Showing the trends of the current evolution of the international situation, comrade Nicolae Ceausescu pointed out that precisely its complexity and the fact that "contemporary evolution is marked by a series of serious and profound problems" require the historians to dig into their profession and the science they serve in order to make history an instrument for closeness and cooperation between peoples, human solidarity and respect for the values created by people throughout the centuries. In fact, to what other more noble and uplifting mission can an historian aspire than to remain loyal to the authentic vocation of history, which cannot be but humanistic, of a broad understanding of people and their ideals? In this way and along these lines, it also serves the imperatives of its time! The pass and the present are thus found closely articulated from the point of view of the meaning which the historian seeks in them. More profoundly and encompassingly understanding the demands of our era, the historians makes easier the task of unravelling the authentic messages that come from the depths of history, after which, acting as the most honest spokesman for these messages, he has the satisfaction of fulfilling the duties of today through the humanist values of human understanding and solidarity which are prescribed to him.

Perhaps more than the other congresses since the Second World War, in Paris (1950), Rome (1955), Stockholm (1960), Vienna (1965), Moscow (1970) and San Fransisco (1975), the historians' concern, marked by care and responsibility, for the destiny of today's world and their increased sensitivity to their responsibilities. Moreover, the scientific theme of the congress also had an orientation that favored an opening of the present and some of the important phenomena of the comtemporary era.

Before examining some of the aspects of the content of these themes, I feel it is necessary to make some mention of the structure itself of the proceedings of the congress.

What comes to mind first is the breadth of the themes and their complexity. According to the concept that was established at the previous congresses, the major discussions at Bucharest were held on the basis of certain reports, co-reports or studies separated into a number of divisions. In the section

designated "Major Themes," in addition to the more in-depth reports, co-reports and papers were presented by certain experts in the fields, with the usual comments from the participants being added. The discussions on the theme "Methodology" had the same format, but were dedicated to certain problems (more or less) in the area of the methodology of history. The "Chronology Section" was grouped according to a chronological criterion, antiquity, middle ages, modern and contemporary history, which represent a series of extremely diversified subjects, reflecting varied aspects of these eras and different geographic areas of the world. Finally, within the framework of the numerous commissions and specialized associations, totalling 26 at this congress with others being established, themes and problems were discussed that were specific to the concerns of the most varied categories of specialists. In this manner, the opportunity was created so that such a numerous audience could effectively participate in the proceedings, with each delegate finding themes that could respond to his preferences and scientific specialty.

Over 140 themes were contained in the program of the Bucharest Congress, with most, understandably, in the chronological sections. Special interest was created, however, as can easily be understood, by the major themes and the ones on methodology through their own major impact, the scope of the reports completed and the substantial nature of the separate discussions throughout an entire work day. The relevance of some of these themes with the contemporary era should be mentioned, such as: The Problem of Peace and Its Forms Throughout History; The Place and Role of Historical Education, Especially Its Secondary Role, In the Formation of 20th Century Man; Eastern Europe - An Area of Convergence for Civilizations; Federal and Pluralist States; Women in Society; Relations Between The Army and Society; Development and Underdevelopment in the 20th Century; and so forth. It is no less true that some of the themes in the chronological sections, not counting those placed on the agenda of the commissions, were capable of holding the participants' attention, with the number of those presented being in the dozens.

Thus, both the Bucharest Congress and the previous ones leave for the future international meetings a task that is hardly easy to resolve. On one hand, the very large number of specialists and the exceptional diversity of their concerns create pressures in the sense of adopting a somewhat complicated schedule that is very busy and, especially, extremely intricate in a thematic sense (especially in the chronological sections). The care to include all the regions and eras and to reflect equally the historical problems in them added new elements of complexity. Under these conditions, some of the reports in the chronological sections appear peripheral and odd. And less gratifying is the fact that in this situation the discussions are excessively restricted, even in those cases where a deeper look into the points being discussed would produce a real scientific gain. It remains for the organizations that establish the programs for the congresses in the future to think about some optimum solutions. Having more information to evaluate, without a doubt the variation proposed by them will be

carefully and thoroughly substantiated. As a simple suggestion, I feel that a certain restriction of the number of themes would work very well, without those present at the meeting feeling it would be impossible to take part effectively, if well selected themes could be found dealing with the history of a number of peoples and the common elements of the historical phenomena and processes of a number of countries.

The vast majority of the reports and coreports were presented at a high professional level. Some were true models in their field through the precision of their analysis and wealth of information and through their ability to present an overview and details at the same time. At the basis of certain reports were years of study in an effort to uncover and present the multiple significances of certain phenomena of a vast nature. A patient accumulation of handicraft work is represented here and put forth to polish information, facts and thoughts in a completely coherent manner. Basically, this is a marvelous effort to preserve the memories of mankind and to remind man of the course of time. Even if they deal with wide-spread aspects, the documents of the Bucharest Congress are a book on humanity, suggesting something in the unified life of mankind and "its adventures," as the Italians say.

Without a doubt, historians and other researchers will for a long time refer to the documents from the Bucharest Congress when they study the themes connected with the important reports or many of the reports presented in the chronological sections and commissions.

Professors Juliusz Bardach and Hubert Izdebski (from Poland) conceived their report, for example, regarding federal and pluralist states on a vast scale, combining the analysis of historical aspects with institutional legal ones. In his report about the problems of peace in the early Middle Ages, Raoul Manselli (from Italy) gives a true x-ray of political relations in Europe during that era. Claude Fohlen (from France) seeks to deal with results and directions of research on the theme of "The Woman in Society." Domenico Demarco's (from Italy) report, "Development and Underdevelopment in the 20th Century," was distinguished by its clarity and spirit of synthesis. A broad and encompassing text about the language of the historian was completed by Karl Georg Faber (from West Germany) (unfortunately, only a brief summary appears in the congress's documents because his text arrived late). M. W. Flinn (from Great Britain) completed a laborious study regarding the birth and mortality phenomena, particularly in the modern era.

For their part, Romanian researchers made a notable contribution, both quantitatively and qualitatively, to a series of reports and coreports presented at the congress. They were entrusted with a report within the framework of the major themes, three reports in the chronological sections, two reports in the commissions affiliated with the congress, three coreports

on the major themes and three coreports in the affiliated commissions. Both the reports and most of the coreports are robust, well articulated studies, with a broad, encompassing scope. One work that I would call bold was undertaken by academicians Emil Condurachi and Razvan Teodorescu in their report, one of the major themes: "East Europe - An Area of Convergence for Civilizations." As can be easily seen, this theme can be examined from various perspectives, from one of the culture's philosophy to one of a strictly empirical, documentary nature. The authors deal with the problem in an historical manner that is not boring or factological, but wide open with analytical observations. There is a prevalence of material regarding cultural relations, although, especially for the older part, the idea of interdependence and inter-relations is also maintained in other areas: inter-human relations, population studies, types of peoples, linguistics, materials and so forth.

In his study, "The Dacians and Their Civilization," Hadrian Daicoviciu achieves a successful study of this problem. Alexandru Dutu and Pompiliu Teodor pertinently present the status of the study of the luminist phenomenon in Central and East Europe. They pose the question of the typology of this phenomenon and, bringing attention to the need to go beyond the traditional approach to luminism which locks research exclusively into the area of ideas, include in the study phenomena of a social, national, economic and diverse nature that are equally significant for the period, as well as those aspects of collective awareness. Costin Murgescu and his co-author, in their report, presented an overall picture of agrarian reforms in Europe after the First World War, including Romania's reforms in their study.

The discussions at the congress were active and lively and carried out in the vast majority of cases in a scientific, sober and objective spirit. There was an atmosphere of intellectual freedom appropriate to a fertile exchange of opinions. Perhaps more than any other time, there was an opening for dialogues and an increased understanding for "the rules of dialogue." Certainly, different views and opinions were encountered and different points of view were expressed. In the vast majority of cases, however, they did not abandon the idea of being faithful to historical truth and they did not violate the spirit of objectivity.

The proceedings of the congress showed that the Marxist research method shows its superiority, with the condition that the research be carried out correctly, using the necessary wealth of information and the appropriate professional skill. Otherwise, using the term Marxist does not save the text that is dull, subjective or ambiguous.

As can be understood in the case of a meeting of such dimensions, several unpleasantries could not be avoided which clashed with the general orientation of the proceedings. These appeared when a few of the participants left the subject of history itself, moving into the area of certain problems of a extra-scientific nature. In this case, history served merely as a more distant support for questions of a political nature.

The Romanian historians tried to give a broader view of our historiography and their activities, primarily through the production of specialized books that they brought to the congress. And, it must be said that this production truly impressed a great many foreign participants through the variety of the themes and concerns, through the graphic excellent content of many of these works and through the efforts to translate a series of representative books into the more common international languages. Without any doubt, the production of Romanian historical books reached a peak at the congress, responding to the constantly increasing and always lively interest of the readers in our country for history subjects. In this accomplishment of success, we cannot stress enough the contribution and efforts of the publishing houses, especially the Publishing House of the Academy and the Scientific and Encyclopedic Publishing House, which carried out a true feat of strength in order to complete publishing projects and plans, both of an individual and collective nature. We are speaking here not of fulfilling a simple task at work, but of great self-sacrifice, enthusiasm and self-denial, from the leadership of the publishing institutes to the careful printing of each letter.

A most favorable impression was made by the historical book exposition (both Romanian and international), organized during the congress. Functionally, and at the same time, elegantly and properly conceived, the exposition in Bucharest, in the words of the secretary of the International Committee of History (up to the congress), Michel Francois, was organized in a model for the exposition of specialized books at such a meeting.

The Romanian delegation of historians or specialists in some of the related fields was an active partner in the discussions. Many of our representative specialists worked harder so that the values of our history can be better and more widely known and so that the experience of our people's past can be seen in its major significant aspects.

The foreign specialists were able to note the open position of our historiography, its ability for dialogue, its sensitivity to nuances and the repudiation of preconceived ideas. Our historiography was guided by the idea of truth and abjectivity in science, understanding, however, that these concepts are not the result of a priori inspirations, but are the result of a long process of understanding. Our historiography was determined and sought not to leave anything unclear when in the discussions there were allusions, frequently in extremely sophisticated forms, and imprecise or

erroneous statements regarding, let us say, the problem of Daco-Roman continuity, the cultural and humanist Romanian values during the feudal era, the ideal of freedom within the framework of the Romanian's struggle in Transylvania in 1848, the historical justice of the Peace Treaty of Trianon (1920) and so forth.

The congress fully showed that our historiography has well prepared messengers, with a broad cultural horizon and a specialized nature capable of maintaining a lively dialogue with its foreign partners and of achieving that necessary number of "contacts of ideas." Certainly, this was the characteristic and defining tenor. That there were also certain shortcomings in this area is a fact that cannot escape careful and clear review. Basically, a dull, declarative report, fortunately there were few of these, is of service to no one, and first of all to the person who presents it. Mastery of the common international languages is a sine qua non condition for communication. We feel that the problem of the mastery of common international foreign languages must receive more attention in the process of quality training and growth of the corps of specialists in the field of history. The question is primarily one of a personal nature, but perhaps in the educational system at the doctorate level there could be a reconsideration of some of the aspects aimed at increasing the requirements in a given area. We are not talking merely about the opportunity for conversation, as such, in a common international language, but, in a broader sense, about historical culture itself and the specialist's general horizon of knowledge.

As numerous prestigious scientists noted, the Bucharest Congress reflected the trend of current historiography to directed itself more towards the masses and to take into consideration the great communities and their problems. During the proceedings of the congress, relatively new themes were included that were untreated by or peripheral to traditional historiography. It is sufficient to mention the theme regarding "Woman in Society" or those themes that were part of the program and were unusual for the historiographer, such as "Work and Administration in the Management of Industry in the 20th Century," "Domestic Policy and The Economy" and so forth.

From the point of view of introducing new problems in the historiographic discussions, the Bucharest Congress can rightly claim special merit. Less spectacular to us were the incursions of a methodological nature into current historiography. It appears that after the effervescence of the previous decades we are working in a calmer period in this regard, a period of decantation and evaluation of results after which new impulses and new creative searches will probably appear.

Right now it is clearly premature to formulate definitive conclusions about the place and role of the congress in the evolution of historiography in

our time. Only the further study of its works on the basis of the previous evolution of historiography and its current characteristic trends will permit broader conclusions. If it is difficult to appreciate the degree in which the proceedings of the congress actually guide the development of world historiography, influence it or define it (my opinion is that it does so only partially), it is also incontestable that they reflect its situation, the status of certain concerns and the level reached by research in certain fields. This is also the role of congresses and it would be presumptuous to expect or to insist on more from them. Basically, they are not organs for producing guidance, but meetings for scientific discussions, for affirming itself (the community of historians) and presenting itself to society for the cause of the field that the participants are cultivating.

What the congress clearly showed is the idea that the growth of the prestige of the science of history and its ability to provide social guidance are tied to the scientific statute of historiography and the qualitative level of its theoretical discoveries. As a celebrated historian observed in a remarkable statement, it is a sign of spiritual triumph that man, freed from the impediments that slowed his creative elan, can build not only the present and play a willful role in the future, but penetrate more exactly and thoroughly the space and time of the past.

The congress was an opportunity for meetings or reunions between historians from all over, for scientific contacts and exchanges of ideas, and for becoming aware of certain methods and types of recent research. The type of historiographic approach and the manner in which the historian approaches his theme and examines it especially presented a separate interest for professional colleagues.

For our historiography, the Bucharest Congress meant a great scientific experience whose significance still remains to be analyzed. It facilitated the spread of our historiography in world circles, it familiarized many foreign historians with some aspects of our people's past and broadened the circle of friends of our people among the foreign scientists.

At the conclusion of the congress, the newly elected president of the International Committee of Historical Sciences for the next 5 years, the Polish professor Alexander Gieysztor, speaking in the name of the Bureau of the International Committee and substantially new in its organization, expressed his hope for a fertile and prosperous period of peace and peaceful work for historians until the next congress in 1985, which will take place in West Germany. In offices or at archeological digs, in classrooms or at new domestic or international meetings, historians will accumulate new knowledge about the course of humanity and will improve their professional skills and research methods in order to tie together the string of international congresses into a continuity of efforts and hopes that desire to be a part, no matter how small, of the great continuity of humanity.

BRIEFS

MACEDONIAN MOSLEM MEETING--Struga, 28 Sep--The Third Cultural-Scientific Meeting of Macedonian Moslems took place today in the Poetry Club in Struga. In addition to the delegates from many settlements where Macedonian Moslems live, Strakhil Gigov, Tom Drakulevsi, representatives of social and political organizations and of the assemblies of opstinas, scientific and cultural workers and others also took part in the meeting. The participants at the meeting were addressed by the president of the executive council of the assembly of Struga Opstina, Kire Srbinovski, who stated, among other things, that the Macedonian Moslems, because of the fact of their Islamization, had for a long time felt like a piece torn off from the Macedonian people, as a result preserving their own purest fluency of the Macedonian language and the peculiar characteristics of the Macedonian people. Srbinovski also informed them of the efforts being invested in Struga Opstina to raise the standard of living of the population of the opstina where about 12,000 Macedonian Moslems live. Nijazi Limanov, Gorge Milkovik, Blagoja Korubin and others also spoke at the meeting. They stated that the Macedonian Moslems are an indivisible part of the whole of the Macedonian people and nation, pointed to historical events and to the conditions which led to the Islamization of the Macedonian population. They also spoke of the relationship between nationality and language. Afterwards, Macedonian Moslem folk groups from a number of villages performed at the meeting. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

YOUTH CHIDED FOR UNDERESTIMATING IMPORTANCE OF KNOWLEDGE OF WEAPONS

Tirana ZERI I POPULLIT in Albanian 9 Sep 80 p 3

[Article: "The Love of Weapons Is Expressed by Knowing, Using, Protecting and Caring for Them"]

[Excerpts] In the hands of our people, arms have played an important role because with them, the people have fought against every occupier and our freedom, customs and wonderful traditions have been defended. In the youth organizations, good work has been done to increase concern and love for weapons and combat techniques, and for taking care of weapons properly. In their work, these youth organizations have concentrated on two main things: first, the knowledge of the traditions of our ancestors, mainly those of the Anti-fascist National Liberation War, traditions which the party has raised to a higher level, giving them a new content. To achieve this aim, a number of activities have been organized, such as meetings with veterans, visits to historic places, etc. The organization of sessions on topics such as "The Albanian and the Gun" and "The Gun and Freedom" have been very productive.

The second aspect deals with the concrete activity of the youth in learning about, using, and taking care of weapons. In this area, concepts of self-satisfaction, expressed in an underestimation of the importance of the knowledge and maintenance of weapons, are combatted. In this activity, we rely on the teachings of the party and on the requirements of the People's Military Art, which explain the place of weapons in relation to other key elements of combat. Extensive work has been done to implement the teaching of Comrade Enver Hoxha that although the decisive factor in a battle is the individual, this does not mean that arms should be underestimated. By regarding arms and techniques as important tools in the hands of the individual, we must evaluate them properly and calculate their effect on the enemy.

The youth organizations, in cooperation with the commands, in addition to their educational work in this area, have concentrated their attention in the area of increasing the demands for a daily accounting by each youth so that the directives and requirements in regard to the knowledge, protection and maintenance of weapons and combat techniques will be strictly executed. The love of each person for weapons and techniques is measured by concrete results; education by means of traditions takes concrete form and serves concretely the raising of the coefficient of preparedness.

FRG CONCEPT OF GERMAN CULTURAL UNITY REJECTED

West German Commentary

Bonn IWE-TAGESDIENST in German No 77, 22 May 80 'iwe-kultur' supplement

[Report from Berlin: "SED Insists on 'Socialist National Culture.'" A translation of the East Berlin DEUTSCHE LEHRERZEITUNG article cited below follows this commentary]

[Text] According to the SED, the GDR's art and culture have nothing in common with any of the developments in art and culture in the FRG. Hans Koch, the well-known East Berlin cultural ideologist of the SED Academy of Social Sciences stated that the "talk" of the "unity of German national culture" would hardly merit any attention, if it were not a cultural-historical and cultural-critical veneer and justification of a "policy fundamentally opposed to detente" and if it did not represent an attempt at "interference in the internal affairs of the sovereign GDR."

According to Koch, it is one of the key axioms of "the adversary's argumentation" that the GDR must not be recognized, at least not as an independent intellectual-cultural reality, and that anything uniquely characteristic of the GDR should be denied and eradicated. However, the existence of the "socialist German national culture of the GDR represents an incontestable reality." According to Koch, all objective analyses have shown that neither in its social traits and substantive characteristics nor in its cultural-historical position, its inner structures, functions and national life is there any "unity, common ground or even the slightest tendency toward agreement with the dominant imperialist culture of the FRG, in which great power-chauvinism and revanchist and hegemonic characteristics are becoming more and more apparent." Koch stated that the culture of the GDR had long been historically confirmed as "German culture of real socialism." (DEUTSCHE LEHRERZEITUNG 21/80).

GDR Academician's Discussion

East Berlin DEUTSCHE LEHRERZEITUNG in German Vol 27 No 21, 23 May 80 signed to press 15 May 80 'DLZ-Konsultation' feature supplement pp 1-8

[Contribution to Party School Year for June 1980 by Prof Dr Hans Koch, Academy of Social Sciences, SED Central Committee: "On the Continued Development of the Socialist National Culture in the GDR." Passages in slantlines printed in boldface]

[Text] "As is indicated by the resolutions of the Ninth Party Congress and by the program of our Party, the development of science, education and culture is an integral part of the entire policy of the Party, which is oriented toward the well-being of the people. We want to insure all-round support and encouragement of the striving for a high level of education, for fruitful scientific insight contributing to the consolidation of our socialist society and for a rich and complex cultural life. This is in accord with the nature of socialism, for socialism serves to promote the well-being of the people and the full development of the people's creative faculties. Socialism represents a society of true humanity and realized human rights, of the all-round development of socialist personalities and their cultured way of life. Thus material and cultural elements form an integral whole. We are concerned with cultural development in all sectors of our society, in all spheres of human activity."[1]

Considering what would be necessary "to establish the consummate socialist society,"[2] Lenin in 1923 stated that this would be "impossible without an all-out cultural revolution: This cultural revolution will be sufficient fully to establish socialism in our country...."[3] The implementation of the socialist cultural revolution has long been recognized and confirmed as a /universal law/ of the development of the new society.

The prediction that in the cultural sector protracted, patient and persistent work will be required has likewise been confirmed. In regard to many aspects of the development of the new society and of the socialist personality and consciousness, "only that can be regarded as firmly established which has become part of everyday life and habitual practice."[4]

Today we know from the experience gained in the Soviet Union and other socialist countries, including the GDR, that the radical historic changes through which the developed socialist society matures include the further development of the socialist cultural revolution.

Of primary importance are two tasks that are closely related:

Firstly, the Party demands that the GDR's socialist national culture be extensively developed, that its patriotic and internationalist socialist substance be more and more clearly defined, that its creative achievements and new values be expanded in many directions and that the progressive and

humanistic heritage of German history and the great accomplishments of world culture (especially those of the Soviet Union and the other socialist countries) be preserved in our culture.

Secondly, indicative of the importance of cultural tasks is the demand "to create the conditions necessary for the full development of the people's social relations and physical and intellectual faculties and for insuring that they can lead a rich and cultured life, that the working people's thought and action are determined by the socialist ideology, by the Marxist-Leninist world view of the working class."[5]

Cultural progress is now inseparably linked to the implementation of the principal task: to achieve--on the basis of an accelerated production growth rate, great efficiency, scientific-technological progress and rapid increases in labor productivity--steady improvement of the people's material and cultural standard of living.

If we want our culture to contribute to continued social progress in the intellectual struggles of our time, it is imperative that we still more effectively make use of the possibilities it offers in regard to the development of the personality and of consciousness.

Culture and the Development of Socialist Consciousness

We need a differentiated, interesting cultural life. It is true of the overall national framework and of any place, of the atmosphere in the work collective or of that in the family that "the degree of stimulation provided by culture and art, the extent to which they help satisfy and form intellectual and moral requirements depends to a large extent on the well-being of the people and on whether their life is a rich one in the cultural sense as well."[6]

Systematically, our Party is trying further to develop /socialist-realistic art/. Regardless of what artistic measures it uses to express itself, its criteria are based on the deep inner links with the reality of socialism and the life of the people, on the consistent party spirit, with which it advocates peace, democracy and socialism and opposes imperialism, aggression and reaction, on the clear socialist ideas and on its solidarity with the people. Thanks to the range and diversity of its--surely not nearly fully exploited--artistic possibilities, socialist-realistic art can exert an influence on the most diverse personal inclinations and interests. It can influence the life of the people, form attitudes toward life, develop socialist convictions and communist ideals and help to foster a sense of beauty.

According to Brecht, socialist-realistic art has "the noble task to contribute to the radical reorganization of the way in which the people live together."[7] In this respect, GDR art has provided strong impulses. Especially noteworthy are the contributions of children's literature and other forms of art.

Erich Honecker emphasized that "...we know of course that not all writers and artists are Marxists-Leninists."[8] However, the GDR's artistic world offers a broad range of opportunities to any artistic endeavor, as long as it furthers--without stabbing real socialism in the back--humanistic ideas and advocates peace, democracy, antifascism and anti-imperialist solidarity. The creative talents and concerns, the life and work experience of the individual artists differ greatly. However, it is bound to be beneficial, if each individual artist is and remains called upon to make as great a contribution to the development of the socialist personality as he or she is capable on the basis of his or her personal circumstances and if each individual's efforts in this regard are appreciated.[9]

To a large extent, our social progress is stimulated by the social awareness inherent in the creative activities of the masses--by motives that they derive from the Marxist-Leninist world view: to be a driving force of the historic creativity of the working class and of the working people--it is toward this that the structures and functions of socialist intellectual culture are presently oriented.

Thomas Mann once confessed "that it was an error of the German bourgeoisie to believe that a cultured individual could be apolitical."[10] /Political culture/ is an integral part of socialism: Lenin held that it was of crucial importance in regard to "the establishment of a state without capitalists, without exploiters, without landowners."[11] Political culture requires not only extensive political knowledge; it is only through the combination of such knowledge with a firm, class-oriented point of view, with a high degree of organization and discipline, with fervent mental commitment and constant readiness for action and combat that we can attain the level of culture required today.

The /education/ that we provide in the schools and through many forms of life-long learning develops appreciation of the laws of development in nature and society. According to Engels, education based on socialist ideas aims above all to heighten the people's awareness so that they can perceive more clearly the laws governing their own social activities--laws that formerly were alien natural laws controlling them--that they can use them with growing expertise and thus increasingly control them.[12] Thus, education--a cultural element of the greatest importance--must be increasingly used to form /creative/ faculties and attitudes.

In our society, to which irrationality and mysticism are entirely alien, importance of the sciences as a /cultural factor/ is noticeably increasing. Academy President Prof Dr Werner Scheler stated that the sciences are a "vital part of the culture of a people, indeed of mankind as a whole." This applies not only to their immediate influence on the productive forces. Science "lays essential foundations for the education and training of the people and helps to develop the specific cultural characteristics of a nation as well as the personality of the individual citizen."[13] Today it is more important than ever to be mindful of the fact that decades ago the

great artist Maxim Gorki "seriously and consciously" ranked the sciences among the most important creative forces concerning the "development of social modes of conduct."[14]

In accordance with our present circumstances, such modes of conduct should be oriented above all toward insuring increased intensity of public work, maximum efficiency of socialist production, a high rate of acceleration of scientific-technological progress, etc. It would be inconsistent with the structures and functions of the new, socialist type of intellectual culture, if we kept aloof on this crucial battlefield of socialism. Just two factors should be singled out here:

Firstly, there is the new interrelationship of /work and culture/, which is being realized by socialism. L. I. Brezhnev called the "historic linking of work and culture," which the best minds so far have only dreamed about, "a turning point of tremendous significance" for the entire history of world culture.[15]

Freed from exploitation, socialist work becomes the supportive foundation of the cultural creativity of the masses and helps to form the substance of the cultural values of socialism. It is not without good reason that conscientious, honest and socially useful work is considered the cornerstone of the socialist way of life. The orientation toward this factor of the development of socialist culture begins with an element of education that is characteristic of our society--the polytechnical character of the school and the validity of principles of work education for all students. This orientation is upheld through the concern about a socialist work culture--appropriate to our social level--"in all places of work and learning."[16] It is reflected in the personality-forming values of the socialist performance principle. This principle calls for the release of a maximum of intellectual-creative capacities, of skills, knowledge, talent and imagination, expressed in the will and ability to work for one's own benefit and in the interest of one's own personality and for the benefit of society. Thus this principle reflects the absolute laws of the development "of the /social/ character of /personal/ talents, faculties and activities."[17]

Secondly, we would like to draw attention to the raising of the /cultural-technological level/. The intensification of production and the development of science and technology make heavy demands on education and training.[18] These requirements are concerned not only with professional qualifications and specialized skills. Equally necessary are an increased aptitude for technological creativity, familiarity with extensive production structures and economic interrelationships, responsibility for the quality of one's own work, striving for a high degree of efficiency, including an efficient use of time, etc. Thus we should also ask ourselves, if Brecht's exhortation applies not only to the theatrical world, but to the socialist intellectual life as a whole: "Afford pleasure about the possibility of controlling the human condition through society."[19]

More so than any other work collective, a pedagogical collective is confronted with the task /to integrate the totality of the consciousness- and personality-forming capacities of the intellectual culture of socialism in its own work/. This goes far beyond the specific requirements of the individual subjects concerned. The common denominator of these efforts is the collective endeavor to develop moral values, by means of which it is possible to meet social and individual requirements in the process of overcoming the contradictions between the conduct of the individual and the interests of society.[20] Thus the demands raised at the Eighth Pedagogical Congress are applicable here: "Education must bring the individual to view all that which is necessary, correct, good and just for our cause as correct, good, just for itself as well and to act accordingly."[21]

This is a key aspect of long-range tasks, in regard to which Kurt Hager stated: "In all fields, we must develop and enforce /our/ socialist position, /our/ value criteria, /our/ attitude toward life, /our/ social psychology. Socialist culture includes man's entire intellectual, moral, aesthetic and emotional level of development, the totality of his knowledge, skills, talents, modes of conduct, attitudes, convictions, social habits and pleasures. All these elements are reflected in cultural requirements."[22]

Development of Socialist Cultural Requirements

Lenin taught that the goal of socialism is the "safeguarding of the maximum well-being and of the free all-round development of all members of society."[23] It is to this end that our Party developed the unity of social and economic policy. In accordance with the basic economic law of socialism, this unity helps better and better to meet the material and cultural requirements.

Of necessity, the development of public work leads to "a steadily expanding and increasingly comprehensive system of types of work and production, which is paralleled by a complex, steadily expanding system of requirements."[24] An actual abundance of requirements--i.e. the opposite not only of a lack of intellectual requirements, but also of a seeming abundance of requirements, which, however, can be reduced to the one "requirement of /possessing/"--is a cultural factor of the first order. Marx speaks of the "culture incorporating all traits of the social individual," which is based on this factor, and of developing "a social individual that has many needs, because it has many traits and relationships."[25] The education and training of cultured, universally educated socialist personalities presuppose an abundance of "real and ideal relationships" on their part;[26] but this is inseparably bound up with diverse material and cultural requirements, both in regard to the individual and in regard to the socialist way of life as a whole.

In the 1970's in particular, the development of cultural requirements was quite dynamic thanks to the concentration on the principal task. The general, 10-grade polytechnical high school was introduced throughout the

country for all children and juveniles; this measure put the development of cultural requirements on a qualitatively new basis.

A number of data should be quoted here. During the period from 1970 to 1978, the following increases were registered: The number of participants in the competition for the title of "Collective of Socialist Work"—to 179.9 percent; the total number of innovators in the national economy--to 257.5 percent; annual yield of the innovator results produced—to 184.3 percent; the total number of participants in the Fairs of the Masters of Tomorrow--to 394.8 percent.[27]

These figures represent more than just economic facts. They stand for considerable "cultural investments" of reflection, interests, creativity, talents and diverse skills, intellectual flexibility and social responsibility. This indicates how the individual's creative approach to his or her own work begins to manifest itself—more or less steadily--as a basic cultural need.

The "rate of consumption" of cultural goods and services is not the primary criterion of the developmental level of cultural requirements. Nevertheless, their significance should not be underrated. In regard to the most important items, the level of cultural requirements is higher in the GDR than in the developed capitalist countries, including the FRG.

In 1978, 98.2 percent of GDR households were equipped with radio receivers, while 86.5 percent owned a TV set. (In regard to television sets, the GDR is among the European countries distinguished by a high degree of market saturation.) The per capita production of books and brochures amounted to 8.3 copies, and the corresponding figures for journals and newspapers were 14.5 and 181.7, respectively; 30.2 percent of the population are registered users of public libraries; thus our republic occupies a leading position among the "reading countries." The figures of attendance (per 1,000 residents) at cultural events are as follows: Movies: 4,795; theater: 634; concerts: 189; clubs and cultural establishments: 3,467; events of the Cultural League: 342; Urania lectures: 698; museums: 1,920; zoos: 840. And of every 1,000 GDR citizens, 755 traveled abroad.[28]

It would be unrealistic to regard cultural requirements as "purely intellectual", as far removed from all requirements of material and physical pleasures. Thus Friedrich Engels pointed out--and we need only recall here the cultural aspect of our housing construction program: "The satisfaction of the need for shelter will become a criterion of the way in which all other needs are met."[29] And further: "A truly humane enjoyment of life"[30] is an integral part of the socialist way of life. Margot Honecker broached the question whether one should oppose the young people's desire to acquire beautiful and pleasurable things--because the enemy hopes they will turn bourgeois. It would be anachronistic "to educate the young people so as to prevent them from developing material demands. In keeping with the growing influence of the moral stimuli, the principle of material interests will

remain for a long time to come a significant driving force of development. In regard to education, it is of crucial importance that our young people realise that one's demands can be met only through one's own work, that they know: One cannot live at the expense of others; one must not place one's own well-being above that of other people."31

Pedagogical collectives in particular should look for ways of overcoming instances of a lack of cultural requirements. The endeavor to attain a high level of "culture of requirements" includes the attitude, in regard to which the SED Program states: "The Party emphatically opposes heartlessness and inconsiderateness in human relations; it opposes hypocrisy, cynicism and disgraceful conduct vis-a-vis the opposite sex. It demands that everyone wage a determined struggle against violations of the law, against asocial conduct and rowdyism and against abuse of alcohol."32

Nobody denies the fact that in regard to certain "beautiful things" that are attractive to young people in particular, we do not always match the offerings of capitalist enterprises. Especially in this regard, we must see to it that consideration of individual elements does not distort the correct view of the whole.

The intellectual-cultural class struggle--which is especially intense at the point of contact between the antagonistic systems--goes far beyond the confrontation of ideological thought systems and political principles. The struggle in regard to needs and demand structures is no less intense. The enemy pins his hopes on the effects produced by three TV programs and approximately 2 dozen radio stations, on many personal encounters with citizens of an imperialist state, on a network of ties that in one way or another links us with the material commodity "culture" of capitalism. It is impossible to isolate young people from all this--even though our educational principles naturally prohibit granting "Western" television programs or "Western" plastic bags the status of "equal" intellectual or material cultural phenomena. We must educate the young people so as to enable them to deal with such phenomena and influences from an /independent as well as party- and class-based position/ and also to refuse--out of personal civic pride--to advertise the products of any capitalist concern. It is not only individual phenomena that are at issue. We are concerned with making clear the /contrary/ development of needs in antagonistic social systems--a development that is contrary even when individual needs focus on identical objects or services. The system of cultural requirements in the capitalist society develops--as a social rule, not as an automatism of all individual demands--/not/ as a need for greater humaneness, for greater personality values. The description of the capitalist "culture" of the development of demands, which was given by the young Marx in 1844, is still applicable today: "All that which capitalism takes from you in the form of life and of humanity, all that it replaces by /money/ and /riches/, and all that which you are not able to do, your money is able to do: It can eat and drink, it can go to the ball and to the theater, it is able (to acquire) art, erudition, the historical rarities...; it is the true /property/." As

far as the worker is concerned in this connection, he may "have only so much that he wants to live and he must want to live only in order to have."[33] In this connection, Marx also analyzed the "refinement of demands" as an ultimately merely /"seeming/ satisfaction of demands," as "civilization /within/ the crude barbarism of the demand."[34]

Socialism renders possible the satisfaction of growing, individually differentiated material and cultural demands by means of a development that is an element of real humanism. Here it is possible to accomplish what Marx stated at that time: "Assuming that /man/ is a /humane being/ and that his relationship to the world is a humane one, then love can be obtained only in return for love, trust only in return for trust, etc. Whoever wants to enjoy art must be an artistically educated person; whoever wants to exert influence on other people must be a person who has a truly stimulating and encouraging effect on other people."[35]

The GDR's Socialist National Culture--Accomplishment and Source of Strength of the Victorious Working Class

The flowering of the socialist national culture is prerequisite to the development of the socialist German nation in the GDR. The characteristics of this nation are determined above all by the victorious working class.

In the FRG, certain circles are talking more and more insistently--and stridently--of "keeping open the German question." However, the historical dice in regard to the birth, existence and successful development of the socialist nation on the soil of the GDR have irrevocably been cast. What is there "to be kept open"? Surely just "Great-German" claims nurtured by hopes--and not infrequently, wild plans--of someday advancing again the domain of German imperialism up to the Oder and Neisse rivers and then filling--at least--the "borders of 1937." These feverish political fantasies that reveal the aggressive character of German imperialism are for the most part based on cultural dreams. For formulas such as "unity of the German national culture" or "common history, culture and language as vital braces of national unity in the past, present and future" sound rather peaceful. Such talk would not merit any attention, if it were not a "cultural-historical" or "cultural-critical" veneer and justification of a policy fundamentally opposed to detente and if it did not represent an attempt at interference in the internal affairs of the sovereign GDR. Especially inflammatory in this respect is the resolution concerning the "German question in education," which was adopted in November 1978 by the Permanent Conference of the Senators and Ministers of Education of the FRG States. There are diverse activities that are clearly indicative of an acute aggravation of the class struggle in the intellectual-cultural realm and of its interconnection with the fate of peace and security in Europe. It is one of the key axioms of the enemy's argumentation that the GDR must not be recognized, at least not as an independent intellectual-cultural reality, and that anything characteristic of the GDR, anything that is related to the development of the socialist German nation, should be denied and--at first intellectually--eliminated and eradicated.

However, the existence of the GDR's socialist German national culture is an irrevocable fact. All objective analyses have shown that neither in its social traits and substantive characteristics nor in its cultural-historical position and inner structures, nor in its functions concerning national life is there any "unity" or "common ground" or even the slightest tendency toward "agreement" with the dominant imperialist culture in the FRG, in which great power-chauvinist, revanchist and hegemonic characteristics are becoming more and more apparent. Our GDR culture has long been historically confirmed as the German culture of real socialism, in which the people of the GDR give expression to and participate in the implementation of their national self-determination.

The principal factors that prove the socialist German national culture--which is characterized by the dominant influence of the victorious working class--to be a culture of a new historical type are the following: Firstly, the socialist national culture of the GDR is developing as the /culture of the victorious working class and of all working people led by the Marxist-Leninist Party/. The emergence of a socialist intelligentsia, primarily from the ranks of the workers and farmers, is one of the most important culturally creative achievements of the working class. Its alliance with this socialist intelligentsia (which naturally includes the productive pedagogical intelligentsia) is a vital source of our cultural progress. This progress is taking place on socialism's "own foundations." For all the specific inherent laws of the various forms of culture, the overall cultural development is subject to the crucial influence of the basic laws governing the development of the advanced socialist society.

Secondly: Culture in particular gives expression--and not only linguistic expression--to those special, peculiar characteristics that distinguish one nation from another. However, these characteristics are not imposed on it by ethnic factors or by its historical origins. Its /present and future-oriented definition/ is taking place primarily in the interaction of all concrete social, economic, intellectual and other processes, in the dialectics of all internal and external conditions under which the developed socialism is maturing. We are fully aware of the fact that the tasks we are confronted with are great and difficult ones. But we take pride in our accomplishments in the field of cultural mass activities, in national education, in literature, in the arts and sciences, in physical education and sports, etc.; this is a justified national pride that we are not willing to share with just any concern director or stockbroker.

This patriotism, which--closely bound up with proletarian internationalism--is a distinguishing characteristic of our culture, is concerned with the historical position, the revolutionary prospects, the history and assured future, the country and state of the GDR, with the respect it enjoys--closely allied with the USSR--in the community of socialist states. Our patriotism comprises the will to defend all the accomplishments, the sovereignty and territorial integrity of our homeland against any imperialist machinations.

Thirdly: Our socialist German national culture gives expression to and defines the position that our republic--the work of the victorious working class--occupies in the entire history of the German people. It represents a type of fundamentally new national-historical interrelationships.

These interrelationships preclude national arrogance, chauvinism and racism. They do not leave any room for ethnic or religious hatred; they are free from the pernicious spirit of anticommunism and from national nihilism and cosmopolitanism. Our culture is firmly rooted in the traditions of the German people's centuries-old struggle for social progress. It is indebted to all humanistic, progressive and revolutionary accomplishments in German history, to every instance of opposition to reaction. Our culture values especially highly

--all the revolutionary uprisings and intellectual programs that demanded freedom and justice for the working people;

--the material, intellectual and moral values created by the masses;

--the rich historical and cultural heritage of the revolutionary German workers' movement; the morality of the bloody struggle against the supremacy of capitalism and imperialism, against militarism, fascism and wars of conquest;

--the--already quite significant--cultural achievements of real socialism on German soil.

Our culture is closely connected with all those elements that have united progressive endeavors in the history of our people with those of other nations.

Fourthly: Our socialist national culture is giving rise to /a new historic type of relationship to the cultural achievements of other nations/--inspired by Lenin's "principle of internationalism and of an intransigent struggle against the contamination of the proletariat with bourgeois nationalism, even in its most refined form."[36] Being essentially /worldly/, it is imbued with the spirit of international friendship and of respect for the humanistic cultural achievements of /all/ nations. Thus new patterns and structures in international cultural relations are being established.

The growth of our "own" culture is connected with an ever-expanding process of rapprochement and mutual enrichment among the socialist national cultures in the fraternal countries. It is primarily through the links with the multinational Soviet culture and the cultures of the other socialist countries that proletarian internationalism, one of the basic assets of our culture, is growing stronger.

Our culture is prepared to accept anti-imperialist-democratic and socialist elements of the capitalist countries. The relations with such cultural

elements in the FRG are developing on the basis of the opposition to the imperialism predominant in that country.

Solidarity-inspired relations with frequently age-old and presently rejuvenating cultures of peoples that have freed themselves from colonial or semicolonial servitude, from national or racist subjugation are becoming increasingly important. This goes above all for socialist-oriented countries.

Fifthly: Like the other countries of real socialism, the GDR--in extensively developing its socialist national culture--is making a noble /contribution to the international culture of socialism/, the most important phenomenon of the world culture of our time. Thus it is opening up a vital source of power for advancing social progress.

Considering the diverse aspects of a cultural policy formulated and directed by the SED Program, we can justly say: "Since its foundation, our Party has been carrying out a cultural policy that implements the most noble aspirations of the humanistic and revolutionary champions of mankind."[37]

PRUSSIAN HISTORY TO BE ACCEPTED AS PART OF GDR 'HERITAGE'

Honecker on Frederick the Great

Frankfurt/Main FRANKFURTER ALLGEMEINE in German 27 Aug 80 p 5.

[Article signed 'Ws,' datelined Berlin, 26 August: "Honecker Speaks of Frederick the Great; Travel Restrictions To Be Eased--Only If Bonn Recognizes GDR Citizenship--An Interview"]

[Text] SED General Secretary Honecker has made clear in an interview that the GDR will refuse to reduce the age-limit for GDR inhabitants allowed to travel to the west as long as the FRG is unwilling to recognize GDR citizenship. "Serious obstacles on the part of the FRG opposed" the lowering of the travel age-limit, Honecker said. "We have often called for eliminating them but have thus far only met with refusal. That is true mainly of the recognition of GDR citizenship." Because the FRG did not recognize GDR citizenship, it was impossible to make headway in other fields such as legal aid and travel. When asked about the "Prussia Renaissance" in the GDR, Honecker intimated that Rauch's famous equestrian statue of Frederick the Great was going to be reerected in the center of East Berlin.

The utterances by the SED general secretary are included in an interview composed of 50 questions and answers given to the British publisher Maxwell as early as 4 July. Its text, now published by ADN, also is contained in an autobiographical book by Honecker that has now also been published by Maxwell's publishing house Pergamon Press under the title "Aus meinem Leben" (From My Life) in the FRG. Last Monday, on his 68th birthday, Honecker was handed the first copy of the book by the publisher.

In the interview, of which an excerpt was published in the 5 July issue of the SED's central organ NEUES DEUTSCHLAND, Honecker further said about the relations between the two Germanys: "All in all, the relations are not bad but could still be better." But that was not an easy matter to achieve. The problem was that certain FRG circles still had not realized that "the GDR is no enclave of the FRG." In Honecker's view, the development of relations between the two German states had good prospects. What mattered was to make still better use than so far of existing possibilities with

regard for common interests. An improvement of the climate between the two German states, "which we are seeking," could benefit the many-sided GDR-FRG communication, including travel.

The FRG's refusal to recognize GDR citizenship did not prevent the GDR, however, from being generous in humanitarian matters. That was indicated by the figures on travel for urgent family business. There were, after all 1.5 million GDR inhabitants already traveling to western countries annually. "Yet generosity is one thing. The other thing is that in the FRG, subsidized out of the federal budget, regional organizations are still up to their tricks, pushing so-called homeland claims against the GDR, Poland and the CSSR, and often agitating for revenge." Honecker continued: "If it were up to us, the situation could be different. But up to this point, conditions in the FRG evidently do not allow further steps."

'Understanding History in Its Objective Course'

With respect to the SED's relation with German history, the SED General Secretary said: "We foster not only revolutionary, socialist traditions . . . but it conforms with our image of the world to understand history in its objective, actual course, in its overall dialectics. That inlcudes looking at the greatness and the limits of outstanding historical personalities." By now appreciating the historic achievement of Luther and Clausewitz, the SED wholly followed the traditions of Marx, Engels, and Lenin, that of the German workers movement "and our history since 1945." By no means did one thereby ignore the limits of one personality or another, their negative features, their contradictory attitudes or the historic tragedy in which they had been enmeshed.

With reference to the publication of Ingrid Mittenzwei's biography of Frederick II of Prussia in the GDR, which was sold out at once, the interviewer asked Honecker whether that did not amount to a "breakthrough." Honecker answered: "Ingrid Mittenzwei's biography of Frederick the Great, a work which I have great regard for, incidentally, without necessarily endorsing every sentence in it, is from that vantage point no 'breakthrough' but an outcome of our attitude toward our heritage. That also includes the history of Prussia. As you have properly noticed, in the center of our capital, Berlin, there are monuments to Clausewitz, Scharnhorst, Yorck and Gneisenau. Perhaps Rauch's monument to Frederick the Great will be added in the foreseeable future. That would replenish, so to speak, the rebuilt arena of Unter den Linden in the center of Berlin. All this should surprise nobody. Every German land had things that were progressive as well as reactionary in the past, and the monuments usually were created by famous sculptors. It is all part of the culture of our people."

These utterances by Honecker are remarkable in more than one respect. First because he is the first GDR party and government chief to publicly use, unabashedly, the designation "Frederick the Great" for the Prussian king, which had been taboo up to now. Thus far they would always only refer to King Frederick II of Prussia. Secondly, Honecker is in error in saying that,

along with the monuments to Scharnhorst, Yorck and Gneisenau, there also was one of Carl von Clausewitz in the center of East Berlin. In the park around the Unter den Linden opera coffeehouse, four monuments to famous Prussian generals were reerected, to be sure, in 1964, yet along with Rauch's marble Scharnhorst monument, these are the bronze monuments to Ludwig Count Yorck von Wartenburg (1759-1830), August Count Neidhardt von Gneisenau (1760-1831), and Gebhard Leberecht Prince Bluecher (1742-1819). Not Clausewitz then, the theoretician whose 200th birthday was recently celebrated in the GDR, but Bluecher, the man of practice, "Marshal Forward," is the one who was immortalized here. There is no Clausewitz monument in East Berlin.

Finally, Honecker's remark about the equestrian statue of Frederick the Great seems to support the rumors to the effect that for the 200th anniversary of his death in 1986 the monument to the great Prussian king would again stand where it belongs: Unter den Linden in Berlin. The equestrian statue of Frederick the Great--the king on horseback, set on a multi-step pedestal and adorned with rich pieces of sculpture, created by Christian Daniel Rauch in 1851 and unveiled on Unter den Linden--was removed from Berlin under Ulbricht in 1950 and placed, somewhat hidden, in the Sanssouci Park of Potsdam, in the "Hippodrome," in 1961. It rates as one of the most magnificent monumental sculptures of the 19th century in Germany.

GDR Historian's Frederick II Biography

Frankfurt/Main FRANKFURTER ALLGEMEINE in German 27 Feb 80 p 12

[Article by Peter Jochen Winters, datelined Berlin, in February: "East Berlin Has Second Thoughts About Prussia--Much Attention Paid to a Biography of Frederick the Great." A translation of the below cited East Berlin EINHEIT article, coauthored by Biographer Ingrid Mittenzwei, follows the Winters article. For an official FRG analysis of this EINHEIT article see JPRS 73990, 10 Aug 79, No 1706 of this series, pp 11-13. The text of an East Berlin interview with Dr Mittenzwei on her biography is available in JPRS 74590, 16 Nov 79, No 1738 of this series, pp 95-99. For a West German analysis of the development of GDR historiography see JPRS 75760, 23 May 80, No 1788 of this series, pp 41-68]

[Text] In East Berlin you can find people who are willing to make a bet that the equestrian statue of Frederick II, completed by Christian Daniel Rauch in 1851, will on the 200th anniversary of the great Prussian King's death, in 1986, stand again where it belongs: Unter den Linden in Berlin. Yet things are not likely to go that far, after the German communists in 1950 removed the bronze monument--an equestrian statue set on a multi-step pedestal and adorned with rich pieces of sculpture--and reerected it in 1961, somewhat hidden, in the Sanssouci park of Potsdam, the so-called "Hippodrome." What seems more realistic is the speculation that the equestrian statue of Frederick the Great will be assigned a representative spot commensurate with its importance as one of the most magnificent monumental sculptures of the 19th century in the park of Sanssouci.

Sold Out After a Few Days

Yet it is not art that is involved here but history. And if the people in East Berlin are willing to make the bet we referred to above, the reason is that the GDR now has discovered its interest in Frederick the Great--not last, presumably, because of the big exhibition, "Prussia--Attempt at an Accounting," scheduled to be held in West Berlin in 1981. So also, the first GDR biography of Frederick II of Prussia recently came out, and it was sold out within a few days. (Ingrid Mittenzwei: "Frederick II of Prussia," VEB Deutscher Verlag der Wissenschaften, East Berlin). When its author--she is the department chief for "German History from 1684 to 1789" at the Central Institute for History at the GDR Academy of Sciences--gave a lecture about the great king late last year in East Berlin's municipal library, the lecture hall was as crowded as a few weeks later, when the topic was Frederick II and the architecture of his time.

Increased attention to Prussian history has been unmistakable among the GDR's historians in recent years. "A deeper understanding of history strengthens the citizens' bonds with their socialist fatherland and enhances their pride in the achievements of the socialist revolution," SED General Secretary Honecker announced last summer, whereby he underscored the efforts of the SED leadership to distill and take over from German history its "positive historic traditions." "We cannot deal with German history without reworking Prussian history," is the historians' argument over there, and Ingrid Mittenzwei has this to add to it: "Our discussions of our concept of legacy have now also made apparent that now, after mainly having concentrated on the revolutionary traditions of the workers class and the humanistic traditions, we must also deal more with the history of the exploiter class." In application to Prussia this means: After the GDR historians have already dealt in detail with the Prussian reformers of from 1807 to 1813, Stein and Hardenberg, Scharnhorst and Gneisenau, Clausewitz and even Lt Gen Yorck von Wartenburg, who in the last days of December in 1812, and in opposition to the order from his king, signed the Tauroggen Convention, which all was added, as "positive traditions," to the integral part of the GDR's historic "legacy," the time had come to deal with Frederick II, a representative of what was then the "ruling class."

But the time of painting history in black and white is long past in the GDR also. In "necessarily fighting against and turning down everything reactionary in Prussia" one should not "slight or negate its positive progressive elements," leading GDR historians warned some time ago in the SED's theoretical journal EINHEIT. As positive and progressive features and developments in Prussian history they now referred to "certain progressive measures taken by some Prussian rulers," mainly pointing to Frederick I and Frederick II. "The development of socialist society in the GDR, where the social roots of Prussianism were eliminated, requires of us, however, to tap and to integrate with our store of traditions all the positive and progressive achievements and traditions in Prussian history as well," EINHEIT said at that time. This is a maxim Ingrid Mittenzwei has taken to heart in her Frederick II biography, hailed by the critics as an "enrichment of our historical literature" and evidently read by the population.

Seeking Specific Differences

The author seeks to approach Frederick II of Prussia with discernment. She calls him "an exceedingly contradictory historical figure," and she acknowledges he had surpassed the level of 18th century German monarchical grandeur and, as "a most sensitive representative of his class" he then had reacted to the transitional character of his time with a policy of accommodation. So he had, in his domestic policy, banked on limited reforms which never, however, went beyond the framework of the existing order. Frederick II, who died shortly before the French Revolution, had been a man who had, to be sure, received impulses from the newly evolving era and reacted to it "in seeking to adapt bis backward country to the new conditions," but who at the same time--"chained to the conditions of his class and of his country"--erected dams against the new society. Yet--says the Frederick biographer--"the dialectics of history had the effect that what existed could no longer be preserved without adaptability and flexibility."

At the end of her book Ingrid Mittenzwei makes some remarks about "Frederick II and His Posterity" and reaches the following remarkable conclusion: "Frederick II never pursued national goals. Which then means there was no plain continuity between Frederick's policy and that of Junker Bismarck nor any direct line leading from Frederick II via Bismarck upto Hitler, as has sometimes been maintained after World War II." The Nazis had been the ones to draw the line from Frederick the Great via Bismarck to Hitler so as to present themselves as Prussia's genuine heirs. After the war, the Allies held on to this legend and used it not only to justify the dissolution of the Prussian state by the control council law of the Allies but also to condemn everything Prussian altogether. The blowing up of the city palace in East Berlin and the demounting of the equestrian statue of Frederick II are likely to have been a result of that legend too, against which FRG historians came out early in showing that it was not tenable. That the GDR now also bids farewell to that legend is an encouraging sign.

Prussian Progressive Traditions

East Berlin EINHEIT in German Vol 34 No 6, Jun 79 signed to press 9 May 79 pp 637-646

[Article by Prof Dr Horst Bartel, member, GDR Academy of Sciences; director of academy's Central Institute for History; Dr Ingrid Mittenzwei, department head in same institute; and Prof Dr Walter Schmidt, director, Institute for History of German Workers Movement, Academy of Social Sciences, SED Central Committee: "Prussia and German History"]

[Text] The history of Prussia belongs to our historic legacy in its totality, and its various elements are in relation to which we define our standpoint from the positions of the victorious workers class. Any one-sidedness or any absolute terms are alien to our Marxist-Leninist image of

> Prussian history. It brings to the fore the reactionary features that are inevitably connected with the development of that state image and at the same time also includes the historically grown positive values due to the efforts of progressive forces there as well which, like everything else that was progressive in German history, are integrated within the GDR's store of tradition.

The GDR maintains a clear and unequivocal relationship with its historic premises. Its historic roots reach far back into the history of the German people. "Our socialist state," as the appeal for the 30th anniversary of the founding of the GDR says, "typifies all that is best in German history, in the same way as it marks a complete break with all that is reactionary."[1] We take our stand vis-a-vis the historic legacy from our German past in its entirety, the good as the bad, but we define clearly and unmistakably, from the positions of the victorious workers class, our standpoint on the various components of this legacy.

An integral part of this legacy is the history of Prussia, one of the largest, strongest and most important German territorial states that had a great influence on German history since the late 17th century. That state had a contradictory development. That contradictoriness it is precisely that forces us to define more accurately our position on the historic legacy left behind by Prussia lest we slight, or even negate, over our necessary fight against and rejection of what was reactionary in Prussia, its positive, progressive elements. Because Prussian history also had reactionary as well as progressive elements.

Joining the issue about Prussian history is all the more urgent since bourgeois ideologues and historians are increasingly seeking to draw a picture of Prussia as they see fit, one which contradicts historic truth. Two trends in it are unmistakable. On the one side, they keep spreading the old conservative variant which more or less glorifies the Prussian state. On the other, flexible bourgeois historians, notably those with a bent for social and cultural history, seek to convey a more discriminating image of Prussia that also will provide critical emphases. Yet ultimately this partial criticism of Prussia serves to justify the FRG's current imperialist system. These efforts enjoy the massive political and financial support by those who have a say in Bonn and West Berlin. That is indicated, for instance, by the exhibition, "Prussia--Attempt of an Accounting," now being prepared on the recommendation and under the patronage of the lord mayor of West Berlin and with the involvement of FRG government authorities, as well as by the recently illegally opened Prussian state library on cultural values. There, in his opening speech, FRG President Walter Scheel ballyhooed the thesis of Prussia as a so-called constitutional state.

In contrast to the clearly academic scholarship in historiography, it unequivocally is the conservative version of the bourgeois image of Prussia which predominates in FRG journalism and mass media. That is the direction in which many newspaper articles, television programs, magazine essays and also the recently published book by journalist Sebastian Haffner, "Preussen ohne Legende," move.[2] They seek to do away with the inseparable continuity between the German Empire as founded in 1871 and reactionary Prussianism. With all the criticism journalism bestows on Prussia, its basic tenor lies in the attempt to undo the reactionary class line from the old Prussian state down to the German Empire and its destruction and the subsequent disbandment of Prussia. It means a whitewash of reactionary Prussianism, exonerating it of its historic coresponsibility for the unleashing of two world wars and the fascist rule of terror.

The Dialectics of Two Class Lines

A scientific analysis of German history shows that in the Prussian state factors predominated over long periods that obstructed all progress, due to specific historic conditions. That was due principally to the privileged position of the feudal landowners and, later, of the junkers with their capitalist economy. Absolutism in Prussia let the nobility keep its extraordinary economic and social privileges and fully surrendered to it the peasants forced into serfdom. Also during the transition to capitalism in the 19th century, the nobility, now, in the "Prussian way," putting on airs as a class of the capitalist society, retained its economic, social and political power positions, by which it could continue its reactionary influence.

In this special role of the Prussian aristocratic and junkers' class is rooted the ominous continuity of militarism ranging from late feudalism to imperialism. The militarization of society, this late feudal militarism that started under King Frederick Wilhelm I, by preserving its class foundations in the 19th century, then grew into the militarism of the junkers and capitalists and, eventually, into a dangerous symbiosis with German imperialism which had come too late when the world was divided up. Thus Prussia became and remained the incarnation of militarism in the world. It pervaded all of public life and produced pride of place, nationalistic arrogance and a spirit of aggression as much as submissiveness, slavish obedience, hypocricy and bigoted offialdom.

Those were the concomitants of reactionary Prussianism which had for its maxims the suppression of any democratic aspirations within and aggressiveness against the outside. All progressive forces in German history found themselves in bitter struggle against Prussianism. Nor did Prussia have any "German calling," as bourgeois ideology has been pretending, despite some voices to the contrary, but up to the early 1860's was engaged in nothing but naked big power politics to extract maximum profits from a Germany split up into all the different feudal states. In the bourgeois transformation that had set in late in the 18th century, the Prussian state eventually

became the strongest and most evil and dangerous enemy of any democratic unification of Germany. And when, under the double pressure from economic needs and a threatening revolution from below, Prussia under Bismarck's leadership created the German national state, in blood and iron, and for all intents and purposes completed the bourgeois transformation, this limited bourgeois advance came combined with the preservation of the reactionary rule by the junkers, Prussia was not absorbed by Germany, but Germany was Prussianized. The upper hand was maintained by those reactionary forces of Prussianism that had turned antidemocratism within and aggression against the outside into a state doctrine.

This judgment on the ominous role of reactionary Prussianism in German history was elaborated in its basic features by the representatives of the revolutionary German workers movement, mainly by Marx, Engels and Mehring, and was further developed on the basis of new historic experiences through many different scientific studies in Marxist-Leninist historiography. The reactionary policies of the Prussian state, Prussianism in history and at the present, was, is and remains a subject matter of most intensive confrontation. In the course of the thus far greatest social transformation on German soil, the GDR has made a radical break from reactionary Prussianism.

By breaking the power of the junkers and monopoly capitalists, the GDR destroyed the social buttresses of Prussianism and Prussian-German militarism and thus paved the way for establishing a new, a socialist German fatherland. A central spot in this process was assigned to taking issue intellectually with reactionary Prussianism, which had proven the historic root of fascism. By destroying its social foundations, the socialist society also rid itself of the ominous social effects and traditions of Prussianism and thereby then also gained a new historic position from which the "other Prussia," the values and traditions created by the progressive classes in that state, can be tapped.

Prussian history, after all, is not confined to the work of the Hohenzollern dynasty and the aristocratic and junkers' class controlling that state. Those reactionary forces, while they decisively shaped the development of the Prussian state, they did not exclusively decide that development. It is also true of Prussia that the people's masses are making history because they ultimately constitute the decisive impulses for social progress and, as the producers and through their steady "quiet labor," create the material foundations for progress and, through their sociopolitical activities much as they may vary in the different phases of development, make the most important contribution to overcoming obsolete and enforcing new social conditions. The revolutionary activities of the people's masses ultimately, together with elemental economic needs, also forced the ruling classes of Prussia to accommodate themselves to historic progress in the transition from feudalism to capitalism.

The History of Prussia Also Has Its Progressive Traditions

GDR historiography has done a great deal in recent years to illuminate the progressive sides of Prussian history. Yet important research tasks remain to be solved in this direction. In this, GDR historiography can proceed from scientific insights by the founders of Marxism and by the leading representatives of the revolutionary German workers movement. Marx, Engels and Mehring have as long as they lived implacably opposed reactionary Prussianism and engaged in resolute struggle against all the pro-Prussian myths disseminated by bourgeois historiography. But they very accurately distinguished between this Prussianism and the social activities of the various classes in the Prussian state and thus never slighted or ignored the progressive tendencies and aspirations in Prussian history. They looked at Prussia with discrimination. They took account of the positive features the progressive classes had wrought. Nor were they oblivious of certain progress-promoting measures by some Prussian rulers. The classic authors of Marxism as much as Mehring recognized the historic place value of the Prussian reforms as a breakthrough achievement for making capitalist conditions prevail in Germany. To determine our own relationship, as a socialist German state, with Prussia's legacy we need not revise the image of Prussia as held by the revolutionary German workers movement, as bourgeois ideologues claim we have to. In our preserving and fostering the progressive traditions from Prussian history we also can pick up the insights of the leading representatives of the German proletariat.

Prussia was not only the state of the Hohenzollern and the country bumpkins, of militarism and aggression. Prussia also was the country of important peasant revolts late in the 18th century and in the 1848 revolution, the place of the liberal aristocratic reformers between 1807 and 1813, the part of Germany where the capitalist development went most rapidly and assumed the widest scope in the 19th century, and in the metropolis of which, in Berlin, the German bourgeois-democratic revolution reached what probably was its most important climax, on 18 March 1848. Here also it was where a strong workers class grew up which took up its independent struggle against semi-feudal Prussianism and the bourgeois exploiter system early in the game. The at times rapid and comprehensive development of Prussia in its economy, social structure and culture in the era of transition from feudalism to capitalism and, especially, in the time of the bourgeois transformation in the 19th century cannot be detached from the historic achievements of the working classes and strata, the peasants, petty bourgeois, the young working class, the progressive intelligentsia and, indeed, also the rising bourgeoisie.

During certain developmental phases and in certain areas, exploiter classes also contributed to Prussia's progress--as they did in all other class-antagonistic states as well. Marxist-Leninist historiography keeps its distance from idealizing the masses as much as frommoralistically denying progress potentials in exploiting classes. It objectively takes into account the antagonistic character of social progress under exploitative

conditions, the fact, that is, that under such conditions social progress to a large extent is brought about through exploitation. Not only the production organization and coordination but also the concentration and application of the surplus product as wrought from the working classes is among the functions of the exploiter classes.[3] Marxist-Leninist historiography here insists on the essential value criterion for how much the surplus product, though used throughout in the class interest of the exploiters, at the same time also is employed for the advance of progress. And finally it inquires into the "historic mission" of any given exploiter class seeking predominance in the class struggles to do away with the old and establish a new social order, that is, into whether and how much it exercises its responsibility as the leadership force for all classes in the new society.

As to the history of Prussia, this mainly involves the role of the Prussian bourgeoisie in the process of the bourgeois transformation of Germany. We have to inquire also, however, into the achievements by representatives of the Prussian nobility which, when the bourgeois society came to prevail, transformed itself into a capitalist junkers' class, in getting the bourgeois transformation started and completed. For there is no homogeneity within an exploiter class, it is diversified and composed of diverse fractions which also take different positions on the tasks of any given era. The Prussian nobility also produced various progressive representatives and had a liberal wing in the 19th century that advocated bourgeois, if moderate, progress. Finally we shall have to explore how the representatives of the nobility, notably the "crowned heads," in the Prussian state, applied the surplus product gained through exploitation, how much it served the advancement of progress or was used to block it.

The Janus Head of Absolutistic Prussia

A judgment on that for the age of absolutism will not be able to pass by the undeniable fact that Prussia's rulers used the means extorted from the people to insure their own class rule within and their active and aggressive foreign policy. Since Frederick Wilhelm I, roughly two-thirds of all state revenue were devoured by a gigantic standing army. Based on that, Frederick II conducted wars of conquest, annexed Silesia and engaged in the first division of Poland. That did not fail to have negative effects on the productive forces and the weak stratum of commercial and manufacturing capitalists then developing.

Under the conditions of the transitional era from feudalism to capitalism, securing late feudal class rule however also depended on the willingness by the princes or some progressive civil servants and aristocrats to accommodate themselves to the new trends in development. Prussia's rulers could not evade the effects of the era either. Up to 1640, when Elector Frederick Wilhelm came to the throne and the rise of Prussia began, there had only been one country in which the bourgeois revolution had won, the Netherlands. At the same time, with the start of the bourgeois revolution in England,

the emancipation struggle of the European bourgeoisie reached a new and higher level. When Frederick II died in 1786, the bourgeois transformation had already spread to the American continent, while France had come to the eve of its great bourgeois revolution which initiated the definitive triumph of capitalism in Europe. These transformations did not remain without effects on the feudal states, mainly because their internal structure was also beginning to change. Absolutism, coming to prevail then in many European states, ultimately was a form of accommodation to these new phenomena.

In Brandenburg-Prussia, leading representatives of the ruling class--even if for egoistical class interests--developed a relatively high willingness to accommodate. There, up to the last third of the 18th century it was greater than in many other German territorial states and ranged from imitating and restructuring progressive developments in more advanced states to adapting bourgeois ideologies to the backward feudal conditions all the way to the further development of the machinery of state. So Prussia's rulers got many suggestions for developing their government system, with respect to their commercial policy and army organization for instance, from the bourgeois Netherlands. This focus on the Netherlands was later supplemented by taking over experiences in the agricultural field from bourgeois England. The success of these efforts remained a limited one, to be sure, because Prussia's ruler would not touch the privileges of the nobility and would grant the bourgeoisie merely a narrow leeway for development.

In comparison with other West European states, Brandenburg-Prussia remained a backward country. Its population, mainly the feudally exploited peasants, lived in poverty and under the constant pressure from the landowners and the omnipotent machinery of state which would extort all and everything from them on behalf of the standing army. As the objective in the policy of accommodation never was the well-being of the people, the electors and kings did not care about social progress toward capitalist society either. Prussia's rulers engaged in dynastic power politics; they wanted to strenghten their state. For that purpose they took over experiences of the Netherlands, England and France.

Yet intention is not identical with effects in the history of the exploiter societies. The Hohenzollern, sure enough, reached their goal and in the course of the 18th century became the most powerful princes in the empire, along with the Habsburgs. Simultaneously, however, they inadvertently loosened existing structures of feudal coinage. The monarchy could not be strengthened economically without protecting the weak manufacturing bourgeoisie and without a minimum of cooperation.

The ability and willingness for accommodation were in the last analysis reflected by absolutism itself which, under the conditions of the transition to capitalism, insured the rule of the nobility. In spite of all its peculiarities, expressed in the enormous weight of the feudal landowners and in the

militarization of public life, one of the achievements of Prussian absolutism lay in the limited encouragement it gave to the productive forces. This includes principally the domestic colonizing stimulated by Prussian kings, mainly by Frederick II, the cultivation of fallow regions like the Oder basin or the construction of important canals. This expansion of the culture landscape goes to the credit of Prussian peasants and busy colonizers, some of whom had been expelled from other states for religious reasons. Under the prevailing conditions it could not have been carried out without the state playing an active role, i.e., without its financial resources, the work of experienced engineers and the employment of organizationally skilled civil servants.

Typical of Prussian absolutism was the development of the state machinery, by which the Prussian rulers consolidated their domestic rule, enforced their militarization of society—military modes of conduct were to a large extent carried into civilian life—, and shored up their aggressive foreign policy. The dialectics of history brought it about that thereby the state apparatus reached a high degree of centralization and "rationality" ever since the 1720's. Orderliness in finances and thrift now came to be the vogue at the Prussian court. Among the myths of Prussian historiography is that of the incorruptible, upright Prussian civil servant. Much could be objected to that. Nonetheless, there was still enough order and incorruptibility for the Prussian administration to serve as a model for the reforms by other absolute rulers and for the French apostles of enlightenment in the second half of the 18th century to derive a sense of reliability from it.

Noteworthy in Prussian absolutism furthermore was a certain encouragement for science and culture. "In fact, in its dealing with science one can discern the progressive face of the absolutistic Janus head," the GDR's noted Romance scholar Werner Krauss wrote about the European absolutistic states.[4] In Prussia, to be sure, this process had no continuity. Nor did it embrace the whole breadth of cultural development. Even so, science and culture gained a relatively wide margin, especially under kings Frederick I and Frederick II. In those years Prussia became an asylum for German or French men of the Enlightenment. On the initiative of Leibniz and under his direction the Prussian Academy of Sciences was established in 1700. In the further development of Berlin important monumental structures were created such as the opera Unter den Linden, designed by Knobelsdorff, and its forum. They, as much as the structures at Sanssouci belong among the architectural treasures that have come down to us from that period and for the restoration and maintenance of which the GDR government spends copious sums.

None of this abridges in any way the class character of Prussian absolutism. The bourgeois transformation, whatever the bourgeois historians may claim, did not start with the enlightened absolutism of a Frederick II. The reforms by the Prussian king inhered in his system. Nowhere did they cross the boundaries of feudal society, and they stopped precisely at the point where the interests of the feudal nobility would have been impinged. Rather, what was needed to initiate the bourgeois transformation in Prussia was the great French Revolution.

Prussia and the Bourgeois Transformation--Revolutionary or Reformist?

Prussia's position was ambiguous in this new world historic era. The Prussian state belonged among the most active reactionary powers trying everything possible for one and a half decades, by invasion attempts and counter-revolutionary wars against revolutionary France, to cancel the revolutionary bourgeois achievements in France gained by the 1789-1795 revolution. After 1815, Prussia, together with Austria and Russia, would form the international reactionary alliance, the "Holy Alliance," that would seek to nip in the bud any bourgeois-oppositional movement in Europe. In 1848/49 it was, along with Austria, the most powerful adversary of the bourgeois revolution in Germany.

The destruction of the Prussian state then was a condition for a democratic unification of Germany and, at once, a requirement for making bourgeois-democratic conditions prevail in Central Europe. "The Prussian state with all its setup, its tradition and its dynasty was exactly the only serious internal enemy the revolution in Germany had to overcome," is the judgment of Friedrich Engels. "Disbanding of the Prussian and disintegration of the Austrian state, true unification of Germany as a republic--there could be no other revolutionary program coming up for us."[5] The destruction of the Prussian state was the objective of all revolutionary forces in the 19th century. For this state, ruled by the junkers' class, not only provided the actual backing for the semifeudal reaction in all of Germany, but it became the main force itself seeking an antidemocratic solution of the tasks of the bourgeois transformation, the power center of a "revolution from the top."

Simultaneously, however, important positive impulses for bourgeois progress in Germany sprang from the revolutionary activities of the peasants, plebeians and workers, from the work of liberal Prussian aristocrats, and from oppositional efforts in the Prussian bourgeoisie. The effects of the French Revolution and the revolutionary wars, most clearly revealed in the striking defeat of the old Prussian state at Jena and Auerstedt, and the simultaneous pressure by antifeudal movements in Prussia, while they were not sufficient for overthrowing the reactionary junkers' class and setting the bourgeois society in Prussia on its revolutionary course, did yet create enough sociopolitical leeway for liberal aristocrats since 1807 to pave the way to the bourgeois system through reforms. Even if these reforms were kept within bounds as determined by the junkers' interests and still further restricted since 1815, progress, through the initiation of the bourgeois transformation in Prussia, still assumed national dimension and radiation. While the Prussian reforms did not reach the degree of the transformation brought about in the West German areas more strongly affected by the French Revolution, they were still more decisive and comprehensive than in many other German territorial states.

It explains why bourgeois patriots looked to Prussia then and thought they saw a center of progress in it and why Prussia, in the struggle against the foreign rule under Napoleon, became a center of national resistance

and could play a historically positive role during the war of liberation in 1813. Thanks to the activities by the popular masses, released and encouraged by the reforms, the war of liberation assumed features of a people's liberation struggle. GDR historiography has already done a great deal in the early 1950's, mainly in connection with the 140th anniversary of the war of liberation, in scientifically elaborating and creating awareness of the progressive traditions of the Prussian reform period. The stimulating television film about Scharnhorst has recently picked up those efforts. Historical science and propaganda ought to pay tribute in the future, above and beyond the merits of the military reformers, to the achievments of the reformers in other areas of social development as well.

Also in the struggle against the political restoration of aristocratic rule after 1815 and in the time of the preparation and implementation of the bourgeois-democratic 1848/49 revolution, progressive class forces in Prussia played an important role. Not until the Prussian bourgeoisie headed the feudal opposition in 1840, it assumed a national scope, and a development was initiated that led to the 1848 revolution. Its resistance against the Prussian government at the first united Landtag in 1847 formed the climax in the political-progressive struggle by that class for extending the bourgeois transformation. This was the most important example of the German bourgeoisie's actively assuming its hegemony. All the more apparent then was the betrayal by the Prussian bourgeoisie during the 1848 revolution, when it surrendered its claim to power out of fear of the people and the independently acting workers class.

The class struggles in Prussia were of a decision-making character throughout the revolution. On the one hand, what happened in Berlin on 18 March 1848 smashed the omnipotence of reaction in Germany. On the other hand, the defeat of the revolutionary forces in their struggle against the coup d'etat of the crown in November 1848 ushered in the decisive counterrevolutionary reversal in Germany. In the 1860's Prussia became an important center in the struggle between revolutionary and counterrevolutionary forces for ending the bourgeois revolution in Germany. Along with more immediate economic needs, the revolutionary mass movements were what forced the Prussian junkers to enforce the most important demands of the 1848/49 revolution, even though in their own specific manner, by a "revolution from the top." In the final phase of the bourgeois transformation, the work of the doubtless most far-sighted representative of the junkers' class, Otto von Bismarck, whom Friedrich Engels called a "royal Prussian revolutionary,"[6] had progressive consequences, even though strongly confined by the interests of the junkers' class.

To the extent that Prussia, in consequence of the industrial revolution, became the economically strongest and most important German state, having important industrial centers of Germany at its disposal in the Rhineland, Silesia and Berlin, it also became the main field for the German workers class to constitute itself economically, socially and politically. The weavers' rebellion in Prussian Silesia in 1844 sparked the active movement

of the German proletariat. Rhenish Prussia became a chief bastion of the first Marxist party, the Communist League, in Germany. The Rhenish metropolis on 3 March 1848 experienced the first independent political action taken by German workers, initiated by the communists, during the 1848 revolution. Cologne in 1848/49 became the headquarters of the communist vanguard. There, the first independent newspaper of the German proletariat, the NEUE RHEINISCHE ZEITUNG, was published. Berlin and other Prussian cities became centers of the first large strike movement of German workers in the spring of 1848. In the Rhine Province as well as in Berlin, members of the Communist League secured the revolutionary continuity throughout the period of reaction and had a significant share in the new upswing of the workers movement in the 1860's. The Universal German Working Men's Association, founded in 1863, had its most important bases in Prussia. In Berlin, Magdeburg and several Prussian cities on the Rhine, the first organized groups of adherents to the International Workers Association sprang up in the mid-1860's. In the struggle against Bismarck's Anti-Socialist Laws, the Prussian regions, because of the strength of the workers class there and its direct confrontation with Prussianism, became centers for the development of the revolutionary German workers movement.

The German Bourgeoisie--Heir to Reactionary Prussianism

The unification of the empire in 1871 became a decisive caesura in the history of Prussia and of the German people. This event was contradictory in character. Doing away with the splintering of Germany and forming a bourgeois German national state meant significant social progress. Because a united German state conformed to the needs of capitalist development. It facilitated a rapid development of the capitalist mode of production and of the modern industrial proletariat and finally offered the socialist workers movement new opportunities for forming on a national basis. It was in this sense that Marx wrote to Engels in 1870: "If the Prussians win, then the centralization of state power [will be] useful for the centralization of the German workers class."[7] At the same time, the founding of the Reich was a victory for Prussian reaction. The German bourgeoisie carries part of the blame and a special responsibility for it. Once again, afraid of a democratic popular movement, it had betrayed its own historic class tasks and formed an antidemocratic reactionary class alliance with Prussian junkerdom, in which the latter exercised the predominant political influence. This enabled the bourgeoisie to conserve and preserve arch-reactionary Prussianism far into the 20th century, becoming one of the pillars of Prussian-German militarism.

The 1871 unification of the empire fastened together the unification with Prussianism and militarism. It provided Prussia with supremacy in the German Empire, securing that supremacy by the especially reactionary class and government structure of that state which would then essentially determine the policies of the German Empire. The historically fateful relationship between Prussia and the empire was the result of capitalism's counterrevolutionary prevailing over the militaristic founding of the empire and therefore also remained a fundamental social problem--as long as the empire

and Prussia existed. "The German Reich," Friedrich Engels wrote in 1886, looking into the far distant future, "is placed in vital danger by its Prussian foundation."[8] Prussia's supremacy in the empire led to the further expansion of militarism. The military apparatus and its administrative and planning organs remained almost completely outside any parliamentary control. In terms of its class structure borne mainly by junkerdom and parts of the haute bourgeoisie, and pervaded by specifically Prussian caste prejudice, this forceful militarization, for antidemocratic motives in domestic policy and aggressive motives in foreign policy, for all intents and purposes became the "state's main purpose."[9] The military apparatus and its executive organs were given crucial political weight in deciding all domestic and foreign policy questions.

After the unification of the empire in 1871, Prussia had lost the last function still connecting it with social progress in Germany. Now it became a bastion of reaction all the way through. The systematic Prussianization of Germany began. As the Prussian prime minister and its chancellor at one and the same time, Bismarck started an extensive campaign against the Social-Democratic workers movement in this newly founded Prussian-German empire and for 12 years kept the notorious Anti-Socialist Laws alive. The Prussian militarists engaged in a systematic mobilization of the German army and started building a navy with which to threaten England. By having stolen Alsace and Lorraine, Germany had already made a permanent enemy of France.

German imperialism, developing since the turn of the century, which had arrived too late when the world was divided up and which, to quote Lenin, was essentially bourgeois junkerdom imperialism, found its most important tool in Prussian militarism and the most obedient executors of its rapacious policy in the Prussian ministerial bureaucracy, which eventually led to the catastrophe of World War I. The November Revolution in Germany, breaking out under the influence of the Great Socialist October Revolution, did weaken the positions of Prussian reaction but did not render it impotent. The Rhenish-Westphalian heavy industrialists and the junkers east of the Elbe, embodying reactionary Prussianism in the 20th century, conducted the counterrevolution and the fascist "seizure of power." It was patently symbolic that the Prussian General Field Marshal and German Reichspraesident Paul von Hindenburg appointed Adolf Hitler chancellor and, in March 1933, demonstratively stood at his side in the garrison church of Potsdam in front of the sarcophagus of Frederick II.

Not until World War II was lost, which had, on behalf of German monopoly capital, been unleashed by the fascists and had been conducted by generals reared in the Prussian tradition, some Prussian conservatives recalled the Tauroggen Convention and Bismarck's warnings never to let a conflict with Russia arise. Some of them took part in the antifascist resistance struggle and found their way to the Free Germany National Committee. The influence of Prussian reaction had proven so fateful however that the victorious allied powers officially dissolved the Land of Prussia by a control council

decision in 1947. Dissolving the Prussian state was a necessary historic act and conformed with the centuries-old historic experiences the German people and other European peoples had had with militarism and reactionary Prussianism. Yet the actual destruction of reactionary Prussianism could come only through the progressive forces of the people itself under working class leadership. With the revolutionary elimination of imperialism on GDR soil, the economic, social and political roots of Prussianism likewise were destroyed.

The Marxist-Leninist picture of Prussia has clear and sharp contours. It is based on the realization that Prussian history too is governed by the dialectics between two class lines. It avoids all one-sidedness and absolute terms and unmistakably brings out the reactionary features inseparable from the development of that state entity. At the same time, however, it also includes all those historically grown values, the positive values that come from the efforts of progressive classes--even in as reactionary a state as Prussia, and those are the ones that our discriminating understanding of our inheritance accepts, preserves and fosters as our traditions. The ideological class struggle against present-day imperialism calls for a confrontation, on principle, with all manifestations of reactionary Prussianism which find their continuation under the imperialist conditions in the FRG. The development of socialist society in the GDR, where the social roots of Prussianism have been eliminated, demands however that we tap all positive and progressive achievements and traditions also found in Prussian history and integrate them with our own store of traditions.

'Prussia's Image' for Workers Class

East Berlin BERLINER ZEITUNG in German 20-21 Sep 80 p 9

['Reflections for the Weekend' column by Ottomar Harbauer: "Prussia, History, We and Others"]

[Text] Prussia--that word arouses ambiguous feelings, surely.

By Law number 46 of the Allied Control Council for Germany, of 25 February 1947, that Land was officially dissolved. Properly called there the "cradle of militarism," it had perished as the heartland of the "Thousand Year Reich" and together with it.

It has nothing certainly to do with apolitical nostalgia if in the state west of our border, which wishes that so much should continue to exist that has long been dead, new myths about Prussia are invented and added to the old ones. After everything that has happened in German history, no one may be indifferent to which image of Prussia it is that is publicly being sold there, and for whose benefit. And especially it does not leave us unruffled if one intends to attribute to the GDR a view on Prussia, for transparent political reasons, that is far removed from reality.

The revolutionary German workers movement has always had a vivid interest in the past, and not only in that of its own class. It advanced while taking critical issue with history and constantly absorbing progressive and humanistic ideas of the past. Reactionary chatterers often have accused the GDR of having a ruptured relationship with, or even escaping from, German history. A dumber claim than that has never been made. Deeply rooted in this history itself, tied up with it through thousands of spiritual threads, the GDR at once faces up to the totality of our historical inheritance. Prussia is part of our past.

Marx and Engels, Mehring and Karl Liebknecht handed down to us a cogent characterization of reactionary Prussianism. Implacably they fought against militarism, which infested all life in the Prussian state like weeds, sought to choke any democratic sentiment within, and attacked other peoples by its aggressions. The Prussian sense of submissiveness (which would later be held up to ridicule in a masterly fashion by Heinrich Mann), the nobility's overbearing sense of dignity of rank and its arrogant intellectual stupidity were the targets of their acerbic mockery. At the same time, however, they never disregarded the progressive elements in Prussian history.

The image of Prussia held by the German workers class thus has long had clearly delineated contours. No cause for revising it exists.

If we today can discern still more lines within these contours and lights and shadows protrude more prominently, it certainly has something to do with the fact that our country after 1945 took thorough critical issue with reactionary Prussianism and eradicated its social and political roots. It became possible to take a calmer view on that period of German history. Our image of Prussia became more differentiated.

Prussian history of course includes also the achievements and political actions taken by the people, the liberal bourgeoisie, the noted reformers and the patriots among the military leaders. Famous sculptors and architects worked in Prussia, without whom there would be no Sans Souci and no Linden Forum, and important poets and painters. And without the great scientific achievements of that time, our people's intellectual reservoir would be much poorer. Prussia, after all, also was the center of modern industrial development, and that means of the revolutionary German workers movement.

We look at history as it has been, in all its dialectics, i.e., its contradictoriness, with "good" and "evil" existing in juxtaposition. This discriminating view also applies to the ruling classes and their representatives, even though we certainly have no desire to "turn" Prussian kings into heroes of progress.

But this is the way it is: Based on our condemnation, in principle, of reactionary Prussianism, we also critically investigate that period of our history and, in doing so, discover quite a lot that can satisfy the legitimate working class claim to preserving our historic legacy and be absorbed in our socialist state's store of traditions. That will then also be withheld from being misused for nationalistic purposes.

If that galls them on the Rhine—we could not care less.

IMPORTANCE OF NATIONAL, LOCAL PATRIOTISM EXPLAINED

GDR Citizens: Patriots, Internationalists

East Berlin NEUES DEUTSCHLAND in German 26-27 Jan 80 p 9

['Blickpunkt' (Focal Point) feature article by Dr Guenter Kertzscher: "We Really Have Our Fatherland--Reflections After the 11th SED Central Committee Session." For references to other discussions of the subject see translation of an East Berlin EINHEIT July-August 1980 article published under the heading, "Need for Intensified 'Homeland History' Study Discussed," in JPRS 76481, 24 Sep 80, No 1815 of this series, pp 103-111]

[Text] When I talk of the "territory" of the GDR, I am using a concept that can be handled most soberly. I refer to a piece of the global surface of our planet, defined by a marked national border and with appropriate aspects in terms of geography and international law. If I talk about "fatherland," I am using a word to which there is more than merely a concept. It--like the moon at hazy days--is surrounded by an aura made up of sentiments, experiences, historical memories, attractive or repulsive, never leaving you indifferent. You must listen to the sound of the word, whether it is big and full or tinny and hollow.

In Hoelderlin's poems, "fatherland" has a lofty sound, and also in Schiller's language: "Your fatherland, so dear, that you must join, and hold it firmly with all your heart, there are the mighty roots of all your strength." Hollow and suspicious the word sounds in "Deutsche Kriegslieder" (German War songs), published in 1914. Actually it is not a matter of the poets' linguistic gift, for there were noted people among their authors. It depends on the historic circumstances which stand clearly before our eyes: Under the slogan that the peoples had to defend their fatherland they were driven into imperialist war--and not only the German people. In our language, the word "fatherland" has long not been able to recover from that abuse. Not until the GDR was founded, under entirely new circumstances, we use it with good conscience and without holds barred.

Homeland Sentiment and Patriotism

In the "Communist Manifesto," Marx and Engels put it like this: "The workers have no fatherland." That is a point of polemics. It addresses the accusation that the communists wanted to abolish the fatherland. And then the text continues: "We cannot take from them what they don't possess. Since the proletariat must first of all acquire political supremacy, must rise to be the leading class of the nation, must constitute itself as the nation, it is, so far, itself national, though not in the bourgeois sense of the word." This somewhat qualifies the apodictic statement that the workers have no fatherland. One could put it like this: They do not have it. That means they live in it but do not possess it. It is owned by the exploiters. The exploited are treated poorly in this fatherland. In that sense they do not have one.

But they do have a homeland which they certainly love no less than do the ruling classes in capitalist society. Love for the homeland is the centerpiece of patriotism.

In the Weimar Republic period, in 1929, Kurt Tucholsky published a book with the ironic title "Deutschland, Deutschland ueber alles" (Germany, Germany Above Everything). It is full of mordant criticism of that society, of those circumstances that would give rise to fascism and war. But its last chapter deals with the love for the homeland. The author writes about "his" country: "It begins in Central Germany, where the air is so clear above the roofs, and the more northward you go, the louder beats your heart, until you sense the sea. The sea—. As already for kilometers before, every pole and every thatched roof suddenly gains a deeper importance . . . here we stand only, they tell us, because right behind us is the sea—and the sea is what we are there for. Wind-blown is the shrubbery, on fine sand you gnash your teeth . . ."

The whole section is an affecting expression of patriotism. The author might have rejected that word, and this quite properly so because he does not include the state and society in it. Those he hates. And still he does not want to give up his fatherland: "And just as the national associations are drumming across the roads--with the same right, the very identical right, we, having been born here, and writing and speaking a better German than most of the national asses--with precisely the same right we claim the river and the forest, the beach and the house, the clearing and the meadow: our land it is."

Abuse of the Word Fatherland

In that sense the workers too have always had a fatherland: their land, *their language, their local dialect, the humanistic culture of their* people. And politically? Not the ruling bourgeois state could be their fatherland, but the tradition of their revolutionary struggle was already part of it. After all, as Marx and Engels put it, they struggled to

"constitute themselves as the nation." Thus their fatherland to them, to quote what Lenin said later, is the "given political, cultural, social milieu" of the class struggle. The revolutionary proletariat could not be indifferent to the conditions for its struggle. Just because at no time the fatherland was an indifferent matter, the imperialist bourgeoisie was able to misuse the ties of all the working people with their fatherland.

Against this abuse Lenin fought rigorously during World War I. "There is no other way to 'defend one's fatherland' in Europe in the 20th century," he wrote, "but by fighting with all revolutionary means against the monarchy and the landowners and capitalists in one's own fatherland, i.e., against the worst enemies in one's homeland."

It was a matter of turning the imperialist war, mendaciously ballyhooed as the defense of the fatherland, into a struggle for liberating the fatherland from imperialism. In 1918 Lenin called for the defense of the fatherland. The October Revolution had then taken place. Now the Russian workers defended their fatherland, for now they had a fatherland in the true sense of the word.

We too today have a fatherland in the full sense, the GDR. It is our land between Cape Arkona and the Fichtel Gebirge. Socialist conditions see to its being a true fatherland without any restraints. We are working together and for ourselves. We have achieved something, have experienced something in common, and are jointly planning our future. It gives rise to the sense of of "we" that connects us. For the 30th anniversary of our republic, we paid tribute to our common path, the achievements we have accomplished, the battles we have won. It was a holiday at which, as Erich Honecker said in his report to the 11th Central Committee session, the GDR citizens demonstrated "their deep love for their socialist fatherland."

The fatherland provides safety as well as space for our developing capacities and capabilities. It offers security and protection. The well-being of men, the happiness of the people, that is the meaning of socialism. That is our country's supreme precept.

We Are Prepared to Defend It

A fatherland lives through its citizens. The result of labor determines the standard of living. Among us, in socialism, both sides are closely and directly connected with each other. Not only labor is wanted but also a sense of responsibility, stock-taking, initiative. We are all for our fatherland. We are ready to defend it any old day whenever anyone comes to defame or insult our fatherland. Our allegiance to our socialist fatherland is an essential element of what we mean by human dignity.

The love for our fatherland does not blind us to everything else. We are no chauvinists. We appreciate what other peoples have achieved and are achieving. We have respect for their peculiarities. We feel part of the

family of socialist states and know of our commitment to that community. Our policy is borne by a sense of coresponsibility for peace all over the world. Thus we are patriots and internationalists at once.

LDPD on Promotion of Patriotism

East Berlin DER MORGEN in German 11 Jun 80 p 3

[Excerpts of speech by Gerhard Lindner, member, Political Committee; secretary, Central Executive Committee, Liberal Democratic Party of Germany (LDPD); given at recent Political Committee meeting in House of Ministries, East Berlin: "Homeland Sentiment and Action." A translation of a July 1978 article defining the GDR's historical traditions, published by the party's monthly organ, see JPRS 71785, 31 Aug 78, No 1582 of this series, pp 3-5]

[Text] The LDPD members in the residential areas concentrate their commitment on the shaping of universally interested personalities for whom patriotism, homeland sentiment and national consciousness, social activity and a sense of community are important and indispensable values in life. With constituting the socialist nation in the GDR, the promotion of patriotism, of consciously feeling at home, and the deliberate presentation of the various elements that document our national identity play an ever increasing role in our theoretical thought and our cultural life in practice.

The citizens' identification with their state, their town, their residential area keeps reasserting itself as an important social impulse for the will for achievement and for being interested in all territorial problems. If love for one's immediate home area and the pride in what one has achieved oneself combine with a view at the historic lines of development and with respect for the national identity of other peoples, patriotism will produce those patriotic and internationalist values that are commensurate with the ideals of the workers class.

Homeland sentiment thus is an essential motive, object and subject of activity in cultural policy. That is served first of all by animating our intellectual-cultural life in the whole breadth of the culture concept in the residential areas. It is served by all those relevant intellectual concerns, all the cultural offerings, all the sports activities which make the citizen find out the residential area offers the place and space for his personality development, allowing him to develop and satisfy his needs.

And then, the development of homeland sentiment is served by a whole number of specific forms of cultural work and activity which have become more prominent in recent years and the encouragement of which also calls for our party's participation. We refer to the appropriation, cultivation and further development of traditions and of our cultural legacy in its whole breadth, the preservation, fostering and further development of customs and habits and territorial peculiarities, of folklore and natural and local history, the memorials, the care for the eye-witnesses of human capabilities and much else besides.

Many party friends in all bezirk associations have committed themselves to this task at work and at leisure time. Broad is the palette of our party friends' participation in the preparation for the folklore festival within the 18th workers festival to be held this month in Stralsund. Our party friends are working with dedication within the circles of our friends in the newly founded societies of the GDR Culture League, such as the society for memorial sites, the society for local history and the society for nature and environment.

In regarding the residential area as an essential place for personality development and for shaping the socialist way of life, which is intimately connected with the sphere of work and the sphere of individual life, it becomes clear that the forming of the socialist way of life here too connects with doing away with old habits of thinking and living, and with confronting late bourgeois models of behavior.

The socialist way of life does not form by itself and certainly not without turning back all attempts at ideological diversion by our imperialist enemy. It therefore is necessary, throughout the creative process that forms the socialist way of life, to deal with basic issues, to give oneself an accounting of what has been achieved, and constantly to consolidate one's political-ideological standpoint again in the struggles of our times. That also is why we regard our party events as an indispensable part of our intellectual life in the residential areas.

All who work in the residential areas must give further thought to two things: (1) How can we fully tap available reserves and, through new ideas and initiatives, and by involving additional forces, further extend the advances made in the National Front community; and (2) what are the new demands and possibilities resulting from the rapidly proceeding changes in our socialist reality.

Higher intensity and increased labor efficiency is the most important source of culture in socialism, as our cultural level, in turn, is an important source for improved labor efficiency.

At the end of the speech, the tasks for the LDPD executive committees in promoting cultural-intellectual life in the residential areas were summarized under five points. They include a penetrating clarification of the fundamental cultural aspects of party events resulting from social development, the promotion among all party friends of the desire for culture, the constructive political-ideological work in each basic unit and its influence on the cooperation within the National Front, as well as the active participation by the Liberal Democrats in all tasks in the residential areas.

AUSTRIAN GENERAL INTERVIEWED ON MILITARY IMPLICATIONS OF STRIKES

DW110856 Bonn DIE WELT in German 9 Sep 80 p 5

[Interview of Gen Wilhelm Kuntner, commanding officer of the Austrian army's leadership academy by Carl Gustav Stroehm, date and place of interview not given]

[Text] There are many indications that Poland has not calmed down yet by a shot. And the tones from Moscow grow sharper. The "brotherhood-in-arms" fall military exercises of the Warsaw Pact have been in progress since yesterday. Reminiscences of Prague come alive. How alarming is the situation? This is the topic on which DIE WELT interviewed Austrian General Wilhelm Kuntner.

WELT: General, do you still consider the Polish army a reliable ally of Moscow and of the Warsaw Pact after the latest strikes and revolts in Poland?

Kuntner: ARMEE RUNDSCHAU, the journal of the GDR People's Army, wrote in July this year: "Today the Polish Army is considered a modern coalition force within the combined armed forces of the Warsaw Pact countries. The PZPR--with which 85 percent of the officers, every other professional noncommissioned officer, and 23 percent of the soldiers are affiliated--consistently insures a constantly closer concerted action especially with the Soviet Army, the National People's Army and the Czechoslovak People's Army."

This is a quotation from a journal of the Warsaw Pact shortly before the outbreak of the strike. Perhaps we ought to phrase the question thusly: To what extent is the PZPR still a solidly structured, integrated instrument among the East Bloc's Communist parties?

Parallels exist here with the events of 1968: but with a converse effect. In Czechoslovakia it was the new leadership elite of the communist party which had set its sights on, say, a friendlier communist social system and immediately was accepted by the party have been enforced by means of pressure from below. The future will tell whether the Polish Communist Party with its present leadership is credible to the leading Soviet power or whether a change will start this Polish party, albeit not in the direction of further concessions, but in the direction of a hardening of the situation.

WELT: So you do not see any chance for further concessions from the party to the people?

Kuntner: The limits of these concessions do not depend so much on the Polish party leadership as on the interests of the leading power of the Warsaw Pact, that is, the Soviet Union. The tones we are hearing from Moscow these days are not a good omen. However, it will depend on Moscow as to whether something can emerge in the Warsaw Pact which so far has been unprecedented.

Every West European should be gratified if this happens--yet every thinking person ought to ask himself soberly whether anything like what has now happened in Poland is possible at all in a communist country and in a communist alliance.

WELT: Suppose the development takes a negative turn, how would you assess the combat potential of the Polish Army? Do you believe that this army--as threatened already by the Polish army paper a few days back--would allow itself to be used internally in a conflict similar to civil war?

Kuntner: Since I know Poland and the Poles I venture to doubt that an army like the Polish army with its total of 300,000 men could be used against its own people, despite the fact that many communists are in that army. This may be different in the case of the 70,000 men of the security forces, including the border troops, which are under the supervision of the Ministry of the Interior. But then, the orders of magnitude are different: those who went on strike numbered many hundred thousand men and they now have certain expectations--they are perhaps in a sort of euphoria. If these expectations are not fulfilled, we have to fear indeed that internal conflicts will be inevitable--especially if the Polish working people are too greatly disappointed.

I believe that what matters to this Polish workers' movement is not so much as improvement in the economic conditions, but having a chance to live as central Europeans: with the basic rights of freedom, without censorship, and in a society in which man is not just an instrument of the party bureaucracy but really can be a human being.

WELT: Do you consider a Soviet military intervention to be feasible, possible--or ruled out?

Kuntner: Something that has happened once before cannot be ruled out. I believe that the Soviets will try very hard to keep their own armed forces from becoming involved in an internal conflict of a Warsaw Pact state, particularly now, shortly before the Madrid CSCE followup conference slated to begin in November in Madrid. But, on the other hand, it is absolutely clear to me that when the collective security of the Warsaw Pact states is involved, as Moscow interprets it, the Kremlin will not shy away from an armed intervention in Poland as a last resort.

WELT: What size military force would something like that require? Would the troops of the pact maneuvers "brotherhood-in-arms 80" suffice, the troops that are being concentrated now close to the Polish border on GDR territory?

Kuntner: The maneuvers taking place now in the GDR were announced a few days prior to the Polish strikes. A total of 40,000 men are involved. That would be too few for an intervention. Moreover, the Soviet Union has stationed 20 divisions in the GDR alone, in Poland there are two-to-three Soviet divisions,

and another 30 divisions are stationed in the European part of Russia, that is East of Poland. Alerting these units or marching them off is certainly not a problem for a big military power. I see no connection now between the Warsaw Pact maneuvers and developments in Poland.

WELT: Could you imagine a military collision between the Polish and the Russian armies?

Kuntner: In the Czechoslovak crisis, that is in 1968, many people were surprised that the CSSR army did not resist the Soviet invasion at all. We know today that this army was trained for more than two decades that the enemy and invader would come from the West. It seemed impossible to turn the Czechoslovak Army around in a few hours, saying that invaders were coming from a completely different side, namely from the East.

That would be different in Poland due to a long tradition, and maybe also due to the fact that Poland does not have a border with NATO. The Poles have a different awareness with regard to their state and people than the Czechoslovaks. Soviet military planning, therefore, would have to take into consideration, in contrast to 1968, that the Polish Army might not side with the Warsaw Pact everywhere, and that at least parts of the Polish Armed Forces could side with the Polish people and the workers, just as in Hungary in 1956.

WELT: How many troops would the Soviets have to use militarily in order to carry out a successful intervention in Poland?

Kuntner: Well, that depends on the assessment of the Polish Army, but if the Soviets want to exert control over Poland very quickly--just to create a fait accompli vis-a-vis the world public--they would have to set up at least 20 divisions in the East as well as in the West so as to starve out the reoccurrence of such movements as in Gdansk.

WELT: How long do you think it would take to make preparations for such an enterprise vis-a-vis Poland?

Kuntner: The preparations for the Soviet intervention in Czechoslovakia in 1968 lasted for many weeks, but at that time it went parallel with several Soviet attempts to solve the problem politically. Purely militarily--that is, without the attempt to achieve a political solution--the Soviets would need 1 week for the concentration of troops in the case of Poland. But we would spot that in time.

WELT: Could it happen to Western politicians and military men that they might wake up some day unsuspectingly while the Soviets have invaded Warsaw?

Kuntner: No. Particularly, since the Soviet Armed Forces in the GDR have all been deployed with a view to the West--and in order to turn them around in the direction of Poland, some reorganization would naturally be necessary, which one would most accurately observe in the West with today's electronic means.

WELT: Is it not so that regardless of how the Polish movement may develop in the future, the strategic situation in Europe must change due to this development?

Kuntner: Particularly the political landscape will change. If the reform movement continues, the whole East Bloc will change in the long run, because developments cannot be limited to Poland. But if there is an intervention, detente will lose face and significance completely. One cannot apply force internally while saying externally that detente exists.

We in the West knew about the limits of the process of detente. We started out from the assumption that there were common interests among Europeans despite the differences in political and economic systems. But if the application of force is necessary, we ought to strike the word detente from our vocabulary.

AIR ROUTES, AIRPORTS FOR CIVIL AVIATION DESIGNATED BY DECREE

Bucharest BULETINUL OFICIAL in Romanian Part I No 77, 25 Sep 80 pp 2-4

[Decree of the Council of State for the establishment of air routes, airports and aerodromes assigned to civil aviation]

[Text] The Council of State of the Socialist Republic of Romania decrees:

Article 1. - The air routes assigned to civil aviation for international and domestic air transport, as well as for purely domestic air transport, are those outlined in Annex No 1.

The width of air routes is:

a) 20 km (10 km to the left and right of the line of flight) for international air routes;

b) 10 km (5 km to the left and right of the line of flight) for domestic air routes.

The designation of air routes and the minimum flight levels for them will be established by the Department of Civil Aviation and will be published in the radio-navigation map of the Socialist Republic of Romania.

The maximum flight level for air routes is 14,950 standard meters.

Article 2. - The airports and aerodromes assigned to civil aviation, as well as their zones, are those outlined in Annex No 2.

The vertical limits of airport zones will be established by the Department of Civil Aviation and will be published in the approach maps drawn up for each airport.

For take-offs and landings, those aircraft that fly utility missions and for sport will use the airports and aerodromes outlined in the Annex, as well as the airfields established according to legal provisions. The airfield zones will have a maximum lateral limit of 20 km from the center of the field and the vertical limit will be a maximum of 200 meters above the ground and obstacles on it.

Article 3. - Annexes No 1 and No 2 are an integral part of this decree.

Article 4. - Articles 6-9, 13 and the annex "The Airports and Aerodromes Assigned to Civil Aviation, as well as Their Zones" in the Flight Rules in the Air Space of the Socialist Republic of Romania, approved in Council of Ministers Decision No 793/1974, published in BULETINUL OFICIAL of the Socialist Republic of Romania, Part I No 98, 11 July 1974, as it was amended and modified in Council of Ministers Decision No 65/1978, is hereby abrogated.

[Signed] Nicolae Ceausescu, President of the Socialist Republic of Romania
Bucharest, 23 September 1980, No 287.

Annex No 1

Air Routes Assigned to Civil Aviation

A. For international and domestic air transport:

1. Border crossing point with the Union of Soviet Socialist Republics (48°03'N - 23°19'E) - Baia Mare - Tirgu Mures - Brasov - Mizil.

2. Border crossing point with the Union of Soviet Socialist Republics (45°28'N - 28°14'E) - Galati - Urziceni - Floresti - border crossing point with the Bulgarian People's Republic (43°42'N - 24°51'E).

3. From the Black Sea (43°56'N - 29°10'E) - Constanta - Galati - Brasov.

4. From the Black Sea (43°42'N - 28°48'E) - Constanta - Tandarei - Urziceni - Strejnic - Curtea de Arges - Deva - Arad - border crossing point with the People's Republic of Hungary (46°18'N - 21°10'E).

5. Border crossing point with the People's Republic of Bulgaria (43°45'N - 29°49'E) - Tirgu Jiu - Arad.

6. Border crossing point with the People's Republic of Bulgaria (43°48'N - 23°43'E) - Tirgu Jiu.

7. Border crossing point with the Socialist Federal Republic of Yugoslavia (44°46'N - 21°34'E) - Tirgu Jiu - Floresti - Mizil - Galati.

8. Border crossing point with the Socialist Federal Republic of Yugoslavia (45°16'13"N - 21°16'43"E) - Timisoara - Arad.

9. Border crossing point with the People's Republic of Hungary (47°00'N - 21°41'E) - Oradea - Sibiu - Strejnic.

10. Oradea - Cluj-Napoca - Sibiu - Brasov - Strejnic.

11. Baia Mare - Cluj-Napoca - Tirgu Mures.

12. Floresti - Curtea de Arges.

13. Curtea de Arges - Sibiu - Deva.

14. Timisoara - Deva.

B. For domestic air transport:

1. Urziceni - Tulcea.

2. Constanta - Tulcea - Galati - Bacau - Suceava.

3. Galati - Iasi - Suceava.

4. Mizil - Bacau - Iasi.

5. Floresti - Craiova - Tirgu Jiu - Caransebes - Timisoara.

6. Arad - Oradea - Satu Mare - Baia Mare.

7. Oradea - Deva.

8. Satu Mare - Cluj-Napoca - Deva.

9. Tirgu Mures - Suceava.

10. Bacau - Tirgu Mures - Sibiu.

[Annex No 2 on next page]

Annex No 2

Airports and Aerodromes Assigned to Civil Aviation, as well as Their Zones

Airport (Aerodrome)	Airport (Aerodrome) Zone: Lateral Limit from the Center of the Airport (Aerodrome)	Airport (Aerodrome) Zone: Vertical Limit from the Ground - in meters -
1	2	3
A. Airports Open to Domestic and International Air Traffic		
Arad/Arad	Segment of a circle extending 20 km, limited by the border with the People's Republic of Hungary and the coordinates: 46°02'00"N - 21°06'30"E and 46°02'00"N - 21°25'30"e	Limit set by the Department of Civil Aviation
Bucharest/Baneasa	An irregular area, with the farthest side 22 km away	
Bucharest/Otopeni	Segment of a circle extending 25 km	
Constanta/M. Kogalniceanu	A circle extending 30 km	
Tirgu Mures/Vidrasau	A circle extending 20 km	
Timisoara/Giarmata	A circle extending 25 km	
B. Airports Open to Domestic Air Traffic		
Bacau/Bacau	A circle extending 20 km	Limit set by the Department of Civil Aviation
Baia Mare/Tautii-Magheraus	A circle extending 20 km

EXTRAVAGANCE CITED IN RELIGIOUS BUILDING IN BOSNIA

Building Limits Proposed

Belgrade BORBA in Serbo-Croatian 9 Oct 80 p 4

[Excerpt] The coordinating council of the Republic Conference of the SAWP of Bosnia-Hercegovina, considering the problem of construction by religious communities, said today in Sarajevo that in the past few years a considerable number of religious facilities had been built in this republic which confirms the fact that the democratization of our society is felt also in this regard. But a reminder was given at the meeting that excesses had arisen in the building of such facilities, for example, the demonstration of power, unnecessary luxury, and the creation of grandiose facilities which do not correspond to actual needs, to the developed status of the opstina, or even the standard of living of the believers. It often happens that legal standards are violated, especially in constructing these facilities without permits. Also, despite precise legal regulations and political views about this problem, various problems arise in practice, such as the illegal action of religious communities, the self-will of individual clericalists, and sectarian behavior.

In Bosnia-Hercegovina at present more than 220 such facilities would be or are in the process of being built. It was said at the meeting that problems are arising in getting building permits, i.e., [there is] "administrative silence" in certain opstinas, or to put it better, there is a lack of understanding among individuals [who believe] that building these projects means the expansion of society toward religious communities.

It was proposed at the meeting that in future the construction of religious facilities should be resolved more simply, for example, urban regulations should establish the space and size of such a facility, so that unrealistic demands will not arise in this regard.

The council examined also some manifestations of politicalization in the publishing and informational activity of religious communities, stating that there are also problems here and an increasing number of texts with politicized content, ranging from hidden allusions to openly clericalist attitudes.

Collections for Construction

Belgrade BORBA in Serbo-Croatian 12 Oct 80 p 6

[Excerpts] ...Such intensity in the construction of religious buildings is followed, often unfortunately, by clericalist or sectarian behavior, illegal actions and talk, among other things, about the unhindered expression of religious freedom. In Bosnia-Hercegovina this is also the result of the fact that there are three traditional religious communities, each of which wants to build religious facilities for their members and do not want to lag behind the other religions.

The frequent building of churches and mosques is, of course, an expression also of the large material possibilities of citizens who are believers. Their contributions to religious communities, the raising and furnishing of these facilities, is their private affair. No one can or should put pressure on them in any way or form. We are not pointing to this...without reason. Certain behavior at the time of building and especially of dedicating the new structure reminds one of a kind of misuse of the increased material possibilities of believers and a kind of pressure on their possibilities and interests.

In the solicitations that are often carried out among believers the costs of construction [reconstruction, etc.] often reach several million [dinars].

Such solicitation was recently discussed in the SAWP and it was concluded that agreements regarding such building should be reached in accord with religious needs and the material possibility of citizens, not only because it [such construction] means another "imposition on the village...," which should be considered in these stabilization times, but also because any soliciting among citizens can violate and threaten their human and moral dignity, which can separate and unjustifiably divide them into first- or second-class citizens, into more devout or less devout, even into greater or lesser members of the faith.

NAMING OF PARTIES AT FAULT FOR DETERGENT SHORTAGE URGED

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1546, 17 Aug 80 p 25

[Article by Jug Grizelj: "Lessons of an Incident"]

[Text] The "detergent incident" seems to be fading. And what it teaches us is certainly that it is very easy to cause confusion, but very difficult to correct it. He (or they) who a year ago was unable to examine all the consequences of the actions which brought about the shortage on the market of this obviously indispensable article showed at the very least an incompetence which bordered on negligence.

It turned out, that is, that the consequences of the shortage of this article were vastly out of proportion to the causes of the disturbance, as we have clearly heard (much later, of course, and altogether too late) even from many official spokesmen and places.

During its entire duration the "detergent incident" was characterized by a kind of duel, to be sure often half-unspoken and conducted nervously on both sides, which took place, to oversimplify the thing, between the administration and the public. Aside from keeping the public in a state of uncertainty (especially in the first phase) as to the first causes of the shortage of detergents, it is significant that the competent institutions on several occasions stubbornly insisted in moments of crisis on the argument that supply was "by and large" becoming normal, as was to be seen, it was said and is said even today, from the large amounts of detergents which the factories are distributing to the distribution sector which, however, is unable to satisfy the market, since "individuals are unnecessarily piling up reserves" and are thereby impeding normalization of the supply of this article.

The response of the public to these charges was to ignore them and to stubbornly persist in their siege of the stores.

There is no doubt that the statistical indicators were accurate and that the market did at one point actually obtain more than last year. Yet this

means nothing: the market, i.e., individuals, having been tricked and burned by bad experience, which has now taken it to the point of losing faith, is now demonstrating that lack of faith by hoarding up reserves, as natural a human reaction as there is.

In such a situation "normal amounts of detergents," of course, do not satisfy the market. But this is not the reason why the detergent market is still unsettled, but the consequence. It is the consequence of what we have called incompetence and negligence, and that is an altogether inappropriate name for officials in an administration which are by no means nameless, officials who proposed and conducted the policy of economy and stabilization and carried it out in this unselective way.

Detergents are slowly coming back, and in any case it seems that this problem is solved. What has not been solved--though the question of responsibility and indeed personal responsibility for every action is worked over every day by every spokesman, is the question of the ephemeral history of the still more ephemeral "detergent incident," whose consequences, however, are far from being ephemeral, as has also recently been said from several of the most prestigious political rostrums and forums.

If we wish to speak about the "detergent incident" from the standpoint of our so-called reputation in the world (which in any case, I believe, is a rather artificial category, since no country lives on the reputation which it has outside its own borders unless that reputation is based on its reputation at home), it would then be worth saying that there is something really comic in the failure of millions of foreign tourists on the Adriatic in the recent past to understand how there could be a shortage of detergents and coffee in a country where they have been well and hospitably received, where they can obtain nearly everything they need for a pleasant vacation, just as in their own advanced countries, and those things they can obtain are indeed more expensive and more difficult and complicated to produce or to import than detergents and coffee.

They simply do not understand. They do not understand that an advanced country like ours can have a shortage of detergent, and by and large they explain this by our "sense of the exotic." The foreigners, of course, are wrong, we are well aware of that, this is not a matter of a taste for the exotic, but of negligence and incompetence on the part of a person or persons who have a first name and a last name. Why don't we say so.

The least important reason for this is for the heads to roll, though here and there a public resignation in this or a similar case would certainly signify more than we suppose. But above all so that the administrative official, at least in this sector, would be on a par with a self-manager in an organization of associated labor who is quite well aware that he must bear public responsibility for any oversight both before his own organization of associated labor and before society as a whole.

As far as I can remember, there has never been a case when a journalist refrained for reasons of any political or any other sensitivity from publishing the actual names of the specific individual responsible in a work organisation for a specific loss that occurred. On the contrary: when a newsman is prevented from attending some meeting of a work collective where someone's specific responsibility and guilt is being debated--we appeal to all the well-known principles of public scrutiny of proceedings in our self-managed society.

If all of us, and concerning this "detergent incident" I am referring both to the broad base of self-management and to the highest and most responsible delegate forums, to the assemblies and political organizations--took note that the "detergent incident" occurred because of someone's incompetence and irresponsibility, then who are we helping when we do not allow the public to be present when we sit in judgment on those responsible?

What purpose is there in it except that it nurtures an unfortunate and long obsolete assumption of the past--that there is a double standard for responsibility: one used for responsibility of a public figure and another for the responsibility of one who is not a public figure.

If this case, which we have provisionally referred to as the "detergent incident," is not an occasion for rumors to develop about a double standard concerning responsibility, then it would really be difficult to say what sort of occasion that might be.

BRIEFS

SOVIET OFFICIAL'S MEMOIRS--The 26 September 1980 issue of the party weekly Belgrade KOMUNIST in Serbo-Croatian p 4 publishes a criticism of Soviet Marshal Aleksander Vasilevski's World War II memoirs which came out in the USSR in 1973 and have now been published in Belgrade. It was pointed in asking why they are being published in Yugoslavia, especially without an introductory comment. Readers, it says, should be made aware of the fact that the author glorifies the Stalinist era in a blatantly propagandistic way, justifying Stalin's pact with Hitler and ignoring historical events, such as the army purges, the Yugoslav and Balkan actions, and the Yalta Conference. [Editorial Report]

CHURCH ROLE IN POLISH CRISIS--The 28 September 1980 issue of the Zagreb Catholic bimonthly GLAS KONCILA in Serbo-Croatian pp 3,7,12, publishes a full-page article on "the Catholic Church in the latest events in Poland," featuring a prominent picture of Lech Walesa and workers praying with a priest and citing Walesa's statement, "Without religion I would be nothing." It also cites from Cardinal Wyszynski's 2 September letter in which he said that the causes of the crisis "are not only economic, but the roots are much deeper. The Cardinal believes that these [causes] are rooted in the monopoly of the party in economic life, the fact that workers are deprived of freedom of opinion and the defense of their rights.... The government is concerned only about increasing production, not considering the physical and phychic possibilities of the workers, their family and religious obligations. ...The workers know where one should seek help to revitalize our society. In another item, GLAS KONCILA also makes reference to the first radio broadcasts in Poland of religious services. This issue also includes a half-page reportage, with picture, on the sentencing of the Russian Orthodox priest Gleb Yakunin. [Editorial Report]

SENTENCED FOR ETHNIC INTOLERANCE--On 23 September 1980 Ago Curovac (born in 1929), watchmaker, and Muharem Hasanbegovic (born in 1946), a member of the religious clergy from Gorazde, were each sentenced to 4 years in prison for the criminal act of inciting to national, racist and religious hatred, division, or intolerance (Article 134, Paragraph 1 of the SFRY Criminal Code). The sentence was pronounced by the criminal council of the district court in Sarajevo presided over by Judge Rizah Hadzic. [Text] [Sarajevo OSLOBODJENJE in Serbo-Croatian 24 Sep 80 p 28]

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

GDR SEES IMPROVED BLOC RELATIONS WITH THIRD WORLD

Socialism Gaining 'Foothold'

East Berlin BERLINER ZEITUNG in German 12 Sep 80 p 4

[Article by Hartmut Kohlmetz: "Karl Marx--A Guide Even for the Millions in Africa; Socialism Is Beginning To Gain a Foothold on the Fourth Continent"]

> [Text] The 1970's marked the transition from the cold war to detente. At the start of the 1980's, the world stands at the crossroads: will it manage to make the principles of peaceful coexistence prevail further, end the more and more dangerous arms race and undertake effective disarmament steps? Or is the world going into another cold war? The answers to that as well as the questions about the causes for the exacerbation of the international situation and about ways for defusing it are the subject of this article series. Today we will deal with the change on the African continent.

The 1970's turned Africa into a focal point of the worldwide class conflict. Since the Portuguese empire collapsed (1974), colonialism has virtually been eradicated. The independence of Zimbabwe in April this year also marked the beginning of the end of minority rule in the south of Africa. And more than that: Laying the corner stone for the Karl Marx monument in Addis Ababa during a visit by a GDR party and state delegation in November last year was conspicuously symbolic of the further progress on the fourth continent. During the laying of the corner stone, Erich Honecker said: "It shows that millions of people in Africa have started to regard Marxism-Leninism as a guide in their righteous struggle for national and social liberation."

A new phase of the liberation struggle has begun in Africa. The greater strength of socialism, the new possibilities for international solidarity arising therefrom, and the relations for mutual advantage initiated meanwhile between the young African states and the socialist countries have made it possible to enter the struggle for the second liberation: economic independence, indispensably prerequisite to any real political independence.

A Lift for the Second Liberation

The peoples' in the former Portuguese colonies decision to move toward a people's democratic course of development in the socialist direction and the overthrow of the feudal-monarchistic regime in Ethiopia (1974) and the social revolution that came with it provided the impulse. That such revolutionary decisions by the peoples can no longer be swept under the rug without trouble by the military export of the counterrevolution on this continent either is an experience imperialism had to make in Angola as in Ethiopia.

To be sure, imperialism refuses to reconcile itself with such losses in positions. It wants no consolidation of the young states' political independence wishing to determine their raw material production and prices themselves. It does not want the emergence and development of states that have opted for socialism. It wants no alliance consolidating between the progressive African states and the countries of real socialism.

"The immense African continent," as U.S. Defense Secretary Brown explained in May 1978, "deserves attention not only because of its strategically important geographic location but also because of its growing value as a raw material source."

And indeed, Africa--along with the petroleum centers of the Near East--is imperialism's most important raw material source. For that reason its strategic goals in the worldwide class conflict lie in "preserving the access of the West to the raw material deposits vital for the prosperity of the rich world," as the bourgeois LE MONDE DIPLOMATIQUE wrote in July 1978. On the whole, Africa's soil harbors circa one-third of the world's mineral resources.

No Blank Check for the Status Quo

The former U.S. Secretary of State Kissinger had wanted to persuade the world public that by accepting the detente policy the United States had received a blank check, as it were, from the Soviet Union for preserving the status quo in the Third World. He evidently believed the Soviet Union's great interest in detente would make possible putting the Soviet Union under pressure and preventing it from engaging in internationalist solidarity with the African nations. That design had to collapse of course like a house of cards because the communists do not throw their class position overboard.

After throwing back the South African aggressors in Angola, stirred up by the United States--in the fall of 1975, the racists were only 25 kilometers from Luanda--, through military support from the Soviet Union and Cuba, the time had come for imperialism to seek a new Africa strategy. Its principles were formulated by the current national security advisor to the U.S. President, Brzezinski.

The battle between socialism and capitalism was being decided in the Third World, he explained in his book, "America in a Hostile World," published in excerpts only in the summer 1976 issue of FOREIGN POLICY. For that reason, the capitalist countries, the "industrially developed democracies," should have to unite in order to "solve the problems with the developing countries" through such a united front. The leadership in this "creative process of constructing a new world community" would of course go to the United States which was called upon "to structure the rapidly changing world in a manner that conforms with our national interests."

The imperialist conspiracy based on this concept, by which unrestrained supremacy in Africa is to be reconstituted, was sealed at the NATO Council Session in Washington in May 1978 and the subsequent summit meeting of the seven leading imperialist powers in Bonn in July 1978. Part of this counter-offensive were and are the confrontations around the Horn of Africa to bring Ethiopia down on its knees. That also includes South Africa's attacks on Angola and the military operations of former Southern Rhodesia against Mozambique and Zambia. In the same directions were and are aimed the attempts at imposing neocolonialist pseudo-solutions on Zimbabwe and now also Namibia. This furthermore includes the nuclear conspiracy with South Africa up to igniting the first nuclear bomb in September last year, the buildup of a Rapid Deployment Force, and the slander campaign in the African states directed against the Soviet Union, Cuba and the GDR.

These imperialist activities have kindled dangerous tension in many places and extracted costly human and material sacrifices from the peoples which they would have needed urgently for their own material and cultural development. In drawing up an interim balance-sheet for the imperialist counter-offensive thus far, the enemies of the African peoples were able temporarily to gain some positions, to be sure, in a few countries that were willing to provide the United States with military bases. But on the whole, the imperialist plot did not work.

On What the Peoples May Continue to Rely in the Future

The most recent session of the Political Advisory Commission of the Warsaw Pact states reiterated its continued resolute support for the African peoples. That gives them the guarantee that they will continue their advances throughout the 1980's in getting rid of the yoke of imperialism, neocolonialism and racism.

West German Commentary

Bonn IWE-TAGESDIENST in German No 119, 7 Aug 80 pp 1-2

[Report from Berlin: "East Wants To Form Closer Ties With Developing Countries--GDR Journal Stresses Growing Significance of Developing Countries in East-West Conflict." A translation of the East Berlin DEUTSCHE AUSSEN-POLITIK article cited below follows this commentary]

[Text] The semiofficial East Berlin journal DEUTSCHE AUSSENPOLITIK (No 8, 1980) has advocated closer ties between the developing countries and the socialist states. New successes in the national and social liberation struggle by the peoples of Asia, Africa and Latin America would depend on how they "cooperate with the USSR and the other socialist states, how effectively they use the aid and support offered by them, and not let themselves be pushed into anticommunist and anti-Sovietist positions." The course of socialist development taken by some of these states made it possible "gradually to overcome the backwardness and dependency inherited from their colonialist past and create the material-technical, social and political-ideological preconditions for having the revolutionary process grow into the socialist revolution." The future of the socialist-oriented developing countries would depend "significantly on how firmly those particular countries are solidarily affiliated with the socialist states."

DEUTSCHE AUSSENPOLITIK in this context stressed the great role played by the circa 120 developing countries in the intensifying East-West conflict. The developing countries, as the largest group of states in numbers, had "a great influence on UN decisions." Some developing countries had immense raw material and energy resources and played a great role, especially, for the economy of the Western states. The increasing weight of the developing countries with respect to the East-West conflict was, last but not least, determined by the military-strategic location of many of these states.

Importance in East-West Conflict

East Berlin DEUTSCHE AUSSENPOLITIK in German Vol 25 No 8, Aug 80 signed to press 3 Jul 80 pp 37-48

[Article by Dr Emil Langer, Academy of Social Sciences, SED Central Committee, East Berlin: "Lenin and the National Liberation Movement"]

[Text] From 19 July to 7 August 1920, 60 years ago, the Second Congress of the Communist International (Comintern) was held in Petrograd and Moscow. The resolutions of that congress were of extraordinary importance for the development and struggle of the growing communist movement.[1]

In the preparation of the program documents and resolutions of that congress, Lenin, whose 110th birthday is being celebrated this year by progressive forces all over the world, had a decisive share. Among the studies on which the congress deliberations were based also was the "Original Draft for the Theses on the National and Colonial Question."[2] This study by itself makes clear that the Second Comintern Congress through Lenin's creative work also made a significant contribution to preparing a scientific orientation for the activities of the communists in the colonial and semicolonial countries. That is attested by the fact that Lenin delivered the report by the commission for the national and colonial question.[3]

To give a vivid picture on just a few pages of the whole breadth and variety of the problems treated at that congress is impossible. Instead, by selected problems we wish to pay tribute to the share Lenin and the Second Comintern Congress have had in extending the doctrine of the national and colonial question and the strategy and tactics of the international revolutionary workers movement vis-a-vis the national liberation movement.

In contrast to the parties of the Second International (1889 to 1914) that were dominated by the opportunists, the Comintern adopted a rigorously revolutionary position based on proletarian internationalism with respect to the national and colonial question. That stance had for its premise the teachings of the founders of scientific communism. Karl Marx and Friedrich Engels had paid much attention to the peoples' liberation struggle in the colonial and semicolonial countries. They had revealed the essence of the national and colonial question and proven the inevitably established community of interests and struggle between the workers class in the so-called motherlands and the subjugated peoples in the colonies. Marx and Engels illuminated that the struggle by those peoples for national liberation and social progress was inseparably connected with the struggle of the international proletariat, with the successes and victories of the revolutionary workers movement. They created the theoretical principles for the interrelations and cooperation between the international workers movement and the national liberation movement.

These important insights by Marx and Engels also governed the practical political work of the First International in opposition to colonialism and on behalf of the peoples' freedom. They were further developed by Lenin, creatively and through heavy confrontation with revisionist conceptions, under the conditions of imperialism and the general crisis in capitalism, into a doctrine on the national and colonial question and the strategy and tactics for the international workers movement vis-a-vis the national liberation movement.

Lenin and the Role of the National Liberation Movement in the Revolutionary World Process

While the reformist parties of the Second International were of the opinion that the suppressed peoples were "not yet ripe" for their independence and regarded the movement in the colonial countries as as an "insignificant national and utterly peaceful movement," Lenin marked its new quality as follows: "Millions and hundreds of millions--in fact, the overwhelming majority of the population on our globe--are asserting themselves now as independent, active, revolutionary factors."[4] Based on the theoretical insights by Marx and Engels into the dialectical connection between the revolutionary proletarian movement and the national liberation movement, Lenin wrote in 1916: "The social revolution can proceed in no other way but in the form of an era in which the proletariat's civil war against the bourgeoisie in the progressive countries combines with a whole number of democratic and revolutionary movements, including the national liberation movements of the undeveloped, backward and suppressed nations."[5]

The first victorious socialist revolution in the world itself also met tasks of an anticolonial revolution, of a national liberation revolution. It, at the same time, amounted to a turning point in the liberation struggle of the colonially suppressed peoples altogether.

With the victory of the Great Socialist October Revolution, the national liberation movement entered a new phase and got a mighty boost. In the first socialist state it got its most loyal ally. The Soviet Union, as Lenin announced, acted not only as the "representative of the proletarians of all countries," but also as the "representative of the suppressed peoples."[6] The first firm foundations were laid for the anti-imperialist alliance between socialism, the international workers movement and the national liberation movement. Lenin stressed "that the revolutionary movement of the peoples of the East can develop successfully and reach its goal only through its direct connections with the revolutionary struggle of our Soviet Republic against international imperialism."[7]

After the victory of the Great Socialist October Revolution, Lenin prepared a prognosis for the future role of the national liberation movement within the revolutionary world process. The awakening of the peoples of the East, that was caused by the October Revolution, would be followed, he predicted, by an epoch in which all these peoples "take part in deciding the destiny of the whole world and stop being merely an object for enrichment."[8]

Lenin defined the liberation movement of the suppressed peoples as "national-revolutionary,"[9] as an "active factor in the struggle for the overthrow of world imperialism."[10] The specific share this movement would have in the revolutionary world process he primarily saw in that it would have the task to eliminate imperialist colonial rule in vast areas of the world and pave the way for solving general democratic tasks and for surmounting the backwardness for which colonialism was to be blamed. At the Second Comintern Congress in 1921, he drew the conclusion that "in the decisive battles of the world revolution to come, the movement of the majority of the world population, which originally aimed at their national liberation, will turn against capitalism and imperialism and perhaps play a much greater revolutionary role than we had expected, and where the masses of the working people and the peasants in the colonial countries, though they are still backwards now, will play a very great revolutionary role in subsequent phases of the world revolution."[11]

Enriched in recent decades by the scientific achievements of the communist world movement, mainly that of the CPSU, in settling newly ripened theoretical and practical problems in the national and social liberation struggle under the conditions of the successful advances of the socialist world system and the further deepening of the general crisis in capitalism, the Marxist-Leninist doctrine on the national and colonial question has emphatically attested to its strength all over the world in revolutionizing and actively chang'ng the popular masses.

That the national liberation movement developed into a significant factor of the anti-imperialist struggle is inseparably connected with the world-transforming victories of socialism. The international conference of the communist and workers parties in 1969 defined that movement as one of the three main revolutionary currents of our time, and as an alliance partner of the socialist states and the international workers movement in the struggle against imperialism and reaction and for social progress.[12]

The course of events in Asia, Africa and Latin America fully confirmed Lenin's analysis and prognosis and those of the communist world movement, especially also those of the 25th CPSU Congress and of the Ninth SED Congress with respect to the role of the national liberation movement in the world-wide revolutionary process. The overwhelming majority of the once colonially suppressed peoples on those continents won their national independence. Today circa 120 states, in which more than 70 percent of the world's population lives, make up the group of the developing countries and constitute four-fifths of the UN member states. They have become active participants and coshapers of world politics and international relations. Their weight in the conflict between socialism and imperialism and in the struggle for peace and social progress keeps increasing.

The peoples' national liberation struggle contributed to a change in the situation in the United Nations and other international organizations, a change that reflects the development of the international balance of power. As the numerically strongest group of states, the developing countries exercise a great influence on UN decisions. Most of these countries take part in the movement of the nonalined states, which plays an increasing role in international life, actively struggling against imperialism and aggression, neocolonialism and racism.[13] These states also are more strongly affecting the activities of other international organizations. More than ever the USSR and the other socialist states, together with most of the liberated countries, have been able to bring about important resolutions in such organizations that serve the defense of world peace, the safeguarding of international security, the elimination of dangerous sources of conflict, the expansion of international detente to other areas in the world, the total elimination of all sources of colonialism and racism, and the democratic transformation of international economic relations. At the same time it is apparent that the increasing diversification among the developing countries and the growing socioeconomic and political differences among them affect the consistency of their anti-imperialist struggle and the cohesion in their stand against neocolonialism and hegemonism. Thus it should not be excluded that nonalined states, as Erich Honecker put it, "in one case or another assume diverse positions in the United Nations because of differences in their socioeconomic levels and their political orientation."[14] This applies as much to their activities on other levels of international politics.

Some of the developing countries have enormous raw material and energy resources. Among other things, for instance, from 80 to 90 percent of the

petroleum and phosphate deposits outside the socialist world, and from 50 to 60 percent of the copper, iron and manganese ore deposits, are concentrated in such countries. Africa, for instance, holds 97 percent of the world supplies surveyed in chromium, 85 percent of the platinum, 65 percent of the gold, 50 percent of the manganese and 25 percent of the uranium. African countries are among the most important producers of petroleum, iron, diamonds, bauxite, phosphates, copper and alloy steels. These few figures and facts suffice to explain how much of a role the developing countries currently play, especially for the economy of the imperialist states, and how great their potential is for the future shaping of international economic relations and the solution of global problems of humanity.

It conforms with the aggressive character of imperialism that it opposes in every way the struggle by the peoples in the developing countries for their economic independence, for the power of disposition over their national resources, to keep or regain those raw material and fuel sources.

The South African racist regime and the NATO states stubbornly deprive the Namibian people of their freedom and independence, not last because it has uranium deposits counting among the largest in the world. The FRG imports 30 percent of its uranium from Namibia although UN resolutions prohibit the import of raw materials from that country.

In the 1970's imperialism sought to appropriate the resources of the developing countries mainly by an increased capital export offensive. "The aggressive circles of imperialism seek raw material sources," Erich Honecker said, "political and military-strategic positions, spheres of influence, and maximum profits."[15] The contradictions between the imperialist states and the developing countries are going to continue throughout the 1980's.[16]

The attitude of the nationally liberated states is gaining increasing importance for the solution of global problems of humanity, especially in the struggle for peace and disarmament. It must be kept in mind that most sources of conflict and war in the world, which were generated or are being maintained by the aggressive policy of imperialism and the Chinese leaders' hegemonistic drive for expansion, relate to the nationally liberated countries or the still colonially or racially suppressed peoples. Advances in arms limitation and disarmament and the removal of imperialist military bases from territories of once colonial countries would solidify the sovereignty and integrity of the countries of Asia, Africa and Latin America and spare them their great military expenditures.

The frantic U.S. and NATO armaments policy implies an ever more copious and profitable export of arms to the developing countries. The armaments expenditures of some of those countries have risen by leaps and bounds in recent years. According to Soviet publications, the proportion in general world armaments expenditures on the part of the developing countries rose from 5.8 to 12.6 percent between 1965 and 1975. In 1976, their armaments expenditures came to $ 90.7 billion. Some states, especially Brazil and

Argentina, have themselves become arms producers and suppliers. Brazil alone already sells arms to 33 states. Its armaments export in 1979 came up to a value of approximately $ 500 million. In 1980, prospects are it will go to $ 1 billion.[17]

Containing the arms race and disarmament measures would release considerable funds for peaceful purposes, which also would support the developing countries in their solving their economic, social and educational and cultural policy problems. This would create more favorable conditions for coming to grips with the global problems mankind is confronting. That applies to the struggle against hunger and disease, environmental protection and other matters that have to do with the population explosion and modern civilization that are becoming more and more urgent. According to UN surveys, for example, more than 30 million children below the age of 5 starved in 1978, and circa 800 million are vegetating below the subsistence minimum.

The most recent estimates of the UN Center for Demography suggest the inference that the population in the developing countries will continue to increase rapidly and that 80 percent of the entire population of the world will be living there by the end of our century.[18] This enormous growth causes many complicated economic, social, medical and other problems and tasks which can be resolved only by an efficient use of national resources and by international cooperation.

The labor potential in those countries will have approximately doubled by the year 2000, with circa 1.5 billion working persons. The historically most important trend in this is the constant growth of the workers class that will find its social role enhanced.

Last but not least, it also is the military-strategic location of many of these countries that increases the weight of the former colonial world in international relations, in the conflict between socialism and imperialism, and in the struggle for peace and social progress.

Lenin's 1919 remark, that the revolutionary movement of the peoples of the East could successfully develop and reach its goal in immediate connection only with the Soviet Union's revolutionary struggle against international imperialism, remains wholly pertinent. The assured prospects of the national and social liberation struggle by the peoples of Asia, Africa and Latin America also have a close connection with the growing strength of real socialism and of its international influence. New successes in this struggle will depend on how well the anti-imperialist, revolutionary forces in the countries on these continents strengthen further their own commitment in the international arena and work together with the USSR and the other socialist states, make efficient use of the aid and support they have offered them and not let themselves be pushed into anticommunist and anti-Sovietist positions. The close alliance among world socialism, the revolutionary workers movement in the capitalist countries and the peoples' anti-imperialist liberation movement, based on reciprocal objective identity of interests, is a crucial prerequisite and guarantee for victory in the cause of national and social liberation and imposes solidary obligations on all alliance partners.

The policy of peace, detente and peaceful coexistence, pursued by the USSR and the other states in the socialist community, in conformity with the essence of socialism, expresses the fundamental vital interests of all peoples. As historic experience has proven in recent decades, it also is a decisive precondition for the successful development and victory of the anti-imperialist movement in Asia, Africa and Latin America. Only by all developing countries' active commitment to the safeguarding of peace and the prevention of imperialist interventions and aggressive acts by hegemonial forces, the peoples of the former colonial and semicolonial countries will find it possible to solve their vital problems. Erich Honecker said about this: "In peace, the interests of the peoples, and their struggle for national independence and social progress, prosper. The class policy of monopoly capital raises danger to peace and the nations' security. Therefore the struggle for peace is the central issue for mankind and for the class struggle in the international arena."[19]

Lenin on the Social Prospects of the Former Colonial and Backward Countries

The founders of scientific communism arrived at the ingenious prediction that it would be possible for colonially suppressed and dependent nations to shorten their developmental process toward socialist society and spare themselves the agonies of the capitalist system. Lenin defended these theoretical insights against all attacks by rightist opportunist and ultra-leftist forces and creatively extended them further under the new historic conditions in our century. At the Second Cominform Congress he reaffirmed the possibility "that the backward countries with the support from the proletariat in the most progressive countries" could arrive at socialism "without having had to pass through the stage of capitalist development."[20]

The theory of noncapitalist development demonstrated its vitality first within the framework of the USSR and then in the Mongolian People's Republic. It has been and is being enriched by the experiences of the peoples of Vietnam, the Korean Democratic People's Republic and other states that have turned toward socialist development. Social development oriented toward socialism, as it is becoming reality today in an increasing number of nationally liberated states, doubtless is the most important sociopolitical phenomenon in Asia and Africa after the disintegration of the imperialist colonial system. It is a significant criterion in the further spread of the revolutionary world process and in the deepening of the general crisis of capitalism. Practical public affairs in the countries that have opted for the socialist orientation confirm that this course amounts to a revolutionary transition process entailing anti-imperialist, antifeudal, democratic and increasingly also anticapitalist transformations. This course of development makes possible gradually to overcome the backwardness and dependency inherited from the colonial past and to create the material-technical, social and political-ideological preconditions for having the revolutionary process grow into the socialist revolution. Decisive for this are the altered international correlation of forces, the firm political alliance between the progressive forces of any of those countries with the

USSR and the other socialist states, and the formation of a revolutionary vanguard of the working people, equipped with the scientific world-outlook, that is able to give political leadership to the state and society.

The peoples in the countries with a socialist orientation are visibly successful in their efforts at securing and solidifying their state sovereignty, constructing their national economy and gaining economic independence, making public and political life more democratic, developing an educational and health system, encouraging national culture and raising the standard of living. They are securing for themselves the power of disposition over their national resources and are developing a strong governmental economic sector as the economic basis for their revolutionary-democratic power. The USSR and other socialist states, the GDR included, are providing them in this with extensive political, economic, scientific-technical and other aid. The 34th CEMA session, from 17 to 19 June 1980, reiterated once again: "Led by the principles of internationalism, the CEMA member countries, on a bilateral and multilateral basis, support the young states that have taken the course of socialist development as well as other developing countries in their rapid economic development and in consolidating the political and economic independence of these countries."[21]

Aleksey Kosygin, chairman of the USSR Council of Ministers, at that session made a special point of how important it was to develop cooperation with Angola, Afghanistan, Democratic Yemen, Kampuchea, Laos, Mozambique and Ethiopia.[22]

The countries with a socialist orientation are pursuing an anti-imperialist peace and detente policy and are standing in the front rank of the national and social liberation struggle by the African and Asian peoples. Due to uneven starting and developmental conditions, there are great differences among them with respect to the course of the revolutionary process and the changes in their base and superstructure achieved thus far and desired in the future. Social development in those countries proceeds under complicated domestic and external conditions and contains many social and political contradictions. It is accompanied by bitter conflicts and also, at times, by stagnation and reversals. As Erich Honecker emphasized, advances "mainly depend on the development of the classes, their power ratio, the degree of organization in the revolutionary forces, and the formation of vanguard parties."[23]

Imperialism and domestic reaction seek as best they can to stop the revolutionary process and reverse the social transformations initiated. In this they are exploiting the fact that the countries of socialist orientation still depend to a large extent on the capitalist world market right now and for the foreseeable future.

The nearly 20-year historic experiences by nationally liberated states moving toward socialism teach us, however, that this form of progressive social development is a real and auspicious course of struggle by the peoples for a new life, even if some countries have broken it off or stagnations or retrogressive trends have occurred.

A perspective in social development oriented toward socialism will be secure to the extent that, mainly, stable relations evolve in the revolutionary exercise of power by the working people, based on the political alliance among the workers, peasants and other working people under the leadership by the workers class and its Marxist-Leninist vanguard. It essentially depends on how firmly the countries concerned are tied in solidarity to the socialist states.

Lenin on the Specifics in the Communists' Struggle in the Colonies and Semicolonies

Lenin marked as the "corner stone of all Comintern policy in the national and colonial question the mutual rapprochement between the proletarians and the working masses in all nations and countries in a common revolutionary struggle for the overthrow of the landowners and the bourgeoisie."[24] Accordingly, the guidelines he had prepared, which were adopted by the Second Comintern Congress, set as conditions for membership in the Comintern: "Any party that wishes to belong to the Third International is obligated implacably to unmask the machinations of 'its' imperialists in the colonies, support every liberation movement in the colonies, not by words but by deeds, demand the expulsion of its own imperialists from these colonies, awaken truly fraternal sentiments for the working population in the colonies in the hearts of the workers of its own country, and for the suppressed nations, and engage, in its country's army, in systematic agitation against any suppression of the colonial peoples."[25]

To the extent that the communist parties in their practical politics let themselves be guided by these principles and the colonially suppressed peoples overcame their own reservations toward the working people in the imperialist states, the alliance developed between the revolutionary workers movement and the national liberation movement in its anticolonial, anti-imperialist struggle. The slogan, "Proletarians of All Countries and Suppressed Peoples All Over the World, Unite!" which was first formulated at the First Congress of the Peoples of the East in 1920, more and more turned into a joint action program.

In the outcome of this evolution and of the struggle by the revolutionary forces there also formed communist parties and groups in colonial and dependent countries. Among the historic distinctions of the Comintern is that it did extensive work in supporting the formation of such parties and solidifying them ideologically and organizationally. It is of course largely the specific sociopolitical and national-ethnic conditions in the countries of Asia, Africa and Latin America that mark the appearance and effectiveness potential of these parties. Lenin repeatedly pointed out that one could not possibly speak of any "purely proletarian movement"[26] in colonies the most important feature of which was that precapitalist conditions were still prevailing there.

"It would be utopian to believe," he explained, "that proletarian parties, if they could evolve in such countries in the first place, would be in the position to carry out communist tactics and communist policy in such backward countries without establishing certain relations with the peasants movement and energetically supporting it."[27]

Reviewing the practical results of the work by Russian communists in former tsarist colonies, in Turkestan for example, he however also made the point "that in spite of these difficulties it is possible to awaken in the masses the desire for independent political thinking and independent political activity even where there is almost no proletariat."[28] While already the First Comintern Congress had been attended by revolutionaries from China, Korea, Persia, Turkey and Latin America, the Second Congress for the first time also saw delegates from other colonial and dependent countries among its attendants, from India, for example. They represented Marxist circles and groups and leftist forces in socialist organizations and national-revolutionary liberation movements that had taken a mighty boost after the Great Socialist October Revolution. About the magnitude of the task the communists had in the colonies and semicolonies to work out a correct revolutionary strategy and tactics commensurate with the realities of colonial dependence and backwardness, Lenin said: "Here a task arises for them unlike any other ever for communists all over the world: Based on general communist theory and practice, they must, while adapting to specific conditions such as do not exist in European countries, know how to apply this theory and practice to conditions where the population is made up almost completely by peasants and where the struggle has to be directed not against capital but against the residues of the Middle-Ages."[29]

Of special value was the remark that the revolutionary party of the proletariat must be able "to combine with the broadest masses of the working people, principally with the proletarian but also with the nonproletarian working masses, get closer to them and, if you wish, meld with them to a certain degree."[30] It was necessary for the party "to use any, even the tiniest possibility to gain an ally among the masses, even if he be only a temporary, fluctuating, unsafe, unreliable or conditional ally."[31]

The national liberation struggle has emphatically provided practical confirmation of the correctness of these remarks by Lenin and of the Second Comintern Congress resolutions. The communist parties that evolved in Asia and Africa have followed a complicated course, rich in sacrifice. Since being set up, all their efforts have been directed at liberating their peoples from the colonial yoke and representing the working masses' vital public interests. The communist movement has also grown on these continents and has become politically stronger in recent years. Its guiding and mobilizing role in carrying further the national and social liberation struggle has grown. Most communist parties have in the 1970's rendered more precise and further developed their political, strategic and tactical positions and adopted new party programs or program documents.

It is of extraordinary importance that in several African and Asian states, like in Angola, Mozambique, Congo, Benin, Ethiopia and the People's Democratic Republic of Yemen, the revolutionary-democratic parties or movements have pronounced scientific socialism the basis of their policy and have begun to organize themselves as revolutionary vanguard parties. This attests to the fact that even in countries with weakly developed class distinctions, where thus far no communist parties had formed, the movement for national and social liberation increasingly begins to combine with scientific socialism.

The SED and the GDR have always stood by the side of the peoples struggling for their national and social liberation and have lent them the greatest possible assistance. They do attach special importance to the socialist-oriented states, to the formation of revolutionary vanguard parties in Africa and Asia because they, after all, as Erich Honecker put it at the 11th SED Central Committee session, embody social progress and another great victory of scientific socialism.[32]

At present, alliance relations of new dimensions and new qualities are developing with these states and parties. An important contribution to that have been the friendship visits of party and state delegations in 1979, headed by SED Central Committee General Secretary and GDR State Council Chairman Erich Honecker to several African and Arab countries. The long-term friendship and cooperation treaties signed on those occasions with Angola, Mozambique, Ethiopia and the People's Democratic Republic of Yemen open up great prospects for these relations on behalf of our common struggle against imperialism and its neocolonialist policy, and for peace and social progress.

BIOGRAPHICAL SKETCH OF RUBEN AVRAMOV LEVI

Sofia RABOTNICHESKO DELO in Bulgarian 23 Sep 80 p 4

[Article by Deyan Pavlov, senior scientific associate: "Notable Scientist and Distinguished Statesman"]

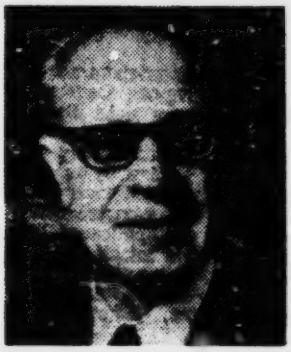
[Text] Comrade Ruben Avramov, a veteran statesman as well as a notable figure in cultural and scientific fields, recently turned 80 years of age. Our nation celebrated his anniversary with due respect and gratitude for his work as professor, member of the Central Committee of the BCP, hero ofsocialist labor, public figure in art and culture and director of the Institute on Contemporary Socialist Theory.

Comrade R. Avramov was born on 23 September 1900 in Samokov into a large family of workers. During World War I he became a sympathizer of the leftwing socialist party. In 1919 the students circle in which R. Avramov participated merged with the then created youth communist league in Samokov. Through his initiative a league of this kind was founded in Dolna Banya too. In the fall of the following year young Ruben arrived in Sofia and started active work in the Komsomol of the capital and in 1922 became its secretary. R. Avramov, a courageous and unwavering fighter, participated in the preparation of the September 1923 uprising in Sofia by organizing combat units. In October of the same year Avramov was made a member of the Central Committee of the BKMS [Bulgarian Communist Youth Union].

At the beginning of 1925 R. Avramov's life entered a new phase. Following the decision of the BKMS Central Committee he was sent as a delegate to the enlarged plenum of the Executive Committee of the Communist Youth International. After the April 1925 bombing of St Sofia Cathedral in Sofia and the beastly terror, the Office in Exile of the BCP Central Committee decided that R. Avramov should stay in the USSR as a political emigre. The fascist regime in Bulgaria sentenced him to death in absentia.

He graduated from the Lenin International School, founded by the Executive Committee of the Comintern with the purpose of training cadres from other fraternal parties. Later on he was appointed lecturer at the Bulgarian sector of the Communist University for training of cadres for the communist parties in some capitalist countries. In 1931 he became a lecturer at the Lenin International School. With great energy and devotion to the party Avramov participated in the work of the Bulgarian emigres in the USSR.

In 1936 R. Avramov began to work actively in the struggle of the workers in Spain to save the republic from the raging fury of fascism. After the election victory of the Popular Front in Spain, the Spanish students at the Lenin International School auditing the courses of the sector chaired by R. Avramov went back to their country. The ardent proletarian internationalist Avramov, following the decision of the Comintern, Central Committee, joined them in Spain as emissary of the Comintern.



Caption of Photo: Hero of the People's Republic of Bulgaria.
The State Council has issued a decree awarding Ruben Avramov Levi with the title "Hero of the People's Republic of Bulgaria" for his active participation in the fight against fascism and capitalism, for his contribution to the building of socialism and in honor of his 80th birthday.

During the Spanish war he was appointed in early October of 1936 by the military commisariat of the Spanish Republican Army as an inspector general of the military commissars of the Central Front. At the end of 1936, due to his courage, decisiveness and excellent promotional qualities as mass oragnizer and ideological activist, Avramov was recommended by the government of the Spanish Republic and the Communist Party Central Committee to organize the work of the military commissars in the entire republican zone. He was also appointed chief editor of EL KOMISARIO, the organ of the military commissariat of the Spanish Republican Party.

Day after day, week after week and month after month, Ruben Avramov, the communist internationalist, worked diligently under most trying circumstances and fulfilled all tasks entrusted to him with his habitual revolutionary assertiveness and organizational talent.

In March 1939, after many complex and unforeseen difficulties, R. Avramov left Spain, which was soaked in blood by the war, and, aided by the French Communist Party, reached Paris together with some Spanish comrades. The second half of May of the same year he was back in the USSR, his second fatherland.

In Moscow the Comintern Executive Committee appointed him director of the newly created 2-year party school for training party cadres among Spanish military emigres. In 1942 he became director of the unified school of the Communist International. In this capacity he contributed greatly to the emergence of ardent revolutionaries in the ranks of the fraternal communist parties who later on played an important role in the

fight of their own people against capitalism and fascism, on the side of freedom and socialism. At a later date R. Avramov was made one of the editors of the famous radio station Khristo Botev (1943-1944).

Happy days followed after the 9 September 1944 victory, to which R. Avramov had devoted his strength and entire life without reservations from his early years. At the end of September 1944 he arrived in his country, where new and serious responsibilities awaited him as a party, social, and national figure, as well as teacher, publicist and propagandist. First he worked as acting deputy of the Agitation and Propaganda Department of the BCP Central Committee and has continually been elected at all congresses.

Comrade Avramov has always held responsible positions in the cultural, scientific and ideological fronts during the entire period of the building of socialism. Wherever the party sent him he worked selflessly and successfully for the fulfillment of the tasks in the ideological, scientific and cultural fronts, and also contributed to the victory of the Marxist-Leninist ideology in Bulgaria under the leadership of the party. He participated abroad in many international conferences of the fraternal communist parties.

R. Avramov is a relentless fighter for the promotion of the Leninist April line of the party led by Comrade Todor Zhivkov. This line has opened wide horizons in the transition to socialism and the building of a mature socialist society in our country.

Comrade Avramov's entire life represents a courageous fight based on the principles of unmasking bourgeois ideology, anticommunism, anti-Sovietism, the rightist and "leftist" revisionism, reformism and anarchism. Therefore, it was most natural for Comrade Avramov to head for the past 10 years the Institute on Contemporary Socialist Theories, a specialized scientific enterprise for the fight against hostile ideology and propaganda.

Being a consistent Marxist-Leninist, R. Avramov has always tried to combine his practical with his theoretical and propaganda work, and to contribute to the defense, application and further development of our immortal revolutionary ideology.

The soldier of revolution, the ardent communist, Ruben Avramov Levi, is celebrating his 80th anniversary in the combat line of the party, fulfilling today as well his sacred duty of a patriot and internationalist.

BRIEFS

ALEKSANDUR LILOV IN VRATSA--On 7 October Aleksandur Lilov opened an historic exhibition in Vratsa City, dealing with the anniversary of forming the Bulgarian state. Later on Aleksandur Lilov met the BCP Vratsa Okrug Bureau and was briefed on the tasks performed by the BCP Vratsa Okrug Organization at present. [AU082032 Sofia Domestic Service in Bulgarian 1830 GMT 7 Oct 80 AU]

BOZHINOV AT OKRUG PLENUM--On 7 October Todor Bozhinov, BCP Central Committee Politburo member and first deputy chairman of the Council of Ministers, and Kiril Zarev, deputy chairman of the Council of Ministers and chairman of the State Planning Committee, took part in a plenum of the BCP Smolen Okrug Organization, at which improving the labor organization and applying the new economic approach were discussed. [AU082032 Sofia Domestic Service in Bulgarian 1430 GMT 7 Oct 80 AU]

CSSR MINISTER--Grigor Stoichkov, deputy chairman of the Council of Ministers, yesterday received Ladislav Gerle, CSSR minister of metallurgy and heavy industry, who is visiting our country. They discussed questions pertaining to the further development of cooperation in the production and delivery of hydropower equipment, as well as in the field of metallurgy industry and heavy machine building industry. The meeting, which proceeded in a friendly and cordial atmosphere, was attended by Nikola Todoriev, Bulgarian minister of power supply, as well as Jaroslav Hejna, CSSR ambassador extraordinary and plenipotentiary.. [Text] [AU031824 Sofia ROBOTNICHESKO DELO in Bulgarian 30 Sep 80 p 3 AU]

BOZHINOV VISITS PLOVDIV FAIR--On 3 October Todor Bozhinov, BCP Central Committee Politburo member and first deputy chairman of the Council of Ministers, visited the Plovdiv International Fair. He visited the Bulgarian display and was briefed on the technological novelties displayed at the fair. [AU031824 Sofia Domestic Service in Bulgarian 1000 GMT 3 Oct 80 AU]

TODOROV, SOVIET ACADEMICIAN--Today Comrade Stanko Todorov received academician Vladimir Kotelnikov, vice president of the USSR Academy of Sciences. [Text] [AU022105 Sofia Domestic Service in Bulgarian 1830 GMT 2 Oct 80 AU]

NATIONAL ASSEMBLY COMMITTEE--The permanent committee on social policy opened a session at the National Assembly. The session is chaired by Peko Takov, chairman of the committee. Members of the council on the reproduction of human resources attached to the State Council are also taking part in the session.

The National Assembly deputies will discuss issues of the workers health protection. They will be submitted reports by Radoy Popivanov, minister of national health, and by Misho Mishev, chairman of the Bulgarian Trade Unions Central Council. The National Assembly deputies will also study documents on investigations carried out in connection with the health protection of workers in the capital and in seven okrugs of the country. [AU022105 Sofia Domestic Service in Bulgarian 1000 GMT 29 Sep 80 AU]

SCIENTIFIC, TECHNOLOGICAL FORECASTING SYMPOSIUM--Sofia, 1 Oct (BTA)--The 2nd International Symposium on the Problems of Scientific and Technological Forecasting opened here today with a speech of Mr Nacho Papazov, chairman of the State Committee for Science and Technological Progress. At two plenary sittings and the sessions of five sections, specialists from Bulgaria, the GDR, Cuba, Poland, Romania, the Soviet Union, Hungary and Czechoslovakia will exchange experience in application of scientific and technological forecasting in the national economy and the different industries and will discuss the deepening international cooperation in this sphere. [AU022105 Sofia BTA in English 1448 GMT 1 Oct 80]

STOYAN MIKHAYLOV ACTIVITIES--Stoyan Mikhaylov, BCP Central Committee secretary, has received the working group of the CPCZ Central Committee Education and Science Department, led by Chief Jan Majcharcik. During the cordial and friendly talks, issues concerning implementation of the BCP decisions on developing education in our country and on further expanding cooperation between the two communist parties in the sphere of science and education were discussed. [Text] [AU032128 Sofia Domestic Service in Bulgarian 2030 GMT 3 Oct 80 AU]

BOZHINOV IN PLOVDIV--On 9 October Todor Bozhinov visited Plovdiv. He visited several industrial plants and took part in a meeting of the BCP Plovdiv Okrug Bureau and Plovdiv Okrug People's Council Executive Committee, in which he was briefed on the tasks solved at present by the okrug party organization. [AU100946 Sofia Domestic Service in Bulgarian 1630 GMT 9 Oct 80 AU]

LILOV VISIT TO VRATSA--On 9 October Aleksandur Lilov, BCP Central Committee Politburo member and Central Committee secretary, visited Vratsa Okrug. Accompanied by Nano Lalov, BCP Varna Okrug Committee first secretary, Aleksandur Lilov visited research institutes, agrarian plants and the Kozloduy nuclear plant. [AU100946 Sofia Domestic Service in Bulgarian 1830 GMT 9 Oct 80 AU]

STANISHEV AT AKTIV MEETING--On 7 October Dimitur Stanishev, BCP Central Committee secretary attended a meeting of Sofia Okrug state, party and economic and public aktiv, which marked the beginning of the party education academic year. Nikokay Dyulgerov, BCP Sofia Okrug Committee first secretary, spoke on the tasks of BCP Sofia Okrug Organization. [AU072140 Sofia Domestic Service in Bulgarian 1630 GMT 7 Oct 80 AU]

GDR DEPUTY MINISTER--Sofia, 7 Oct (BTA)--Today member of the politburo of the CC of the BCP and first deputy chairman of the Council of Ministers Todor Bozhinov received deputy minister of heavy mechanical engineering and appliance building of the GDR (Eckhard Nezmann). Talks were held on the techno-scientific cooperation in the field of heavy mechanical engineering and the production of

complete projects. Some basic matters of specialization and joint production of mining, metallurgical and power generation equipment up to 1985 were reviewed. [Text] [AU072140 Sofia BTA in English 1835 GMT 7 Oct 80 AU]

LATVIAN VISITOR--Georgi Yordanov, deputy chairman of the Council of Ministers, received a delegation headed by Viktor Krumin, deputy chairman of the Council of Ministers and minister of foreign affairs of the Latvian SSR, yesterday. The meeting, which proceeded in a warm and comradely atmosphere, was attended by (Valentin Dyakov), trade attache of the USSR in Bulgaria. [Text] [AU062020 Sofia RABOTNICHESKO DELO in Bulgarian 3 Oct 80 p 4 AU]

USSR CINEMATOGRAPHY OFFICIAL--On 4 October in Varna Lyudmila Zhivkova received Filipp Yermash, chairman of the USSR State Committee for Cinematography. In a friendly atmosphere they held a discussion on the problems and tendencies of modern cinematography. [AU052200 Sofia Domestic Service in Bulgarian 2030 GMT 4 Oct 80 AU]

CSO: 2200

POLITICAL RELIABILITY KEY FACTOR IN MILITIA CADRE SELECTION

East Berlin DER KAEMPFER in German Vol 24 No 9, Sep 80 p 5

[Article by Lt Col Mattuschak, People's Police, military scientist: "Training Course Capacities Always To Be Fully Utilized According to Type--Observance of Quality Characteristics in Selecting Cadres a Prerequisite for Successful School Attendance"]

[Text] Cadres naturally play an important role in the successful realization of the class mission of the militia cadres which, as a component of socialist national defense, always guarantees continuous high combat strength and combat readiness. Therefore, the work of cadres is an extremely important part of the organizational activities of party and state officials, of police officers responsible and of course also of commanders.

In the total course of development of the militia, the party continues to devote great attention to the cadre problem. Lenin teaches that the cadre is the combat strength of the party and of the state when building up socialism, when strengthening the nation's defense strength, and when solving all socioeconomic problems. Lenin's theoretical legacy contains a universal foundation for the principles of selection, assignment, training and education of the cadre. Lenin placed the political aspect first in solving the cadre problem. He regarded a successful solution of the tasks without approaching the selection of cadres politically as unthinkable. The cadres, their knowledge and experiences, unshakable party loyalty and devotion to socialism decide the success of the matter and finally decide the victory in battle. It is therefore by no means a coincidence that our Marxist-Leninist party places political reliability first when it comes to the selection, acceptance and training of militia members. This principle applies even more for the selection, advanced training and deployment of leadership cadres.

In order to successfully lead men and units in combat, political reliability alone does not suffice. For that it is necessary to have also basic military and theoretical knowledge. The majority of the cadres cannot attain this through self-study. This absolutely necessary knowledge is conveyed in concentrated form and by specialists at the appropriate schools, also to militia members.

The criteria for the selection and assignment of militia cadres to the respective schools are unequivocably established in the appropriate documents. Our

experiences with the Ernst Thaelmann Academy are evidence that a good job of selection continues to be done in districts and counties.. The realization that an even distribution in accordance with training capacities guarantees the highest degree of success during the respective training courses has gained acceptance.

A further increase in the quality and effectiveness in preparation and execution of the political and combat training as well as the additional extracurricular training has always been achieved through the goal-directed use of the cadres in the appropriate functions after completion of their course of instruction. Therefore, it is necessary when selecting and assigning cadres that the comrades assigned to a basic course for commanders and deputies for training as well as for deputies for political work at the Central School, for example, have already completed a course for platoon-leaders and, if possible, have carried out this function. The same holds true for other courses as well. That means that cadre preparation is to be assured and carried out in accordance with the regulations contained in the programs. We must, however, frequently note that new course participants do not know the programs and accordingly were not able to prepare for them. If this were improved it would also assure that a higher standard could be strived for and also reached in the first hours of a course of instruction.

We consider very good and desirable what is already being successfully practiced in a number of units. There a comrade who has already graduated from the academy in the same, if possible, or another course, is assigned to a cadre as a sponsor, as it were. This sponsor familiarizes the comrade with the most important things, including the program, which await him at the academy. This has proven best in our experiences also, because the comrade assigned to the course is thus made familiar with the operation of the school and with the prevailing atmosphere and can orient themself more quickly, which, to be honest, saves us a lot of work and works out favorably for the course of instruction, discipline and order. We say to that openly: Imitate!

We have trouble, and the assigned comrade is in difficulty, if it has not been assured that this or that cadre brought along the necessary documents, clothing and supply items appropriate for the course. In addition to cadre documents (personal files), this concerns primarily: Proof of qualification (as far as already received), militia ID, a complete uniform and protective mask, and two authorized notebooks.

In this connection it is also necessary to point out once again that the assigned comrades were taught the regulations regarding alertness and secrecy, and know the contents of the service order militia well. Finally, timely arrival must be assured. We have good reasons to point out that fact also.

It is probably understandable to everyone that the preparation and carrying out of the training process is made considerably more difficult by non-compliance with the most important criteria here. That is shown particularly in the fact that assignment to classes according to the individual categories is made more difficult i.e. delayed, resulting in the fact that military formation takes up precious training time. It is not possible fully to plan the beginning of training and of advanced training. When the participants have differing or even partially

insufficient preparation, additional time and effort are taken up to compensate for this, resulting in decreased accomplishments of the objective of the course of instruction. At the same time, additional demands are made on the class collective in order to give help and support beyond that normally given to individuals.

That means that the process of training and continued training is negatively influenced by the noncompliance with the regulations for the selection and assignment of cadres, the training and qualification of all comrades are affected detrimentally by one or a few. The universal fulfillment of set goals in the training programs can only be reached with increased efforts on the part of the teaching personnel which finally costs them their free time and, over the years, also their health.

High effectiveness and quality in training, coupled with proper selection and assignment of cadres, are the keys to further successes in the increase of combat strength and combat readiness of the militia. Theoretically this is clear; it is important to put the theory into practice.

DEPARTMENT HEAD DESCRIBES FLIGHT ENGINEER TRAINING

East Berlin MILITAERTECHNIK in German No 5, 1980 signed to press 15 Jul 80
pp 228-230

[Article by Col C. Kippenhahn, commander, Flight Engineer Department, Franz Mehring Officers' College: "'Franz Mehring' Air Force/Air Defense Command Officers' College, Flight Engineer Department"]

[Text] The Flight Engineer Department (FID) at the officers' college of the Civil Air Defense Command (LSK/LV) trains military cadres who are ready and able to assure the combat training of the NVA's flying forces through engineering technology as well as aircraft supply technology under any conditions, as well as in the continuous and timely maintenance of aircraft i.e. aircraft supply technology (FVT).

Based on the variety of demands and tasks, officer cadets receive basic training in the following specialties: "FID officer for cell/engine," "FID officer for aircraft armament," "FID officer for special electrical equipment," or "FID officer for radio and radar equipment," or "officer for flight-technical supplies."

The FID has at its disposal experienced and highly qualified superiors and teachers who, together with the faculty of social sciences and basic training, with the party and FDJ organization, educate the officer cadets to class-conscious officers who are loyally devoted to the party and to their socialist homeland, and who meet the requirements of their first and second assignments.

1. Tasks and Requirements for Officers of the FID or for airport Technical Security

The engineer and airport technical security of the air force places complicated demands on FID members or FVT personnel. The conscious work of FID or FVT personnel gains in significance especially when the enemy attacks quickly and at extremely low altitudes. The greater their sense of responsibility and qualifications the more extensive the practical capabilities and skills of the young officers, the greater is their contribution to securing the combat readiness of the air force.

This means for the officer of the FID or the FVT:

Supported by a solid and useful Marxist-Leninist knowledge, he trains his subordinates to be class-conscious, combat-ready fighters in the sense of socialist patriotism and proletarian internationalism.

He trains his subordinates in high military discipline and order, alertness, reliability and honesty.

On the basis of his military technical knowledge, his practical capabilities and skills, he is capable of carrying out the operation, maintenance, care and repair i.e. aircraft supply technology, and to lead and to control collectives in these activities.

He is prepared to form his collective into a military combat collective, to lead it to high accomplishments in socialist competition, to supervise, guide and inspire them with enthusiasm through exemplary work.

He is capable of enduring great physical and psychological stress, and is prepared for the highest accomplishments in combat.

These selected requirements show that during the training process not only the officer cadets, but also the instructors must continuously qualify themselves.

2. Main Points of Emphasis in Training

The officer cadets receive--independent of training specialty or use--complete training in the social sciences, with the subjects distributed over the entire training period, as well as military training in artillery, protection, topographic, tactical, engineering, communication and motor vehicle training (Class V driving permit); in addition they receive training applicable to their specialty in the basic subjects of mathematics, electrotechnology, communication technical systems and automatic guidance.

Experienced officers and college instructors give the officer cadets extensive basic knowledge in natural sciences and tactical technical special knowledge. They are always making the effort to update the teaching materials on the basis of the most modern scientific findings as well as to improve the forms and methods of training in accordance with the requirements of the 1980's. They also have a significant part in shaping the officer cadets into socialist soldier personalities, influence their abilities to make expert decisions, their ability to gain knowledge on their own, their disciplined conduct while guaranteeing high combat readiness of the technology in their charge, and the constant strengthening of their professional motivation of becoming FID or FVT officers in our air force.

The department has under it the following subjects: Cell/Engine, Special Electrical Equipment, Flight Radio and Radar Equipment, Aircraft Armament, and Engineer Technical Safety.

The subject Cell/Engine familiarizes the officer cadets with aerodynamics/flight mechanics, thermodynamics, hydraulic-pneumatic systems, mechanical systems, the cell and the engine, as well as with the theoretical principles, constructive solutions, structure, characteristic processes, principles of operation and interaction of the various structural components and component parts of the aircraft (helicopter) cell as well as the hydraulic and pneumatic installations and flight engines. During their practical training the officer cadets gain basic skills in all control, maintenance and repair work for modern flight technology.

The subject Special Electrical Equipment introduces specialty-related knowledge, capabilities and skills in areas of power supply, engine control, flight regulator and flight navigation. Part of this is the preparation of installations and systems of the special electrical equipment before and between uses as well as restoring its usefulness in case of defects or breakdowns. The greatly increasing size of engine regulation equipment, the extensive industrial measuring and control equipment in the power equipment and the high degree of automation in flight control show the responsibility of the officers in this specialty for flight safety and for the success of the combat mission by the pilot.

Main subjects taught are:

Power equipment systems of planes and helicopters. It is the goal of training to learn the theory behind electrical machines as well as the principles of operation and of energy distribution, as well as of voltage control.

Flight regulators and flight navigation installations, with the goal to be able to assure proper operation, maintenance and control through solid knowledge of the mode of operation, methods and principles of construction of these systems.

Hands-on briefing in the actual installation of the plane or helicopter, which the graduate will use, with the objective of understanding and mastering the tactical technical possibilities, interaction and the use of control and measuring devices.

Combat duty which trains and teaches practical engineer technical safety according to technical documents and technologies, in cooperation with the engineering personnel.

The subject Flight-Radio-Radar Equipment teaches specialty-oriented knowledge, capabilities and skills in the area of radio, radar and flight navigation equipment of planes and helicopters. Part of this is the preparation of this equipment before and between uses as well as restoring its usefulness after a mission.

Main courses taught are:

Principles of signal communication technology, radio location and radio navigation with the objective of teaching operational principles and methods of present and future installations.

Hands-on briefing in actual plane and helicopter installations, their tactical technical possibilities, the structure, interaction with peripheral installations, their measuring devices and their uses.

Combat service enabling the officer cadets in the shortest time possible to assure safety in maintenance, preparation for combat, equipment protection, searching for and analyzing defects, and decisions regarding restoration of combat readiness of aircraft or helicopters, based on current service regulations and technical documentations, in cooperation with engineering personnel.

The subject Aircraft Armament teaches how to maintain, care for, prepare for deployment, use and repair the armament for manned missiles. It teaches technical and specialized basic knowledge and its use in the area of aircraft armament and planes, i.e. helicopters' installations and equipment which guarantee the specific and effective use of these weapons.

The technical and specialized principles are:

Mechanics and its use in aircraft construction, ballistics, dynamics of missiles, of gyrostats, and mechanisms.

Principles of aerodynamics for rapidly flying missiles and their use in aircraft rockets and projectiles.

Principles of guidance and guidance systems of guided rockets.

Problems of missile stabilization

Rocket and projectile propulsion and its use in aircraft weapons

Selected principles of explosives theory, of explosives and their fuses as well as their use in projectiles and bombs

Principles of infrared and laser technology

Principles of computer technology and their use in sighting mechanisms as well as in control and test equipment

Principles of electronic, electrical and electromechanical guidance systems as well as their use.

The subject Engineer-Technical Safety (ITS) fulfills various tasks of very different character. The ITS is for all FID specialties. It teaches the officer cadets extensive knowledge regarding the organization and conduct of ITS in combat training and combat operations of all branches of the NVA air force. The cadets are made familiar with the general rules and principles of work on aircraft, their duties in their first assignments and the contents of the FID service regulations.

This subject is the basis for the FID activity, it extends over all training years and is part of the final examination.

Troop maintenance falls under the same subject. Here the officer cadets receive the necessary equipment for the troop maintenance of flight equipment and other flight technical equipment, they learn about the theory of aviation materials and fuels. In addition, specialists from LSK regiments are being qualified in courses. They are trained for repair of engine cells, as welders for flight materials, users of combine trade union headquarters technology or for nondestructive material testing. They also assure the advanced training of welders and their supervision after TGL 2847. It is the goal of all courses to award or to receive government licenses or permits.

Aircraft supply technology is another field under this subject. It is responsible for the training of officers in airport security. After graduating as officers, they work as platoon leaders or deputy TA in a flight technical company or in an installation of the Rear Services. The officer cadets of this branch receive a wide spectrum of knowledge. They are able to organize and to lead the airport technical safety of flying and helicopter regiments, to prepare, use, maintain and repair aircraft supply technology, as well as to supply fuels and technical gases timely, continuously and properly.

Special training and basic tactical-technical training occurs in the following fields:

Power machines and operating machines

Special technology (construction, structure, functioning)

Combat service (use and maintenance of aircraft supply and special technology such as airfield fuel supply vehicles, liquid fuel transport and reloading technology, aircraft starting devices, among others; and Read Area security (tactics, organization, leadership).

3. Practice-Related Training of Officer Cadets

For the practice-related training of officer cadets, the FID has in addition to rooms, laboratories and workshops a training airport too. Already in the first year of training, the cadets gain practical abilities and skills at the training stands as well as the training combat technology. Until into their second year of training, they primarily learn elements of service control. In their third year they are fully familiarized with the operation of engineer-technical safety and the execution, supervision and control of all work in relation with the use and maintenance of aircraft technology or aircraft supply technology.

Only after they have mastered it in its entirety does their practical training at the officers' college come to an end. They gain their first practical experience at the beginning of their first year in a fighter bomber wing or in a flight technical batallion. In their second year they improve their capabilities and skills in leading military collectives in the role of squad leader in the

troop practical training courses I and II or in socialist military training. Simultaneously they study the practical leadership activity of an officer in his first and second assignment, by making them part of the technical and flight services. The final practical training course III for cadets in their third year takes place in the regiments and companies in which they serve as officers. Here they must prove themselves, because they work in those military collectives to which they will be assigned or which they will lead politically and militarily after graduation.

Love for their socialist homeland is expected above all else from officer applicants. This should be reflected in their entire demeanor and in all their actions, especially in seeking greater friendship with the Soviet Union and the other socialist states. In addition we expect openness, honesty, cooperation and modesty in forming true socialist relationships in the training and combat collectives. That means being socially active even before beginning the honor service in the NVA. Emphasis is placed on work in the socialist youth alliance, in the worker communes of the Society for Sport and Technology, or in the collectives of officer applicants under leadership of the kreis military commsnd. All possibilities given in schools, enterprises and local installations should be taken advantage of in order to gain the necessary prerequisites such as political clarity about the work of the NVA, physical endurance and professional ambition.

The officer applicant for training in the area of flight engineer service and aircraft supply technology must have a love for technical problems of modern weapons systems of the air force and must have an interest in carrying out the organization and leadership of engineering or airport technical safety. His thinking and actions must be aimed at solving all political, military and specialized tasks with initiative, while taking economic problems into consideration.

The faculty itself will make every effort in order to further the applicant's professional motivation. For that reason the political, military and specialized training takes place at a high level under troop related conditions, and training --in accordance with the steadily increasing demands in the technological revolution in the military--aims at the highest results.

CSO:2300

PROBLEMS CITED IN DAMAGE TO AIRCRAFT ENGINES

East Berlin MILITAERTECHNIK in German No 5, 1980 signed to press 15 Jul 80 pp 250-253

[Article by Lt Col R. Beck: "Prevent Intake of Foreign Bodies Into Aircraft Engines; How Can Damage to Turbine Engines Be Reduced?"]

[Text] Negative effects result in three respects whenever it is necessary in the air force to exchange aircraft engines prior to the termination of their required operating hours.

First of all, the unit's combat readiness is impaired because the particular aircraft is not operational for the period required for the failure investigation and the engine change.

Second, flight safety is endangered when engine damage is not recognized at the right time.

Third, we get heavy military-economic losses when only a small part of the required operating hours was "used up."

It follows from all this that everything must be done to prevent premature engine changes. The absolutely critical point here is represented by engine damage due to the intake of foreign bodies.

Engine failure due to technical causes essentially springs from design factors as well as the quality of production or industrial repair, apart from the few cases of gross mishandling by rated and engineering-technical personnel. The modern turbojet engines used in our LSK [Air Force] have a very high degree of operational reliability. There are rarely any technical causes leading to engine change. The critical aspect of "intake of foreign bodies" also springs from the fact that, considering the current level of development of our engines, because of the need for minimizing the overall pressure losses in the intake part as well as the dry weight and the frontal cross-section, there are no devices for intercepting foreign bodi - in front of the air intake of the axial compressor.

1. Responsibility of Commanders and Supervisors

The three conditions for the intake of foreign bodies, mentioned in the article by Colonel Kippenhahn (MILITAERTECHNIK, No 4, 1980), characterize the multiplicity of possibilities and at the same time the danger of foreign bodies getting into the engine. It follows from this that the specialized services, which organize flight operations, which provide back-up support, guidance, and supervision, must together prevent the intake of foreign bodies. But that job can be done successfully only if the particular commander educates the supervisors of all pertinent specialized sections and, if necessary, forces them consistently to implement the requirement for cleanliness and orderliness in their area of responsibility.

The body of regulations applicable to flight operations and technical support services, the design of the aircraft and its ground equipment, as well as the requirements regarding the condition of flight operations areas (aprons, hardstands, taxiways, and runways) to a great extent take into consideration the danger of foreign bodies being sucked into the engine. Nevertheless, we still have such cases where engine failures result from the intake of foreign bodies. What therefore must be done in order to prevent premature engine change due to foreign body intake?

Above all we must extensively eliminate all causes and circumstances promoting the intake of foreign bodies. All personnel must be able and must be trained responsibly to obey the regulations, to keep aircraft and ground equipment in excellent technical condition, and to assure the proper condition of flight operations areas. Whenever damage on compressor blades and other engine components is observed, it will be necessary to make technically justified decisions as to the permissibility or impermissibility of continuing the particular engine in use. It is furthermore necessary to utilize all possibilities of unit-level repair as a function of the design features involved in the particular engine type. Commanders on all echelons are fully responsible for the general condition of the equipment while the particular flight engineering supervisor is responsible for technical inspection and reporting as well as the instructions given on the basis of those reports.

2. Eliminate Causes and Conducive Circumstances

Table 1 shows the essential danger sources regarding foreign body intake. It is not supposed to be complete and it is intended merely to help identify and eliminate causes and conducive circumstances promoting engine failure.

The cases mentioned in the left-hand column as a rule cause such severe engine damage that it cannot be repaired on the unit level. In some cases, the costs of industrial repair can be the same as the initial procurement

costs, that is to say, repair will no longer make any sense. The multiplicity of possible causes underscores the complex character which all efforts to protect engines against foreign bodies must reveal. It might be added at this point that, under the conditions of routine unit operation, it is not always easy to eliminate all causes and conducive circumstances.

Table 1. Causes and Conducive Circumstances Promoting Intake of Foreign Bodies

Foreign body is already in or within immediate vicinity of entry part	Foreign body is whirled up and gets into action radius of suction forces of entry part
Mishandling by flight operations personnel (violations of regulations and technologies, deficient inspection)	Defective condition of flight operations areas, separation of surface layer (blacktop, synthetic resin)
Failure to remove foreign bodies (tools, blank covers, nondurable material, etc.) in suction range	Breaks, cracks, crumbling of concrete, use of blacktop surfacing in places subjected to heavy stress due to gas jet and fuel leak losses
Failure to close hatches in suction shaft, combined with foreign bodies located in suction area behind the hatch lid to be closed	Defective fastening of taxiway wheels
Impermissible changes on ground equipment leading to the loosening of parts in the suction range	Defects in the cleaning of flight operations areas prior to the start of flight operations (wire remnants from sweeping brushes, concrete, blacktop, and ice remnants)
Taking along of foreign bodies in pockets of special work uniforms	Lack of cleanliness in parking areas (remnants of safety wires, screws, cleaning rags, etc.)
Incorrect donning of and loose parts in special work uniforms	Failure to sweep hardstand pad prior to starting engine
Staying in safety zones with engines running	Improper order at parking area (depositing of ground equipment, canvas, tools, etc.)
Defective attachment (securing) of self-locking screws and snap closures in suction range (for example, use of self-locking trigger-guard screws of incorrect length)	Contamination of flight operations areas due to violations of regulations regarding driving on air field

Design and production-engineering deficiencies (manufacture and industrial repair)	Driving on flight operations areas with dirty vehicles (for example, pebbles stuck in tire tread)
Deficient attachment (securing) of self-locking screws and snap closures in suction range (including on-ground equipment)	Unauthorized personnel driving on flight operations areas
Deficiencies in driving through water	Improper behavior by rated personnel Failure to maintain required taxiing intervals
Use of unsecured screws in suction range, defective welding seams, crack formation in suction range (including on-ground equipment)	Failure to watch wind direction during takeoff of groups of aircraft
Loose rivet in suction range	Using taxiways not cleared for use Insufficient inspection during acceptance of flight operations areas Pulling out of power dive too low during ground target firing practice using unguided rockets Failure to observe ornithological situation

The limited time available for preparing aircraft for a repeat takeoff, unfavorable lighting conditions during night flight, severe physical and psychological stresses on personnel during working while wearing protective clothing, unfavorable weather conditions and the requirement for short takeoff intervals during unit takeoffs make it difficult to meet all requirements for the protection of engines against foreign bodies. It is therefore all the more necessary to make sure that both the technical support service and the flight operations service are prepared, carried out, and supported on the basis of a high level of discipline as well as excellent capabilities and skills on the part of personnel. Every participating comrade, regardless of whether he is a tank truck driver, an aircraft mechanic, or an aircraft commander, must carry out the regulations in an exemplary fashion and must be able to recognize danger sources and act accordingly. This in particular means that the commanders and supervisors must always analyze their organizational and educational activities from the viewpoint of "foreign bodies" and consistently implement the corresponding regulations.

3. Recognize and Eliminate Causes of Actual Engine Failure

The examination of actual engine failure plays a special role in recognizing and eliminating weak points. This is currently not yet being done every where on the basis of uniform criteria and with the required effectiveness.

In what direction is the investigation to be conducted?

Inspection of Engine Damage
(As a rule: Compressor Rotor Blade)

In case of minor damage (so-called dents [impacts]), it is first of all necessary to determine whether the engine can continue to be used or what repair possibilities exist under unit conditions (see chapters 4 and 5). On the basis of the shape, dimensions, number, and location of damage points it is then necessary to work out the most accurate possible concepts as to the type of foreign body (make photos, sketches). In special cases, it is possible to conduct trace-plot investigations, calling upon criminal investigation specialists. Here it is necessary to keep in mind that the origin of the foreign body has not yet been established as a result of the investigation findings, for example, "hexagonal screw, M-7, shaft length 10 mm."

Investigation To Determine Missing Parts

All parts located in the suction range of the aircraft as well as ground equipment and tools must be subjected to a careful visual inspection (main point: see left-hand column in Table 1). The tool and the 1:1 ground equipment set must be checked for completeness.

Checking Documentation

Starting with the last compressor inspection recorded (as a rule, the last flight preparation phase), it is necessary in detail and in chronological order to record the "record" of the engine: flight preparation, pre-flight check, flying shifts (broken down for each individual flight), trial runs, tool time checkups, etc. For each stage it is necessary to determine the date, the time, the personnel involved, and any unusual observations. Furthermore it is necessary to determine, for the individual flight shifts, the wind speed, wind direction, takeoff direction, as well as, for the individual flights, the number of the exercise, takeoff interval, and takeoff formation. During ground target firing practice using unguided rockets, it is necessary to look into the maintenance of flight patterns.

Inspection of Flight Operations Area

Here it is necessary to examine the structural condition of aprons, forward takeoff line, taxiways, runways, and braking stations, including the guy wires and safety line. Besides, it is necessary to look into compliance

with and effectiveness of specified cleaning operations and acceptance functions as well as the implementation of the driving patterns for motor vehicles.

Interviewing Rated, Engineering-Technical, and Supervisory Personnel Involved

The basis of the interview might consist of written reports which the personnel involved must prepare in advance regarding all phases of flight preparation and implementation. In this process we clear up the questions arising from prior investigations and reports regarding the development of operations and any unusual incidents as well as compliance with military regulations.

Drafting the Conclusions

By analyzing the above-mentioned investigations, we can determine the cause or possible causes. If it is impossible to come up with clear statements regarding this situation--something which happens particularly frequently in the case of the so-called "dents"--then the minimum requirement calls for us to list all weak points in the entire process of flight preparation and implementation in a thorough fashion.

Spelling Out Measures To Be Taken

These measures are designed to eliminate the above-mentioned causes or weak points. The following can be such measures, for example:

Repairing the engine,

Suspension of personnel and deadlining of equipment,

Readmission after suspension,

Analysis of situation together with rated, engineering-technical, and back-up support personnel,

Instruction on specific topics (for example, compressor inspection),

Preventive inspections on aircraft and ground equipment,

Design changes on aircraft and ground equipment,

Organizational determinations (for example, specific determination of taxi and driving patterns, inspection of taxiways, additional cleaning work),

Improvement of structural condition of flight operations surfaces,

Drafting of technical reports, training materials, etc.,

Disciplinary and damage restitution measures.

As a function of specific conditions one can of course omit or expand individual elements of the investigation procedure described here while other steps can be added. The important thing is to make sure that the investigation will be carried out not only by the flight engineering service but together with responsible officers from all specialized services involved (for example, air base support service).

4. Make Technically Justified Decisions

In order to exchange engines, which have sucked in foreign bodies, only if operational safety is endangered, the manufacturer will determine technical conditions for blade damage as a function of the design features. If these conditions are exceeded, then the engine must be changed. In this way we avoid unnecessary engine changes in case of rust spots, small nicks, erosion on blades, etc., which result from very tiny foreign bodies. The following, for example, are permissible on the blades of the first compressor stage of a certain engine type (Figure 2):

Dents on no more than ten blades,

On one blade, no more than five dents, including up to three dents at the entry edge and up to two dents at the exit edge,

The dents must be at least 10 mm away from each other,

Dents at the leading and trailing edge of a blade must not be located on one particular radius,

For each blade, one dent with a maximum depth of 0.5 mm, the others less than 0.5 mm deep,

There must be no dents in zone "B."

The decision as to the further use or the removal of the engine in case of determination of dents must be made very carefully and must be technically justified. If the wrong decision is made, we either endanger flight safety or we get an unjustified heavier economic damage plus an additional expense. Past experience tell us that the dent depth is overestimated in case of visual estimation without the use of measurement instruments.

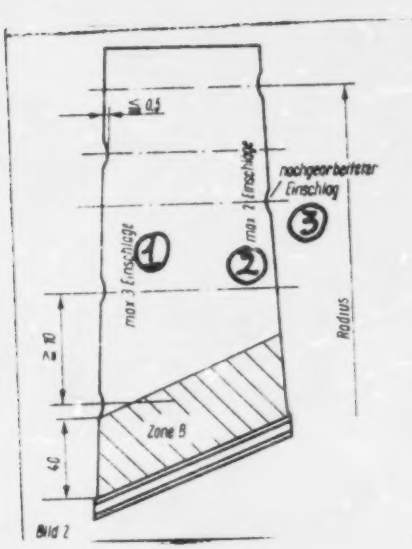

Figure 2. Permissible damage to a blade in the first compressor stage. Key: 1--maximum of three dents; 2--maximum of two dents; 3--repaired dent.

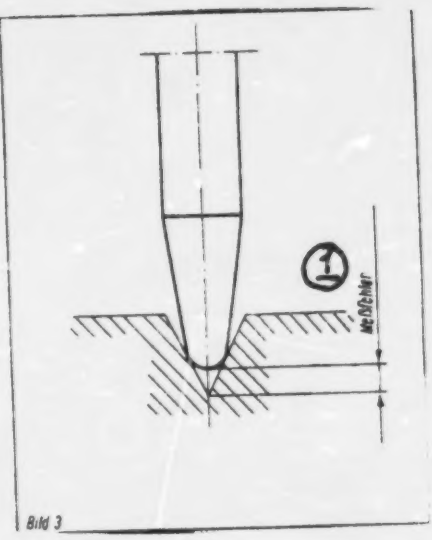

Figure 3. Measurement error in depth measurement using precision instrument. Key: 1--measurement error.

5. Possibilities of Judging Dents

The visual inspection of the first and second compressor stages as a rule is accomplished only with a good light source, without special aids, because in most aircraft there is a possibility of getting at the compressor intake via the suction shaft. For the purpose of visual inspection of the rear compressor stages, the manufacturer has provided special hatches in the compressor housing, whereby aids such as illuminated mirrors, endoscopes, etc., must be used. Here there is a danger that the magnification effect of the optical aids might cause the dents to be overestimated. It is therefore absolutely necessary to make sure that personnel will acquire a certain training level for this type of work with the help of comparison blades. Because visual overestimation of dent depth also results from the shadow created by burr formation and dirt, it is necessary to remove the burr from the dent before making any judgment and to clean the dent with an organic solvent.

When cracks are observed in a blade, it is necessary in every case to exchange the engine or, if possible, the particular blade. In case of a suspected crack, a suitable crack examination method must be used.

The measurement of the depth of these dents is possible only if the blades are easily accessible and if we can stop the entry of additional foreign

bodies during measurement (for example, in the first compressor stage or in compressors whose housings can be opened under utilization conditions). In the GDR air force, a portable measurement equipment set was assembled for use under field unit conditions on the basis of innovator proposals (figure 4); it facilitates direct and indirect depth measurement. For direct depth measurement, we use a precision instrument which was provided with a sensor tip and special support legs (figure 5). This measurement method is simple and quickly applicable but has the disadvantage that, in case of dents with a radius where the base of the dent is smaller than the radius of the sensor tip, we get a measurement error which is difficult to judge (figure 3).

In case of indirect depth measurement, we make a negative casting of the dent. For this purpose, after removal of the burr, we paint a separation agent on the damaged spot and we then form a small depression around the dent with plasticine. Into this little depression we pour the mold mass which has been stirred together from two components. After the hardening and removal of the negative casting, we can measure the impact [dent] depth with the precision instrument as a rise on the negative casting. This method extensively eliminates the measurement error connected with direct depth measurement but its handling is more expensive.

The foreign body which goes by the name of "bird" creates special requirements when it comes to deciding on the further use of the particular engine.

After a bird has been sucked in, the compressor blades are often not distorted but there is a danger that feather or meat remnants might clog the pipelines leading to the air outlet from the compressor. If these pipelines run outside the compressor housing and, which is the case as a rule, contain filters in front of sensitive structural components and systems, then we have an objective inspection possibility. A technically justified decision to be sure however requires a considerable effort but yields clear result.

If however the air flows through the interior of the compressor (for example, the shaft) and if such elements as the cooling-air ducts in the turbine rotor blades--which are so extraordinarily important for operational safety--are being supplied, then there is a greater danger that these narrow ducts might become clogged. In that case there is no objective inspection possibility on the unit level. To make a decision, we thus face the difficult task of determining whether a bird did fly in, whether that can lead to clogging, or whether we are dealing here only with parts or remnants of a bird (separation due to the sharp-edged parts of the air intake)--something which does not constitute a danger. In the first case of course the engine must be changed.

From this viewpoint it is understandable that the subject heading of "bird intake" accounts for a very large percentage of premature engine changes

due to foreign body entry, particularly in engines with interior cooling of turbine rotor blades. Here we particularly crassly run into the requirement which applies to all categories of foreign body entry: by means of complex efforts it is necessary to eliminate conditions for foreign body entry and, in case of the appearance of such a situation, it is necessary to make responsible decisions.

6. Utilizing All Unit Repair Facilities

These possibilities depend first of all on the engine design. As a rule, we can repair only engines with a limited number or limited dimenstions of dents in compressor rotor blades under unit conditions. From the viewpoint of high military-economic savings, which can be achieved in this way, it is necessary fully to utilize these repair possibilities.

Here are some examples:

We clean the blades in case of dents which, in keeping with the manufacturer's technical conditions, permit the further utilization of the engine ("permissible dents"). The purpose here is to prevent the development of cracks along dents. The cleaning must be done with fine-grained grinding-cloths (specified by the manufacturer) in such a manner that the dent can be completely removed and that we will get small grooves, especially in a direction lateral to the blade edge. This is permissible only if we can be adequately sure that no foreign bodies (grinding agents, chips) will get into the compressor.

The exchange of blades and the exchange of the first compressor stage are accomplished on engines, which facilitate this change by virtue of their design, according to the technology provided by the manufacturer.

7. Conclusion

The above article is designed to help the reader understand the need for the absolute protection of engines against foreign bodies and the complexity of this problem. The problem of "foreign body intake" is one of those areas where only through circumspect, responsible behavior, coupled with solid knowledge and ability, often without any major additional effort, we can accomplish the task which was formulated as follows by our minister of national defense:

"Our responsibility as socialist military personnel commands us to secure the required level of combat strength and combat readiness of the armed forces coupled with the lowest possible burden on the economic potential."

READY-ALERT SYSTEM METEOROLOGICAL SERVICES DESCRIBED

East Berlin FLIEGER-REVUE in German No 9, Sep 80 pp 383-385

[Article by Horst Karos: "National People's Army (NVA)--Flight Meteorologists"]

[Text] There is a popular saying to the effect that, when the frogs croak for a long time and when the swallows fly high, we are going to have nice weather but when the swallows fly low and when the frogs jump, we are going to have bad weather. Those animals, whose behavior does supply some hint as to changes in the weather, however cannot be used as accurate weather forecasters. Anybody who wants to get precise information on the weather simply will not be satisfied with the report to the effect that the weather is going to get nicer or worse. Military pilots for example need a large volume of information about the current and future weather situation in order to be able safely to accomplish their flight mission. The faster, the further, the higher, or the lower they fly, the more thorough must the weather data for them be. This is why every air field of our NVA [National People's Army] has its own weather station. We want to report about the work of such a flight weather station here.

Nine Men and One Woman

The Hermann Matern Fighter Wing has a long record of good results in airborne combat training and in the accomplishment of assignments on routine duty missions. These results last but not least are also the work of the wing's flight meteorologists because they help decide which planned alternate flight plans are to be considered for the particular day, with what degree of safety the flying missions can be accomplished, and the way in which certain special missions can be accomplished. Here, nine men and one woman assemble the weather data and draw and interpret the necessary weather charts. The team leader is the 36-year-old graduate meteorologist Maj Klaus Wolf who, back in 1967, completed his studies at Karl Marx University in Leipzig. Nobody can work here without the proper qualifications and without constant advanced training. This why, during my visit, I did not get to meet the only woman among the group of the wing's weathermakers, as it were. She is Sylvia Kirchner. This 20-year-old lady just happens to

be in Dresden where she is taking a special correspondence course to become a meteorological engineer. Lt Bernd Schmidt already has achieved this skill level. Graduate meteorologists 1st Lt Joachim Schorlemmer and Lt Norbert Strauss likewise graduated from Humboldt University in Berlin a long time ago. Sgt 1st Cl Waldemar Ziegler, a career NCO, has been a category-II team leader for several years. He is assisted by Cpls Arne Hartmann, Bernd Wiemert, and Frank Trabhardt. They acquired the fundamentals required for synoptics specialist (that is the technical term covering experts in the field of weather forecasting) at the NCO School of LSK/LV [Air Force/Air Defense]. In conclusion we might mention PFC Ralph Schoenherr who has the job title of assistant in flight meteorology.

During the recent period, this team considerably contributed to enabling the wing to fulfill the airborne combat training plan in terms of flying hours and flying elements month by month with a high level of flight safety; this was due last but not least to the thorough briefing and flight hazard reports from the meteorologists.

At the Flight Weather Station

The rooms of the wing's weather station are brightly lit and well air-conditioned day and night. Here the comrades know at any moment where in Central Europe it happens to be raining or snowing, what the temperatures are along the Baltic Sea or in the Thuringian Forest, how the wind speed and direction change with the altitude, and many other data. By radio and wire, the weather station personnel however are constantly informed not only about the weather in Central Europe but also on other continents.

While Maj Klaus Wolf was explaining some measurement instruments to me, a radio-teletype unit working at high speed picked up columns of letters and numbers. For the uninitiated, these data are a big mystery. Major Wolf waits until the teletype machine has shut off and then he rips the printed sheet out. With his index finger he points to the 11th item showing the letters lhbp and explains to me that those were data from the Budapest airport. Thus I finally learned what temperature and visibility conditions, what wind speed and wind direction prevailed 20 minutes earlier in Budapest, how high the clouds were above the Hungarian capital, what their shapes were, etc.

In addition to the data from the weather stations at air terminals, the comrades naturally also get data from other stations, such as data from radio probe ascents or they get ready-made radar weather maps via so-called facsimile receivers which likewise provide information on high-altitude winds, thunderstorm activity, and other weather phenomena.

All of these data are supplemented by measurements taken within our own air filed perimeter. For example, every quarter hour, the automatic cloud altitude measurement instrument measures the lower boundary of the cloud

cover. By means of a wind measurement instrument, the wing's flight meteorologists learn every 10 minutes what the average wind speed is in the main landing direction of the runway. Then Sgt 1st Cl Waldemar Ziegler and his comrades very skillfully and accurately enter the data from other sources and their own data on the colored weather map. Around the clock, the NVA flight meteorologists carry out their duties in a three-shift system and every hour a new, up to date weather map is made.

This map helps the meteorologist on duty in preparing the reports and during flight operations it enables him at all times to give accurate information on the weather at our own airfield and in the surrounding areas. But that is not enough. The comrades at the weather station must be able to provide the fighter pilots with detailed information also on the current weather situation at airfields which have been earmarked as intermediate or alternate airfields.

Danger Between Heaven and Earth

This high degree of action readiness, which is also demanded of the flight meteorologists, is due to the flying missions which modern fighter-interceptors can and must accomplish today. As we know, they fly both at very low and at extremely high altitudes and they do so at high speed. Nevertheless, even the most modern fighter aircraft are not independent of the weather; in spite of all of the advanced technology, poor visibility, turbulent air movements, rainfall and snow do influence the course of their flights. Thus, the flying attitude of a fighter plane can be changed in the turbulence range of a thundercloud without the aircraft commander always being able to react to that right away. Let us take another example. Inaccurate data on air pressure near the ground can lead to erroneous altitude estimates and, during low-level flight or during a landing approach, this can lead to complications.

Meteorological Reconnaissance Flight

Even when flight operations are scheduled, the flight meteorologists of the Hermann Matern Fighter Wing are particularly in demand. Before the start of each flying shift, a crew takes off for a weather reconnaissance flight during which it flies along all routes and over all areas in which training and combat flights are to be made. This is done mostly one hour before the first takeoff. Before the comrades of the meteorological flight reconnaissance crew get into their plane, they consult directly along the foreward flight line with the meteorologists on duty who, depending upon the duty schedule, might be Wolf, Schorlemmer, Strauss, or Schmidt. On the basis of the up to date weather chart, they meteorologist on duty then briefs them on the weather to be anticipated.

Then the weather fliers take off, they compare the weather forecast with the actually prevailing weather and record certain observations in writing. After landing, the weather fliers confirm the forecast for the meteorologist

or they make the corresponding supplementary entries. Only then is the "weathermaker" on duty available to the flight operations officer and the unit commander who then, on the basis of the by now complete weather report, determine the particular alternate flight plan.

When all of the aircraft commanders assigned to the particular flying shift get together, so that the flight director [operations officer] or commander can give his final instructions, the flight meteorologist is the first one to speak up. He explains the current and anticipated weather situation to the aircraft commanders, he points out any special aspects, for example, unusual things to be watched out for during the takeoff and landing phase.

The men around Maj Klaus Wolf naturally do not get any rest then either, even though the first takeoff may have taken place. They must continue to keep track of the development of the weather situation, they must analyze all weather data and if necessary immediately notify the flight director as to any weather changes, if such changes could influence flight operations. It then happens by no means infrequently that an alternate flight plan must be selected during the particular flying shift. The commander's decision on that is prepared by the data from the flight meteorologist.

The visit to the flight meteorologists of the "Hermann Matern" Fighter Wing, the conversations with Maj Klaus Wolf and his companions clearly showed me what important, responsible, and also interesting activities these comrades are involved in. They exert direct influence on making sure that the combat value of their wing will meet the requirements arising from the missions of our national defense.

JOURNAL VIEWS PROBLEMS OF MEDIA CENSORSHIP

Warsaw PRAWO I ZYCIE in Polish No 40, 5 Oct 80 p 12

[Article by Marian Flasinski: "Censorship; on a Model of Legal Regulation"]

> [Text] There is no doubt that one of the most important causes of the deformation of socialist democracy was the blocking of an important channel of public information in books and the press and on the radio and television. This diagnosis, presented by the striking working forces on the coast, has been reflected in the agreement with the government. This agreement confirms the necessity of legal limitation on censorship interference so that censorship remains within the essential boundaries which are essential to protect the most important interests of the socialist state, state and economic secrets, and the morals, customs, and feelings of believers and nonbelievers.

The chief criticism is focused on the past practices of the Chief Office for the Control of Press, Publishing, and Public Performances, as the government body responsible to the chairman of the Council of Ministers.

When we consider more deeply the problem as to the sort of method which assures that the society has access to reliable and current information and at the same time that protects effectively the basic values of the socialist society and state, we should nonetheless meekly ask whether in fact the GUKPPiW [Control of Press, Publishing, and Public Performances] bears the main responsibility for failing to disseminate the mass dimedia of real, critical information about what has happened in the state and in particular about the growing conflicts and their causes, for example, voluntarism, megalomainia, inability, and to a certain extent also the excesses of power of certain representatives of the administration, should we not?

Even for persons who have come into contact with censorship only in a casual, intermediate way, it is obvious that many decisions of the GUKPPiW have resulted simply from prohibitions and commands determined outside of and usually above the chief office, sometimes through the inspiration of the government leadership at the time to defend the special immediate interests of government departments, economic organizations, regions, or even individual parties. Nonetheless the odium of public criticism has fallen on GUKPPiW employees.

At the same time the careful reader of the press and books published during the past few years could note rather substantial differences in the reliability of material included in various publications. This means that sometimes the state censor was more liberal than the censorship exercised by the heads of certain publishing houses. Many writers can find in their own experience examples of mishaps with those publishers who used censorship as an excuse for their unwillingness to allow their lack of reliability and courage to be made visible. The most convincing example of the hypothesis that GUKPPiW was not the only party responsible for the creation of such idyllic myths divorced from all reality was Dziennik Telewizyjny. There were few people who were not aware who it was who was the chief director and censor of this "hour of prosperity," and it was not the GUKPPiW people.

In order to weigh the assumptions for the censorship law, it will be essential to note that if censorship practice was based solely on the regulations in force from the 1946 decree, improper interference would be extremely infrequent.

Let us recall that in keeping with the decree on the creation of the GUKPPiW, dated 5 July 1946 (with later changes) censorship control has as its goal the prevention of a threat to the system of the Polish state, the waging of military propaganda, the revealing of state secrets, action detrimental to the international relations of the Polish state, violation of the law or morality, and leading public opinion astray by giving information inconsistent with reality.

And so the decree limited state censorship interference to the minimum necessary for the basic good of the state and the society. If despite this things reached the point of a basic blocking of reliable public information, then at any rate it was not the decree which thrust these restrictions on anyone.

The above statement gives rise to the conclusion that even the best legal solutions which precisely restrict the authority of censorship cannot insure the proper flow of information, if they boil down merely to listing the restrictions, without containing any guarantees or creating any mechanisms to insure against others or against very subjective decisions about what the society should know and what it should not know.

In this situation the main legislative effort concerning the censorship law should be focused mainly on the construction of proper safeguards and corrective mechanisms to prevent the distortions which, as experience shows, arise in the absence of open control.

Hence, the first general conclusion quite obviously comes to the fore. The new law should guarantee the society the right to full, reliable information, and exception to this principles can occur only on the basis of the law's regulations in effect which are publically announced.

Somebody can reply that any general regulation can be interpreted in various ways depending upon who is doing the interpreting and what he wants to read into it. That is true. Such a danger exists, but it can be minimized by properly locating the system of control in the state's organizational structure.

Where Should Censorship Be Put?

Past experience shows that making censorship subordinate to the top body of the administration, that is, the chairman of the Council of Ministers, has not produced socially beneficial effects. This is understandable, because the government is directly responsible for the state of the economy, the extent to which the principles of democracy are carried out, planning errors, administration, and so on.

But after all the right to reliable, objective information and a forthright assessment of reality is the basic right of every citizen and also one of the main conditions of democracy in a highly organized society. This right is of particular significance in a socialist society, in which joint governance of the state is an essential element of the system. Here it is worthwhile to note that only objective, reliable information gives the citizen the possibility of sharing in decisionmaking and a sense of responsibility for the affairs of the state, and hence can liberate that necessary initiative which provides the impetus for social development.

Finally, reliable information is a point of departure for accomplishing authentic control of the administration and prevents most social and economic distortions of the development of the society. Giving rise to a sense of national solidarity and faith in the leadership, it bolsters the real power of the state and all its bodies.

All this leads us to the conclusion that in order for the censorship office, which has the authority to intervene, not to be able to be exploited to limit civil rights, for example, and above all, in the realm of control of the administration, it must not be put under the supervision and jurisdiction of that body of the administration, not even at the highest level.

The body which in this situation could and should take over the supervision of the censorship office is the Council of State, as the supreme body of state leadership.

From the theoretical-legal viewpoint such placement would also be more proper, because let us weigh the fact that other major bodies of the state which guard socialist propriety and civil rights are under the very same Council of State.

Besides this, those arguments which have recently been raised for the removal of the Supreme Chamber of Control from the supervision of the chairman of the Council of Ministers also speak for locating the censorship office in the way mentioned above.

This is the result of the conviction that a properly functioning socialist democracy must be based on the principle that the government governs under authentic social control exerted mainly by the leadership bodies selected by the society and also directly by the right to public information and criticism.

Control of Censorship Decisions

The most recent new feature of the administrative procedure code has made permanent the principle of dual stages, which is one of the canons of procedure before the bodies of the democratic state. This two-stage system must also be assured in procedure brought about by a censorship decision, before the ultimate decision can be appealed to the Supreme Administrative Court.

Meanwhile, given the present shape of the GUKPPiW, this is not possible, because it has a uniform structure, because the local departments are delegated, and not separate units, of a lower order, subordinate only organizationally to their central office. In this situation it seems essential to return to the old structure in which the control body of the first stage would be district, intervoivodship, or voivodship control offices, with the Chief Office being the second stage.

There are other important considerations which speak on behalf of this solution. The first is the need to take into consideration the central office leadership's right to correct erroneous and improper decisions of subordinate officers, if it is supposed to be responsible for these decisions. The second, still more important, is the assurance of the possibility of making rapid corrections, which is so important in the case of information of short-term timeliness, which usually cannot be assured to an adequate extent by court proceedings.

Scope of Publication Restrictions

When we consider the entry on restrictions justifying censorship intervention, first of all there arises the question as to whether in the

new censorship law such an entry is necessary at all, inasmuch a whole number of publication restrictions are imposed by other laws, such as the penal code, the misdemeanor code, and the civil code.

Such a question must be answered in the affirmative, if only to show that the understanding between the government and the strikers was inculcated in this material too. Nonetheless, the legal note must not be casuistic and should not repeat regulations of the penal, civil, and similar codes, for example concerning the offenses against the sacred, dignity, and so on.

As a consequence I come to the conclusion that in the new censorship law there should be only those publication restrictions which are not implied in other legal regulations.

Censorship and Editorial Policy

The tremendous amount of information in the modern world requires that it be very carefully selected. This is the task of editors and publishers, and not state censorship, but sui generis selection is also censorship, because only some information is given wider currency, while other information is held up. Nevertheless, this selection should be or is made on a different basis, that is, the priority of the information which is more valuable or interesting to the whole society or those groups of it which are assumed to be consumers of the information.

The priority given to a certain type of information or work or artistic works is established by the publisher through the editor-in-chief or an editorial committee.

The above fact, which is after all banal, is worth remembering in the deliberations on the shape of the censorship law, which can only to a certain extent stimulate the proper flow of valuable social information, but cannot on the other hand insure its universality and quality.

These preliminary remarks on the construction of the model of the draft of the censorship law are being limited only to a few basic problems. Many meritorical, structural, and procedural questions fall outside its scope. Particularly difficult and doubtful can be the procedural regulations related to the fact that procedure which may be required of the censorship office has not been completely adapted to the specific details of censorship work.

It would also be worth considering whether work on the censorship law should not be related to work on the press law, inasmuch as it is generally and basically correctly assumed that the decree of the president of the Polish Republic dated 21 November 1938 (Press law) is practically not in force.

At any rate, it would seem that PRAWO I ZYCIE needs to publish a forthright exchange of ideas on the sort of legal regulation of the activity of the mass media which on the one hand can guarantee the society the right to reliable information and on the other hand can effectively protect the fundamental values and interests of the socialist state and all its citizens.

RESPONSIBILITY FOR COMPENSATION FOR DAMAGES UNDER SOCIALIST LAW

Bucharest REVISTA ROMANA DE DREPT in Romanian Jul 80 pp 68-77

/Article by Lect Dr Renee Sanilevici: "Delictual Liability in the System of the Civil Codes of European Socialist Countries"/

/Text/ The present study is a continuation of the one published in REVISTA ROMANA DE DREPT, No 1, 1979, regarding the object and the system of the socialist civil codes, within the framework of the concern of studying the experience of socialist countries in drawing up the civil code, in order to point out the advantages of one or another of the solutions adopted.

I. Traditionally, delictual liability is considered a legal institution distinct from contractual liability.

In modern legal literature, the majority of the authors agree on the unity of the legal institution of liability, although there are some differences between delictual liability and contractual liability. In many works, the conditions and the effects of delictual civil liability are studied concurrently with those of contractual liability.[1]

The system and the place of the regulation of delictual civil liability in the civil codes of the European socialist countries differ, but, through one formula or another of legislative technique, their unity is established.

Thus, one solution is that of the single regulation.[2] This solution was adopted by the Czechoslovak Civil Code of 1964, which does not recognize the distinction between contractual liability and delictual liability and contains a single regulation in Part VI, titled "Liability for Damages and Enrichment Without Just Cause." The provisions on liability refer only to relations between citizens and between citizens and socialist organizations. In the Economic Code, too, which contains rules applicable to the socialist organizations, contractual liability and delictual liability are regulated by the same text.

In all the other codes--the Hungarian Civil Code of 1959, the Polish Civil Code of 1964, the RSFSR Civil Code of 1964 and the GDR Civil Code of 1976--delictual liability is regulated by a group of distinct rules. In some of these codes, the regulations on contractual matters contain texts of referral to the rules of delictual liability. In others, the rules of delictual liability are parallel to those of contractual liability.

The unity between the two forms of liability finds its expression, on the one hand, in the closeness of the rules that govern them,[3] such as, for example, the extension of the presumption of guilt to both forms of liability, and, on the other hand, in the adoption of common texts (or, respectively, texts of referral). Thus, we find texts of referral, which express the unity of the two forms of liability, in Article 318 of the Hungarian Civil Code, which stipulates that the provisions on delictual liability are also applicable to contractual liability, both as regards the conditions of liability and as regards the extent of the damages. Article 93 of the GDR Civil Code is to a similar effect.

The Polish Civil Code and the RSFSR Civil Code preserve the traditional solution of separate and parallel regulation.

Delictual liability is established as a source of obligations, while contractual liability is regulated in the chapter on the execution of obligations and the consequences of not executing them. Because of the common traits between the two types of liability, there are a number of common rules, such as those on the manner of establishing the damages, the influence of the victim's guilt and so on.[4] In the Polish Civil Code, the correlation between the two types of liability is also established by Article 443, which allows expressly the creditor's choice between the contractual and delictual basis of liability in the hypothesis in which the violation of contractual obligations also comprises the traits of a civil wrong.

The civil codes contain general rules of liability that are applied for any kind of damages caused by unlawful acts, as well as special rules: special rules depending on the subjects of the relation of obligation, such as the case of the commission of unlawful acts by minor children or by agents; special rules depending on the protected object, such as the rules on reparation of damages caused by injury [line missing in original] causing the damage, such as those on liability for damages caused by things.

II. 1. The rule of liability for guilt. In all the civil codes subjected to analysis, delictual liability is conceived as liability for guilt. Objective liability, without guilt, is allowed only under exceptional circumstances, expressly provided by law. The majority of these codes also establish a legal presumption of guilt in the matter of delictual liability: Article 339 of the Hungarian Civil Code, Article 444 of the RSFSR Civil Code, Article 420 of the Czechoslovak Civil Code and Article 333 of the GDR Civil Code. The presumption is relative and can be overturned by proof to the contrary. The criterion for judgment of guilt is an objective

criterion, that of the conduct of a diligent person. We find an express establishment of the objective criterion in Article 339 of the Hungarian Civil Code, which stipulates that the perpetrator can be exonerated from liability if he proves that "he acted as was expected under the given conditions."

In general, delictual liability is involved for any kind of guilt, regardless of its seriousness. In legal literature, it is proposed that, in judging the perpetrator's guilt, a distinction be made between guilt and error. There is guilt insofar as the perpetrator can choose his conduct. Guilt is conduct that a diligent person would not have, while error is an unfortunate reaction that also could have been the act of a diligent person. In this regard, there is cited the fact that a driver makes one-two errors in each 3-4 km and any physician makes errors of diagnosis. Liability for errors is not justified morally and it cannot prevent citizens from making errors.[5] The wording used in the Hungarian Civil Code--"as was expected under the given conditions"—permits the taking into consideration of circumstances that make error inevitable.

One's attention is arrested by the fact that the criterion for judgment of guilt differs in the case of physical persons and in that of socialist organizations. Thus, for physical persons, the GDR Civil Code, Article 333, establishes the criterion of "the general requirements," which also implies the observance of the general requirements for exercising certain professions or activities.[6] For socialist organizations, exoneration from liability can occur in conformity with the provisions of Article 334, only if the damage could not have been eliminated although the enterprise used all the possibilities created by socialist production relations.

The problem of discretion is also connected with the rule of liability for guilt. In the traditional solution, persons lacking in discretion were exonerated from liability. More recently, one notes a tendency to obligate persons lacking in discretion to repair the damages.[7]

The RSFSR Civil Code and the Czechoslovak Civil Code adopt the traditional solution of exonerating from liability persons lacking in discretion. For protecting the victim's interests, the liability of those who have persons lacking in discretion under their supervision is instituted.

The other codes establish the liability of persons lacking in discretion, but as subsidiary liability, which can arise only in the presence of certain conditions. Thus, according to Article 352 of the Hungarian Civil Code, persons lacking in discretion are liable subsidiarily, where there are no other persons who would be liable, depending on the circumstances of the case and on the financial situation of the parties. Article 428 of the Polish Civil Code and Article 350 of the GDR Civil Code are also to the same effect. The authors feel that it is not a question of a form of liability but of a right to a suit for damages on the basis of the general principles of socialist cohabitation, although the conditions of liability are not met.[8]

II. 2. Material harm and mental harm. In some systems of law, the obligation to repair the damages resulting from the commission of unlawful acts refers only to material damages. In other systems, mental damages are also subject to reparation, on the same plane as material damages. Finally, there are systems of law in which the reparation of mental damages is allowed only in certain cases and in the presence of certain conditions.

Although suffering cannot be evaluated in money, the systems of law that allow the reparation of mental damages start from the idea that monetary compensation is an imperfect manner of reparation of mental damage, but it is the only possible one and thus better than no reparation.

In legal literature, there is talk about the existence of damages that are on the borderline between material damages and mental damages, such as the loss of prospects of advancement, the hindering of the choice of profession and so on. They have both patrimonial aspects and nonpatrimonial aspects. They cannot be evaluated precisely and have to be established by judgment.

In general, the systems of bourgeois law establish or allow the obligation to repair mental damages. Among the socialist civil codes, the RSFSR Civil Code, Article 444, allows only the reparation of material damages.[10]

The GDR Civil Code, too, establishes expressly, by means of Article 336, only the obligation to repair material damages, but the text adds in Paragraph 3 that in cases of injury to health the damage caused by the hindering of participation in social life also enters into the calculation of the damages. It is also characteristic of these damages that the victim does not have to justify how he uses these sums. In legal literature, it is felt that the damages for the hindering of participation in social life are not mental damages (Schmerzensgeld) but put at the victim's disposal additional material resources for finding himself elements of compensation in the content of life.[11] At any rate, these damages, which are in fact on the borderline between material damages and mental damages, attenuate the rigid character of the rule of reparation only of material damages.

The reparation of mental damages is expressly established in the cases provided by law in the system of the Polish Civil Code, the Czechoslovak Civil Code and the Hungarian Civil Code, as a result of amendment in 1978. Article 445 of the Polish Civil Code establishes the awarding of a sum of money as monetary satisfaction in the case of injury to health, detriment caused to liberty, and seduction of a female by deception or by force. They are conceived as damages meant to repair mental harm, procuring for the victim the necessary resources for ameliorating or forgetting the suffering.[12]

The Czechoslovak Civil Code establishes, by means of Article 444, the possibility of the reparation of nonmaterial damage only in the case of injury to health. In legal literature, it is felt that it has the character of a sanction meant to give satisfaction to the victim (Genugtuungsaktion).[13]

The Hungarian Civil Code allowed only the reparation of material damages. Through the amendments made in the Civil Code in 1978, there was introduced into Article 354 a provision that establishes the reparation of nonpatrimonial damages, when, as a result of the unlawful act, the victim is prevented from participating in social life or his life is made harder.

Studying the provisions of the socialist civil codes that allow the reparation of mental damages, we observe that: a) the reparation of mental damages is allowed, not as a general rule, but in a limited manner, for the cases and under the conditions provided by law; b) only some of these provisions refer to mental damages proper and others refer, in reality, to damages that are concretized in disturbances in the victim's living conditions, ultimately, in material damages that are not susceptible of precise evaluation; c) only the victim has the right to mental damages. Damages cannot be awarded for suffering caused by the mutilation or death of a close person.

From the causing of material damage through the commission of an unlawful act there always results the obligation to repair it. Regarding the criteria for evaluation of material damages, there are, in principle, two systems: the establishment of the damages depending on the extent of the harm, in conformity with the rule of full reparation, and the system of establishing them depending on guilt. Each of these two systems has a wider or narrower sphere of exceptions.

Among the civil codes subjected to comparative research, the rule of full reparation of damage is established in Article 358 of the Hungarian Civil Code, Article 457 of the RSFSR Civil Code, Article 415 of the Polish Civil Code and articles 336-337 of the GDR Civil Code. Only the Czechoslovak Civil Code also adopts as a general criterion, besides the extent of the harm, the criterion of the seriousness of the perpetrator's guilt. Thus, according to Article 442, only the actual damage is subject to reparation. In the case of deliberately committed acts, the court must also take into account other harm, such as unrealized earnings.

The establishment of the judge's right, by way of exception, by departure from the rule of full reparation of damage, to reduce the amount of the damages is characteristic of the socialist civil codes. We mention that it is not a question of the situation in which the harm cannot be established precisely and the court has freedom of judgment but of the situation in which the extent of the harm is known and the court has the right to reduce the amount of the damages.

Jus moderandi is established only in the favor of physical persons. Jus moderandi is established either through a general formula "depending on the circumstances of the case" or with the indication of the circumstances that the judge must take into consideration, such as the financial situation of the perpetrator or of both parties, the guilt and so on.

A wide formulation--"under special circumstances"--is used in Article 339 of the Hungarian Civil Code, Article 458 of the RSFSR Civil Code and Article 340 of the GDR Civil Code, which permit the reduction of the damages depending on the perpetrator's financial situation, and Article 450 of the Czechoslovak Civil Code and Article 440 of the Polish Civil Code allow this depending on the financial situation of both parties.

In legal literature, the solution that permits the judge to reduce the amount of the damages depending on the circumstances of the case is viewed favorably.[14]

II. 3. The sharing of liability in the case of joint guilt. In the civil codes studied, express rules have been adopted with regard to the sharing of liability, that is, the reduction of the damages owed by the perpetrator in the case of the victim's joint guilt.

The rule of the sharing of liability is established in Article 340 of the Hungarian Civil Code, Article 441 of the Czechoslovak Civil Code and Article 341 of the GDR Civil Code. The RSFSR Civil Code makes some distinctions depending on the degree of the victim's guilt. Thus, Article 458 of the RSFSR Civil Code, as amended in 1974, stipulates that, in the situation in which the victim's serious imprudence helped to cause or increase the harm, the amount of the damages has to be reduced, if it is not provided otherwise, depending on the victim's guilt (and, in the case of the perpetrator's guilt, also depending on the degree of his guilt), or the victim's claims have to be rejected. From this text it follows that the victim's slight negligence is not taken into consideration. The victim's intent eliminates the perpetrator's liability, and serious imprudence can lead, as the case may be, either to the sharing of liability, that is, to the reduction of the damages owed by the perpetrator depending on the seriousness of the guilt of both parties, or to the elimination of liability, in the case in which the victim's guilt is extremely serious.[15]

One's attention is arrested by the fact that, although all the above-mentioned codes contain rules in the sense of taking into consideration the victim's guilt in establishing the damages caused by the perpetrator, the name of this institution differs. Thus, it is regulated in the Soviet Civil Code under the name of "the taking of the victim's guilt into consideration" and in the GDR Civil Code under the name of the victim's participation in liability.

We mention that the sharing of liability occurs both in the situation in which the victim helped to cause the harm and in the situation in which the victim's guilt consists of not taking steps to eliminate or reduce the harm.

II. 4. The joint or conjunct liability of accomplices. The above-mentioned civil codes establish different solutions for the hypothesis of the plurality of perpetrators. Thus, some codes adopt expressly the rule of

joint liability, either as a single applicable rule or as a rule from which exceptions are allowed.

The Polish Civil Code establishes the rule of the joint liability of accomplices, as well as the right of recourse of the one who indemnified the victim against the other codebtors (Article 441).

The rule of the joint liability "of the persons who caused the harm together" is established in the same sense in Article 445 of the RSFSR Civil Code. In legal literature, there are discussions about the applicable criterion for establishing the circumstance that the harmful act was committed "together." Some authors feel that the liability is joint only for those whose acts represent the cause of the harm, and the persons who created the conditions for the commission of the harmful act are liable only pro parte."[16]

It is felt that the principle of joint liability does not apply to parents in the case of the production of harm by many minor children, since such a person, that is, a parent, would thus be held liable for the acts of another's child.[17]

The Hungarian Civil Code adopts the rule of joint liability depending on the participation in causing the harm or if this participation cannot be established equally (Article 344). By way of exception, the involvement of the liability of the accomplices in relation to the victim depending on their participation in the harm is allowed in two cases: if there is not the danger that the damage would remain unrepaired or when the victim participated in causing the harm.

The GDR Civil Code, too, establishes the rule of joint liability with the possibility that, under exceptional circumstances, the accomplices may be obligated only pro parte (Article 342). It follows that the possibility of departure from the rule of joint liability is at the court's discretion. Thus, the courts can proceed to obligate one of the accomplices only pro parte when his participation in causing the harm is slight.[18]

A different solution is adopted by the Czechoslovak Civil Code, which establishes the rule of conjunct liability, with the court's possibility of obligating the accomplices, jointly, to repair the damage caused (Article 438).

III. 1. Liability for harm caused by persons under supervision. The socialist civil codes contain special provisions on the liability of parents or other persons for unlawful acts of minor children, based on a legal presumption of guilt.[19] These special provisions also refer to the liability of persons or institutions that have under supervision persons lacking in discretion (other than minors).

The liability of parents with that of minor children who have committed acts can be alternative or concurrent. In Article 427 of the Polish Civil

Code and Article 450 of the RSFSR Civil Code, the liability of parents (or other persons) and of minor children is alternative. Parents (or other persons) are liable only in the case of unlawful acts committed by minor children lacking in discretion. In the system of the RSFSR Civil Code, for minors between 15-18 years, parents are liable only subsidiarily, if the minor does not have assets or earnings from work.

In the system adopted by Article 352 of the Hungarian Civil Code, Article 422 of the Czechoslovak Civil Code and Article 351 of the GDR Civil Code, parents are liable jointly with minor children with discretion who have worked and instead of minor children without discretion who have worked. The age limit up to which the presumption of a lack of discretion operates differs: 6 years in the GDR, 12 years in Hungary, 13 years in Poland and 15 years in the USSR. One notes, in general, a tendency to reduce the age of minors for whom parents are held liable, brought about by the greater independence of the younger generation under the economic and social conditions of modern life.[20]

The same text that establishes the liability of parents for unlawful acts of minor children also establishes under the same conditions the indirect liability of persons who have under supervision mental incompetents lacking in discretion.

The circle of persons with regard to whom the presumption of guilt operates and the system for determining them differ in the regulations adopted by the socialist civil codes. One's attention is arrested by the fact that, in all the codes studied, the presumption of guilt for harm caused by minors is not limited to parents but it also extends to other persons obligated to supervise the minor. As in the French Civil Code of 1804 (and in the systems of law patterned after it), teachers and artisans are not listed among them.[21]

The RSFSR Civil Code establishes the liability of parents and guardians, with the specification that, if the minor is under the supervision of an educational or medical institution, the liability devolves upon them (Article 450). We observe that, in the system of the RSFSR Civil Code, there no longer is liability of the teacher as a physical person but of the educational institution. For persons lacking in discretion the guardian or the socialist organization that has the obligation to supervise them is liable.

In Article 427 of the Polish Civil Code, Article 352 of the Hungarian Civil Code, Article 422 of the Czechoslovak Civil Code and Article 351 of the GDR Civil Code we find a broad formulation, which includes all persons who have the legal or conventional obligation of supervision or who actually exercise supervision of the minor or a person lacking in discretion. The presumption of guilt has a relative character. It is based, for all the persons involved, on the obligation to supervise the minor, or, respectively, the persons lacking in discretion, and, for the parents, also on the obligation to give a suitable education to minors. Consequently, the liability

of parents can be involved cumulatively with that of other persons who have the obligation to supervise the minor on two different legal bases: that of the parent for the lack of education and that of other persons for the lack of supervision.[22]

III. 2. The liability of principals for harm caused by agents. The regulations on the liability of principals for unlawful acts of their agents are also special regulations depending on the subjects of liability. Studying the provisions of the above-mentioned civil codes, we observe that they adopt two different systems: a) the liability of the principal or, respectively, of the enterprise is considered direct liability; b) the principal's liability is considered indirect liability, along with which the agent's liability can also be involved.

Article 348 of the Hungarian Civil Code, Article 446 of the RSFSR Civil Code, Article 421 of the Czechoslovak Civil Code and Article 331 of the GDR Civil Code regulate as direct liability the liability of the socialist organizations as principals. In legal literature, this system is substantiated by the specific character of socialist production relations.[23] The activity of the working people in state and cooperative enterprises is considered the very activity of the enterprise. Each person acts not as a private individual but as a member of the staff. If he commits an unlawful act, it constitutes the socialist organization's act. A distinction is no longer made between the liability for the organ's acts and the liability for the agent's acts. The conduct of any working person in an enterprise or of any member of the cooperative is imputed to the staff. The victim can bring the suit for damages only against the socialist organization. The perpetrator's responsibility to the staff, to the cooperative or state socialist organization, is an internal matter. The enterprise's suit for recourse against the perpetrator of the unlawful act is governed by the rules of labor law, with the liability being, among other things, limited. It is stated that the advantage of such a system consists of the elimination of the difference between the liability of the employee as the unlawful act harmed the enterprise where he works or a third party.[24] We believe that to this advantage it is also possible to add that of the unity of the competent body of jurisdiction in the hypothesis in which the harm was caused to a socialist organization.

By way of exception to the rule according to which only the socialist organization is liable, the Hungarian Civil Code stipulates that the agent is liable jointly with the principal in the case of deliberate infractions, as well as when the principal is a physical person and the damage cannot be recovered from him.

Article 430 of the Polish Civil Code adopts the traditional solution of the French Civil Code, in whose system the principal's liability for the agent's acts is conceived as indirect liability. The liability of artificial persons for the acts of organs is established distinctly as a form of direct liability (Article 416).

One special condition common to the principal's liability for the agent's acts, regardless of whether it is conceived as direct or indirect liability, is that the act must be committed in the exercise of the activity entrusted by the principal. This condition is contained in similar formulations: "in the execution of official duties" (Article 445 of the RSFSR Civil Code), "in the execution of activity" (Article 430 of the Polish Civil Code), "in the performance of official duties or acting within the limits of his jurisdiction" (Article 348 of the Hungarian Civil Code), "in the fulfillment of official tasks" (Article 331 of the GDR Civil Code) and "within the framework of fulfilling the tasks" (Article 441 of the Czechoslovak Civil Code). In the practice of the application of this condition, there is a restrictive interpretation, which considers possible the involvement of the principal's liability only in the case of the commission of the act during the execution of official duties, in particular, in Poland and the USSR, and an extensive interpretation, which considers that the principal's liability can also be involved in the situation in which the agent's harmful act has a connection with his official duties, as in Hungary, Czechoslovakia and the GDR.[25]

The state's liability for illegal administrative acts can be conceived as an institution of public law or as an institution of civil law, subject to the general rules of delictual civil liability or to special rules.

In the law of the GDR, the state's liability for illegal administrative acts is regulated, by a special law of 1967, as an institution of administrative law.

The other codes studied contain special provisions (Article 349 of the Hungarian Civil Code, articles 446-447 of the RSFSR Civil Code, articles 417-420 of the Polish Civil Code and Article 426 of the Czechoslovak Civil Code) that establish the state's liability for illegal administrative acts as a variant of civil liability.

The Czechoslovak Civil Code establishes only the principle of the liability of state bodies for harm caused by illegal decisions under the conditions provided by special laws.

In the system of the RSFSR Civil Code, liability for unlawful acts committed in the sphere of state administration is involved under the conditions of the common law of delictual civil liability. The administrative act's unlawful character has to be established during the suit for the reparation of damages.

In order to avoid groundless suits, in the system of the Polish Civil Code, the decision's unlawful character and, in the system of the Hungarian Civil Code, the functionary's guilt have to result from a criminal judgment or, respectively, from a judgment of a disciplinary body or the higher body.

In the system of the Polish Civil Code and the Hungarian Civil Code, the provisions on liability for unlawful acts committed in the field of state

administration are also applicable to harm caused within the framework of the activity performed by organs of the magistracy and by courts.

In the RSFSR Civil Code, for harm caused by unlawful acts by persons who work in organs of criminal prosecution, the magistracy and the courts, liability can be involved only in the special cases provided by law.

III. 3. Reparation of damages in the case of injury to health or the death of the victim. One characteristic common to all the socialist civil codes is the establishment of special rules, depending on the protected object, for the case of injury to health and the death of the victim.

In the earlier regulations, in the absence of special provisions, there was formed, in legal practice, a system of solutions regarding the criteria for establishing the damages, the circle of persons entitled to reparation and the method of reparation, which are reflected in the provisions of the civil codes.

Thus, for the case of injury to health, the damages subject to reparation include the expenses for care and the unrealized income (Article 459 of the RSFSR Civil Code, articles 336 and 337 of the amended Hungarian Civil Code--such special provisions did not exist prior to amendment--articles 446 and 447 of the Czechoslovak Civil Code and Article 338 of the GDR Civil Code). The Polish Civil Code specifies that the expenses needed for learning a new profession must be included in the damages.

All the civil codes subjected to analysis establish the existence of a right to the reparation of damage caused by the provider's death. They establish the categories of persons and the conditions in which they have the right to the reparation of damage caused by the death of the victim in whose support they are found. The Hungarian Civil Code establishes a right to the reparation of damage only for persons who have a right to support.

Article 460 of the RSFSR Civil Code and Article 448 of the Czechoslovak Civil Code stipulate that persons who are actually in the victim's support or who have a right to support have a right to the reparation of damage. The RSFSR Civil Code specifies that only persons unable to work can claim the reparation of damage.

Article 446 of the Polish Civil Code establishes the right to the reparation of damage caused by the victim's death in the favor of the persons who have a right to support and of other relatives actually found in the victim's support, but only if from the circumstances of the case it follows that the rules of socialist cohabitation impose the payment of an annuity.

The GDR Civil Code establishes the right to the reparation of damage for persons who have a right to support in conformity with the provisions of family law. Other persons actually found in the victim's support have a right to the reparation of damage only if they do not have their own incomes. Their right is limited in time to a maximum of 2 years.

Regarding the method of reparation, the damages can be awarded in the form of a lump sum or in the form of a periodic payment. Some systems of law permit only one of the forms or the other. Others permit the alternative or simultaneous use of both forms.[26]

The rule of the awarding of damages in the form of periodic payments is characteristic of socialist law. This rule is established in all the codes studied: in Article 357 of the Hungarian Civil Code, Article 447 of the Polish Civil Code, Article 357 of the Czechoslovak Civil Code, Article 468 of the RSFSR Civil Code and Article 338 of tho GDR Civil Code. The Polish Civil Code establishes the possibility that, in thoroughly justified cases, such as, for example, the necessity of learning new professions, the court may establish the damages in the form of a lump sum. In the GDR Civil Code, the parties can agree in writing to the reparation of damage by means of the payment of a lump sum.

The solution according to which, in thoroughly justified cases, by way of exception to the rule of awarding monthly sums, the perpetrator can be obligated to pay a lump sum seems to us to be the wisest solution.

III. 4. Liability for things. Depending on the manner in which the damage is caused, the socialist civil codes contain special provisions on the harm caused by things.

The liability for things can be conceived as a form of general liability, to which the general conditions of delictual civil liability apply, or as a distinct form of liability. From the viewpoint of its sphere of application, it can be regulated as a general liability for things or as a special liability for certain things. In its turn, general liability can have a wider or narrower sphere, for all things or only for dangerous ones.

As for historical evolution, in the system of the French Civil Code and the codes patterned after it, the liability for things was able to be involved only in the presence of the general conditions of liability, with the exception of special cases in which, for certain expressly stiupulated things, such as animals or the wreckage of a building, the presumption of guilt operated. Along with the development of modern technology and the dangers that its use creates, which also imply an increase in the difficulties in the proving of guilt, toward the end of the 19th century and the start of the 20th century, the legal institution of the general liability for things appeared. Initially a creation of jurisprudence, the liability for things was then also established through the adoption of legislative provisions.[27]

The socialist civil codes subjected to analysis establish expressly the general liability for things, namely in the form of general liability for dangerous things: Article 345 of the Hungarian Civil Code, Article 454 of the RSFSR Civil Code, Article 428 of the Czechoslovak Civil Code and Article 344 of the GDR Civil Code. The formulations used to delimit the sphere

of this liability differ. In the Hungarian Civil Code, there is talk about the liability of persons who perform an activity connected with sources of increased danger, without other specifications. The Polish Civil Code provides the liability of enterprises that use in their activity forces of nature like steam, gas, electricity, liquid fuel and so on and the liability of physical persons who use mechanical means of displacement. The RSFSR Civil Code refers to the liability of enterprises whose activity is connected with increased dangers, such as industrial enterprises, construction, automobile owners and so on. The forms of manifestation of the sources of increased danger are varied and their enumeration in texts is exemplificative. The GDR Civil Code also contains, besides the general rule of liability for sources of increased danger, special rules for certain sources of danger.

Some differences in the regulations adopted by the civil codes studied also reflect differences with regard to the basis of the liability for things. Thus, in the Polish Civil Code, which establishes the liability for things in two groups of cases (Article 435 and Article 436), the liability is based on the danger created for the surrounding world by the enterprise or the person that uses the source of increased danger. A causal connection between the enterprise's functional activity and the damage is required, in contrast to Soviet law, where the causal connection has to be made with a source of increased danger.[28]

In the same regard, in the Czechoslovak Civil Code, it is felt that liability without guilt for harm caused by extremely dangerous things is the consequence of using such things.[29]

The liability for sources of increased danger is considered objective liability, that is, increased liability, which has the function of fostering care in the use of sources of increased danger.[30] Some authors feel that in fact it is not a question of liability but of an obligation to repair the damage.[31]

For harm caused by other things (other than dangerous ones), liability can be involved only for guilt, with the specification that, in four of these codes, delictual liability is based on the presumption of guilt, so that the difficulty in the proving of guilt is implicitly eliminated.

In some of these codes, namely Article 353 of the Hungarian Civil Code, Article 431 of the Polish Civil Code and Article 346 of the German Civil Code, the liability for animals is established through special provisions. It is conceived as liability for guilt in the Hungarian Civil Code and the Polish Civil Code and as increased liability in the GDR Civil Code. In the system of the Polish Civil Code, there is the possibility of the obligation to partial or full reparation of damage even in the absence of guilt, if from the circumstances of the case it follows that the principles of socialist cohabitation impose the reparation of damages. The Hungarian Civil Code makes a distinction between domestic animals and wild animals,

stipulating that persons who use wild animals are liable under the same conditions as those whose activity is connected with sources of increased danger.

In some of these codes, we also find special provisions for harm caused by the wreckage of a building: Article 354 of the Hungarian Civil Code, Article 434 of the Polish Civil Code and Article 347 of the GDR Civil Code. The Hungarian Civil Code and the Polish Civil Code also establish the liability for harm caused by objects fallen, thrown or dropped from buildings.

In conclusion, analyzing the provisions on delictual liability in the socialist civil codes, we observe that they have established legistatively a number of legal institutions springing from the practical needs of modern life. In comparison with the earlier regulations, they contain a more detailed treatment of delictual liability. On the other hand, they reflect the specific character of socialist production relations, within the framework of which the role of civil liability in preventing harm and in fostering careful conduct in work and everyday life acquires a special importance. In the present study we dwelled on those that seemed more significant to us.

7. The German Civil Code of 1900 allows the so-called "equitable liability" (Billigkeitshaftung) of persons lacking in discretion, in the presence of certain conditions, namely the damages cannot be claimed from a third party and, regarding the financial situation of the parties, equity imposes the solution of repairing the damage.

   In France, a law of 1968 overturned the traditional principle of the lack of liability of the mental incompentent, establishing the civil liability of all the persons, even if they committed the act under the influence of a mental disorder.

9. In French law, in the absence of an express text, the provisions of Article 1,382 of the French Civil Code, which establishes the obligation to repair the damages, were interpreted in the sense that they refer both to material damages and to mental damages (see: H. L. Mazeaud, A. Tunc, op. cit., Vol 1, p 385; G. Marty, P. Raynaud, op. cit., Vol II, p 362).

   In German law, the Civil Code of 1900 enumerates the cases in which the obligation to repair mental damages exists. The authors point out legal practice's tendency to widen the possibility of awarding mental damages (see: K. Larenz, "Lehrbuch des Schuldrechts," Munich, 1976, 10th Ed, Vol 1, p 379).

   In English law, the courts include in the category of mental damages the physical and mental suffering of the injured persons, the loss of pastimes, the prospect of the shortening of life. Compensation for the mental suffering of the victim's relatives is not allowed (see: R. E. V. Heuston, "Solmond and the Law of Torts," London, 1973, p 590).

10. The RSFSR Civil Code takes the solution of the Civil Code of 1922, which was, moreover, the traditional solution of civil law prior to the revolution (also see: E. A. Fleisit, "Nauciosprakticeski Komentarii WGK," Moscow, 1966, p 518). We mention that, in Soviet literature, too, the opinion of the necessity of allowing the reparation of mental damages has been expressed. For details, see: M. I. Siminova, "Imuscestvennaia Otvetsvennosti za Moralinai Vred," SOVIETSKOE GOSUDARSTVO I PRAVO, No 1, 1970, pp 118 et seqq.

17. See: Staff, "Grajdanskoe Pravo," Moscow, 1970, Vol II, p 421.

18. See: M. Posch, op. cit., p 60.

19. There are systems of law that do not adopt special regulations on this matter. Thus, in the common law countries, persons who have minors under supervision are liable only on the basis of proved guilt in the exercise of supervision.

20. See: J. P. Le Gall, "Liability for Persons Under Supervision," in "International Encyclopaedia of Comparative Law," Tubingen, Vol XI, Ch 3, p 29.

21. We mention that in France, in 1937, the civil code's provisions on the teacher's liability were amended, the presumption of his guilt being eliminated. Teachers are liable under the conditions of common law, that is, only for proved guilt. The solution was imposed as a result of the criticism raised in the sense that, under the conditions of public education in which the teacher does not choose his pupils, it is unjust to burden him with a presumption of guilt, which does not affect other categories of civil servants. The liability of teachers was replaced with the state's liability. Regarding the liability of artisans for the acts of apprentices, it is becoming less and less applicable in practice.

22. See: O. S. Ioffe et al, "Sovetskoe Grajdanskoe Pravo," 1971, p 376; M. Posch, op. cit., p 87.

23. See: M. Posch, op. cit., p 49; G. Matveev, op. cit., p 230.

24. See: G. Eorsy, op. cit., p 297.

25. See: G. Eorsy, "Private and Governmental Liability for the Torts of Employees and Organs," in "International Encyclopaedia of Comparative Law," Tubingen, Vol XI, Ch 4, p 78.

26. In the practice of the bourgeois courts, the solution of awarding a lump sum is the most frequent one. There is raised in favor of this solution the argument that it resolves the litigation for good and saves the victim the trouble of chasing after the periodic payments. For the hypothesis of the alteration of the extent of the harm, the possibility of revision is proposed (see: M. Gregor, "Personal Injury and Death," in "Encyclopaedia of Comparative Law," Tubingen, Vol XI, Ch IX, p 25).

27. In France (and the countries that adopted codes like the French code), through the interpretation of Article 1,389 of the Civil Code, it was felt that there is a general liability for any sort of things. In the same regard, the solution of the objective liability (strict liability) for anything on a person's land and out of control, such as water, gas, noxious smoke, vibrations and so on, appeared in the practice of the English courts (see: A. Roger, "Winfield and Jalowiez on Tort," London, pp 360-362). In Germany, there are texts in the Civil Code of 1900 that establish objective liability (Gefahrderungshaftung), and many special provisions that widen the liability for things--railroads, highways, aircraft, power stations, radioactive substances--have appeared (see: K. Larenz, op. cit., p 534).

SUSPENSION OF SELF-MANAGEMENT PROCEDURES ON UPSWING

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1551, 21 Sep 80 pp 12-13

[Article by Stevan Niksic: "Who Is the Government Working For?"]

> [Text] On the initiative of the second program of Radio Belgrade and NIN a discussion was organized in the Central Council of the Federation of Yugoslav Trade Unions with Miran Potrc, chairman of the trade unions council, and Dr Najdan Pasic, professor and president of the Constitutional Court of Serbia. The decision to suspend self-management in one OOUR [basic organization of associated labor] of Sloboda in Cacak provided the occasion for the discussion.

Letter to BORBA From Workers in Sloboda

Six years ago, in 1974, the work organization of that time, which was called Sloboda, showed losses of 17 billion dinars. The then director of the organization hastily convened the workers' council and said that the organization was showing neither a profit nor a loss, and he then immediately resigned a few days later, received a gift and left the work organization forever. Immediately after his departure it was learned that the situation had been falsely portrayed and that we had a large loss, which for us workers was like a bolt from the blue, something we could not believe because we had at that time been showing the best results. Since then and up until this day we have been in a very difficult financial situation. We can freely say that we are without self-management, nor can we call ourselves self-managers, since we haven't felt what our constitution guarantees and grants us.... The facts state that human relations have been very troubled in this OOUR and that this has had an effect on the production process and thereby on personal incomes, precisely because in those years we have had four directors, just as many deputy directors, administrators and supervisors. These same people have promised this OOUR a sound and glittering existence, while they held on to their high positions and the personal incomes that go with them, and this OOUR has sunk into still

larger losses from one day to the next. A situation like this can be expected to result in worker dissatisfaction and even work stoppage by workers who have had very low personal incomes, from 260,000 to 350,000 old dinars, by contrast with their supervisors. We can conclude from all this that there has been no self-management, nor does it exist today in this OOUR....

[Discussion With Pasic and Potrc]

The letter to BORBA from three workers in the OOUR Garant of the Cacak work organization Sloboda has already served as a pretext for many varied comments. It was written because of a decision by the public defender of self-management law in that town, who, at the initiative of so-called social factors in the opstina and with the consent of the self-management bodies in the collective, ordered on 30 June of this year that temporary measures be instituted in the OOUR Garant. The temporary measures which the law foresees are aimed above all at protecting the self-management rights of the workers consisting of suspending self-management and of turning power over to a temporary professional management body, which was expected to "rescue the collective," as was stated in a conversation a few days ago.

The three workers who wrote to BORBA--Sreten Grujovic, Stojan Kaplarevic and Milorad Terzic--have in the meantime been pronounced rebels since they thought differently on this issue from their officially elected representatives and supervisors. A punishment probably awaits them for that reason: it has been proposed that they be transferred to other jobs in Sloboda "for lack of discipline and disorder."

By all appearances the Cacak "case" is not an isolated one. Similar decisions instituting interventionary measures to protect disrupted self-management relations in many collectives have become more frequent in recent months, at least according to the news carried by the press.

The Reason for the Temporary Measures

NIN and the second program of Radio Belgrade (which has already devoted two successive broadcasts of "Open Radio"--on Tuesday at 1300 hours--to the events in the OOUR Garant in Cacak) arranged a discussion on this topic in the Central Council of the Federation of Yugoslav Trade Unions with Miran Potrc, chairman of the Central Council, and Dr Najdan Pasic, professor at the School of Political Science in Belgrade and president of the Constitutional Court of Serbia. Pasic and Potrc first listened to a tape of a conversation with workers and supervisors of this work organization and with officials of Cacak Opstina. The topic of the discussion which was conducted thereafter went beyond the dimensions of that event, however.

Do you know the exact figures on the number of exceptional measures throughout the country? went the first question.

"Reading the newspapers I have myself noted that there are more of these reports than there were previously, and I therefore conclude that there are also more exceptional measures. However, there are no data whatsoever on this. But I am certain that it is a token number," said the trade union chairman.

In the present situation many organizations are in great difficulties because of disrupted economic relations. It is our impression that they are seeking a way out of these difficulties through such measures, that is, through a suspension of self-management. We called upon Potrc and Pasic to comment on this. Is it not dangerous if we continue to reinforce the notion that the government or the party or someone else outside of self-management can solve the problems more effectively? we asked.

"That is true," Potrc said. "At this point we must ensure that our self-management becomes stronger even in a quite difficult economic situation. Self-management must be confirmed even in quite difficult situations, when there is a need to reassess development and business policy, to analyze all mutual relations and the position of organizations on the market, to make the workers' real status evident.... It seems to me that we are in a transitional period. We have the constitution and the Law on Associated Labor, but we know that a goodly portion of the possibilities they envisage have not been realized. The reason is probably that as a society we are not able to achieve everything in 3 or 4 years. There are also efforts to keep that law from being implemented altogether."

Certain Old Errors

"Will we strengthen self-management in this period or will we give in to the demands to seek a way out other than through self-management? That is now a very, very serious question. Precisely for that reason it is good to talk about these specific and individual cases where intervention perhaps may be justified, but it is also worth talking about this and indicating the danger of this becoming general practice," Potrc said.

"The danger is all the greater in that such measures could yield results that appear to be good, isn't that right?"

"They might," Potrc said, "but not because the self-management rights have been taken away from the workers, but because entire teams make an authentic commitment at such times. It is also at this point that the workers become fed up, they know that there is no longer any possibility but to make a real effort to resolve the difficult situation."

A question for Professor Pasic: Self-management is most underdeveloped in government agencies. How can we believe, then, that they will effectively protect self-management through decisions to intervene?

"Self-management is certainly less developed in government agencies than in the self-management base, but at the same time we should not glorify the self-management base. Government agencies must for that reason have certain powers that are in the interest of the entire working class. Otherwise that would mean that we are quickly and easily removing the government from the scene just because self-management is less developed in government agencies. It is worth recalling, then, certain of our errors from previous periods, those, say, which had to do with what was referred to as the 15th amendment, which was adopted in 1968. I am not saying that these errors were dominant, but they were very much present.

"The worker, as Comrade Kardelj put it, must be organized politically and not just through self-management, and at times must also rely on his government agencies and act through political organizations. The worker must take advantage of the entire set of instruments of the delegate system. In a delegate assembly certain social problems can also be examined in a broader context. We cannot assume that consciousness of self-interest and the broader interests of society and of the need to align the one with the other will always be sufficiently developed in every organization of associated labor. I think it would not be good for us to regard as self-management only what happens in individual work collectives, and to suppose that what comes from the broader social community, as a decision of delegate assemblies or broader social forums, signifies in advance elements of technocracy and bureaucratic positions. There may be that as well, but it is very dangerous to have a black-and-white technique for framing conclusions in such situations.

"So, bearing in mind the occasion for this discussion of ours I would like to emphasize that temporary measures need not always be directed against the self-management rights of the workers."

How is one to interpret the fact that the number of interventionary measures by government agencies, especially in the economic sphere, has increased simultaneously with the deterioration of the economic situation in our society? Doesn't this contain a kind of latent distrust of self-management and of the system built on it?

The Old and the New

"Well, you know that even in the past it has been our judgment that the lag in development of self-management relations is one of the essential reasons for the worsened economic situation. I have already said that we still have not managed to institute associated labor in the true sense of the word.... I think the worst thing is that we have allowed ourselves to be satisfied with certain external forms so as to assure ourselves that we have accomplished a great deal of this. We have been satisfied, say, when some self-management accord is signed, though often we have not gone into the essence of its content. These forms which pertain to self-management only in their title usually contain many of the old relationships.

"Today we can no longer resolve the problems in the economic structure, the problems of export and import, problems in excessive spending--through government intervention. First, because we refuse to do so. But even if we wanted, we no longer have an administration that would be capable of doing this, that would today be able, say, to do the kind of planning we had in 1950.

"I think that here we have touched on a key problem," Professor Pasic continued. "On the one hand the market is still uncontrolled and fragmented, while on the other we have a system of ad hoc measures of government intervention. Perhaps we have not had enough to say about that on this occasion, but it seems to me that neither the problem of Garant in Cacak, which is what we have been discussing, nor the problems of other organizations of associated labor which have fallen into difficulties can be resolved solely by changing the situation within the collective--by increasing work discipline or by any sort of better organizational measures."

What Is It That Nurtures This Love?

Potrc: We have been speaking about the excessively great influence of the government on the one hand and of underdeveloped self-management on the other. I think that in this situation, which I have referred to as a transition, it would be bad if we hesitated about what we are going to do.

Nor is it possible to place the entire society in an incubator for a time, a year say, so that we can wait for better times and continue to make advances with self-management. Self-managed associated labor must offer a way out even in the present difficult conditions, at least slowly, if only step by step.

Where does such great love and unlimited trust in the measures of the government and government intervention come from? What is it that nourishes this love in us?

Pasic: Because we have not found self-management solutions to many problems. From the theoretical standpoint our economists still owe us certain answers. We note, say, that the pace of integration and self-management linkage is unsatisfactory, that there are cases of self-enclosure within local, regional and republic limits. But have we made a precise and accurate analysis with which we would be able to ascertain all the causes which have led to this? I say that there are many, many obstacles even in the normative solutions that are now in effect. And then certain collectives are gathering the fruits of the momentary situation on the market, and understandably are very reluctant to enter into the processes of integration. They simply want to preserve their privileged position at all costs. That is why all the problems cannot be resolved by merely expanding the autonomy of collectives. We need an organized effort of the social community, whether it is called the state, the delegate system or anything else, but it is obviously indispensable.

We will not ensure that the state withers away and that self-management becomes broader solely by taking certain powers and functions away from the state. After all, later, in difficult situations, it is clear that we must rely even on them. And then we discover, too late unfortunately, that agencies which should intervene no longer have the powers or are no longer equipped to do it.

SLOVENIAN SURVEY ON REASONS FOR CHANGING JOBS

Zagreb VJESNIK in Serbo-Croatian SEDAM DANA supplement 27 Sep 80 p 9

[Article by Boris Petrovic: "Why People Are Quitting"]

[Text] The decision to change one's workplace and perhaps even his type of work is rarely taken "overnight." It is difficult for the great majority of people to leave their accustomed group of acquaintances, colleagues or friends and to set off into an unknown environment. Nevertheless, the statistics show that more and more workers are deciding on such a step and that very often the departure from the collective without the customary "I am sorry to be leaving."

In recent years sociologists in numerous economically advanced countries have been ever more seriously concerned with personnel turnover, and they take a simple calculation as their point of departure. According to certain estimates, in West Germany it cost the economy about 275,000 marks for one supervisor to go to another job, and a large loss occurs when even "ordinary workers" do this by moving from one job to another. In the period when the decision to leave has already been made, the worker or supervisor usually no longer makes an effort to do good work, and when he enters the other workplace, it takes him a certain time to become accustomed to the new working conditions, and his output is below what it ordinarily was.

On the average the search for a new, more attractive and if possible better paid job lasts about 6 months, and in that time, it is estimated, output in terms of work done not infrequently drops as much as 50 percent. An output cut in half is also normal during the first months of performing new work duties. It thus follows that a change in personnel means half the output in a job of what it would ordinarily be for almost an entire year. Yet the entire personal income is certainly paid!

The Critical Point

"No one has yet attempted to compute how much is lost by the Yugoslav economy because of personnel turnover, nor are there true indicators on how widespread this phenomenon is and on its causes," says Dr Janez Jerovsek,

senior staff scientist in the Ljubljana School of Sociology, Political Science and Journalism, the author of a survey which has aroused quite a bit of interest in Slovenia.

In short, too little is known about personnel turnover, and it is particularly disturbing that there is no computation of the "critical point," the percentage of turnover which in every industry would mark the threshold that cannot be crossed without quite serious losses. The same certainly applies to the percentage of absences from work. But while there is a lot of talk about sick leave and other reasons for the drop in productivity, usually nothing is said about turnover, which obviously causes large losses.

"It even makes some people feel rather embarrassed, and a number of Slovenian work organizations refuse to have the causes of turnover studied in their plants. This is probably because the questionnaire used in the survey included quite a few questions about human relations and the way they are resolved," reflected Dr Janez Jerovsek, who feels that the move from one job to another has already taken on such dimensions that "if it continues this way, it could become a serious brake on economic development." The costs of turnover are lowest where work is done on the assembly line, and highest where workers are expected to show greater independence, creativity or a high degree of practice in performing very complicated work duties. Since only about 15 percent of the workers in Slovenia work on the assembly line, and personnel turnover is increasing, the Slovenian Economic Chamber has shown great interest in studying it."

Earnings in Only Third Place

"After the statistical processing of the percentage of responses to the various questions I concluded that people are usually driven to change jobs by dissatisfaction with the possibility of utilizing their knowledge and ability in their work. One respondent told me how his boss often left him without anything to do. This means that he really does not need me, this young specialist concluded, and he went off to another collective. Run-ins, tension and other conflicts are frequent in cases when the supervisor has less education than some of his coworkers. Among the reasons for quitting second place is confidently taken by various conflicts between supervisors themselves, between supervisors and workers or between "subordinates" and "superiors" in the same work unit. Conflicts among the workers themselves, as can be seen from the table, are considerably rarer and are not a reason for quitting," Dr Jerovsek said.

The manner of remuneration comes only in third place, which was rather unexpected. However, it is not a question of the absolute level of personal incomes, but of excessive differences in remuneration of particular forms of work. According to statements by numerous workers engaged directly in production, the ratio between their earnings and the personal earnings of supervisors should not be greater than 1:3. Often it is also

dissatisfaction with the difference in the personal incomes of people employed in the same work unit.

By and large, on the basis of this survey, it turned out that little influence is had on better work and "loyalty" to some work organization by money alone, and the workers do not compare their own income so much with the directors as with that of their colleagues on the job. Among the 16 proposed reasons for fleeing the production shop of factories, the great majority of the respondents said that employment in nonproductive activities is easier and the personal incomes higher both in general and also in their own collective. They also say that a job outside the production department also offers faster promotion. It is interesting as well that they feel that responsibility is considerably less in administrative and economic jobs--or "mistakes made in the office are less obvious than mistakes made on a machine."

Connections and Influence

Though each of the tables requires quite a bit of comment, we will explain in conclusion only those which speak about job promotion and the method of resolving conflicts.

Though all of 43 percent of the respondents make charges against connections and influence, they did say that this would not help without education and some sort of achievement in work performance.

Resolving conflicts by declaring the "winner"--and very often it is the supervisor--has driven many from a collective where they have spent a number of years. But, as shown by the answers to the other questions, they did not for that reason lose confidence that they could win the struggle for their rights through greater persistence.

Though all the results of the survey have not been processed, and the entire project of studying personnel turnover will last all of 3 years, even these figures sufficiently indicate the direction the social effort should take and why it is obviously necessary.

[Box] 318 Respondents

In a survey financed by the Slovenian Republic Research Community and the Slovenian Economic Chamber the respondents were 318 students of the Maribor Junior Postsecondary Economics School and the Ljubljana Management School. All the respondents are employed full time and decided to go to school mainly because they wanted to change jobs and frequently their workplace. It is particularly interesting that 21 percent of the respondents already hold supervisory jobs, which offers additional information for understanding the degree of relevance of the figures in the table to the answers to questions about possibility of promotion, the frequency of conflicts between supervisors, the ratios between personal incomes and opinions on the

extent to which a higher personal income would tend to improve the quality of work.

All of 42 percent of the respondents have been employed for more than 5 years, 66 percent work in production proper, and 45 percent are members of the League of Communists. About 85 percent are under age 35, at the height of their strength and have a strong desire to make better use of the knowledge they have acquired in their job or in school. About 42 percent of the respondents have graduated from a secondary technical school, 25 percent a school for worker occupations, and only 3 percent an academic high school. Less than half have already changed their workplace once, 24 percent have done so twice, 18 percent have moved to another collective three times, and the same proportion have done it four times. In short, respondents were chosen who have spent their work life up to this point just like the majority of other employees, and chronic "migratory birds" or people who are never satisfied were avoided. Nevertheless, the principal characteristic of this group of respondents is still the datum that in undertaking to study the economic and legal sciences they wanted to leave production departments and to go to jobs outside production proper or--among supervisory personnel.

It is not out of place to mention that nearly every respondent is employed in a different work organization, so that to some extent this survey also offers a cross section of opinions which apply (under certain conditions) to all of Slovenia. We have given only some of the figures from the survey, which in all covered 50 questions, and the negligible number of questionnaires not altogether filled out indicates that the topic aroused great interest among the respondents.

At the same time we want to thank Dr Janez Jerovsek, the Slovenian Economic Chamber and the Slovenian Republic Research Community for having made the material available and for having allowed us to use their questionnaire, which we will be using this fall in a similar survey in Croatia.

The Questions That Were Asked and the Answers That Were Given

Do you feel that the job you perform is sufficiently esteemed and respected in your collective?

a) My work is highly esteemed	3
b) My work is given satisfactory credit	58
c) My work is not particularly esteemed	35
d) My work is not esteemed at all	4

Do you think of changing your workplace?

a) Yes, very often	23
b) Yes, sometimes	45
c) Very rarely	23
d) Never	9

What sort of opportunities are there for promotion in your work organization?

a) Satisfactory or even very good	32
b) Little opportunity for promotion	50
c) No opportunities for promotion at all	14
d) I am not interested in promotion	4

What in your opinion is the principal condition for promotion in your workplace?

a) Education and work performance	57
b) Connections, who you know, and the like	43

Would it be hard for you to go off to another workplace?

a) Yes, that would be hard on me	62
b) It makes no difference	18
c) I would gladly go	20

What sort of influence do you have on decisionmaking and other events in the work organization?

a) Very great	1
b) Great	8
c) Moderate	40
d) Small	29
e) Very small	20
f) Don't know	2

Occasional tension or conflicts are one of the general and lasting phenomena in all workplaces. How often do they occur in your collective and who are the principals?

	Very Often	Often	Rarely	Very Rarely
a) Between supervisors	8	32	42	18
b) Between supervisors and workers	13	38	39	10
c) Between subordinates and superiors in the work unit	12	39	36	13
d) Among the workers themselves	4	16	40	40

How in your opinion are disputes, conflicts, tensions and other conflict situations usually resolved?

a) By avoiding or concealing the conflict	21
b) By reconciling opposed interests (compromise)	45
c) By honoring only one opinion so that one party "wins" and the other is "defeated"	34

If you feel that workers with higher education would rather take supervisory positions than to go into production proper, why in your opinion is this the case?

a) Personal incomes are considerably higher in supervisory jobs than in production proper	41
b) The work in a supervisory position is more interesting	8
c) The work in a supervisory job brings greater social status and more power	44
d) For other reasons	3
e) Don't know	4

Are the ratios between personal incomes for performance of supervisory work duties and work duties in production justified?

a) The ratio between the personal incomes of the workers and supervisors is too large	74
b) This ratio is fully justified	23
c) The personal incomes of supervisors are too low in proportional terms	3

We will enumerate several frequently encountered opinions pertaining to remuneration. Do you agree with them?

	Yes	No	Don't Know
a) A majority of the persons employed in the collective are remunerated precisely according to the results of their own work. If they work more, they will earn more	65	29	6
b) The employees would have an incentive to work better if ratios were fairer between personal incomes, but not if they were increased	74	13	13
c) The range is too small between the lowest and highest personal incomes	21	65	14
d) If the personal incomes of supervisory personnel were increased, they would work more	2	82	16
e) If the personal incomes of unskilled workers, semi-skilled workers and skilled workers were increased, they would work more	52	33	15

How much of work time do you spend actually working?

a) 50 to 60 percent	11
b) 60 to 80 percent	52
c) 80 to 90 percent	27
d) 90 to 100 percent	10

SITUATION OF CHURCHES, RELATIONS WITH STATE REVIEWED

Emphasis on Good Relations

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1549, 7 Sep 80 pp 16-19

[Article by Milan Milosevic: "The Churches in Yugoslavia"]

[Text] It is perhaps a paradox of the eighties that the church has begun to take on a political role once again in some places. The adaptation of the Catholic Church to the working class movement today, for example, is quite reminiscent of the papal bulls in 1848 when the socialists were equated with Satan. In Latin America the church is playing an important and frequently progressive role; we have before us the Islamic Revolution in Iran, which has been spectacular for a long time, and in the events in Poland the church has been very much a presence. As if it is coming down to earth more and more frequently and assuming the risk of politics.

Perhaps it is no wonder that foreign analysts of conditions in our country have been concerned with the church--at times even in calculations concerning a "possible destabilization." There has been writing about Stepinac, about the "influence of the religious imam Khomeini...."

All those familiar with this problem we have talked to judge that these calculations are groundless--problems between the church and state are today on a lower rung than they were.

It is a fact, however, that in our public politics there has been talk recently about the "subversive activity of certain clerical circles." Hamdija Pozderac warned some 10 months ago that there had been attempts "to take over the sponsorship and 'concern' for the stability of the nationality through religion and by equating it with the identity of the nationality." Last November Stane Dolanc reacted with the following sentence to what had been written in the newspaper DRUZINA: "We will never allow religious freedom in our society to be abused in order to exert pressure on religious people and on their commitment as self-managers."

There have also been reactions of a different kind: Franc Setinc announced this June that "we cannot allow a conflict to be waged in the news media between views of the world that would willy-nilly result in a political division into atheists and believers." Branko Mikulic reproached narrow-minded and doctrinaire members of the League of Communists who have been criticizing their comrades for not adopting atheistic rights when they bury their religious parents with the words: "Who does that serve, and why?"

What all these statements indicate is not a crisis, but on the contrary an endeavor to protect the present atmosphere in this domain, which by and large is favorable, against possible exaggerations and abuses.

When we decided to publish this little sketch of religions in Yugoslavia, we were guided by precisely that motive--even the most superficial glimpse of this complicated mosaic indicates that mutual tolerance is a condition in this society for the coexistence of such great differences.

The Religious Pattern

What does Yugoslavia's present "religious pattern" look like? Atheization and secularization are characteristic of many advanced societies, yet we are witnesses of ebbs and floods of religion in the world. What actually is the situation in our country?

Dr Esad Djimic, a sociologist who studies religion and to whom we talked about the drama of atheization a few days ago, says that we can observe the inertia of consciousness today as in a kind of retort.

The government does not interfere with religion, and it is so consistent in this that it even does not ask people what faith they belong to. The last time such a question was put was in the 1953 census, and at that time 41.4 percent were orthodox, 31.8 percent Catholic, 12.3 percent Moslem and 12.5 percent nonbelievers. Subsequent sociological research has shown that the number of believers is dropping. For instance, in Slovenia in 1975 a survey showed that about 60 percent of the population there is religious, and the rest atheist. Esad Djimic says that the empirical data should be taken with caution; 30 years is too short a time for the changes to be evident.

The Social Sciences Institute in Belgrade, however, ascertained in a survey on social strata in Serbia conducted sometime in 1974 and published in 1978 that all of 88 percent were not religious, 5 percent were religious, and 7 percent belonged in the mixed category. This is the lowest religious representation recorded in any survey in our country, and even if we take it with a certain reserve--the tendency toward atheization is clearly outlined.

It is obvious that religion is being displaced more by the spirit of the time than by the efforts of atheists. Here is a little detail that can illustrate that truth. The conference of bishops of the Catholic Church,

it was reported in POVJESTI KATOLICKE CRKVE, once included "combating nudism on coastal beaches" among its undertakings along with topics having to do with the church and charity.

Something paradoxical has occurred. Since 1945 we have been witnesses of an obvious atheization of society on the one hand, while on the other religious activity has been developing without hindrance. Before the war, for example, only six religions were allowed. In Yugoslavia today there are 35 different religious communities, and some specialists say even 40.

The Drama of Atheization

Radovan Samardzic, who has an M.A. in theology and is secretary of the Commission for Relations With Religious Communities of the Federal Executive Council, a man who aside from his official position is also concerned with this problem area as a scientist, is attempting to reconstruct a kind of geography of religions in Yugoslavia. The layman has no idea of the kind of interlacing that is involved. Some areas are completely atheistic, in some paganism predominates, and there are places where there are as many as 10 different churches.

This drama of atheization is not a simple one: baptism, marriage and bu burial--we would have to be deaf not to see those subtle dramas concealed behind family walls. Sons with what Huxley would call their atheistic "behaving as though death were an unverified rumor" and elderly parents who in their old age make more remarks than they did to their sons about the deceptive paradise which death could open up. It would seem that the family social environment passes on religious views along with its behavior patterns and customs.

Yet we still should not forget what are called institutional channels. In Yugoslavia there are about 20,000 professional religious officers doing "the work of the Lord" in about 20,000 churches, monasteries, mosques and church homes. The impressiveness of this mosaic pattern of churches is indicative of society's openness, but also of all the possible material and spiritual influences which struck down roots here.

The religious communities are not hampered in disseminating their doctrine. According to data of the Catholic Church and the Islamic community, which are the only ones who keep records on this, half a million children receive Catholic religious instruction in a thousand lecture rooms, and there are about 100,000 students in a slightly smaller number of Islamic religious schools.

The State and the Church

Religious communities in Yugoslavia carry on elaborate information activities. GLAS KONCILA is a semimonthly with a circulation of about 100,000. PRAVOSLAVLE has a circulation of 30,000, and the herald of the Islamic community PROPOBED has a circulation of about 30,000.

What is the relationship between the government and these religious communities? Dr Aleksandar Fira, chairman of the Commission for Relations With Religious Communities of the Federal Executive Council, says that they are conducted in conformity with the constitution, and we regulated the relationship between the government and religious communities on the same principles in the 1946 constitution and in the present constitution. This in itself is indication that the achievement of the revolution has effectively withstood the test of time. A system in which the church is separate from the state and the school is an achievement of progressive bourgeois thought taken up by our socialist revolution and consistently implemented.

What is the present situation?

Dr Fira says that relations between the government and the religious communities are good, which has been reiterated several times, "but," Fira says, "our assessments also point up the fact that in certain religious communities there are abuses of religion for political purposes. We encounter even attempts to merge religion with nationalism, which are very dangerous for our society. One might also note cases of narrow-mindedness and doctrinaire positions on the part of public officeholders concerning demands which religious communities make on the basis of law to exercise their rights. The greatest problems, for example, are with sites for building religious structures. But that is a part of the general situation. Even in general terms we have a disorderly situation in urban planning, and the religious communities are, of course, suffering their part of that fate."

According to the assessments of Moma Radosavljevic and Ljubisa Stokic, whom we talked to in the Socialist Alliance of Working People of Yugoslavia, a great deal of attention has to be paid in this sensitive area so as to avoid sectarianism on the one hand and on the other to avert clericalism. By sectarianism is probably meant a dogmatic and adverse attitude toward the demands of the church and toward the right of a man who believes in God to be involved in politics as a citizen.

By clericalism is probably meant the attempt of church circles to continue to play a political role. Asked to comment on this phenomenon, Dr Aleksandar Fira said that "no demands have been articulated on the part of the religious communities to impose themselves as political partners, though a more subtle political analysis would confirm an endeavor of this kind on the part of individuals in religious communities."

To what extent is the behavior of religious institutions affected by current international events? Dr Fira's answer is this: "It cannot be said that there is no such influence." He did tell NIN, however, that "official church representatives of the most numerous religious communities are constantly giving assurances that they harbor no tendencies toward any kind of international linkup that would not be in accordance with their constitutional status or with their organization, though there have been individual cases that indicate that such influences are spreading. The government

does not stand in the way of the international contacts of religious communities," Dr Fira says, "but they must be brought into conformity with our fundamental principles of foreign policy, which is an obligation of every citizen foreseen by the constitution."

The churches in Yugoslavia are financially independent aside from the aid of the government, they are supported by the offerings of their congregations, and they perform religious services. To what extent does the fact that money sometimes comes from abroad as well determine their role?

"The churches," Dr Fira says, "are not prohibited from receiving aid. We do not keep a record of this in government agencies. I know of cases in which religious communities in this country have been receiving that kind of aid, but I would not be able to say to what extent that aid determines their behavior."

One person we talked to, one who is knowledgeable in this field, judges that "today the church has more problems with itself than with the government."

A "Lower Order" Problem

It is obvious that these haggles over construction of particular churches do not leave deep traces, just as deep traces are not left by this kind of tale: one clergyman, an official in his professional association, which, unlike the church, is affiliated with the Socialist Alliance, says to an official in the SAWP with whom he must maintain a working relationship: "Better for us to meet in my office, you know my 'hierarchy won't like it if I'm constantly paying visits to the government.'"

It is obvious that today the problems are of a "lower order" than yesterday. The same can be said of institutions.

As for relations between religious people and atheists, here again certain dilemmas have been resolved, certain prejudices overcome, and on the whole the dialog is more tolerant.

This is obviously our formula. Nevertheless, it seems as though the effort not to injure religious sentiments and the domain of religion have been unnecessarily wrapped in a veil of silence. In preparing ourselves for life, in school, for example, we hardly get even the most basic concepts. Yet a more subtle analysis of doctrines and myths of the churches which are active in our country might help to break down certain prejudices.

At a time when there is so much information about religion coming in from elsewhere in the world, perhaps we are not as good readers of the world in which we live for the lack of a deeper knowledge of these "subtle matters of the soul."

Church Holdings

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian, No 1549, 7 Sep 80 pp 16-17

[Text] The confusing mosaic of faiths, places of worship and theological views, differences which do not originate merely with the schism in 1054:

The Catholic Church, according to statistics from a few years back, has about 2,700 parishes, 182 monasteries and 415 convents. In the language of numbers, this represents about 3,100 diocesan priests, 1,768 monks, 8,600 nuns, 120 postulants and 280 novices in monasteries and more than 800 postulants and novices in convents.

About 760 divinity students and 560 seminarists are studying in the 2 theological schools for service in the Catholic Church. In 1969 the Catholic Church began to celebrate the mass in the language of the people.

The Serbian Orthodox Church, which is autocephalic, has 28 dioceses (21 in Yugoslavia and 7 abroad), about 2,400 parishes, about 180 convents and monasteries and about 2,200 priests, monks and nuns.

Last year there were 70 full-time students attending the theological school, and there were about 380 seminarists.

The Macedonian Orthodox Church, which proclaimed its autocephalic status in 1967, has about 225 parishes, 120 monasteries, 239 priests and some dozen monks. It has a seminary at the secondary level with 80 students.

The Islamic Community has about 1,600 religious officers in its 4 synods (in Sarajevo for Bosnia-Hercegovina, in Pristina for Serbia, in Skopje for Macedonia and in Titograd for Montenegro) and recently has built a large number of mosques.

Religious schools at the secondary level (medresas are Moslem theological schools at the secondary and junior postsecondary level) in Sarajevo and Pristina have about 500 students, and in Sarajevo there is also the Moslem School of Theology.

The Evangelical Church (established in Germany in 1817 and taking the Gospels as the basis of its faith, conducts its service in the language of the people, and is characterized by decentralization of the church organization) has 18 churches in Croatia, Bosnia-Hercegovina and Vojvodina, 13 church districts, 5 affiliates, 12 ministers and 23 lay ministers.

The Evangelical Christian Church of the Augsburg Confession, with headquarters in Murska Sobota, has 16 churches, 15 ministers and 20 lay ministers, and the Slovak Evangelical Church of the Augsburg Confession (the Augsburg Confession is the first official foundation of Protestantism), with its

headquarters in Novi Sad, has 27 districts. Its ministers are trained in Bratislava and Erlangen, Germany.

The Christian Reformed Church--Calvanist, with headquarters in Pacir, which is in Backa, has 43 ministers in 43 church districts and 9 affiliates, about 60 churches and seminaries in Baranja, Slavonia, Medjumurje and Vojvodina. In the Calvinist churches there is no altar, icon or statues (it condemns idolatry). This movement came into our country through Hungary. It perhaps is worth recalling that this religious movement dates from the 16th century in the vicinity of Geneva and spread from there into France (the Huguenots) and England (the Puritans).

The Baptists in Yugoslavia have 54 church districts and about 20 ministers and lay ministers. The Baptist and Evangelical churches have established a divinity school in Zagreb. The Baptists are a Protestant religious sect established in England in 1633, they are advocates of baptism of adults, since they teach that only a man who has a thoroughly conscious attitude toward faith can participate in the right of baptism.

The Methodist Church has about 40 ministers; the bishop's seat is in Skopje, and the headquarters of the secretariat in Novi Sad. The Methodists are a sect of the Anglican Church, and the latter, if we resort to the aid of an encyclopedia, came into being in 1534 in England when Henry VIII broke with Pope Clement VII. Some will remember the film on this subject.

The Christian Adventist Church has in its 4 regions (Zagreb, Novi Sad, Nis and Sarajevo), which comprise the union, which has its seat in Belgrade, has 300 local churches with more than 120 professional ministers. They have a junior postsecondary and secondary school attended by about 150 young men and women, and there is also a bible correspondence school. This is a religious sect which celebrates the Sabbath on Saturday; this sect believes "in the second coming of Christ and the Day of Judgment."

The Christian Community of Jehovah's Witnesses has 104 districts governed by appointed representatives (servants). The Christian Pentecost Church has 72 church districts and about 70 ministers making up synods or regions of Serbia, Slavonia, Croatia, Bosnia-Hercegovina, and Macedonia. There is also a Romanian synod in Banat and one Hungarian one in Subotica which are officially called Christ's Spiritual Church.

The Jewish Community has 36 Jewish communes, and each of them has a religious section among others. There are no professional religious officers, but the rabbi's functions are performed by individual laymen. Their liturgy consists of prayers and readings of various canonical books.

An alliance of Old Catholic churches was established in 1954 (11 parishes, 10 priests and 7 churches) which was joined by the Old Catholic churches of Croatia, Serbia, Slovenia and Bosnia-Hercegovina.

There are also many smaller churches active in Yugoslavia: for example, the Romanian Orthodox Church (Vrsac), Christ's Church of Brethren (Backi Petrovac), the Christian Nazarene Community (Novi Sad). It is characteristic of the Nazarenes that they reject the church hierarchy, the clergy and church services, they refuse to take oaths and to serve in the army. They are also referred to as New Believers.

The very list of churches in and of itself indicates the traces left in this region by various material and spiritual influences. This interwoven pattern is most obvious in the north of our country: the Spiritual Church of Christ of Those Whose Feet Are Washed (Vrdnik), the Spiritual Church of Christ of the Partially Immersed (Subotica), the Spiritual Church of Christ of the Evangelical Brethren (Belgrade), the Jesus Christ God's Church of Saints (Zagreb), the Reform Movement of Seventh Day Adventists (Belgrade), the Esoterian University Religious Community (Zagreb), the Seventh Day Church of God (Novi Sad), the Church of God (Vinkovci), the Church of Last Judgment (Osijek), the Free Catholic Church (Zagreb), the Mormons (Zadar), and so on.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

'ATA' REVIEWS NEW HOXHA BOOK 'THE KHRUSHCHEVITES'

AU071423 Tirana ATA in English 7 Oct 80

[ATA headline: "Comrade Enver Hoxha's New Work 'The Khrushchevites'--Another Testimony to the Principled Struggle of the Party of Labor of Albania, PLA, Against Modern Revisionism"]

[Text] Tirana, 7 Oct (ATA)--Comrade Enver Hoxha's book "The Khrushchevites"-memoirs, another work in the series of the memoirs by the author, after that "With Stalin," which was published in December 1979, came off the press these days.

The book "The Khrushchevites," through the impressions and reminiscences of the author from the contacts with the leaders of the CPSU and other communist and workers' parties, provides a vivid and concrete tableau about the development of the relations between the PLA and those parties over the period 1953-1961, since the death of Stalin till the final break off with the Khrushchevites.

> -Book which analyses the activity of the Soviet leaders who came to power after Stalin's death and discovers and portrays their character as unscrupulous and undignified politicians-

Speaking about the Soviet leaders who came to power after Stalin's death, apart from the political and ideological analysis of their activity, which has been made also elsewhere, in this book, Comrade Enver Hoxha, on the basis of his personal recognition, discovers and portrays also the character of these unscrupulous and undignified politicians, who did not hesitate to alter the flatteries, promises for aid with the skirmishing of the teeth of the super-state, with the false statement about internationalism with the blockade of starvation.

> -The factors that brought about the great tragedy of the Soviet Union-

What characterizes the book "The Khrushchevites" is the organic interlacing of the reminiscences for a period of time with the analytical reflections, either for that period of time, or about the later development. Thus, through the vivid presentation of facts, the author writes down the opinions about the factors that brought about the great tragedy in the Soviet Union, opinions which have played a role of theoretical and practical importance in the struggle of the Party of Labour of Albania to know and expose the modern revisionists in time and which have served, in particular, not to allow such a revisionist retrogression in our country, as

the one that occurred in many former socialist countries. Bureaucracy and technocratism, the loss of the revolutionary vigilance, the domination of the apparatchiki on the party and the state, the creation of the megalomanic caste, sick euphoria, the running after posts and privileges and, above all, the abandonment of the Marxist-Leninist guiding compass, are some of the roots of the evil the book underlines.

> -The road of the Khrushchevites towards the usurpation of power was the road of intrigues, putsches, liquidation of the opponents, slanders, mysterious murders.

Stressing that J.V. Stalin's line was correct, Marxist-Leninist, Comrade Enver Hoxha brings to the fore the counter-revolutionary role of Khrushchev, Mikoyan and others, who, for their own ends, created a situation of euphoria in the party, built up the cult of Stalin, but, in fact they were distorting his directives and were preparing their counter-revolutionary plot in the darkness. Their road towards the usurpation of the power was the road of intrigues, putsches, liquidation of the opponents, slanders, mysterious murders. The success of their plot was also favoured by the stand of the old guard of the Soviet leaders, who were considered as co-fighters of Stalin, but who had lost their revolutionary spirit, who had become politically sclerotic and had been turned into corpses of Bolshevism.

The conflict between the Party of Labour of Albania and the Soviet leadership was a conflict which was matured gradually through numerous clashes on an ideological and political basis. It had to do with major problems of the theory and practice of the revolution, with the strategy and tactics of the communist movement, with the stand towards the enemies of the revolution, the peoples as well as towards the distorters of Marxism-Leninism.

> -The book shows the ways and methods employed by the Khrushchev's group in power to break this principled and firm stand of the PLA, but which yielded no result-

Through the pages of this new work, Comrade Enver Hoxha shows in a convincing way how our party withstood the sick spirit that the Soviet Khrushchevites spread in the international communist movement. Its principled and unwavering stand was manifested openly at 1957 and 1960 Moscow meetings, at the talks and meetings with the Soviet leaders, at the Bucharest meeting, etc.

The autbor brings to the fore all the ways and methods employed by the Khrushchev's group in power to break this stand. The official talks, the invitations for "holidays," the "occasional" meetings, receptions, the deceitful generosity, hypocrisy, bugging devices, the KGB agents, the open provocations and blackmail, constituted the preferred arsenal of the machiavellian policy of the Khrushchevites. But these means which had yielded their fruits in other countries, where the sound elements were liquidated and Khrushchev's men were brought to power, in Albania did not yield the results he wanted to achieve to.

> -In his new book Comrade Enver Hoxha analyses the efforts of the Soviet revisionist leadership to transform the socialist countries into Gouberna [Vassal states] depending on the Soviet metropolis-

The efforts of the Soviet revisionist leadership to subdue our country were a continuation of their policy to transform the socialist countries into Gouberna depending on Soviet metropolis. To achieve these aims, the Khrushchev's group carried out a feverish activity to eliminate the revolutionary leaders, instigated the anti-Marxist elements in the other parties and put them in the leadership. The unprincipled policy incited it to rely on Nagy, Gomulka and other punished enemies and strike bargainings with them and their supports to the detriment of the peoples and socialism. The events in Poland, especially the counter-revolution in Hungary in 1956, as the book shows, strengthened the doubts of our party about the policy of the Soviet leadership.

> -In the book "The Khrushchevites" a prominent place is held by the events of 1960, the Bucharest meeting and that of Moscow, in which the Party of Labour of Albania openly launched its attack against Khrushchevite revisionism.

A prominent place is held in the book by the important events of 1960, the Bucharest meeting and that of Moscow, in which the Party of Labour of Albania openly launched its attack against Khrushchevite revisionism. Speaking about the [word indistinct] Comrade Enver said that the principled stand adopted by the Party of Labour of Albania, as time proved it, was conditioned by no pragmatic, economic, financial or military interest. The Marxist-Leninist position of our party, courageously and faithfully expressed by Comrade Hysni Kapo, was dictated only by the lofty aim to defend the Marxist-Leninist norms, to oppose the Khrushchevite dictate. This resolute opposition was transformed at the Moscow meeting into a sting blow against modern revisionism which had seized the power in the CPSU and in many other communist and workers' parties.

The relations of our party and country with the other parties and socialist countries find also their reflection in the book through the visits, meetings, contacts the author has had with a number of leaders of these countries, as well as through the impressions and characterization he makes them. The book speaks with great affection and warmth for such leaders as Dimitrov, Gottwalt, Kolarov, Pieck, Bierut and others, who were internationalists and genuine friends of the Albanian people. While with regard to those who came to power later on, the book underlines their indifferent, under-rating, unfriendly and later on the hostile stand, even the pursuance by them towards our country of a policy according to the revisionist conductor's baton. With the line they pursued, they not only caused damage to the international communist movement, but also gravely hit the fundamental interests of their countries. It was this policy which put these countries under the domination of the Khrushchev's group and later on under that of Brezhnev, whereas the resolute stand of our party was decisive for the safeguard of the independence of our socialist homeland.

FOREIGN POLICY JOURNAL ATTACKS CHINA'S DISARMAMENT POLICY

West German Commentary

Bonn IWE-TAGESDIENST in German No 120, 11 Aug 80 pp 1-2

[Report from Berlin: "East Berlin Attacks Beijing's Position on Disarmament Question." A translation of the East Berlin DEUTSCHE AUSSENPOLITIK article cited below follows this commentary]

[Text] East Berlin has sharply attacked Beijing's attitude in the disarmament issue. The semiofficial East Berlin journal DEUTSCHE AUSSENPOLITIK, No 8/1980, stated that China was pursuing a dangerous conception of conventional and nuclear rearmament. By establishing a worldwide "united anti-Soviet front" China wished to block the initiatives for disarmament and arms limitation issuing from the socialist countries. Beijing's "destructive attitude" to this key issue of international politics had "become an obstacle threatening further progress on disarmament and arms limitation." China thereby was reinforcing the "most reactionary circles of imperialism," which, for their part, sought to prevent any step toward arms reduction. Consequently China's "disarmament demagogy" had to be "constantly unmasked and resolutely rejected."

PRC's 'Hegemonistic' Goals

East Berlin DEUTSCHE AUSSENPOLITIK in German Vol 25 No 8, Aug 80 signed to press 3 Jul 80 pp 109-126

[Article by Dr Bernd Kaufmann, Humboldt University, East Berlin; and Dr Guenter Raube, Institute for International Relations, GDR Academy for Political Science and Jurisprudence, Potsdam-Babelsberg: "The Policy of the Chinese Leaders in Questions of Disarmament"]

[Text] Emphatically reiterated at the Twelfth SED Central Committee Meeting were Erich Honecker's words, spoken at the meeting of the Central Committee Secretariat with the first secretaries of kreis leadership organizations of 25 January 1980 in Berlin: "That which matters most of all at this time and upon which everything ultimately depends is the resolute defense of peace."[1] At the important meeting of the Political Advisory Committee of the Warsaw Pact countries on 14 and 15 May last in Warsaw it was unanimously agreed that, following the U.S.Government's shift from detente to confrontation, the international situation has seriously worsened and the threat to peace

and detente risen considerably. Consequently the Warsaw Pact countries, inspired by the goal of securing peace, adopted significant initiatives to give new impetus to detente, provide a new push in the struggle for an end to the arms race and achieve effective measures for disarmament, thereby lessening the danger of the outbreak of a nuclear world war. In his address to the Twelfth Central Committee Plenum concerning the convocation of the Tenth SED Congress, Erich Honecker, general secretary of the SED Central Committee, rightly noted:

"When thinking of the future, mankind at the beginning of the 1980's thinks primarily of securing peace. All those on the international scene, who hold governmental responsibility will be judged by their contribution to the settlement of this the main issue of our time."[2]

The same fully applies to the policy of the Chinese leaders, especially as regards detente and disarmament. The People's Republic of China is a major power and, as a permanent member of the UN Security Council together with the Soviet Union, the United States, Britain and France, holds a very particular responsibility for the maintenance and consolidation of world peace.

However, the current Chinese leaders not only do not meet this responsibility, since Mao Zedong's death in 1976 they have increasingly emphasized a foreign policy hostile to peace, detente and progress. Efforts to achieve domination in international relations have evidently come to the fore. China's brutal military attack on socialist Vietnam in the spring of 1979 demonstrates that the responsible Chinese leaders are ready and able to switch from cold to hot war in the interest of implementing their policy directed to regional and global hegemony. At the same time, and as shown by their military defeat in Vietnam, they overestimate their potential and scope.

The Chinese leaders have chosen collaboration with imperialism, especially U.S.imperialism. As a consequence of its unprecedented "opening" to the West China intends to become a world power of the first rank with the aid and at the side of imperialism, doing so by accelerated economic, scientific-technological and military "modernization." To gain the aid of the developed capitalist countries, above all the United States, anti-Sovietism was escalated, the aggressive policy of the Carter Administration stimulated and supported, and imperialism offered a joint global "containment strategy" directed against world socialism, in particular its major power, the Soviet Union. The Chinese leaders are intent, if possible, to incite the Soviet Union and the United States to a military conflict in order at least to weaken them and thus more quickly transform China into a power dominating the world.

As the initiation of military links demonstrates, relations between China and the United States are oriented to the emergence of an ad hoc alliance. At the same time the two sides confront one another not only as allies but

also as rivals with their own hegemonistic goals. While increasingly those laws and motive forces become active between China and imperialism, which are typical for inner-imperialist proportions of forces, and while China is becoming dependent on the economically far superior imperialist countries, discussions and disputes are increasing in China about the manner and goals of the country's "modernization." Exacerbated thereby is the contradiction between the great power chauvinist policy of the Chinese leaders on the one hand and the objective requirements of the economic construction in China as well as its international relations on the other.

Against this background the foreign policy of the Chinese leaders on the threshold of the 1980's has become a main spring for international tension; it now represents a factor complicating the international situation, even destabilizing it in some regions and, above all, seriously prejudicing the struggle for peace, security, disarmament and arms limitation.[3]

The Evolution of the PRC's Attitude to the Security of Peace, Detente and Disarmament

In the wake of the shift, begun in the late 1950's, of the PRC's foreign policy from anti-imperialism to antisocialism, its attitude to the issues of war or peace, political and military detente, disarmament and arms limitation also was subject to a fundamental revision. To the degree that the effort to achieve hegemony became the ruling concern of Chinese foreign policy, hostility to detente and disarmament increased, conventional and nuclear armament was emphasized in order to enable the PRC to carry on a policy of strength, a policy of dictate, blackmail and military threats toward the Soviet Union, the Asian neighbor countries and world socialism.

In the 1950's PRC policy regarding military detente and disarmament, just as its overall foreign policy, was part and parcel of the total strategy of the countries of socialism. On the occasion of the 40th anniversary of the Great October Socialist Revolution Mao Zedong stated in Moscow on 6 November 1957:

"The Soviet Union, China and the other socialist countries have long made every effort to lessen international tension. The proposal repeated submitted by the Soviet Union on the issue of disarmament and the ban on the production, testing and use of weapons of mass annihilation reflects the common attitude of all socialist countries and, at the same time, responds to the interest of the peoples of the world."[4]

The first constitution of 18 September 1954 postulated the struggle for world peace as China's "unalterable policy" and thus elevated it to a constitutional principle. The Eighth CCP Congress (1956) specially honored the socialist countries active and united advocacy of peaceful coexistence and disarmament.

In those years the Government of the People's Republic of China developed its own measures. The main emphasis of its actions was logically directed to the assurance of peace in the Asian-Pacific region, coupled with the reduction of the tensions caused there by the United States. The PRC concentrated on defusing such conflicts as directly threatened the security of the Chinese state. Preeminent was the dispatch of volunteers to Korea (1950) and the struggle--conducted jointly with the USSR and the other socialist countries--for an end to the Korean War. In the treaties of friendship and assistance concluded in 1950-1960 as well as in communiques and joint declarations with other socialist states the PRC obligated itself actively to participate in securing peace and champion definite steps toward disarmament.

The Permanent Committee of the National People's Congress adopted a resolution enthusiastically endorsing the important appeal on disarmament addressed by the USSR Supreme Soviet on 10 May 1955 to the parliaments of all other countries. China strongly condemned the conclusion of a separate peace treaty between the United States and Japan as well as the remilitarization of Japan and the FRG. The treaty on trade and communications between the Chinese region of Tibet and India of 29 April 1954 first contractually formulated the five principles of peaceful coexistence. The PRC offered a considerable contribution to the implementation of detente and peaceful coexistence at the Bandung Conference of Afro-Asian countries in April 1955. On 30 July 1955 the Chinese Government submitted to the countries of Asia, the Pacific region and the United States a proposal to replace military blocs by a collective peace pact. In April 1957 it suggested the establishment of an Asian security system involving the United States, the USSR, Japan, the PRC, Burma, Indonesia and India. Finally, in March 1958, the Chinese Government advocated the creation of a peace zone in Asia, free of nuclear weapons. Repeated initiatives were launched to improve relations with Japan and (from 1955 in Chinese-American talks at ambassadorial level) to normalize relations with the United States.

The Chinese leaders constructive peace policy met with the complete approbation of the overwhelming majority of the people. Witness are the hundreds of millions of signatures collected in China for the first Stockholm Appeal and the Berlin Peace Appeal of the Peace Council which was prominent in the 1950's international movement against nuclear arms. This policy, directed to the stabilization of the situation and the security of peace in the Asian-Pacific region considerably contributed to the rise of the VRC to an acknowledged anti-imperialist force which gained steadily in international influence. The USSR and the other socialist countries proved to be its natural allies. The United States carried on a policy of open hostility toward China. Its occupation of Taiwan and especially the threatened U.S. intervention in the People's Republic of China, which was involved in the aggression against the Democratic People's Republic of Korea left even the most nationalist forces in Beijing no choice but to consider U.S. imperialism its arch foe. In the first years of the People's Republic of China, therefore, the country's alliance, security and disarmament policy was

mainly directed against the far superior military power of the United States threatening to blockade and contain the PRC.

At the end of the 1950's Mao Zedong gradually and at first secretly, though later more and more openly, subjected this tried and tested policy to a fundamental correction which, in subsequent years, degenerated into a "special line" and, since the late 1960's, has been dominated by anti-Sovietism and great power chauvinism. The nationalist forces in particular, grouped around Mao Zedong, made every effort to adopt a dominating attitude initially within the framework of the socialist world system and the international communist movement, and later vis-a-vis the national liberation movement and the developing countries. This had the result that the PRC began to hold an increasingly militant and adventurist attitude on the issue of war or peace, the policy of peaceful coexistence and, therefore, especially the role of the military factor in politics. The most obvious reflection of this attitude was the growing assertion that a world war was "inevitable," that the overthrow of the capitalist system could thus be made to happen worldwide and far more quickly, and that the nuclear bomb should merely be considered a "paper tiger." This conception opposed to the peace and security policy of the socialist states initially involved the doctrine of militant "anti-Americanism" designed to incite a military conflict between the USSR and the United States. This doctrine came to the fore in the 1958 Taiwan crisis and the provocation of military border clashes with India (1959 and 1962). At the same time military cooperation with the Soviet Union was revoked and nuclear armament pushed.

Consequently the actions of the Chinese leaders in matters of disarmament and especially nuclear disarmament diverged further and further from the policy of the socialist countries and finally postulated their hostility to the security of peace and disarmament. In June 1960, on the occasion of a conference in Beijing of the World Trade Union Federation, the PRC first displayed its open rejection of general and complete disarmament as the achievable goal of socialist disarmament policy by describing this goal as an "illusion" as long as imperialism persisted.[5] The real reason for this attitude was the fact that, in the interest of their own rearmament designed to carry out its plans for domination, the Maoists no longer wished for disarmament and tried to hide this by the doctrine of the necessity of a "decisive military struggle against imperialism." To recruit the national liberation movement as allies for this attitude, the Chinese leaders hypocritically claimed that disarmament was not in the interest of the peoples fighting for national independence, because they would thus be unarmed against imperialism.

The fundamental change in the PRC's attitude to disarmament in general and to nuclear disarmament in particular occurred in the early 1960's. It was coupled at the same time with the effort to develop an independent Chinese disarmament conception. The CCP's Maoist "proposal on the general line of the international communist movement" of 14 June 1963 basically marked the end of the process of China's abandonment of joint proceedings with the

USSR and the other socialist countries on the disarmament issue. The USSR's proposals for achieving general and complete disarmament were denigrated as "aiding and abetting imperialist aggression and war policies."[6]

Efforts at Domination and Hostility to Disarmament

On 16 October 1964 the PRC exploded a uranium-235 nuclear device in the region of Lop Nor in the Uighur Autonomous Region of Xinjiang. Consequently the PRC joined the United States, the USSR, Britain and France as the fifth country with nuclear weapons capability.

The Chinese leaders believed that they now held a decisive power instrument to buttress their hegemonistic aspirations. Their turning away from the alliance with the USSR more and more obviously shifted to open hostility. It was thus no accident that Mao Zedong in the very same year questioned the territorial status quo in Europe and Asia, which was the result of World War II, put forward territorial demands vis-a-vis the USSR and reiterated the claim to incorporate the sovereign Mongolian People's Republic.[7] Mao Zedong and his followers believed to act from a position of equality with regard to the main imperialist countries, especially the United States, and to be able on this basis to come to an understanding with them.[8]

The first Chinese nuclear bomb test demonstratively underlined the Chinese leaders' claim to establish China as a major power, "independent" of both social systems, as well as their intention as much as possible to profit from the worldwide clash of the socialist and imperialist systems in the interest of pressing ahead with their selfish goals. China's possession of nuclear weapons accelerated the further evolution of its foreign policy in the direction of antisocialism and the establishment of blocs with imperialism. It lent a qualitatively new dimension to the policy of the Chinese leaders with regard to the disarmament issue.

The ownership of nuclear weapons and the development of modern delivery systems is designed to multiply the effectiveness of the Chinese leaders' hegemonistic policy and increase China's influence in world politics. The basic strategic goal of the PRC leaders foreign policy and therefore their attitude to the issue of disarmament and arms limitation is that of making China a power which will, in the long run, dominate the world. They visualize a system of international relations in which China is the superpower. Their efforts to convert this into practical politics meant that nationalism was fueled with an increasing lack of inhibitions, that it degenerated into great power chauvinism and, by tremendous rearmament efforts, imposed unspeakable burdens on the Chinese people.

Whatever the shifts of PRC foreign policy since the end of the 1950's, it always maintained one leitmotif: To sabotage detente in East-West relations, obstruct effective steps in direction disarmament and arms limitation, incite and exploit conflicts and disputes at all foci of world policy--whether in Europe, the Near and Middle East, Africa, Central America and,

especially, in Southeast Asia and the Far East--all in order to drive the Soviet Union and the United States into a permanent political and, if at all possible, military confrontation.

The Chinese leaders therefore acted and continue to act as resolute foes of political and military detente. As it is the nationalist approach to make China the preeminent world power, it follows that the Soviet Union, the strongest power of socialism, is bound to appear the main obstacle to this ambition. Consequently the USSR has for years been slandered as the "arch enemy" of China and the peoples of the world, the "main source" of tensions and war; the peace and security policy of the Soviet Union has been fanatically maligned, the constructive proposals of the socialist fraternal countries on disarmament and arms limitation denigrated and imperialism courted.

For years Chinese politicians have diligently tried to make the world believe that China does not strive for global domination and actually advocates general and complete disarmament. Basically this corresponds to a tenet of the old Chinese "art of government," which advises that real political goals should never be revealed before the time is ripe. To deceive world public opinion Deng Xiaoping went so far as to say at the April 1974 special meeting of the United Nations General Assembly:

"Should China one of these days change its political visage and become a superpower, should it also act the tyrant and on this earth and everywhere subject others to its tyranny, aggression and exploitation, the peoples of this earth should call matters by their proper name..."[9]

Let us take up Deng's challenge and seek truth in the facts!

The Striving for Military Power--The Basis of the Chinese Leaders Attitude to Disarmament

According to Soviet sources the average arms expenditure of the PRC amounts to some 40 percent of the total state budget.[10] The costly missile-nuclear bomb potential continues to be the focal point of Chinese armament. China has available and ready for use nuclear fission and fusion weapons with an explosive range of 20 kiloton to 4 megaton TNT. Since 1964 the People's Republic of China has carried out more than 25 nuclear tests and since 1970 launched 8 satellites as well as undertaken successful test series with respect to guided missiles. It is possible that the Chinese are able to handle the complex recovery technology for satellite payloads.

On 18 and 21 May last China successfully launched toward the South Pacific the first two intercontinental ballistic missiles type CSS-X-4 with a range of about 10,000-14,000 km. According to reports these ICBM's are to be equipped with 3 independent guided nuclear warheads (MIRV's). China also has nearly 100 bombers capable of carrying nuclear weapons. The construction of nuclear fueled submarines serves the purpose of advancing

Chinese naval equipment in the direction of strategic tasks. On the whole. however, the PRC's strategic capacities are by no means sufficient to carry out intercontinental missions. The PRC's ballistic missiles so far represent a danger mainly to the USSR, the Mongolian People's Republic, India, the Southeast Asian countries and Japan. Nevertheless we must assume that a new strategic situation will dawn in the earl 1980's in Sino-United States relations: Chinese intercontinental ballistic missiles will then be able for the first time to reach the U.S.mainland.

At the moment about 4 million men are serving in the Chinese armed forces. The army has available some 10,000 tanks (light and heavy), about 3,000 armored personnel carriers, 5,500 heavy grenade launchers and 15,000 artillery pieces. The navy boasts some 200 floating units. They include 50 submarines and some obsolete destroyers. Also included are 4 naval air divisions. The air force has more than 5,000 obsolescent Soviet aircraft or Chinese copies. Some 60 million members of paramilitary formations represent the so-called nuclear militia.

In contrast to the Chinese leaders public assertions China's armed aggression against socialist Vietnam in the spring of 1979 clearly showed that the army is being prepared for attack. The Chinese concluded from their military defeat in Vietnam that they must more strongly emphasize the equipment of their army with modern conventional weapons and modern communications, and that they must also substantially improve their mobility. For this they expect the assistance of imperialist countries, especially the United States. Last January's visit to China by U.S.Defense Secretary Brown and last May's return visit to the United States by General Secretary of the CPC Central Committee's Military Commission Geng Biao represented a definite "leap forward" with respect to the development of military links between China and the United States. It was agreed, for example, that China should obtain the most modern "gray zone" technology such as a land satellite station and equipment for military purposes such as early warning radar, telecommunication devices, trucks, transport aircraft and computers.

In view of the great importance assigned by the Chinese leaders to their own military strength for the implementation of their hegemonistic aims, the PRC's attitude to disarmament primarily features the firm intention not to allow any obstacles to the speeded-up development and expansion of the country's armed forces and arms arsenal. The Chinese attitude to disarmament is largely motivated as follows:

-- The leaders of the People's Republic of China intend to prevent any international agreements which they consider restrictive to their rearmament, especially in the field of nuclear missiles.

-- On the one hand they endeavor to avoid international isolation for the PRC in matters arms limitation, on the other they are interested in stimulating the most reactionary forces of imperialism to prevent effective steps toward disarmament and arms limitation.

-- By saddling the "superpowers" (meaning the USSR and the United States but mainly, and increasingly, the USSR alone) with the sole responsibility for the continuing arms race, the PRC attempts to isolate the USSR, deflect attention from its own rearmament and indeed justify it.

-- More and more the Chinese submit their own proposals and suggestions which call on the "superpowers," especially the USSR, to make unilateral sacrifices in the matter of disarmament. These obviously amount to a shift in the prevailing military proportion of forces worldwide to benefit the People's Republic of China. By the disarmament of the "rivals," the relative weight of the PRC's military factor is to be increased in the long term. The attempt is made to justify this with the efforts of peoples and countries to achieve "equality" and abolish the "supremacy of the superpowers."

-- The Chinese disarmament concept distinguishes between "genuine" and "false" disarmament.[12] All current arms limitation and disarmament treaties based on the internationally acknowledged principle of the equality of obligations and equal security are discounted as "false" measures. Only those steps are proclaimed "genuine" disarmament, which violate this principle and provide unilateral military benefits for the People's Republic of China.

The leaders of the People's Republic of China constantly refer to the "superpowers competition for world domination" and assert that the alleged Soviet expansionism may cause another world war. The Chinese leaders attempt by this demagogy to justify their demand for the implementation of the "principle of disarmament," by which the USSR and the United States "would have to be the first"[13] drastically to reduce their nuclear strategic arms. Only then should other "important military countries join in" disarmament.[14] By putting the question in such unrealistic terms the PRC actually aims to prevent any advance toward disarmament, evade its own disarmament responsibilities as a nuclear power, and shift the entire responsibility onto others.

To disguise its basically negative attitude in regard to nuclear disarmament the PRC began in the early 1960's to advance the demand for a ban on a first nuclear strike. According to a government statement of 16 October 1964, on the occasion of the first Chinese nuclear tests, China would "at no time and in no circumstances" be the first to use nuclear weapons. Ever since the restoration of the PRC's legitimate rights in the United Nations (1971) it has challenged the United States and the USSR to make a similar declaration. Complementing the unilateral obligation accepted by the USSR and the United States in several statements, the USSR has additionally proposed that all nuclear powers should enter into binding international obligations to the effect that they would not use or threaten to use nuclear weapons against countries which do not possess nuclear weapons nor have such weapons emplaced on their territories. The PRC, however, rejected this proposal.

The People's Republic of China's call for the non-use of nuclear weapons, especially against nuclear free zones, must therefore be considered no more than empty rhetoric, especially because it rejects any internationally binding agreement on a general nuclear weapons ban and, in contrast to the USSR, is not willing to enter into firm contractual agreements on the conditions for foregoing the first nuclear strike. In these circumstances the countries bordering on the People's Republic of China can never be secure from a potential Chinese nuclear attack.

So far the PRC has not acceded to any of the major international treaties and agreements on arms limitation and disarmament, though accession to many is open. Other than membership in the 1925 Geneva Protocol, inherited from its predecessor government, the People's Republic of China has been willing only to accept the supplementary protocol No 2 to the treaty on the ban of nuclear weapons in Latin America. By doing so it obligated itself not to use or threaten to use nuclear weapons against the signatories of that treaty. This, though, does not imply any restriction to Chinese nuclear armament The PRC has not signed any of the current and important international agreements in the field of arms limitation and disarmament, which would involve genuine restrictions on the rearmament of the People's Republic of China: Not the Moscow Treaty concerning the ban on nuclear weapons tests in the atmosphere, in space and underseas (1963), not the treaty on the nonproliferation of nuclear weapons (1968), not the treaty on the bottom of the seas (1971), not the B weapons convention (1972), nor yet the environmental convention (1977).

The People's Republic of China and the Ban on Nuclear Weapons Tests

By their efforts to obtain the international acceptance of a comprehensive ban on nuclear weapons tests and a ban of such tests in all media and for all countries, the socialist countries aim to make impossible or at least difficult the further development of existing types and the creation of new generations of such weapons by precluding any tests. At the same time they intend to prevent the further uncontrolled proliferation of nuclear weapons in countries which do not yet have them. The first and so far most important if partial success recorded is represented by the Moscow Treaty, concluded on 5 August 1963 and relating to a partial ban on nuclear weapons tests. The Beijing leaders fought this treaty tooth and nail, even in the preparatory stage. As they assign a central role in their hegemonistic ambitions to their own possession and rapid development of nuclear weapons, they roundly objected to any international agreement which could represent an obstacle. Nor is the PRC willing so far to stop nuclear weapons tests in the atmosphere and restrict itself to underground tests only. China's continuing violation of the treaty provisions (to which no less than 120 countries have now acceded) is designed to prove that the treaty is incapable of preventing nuclear weapons tests in the atmosphere. By this means the effectiveness of the treaty is to be brought into disrepute and its universality gainsayed. The People's Republic of China sharply rejected the complaints about its atmospheric tests, which were expressed by

other countries, in particular Japan, Australia and New Zealand. The PRC tried to give the impression that the tests were an internal concern of China alone, in other words China's sovereign right, and that there was no way of preventing China from proceeding as it wished. Moreover the PRC construes an allegedly valid right of all countries, but especially of countries "with few nuclear weapons and those with insufficient defense capacity," not only to develop nuclear weapons but also to produce and test them.[15] It advises such countries against participation in the Moscow Treaty because this allegedly prejudices their security.

By taking the field against even a partial ban on nuclear weapons the Chinese leaders aim to obstruct the process designed to result in a comprehensive ban on nuclear weapons tests. The generally destructive attitude of the PRC is nowhere so pronounced as on this issue. Ever since it has been a member of the United Nations it has voted against all relevant resolutions by the UN General Assembly.[16] The PRC rejects the USSR's proposal for a conference of the five nuclear powers to discuss issues involved in a total test ban. Since 1977 at least trilateral negotiations on that issue have been carried on by the USSR, the United States and Britain. The PRC's negative attitude has so far served the United States and Britain as a pretext for refusing to submit a draft treaty jointly with the USSR. The lack of progress has made it easier for the PRC to explain and maintain its rejection of the nuclear weapons test ban and continue its nonparticipation in the relevant agreements and negotiations.

The People's Republic of China and the Nuclear Nonproliferation Treaty

This treaty obligated the nuclear powers "not to deliver nuclear weapons or other nuclear explosive devices " to anybody at all, "either directly or indirectly, nor to aid, encourage or cause a country not possessing nuclear weapons to produce or otherwise obtain nuclear weapons or other nuclear explosive devices."[17] The non-nuclear countries which were signatories consequently renounced the acquisition of nuclear weapons and incurred guarantee obligations within the scope of agreements with the International Atomic Energy Organization (IAEA) in Vienna. The treaty secures the "inalienable right of all treaty partners" freely to pursue the possibilities of the peaceful use of nuclear energy.[18] Since the treaty took effect on 5 March 1970 the circle of nuclear powers has in fact not grown, thereby confirming its general efficacy.

The PRC opposed the treaty from the outset, did not accede to it and, to this day, rejects its universality. The PRC's rejection of the Nonproliferation Treaty results less from immediate military considerations (because China was already a nuclear power at the time the treaty was concluded). It is motivated by the PRC's view of the treaty as an important element in the trend to arms limitation, which it rejects because it cannot be made to serve its goal: That is unilaterally to restrict the great powers armaments while allowing the PRC a free hand in speeding up its own.

The People's Republic of China considers the Nonproliferation Treaty the result of a certain coincidence of interests between the USSR and the United States in the prevention of the further spread of nuclear weapons and describes it as "discovered" jointly by the United States and the Soviet Union for the express purpose of perpetuating their "nuclear monopoly" and dominating other countries.[19] Actually the Chinese leaders hegemonistic concept is based on driving the United States and China toward a conflict. Anti-Sovietism and the endeavor to achieve domination are thus the political mainsprings of Chinese rejection of the Nonproliferation Treaty. By its rejection of the treaty the PRC hopes to gain allies among the countries not possessing a nuclear potential, stressing the alleged disparity in the obligations of the nuclear powers on the one hand and those of the non-nuclear nations on the other. The same purpose is served by the PRC's argument that the Nonproliferation Treaty obstructs the development of nuclear technology and its peaceful use by many countries, thereby perpetuating the "superpowers" monopoly in this field.

By rejecting the Nonproliferation Treaty and other measures designed to stop the spread of nuclear weapons the PRC represents one of the main obstacles to nuclear disarmament at this time. Whether and in how far the PRC will modify its attitude in the future cannot be foreseen, but some change may be expected because, in the pursuit of their hegemonistic goals, the Chinese leaders cannot objectively welcome the possibility of China's neighbors obtaining nuclear weapons.

The People's Republic of China and Nuclear Free Zones

The USSR and the other socialist countries have made long and strong efforts to promote the concept of the establishment of nuclear free zones. It has been part and parcel of their wish for military detente, arms limitation and disarmament. Let us in this connection recall the plan for setting up such a zone in Central Europe, submitted on 2 October 1957 by then Polish Foreign Minister Rapacki in an address to the UN General Assembly. Since that time several such projects have been launched. They include plans for the establishment of nuclear free zones in Europe, Latin America, Africa, the Near East, South Asia, the South Pacific, the Balkans, and the concept of a peace zone in the Indian Ocean. The establishment of nuclear free zones is the only issue in the current international discussion of disarmament not rejected outright by the PRC. The PRC adopted a positive attitude at votes on relevant resolutions in the UN General Assembly.[20] It backed the setting up of a peace zone in the Indian Ocean, the establishment of nuclear free zones in Latin America, Africa, the Near East and South Asia. On 12 June 1974 the PRC acceded to supplementary protocol No 2 to the treaty on the nuclear free zone in Latin America. What is the background to that attitude?

The PRC considers the establishment of nuclear free zones and peace zones an alternative, not a supplement to the existing multilateral nuclear test

ban and nonproliferation treaties. As many countries approve the plans for nuclear free zones, the PRC hopes that they will back its rejection of the Moscow Treaty and the Nonproliferation Treaty. Even if all the nuclear free zones now under discussion were actually to be set up, this would not involve any restriction on China's nuclear armament and nuclear weapons tests, or at least would not represent an obstacle. The PRC leaders consider this issue to offer greater scope to their interpretation of the PRC's "positive basic attitude" to the disarmament issue and for demonstrating China's "support" of the interests of "small and medium" countries and non-nuclear countries. The PRC calls on the nuclear powers to forego the use and the threat to use nuclear weapons in these zones. By these means it endeavors to link up with the special security interests of these countries with regard to a nuclear threat and thus recruit them for itself. So far, however, the PRC has failed by its use of this issue to obtain firm alliances with a majority of countries.

The People's Republic of China and SALT

The Chinese leaders have always denigrated the beneficial effects of the SALT agreements on Soviet-American relations and described them as "useless" for nuclear disarmament. In their opinion, though SALT I and SALT II involved certain quantitative limitations on some types of nuclear weapons and delivery systems on the USSR and the United States, the treaties generally served only to maintain and perpetuate the "nuclear monopoly of the superpowers" for "blackmailing" the non-nuclear countries. Moreover, in concluding the SALT agreements the USSR and the USA merely pursued the design of redefining the "rules for their speeded-up strategic arms race" and therefore failed to meet their obligation to "genuine" disarmament, that is immediate drastic reductions.[21] The USSR-United States treaty, unlimited in terms of time, about restrictions on antiballistic missile systems and the supplementary protocol by which both countries renounced the construction of expensive systems (which would have served also to defend them against Chinese strategic weapons) does not appear to PRC propaganda a suitable object of their criticism of SALT. The Chinese leaders therefore largely aim at the denigration of USSR-United States agreements on the limitation of their offensive strategic weapons.

The motives of this defamation of the SALT negotiations by the PRC are as follows: The "superpowers," in particular the USSR, are to be depicted as the main obstacle to the first "genuine" steps to nuclear disarmament. The USSR is accused by means of "qualitative rearmament" to strive for an alleged military superiority.[22] The indication that "genuine" contributions to nuclear disarmament by SALT are so far lacking is meant to help prevent the extension of the bilateral framework of negotiations to all nuclear countries and especially to stifle at the source any potential pressure on the PRC to participate in nuclear disarmament.

Bound to be disappointed is the PRC leaders hope for a shift in the international balance of power in its favor as a consequence of the Soviet-

American agreements. Even the utmost rearmament efforts of the PRC could not possibly achieve the aim of some day matching USSR and United States nuclear potential. That is why their negative attitude to SALT will not change. It well reflects Beijing's endeavor--borrowed from the old "art of diplomacy"--to encourage other countries to wear each other out in order then to be able to dominate them. In this spirit the second session of the Fifth National People's Congress (1979) called on the most reactionary forces of U.S. imperialism to "combat"--on the occasion of the signature of SALT II--the realism of bourgeois politicians in their relations with the USSR by dubbing it "appeasement."[23]

The PRC and the International Disarmament Mechanism

Lately the PRC has been compelled to modify its former objections to various bodies involved in international disarmament negotiations. Its cooperation in such bodies, especially the UN system, has in fact been characterized by growing activism and the extension of its involvement. To cite an example: For the first time a Chinese delegation attended the spring session of the Geneva Disarmament Commission, now expanded to 40 countries. Its performance there served to actually obstruct the operations of this body. The PRC's attendance at various disarmament negotiations is distinguished by its aggressive efforts to compel the international community to adopt the Chinese concept of disarmament. A prime example was the PRC's involvement in the disarmament committee of the UN General Assembly and the submission of its draft of a comprehensive disarmament program to the committee on 15 May 1979.[24]

The PRC was compelled to employ various stratagems regarding the issue of the world disarmament conference proposed by the USSR as early as 1971. Disregarding its own 1964 proposal for the convocation of a summit conference of heads of state and government from all countries, the PRC persisted in rejecting the 1971 Soviet initiative. China believes to be able for some time to come to avoid its likely isolation on this issue by backing special UN General Assembly sessions on disarmament. To begin with it had rejected the convocation of the special disarmament session and failed to participate in the work of the preparatory commission. Later, when such a session could no longer be prevented, the PRC was mainly interested in not allowing it to become a stage in the preparation of a world disarmament conference.

The PRC quite suddenly sent a delegation to the UN special session on disarmament, held in May/June 1978, and even decided to submit its own proposals for the concluding document.[25] However, for technical reasons these were not dealt with. Finally the PRC joined the consensus on the concluding document. The relevant statements by the PRC emphasize that the session had allegedly taken place exclusively on the urging of "small and medium countries," that this had had a beneficial effect on the "spirit" of the resolutions regarding the concluding document, and that it was imperative further to advance in this direction.[26]

New Tactical Maneuvers To Make Old Strategic Goals Prevail

In recent years, in the course of the further emergence of the Chinese leaders hegemonistic policies, we were bound to note a generally deepening evolution of independent Chinese interests in the field of disarmament. This process is characterized by the fact that, as a consequence of the changed conditions of the international class conflict noticeable since the mid-1970's, the PRC leadership has experienced a growing need to adjust to new facts in the international disarmament discussion.

That is why the PRC leaders have occasionally somewhat trimmed their doctrine of the "inevitability" of war, which was not even acceptable to the imperialist countries. However, basically all they have done is to provide a slightly more "palatable" formula, linking it to the assertion that China needs an "environment of lasting peace" for its own "modernization." In the course of his trip to Europe in 1979 Hua Guofeng, Central Committee chairman and premier, State Council, even claimed that China would not permit a new world war to erupt. At the end of 1979 China approved a draft resolution, submitted by Cuba, Yugoslavia and developing countries, regarding the inadmissibility of the pursuit of hegemony in international relations. This incorporated crucial conceptions of the relevant Soviet proposal. The PRC did so in order to avoid isolation and the revelation of its hypocritical opposition to hegemonistic aspirations. We mentioned earlier the PRC's attendance at the UN special session on disarmament (1978). the submission of a Chinese disarmament proposal at the eleventh conference of the UN disarmament commission on 15 May 1979 and its attendance at the Geneva disarmament commission in 1980. The PRC voted for the resolutions on denuclearizing Africa and the Near East (resolutions 34/76A and 34/77), the establishment of a peace zone in the Indian Ocean (resolution 34/80, among others), and against Israel's access to nuclear weapons (resolution 34/89).

No doubt all progressive forces would be only too glad if the PRC were to join the socialist countries to make common cause against the imperialists striving for domination and their insane rearmament plans, if it were to contribute to detente and the security of peace and, most of all champion genuine arms limitation and disarmament--if only in the interest of elevating the standard of living of the Chinese people.

Unfortunately the facts point in exactly the opposite direction. According to Chinese Defense Minister Xu Xiangquian, writing in the October 1979 issue of the theoretical party journal HONGQI, China must be "combat ready at every moment. Xu continues: "We must assume that a war will break out. That is why we must prepare for that war which will soon begin, assume large dimensions and even become a nuclear war." That is why Xu thinks that the "modernization of national defense," China's conventional and nuclear rearmament, represents a task of "great strategic importance." This dangerous conception determines the foreign political strategy of the Chinese leaders and, therefore, the bases of their conception regarding the

issues of disarmament and arms limitation. By establishing a worldwide anti-Soviet "united front" and in the course of the changes in the current system of international relations socialism is to be "contained" globally and the socialist initiatives on detente and arms limitation frustrated. The Chinese leaders consequently describe U.S. imperialism as the "victim" of Soviet hegemonistic ambitions in order on this basis to cooperate with it in policy and defense matters and, together with imperialism, confront Soviet peace and detente policies. As is its wont, the PRC proceeds in three main directions: First it adapts to the new general organizational-practical conditions of its performance in the disarmament debates. Second it stresses the alleged failure of the struggle for disarmament in the past and, third, more and more aggressively champions its own alternatives. Here it not only seeks to recruit individual countries for its unprincipled attitudes and conceptions; it also strives by parallel and coordinated actions with the representatives of imperialist countries--primarily the United States--to thwart any constructive approach to the discussion of the relevant issues.

No doubt the plans and designs of the Chinese leaders---to change the international disarmament discussion into an instrument to advance its hegemonistic goals--are doomed to failure. Nevertheless we must remember that their destructive attitude to this key issue of international politics has become an obstacle which threatens further progress in disarmament and arms limitation. It strengthens the most reactionary circles of imperialism, who for their part seek to prevent any step toward arms reduction and disarmament. It is therefore imperative constantly to unmask and resolutely reject the disarmament demagogy of the PRC leaders. Nobody may dispense the PRC from its responsibilities, especially for nuclear disarmament.

TRADE UNIONS PREPARE FOR XXIV CONGRESS

Budapest PARTELET in Hungarian No 10, Oct 80 pp 11-17

[Article by Gyorgy Fejti, deputy department head of the KB (Central Committee); "The Trade Union Movement Is Preparing For a Congress]

[Text] Barely 2 months before the 24th congress of the Hungarian trade union movement the work of political analysis is being carried on with great responsibility at the branch and industrial branch conventions as well as in the leadership bodies and working committees of the National Council of Trade Unions [SZOT]. This work summarizes the conclusions of the movement's work in the last 5 years based on the opinions and suggestions of hundreds of thousands of the trade union members, shop stewards and delegates, and determines the future tasks. The job of those who participate in this work is no less than based on objective and self-criticial situation analysis, designating that road--which does not exactly promise to be an easy one--which the trade union movement will have to travel in order to fulfill its calling even under today's more complicated socioeconomic circumstances. This is the only way the movement can live up to the expectations of its membership and at the same time also to the requirements defined in the 12th party congress's resolution, according to which: "Our party continues to count on the independent, initiative and responsible work of the trade unions in solving the tasks before us. It expects them, with their political influence and with the tools of their movement, to also help in the future to build socialism, and help satisfy the materials, social and cultural needs of the workers."

Past events in the trade union elections have been characterized by a good political atmosphere, much interest and activity by the organized workers and their delegates. The reports, and mainly the debates, which often passionately discussed the movement's future tasks, have provided a number of interesting lessons, thorough evaluation of which is the job of the trade union congress. But analysis of the experience is also the duty of the party organizations everywhere since the trade union movement is the link between the party and the working class. With their cooperation the party not only leads, organizes and educates the workers but also learns from them. In this sense the trade union elections also provide a good opportunity for the party organizations to evaluate and familiarize themselves with the opinion of the workers about the party's policies, to make use of their observations and suggestions to determine what is to be done.

The main lesson learned from the dialogue conducted with the trade union membership is that the workers agree with the party's policies, with the resolutions of the 12th congress; they identify themselves with our goals and are ready to carry out organized,

better disciplined work than before. Nationally as well as locally, the trade union membership today is occupied with the question of how, at what rate and in which order can we implement the resolutions of the party's congress.

Many questions come up today--some theoretical and some practical in nature, some with general and some with local effect. To find the correct answers there is a need for creative debates, for the leadership and subordinates to think together, and for independent initiatives by the mass organizations and mass movements. We must also expect that exactly because of the complicated nature of the tasks we will not have ready answers for all questions and situations--just as we did not have in the past either. We have to distinguish between ideas proven by practice, questions which are ripe for decision and ones which still require study and analysis. We must pay attention to the future as well as to the tasks immediately before us. But we must direct our main attention to determining the central points of specific action, to making the necessary decisions and to consistently carry these out.

Solving the new tasks before us, defending the results we have already achieved, solidifying chese, laying down the foundations for future growth, demand active, creative behavior, courageous thinking, quick and flexible decisions, accepting reasonable risks which accompany the taking of initiatives, more organized and better disciplined work. Together with the party organizations, the trade union movement can do much that the workers not only should recognize and accept these demands created by the times, but also implement them in their work and require that others, such as [for example] their leadership, be responsible for them also.

The events of trade union elections thus far reflect that--in harmony with the demands specified by the party--the organized workers also expect the role of the trade union movement to increase in solving the tasks and problems before us. They want the trade unions to, on the one hand to implement more widely and more on the merits that the workers be involved in economic and social planning and to carry out the tasks of production and economic operation, and on the other hand to assure more consistently that their interests will be represented and defended, to serve a better coordinated harmony between individual, group and social interests. Thus in the present stage of the trade union movement's growth the main question more and more is: how, at what rate and in what forms can it interest and activate the workers in opening up the reserves in our society's strength?

Good conditions are created for performing the trade union's tasks related to more successfully organizing the production and economic operations, on one hand by the fact that the interest of the workers in economic issues has significantly increased, and on the other hand their knowledge about the situation of the country's and of their more immediate surrounding's economic operation has greatly increased. The open, sincere evaluation based on facts, with which the party analyzed our national economy's situation and revealed our difficulties and problems, is met by broad approval of the workers. Also verbalized at the trade union forums was that the workers understand and accept the program worked out to improve our equilibrium situation and our efforts aimed at solidifying the standard of living we have achieved. But many people have also mentioned that they would also like to achieve further improvement of their living standards and finanical situation by means of improving the quality and efficiency of their work. To this end they expect specific and quick definition of the local tasks, and that the necessary programs will be worked out. This willingness to act, which in many places also manifests itself in proposals

and initiatives, is a very important precondition for our continued progress. The party organizations should build on this readiness to act. Cooperating with the trade unions, they should demand and support that the economic management at each place of work should define the requirements for improving efficiency and quality in a way which can be understood by the individual workers. They should not tolerate the workers being placed into a financially disadvantageous situation because of lack of the necessary professional knowledge or enterprising dispostion, lack of planning, disorganization or other reason which can be eliminated. They should urge creative debates at the place of work and supervise the implementation of reasonable suggestions and opinions.

Better development of the workers' creative ability and activity is conditioned on further developing the trade union activity which aids in the economic operation and production. In the interest of this, efforts must be made to bring the goals, incentives and methods of evaluation of the work formats now employed--primarily the socialist labor movements, work competition, the brigade movement and the innovation movement--into better harmony with the present efforts of our economic policy. In addition to the results of these work movements which can be demonstrated in numbers--for example just the value of innovations and inventions alone which can be expressed in terms of money, exceeds 32 billion forints in the Fifth Five-Year Plan--they significantly contribute to achieving our economic goals, to strengthening the socialist consciousness and behavior, to raising the levels of public mindedness and the workers' knowledge. For this reason also it is important to preserve and further develop the original values of these movements, to increase the role of worker collectives in organizing and evaluating the pledges.

The economic tasks make it mandate us to better manage manpower, our most important resource, in every area of life. Full employment is a great achievement of our system which we will not give up in the future either. However, we must become more conscious of the fact that on the one hand the right to work is accompanied by the obligation of decent, well disciplined performance of that work, and on the other hand it is not the same as the right to work at one specific place of work. Reshaping the production structure, cutting back uneconomical production, better work organization--if the rate of implementing it speeds up--may cause surplus manpower at one place and manpower shortage at another. Today this process has not yet developed to the necessary extent due primarily to the lack of a wage management system which provides incentives to the enterprises and employees alike. Manpower regrouping to areas where it would produce more value for the society is slower than would be desirable. Because of this, the party as well as the trade union organizations will have to pay more attention in the future to opening up the manpower reserves and insuring more efficient employment by means of planned regrouping--within the enterprise if possible, and if not, then between enterprises. The trade union movement also has an important role in participating in the political preparation of manpower regroupings which become necessary, in organized implementation of the retraining and advanced training of the workers, and in supervising the humane implementation of what needs to be done.

Amid the more difficult economic circumstances, the requirement is emphasized even more that the trade unions consistently represent and defend the workers' rights provided by our laws even more, the already achieved results of standard-of-living policies, and--in harmony with our economic opportunities and achievements--take a stand with an even greater sense of responsibility in every issue related to improving the living standards and working conditions of the workers.

In order to successfully perform this task it is necessary for the trade union movement to have reliable information about the living and working conditions of society's various strata and groups, their social situation, unique interests and aspirations. The party organizations should provide the conditions for the trade unions to learn the facts necessary to make these analyses, and at the same time they should require them to work our proposals for shaping the standard-of-living policy and social policy, having learned and expressing [sic] the realistic ambitions of the workers. The trade union movement must pay particular attention to assuring that the place the working class occupies in society, especially the workers of major enterprises, develops according to their position and performance in production.

Among the trade union movement's multifaceted, complex tasks of protecting and representing [certain] interests, particular attention must be paid to the development of wages, the housing situation and the system of public assistance benefits.

The foundation for developing a wage policy and wage system more perspicuous than what we have today and one which would better serve our economic policy goals can only be the more consistent implementation of the principle of distribution according to the work done; that is, in the future the wages and earnings should be shaped more proportionately with performance, with the degree of the work's quality and difficulty. Even though an overwhelming majority of the workers agreed with and accepted the principle of distribution according to the work done, its practicial implementation does not promise to be an easy thing to do at all--precisely because of its consequence, the differentiation of wages. We have to also accept that there will be arguments and conflicts, and we must break with the practice of "playing [a game of]"egalitarianism" which today is still played in many places and which is interpreted incorrectly. The trade union movement can do much to help the workers understand and accept the principle and mainly the practice of paying wages according to performance. Besides wages, more attention must be given also to social control over prices and quality. Every worker is a producer and also a consumer in the same person. Therefore by doing good quality work in his own plant, by meeting the delivery deadlines or by providing good quality services, in the final analysis also on he contributes to good quality a social scale, to a balanced supply of goods, and to developing a good general consumer atmosphere. Furthermore, the trade unions, first of all in their own plants, should participate in organizing social price and quality control and should take a stand against unjustified price increases.

In spite of the very significant efforts by our society, improvement of the housing situation is one of today's most urgent problems awaiting solution. In accordance with the trade union membership's needs the movement will in the future have to accept a larger role to improve the conditions of housing construction and housing distribution, and also distribute housing funds by consistent implementation of the social viewpoints and its social control. It should also collaborate to make the burdens on the state and on the population more proportionate in bearing the expenses of housing construction and maintenance, in helping the number of reasonable apartment trades increase, and also improve the conditions for workers, families with more [than one] children and young married couples to obtain housing.

Since the material goods available to us for distribution are limited, it is necessary to pay more attention than before to rating the needs according to importance. Therefore in the future the trade union movement will have a larger job in helping to see to it that the central and local means available for social aid are used in better harmony with our social policy goals and in better conformance with realistic needs.

In the interest of this more initiatives by the trade unions will be needed to determine which types of aid will need to be further developed within the limits of what is possible, which homes can be maintained at the present level, and where we will be forced to decrease, for example, either the number of those receiving aid, or the extent of such aid.

Our goal is to continue our progress along the road on which we have set out in the interest of developing socialist democracy and the democracy of the place of work, which today is a particularly important component element of this. In recent years we have adequately developed the direct and representative forums of work place democracy, significantly expanding their spheres of authority. But we still cannot be satisfied. We will have to do much more to help these forums be more suitable for their functions: to more consistently insure the workers' participation in exercising power, in developing the decisions, in determining the tasks related to production and distribution, to improving the living standards and working conditions of the workers. We must make available more space for the various interests to appear, clash and become coordinated; for the individual and collective initiatives. Today, satisfying these needs, further developing the work place democracy, requires primarily not an expansion of spheres of authority nor the creation of new forums, but rather that we use the existing opportunities, free of formalisms and duplications, that is, better than before.

Among the complex tasks of better implementing the work place democracy it is necessary to emphasize those tasks which are in connection with identifying and coordinating the [various] interests. Besides the basic interests being the same, the multicolored nature of individual and group interests--as is well known--is a natural feature of our socialist society. The interests appear strongest as individual and group interests, and directions of action, decisions acceptable to all interested parties, can be worked out only with the knowledge of these. In spite of this being public knowledge, today the need for identifying the differences of interest and conflicts has not yet sufficiently sunk into the public consciousness; therefore, the different interests often appear in false forms of expression. On the one hand we see occasions when group, or at times even individual interests seek to prevail clothed as society's interests. But the reverse of this also occurs at times, when justified individual or group interests are refused implementation by referring to some mystified social interests. It is not an easy job to find our way in the complicated and changing system of interests. However, in order for us to be able to politically influence the conflicts of interests, and be able to more consciously use it as one of the driving forces of our growth, we will have to be more receptive towards interests. This requires that the party organizations also give more consideration to the interest identifying and coordinating function of the trade unions.

The working relationship of trade union and state organs plays an important role in the further development of work place democracy. In our country the cooperation of trade union and state organs is built on the principle of the interests of the working masses and of the people's state being one and the same. The working forms of cooperation--also spelled out in high level statutes--were developed in recent decades and are functioning well. Thus the opportunities do exist for the trade union movement to make its voice heard and make its positions prevail on all important questions, from planning through distribution, all the way to evaluation and control. But the situation is not free of contradictions and arguments in this respect either.

As the spheres of authority and independence of enterprise management and of the trade union organs are simultaneously increasing, it is possible theoretically as well as in practice for arguments and disagreements to develop between the economic and trade union organs. The party organizations have a very great responsibility to view these arguments not as necessary evil but as a natural part of life, and also to see to it that the coordination of opinions be done at the right time and with good preparation and that the necessary decisions be arrived at on time. That is, the one-man managing authority and responsiblity of economic managers, and the increasing participation of workers' collectives in the handling of matters, must be asserted simultaneously and in harmony.

The trade union movement can successfully carry out its existing and growing tasks in identifying the reserves in society's strength, in developing the activities of workers in production and in public life only by rendering its relationship with its membership more active and closer, with the millions of workers. For this it is necessary that the movement be able to realistically recognize the social processes, to continuously renew and modernize its organizational system, working style and working methods. Only this way can it put its strength even better than in the past, to serve the cause of the working class, the workers. This is how it can be achieved that the membership feel individually and also collectively that the trade union movement is theirs, their particular goals, ambitions and interests are implemented in its programs, and through its movement it has direct and indirect say in working out the production goals, shaping the living and working conditions, overseeing the implementation of decisions.

During the course of elections held before the congress the structure of the trade union organs in the plants and institutions was significantly rationalized by generally accepting the shop steward and chief shop steward system, and developing the shop steward staff. Of course modification of the trade union organ structure does not by itself solve any kind of social or economic problems. At the same time, by combining [the functions of] management, decisionmaking, implementation and control, and by eliminating the unnecessary duplications, a better opportunity has been opened up to create unity in the work place and trade union democracy, and to prevail more effectively.

In the new organizational and management system the trade union stewards will have the main role because the continuous contact established with the membership will take shape through their persons and by their activities. Their roles in making decisions will increase as well as in organizing and controlling their implementation. The increased role of shop stewards and the significant exparsion of their spheres of authority was justified first of all by their unique position, in addition to the valuable traditions of the Hungarian trade union movement which are worthy of being preserved. They are the ones who can best learn, and thus also represent the needs, interests and aspirations of the trade union members in direct daily contact with the group's members, during the course of cooperative work. They can best evaluate the possibilities of implementing individual decisions and the expected reaction of these, and at the same time. Since in addition to being part of the decisionmaking they are also participants of organizing the implementation, they can evaluate the decision's consequences, and thus they can make suggestions for corrections which may become necessary. Naturally the shop steward can represent his group's interests well only if they become defined within the group. And this is preconditioned on a good effective functioning of relationship the trade union group with the membersand the shop steward and on the group's internal readiness and unity to cooperate. If this is missing then the danger may occur that the steward represents

only his own opinion and not that of the workers. That is, the decisive condition for expanding trade union democratism [sic], for the successful operation of the shop steward bodies is the actual operation of the trade union groups and their continuous control over the shop steward's work.

In order for the shop stewards to be able to handle their increased tasks it is necessary that they receive more help and support from the party organizations for their difficult work which often also involves conflicts. They should be encouraged and defended if, in the interest of the workers, they make well founded demands on the economic management. But they [the party organizations] should also require that [the shop stewards] take a position backed by convincing reason against unfounded demands which exceed our economic potential.

The shop steward bodies combine the functions of the plant democracy's highest forums at the enterprise with the functions of the trade union's highest organ at the place of work. The sphere of their authority is extremely broad: in addition to directing and controlling the basic organization's work they also make decisions about negotiating the collective [labor] contract, accepting the annual report which analyzes its implementation, about the necessary changes, approving the enterprise's social policy and safety program plan, as well as about the use of the enterprise's social, cultural, sport, aid and vacation funds. They take a stand on the main principles and size of the annual wage increases, distribution of the profit sharing, welfare and cultural funds and on accepting the annual report which deals with the implementation of the enterprise's social plan. They render opinions on the enterprise's medium-range and annual plans and, in connection with this, about the yearly activities of the enterprise's economic managers. In addition to these, the body of shop stewards may place any issue on its agenda it considers important from the viewpoint of the workers.

The conditions are constantly improving for implementing these very broad rights. The definite requirement spelled out by the party, the workers' increasing interest and activity in politics and in public life, the large number of suggestions heard at the trade union elections which are worthy of implementation, the favorable development in the composition of trade union bodies are all circumstances which indicate that the conditions do exist for the efficient operation of these bodies.

Whether these bodies will fulfill the hopes attached to them depends not only on them. The local party organizations [also] have a very large role and responsibility in this: their job is to follow with attention the main trends of the sociopolitical processes taking place at the enterprises, and--building on the distribution of work between the trade unions and other social organs on the one hand, and economic management on the other, by analyzing their suggestions and debates--recognize the contradictions which occur, allow them to develop and resolve them.

The Hungarian trade union movement can prepare for its congress with self-confidence. The workers' confidence, the sincerely conducted successful work, and also the movement's valuable traditions on the basis of which the trade union today is a recognized factor here in this country as well as in the international movement, provide a good foundation for this. In the future the party will want to rely even more on the trade unions, and requires that with great responsibility, by taking maximum advantage of the broad spectrum of rights it enjoys, the movement more courageously and with more initiative should participate in forming the national and local political and economic decisions, in organizing and controlling the implementation of these. That is, the

conditions are good for the independence, strength, social weight and prestige of the trade unions to further increase, and for the trade union movement to participate even more successfully in shaping the policies as well as in carrying them out as an indispensible element of our political system.

In the future in accord with our well proven practice, the party organizations should also guide the work of the trade unions with theoretical and political tools by means of the party members who work in the movement. It is therefore necessary for them to familiarize themselves with the decisions of the trade union congresses, and to assign the communists working in the trade unions to help in the consistent implementation of these, by work based on convincing and demonstrative personal examples. They should perform their tasks with the knowledge that for our party it is indespensibly important to win the workers in the trade unions, to achieve their understanding of its policies, accepting them and carrying them out in practice.

NEMETH ADDRESSES GRADUATES OF POLITICAL COLLEGE

Budapest PARTELET in Hungarian No 10, Oct 80 pp 3-10

[Article: "Our Politics Is Built On Mutual Confidence Between the Party and the Working Masses"--speech by Karoly Nemeth, secretary of the MSZMP's Politburo, chairman of the Party Construction Working Collective, at the Political College's diploma awarding ceremony (abbreviated speech).]

[Text] With all my heart I congratulate the comrades who are now receiving their diplomas. This act expresses that you have earned our confidence. At the same time it also represents an acknowledgement of the successful work you and the teaching staff have conducted so diligently, and with all certainty it also represents an important station along the life's path of the comrades affected. I wish to express our hope that in your practical work you will make good use of the theoretical and political knowledge you have acquired in the Political College; that you will honorably fulfill your obligations; that you will work in the communist way; that you will invest the knowledge you gained here by becoming active practitioners and propagators of our scientific ideology. With all my heart I wish all of you all success in this.

We also ask the school's present students, and the comrades now beginning their studies to fulfill conscientiously their present main party assignment: by taking advantage of the opportunities, to learn as well as possible the science of Marxism-Leninism. You should be demanding of yourselves, strengthen community spirit and help each other study! You should follow with attention the development of our social and political circumstances, and not become isolated from the reality of our society. My wish for you is that you succeed in carrying out your task. I will add to this our hope and encouragement that the college's faculty and the appropriate organs of the Central Committee will do everything to help you honorably fulfill your party assignment here at the college.

In the rest of my speech I wish to talk about a few timely issues, in the context that the year 1980 is of outstanding significance from many viewpoints in the country's, society's and the party's growth. The MSZMP held its 12th congress in March. Following this [4 April] we celebrate the 35th anniversary of our country's liberation. Then the congressional and council elections took place. We are in the last half year of our Fifth Five-Year Plan, working for as successful a conclusion as possible of the plan period; at the same time the Sixth Five-Year Plan is also being worked out. These domestic political events are in the closest interrelationship with each other and with the daily and long-range tasks of socialist constructive work.

The 12th congress--the party membership, in agreement with the people's desires--reaffirmed and further developed the MSZMP's present political line. Starting out from our actual situation it has specified the next tasks to be accomplished in building socialism, and by doing so it has provided the entire nation with a program.

During the extraordinarily broad spectrum of debate over guidelines then during the acceptance of the congress's resolutions and in the election campaign the manifestations made by the working masses urged us to consistently continue our present political line because this is the most important condition to successfully build socialism. The congress did fulfill this expectation of the masses; it reinforced and carried on further the party's politics. We are resolved to progress further along this path. But this must not mean that we stiffen up, because circumstances do change, requirements do increase, and we will have to conform to these.

Thus continuation of the present political line means harmony between the permanent and changing elements of politics and the party's working style. We want to, and we will consistently progress further along the Leninist way. We will stand fast by our political line, and will not deviate from it either to the right or to the left!

The MSZMP's politics is built firmly on the principles of Marxism-Leninism, on mutual trust between the party and the masses. This politics is internationalist and nationalist, it applies the universally valid laws for building socialism in a creative manner, takes into consideration the experience gathered by the fraternal parties [of other countries], considers the country's given natural conditions and characteristics with independent responsibility and great care. It both expresses and serves the interests of our working people and the international communist and workers' movements, and the universal interests of progress. The lessons learned in the more than six decades of the party's revolutionary battles and our people's historical experiences are expressed in our politics.

These policies which the party has worked out under the leadership of comrade Janos Kadar and defended in a two-front battle and developed further, have produced great results. I will emphasize here only that these policies and the working style coupled with it have given back to the masses their faith placed in socialism and the confidence towards the party. These policies have made it possible for us to implement the historic task of agriculture's socialist reorganization by following the Leninist principles for cooperatives, and to do so successfully in such a way that production has not decreased during reorganization. These policies made possible the reformation of our economic management system and the implementation of the principles decided upon with increasing consistency.

The Party's Leading Role Is Based On Correct Policies and On Convincing

This policy made it possible that today our people form a close socialist national unity and that for the first time during our history we have become a unified socialist nation. I am emphasizing this also because today the socialist national concentration of forces has particular significance since successful solution of the problem ahead of us requires us to close our ranks even more tightly. That is, consistent implementation of the principle that the party's leadership role is based on correct policies and on convincing people; it assumes good relationship between the party and the masses, providing honest information and exchange of opinions, and broad-based active participation in shaping and implementing the policies.

Therefore--following the direction shown by the 12th congress--we must consistently go on along the way of strengthening socialist democracy. The congressional campaign and election period have repeatedly provided convincing proof that this is the proper and successful path. During this period we were able to witness high levels of manifestation of party democracy as well as democracy in public life. The debates took place in an open, sincere and creative atmosphere. The results and mistakes received realistic evaluation; criticism, proposals and observations were voiced to promote socialist efforts. Thus, communists and people not in the party shaped policies together. The conclusion from this is obvious that we must do everything in the interest of getting the creative debating spirit, the willingness to act to realize the practical implementation of the congress's resolutions, and to do so every day and in every field.

No proof is needed that thinking together and acting together are indispensible conditions and resources which cannot be replaced by anything else in building socialism. Only by broadening the sphere of socialist democracy's effectiveness, by meaningfully operating the existing forums and suppressing the formalities in their characters can we promote that the socialist democracy which is the unity of rights and obligations, should become an even greater driving force of the socialist constructive work.

We have to start out from the point that good solution of the tasks before the party, the country and the people is unimaginable without broad involvement of the workers in public matters, and--the stand also taken by the 12th congress--in the decisions also, in all areas where this is possible. Neither true socialist discipline nor successful action can exist without this. Socialist democracy must be implemented in every day practice.

The interrelationship must also be pointed out which exists between party democracy and social democracy interpreted in the broader sense. The level of the former determined the latter to a decisive extent. That is, when we work to improve party democracy--this at the same time also represents work to improve the essential characteristic of socialism and the socialist democracy.

The Economic Issues Continue to Be In the Focus

An indispensible condition of implementing the economic policy adopted at the 12th congress, of the successful solution of the economic tasks is that the party and the people, the communists and those not in the party should cooperate and work together even better than before. It is no accident that the economic issues were and are in the focal point of attention at the congress and in the everydays of our lives. This is fundamentally justified by the fact that there is not one single area of our lives the development of which does not depend on the economy's achievements. Of course, the work being done in the other areas is also effected by the rate, quality, and momentum of economic growth. This is because society's overall performance is joined by the economic results--and of course one must here consider not only those working in direct production. Public education, the training of specialists, the levels of cultural and scientific activities, administration, the quality of services, consistent implementation of the socialist law, public order, the environment's condition--that is: the totality of socio-political environment--all have effects on the economic achievements.

It is necessary to emphasize this because when we speak about conforming to the changed and more difficult conditions and higher requirements, this is valid for all areas of society's activity.

The changed and more difficult conditions can be summarized as follows: First, in recent years the price and marketing conditions developed in a way commonly known to be unfavorable to us; the details of which I do not wish to go into at this time. I will only mention that currently we have to produce about 20 percent more exports for the same amount of imports as in 1973.

Secondly, moreover, the extensive resources of economic growth have been exhausted in this country. The economy has entered a stage of growth requiring more investments and equipment.

Of course we cannot blame or place the responsibility on the unfavorable foreign trade circumstances for all of our difficulties. Errors in our work here at home, in management and in implementation also form sources of the difficulties. That is, we cannot blame the external circumstances for the growth rate of economic efficiency being slower than would be possible, than what the economy's present technical, technological level would be capable of producing. And intensive development of the economy is a task to be emphasized at any rate, even independently of the foreign trade conditions. However, the situation makes the economy's intensive development even more urgent, increasing the level of technology, faster practical application of scientific results, more vigorous modernization of the production and product structures, rational and frugal economic operation--in other words: more efficient and good quality work, increasing production's international competitiveness and better utilization of our natural resources.

All these also require more rational utilization of our material and intellectual resources. In other words, it calls for higher quality of management, better organization, higher demands, more consistent and better disciplined execution. These are the requirements set by the 12th congress. We must support those [people] who take the initiative, who keep in mind not only the daily interests but also the long-range ones, and who courageously dare to take risks and act in the interest of this. Ability must be definitely supported in all areas. We must not be lenient with those managers who do not want to or who cannot work at the level of these higher requirements.

The [12th] congress also emphasized that it is the party's obligation and responsibility towards the people to solve the question of cadres on time and in a way which improves the situation. In this area also, we must act in the majority's interest. The fair thing to do--and this is what society will accept, this is what it demands--is that the person because of whom the collective as well as the cause suffer should not be allowed to be manager.

How will the higher requirements prevail in the economy? Even though the picture is a mixed one, still over-all it shows a tendency of improvement. In the first half of the year the economic processes in general corresponded to the plan's main economic policy guidelines. The main result is that improvement of the foreign trade balance which began last year has continued. Exports have expanded vigorously, imports are decreasing, the capitalist foreign trade balance deficit, that is, excess imports in the first half year were barely one-fifth of last year's first half. This was accompanied by a certain decrease in economic performance: industrial production, particularly that of the construction industry fell somewhat short not only of the plan but also of last year's first half. Prime contributors to this were the smaller

domestic demand and the cutback in investments. It is favorable that mainly those enterprises increased their production which can economically sell their products on the foreign market. It is also favorable that demand for imported materials and energy has decreased. Improvement can be seen in inventory management and some progress is also seen in the area of investments.

The number of people employed decreased in the first half year by about 46,000, approximately 3 percent compared to the first half of the last year. A new element in the decrease is that the number of people employed in nonphysical jobs is less. This is not a universal phenomenon yet, but it can be seen in many areas.

As far as agriculture is concerned: it can be said according to the present situation that if the corn ripens, the planned 5 percent increase in agricultural production may materialize--in spite of the fact that the flood and inland waters have caused damage, a loss of about 5 billion foreints. In addition to the significant loss of production, about 5,000 houses were damaged, 2,000 of these completely ruined; new ones will have to be built to replace them. The necessary steps have already been taken.

Our grain crop was good, and if the corn which promises a good harvest will actually turn out well, the foundations will have been created for--similarly to recent years--providing a good supply of food, including particularly of meat, and also for getting ahead in improving our foreign trade balance. The foundations for this are assured also in the area of livestock raising. We are confident that the agricultural workers and those people supporting them will do everything in the interest of successfully solving the tasks of the huge autumnal work load, the likes of which have never been seen in recent years, and thus will lay down good foundations for next year.

As far as the population's supply with goods is concerned, it must be said that after the deterioration seen in the year's first few months, which could be felt in many areas, the situation is basically balanced as a result of measures taken. The import and other measures and also coordination of the domestic production make it probable that in the second half year we can also count on satisfactory and balanced supply of merchandise.

Let's Create As Good Foundations As Possible For the State of the Sixth Five-Year Plan

Undoubtedly new efforts will be needed to fulfill the annual plan, and also to allow the favorable tendencies to develop and to solidify even better. This is indispensible for creating as good foundations as possible for the start of the Sixth Five-Year Plan.

As the congress also said, it appears realistic and in harmony with our opportunities in the Sixth Five-Year Plan for us to plan a moderate growth rate coupled with significantly differentiated development and growth of production. The main goal now is that the qualitative characteristics of development should become stronger, modernization of the product structure should speed up, the technological level should increase, efficiency improve and competitiveness increase. Of course the more moderate growth cannot be a long-range goal! Therefore we must do everything in the interest of developing the above mentioned qualitative characteristics as soon as possible, so that they will exert their positive influence for growth to accelerate and the standard of living to improve.

The question arises: can such an economic policy be the motivating force which subordinates the rate of economic growth, the use of national income to reestablishing the national economy's equilibrium, and which considers protecting, solidification of the results already achieved, to be the most important task of the coming years? I think that the answer to this can and must be yes because at the present time only this endeavor is realistic. But I must add that we have to work hard even for this. I think it is hardly necessary to explore in more detail what we have to protect and what we must solidify. In short, what is involved here is our people during the course of their history have never stood at such a high level of affluence, of social progress as the one we have achieved--and we must solidify and protect this.

I would like to add that when we speak of moderate development, this--naturally--does not mean stagnation in one place with respect to the standard of living either. We wish to and we will proceed in the area of improving the standard of living! Especially in solving the housing problem which is society's most urgent concern. In the interest of this we wish to continue housing construction in harmony with the second 15-year housing construction program.

The efforts to be taken to solve the problems of young people embarking on their careers and establishing their families, improving the lot of those retired people with low retirement benefits, easing the living conditions of people with large families must not be removed from our agenda. We are making efforts in the interest of vigorous development of the network of child care institutions, health care and the school network. We also count balanced supply of goods as one of our central tasks. Of course we also must not lose from sight that first we have to produce before we can distribute anything. A situation must not be created where harmony between purchasing power and the merchandise basis is upset, because this could cause very serious political consequences.

Finally I wish to emphasize the following as far as the economic issues are concerned: we have no other realistic choice than adjusting our work to the higher demands caused by the changed foreign and domestic circumstances, and with steadfast efforts lay down the foundations for vigorous growth later. We do have the appropriate conditions for this. One such condition is the planned socialist economy based on social ownership. Further improving the economic management is another important positive factor for us. Our active participation in socialist economic integration is also a large resource of strength for us. We can build on human will power, knowledge and devotion, and do so even better than we have done in the past.

Strengthening Society's Socialist Characteristics

Perhaps one of the most important thoughts of the 12th congress is the one which refers to the increased role of the human factor. I speak about this in the correlation that ideological work, propaganda and agitation--but we can also list cultural activity here--must close their ranks more tightly to the tasks before us, to the requirements of socialist constructive work. In other words: the more moderate growth rate of economic development must not be accompanied by a slower rate of strengthening socialism's essential characteristics.

Production's qualitative factors can really develop only when society's socialist characteristics significantly increase in strength. We must help with joint efforts in the spreading of socialist consciousness and morale, and socialist behavior. The thinking and actions of a steadily increasing circle of people should be permeated

with respect and service of the public interest! For each and every person this should increasingly become an internal, moral obligation. We saw a beautiful example of this recently at the time of floods in the Koros valley. But similar steadfastness is needed in the everyday work also!

We must achieve that in our society, which is a society of work, work should be the sole foundation for evaluation, appreciation and success. Following the congress's guidance, it is necessary to prevent the formation of such incomes behind which there is no work or performance. We must suppress such negative phenomena as bureaucracy and corruption. This requires political work as well as definite measures taken by the state. The warning and criticism by those who work honestly, the overwhelming majority, that at times there is excessive patience shown against the antisocial phenomena, is true and is to be heeded. We must take more determined steps in the interest of increasing human responsibility, and against irresponsibility.

The Nation's Fate Will Be Solved Together by the Party And the People

We must also do more to spread and defend our ideology. There still exist hostile views in our society which arise at times gain and exert their effects, but which are alien to our ideology. There are of course efforts beyond our borders to fuel these and use them against us. One of the most serious among these is nationalism.

Nationalism is completely foreign to true patriotism. Naturally the love of the socialist homeland includes national consciousness, which means the same as responsibility felt for the country's fate, devoted service of our people's national interests, appreciation of our achievements and sincere pointing out and correcting of our errors: but at the same time it also assumes internationalist behavior, solidarity with the powers of socialism and progress and an unceasing fostering of the friendship between peoples. National self-respect cannot mean disrespect of other peoples! It also must not be interpreted on the nationalistic basis--this was also discussed at the congress--, that the situation of Hungarians living beyond our borders is not immaterial to us. What is involved here is that we guarantee the fundamental rights of nationalities living in our country, and in practice implement the Leninist nationality policy; we also expect the same from all other countries where there is a Hungarian minority.

We must also do more to urge the preservation of our people's great value nourished also by our historic past and enriched during the course of our socialist development; to cultivate its traditions. We hold it to be a basic principle that just like in the past, the questions of the nation's fate will also in the future be solved by the party together with the people within the framework of socialism. What is needed is not empty words--even it they sound so beautiful by themselves--, but deeds. The test of true patriotism is the deed which wants to improve the people's destiny. Of course the imperialists consider nationalism to be their ally, and will do everything to take advantage of it in their anticommunist, anti-Soviet, antisocialist propaganda and undermining work.

Agreement on Principles Should in All Areas Be Followed by Unified Action

A few thoughts about the party and about communists. There is order in the party and healthy growth; the Leninist standards prevail. Unity extending over all main areas of politics characterizes it. Defending and strengthening this, and doing so while conforming to the new tasks, is a task which is the obligation of every one of us

from the Central Committee to the smallest basic organization. Now the emphasis must be placed on having uniform implementation follow the agreement on principles and tasks which have been worked out together at all levels and in every area.

Party unity is not some kind of passive agreement but concrete action and also such personal behavior which must take shape in the work of communists, in their political steadfastness and in setting a good example. The overwhelming majority of communists are characterized by manifesting the correct party attitude, carry out their responsibilities and properly use their rights. But there are also those among the party members, even if not in large numbers, who do not increase but wear away the party's moral stock. The large significance of it cannot be sufficiently emphasized that the party and its members must be free of those negative traits against which mainly they are the ones who must consistently carry on the struggle, the fight. Communists should protect each other from mistakes, and by doing so they are also protecting the party. They should aid and respect each other--this is also one of the important components of our unity and of our unified action.

The moral requirements are the same for each and every party member, yet it is right and just for the community to expect more in this area from those whom confidence has placed into positions of leadership. For some people words and deeds do not always coincide, or they violate our moral standards. The party's universal interests demand that in such cases we must not be tolerant. I would also like to point out that modesty, partyline behavior and discipline are mandatory on the job as well as in one's private life. Our party serves the cause of the working class and the people with devotion, and it justly expects from each one of its members, particularly from the leadership, to do the same according to the best of their abilities.

This approach must also permeate the work being done in the party's political college. The yardstick of requirements must be raised higher here also--in harmony with the directions given by the 12th congress. This is necessary in order for the party's political college just as in the past so also in the future to be able to fill a positive role in the training of cadres and in spreading [the doctrine of] Marxism-Leninism and in scientifically cultivating it. Learning well and absorbing the resolution of the 12th congress, helping the spirit of the congress prevail are central tasks of teacher and student alike.

The conditions of constructive work are more difficult than in past years, there are more difficulties in the way of progress, but comrade Janos Kadar is right when he says "show me one year since our liberation which was easy." And really: each year behind us gave us many, many tasks and demanded efforts from us. Of course those years were not all alike, but efforts were always needed. And I will add this that at the present time not only are our tasks bigger, but we also have more strength and experience. And if we make better use of our opportunities, we will get ahead. First of all, because there is a readiness to act in the working masses, and what is most important, the masses have confidence in the party which--as in the last 24 years--serves the benefit of the working people and our country with unchanged devotion. The party and every one of the party's members have a great responsibility to see to it that our people are not disappointed in this legitimate expectation, that is, that we must consistantly implement the resolutions of the 12th congress, stand our ground for our party, our people, and for the communist political line based on the principles of Marxism-Leninism.

JOURNAL COMMENTS ON WORK STOPPAGES

Warsaw ZYCIE WARSZAWY in Polish 15 Aug 80 pp 1-2

[PAP article by: Bohdan Rolinski "Important Problems and the Most Important One"]

[Text] Work Rhythm Disturbances

Work interruptions are occurring at some plants and enterprises. Demands concerning wages as well as work rules, organization and equipment are being advanced during these breaks.

Recently there were partial interruptions in Warsaw's municipal transport. On Wednesday and Thursday there were work interruptions which interfered with the normal rate of production at the Sandra stocking plant in Ludz Aleksandrow, the Teofilow Textile-Clothing Manufacture Plants, and at sections of the Gdansk Shipyards. (PAP)

The PAP report indicates a disturbing phenomenon which has again emerged in certain work places. It is that after a series of work stoppages last month at plants in several provinces, there have been work stoppages again in recent days, this time in our city as well.

On the surface this matter is simple: What emerges is a demand for higher pay. It is often supported by the concern that the current pay is being "eaten up" by an increase in the cost of living, sometimes by concern about the market and price consequences of a disastrous summer, and sometimes by concern over certain disproportions in the management of the wage fund, often within the plant itself. Nevertheless, in some instances the wage demand is made to the management of the plant after a work stoppage or some other interference. So what is to be done? Raise the wage...and back to work? That only appears simple.

Naturally, it is good to earn more than one is earning. But such an increase in today's pay only seems to be possible, with impunity, from the economic and social point of view and from the point of view of the best interests of citizens individually and as a group. Many sensible people who understand the merciless economic trap hidden in this method of wage increases understand its threat to the economy and to the workers themselves. This threat is also grasped by those who, interrupting work, understand that it is not possible for all to get the

increase, but who themselves want to get more. They understand the danger of the chase for zlotys, but give in to the attitude--already a psychosis of sorts--that as it occurs they will get it. Fine--but what next? And what about others?

Increasing numbers of people grasp the fact that the demand for more money is in the final analysis dangerous also to those who want to "obtain" for it. That is due to the fact that instead of guarding the value of the zloty, we may by this means decrease its actual worth.

The zloty's value is determined by the work we put into it, as measured by production. If we do not produce merchandise, if we do not give service, if we do not do work whose result is seen first of all in the stores and in efficient service to the citizen, then a wage increase will satisfy no one. We will run around in a circle and find ourselves back where we started.

I say this because that is how the workers' representatives are conducting the talks with management: together they bargain and bargain, revise, present agreed-upon proposals, then someone resubmits something--sometimes a single problem--and as time goes by the problem becomes more trivial, and once again the talks, bargaining and proposals ensue. Often this happens several times over, in a circle.

But during this time no work is being done, production stops, the bus does not pick up passengers. While talks are going on, while important arguments are being exchanged, the work time of employees not participating in the talks with managers and directors is being lost. The losses are suffered by all workers, including those, for example, who cannot get to their jobs. This reduces our combined national production, the goods to be shared--to be shared also with those who have already put in their working years--the retirees, pensioners, adults with children, persons benefiting from social welfare, from funds jointly earned and shared by society.

It is probably unnecessary to add that the atmosphere accompanying work stoppages also creates the previously-described mood in neighboring plants and at home. That mood promotes rumors and gossip of various sorts and from various sources. It does not promote the very much needed climate of reason and calm at work or, despite this year's weather, quiet and deserved rest for workers.

It is also true that work stoppage by all or some of the employees gathering for the purpose of adjusting wages may put off solving other important production problems and socio-economic conditions, since production stoppages gives rise to successive problems.

But the greatest danger lies in the fact that in a tense atmosphere of a naturally-increasing wave of demands and correct and important--as well as incorrect and less important, or even at present unrealistic--conclusions, there may arise demagoguery or a stance or position which is contrary to the interests of working people, the plants or the society and nation. Can we take this road? Can we be certain that a bit of demagoguery or ill-will might not prevail? Will the reason of those who want the best for the workers, who are certainly bringing up important matters, overcome? Yes--these are important problems, but there is also the most important one.

The most important problem is to guard the already-attained standard of living and to create conditions for its gradual, systematic rise which, in the immediate future, will most certainly be slower than in past years. This most important problem may be dealt with only through production, work, creation of goods and assuring for others efficiently-working services, including transport. It may be dealt with by improving work organization, creating favorable work conditions, improving administration, strengthening worker self-government, and eliminating management errors.

This most important problem may be dealt with only in a work atmosphere.

Today, our common problem does not lie in the area of money, but rather in the area of goods. True, the work stoppages to date have not yet had any crucial effect on market and industry supplies, although they surely have brought about sizeable losses. But duplication of such means of stopping production, or stopping such essential services as municipal transportation, for example, could cause enormous damage in other enterprises and in services to society. Considerable thought must be given to this.

The majority of working people understand this problem, although they too would like to bring home more than they do. Everyone wants to earn more than he does, but can this be accomplished by forcing hasty increases?

Many people realize that more problems are the result of the state of market supplies than of today's wage levels. Many difficult problems occurred this year in our nation--and it is small comfort that they occurred in others as well. We are discussing them and considering and seeking ways to eliminate unfavorable occurrences. This is not the place for a list of problems with which we are struggling every day and which we are overcoming, some with better and some with worse results. We are overcoming them, because we must win in the interest of all. What is relevant, however, is to realize that this year's scarcity is being felt in market supplies, and not only where meat is concerned. We know that this problem can be solved in the long run by implementation of a two-stage move planned by the government and carried out by agriculture. On the other hand, shortages of flour, grain and sugar which are appearing in certain areas should be offset as quickly as possible by the new harvests which, despite catastrophies in certain agricultural regions, promise to be quite good. Of course, supplies are also affected by the organization of purchasing center and marketing activities, and by the increased efforts of workers engaged in this important area. And, needless to say, they are often affected by the proprietor's attention to the store and customers. The vast majority of workers in commerce work hard and honestly, and for that deserve respect. When new supplies arrive, this effort will doubtless be doubled.

One more problem is worth noticing. It has to do with industrial enterprises, where shortages of raw materials and other materials which are cooperative components are nothing new. Today the principal task of industrial organizers is to assure continuing utilization of production strength. It is precisely to thwart difficulties that we must work better. Proper steps are being taken in this area. On the other hand, the job of the plants--of administration as well as workers--is to take the best advantage possible of that which best serves

production. We must take advantage of all opportunities to produce for stores and for export in order to strengthen our economy and also create conditions for increasing real earnings.

After reading the PAP report, I have shared only a few thoughts with my readers. There are more matters, problems, proposals and considerations. These are daily subjects for society, working people, all aware citizens, and those who are responsible for production, as well as those responsible for management.

Important talks are taking place at the plants. They deal with many matters essential to working people, who are properly indicating what must and what should change for the better. There is no lack of bitterness and tough reproaches in these talks, but in the majority--the great majority--of plants these discussions are leading to a search for means of eliminating unfavorable occurrences. They are aiming to reach the proper conclusions, both those resulting from the government program and th e from the discussions in progress, for applying daily production and social practices, for ensuring proper and honest supervision of implementation of decisions, and for seeking causes fo the problems and improving work for all.

Exactly--work. Whatever gains one wants to obtain, however just the demands to be fulfilled, they can be accomplished only in an atmosphere of work, reason, order and calm. Nerves, hot-headedness and giving in to such an atmosphere will accomplish no good. More and more the population feels the need for calm, for working without disturbances. The greater the difficulties the greater the need for calm and reason.

There are no problems in any plant or any work cooperative which cannot be discussed. There are no problems which cannot be critically and self-critically evaluated. There are no subjects which cannot be considered. However, there is one fundamental principle which should be the basis of social coexistence: it is work and fulfillment by everyone of obligations undertaken.

It is today's most important requirement. It is the citizen's obligation. It is society's need.

KATOWICE PROSECUTOR DISCUSSES PROBLEMS AFFECTING LAW ENFORCEMENT

Katowice TRYBUNA ROBOTNICZA in Polish 27-28 Sep 80 pp 1, 2

[Interview with Zdzislaw Kupiec, Katowice Voivodship Prosecutor, by Maria Kujawa-Szymonowicz: "Legally Means With Justice"]

> [Text] Such phenomena as a dangerous growth of economic crime, bribery, corruption, numerous recently-revealed cases of criminal disregard of duties of one's office and misuse of position to obtain improper financial advantage, as well as larcenous attitudes and various actions aimed at circumventing the law have lately become a subject of universal discussion and the object of justified criticism.

[Question] What is the office of the public prosecutor doing to strengthen law and order?

[Answer] As the Prosecutor General of the Polish People's Republic, Comrade Lucjan Czubinski, stated in an interview with the Polish Press Agency, the prosecutor's office always, within the limits of its functions, has endeavored to respond to irregularities known to it. Those problems which the public is discussing in such a lively manner at the present time have long been addressed by the office of the public prosecutor. We are presently doing this with even greater consistency. Our most important tasks, in general terms, include protection of the interests of the state and its citizens, as well as public property. Dominant among actions undertaken recently have been those aimed at protecting public property and protecting the marketplace, and especially ensuring proper distribution of goods, quality of performed services as well as prices, plus maintaining law and order. We are devoting particular attention to verification of the legality of administrative decisions, since many irregularities are occurring in this area. As an example I shall state that we have arrested several persons who issued decisions on the basis of receiving material gain.

[Question] What specific cases has the Voivodship Prosecutor's Office in Katowice dealt with recently?

[Answer] I shall speak rather of certain groups of cases than of specific criminals and crimes. I should like to comment that the prosecutor's office deals not only with prosecution of discovered crimes but also monitors the state of observance of the law and crime-prevention activities.

[Question] Could you comment on crime prevention?

[Answer] Yes. That is of great importance for strengthening law and order. For example, in the course of examining correctness of safeguarding and management of public property, on three occasions in the last two years we have conducted, jointly with the Citizens' Militia and State Inspection officials, inspection of construction sites. A number of irregularities were noted at construction sites, especially in the area of management and care of property, labor discipline, and law and order in general. As a result of these actions, a total of 180 workers were punished for infractions, and 100 enterprises were inspected for labor discipline. A price inspection was conducted at more than 20 enterprises. We also analyzed the correctness of operation of transportation, liquid fuel consumption and management, product quality, and utilization of funds earmarked for financial assistance to the aged and infirm.

[Question] Falsification of economic statistics has become a serious problem. Is this also confirmed in the cases handled by the prosecutor's office?

[Answer] We have examined 112 enterprises in this regard. Acts of statistical dishonesty of various kinds were found in 80 units, involving overstatement of capital investment results, production or services performed for the public. In some instances these overstatements affected "fulfillment" of production targets and thus served as a "basis" for paying undeserved rewards and bonuses. Criminal action was instituted in seven such cases. Administrative action was taken in 67 cases, and 18 cases were turned over to Party Audit Commissions. As regards overstating production target fulfillment and work performance, criminal proceedings were brought against the Kosbud Labor Cooperative in Chorzow, the Bacutil Feed Industry Enterprise in Katowice, and the Municipal Engineering Establishment in Zory. Department officials from the Labor Cooperative in Bytom and Bedzin were made criminally liable for overstatement of the magnitude of services performed for the public. Criminal proceedings were brought against a group of officials at the Transbud Transport Equipment Construction Enterprise in Sosnowiec and the Delam Disabled Veterans Cooperative in Dabrowa Gornicza for overstatement of transport services targets and sales targets.

[Question] The operation of agency stores arouses many questions....

[Answer] We have also dealt with this matter. Trade continues to be incorrectly organized. An attempt to streamline trade and make it more efficient by means of an agency system has not succeeded up to the present time. Preliminary investigations conducted by the prosecutor's office revealed a number of irregularities in this area, especially connected with transfer of public property to agents, establishment of incorrect prearranged remuneration rates, and selection of agents. As a result of these actions the Katowice Governor, executing our demands, issued an order restricting opportunities to conclude new agency contracts until correction of abuses, and socialized trade departments were correspondingly ordered to verify current contractual arrangements. In addition, and this would seem to be very significant, the chairman of the Food Administration Bank issued an order abolishing the system of settling accounts with agents, introducing in place of the previously-employed savings-settlement accounts, the requirement that current accounts be maintained. The varying interpretation of regulations, caused by their lack of clarity, offers considerable opportunity for abuses, not only in the case of agency trade.

[Question] I would not call any of the instances mentioned up to this point, however, a major economic scandal. Do not such cases occur in this country?

[Answer] What you have in mind are crimes involving losses running into the millions, right? One such affair is the case of the officials at Polgaz in Pszczyna, a typical example of poor management engendering criminal actions. As a result of simply incredible organizational confusion reigning at that enterprise, losses occurred amounting to several tens of millions of zlotys; also on the court calendar, to be heard in the very near future, is the case of the "half-timers" at the PW Energomontaz Enterprise in Chorzow. Thirty-five percent of administrative personnel and approximately 27 percent of the laborers employed by that enterprise held part-time jobs at various enterprises, frequently quite distant from their main workplace, such as the Sokolow Podlaski Sugar Mill. Obviously these half-salary positions were not obtained without cost. It has been proven that several department chiefs have accepted approximately 1 million zlotys in bribes. Several million zlotys in losses also occurred from theft of auto parts at the Polmozbyt store in Katowice. The investigation of the "scrap metal affair" is still in progress. A case was recently adjudicated which involved two officials at the Raciborz Polmos Alcohol Industry Enterprise, who "forgot" to shut a valve, as a result of which 7,300 liters of alcohol drained out, causing a loss valued at several million zlotys.

[Question] Is crime increasing?

[Answer] In Katowice Voivodship, on the whole crime is not showing an upward trend. On the other hand, at the present time there are definitely being disclosed more cases of various irregularities in the functioning and operation of certain economic units. We are also receiving more reports than at any time in the past on cases of abuse of position and violation of principles of discipline. Our observations indicate that there are also occurring at the present time more cases of destruction of enterprise property which is inadequately protected and safeguarded. Also disturbing -- we noted this specifically in September -- is a lessening of apparent supervision of children and young people. They are encountered in the streets and in places where they should not be, even late at night. The number of offenses committed by young people is increasing. In conclusion I should like to emphasize that we greatly appreciate cooperation with the public and we count heavily on the sensitivity of public opinion and assistance in disclosing all manifestations of violation of law and order, abuse of authority, and deliberate evasion of regulations. It is precisely thanks to assistance by the public that prosecutor's office officials have brought many cases to light and have eliminated many negative phenomena, bringing the guilty parties to justice. In recent weeks have received a particularly large number of various reports from private citizens and spokesmen for work forces. All these reports are thoroughly investigated and will be conscientiously followed through. We are primarily interested, however, in receiving truthful information dictated by a sense of civic responsibility, not based on rumors and gossip based on personal animosity. The law directs the prosecutor's office to concern itself with defending the good name of every upright citizen. It is the task of the prosecutor's office as guarantor of law and order to protect the interests of both parties, both persons providing information and those persons with whom such reports deal. There must be a high standard of decency and mutual respect. We believe that cooperation with the public will continue to grow and develop. This will enable us to respond more swiftly to irregularities and enable us more effectively to combat all instances of lack of respect for the law.

[Question] Thank you for the interview.

BOOK ON NATO ARMS MARKET REVIEWED

Warsaw TRYBUNA LUDU in Polish 6 Aug 80 p 5

[Article by Stanislaw Reperowicz in the International Affairs section: "Machinery of Peril"]

[Text] Zbigniew Bako's book, "NATO—The Arms Marketplace," is a research work of great current importance. Reading it permits an in-depth understanding of the workings of one of the greatest dangers presently menacing humanity: the arms race which is being promoted by the major nations of NATO.

The author's point of departure is the world's constantly-growing military spending which, according to UN forecasts, may reach 460 billion dollars this year, thus exceeding all the governments' health and education budgets.

The responsibility of the principal NATO nations for the above state of affairs stems from, among other things, the fact that being economic giants, they take advantage of their enormous economic-military potential to exert pressure and impose their positions on other nations. The peacetime policy of the Warsaw Pact governments limits the range and scope of the Atlantic bloc's diktat; nevertheless, it is still dangerously great.

The structure of the industry working to fill NATO's military needs has been very penetratingly exposed. The author emphasizes that the armed forces' material and technical resource needs are so varied that almost all branches of industry are involved in filling them. In fact, almost all industries are interested in obtaining military orders and thus become advocates of high military budgets.

However, the basic role in intensifying the arms spiral is played by businesses belonging to the so-called military-industrial complex, which manufacture the final military products or implements of war. The major arms manufacturers are the United States, France, West Germany and Great Britain. The United States holds first place, with its military expenditures accounting for 70 percent of NATO's total expenses.

The author devotes a great deal of space to the historically unique sociopolitical phenomenon of pressure groups which force the NATO nations' outlays for armaments and production of new defense systems.

These are associations of an informal nature, having no formal organizational structure or formal headquarters, but nevertheless working efficiently and successfully. Who are their members?

The author answers that this powerful lobby is comprised of the army, owners and managers of the armaments industry (that is a particularly large group; approximately 100,000 firms are regularly involved in filling Pentagon orders), members of government who are grateful for election campaign support, as well as employees of armaments factories. Around these four basic groups are gathered various people, among them professional politicians, ideologists fighting the imaginary "communist threat," union leaders with industry connections, government advisors, etc.

The military-economic potential of the NATO nations is great, writes the author. If it were used for war, it would bring enormous human losses and suffering. For that reason the principal task before international society is the maintenance and consolidation of tension-reducing processes. The book which has been reviewed here offers valuable input toward strengthening awareness of this.

CURRENT TRENDS IN AVIATION MEDICINE DISCUSSED

Bucharest REVISTA SANITARA MILITARA in Romanian No 2, Apr-May-Jun 80
pp 209-213

[Article by Colonel Dr Florin Uleu]

[Text] Today, aviation medicine is unanimously recognized as a medical specialty with its own research topics and methods. This raises the need to find the most appropriate approaches for training and educating aviation medical personnel, and for adopting a specific system for accreditation and promotion.

Under the present circumstances, the position of doctor specializing in aviation medicine should be held by the unit doctor, who is most familiar with the adaptation of pilots to the physical and psycho-emotional demands of actual flight.

We estimate that a specialist accreditation could be obtained after an assignment of at least three years in aviation units, followed by attendance of a postgraduate course with a specific topic. An aviation medicine chair at the School for Military Medicine, and the Center for Aviation Medicine would provide a framework for theoretical and practical teaching.

The accreditation of the unit doctor as specialist, and the possible availability of sophisticated equipment, would result in a more competent determination of flight capability before flights, and in the creation of conditions for scientific research for better professional achievements.

Postgraduate study Aviation medicine

Faithfully following the development of aviation, aviation medicine pursues an ascending path and defines its own domain as a unanimously recognized medical specialty, while expanding its interaction with biology, psychology, pedagogy, physics, chemistry, and even mathematics, radioelectronics, cybernetics, aerodynamics, and aircraft construction.

Aviation medicine is concerned with providing medical care to a profession that is exercised in a working environment hostile to man, counter-physiologic, under conditions similar to those encountered in the navy, in underwater activities, in mines, on mountains, in very cold or very hot climates, in the fuel industry, in microwave and toxic environments, and so on. In this respect, it thus becomes labor medicine, with a possible professional pathology.

Aviation Medicine, a Medical Specialty

Aviation medicine has its own research topics and methods. Its specific domain is the study, under simulated and real real conditions, of flight factors -- acceleration, hypobarism, hypoxia, hypothermia and hyperthermia, radiations -- of the stress they place on organisms, and of the possible adaptations to such stresses, which in supersonic flight reach the limits of human resistance. Current research is studying the correlation between man and flight technology, and the ergonomic factors of flight.

Aviation medicine studies and proposes technical and medical means for protecting the health of flight personnel, as well as measures for increasing the personnel's physical and psychological effort capabilities. Resorting to clinical and laboratory examinations in all medical specialties, determinations are made of the health condition, as well as the flight compatibility and incompatibility of flight personnel, and of the pathologic condition of pilots and passengers, upon whom flight factors can have a negative influence. The purpose of recovery and prevention steps is to assure complete flight reliability.

Romanian Aviation Medicine

Romanian aviation medicine, whose existence was officially confirmed in 1920 with the establishment of the air force health services, has responded successfully to the concrete demands for specialized assistance from the military and civilian aviation in our country, at their present level of development. The Center for Aviation Medicine is a specialized institution whose personnel has not only acquired extensive experience in medically certifying flight personnel, but has also made a contribution of unquestionable value through the medical selection of the first Romanian candidates for space flight. The Psychology Laboratory of the center has formulated its own methods and designed its own instruments, both for psychologic investigations associated with the selection and promotion of flight personnel, and for testing astronaut candidates.

An equally important role is played by unit doctors, who are fully competent to assure the medical preparation and conduct of flights, to provide individualized medical supervision for flight personnel, and to responsibly approve daily flight capabilities at air fields.

The unit doctor is respected even by his specialized colleagues as being the best judge of the manner in which each pilot adapts to the physical and psycho-emotional stresses of actual flights. No matter how complete they may be, simulated conditions are nevertheless inferior to real ones, as in fact true imponderability cannot be achieved by simulators in the training of astronauts. To support the unit doctor in obtaining objective data about the flight capability of flight personnel in day-to-day experience, it has become necessary to undertake air-to-ground data transmission and to endow units with portable electronic equipment for the rapid testing of physiologic and psychologic data at air fields.

Special efforts have been made during the last three years to provide the Center for Aviation Medicine with a new building and modern equipment. Today, the center has at its disposal medical instruments and installations compatible with current requirements, and new equipment is being constructed to assure total and complete expertise under flight conditions simulated in the laboratory.

The Center for Aviation Medicine has also made spectacular gains -- qualitatively and quantitatively -- in staffing its facilities.

Training Specialized Medical Staffs

At present, Romania is concerned with finding the most appropriate means for training and improving the education of specialized medical personnel, and for adopting our own system for accreditation and promotion; this assumes the need for a Romanian school for aviation medicine.

In our opinion this need could be met within the higher military medical education system, insofar as our country's aviation medicine arose and developed as part of our military aviation. At present it appears as the first military branch medicine specialty, since aviation technology and science are proving to be advanced fields both nationally and internationally.

Our aviation medicine exists de facto since 1920, with the founding of the Aviation Medical Station, and was recognized de jure last year, when the Decree of the Council of State No 168 designed the present Center for Aviation Medicine as the unique organ for determining and establishing the flight capability of flight personnel.

We believe that at present, the title of specialist should be held by the aviation unit doctor. It is well known that in the medical world and even in conventional wisdom, professional competence is considered to be a function of the specialist.

The specialist accreditation of doctors at the Center for Aviation Medicine in the traditional mold of medical and laboratory specialties, and even in the domain of aviation medicine functional exploration, represents a partial approach to aviation medicine, in fact a supraspecialization. This

statement is valid even when we consider that each specialist gathers, in addition to his conventional training, the experience of specialized examinations of, and assistance to flight personnel of all categories -- candidates, students, cadre -- an experience which is in fact indispensible to any aviation doctor.

Hence the need to formulate precise answers to the question: What is aviation medicine? as well as to another, derivative question: Which doctor represents this branch of medicine?

Aviation medicine has been defined by Armstrong as "that chapter of medicine which concerns itself with all the medical problems in aviation." This makes the point that aviation medicine is not limited to the study of a given illness or group of illnesss, as in the case of many specialties, but rather that it devotes its attention to the entire organism and is characterized by the fact that it exists in four dimensions. Of these, the third dimension is the vertical, in terms of altitude and its harmful effects on the organism, and the fourth dimension is time, given that medical observations of flight personnel are carried out throughout the person's activity in aviation.

Without even enumerating its many scientific and practical tasks, we can conclude that aviation medicine, which is constantly expanding its sphere of interests and its contact points with other domains, cannot be fully encompassed except at the level of an integrative and continuous medicine.

Because the object of the unit doctor's attention is the healthy or sick flier, and because the airman's history is well known to him, the doctor develops a closeness with the fliers and is trusted without reservation. That is why he is expected to have a sound knowledge of internal medicine and of medico-surgical emergencies, to be a good diagnostician of incipient, asymptomatic forms of diseases which could lead to a loss of flight capabilities, an accurate observer and therefore a good psychologist, and be able to use modern equipment with which he can objectively determine the physiologic and psychologic state of a pilot before, during, and after a flight. The unit doctor is entrusted with complex tasks of high responsibility, mostly unstandardized, in assuring the medical conditions of flights and in assessing the flight capabilities of flight personnel.

Specialization of Unit Doctor in Aviation Medicine

There is thus an obvious need for aviation medicine to have a fully competent representative in units, at air fields, wherever aviation plays a live role, wherever theory and practice must blend organically and harmoniously. We believe that a doctor, having practiced at least three years in aviation units, can be accredited as aviation medicine specialist after having completed a postgraduate course on a specific topic, which includes elements of aviation physiology and physiopathology, medical and psychological expertise, aviation hygiene, aviation health organization, aviation ergonomy, as well as medical training and health education of flight personnel.

The framework for specialization could be formed by an aviation medicine chair within the School for Military Medicine. The Center for Aviation Medicine could be used as a base for specific training, since it currently fulfills the necessary conditions for staffing and endowment.

We feel that it is completely realistic to approach the present problems of aviation medicine as an outlook for unit doctors, and that it is fully necessary to raise the level of training, the professional prestige of the doctor, and the prestige of aviation medicine in our country, so as to keep pace with the modern technology of military and civilian aviation.

This creates the foundations of real progress for the present level of training and education of unit doctors in aviation, as well as for their professional standings and the endowment of aviation units with medical equipment, so as to attain working conditions as similar as possible to those at the Center for Aviation Medicine.

The accreditation of unit doctors as specialists, and their endowment with equipment at the level of current requirements will assure greater competence and value in medical decisions taken at air fields regarding the day-to-day flight aptitudes of the personnel, as well as conditions suitable for the development of scientific research into the behavior of airmen during actual flights. In this way, the authority of the unit doctor will approach that of specialists at the Center for Aviation Medicine. Aviation unit doctors will thus be able to achieve professional advancement at their place of work.

ARMED FORCES' BLOOD DONATIONS IN WAR, PEACE VIEWED

Bucharest REVISTA SANITARA MILITARA in Romanian No 2, Apr-May-Jun 80
pp 147-151

[Article by Lieutenant Colonel Dr Tiberiu Georgescu]

[Text] In a modern war, the large number of wounded will at times require appreciable quantities of blood for transfusions.

Because under field conditions, a centralized supply of blood or materials for blood collection and storage will be very difficult to achieve, blood centers will have to operate as autonomous units. It is also proposed that fighting units obtain the amounts of blood they need from their own donors, as has been demonstrated by the experience of recent armed conflicts throughout the world.

In order to properly meet the demand for transfusion blood, organizational steps must be taken during peacetime. Equally useful is a sustained medical education effort, with the contribution not only of doctors, but of all military cadre, using the most varied and effective means of publicity.

Blood donors Military personnel

One of the major tasks of medical assistance in modern war is to provide blood and blood derivatives. According to many groups of specialists, it is generally estimated that the treatment of 1000 wounded for one month would require 3000 l of preserved blood, 100 l of plasma, and 2500 l of substitutes.

The demand however, will not be the same throughout the hostilities. The use of mass destruction weapons, as well as the speed and intensity of military actions cause extremely large health losses, not only in the ranks of the fighting forces, but among civilians as well.. Consequently, sudden increases in the demand for blood will occur during certain phases of military operations, thus imposing a limitation on the amounts to be used.

It should also be pointed out that the real consumption of blood will depend not so much on predetermined quotas, as on the actual delivery capabilities of collection services.

Blood Collection and Storage During a War's Initial Period

The present organization of blood collection in our country, and the difficulties encountered in covering the entire territory with a network of units with autonomous operating capabilities, on one hand, and the guideline figures for eventual needs on the other hand, lead us to believe that very large quantities of blood will have to be collected, representing up to several times the amount of those obtained in peacetime.

Because the current structure and endowment of the Ministry of Health network will not be able to meet the increased demand of wartime, they must be reconsidered. The main problem that will arise will be the rapid recruitment of a large number of donors.

A valuable contribution in this respect will be made by civil defense; through its new legally defined organization, it will make available a large number of donors during wartime, namely rural inhabitants and non-drafted personnel in industrial enterprises.

During the initial period of a war, Red Cross workers will be able to mobilize donor groups independently of their place of work or address, donors whose records must be already be known during peacetime. It is also in peacetime that these workers will have the task of conducting a sustained publicity for blood donations.

Since blood donation is a problem even during peacetime, being given special attention by our party and state leadership, we believe that in addition to the Red Cross, the publicity efforts should involve all mass, public, women's, and youth organizations.

Some preliminary measures must be taken for county centers of blood collection and preservation because the major activity in this respect will be concentrated around these centers during a campaign, and especially during the initial period of a war. This involves: optimum organization of donor networks; organizing donations from recruits at county military centers; organizing the decentralized preparation of stabilizing solutions; providing means for transporting and preserving blood, as well as the most rapid methods for receiving, sorting, and distributing it; creating stocks of materials for small scale collection and preservation, in small, lightweight, and unprepossessing containers.

All of this will have to be assured through a close collaboration between civilian and military organs.

Assuring Blood for Transfusions Under Certain Fighting Conditions

Because according to Romania's military doctrine an eventual armed conflict would be solely a defensive war, it is not impossible that the nation's territory might be temporarily fragmented until the aggressor is finally pushed beyond the national borders.

To the above must be added other particular circumstances, such as: destruction of major railways; destruction of roads, or their closure by troops, fighting, or refugees; difficult air transportation by means of small airplanes or helicopters, due either to unavailability, lack of fuel, or ennemy control of air lanes.

Under such conditions some zones can remain isolated from the rest of the country for a given time, zones which have military units, national guards, or youth training units along with the civilian population. Similarly possible is the surrounding of some troops, whose release would not be immediately possible.

These considerations clearly exclude the supply with blood from other zones that are not affected by military operations. This will therefore raise large problems of material supply, staffing with qualified personnel, and recruitment of blood donors, and primarily of planning and organization.

As a result, the fighting forces and reservists will both have to provide from their own resources, the amounts of blood that they will need.

In applying this principle, one unit of blood will be collected from each fighting man one or two days before a battle. It will thus be possible to obtain the amount of blood required to meet immediate needs, with subsequent needs to be satisfied with collections from the civilian population in the area.

The experience gained from recent military campaigns in various areas of the world is illustrative in this respect. The medical services of some armies have used for transfusions, blood collected almost exclusively from soldiers before they engaged in battle. This process, which definitely does not impair the soldiers' fighting ability, has proven to be reliable, practical, and economical.

Taking into consideration the eventual supply and operating difficulties that can arise during a campaign, our collective considers that some steps are necessary, steps which have already been undertaken by the Army Blood Center.

They involve: replacing with domestic products the anticoagulants and stabilizers which are now being imported; abandoning if the need arises, the current plastic kits, and preparing our own collection devices as we did many years ago; distilling water with simple and readily transportable devices; sterilizing in vertical, portable autoclaves which can use any

available fuel; using natural ice for blood preservation, a reason for which we believe it would be useful to locate icehouses throughout the country, to be supplied during the winter from the running water, lakes, or ponds in their area.

Many of these measures could prove their usefulness even in case of natural disasters.

Blood Donations by the Armed Forces

The legal basis for the above is the Health Law, Decree No 94/1979, Technical Instructions No 44/1970 of the Ministry of Health, and within our own ministry, General Order No 38/1979.

According to the provisions of these regulatory acts, blood collection from the armed forces throughout the country during the last 10 years, with the exception of Bucharest, has been conducted by the collection centers of the Ministry of Health. In Bucharest, this activity was carried out by the Army Blood Center.

The experience garnered during the 10 years since our center restarted its activities, leads to certain conclusions:

1. Sufficient possibilities exist to provide blood both for the Central Military Hospital and for other hospitals of the garrison. However, the participation of the armed forces, outside of their training process, at construction, industrial, and other work sites, creates collection difficulties and raises problems for an adequate supply of blood at the Central Military Hospital.

We should nevertheless point out here that the peacetime needs of military hospitals can be met for the most part with the blood collected from friends and relatives of patients, as provided in the Technical Instructions No 44/1970 of the Ministry of Health.

2. An unjustified inertia on the part of some commanders, leadership cadre, and even doctors, is still noted when their units are faced with such a task. The Blood Center consequently encounters some difficulties when it undertakes donation efforts in military units.

3. The center's personnel has been able to face any volume of work, collecting not always under optimum conditions, with a mobile team travelling long distances from the Bucharest garrison.

4. Laboratory tests have been of good quality, with no post-transfusion accident being recorded during 10 years for blood delivered by our unit.

We believe that substantial possibilities for improvement exist in the collection of blood from the armed forces; the proportion of voluntary donations could be increased through a greater participation of military personnel of all ranks, and especially of enlisted men.

At the same time, because a blood donation constitutes a patriotic action of human solidarity, in essence a matter of political education, we deem it necessary to receive the support of party organs and organizations in the army. As part of their functions, political education resources, the central and branch military press, military radio and television broadcasts, and the army's film studio, can communicate to every soldier, messages associated with blood donations.

The goal sought by radio and television broadcasts, educational films, posters, folders, and brochures on this topic, will have to be a modification of the selfish, fundamentally mistaken attitude that blood is considered as a personal property, and that there exists a right to be helped when in need, but not a duty to help others under the same circumstances.

But before anything else, we will have to convince commanders of the profoundly unscientific, mistaken nature of the mentality which holds that blood donation is dangerous. They are the first ones interested in the rapid recovery of their surgery patients through blood donations obtained from their own units.

It is similarly necessary to introduce health education hours with appropriate contents in active and reserve officer schools, and to organize the information of military personnel of all ranks, so as to create mass opinions which will not be merely limited to a simple campaign.

The response of commanders and unit doctors in blood donation activities will have to go beyond the stage of benevolence and volunteering. The contribution they make in participating in the blood donation efforts of their own units will have to be a criterion in assessing their work, in promotion, and in admission to examinations and competitions. Those with good records should be given priority for spa and rest cures, as well as for compensation, all in accordance with military regulations.

We believe that it is possible for each person in the armed forces to donate twice in one cycle, without creating any hardship for the personnel's military training.

In supporting the above we are envisaging the logical conclusion that can be reached. Whether or not blood will present a problem in a campaign, will depend on the manner in which the armed forces will contribute their own blood to meet urgent needs, as well as on the manner in which military cadre will understand in peacetime the imperative need for this action.

BRIEFS

DEATH OF CATHOLIC BISHOP--Catholic Bishop Aron Marton died on 29 September in Alba Iulia at the age of 84. He served the local Catholic diocese meritoriously for 42 years. When the communist regime was installed in the country, Bishop Aron Marton was arrested and he was in the communist jails from 1945 to 1955. He was arrested again in 1957 and put under house arrest until 1967. The Pope spoke words of praise about the deceased prelate in St. Peter's Square in Rome in the presence of thousands of believers. He was buried in the Alba Iulia Cathedral in the presence of his successor Bishop Jakab Antal and a large number of believers. The newspapers in the Socialist Republic of Romania did not publish any announcement of his death. [Text] [Paris BULETIN DE INFORMATIE PENTRU ROMANI IN EXIL in Romanian 16 Oct 80 p 3]

PRESIDENTIAL APPOINTMENT--The President of the Socialist Republic of Romania decrees that Comrade Ion Tesu is appointed minister state secretary in the Ministry of Agriculture and the Food Industry. [Excerpts] [Bucharest BULETINUL OFICIAL in Romanian Part I No 80, 8 Oct 80 p 2]

MILOVAN DJILAS COMMENTS ON SOVIET SYSTEM

Bonn DIE WELT in German 9 Oct 80 p 8

[Exclusive article by Milovan Djilas: "'Internally and Externally, the Soviet Systems Can Survive Only by Force'"]

[Text] A dangerous fallacy is spreading in the world, particularly in the West; namely, that Soviet expansionism resembles Western capitalist imperialism. This fallacy is current not only among communists and socialists whose attitude toward the Soviet system is also critical otherwise; rather, it can also be found in liberal and conservative circles.

The fallacy derives from the following analogy: Since capitalist imperialism consisted of expansion, domination and exploitation, Soviet expansionism or imperialism cannot be any different either.

Analogies are necessary, unavoidable aids, though they simplify reality and thus also cloud it. Analogies are checked past realizations which are applied to an unexamined present and an uncertain future. Analogies mislead, however, if more is expected of them than they can yield: they can note the similarity but not the identity of two phenomena.

To be sure, comparisons between Western and Soviet imperialism are not unfounded. What is unfounded is to consider them one and the same. That leads us astray.

Capitalism (if this term, like socialism and communism, is applied with reservations in the generally customary, not scientifically analytical, meaning) potentially includes imperialism but need not be imperialistic. The northern capitalist states were not imperialistic. In the development of the most advanced capitalist country, the United States of America, imperialism, colonies and the export of capital did not play a vital role.

The same can also be said of feudalism: it was possible but not necessary for it to be imperialistic. What is more, it was not characteristic either of the capitalism of the empire states to be imperialistic as a whole--"inevitably," "by their nature," as the communists would say. Rather, what was imperialistic was the groupings and branches of capital that were not profitable "at home." These combined with adventurists and fanatics to conquer new markets, cheap labor and rare raw materials.

The Boer War (1899-1902), according to Lenin, was the first war of the imperialistic phase of capitalism. But that war provoked the resistance not only of European and British socialists but of important segments of the British bourgeoisie. In short, imperialistic strivings and undertakings can, but need not, gain the upper hand in the national capitalist state.

Capitalist imperialisms proceeded slowly. They met with resistance at home and abroad. Precisely resistance abroad by rival great powers and competing enterprises helped in the suppression of domestic opponents and contributed to unbridled expansion. The idea was: If we do not conquer, they will do so and thus be stronger.

Capitalism obtained special profits in the colonies, destroying patriarchal cultures there as well as at home. But it also brought science and industrial civilization. Thus the world awaited the 20th century divided between big powers and big combines; there were no empty spaces any more than there was peace, and world wars became unavoidable.

Lenin thought that capitalism had thus entered its highest, final phase. This was the premise of the strategy of the Soviet Union and the communists between the two wars and even in the first few years after 1945. It followed from Lenin's theory that capitalism could not exist without colonies, without colonial and imperialistic wars. The war of 1939 between the Nazis and the Western democracies too was deemed imperialistic by Stalin and the Comintern--as long as Hitler did not attack the Soviet Union.

Lenin's premises did not turn out to be valid, however. In its "highest" and "final" phase, capitalism gave the colonies their national independence. This generally happened without wars or revolutions--except in rare instances when, for instance in Indochina, there was interference by communists and, through them, the Soviet Union. In the decolonialization, a certain, though not decisive, role was of course also played by humanitarianism and liberalism; wars against whole "colonial" peoples had become too expensive and unpopular.

As the dominating great capitalist power, the United States was anticolonialist. Finally, application of the highly developed technology at home was more profitable than the cheap labor in the underdeveloped countries. In short, capitalism entered the postindustrial, electronic period on the road of evolution. It avoided revolution, which Lenin had foreseen as "ineluctable" coincidentally with the fall of imperialism.

The West Is Entertaining Illusions

Soviet imperialism too is imperialism--imperialism similar to military imperialisms of the past--but the essence and nature of Soviet imperialism are not like capitalist imperialism in any respect.

The Soviet economy is based not on free labor or on profit but on the "plan" and "planning"--that is, on the determination of human and social needs by those in power or the party oligarchy. The Soviets produce no values, only quantities. With them compensation is not rendered by the market but "in accordance with work."

Hence neither production nor distribution can occur any other way than through bureaucratic plans--or through the power and stability of the ruling party bureaucracy. Voluntarism and tyranny are rooted deeply and indelibly in the Soviet system.

It follows from this that Soviet imperialism and expansionism are not motivated by an expansion of the market. What is more, they are not motivated by the search for raw materials any more strongly than by the idea that the adversary must be deprived of them--a potential adversary being anyone who has not been subjugated.

This does not mean that Soviet expansion does not also pursue material aims. On the contrary. Though immensely rich, the Soviet Union is not rich in every respect and for all times. It too welcomes inexpensive goods in great variety. But here it is not the market, the free formation of prices, that plays a significant role but political, military-ideological pressure.

Only the fear of uprisings in which the West might interfere--particularly after the uprising in Hungary in 1956--has forced the Soviet leadership occasionally to enter into market economy relations with the subjugated states.

Yet, the ruling class of the Soviet Union is also directly motivated to engage in conquests; some of its members thus climb more rapidly in the hierarchy and attain all kinds of privileges. The class as a whole, however, strengthens its position both at home and abroad. If the Soviet party bureaucracy desisted from expansion, its "messianic," "leading" role would be exposed to rapid erosion. It would then turn out that it was socially superfluous and parasitical. The decay of the system would accelerate, and changes in the social structure of the Soviet Union would become inevitable.

There are indissoluble connections between the power monopoly of the Soviet oligarchy at home and its hegemonism and expansionism abroad. Both have the immutable motive and aim of ruling over people--a rule not limited by anything temporally, and geographically only by the Soviet potential.

The Soviet Union does not effect any occupations--except in the course of military operations. And this happens for the simple reason that it does not have any need at all for occupations per se. Rather, the Soviet regime s rengthens "friendly" communist vassal domination. A military presence is desirable, often even unavoidable, in order to insure the vassal system or Soviet domination. But it is not necessary in every case--vide, for example, Bulgaria, where there is no Soviet occupation but great loyalty to the Soviet Union.

To the Western, nonideological mind Soviet expansionism often appears unreasonable. This leads to the ever-recurring illusions that the Soviets will "come to see reason." Thus the West is entertaining illusions about the Soviet Union going to withdraw its troops from Afghanistan--if for no other reason than that the occupation of Afghanistan is not worth the Soviets' while and is costing them a great deal.

Soviet reason, the Soviet way of drawing conclusions, however, is quite different. The Soviet leadership regards as reasonable and ethical whatever strengthens the "state," power and party, particularly the rule of the party. This leadership

would regard as unreasonable only the kind of expansion--including the one in Afghanistan--that jeopardizes that sort of reasoning and those "absolute values."

The top Soviet leadership, or at least a certain trend among it, has already had to realize that it had underestimated the worldwide reaction to the invasion of Afghanistan. Even the East European governments did not show any enthusiasm over it. But this does not mean that the Soviet troops will withdraw from there--even if there was a predominant inclination to do so within the Soviet leadership. In such a case Moscow would proceed to negotiate and bargain.

The Soviet troops are in Afghanistan in behalf of "higher," "absolute" values--in behalf of "internationalism" embodied in the absolute rule of the Soviet party. For this reason the Soviet Union will not and cannot withdraw from Afghanistan, any more than from the other areas throughout the world, except under pressure of the superiority of opposing forces. The Soviet Union will remain there until it has strengthened the system it wants or the vassal government.

Not Capable of Pluralism

Similar conclusions can be drawn from the Soviet attitude toward the coming into being of independent trade unions in Poland. The Soviet leadership will not be ready for any pluralism, least of all a proletarian pluralism, unless it were to be forced to.

Shakespeare would say: There is method in this madness. Soviet expansions are planned thoroughly and methodically--from a worldwide perspective and for each concrete case. Could it really be otherwise, considering that it is a military expansionism of worldwide extent? Afghanistan is but a step of the ladder--leading to petroleum, to the Indian ocean, to the subjugation of Europe and European industry.

The Soviet leadership, it happens, has long since been aware of the economic and creative inferiority of its system. Khrushchev was the last to be under the illusion that it was possible to overtake the capitalist system. The Soviet leadership notices and surmises that its system can last only if it is supported by force--by a kind of force which dominates not only "at home" but the world over. Hence its uninhibited systematic expansion of military power. Hence also its concealed strategic aim, the subjugation of the industrialized West, primarily via a detour through areas rich in raw materials but underdeveloped, unstable and rebellious.

Stalin dissolved the Communist International--for the sake of the Soviet state. Communist states are already waging wars against one another. But the forces of violence get political aid from the Soviet Union throughout the world--provided that they help Soviet expansion. The international of ideological darkness and of violence continues to exist, renews itself and expands under the leadership of the Soviet Union.

But despite the expansion of its influence, despite the conquests and the military strengthening, the Soviet Union feels encircled and besieged as in the times of its birth. Could the Soviet Union indeed feel different in a world toward which the Soviet system does not and cannot adopt a "friendly" attitude--even if this world had subjugated itself?

LAW ON MOVEMENT, SOJORN OF FOREIGNERS

Belgrade SLUZBENI LIST SFRJ in Serbo-Croatian No 56, 3 Oct 80 pp 1663-1676

[Law enacted by the SFRY Assembly]

[Text] I. General Provisions

Article 1

During their stay in the Socialist Federal Republic of Yugoslavia foreign nationals may move, reside, enter into association, use their name, purchase, possess and bear weapons under the conditions prescribed by this law unless international treaty provides otherwise.

For the purpose of this law "foreigner" means any individual who is not a national of the Socialist Federal Republic of Yugoslavia.

Article 2

During their stay in the Socialist Federal Republic of Yugoslavia the foreigners must abide by the regulations and decisions of government bodies and agencies based on the Constitution of the Socialist Federal Republic of Yugoslavia, the laws of the Socialist Federal Republic of Yugoslavia and its obligations under international treaty.

Article 3

Matters related to the movement and sojourn of foreigners in the Socialist Federal Republic of Yugoslavia shall be handled by the competent agencies in the republic or autonomous province unless federal law provides otherwise.

Article 4

Foreigners may be prohibited from entering the Socialist Federal Republic of Yugoslavia, their movement in a specified area may be restricted or prohibited, their sojourn in the Socialist Federal Republic of Yugoslavia may

be revoked, or they may be prohibited from permanent residence at specified localities on grounds of protecting law and order or on grounds of protecting the interests of national defense or on grounds arising out of international relations.

Organizations of associated labor and other self-managed organizations and communities and government agencies shall set forth in their enactments the conditions under which foreigners may visit and move about in those organizations and communities or agencies.

Organizations of associated labor and other self-managed organizations and communities and government agencies which invite members of foreign armed forces or foreign security services or which receive and organize their visits must notify the competent agency in the republic or autonomous province.

II. Travel Documents and Visas for Entering and Visiting the Socialist Federal Republic of Yugoslavia

1. Travel Documents

Article 5

A foreigner may enter the Socialist Federal Republic of Yugoslavia and visit on its soil if he has a valid foreign travel document or valid travel document for foreigners issued by the competent agency of the Socialist Federal Republic of Yugoslavia, furnished with a Yugoslav visa.

Foreigners who visit the Socialist Federal Republic of Yugoslavia on the basis of a joint (group) travel document may move about separately from the group only on the basis of a permit from the competent agency in the republic or autonomous province.

Article 6

For the purpose of this law "foreign travel document" means passport (personal, family and group), diplomatic passport and official passport, seaman's papers, [river and lake] boatman's papers or other travel documents recognized under international treaty from which it is possible to establish the identity of its bearer, whose period of validity has not expired and which has been issued in accordance with the regulations on issuance of the travel documents of the foreign state.

The travel document of a foreign state shall not be recognized if that foreign state does not recognize the corresponding travel document of the Socialist Federal Republic of Yugoslavia.

Article 7

A travel document for refugees or a travel document for stateless persons, as envisaged by international treaty, shall be issued for travel abroad to a foreigner who in the Socialist Federal Republic of Yugoslavia has been granted the status of a refugee and to a stateless person.

Article 8

The travel document for refugees and the travel document for stateless persons shall be issued by the competent agency in the republic or autonomous province where the refugee or stateless person has his domicile or residence.

The travel documents referred to in Paragraph 1 of this article shall be issued for a period up to 1 year.

The period of validity of the travel documents referred to in Paragraph 1 of this article may be extended, but their total period of validity may not be longer than 5 years.

Article 9

The foreigner's travel certificate is a travel document which is issued to a foreigner who does not have a valid travel document, as follows:

1) who has been granted the right of asylum in the Socialist Federal Republic of Yugoslavia--for travel abroad;

2) who has been granted the protection of the Socialist Federal Republic of Yugoslavia--to enter the Socialist Federal Republic of Yugoslavia;

3) who has obtained a release from his status as a national of the Socialist Federal Republic of Yugoslavia--to depart abroad;

4) who has lost his foreign travel document or has in some other manner been left without it, when the state of which he is a national does not have a mission in the Socialist Federal Republic of Yugoslavia nor are its interests represented by another state--to depart abroad:

5) who while abroad has lost a travel document for foreigners issued by the competent agency of the Socialist Federal Republic of Yugoslavia--for return to the Socialist Federal Republic of Yugoslavia.

The foreigner's travel certificate may also be issued to another foreigner if there are grounds which warrant it.

The foreigner's travel certificate shall be issued for a period of validity not to exceed 1 year.

Article 10

The foreigner's travel certificate shall contain the following: the words "Socijalisticka Federativna Republika Jugoslavija [Socialist Federal Republic of Yugoslavia]"; the number of the travel certificate; the embossed seal of the SFRY; the words "Putni list za stranca [Foreigner's Travel Certificate]"; a place for a photograph; a place to enter data on the bearer of the travel certificate, specifically: first and last name, day, month and year of birth, place of birth, place of residence and nationality; a place for entering data on members of the bearer's family (spouse and children) traveling with him, specifically: first and last name, kinship and date of birth; a place for entering the period of validity of the travel certificate; the name of the agency issuing the travel certificate, the date of issuance of the travel certificate, the imprint of the seal of the agency issuing the travel certificate and the signature of the authorized individual.

A dry seal shall be embossed on the photograph on the travel certificate.

Article 11

The foreigner's travel certificate shall be issued to and by the following:

1) to the foreigner referred to in Article 9, Paragraph 1, Subparagraphs 1, 3 and 4, of this law--by the competent agency in the republic or autonomous province;

2) to the foreigner referred to in Article 9, Paragraph 1, Subparagraph 2, of this law--by the diplomatic or consular mission of the Socialist Federal Republic of Yugoslavia abroad;

3) to the foreigner referred to in Article 9, Paragraph 1, Subparagraph 5, of this law--by a diplomatic or consular mission of the Socialist Federal Republic of Yugoslavia abroad, after it obtains consent to issue the travel certificate from the federal administrative agency competent for internal affairs;

4) to the foreigner referred to in Article 9, Paragraph 2, of this law--by the competent agency in the republic or autonomous province or by a diplomatic or consular mission of the Socialist Federal Republic of Yugoslavia abroad, after it obtains consent to issue the travel certificate from the federal administrative agency competent for internal affairs.

Article 12

The travel document for refugees, the travel document for stateless persons and the foreigner's travel certificate shall be issued to individuals who have reached age 18.

Personal data on persons under age 18 shall be entered on the travel document of parent.

As an exception to the provision of Paragraph 1 of this article, when the grounds so warrant, travel documents referred to in that paragraph may also be issued to a person who has not reached age 18.

Article 13

The travel document for refugees, the travel document for stateless persons and the foreigner's travel certificate shall not be issued to a foreigner in the following cases:

1) if criminal or misdemeanor proceedings are being conducted against him--at the request of the competent agency;

2) if an unsuspended prison sentence has been pronounced against him, until he has served the sentence;

3) on the written request of an interested party or that party's guardian or competent agency serving as guardian--if toward that person or toward other persons in the Socialist Federal Republic of Yugoslavia he has not discharged an obligation in property law arising out of the marital relation or relation between parents and children which has come due;

4) on the written request of a competent agency of a sociopolitical community, organization of associated labor or other self-managed organization or community--if it would not be able in any other manner to obtain discharge of an obligation to it which has come due;

5) if protection of law and order so requires or if the interests of national defense so demand.

In the decision adopted on the basis of Subparagraph 5 of Paragraph 1 of this article the competent agency need not state the reasons which guided it in making the decision.

Article 14

If the grounds referred to in Article 13, Paragraph 1, of this law existed before the day when the travel document was issued, and the competent agency learned of them subsequently or if the grounds arose after the date of issuance of the travel document, the travel document shall be revoked.

The decision on revocation of a travel document shall be made by the agency competent to issue travel documents or visas.

An appeal against the decision referred to in Paragraph 2 of this article shall not postpone its execution.

No administrative dispute may be conducted against a decision rejecting an application for issuance of a travel document or against a decision revoking a travel document.

Article 15

The competent agency in the republic or autonomous province may temporarily retain a foreign travel document belonging to a foreigner in the following cases:

1) if criminal or misdemeanor proceedings are being conducted against him--at the request of the competent agency;

2) on the written request of the competent body of a sociopolitical community, organization of associated labor or other self-managed organization or community--if it would be unable in any other manner to obtain discharge of an obligation to it which has come due;

3) if protection of law and order or the interests of national defense so require.

The authorized individual of the agency who has temporarily retained a foreign travel document shall issue a certificate to that effect to the foreigner whose travel document has been temporarily retained.

2. Tourist Pass

Article 16

A tourist pass may be issued at the border crossing to a foreigner who is entering the Socialist Federal Republic of Yugoslavia for a tourist visit if he possesses a valid national travel document or document establishing his identity. The tourist pass shall be issued with a period of validity not to exceed 30 days.

A tourist pass may also be issued to foreigners traveling in international maritime, river or air tours on the basis of the passenger list certified by the captain of the vessel or aircraft. The passenger list shall contain the following: first and last name, year of birth, nationality and number of the passenger's travel document.

The tourist pass shall be issued by the agency in the republic or autonomous province competent for monitoring control of the national border.

Article 17

The tourist pass shall contain the following: the words "Socijalisticka Federativna Republika Jugoslavija [Socialist Federal Republic of Yugoslavia]," the name of the agency issuing the pass; the words "TURISTICKA

PROPUSNICA [TOURIST PASS]"; a place for entering the number and title of the travel document or other document establishing the identity of the foreigner to whom the pass is being issued; the number of the pass; a place for certifying entry into the Socialist Federal Republic of Yugoslavia; the stamp of the agency issuing the pass and instructions as to its use.

3. Visas

Article 18

A visa shall be issued to a foreigner to enter the Socialist Federal Republic of Yugoslavia or to leave it or to cross the territory of the Socialist Federal Republic of Yugoslavia.

The visa shall be issued for one trip, for several trips or for an unlimited number of trips.

The visa shall be issued with a period of validity not to exceed 1 year or to the date of expiration of the foreign travel document on which the visa is being issued if that period is less than 1 year.

A visa with a period of validity longer than 1 year may be issued under condition of reciprocity to the personnel of the diplomatic or consular mission of a foreign state in the Socialist Federal Republic of Yugoslavia.

Article 19

In a visa being issued on a family passport shall be entered the number of persons traveling with the bearer of the passport and who have been entered in the passport, and in the visa being issued on a joint (group) passport--the first and last name of the leader of the group and the number of members of the group.

At the request of an organization of associated labor organizing a tourist trip a visa may be issued on the list of persons traveling to foreigners visiting the Socialist Federal Republic of Yugoslavia and wishing to make an excursion into a neighboring country. The first and last name of the leader of the group and the number of members of the group shall be entered in the visa.

The list referred to in Paragraph 2 of this article shall contain the first and last name of the members of the group and the number of their travel documents. The list shall be certified by a responsible individual in the organization of associated labor which is organizing the tourist trip.

Article 20

A transit visa shall be issued to a foreigner who seeks a visa to cross the territory of the Socialist Federal Republic of Yugoslavia only if he has an

entry visa of the neighboring country to which he is traveling or across whose territory he is continuing his trip, unless international treaty has exempted him from the obligation of possessing such a visa.

Article 21

A diplomatic or consular mission of the Socialist Federal Republic of Yugoslavia abroad shall issue visas to the following:

1) to a foreigner coming to the Socialist Federal Republic of Yugoslavia to reside permanently;

2) to a foreigner coming to the Socialist Federal Republic of Yugoslavia for a visit or to cross its territory;

3) to a foreigner coming to the Socialist Federal Republic of Yugoslavia or crossing its territory who possesses a diplomatic or official passport;

4) to a foreigner who is a seaman or a foreigner who is a [river or lake] boatman, on the seaman's or boatman's papers--if he is coming to the Socialist Federal Republic of Yugoslavia to embark on a vessel in a Yugoslav seaport, riverport or lake port, or who is crossing the territory of the Socialist Federal Republic of Yugoslavia to embark on a vessel in a foreign seaport, riverport or lake port or who is returning to his own country after disembarking from a vessel in a foreign seaport, riverport or lake port.

Article 22

The agency in the republic or autonomous province competent for monitoring the crossing of the national border shall issue a visa to a foreigner in the following cases:

1) if he is departing from the Socialist Federal Republic of Yugoslavia and his visa has expired;

2) if during sojourn or permanent residence in the Socialist Federal Republic of Yugoslavia he applies for a visa to go abroad and return to the Socialist Federal Republic of Yugoslavia;

3) if he is moving permanently from the Socialist Federal Repbulic of Yugoslavia;

4) if he has come to the Socialist Federal Republic of Yugoslavia under an international treaty on local border traffic;

5) if in the Socialist Federal Republic of Yugoslavia he has lost his travel document or in some other manner been left without his travel document and is leaving the Socialist Federal Republic of Yugoslavia with a new travel document or with a foreigner's travel certificate;

6) if a foreigner's travel certificate has been issued to him to move permanently from the Socialist Federal Republic of Yugoslavia;

7) if he has entered the Socialist Federal Republic of Yugoslavia with a tourist pass, and the diplomatic or consular mission of the state of which he is a national has issued him a travel document.

Article 24

The federal administrative agency competent for foreign affairs shall issue visas to the personnel of diplomatic or consular missions of foreign states in the Socialist Federal Republic of Yugoslavia and to the personnel of other foreign missions which have diplomatic status in the Socialist Federal Republic of Yugoslavia.

Article 25

A visa or tourist pass shall not be issued to foreigners, that is, they shall not be allowed to enter the Socialist Federal Republic of Yugoslavia, in the following cases:

1) if the foreigner has committed a crime against humanity and international law;

2) if the preventive measure of deportation from the Socialist Federal Republic of Yugoslavia has been pronounced against him--for the time covered by that measure;

3) if the protective measure of removal from the territory of the Socialist Federal Republic of Yugoslavia has been pronounced against him--for the time covered by that measure;

4) if his sojourn in the Socialist Federal Republic of Yugoslavia has been revoked--for the time covered by that measure;

5) if he is listed as an international criminal in the records of the competent agency in the Socialist Federal Republic of Yugoslavia;

6) if he possesses a travel document of a foreign state of which he is not a national, unless it is explicitly stated in that travel document that he has the right to return to the state which issued him the travel document or visa.

The official heading the federal administrative agency competent for internal affairs may decide that a visa or tourist pass shall not be issued to foreigners or that their entry into the Socialist Federal Republic of Yugoslavia shall not be allowed in other cases as well if reasons of protecting law and order so require or if this is required by protection of the interests of national defense or reasons which arise from international relations.

Article 26

An application for a visa or tourist pass may be rejected and a foreigner's entry into the Socialist Federal Republic of Yugoslavia prohibited in the following cases:

1) if he has been convicted in the Socialist Federal Republic of Yugoslavia of a crime which is automatically prosecuted;

2) if he has been punished in the Socialist Federal Republic of Yugoslavia for a foreign exchange or customs violation or for a violation of public peace and order;

3) if he does not have the means of support, and support in the Socialist Federal Republic of Yugoslavia has not been assured him in some other manner.

The official heading the federal administrative agency competent for internal affairs may specify that the competent agency may issue a visa or tourist pass to certain foreigners or may allow entry into the Socialist Federal Republic of Yugoslavia only with the prior consent of the federal administrative agency competent for internal affairs.

Article 27

If it is established that any of the grounds referred to in Article 25 of this law existed at the time when a visa was issued or has occurred since that time, the visa shall be canceled.

If it is established that any of the reasons referred to in Article 26 of this law existed at the time when the visa was issued or occurred thereafter, the visa may be canceled.

The visa referred to in Paragraphs 1 and 2 of this article may be canceled by the agency which issued the visa or other agency competent for issuing visas.

Article 28

In the decision rejecting an application for issuance of a visa or decision canceling a visa which has been issued on grounds of protecting law and order or on grounds of protecting the interests of national defense or on grounds which arise from international treaties, the competent agency need not state the reasons which guided it in making that decision.

No administrative dispute may be conducted against a decision rejecting an application for a visa or a decision canceling a visa which has been issued.

Article 29

A visa shall be issued to a foreigner who is moving permanently from the Socialist Federal Republic of Yugoslavia if he attaches to the visa application evidence of the following:

1) that he has discharged due obligations to the sociopolitical community;

2) that he has settled property obligations arising out of the marital relationship or relationship between parents and children toward persons living in the Socialist Federal Republic of Yugoslavia.

Article 30

A visa for departure from the Socialist Federal Republic of Yugoslavia shall not be issued to a foreigner if criminal or misdemeanor proceedings are being conducted against him--if the body conducting proceedings so requests.

III. Sojourn of Foreigners

1. Temporary Sojourn

Article 31

A foreigner who enters the Socialist Federal Republic of Yugoslavia with a foreign travel document may reside temporarily in the Socialist Federal Republic of Yugoslavia during the period of validity of his visa and up to 3 months, but if he is passing across the territory of the Socialist Federal Republic of Yugoslavia such visits shall not exceed 7 days counted from the date when the national border was crossed.

Temporary sojourn of more than 3 months or more than 7 days may be granted to the foreigner referred to in Paragraph 1 of this article at his request.

In the application for temporary sojourn the foreigner must state the reasons why he is seeking approval of temporary sojourn. If the competent agency so requires of him, the foreigner must attach to the application proof of the justifiability of the reasons for which he is seeking the granting of temporary sojourn and on his possession of the means of support or assurance of his support in the Socialist Federal Republic of Yugoslavia in some other manner.

The application for approval of temporary sojourn shall be submitted before expiration of the period referred to in Paragraph 1 of this article.

Article 32

A foreigner who comes to the Socialist Federal Republic of Yugoslavia to attend school, for advanced training, to conduct scientific research, to take employment or to perform a particular professional activity must file an application for approval of temporary sojourn within a period of 3 days from the date when he entered the Socialist Federal Republic of Yugoslavia.

If the foreigner referred to in Paragraph 1 of this article is coming to an organization of associated labor, other self-managed organization or community, or government agency, the organization or community or government agency to which that foreigner has come is required to file application for approval of the foreigner's temporary sojourn within a period of 7 days from the date of his arrival in the Socialist Federal Republic of Yugoslavia.

Article 33

A foreigner shall be granted temporary sojourn by the competent agency in the republic or autonomous province in which the foreigner resides.

The permit for temporary sojourn shall be issued with a period of validity not to exceed 1 year or until expiration of the foreign travel document if that period is shorter than 1 year.

When the grounds so warrant, a foreigner's temporary sojourn may be extended, each time for the period stated in Paragraph 2 of this article.

Article 34

Temporary sojourn in the Socialist Federal Republic of Yugoslavia shall not be granted to a foreigner in the following cases:

1) if under the provisions of Article 25 of this law he cannot be granted entry into the Socialist Federal Republic of Yugoslavia;

2) if he has given inaccurate information about himself or has used a false document;

3) if he has used someone else's travel document or has given his own travel document to someone else to use;

4) if he has entered the Socialist Federal Republic of Yugoslavia in an unlawful manner and has not been granted the status of refugee and has not been granted right of asylum;

5) if he does not have the means of support or his support in the Socialist Federal Republic of Yugoslavia has not been furnished him in some other manner;

6) if he has helped another or instigated another to cross the national border of the Socialist Federal Republic of Yugoslavia in an unlawful manner.

Article 35

A foreigner's temporary sojourn in the Socialist Federal Republic of Yugoslavia shall be terminated in the following cases:

1) if the security measure of deportation from the country or the protective measure of removal from the territory of the Socialist Federal Republic of Yugoslavia has been pronounced against him;

2) if his sojourn in the Socialist Federal Republic of Yugoslavia has been revoked;

3) if the competent agency has rejected his application for temporary sojourn in the Socialist Federal Republic of Yugoslavia.

Article 36

A foreigner's temporary sojourn in the Socialist Federal Republic of Yugoslavia may be revoked in the following cases:

1) if he does not abide by the regulations in effect in the Socialist Federal Republic of Yugoslavia or does not carry out the decisions of the government bodies and agencies;

2) if he is left without means of support, and his support in the Socialist Federal Republic of Yugoslavia has not been assured him in some other manner;

3) if he engages in vagrancy or begging;

4) if reasons of protecting law and order or the interests of national defense so require.

The decision to revoke temporary sojourn shall be made by the competent agency in the republic or autonomous province where the foreigner resides. The decision shall state the time within which the foreigner must leave the territory of the Socialist Federal Republic of Yugoslavia and the period during which he may not come again to the Socialist Federal Republic of Yugoslavia.

An appeal may be filed against the decision referred to in Paragraph 2 of this article within a period of 3 days from the date of receipt of the decision.

Article 37

In a decision rejecting an application for issuance of permission for temporary sojourn in the Socialist Federal Republic of Yugoslavia on grounds of protecting law and order or on grounds of protecting the interests of national defense the competent agency need not state the reasons which guided it in making that decision.

No administrative dispute may be conducted against a decision rejecting an application for the granting of temporary sojourn or against a decision revoking temporary sojourn in the Socialist Federal Republic of Yugoslavia.

2. Permanent Residence

Article 38

A foreigner may take up permanent residence in the Socialist Federal Republic of Yugoslavia if he obtains permission from the competent agency.

The permission referred to in Paragraph 1 of this article shall cease to be valid unless the foreigner takes up residence in the Socialist Federal Republic of Yugoslavia within 1 year from the date when permission was delivered.

Article 39

A foreigner may be allowed to reside permanently in the Socialist Federal Republic of Yugoslavia in the following cases:

1) if some member of his immediate family (spouse, child, parent) is a national of the SFRY or is a foreigner who has been granted permanent residence in the Socialist Federal Republic of Yugoslavia;

2) a foreigner who has married a national of the SFRY;

3) a foreigner of Yugoslav origin.

In exceptional cases other foreigners may also be granted permission to take up permanent residence in the Socialist Federal Republic of Yugoslavia.

The foreigner must attach to the application for permanent residence proof that the means of support have been assured him.

Article 40

The federal administrative agency competent for internal affairs shall grant permission for permanent residence in the Socialist Federal Republic of Yugoslavia.

Article 41

A foreigner's right to reside permanently in the Socialist Federal Republic of Yugoslavia shall be terminated in the following cases:

1) when he moves from the Socialist Federal Republic of Yugoslavia;

2) if he remains abroad continuously longer than 1 year unless he has been granted permission for such sojourn;

3) if the security measure of deportation from the country or the protective measure of removal from the territory of the Socialist Federal Republic of Yugoslavia has been pronounced against him;

4) if his further sojourn in the Socialist Federal Republic of Yugoslavia has been revoked.

The decision on termination of the right to reside permanently in the Socialist Federal Republic of Yugoslavia shall be made by the federal administrative agency competent for internal affairs.

Article 42

In the decision rejecting an application for the granting of permanent residence in the Socialist Federal Republic of Yugoslavia the competent agency need not state the reasons which guided it in making such a decision.

The foreigner may file an appeal with the Federal Executive Council against a decision rejecting his application for the granting of permanent residence and against a decision to terminate the right to reside permanently in the Socialist Federal Republic of Yugoslavia.

No administrative dispute may be conducted against the ruling made on the appeal referred to in Paragraph 2 of this article.

Article 43

Further sojourn of a foreigner who has been granted permanent residence in the Socialist Federal Republic of Yugoslavia may be revoked in the following cases:

1) if he has been convicted of a crime against the foundations of the system of socialist self-management and the security of the SFRY or other grave crime;

2) if he has been left without means of support, and his support in the Socialist Federal Republic of Yugoslavia has not been assured in some other manner;

3) if reasons of protecting law and order or the interests of national defense so require.

The decision revoking the further sojourn of a foreigner who has been granted permission to reside permanently in the Socialist Federal Republic of Yugoslavia shall be made by the competent agency in the republic or autonomous province where the foreigner has his domicile.

In a decision revoking the further stay of a foreigner who has been granted permanent residence in the Socialist Federal Republic of Yugoslavia on grounds of protecting law and order or on grounds of protecting the interests of national defense the competent agency need not state the reasons which guided it in making such a decision.

The decision referred to in Paragraph 2 of this article shall state the period within which the foreigner must leave the territory of the Socialist Federal Republic of Yugoslavia. That period of time may not be shorter than 30 days nor longer than 6 months.

3. Right of Asylum

Article 44

A foreigner who has been persecuted because of his efforts on behalf of democratic views and movements, social and national liberation, freedom and the rights of the individual or on behalf of the freedom of scientific or artistic creativity shall be granted the right of asylum in the Socialist Federal Republic of Yugoslavia.

Article 45

The official heading the federal administrative agency competent for internal affairs shall decide on recognizing or revoking the right of asylum.

A foreigner whose right of asylum has been recognized shall also attain the right of permanent residence in the Socialist Federal Republic of Yugoslavia.

Article 46

A foreigner who has been granted right of asylum shall be provided housing, means of support and health care.

Funds for housing, support and health care of foreigners granted the right of asylum shall be furnished from the federal budget.

The term "housing" in Paragraph 1 of this article means making an appropriate dwelling available for use or granting financial aid necessary to obtain housing space.

The federal administrative agency competent for matters of health and social welfare shall see to the housing, allocation of means of support and health care of foreigners who have been granted the right of asylum.

Article 47

The amount of money required for housing and support of foreigners who have been granted the right of asylum and the extent of health care, the standards and conditions governing the use and manner of obtaining that form of health care shall be defined by the Federal Executive Council for each individual case, but on the recommendation of the federal administrative agency competent for internal affairs and the federal administrative agency competent for matters of health and social welfare.

Article 48

A foreigner's right of asylum may be revoked if he acts against the system established by the SFRY Constitution or against the international interests of the Socialist Federal Republic of Yugoslavia.

The decision revoking the right of asylum shall also state the period within which the foreigner must leave the territory of the Socialist Federal Republic of Yugoslavia. That period may not be shorter than 30 days nor longer than 6 months.

Article 49

A foreigner may file an appeal with the Federal Executive Council against a decision rejecting his application for recognition of the right of asylum and against a decision revoking his right of asylum.

No administrative dispute may be conducted against the ruling issued on the appeal referred to in Paragraph 1 of this article.

4. Refugees

Article 50

A foreigner who has left the state of which he is a national or in which he had permanent residence as a stateless person in order to avoid persecution because of his progressive political aspirations or his ethnic origin, race or religion may be granted the status of refugee in the Socialist Federal Republic of Yugoslavia.

Article 51

Refugee status shall not be granted to a foreigner if there is warranted suspicion that he has committed a crime against humanity and international law or that he has acted contrary to the aims and principles of the Organization of the United Nations.

A foreigner's application for recognition of refugee status may also be rejected on grounds of protecting law and order or on grounds of protecting the interests of national defense.

If the grounds referred to in Paragraphs 1 and 2 of this article existed before recognition of refugee status, and the competent agency learned of them later, or if they occurred after recognition of that status, refugee status shall be revoked.

The federal administrative agency competent for internal affairs shall bear general responsibility for the reception, housing and assurance of funds for support of foreigners granted the status of refugees.

Article 52

The children of foreigners who have been granted refugee status shall enjoy all the rights of their parents who have been granted refugee status.

Upon reaching age 18 the individuals referred to in Paragraph 1 of this article shall be treated like other foreigners residing temporarily in the Socialist Federal Republic of Yugoslavia.

Article 53

The federal administrative agency competent for internal affairs shall decide on recognition or revoking of refugee status.

A foreigner may file an appeal with the Federal Executive Council against a decision rejecting his application for recognition of refugee status or against a decision revoking his refugee status.

No administrative dispute may be conducted against the ruling issued on the appeal referred to in Paragraph 2 of this article.

Article 54

A foreigner's refugee status shall be terminated in the following cases:

1) if he seeks protection of the state of which he is a national or where he had permanent residence as a stateless person;

2) if he may return to the state of which he is a national or in which he had permanent residence as a stateless person once the reasons for which he fled from that state have ceased;

3) if he voluntarily returns to the state from which he fled;

4) if he takes up the nationality of another state.

Article 55

A foreigner whose refugee status has been recognized shall be provided the necessary housing, the necessary means of support and health care until his departure to another country or until he acquires the means of supporting himself, but no longer than 2 years from the date when the application was made for recognition of refugee status. The time restriction shall not apply to a foreigner who is not capable of gainful employment and cannot support himself independently.

The terms "necessary housing and necessary means of support" in the context of Paragraph 1 of this article mean financial aid necessary to provide housing space and to support the foreigner whose refugee status has been recognized and the members of his family. The amount of money shall be determined according to the number and age of members of his family who are not nationals of the SFRY, financial condition, fitness for gainful employment, and as a function of whether the foreigner whose refugee status has been recognized is undergoing specialized training.

As an exception to the provision of Paragraph 2 of this article, necessary housing and necessary means of support also refer to compensation of expenses of placing a foreigner whose refugee status has been recognized in an appropriate organization of associated labor if that placement or accommodation is necessary because he is old and alone or incapable of gainful employment.

Necessary means of support and necessary housing of foreigners whose refugee status has been recognized and to compensate the expenses referred to in Paragraph 3 of this article shall be furnished in the federal budget.

Article 56

The amount of money necessary for the support of foreigners whose refugee status has been recognized and to provide them necessary housing, and the scope of health care and scales and conditions for the use and manner of obtaining these forms of care shall be prescribed by the Federal Executive Council.

Article 57

A refugee reception center may be organized to house foreigners whose refugee status has been recognized.

The reception center referred to in Paragraph 1 of this article shall be established and administered by the federal administrative agency competent for internal affairs.

Foreigners whose refugee status has been recognized shall be sent to the reception center for refugees by the federal administrative agency competent for internal affairs.

The agency referred to in Paragraph 2 of this article shall see that these foreigners are furnished means of support and health care while they are in the reception center for refugees.

Article 58

The federal administrative agency competent for matters of health and social welfare, in collaboration with the federal administrative agency competent for internal affairs, shall see to the housing and furnishing of necessary means of support of foreigners whose refugee status has been recognized and who are not housed in the reception center for refugees and of fitting them for self-support.

Article 59

The place of residence of a foreigner whose refugee status has been recognized and who has not been placed in a reception center for refugees shall be determined by the competent agency in the republic or autonomous province.

The decision on furnishing housing and on allocation of necessary funds for support of the foreigner referred to in Paragraph 1 of this article shall be made by the competent agency in the republic or autonomous province in which that foreigner's place of residence has been determined.

No administrative dispute may be conducted against a final decision as referred to in Paragraph 2 of this article.

Article 60

The competent agency in the republic or autonomous province shall revoke sojourn in the Socialist Federal Republic of Yugoslavia of a foreigner whose refugee status has been recognized if this is required to protect law and order or to protect the interests of national defense, or if his refugee status has been revoked.

The decision revoking a foreigner's sojourn as referred to in Paragraph 1 of this article must state the period of time in which the foreigner must leave the territory of the Socialist Federal Republic of Yugoslavia. The time necessary for the foreigner to be received by another state shall be taken into account in fixing that period.

In the decision revoking sojourn in the Socialist Federal Republic of Yugoslavia of a foreigner whose refugee status has been recognized on grounds of protecting law and order or on grounds of protecting the interests of national defense the competent agency need not state the reasons which guided it in making that decision.

No administrative dispute may be conducted against the decision revoking sojourn of a foreigner whose refugee status has been recognized.

5. Forcible Removal

Article 61

A foreigner against whom the security measure of deportation from the country or the protective measure of removal from the territory of the Socialist Federal Republic of Yugoslavia or whose sojourn in the Socialist Federal Republic of Yugoslavia has been revoked, or who is in the Socialist Federal Republic of Yugoslavia without approval of the competent agency must leave the territory of the Socialist Federal Republic of Yugoslavia within the period of time fixed by the competent agency.

If the foreigner referred to in Paragraph 1 of this article does not leave the territory of the Socialist Federal Republic of Yugoslavia within the period specified, but does have a valid travel document, he shall be escorted to the national border and forcibly removed from the Socialist Federal Republic of Yugoslavia.

The foreigner referred to in Paragraph 1 of this article who does not leave the territory of the Socialist Federal Republic of Yugoslavia within the period specified and does not have a valid travel document shall be sent or escorted to the diplomatic or consular mission of the state of which he is a national to obtain a travel document. If that mission refuses to issue the foreigner a travel document, the foreigner shall be sent or escorted to the national border and turned over to the competent agency of a neighboring state if he is a national of that state or to the competent agency of another state which consents to receive him.

When the agency in the republic or autonomous province escorts a foreigner to the reception center for aliens or to the national border for removal from the territory of the Socialist Federal Republic of Yugoslavia, that agency must first obtain the consent of the federal administrative agency competent for internal affairs. At the latest that consent shall be given within 2 days from the date of receipt of the request for consent.

Article 62

A reception center for aliens shall be organized to house the foreigner referred to in Article 61 of this law, a foreigner who has entered the Socialist Federal Republic of Yugoslavia in an unlawful manner or is residing in it without the permission of the competent agency, the foreigner whose identity cannot be established, the foreigner whose temporary sojourn has not been approved or whose right of asylum or refugee status has not been recognized, and who for whatsoever reason cannot be immediately removed from the territory of the Socialist Federal Republic of Yugoslavia.

The reception center referred to in Paragraph 1 of this article shall be established and administered by the federal administrative agency competent for internal affairs.

The decision to send a foreigner to the reception center for aliens shall be made by the federal administrative agency competent for internal affairs on the recommendation of the competent agency in the republic or autonomous province.

Article 63

The competent agency in the republic or autonomous province may assign a mandatory place of residence or may send to another place where his support is provided for the foreigner referred to in Article 61 of this law or a foreigner who has entered the Socialist Federal Republic of Yugoslavia in an unlawful manner or who is residing in it without permission of the competent agency, or a foreigner whose identity cannot be established, or a foreigner who has not been granted temporary sojourn or whose right of asylum or refugee status has not been recognized, and who for whatsoever reason cannot be immediately removed from the territory of the Socialist Federal Republic of Yugoslavia and who has the means of support or whose support in the Socialist Federal Republic of Yugoslavia has been provided for in some other manner.

Article 64

The costs of escorting a foreigner to a diplomatic or consular mission or to the reception center for aliens or to the national border shall be charged to the foreigner being escorted.

If the foreigner being escorted does not have funds, the costs of escorting him shall be charged to the federal budget.

6. Movement of Foreigners in Uniform

Article 65

Foreigners may wear a foreign military uniform during sojourn in the Socialist Federal Republic of Yugoslavia in the following cases:

1) if they are in the Socialist Federal Republic of Yugoslavia as members of a diplomatic or consular mission of a foreign state or other foreign mission which has diplomatic status in the Socialist Federal Republic of Yugoslavia in the capacity of military representatives, during the life of that mission;

2) if as members of foreign military missions or foreign military delegations they are making an official visit to the Socialist Federal Republic of Yugoslavia;

3) if they are attending school in the schools of the Yugoslav People's Army;

4) if as members of foreign military missions or foreign military delegations they are crossing the territory of the Socialist Federal Republic of Yugoslavia with diplomatic or official passports.

The official heading the federal administrative agency competent for matters of national defense may in agreement with the official who heads the federal administrative agency competent for internal affairs grant approval to other foreigners to wear a foreign military uniform during their sojourn in the Socialist Federal Republic of Yugoslavia.

Article 66

During sojourn in the Socialist Federal Republic of Yugoslavia foreigners may wear a foreign police uniform or uniform of a foreign customs officer in the following cases:

1) if as members of delegations of foreign police or foreign customs authorities they are making an official visit to the Socialist Federal Republic of Yugoslavia;

2) while they are performing official duties in joint monitoring of the crossing of the national border in that portion of the border crossing which belongs to the Socialist Federal Republic of Yugoslavia;

3) if as members of foreign police of foreign customs delegations they are crossing the territory of the Socialist Federal Republic of Yugoslavia with a diplomatic or official passport.

7. Establishment and Termination of Associations of Foreigners

Article 67

Foreigners residing in the Socialist Federal Republic of Yugoslavia may establish associations to accomplish cultural, scientific, technical and other similar goals.

Article 68

Associations of foreigners shall be established on the basis of approval of the competent agency.

A permit for establishment of an association of foreigners operating on the territory of one republic or autonomous province shall be issued by the competent agency in the republic or autonomous province, but the permit for establishing an association of foreigners which operates over the entire territory of the Socialist Federal Republic of Yugoslavia or on the

territory of two or more republics or autonomous provinces shall be issued by the federal administrative agency competent for internal affairs.

Article 69

The establishment of an association of foreigners may be approved on application of at least 10 adult foreigners who are permanent residents of the Socialist Federal Republic of Yugoslavia or who have resided in it longer than 1 year.

As an exception to the provision of Paragraph 1 of this article, a permit to establish an association of foreigners may also be granted to foreigners who have spent less than 1 year in the Socialist Federal Republic of Yugoslavia if their visit is to attend school, to undergo specialization, to conduct scientific research, to take employment or to perform a specified professional activity.

Article 70

The application for a permit to establish an association of foreigners should contain the following: the association's name and the location of its headquarters, the purposes of the association and the means by which those purposes are to be achieved. The minutes of the founding assembly of the association and the rules (bylaws) of the association which have been adopted shall be attached to the application in duplicate.

The rules (bylaws) of the association of foreigners should contain the following: the purpose of the association and the means by which that purpose is to be attained; the rights and duties of members of the association; rights and duties of the organs of the association; the procedure for enrollment of members of the association; termination of membership and withdrawal from the association; representation of the association; the manner in which the means necessary to operate the association are to be furnished; the name of the headquarters of the association and the manner of disposition of property in case of termination of the association.

The founders must notify the competent agency in the republic or autonomous province of the holding of the founding assembly of the association of foreigners.

Article 71

If the agency competent to issue the permit to establish an association of foreigners finds that the rules (bylaws) of the association do not contain certain of the elements which have essential importance to granting the permit for establishment of the association, it shall call upon the founders to supplement the rules within a specified period.

Article 72

The establishment of an association of foreigners shall be approved in a decision containing the following: the name of the association, the association's activity, the association's address and the geographic area in which the association may operate.

The agency competent to grant the permit to establish an association of foreigners shall keep records on associations whose establishment it has approved.

An association of foreigners shall acquire the status of a legal person and may commence operation as of the date when the decision approving the establishment becomes valid.

One copy of the rules (bylaws) of the association, certified by the agency which has approved establishment of the association, shall be returned to the founders with the decision approving establishment of the association of foreigners.

Article 73

An application for approval of establishment of an association of foreigners shall be rejected and the operation of the association of foreigners prohibited if its activity does not conform to the rules (bylaws) of the association or if it is aimed at the following:

1) overthrow or alteration of the system established by the SFRY Constitution;

2) disruption of the brotherhood and unity of the nationalities and ethnic minorities of Yugoslavia and incitement of ethnic, racial or religious enmity;

3) threatening the independence and territorial integrity of the Socialist Federal Republic of Yugoslavia or threatening peace or equal international cooperation;

4) the committing of criminal acts or instigation of the committing of such acts.

An appeal may be filed with the Federal Executive Council against a decision rejecting an application for approval of establishment of an association of foreigners or against a decision prohibiting operation of an association of foreigners and that decision was made by the federal administrative agency competent for internal affairs.

No administrative dispute may be conducted against a decision rejecting an application for approval of establishment of an association of foreigners or a decision prohibiting the operation of an association of foreigners.

Article 74

A foreigner may be a member of an association of citizens of the SFRY if this is provided for in the rules (bylaws) of that association.

Article 75

The lawfulness of the activity of an association of foreigners shall be monitored by the agency which made the decision to allow establishment of that association.

8. The Purchase and Bearing of Arms and Use of Personal Name

Article 76

During sojourn in the Socialist Federal Republic of Yugoslavia a foreigner may purchase, bear and possess weapons and ammunition under the conditions set forth by the statute of the republic or autonomous province.

Article 77

During sojourn in the Socialist Federal Republic of Yugoslavia a foreigner must use the personal name which he has received under the statutes of his own country unless law or international treaty provide otherwise.

IV. Notification of Arrival at and Departure From Place of Residence and Domicile

Article 78

A foreigner residing in the Socialist Federal Republic of Yugoslavia must notify the competent agency in the republic or autonomous province of his sojourn and his change of address, and a foreigner who has been granted permanent residence must also give notification when he takes up or leaves his domicile.

Article 79

For the purpose of this law "place of residence" means the town or place in which the foreigner is residing temporarily.

For the purpose of this law "domicile" means the town or place in which the foreigner who has been granted permanent residence in the Socialist Federal Republic of Yugoslavia is settled with the intention of living in it permanently.

Article 80

A foreigner who has been granted permanent residence in the Socialist Federal Republic of Yugoslavia must notify the competent agency in the republic or autonomous province of his domicile and change of address within that town or place within a period of 8 days from the date of his arrival at the domicile or from the date of change of address and shall report his temporary residence and change of address within 24 hours from arrival at the town or place of temporary residence or from the date of change of address in that place.

A foreigner must give notice of removal from his domicile before the date when he is to leave the domicile.

Article 81

Organizations of associated labor, other self-managed organizations and individuals who provide lodgings to foreigners for compensation, as well as individuals whom foreigners come to visit are required to report the sojourn of foreigners to the competent agency in the republic or autonomous province within 12 hours from the date of providing the lodgings to the foreigner or from the date of the foreigner's arrival for the visit.

A foreigner who does not use lodgings referred to in Paragraph 1 of this article must notify the competent agency in the republic or autonomous province of his sojourn and change of address on the day after arrival in the Socialist Federal Republic of Yugoslavia or within 24 hours from the date of change of place of residence or change of address.

The official heading the federal administrative agency competent for foreign affairs may in agreement with the official who heads the federal administrative agency competent for internal affairs prescribe that certain foreigners shall not be required to give notice of their sojourn in the Socialist Federal Republic of Yugoslavia.

The sojourn of foreigners may also be reported through tourist organizations.

Article 82

Organizations of associated labor, other self-managed organizations and individuals offering lodgings to foreigners for compensation must keep records on the foreigners to whom they furnish lodgings--a book of foreigners.

The book of foreigners shall be certified by the competent agency in the republic or autonomous province.

Organizations and individuals referred to in Paragraph 1 of this article are required to keep a book of foreigners at least 3 years after the date when it is closed.

Organizations and individuals referred to in Paragraph 1 of this article are required to allow an authorized individual of a competent agency to examine the book of foreigners.

V. Documents To Prove Identity

Article 83

A foreigner may prove his identity with the following: a foreign travel document, a travel document for foreigners issued by the competent agency of the Socialist Federal Republic of Yugoslavia, an alien identity card or other document furnished with a photograph by which his identity can be established.

At the request of an authorized individual of a competent agency the foreigner is required to show the document by which he proves his identity.

1. Alien Identity Card

Article 84

An alien identity card shall be issued to the following: to a foreigner who has been granted permanent residence in the Socialist Federal Republic of Yugoslavia and to a foreigner whose temporary sojourn in the Socialist Federal Republic of Yugoslavia has been granted if he does not have a foreign travel document.

As an exception to the provision of Paragraph 1 of this article, an alien identity card may be issued to a foreigner who has been granted temporary residence in the Socialist Federal Republic of Yugoslavia though he has a valid foreign travel document, if that foreigner or diplomatic or consular mission of the state of which he is a national submits an application for issuance of an alien identity card.

A special identity card shall be issued to a foreigner who is a member of a diplomatic or consular mission of a foreign state or a member of another foreign mission which has diplomatic status in the Socialist Federal Republic of Yugoslavia.

Article 85

The alien identity card shall be issued by the competent agency in the republic or autonomous province in which is located the domicile or residence of the foreigner to whom the alien identity card is being issued.

An imprint shall be taken of the index finger of the right hand of the foreigner who is being issued an alien identity card.

The federal administrative agency competent for foreign affairs shall issue the special identity card referred to in Article 84, Paragraph 3, of this law.

Article 86

An application for issuance of an alien identity card may be filed by a foreigner who has reached age 18 and also by a foreigner under age 18 who has married or who has taken employment.

Article 87

The application for issuance of the alien identity card shall be made on the prescribed form.

The application for issuance of the alien identity card shall be accompanied by two photographs of the prescribed size which faithfully portray the applicant or the person for whom the application is being filed.

Article 88

The application for issuance of an alien identity card shall be filed within a period of 30 days from the date of arrival of the foreigner at his domicile or place of residence or within 30 days from the date when the foreigner has married or taken up employment.

Article 89

The form of the alien identity card shall contain the following: the words "Socijalisticka Federativna Republika Jugoslavija"; the name of the agency which issued the alien identity card; the words "Osobna karta za stranca [Alien Identity Card]"; the number of the identity card; a place for a photograph; a place for entering data on the foreigner, specifically: first and last name, day, month and year of birth, place of birth, nationality, domicile and address, basis on which the foreigner is residing in the Socialist Federal Republic of Yugoslavia, date of issuance of the alien identity card; stamp of the agency which issued the alien identity card and signature of the authorized individual.

Article 90

The alien identity card shall be issued to a foreigner who has been granted permanent residence in the Socialist Federal Republic of Yugoslavia for a period of validity of 5 years.

An alien identity card shall be issued to a foreigner who has been granted temporary sojourn in the Socialist Federal Republic of Yugoslavia until expiration of the permit for temporary sojourn, but no longer than 1 year.

The validity of the alien identity card issued to the foreigner referred to in Paragraph 1 of this article may be extended, but its total validity may not be longer than 10 years.

The validity of the alien identity card issued to the foreigner referred to in Paragraph 2 of this article may be extended, provided its total validity does not exceed 5 years.

Article 91

A foreigner is required to carry his alien identity card on his person.

A foreigner may not give his alien identity card to someone else to use, nor may he use someone else's identity card as his own.

Article 92

The alien identity card shall be replaced when damaged or worn out or when for other reasons it can no longer serve its purpose.

Within a period of 8 days from the date of occurrence of any of the reasons referred to in Paragraph 1 of this article the foreigner must file application with the competent agency to replace the alien identity card.

The authorized individual of the competent agency may order a foreigner to file application for replacement of his alien identity card if in examining the foreigner's credentials he finds that any of the reasons stated in Paragraph 1 of this article exist.

Article 93

A foreigner is required to return his alien identity card to the competent agency in the following cases:

1) when he becomes a citizen of the SFRY;

2) when he leaves the Socialist Federal Republic of Yugoslavia;

3) when the security measure of deportation from the country or the protective measure of removal from the territory of the Socialist Federal Republic of Yugoslavia has been pronounced against him or when his further sojourn in the Socialist Federal Republic of Yugoslavia has been revoked.

2. Disappearance or Loss of the Alien Identity Card or Other Document Proving Identity

Article 94

The disappearance or loss of an alien identity card, travel document or other document proving identity in the Socialist Federal Republic of

Yugoslavia must be reported by the foreigner without delay, and no later than within 24 hours from the moment of learning of the loss or disappearance of the alien identity card or other document proving identity, to the competent agency in the republic or autonomous province in which he has lost the document or in which he has learned of its disappearance or loss.

The agency referred to in Paragraph 1 of this article shall issue the foreigner a certificate to the effect that he has reported the loss or disappearance of his alien identity card or other document proving identity.

Article 95

A foreigner who while abroad has lost his travel document issued by the competent agency of the Socialist Federal Republic of Yugoslavia or remains without it in some other manner must report this to the nearest diplomatic or consular mission of the Socialist Federal Republic of Yugoslavia abroad.

The diplomatic or consular mission of the Socialist Federal Republic of Yugoslavia abroad shall issue to the foreigner referred to in Paragraph 1 of this article a new travel document after having obtained consent of the federal administrative agency competent for internal affairs.

Article 96

A foreigner who in the Socialist Federal Republic of Yugoslavia loses his travel document or is left without it in some other manner must accompany his application for issuance of a new travel document or his application for issuance of a visa on a new foreign travel document by the certificate that he has reported the loss or disappearance of the travel document which he previously had.

VI. Records and Reporting

Article 97

Records shall be kept on foreigners who are permanent residents, on foreigners who are temporary residents or who are crossing the territory of the Socialist Federal Republic of Yugoslavia, on establishment and termination of associations of foreigners, and on the documents and visas issued to foreigners by the competent agency of the Socialist Federal Republic of Yugoslavia.

The records referred to in Paragraph 1 of this article shall be kept by the competent agencies in the republic or autonomous province, by the federal administrative agency competent for internal affairs, by the federal administrative agency competent for foreign affairs and by diplomatic or consular missions of the Socialist Federal Republic of Yugoslavia abroad, each within its respective jurisdiction.

Article 98

Records on expenditure of funds for housing and material support of foreigners whose refugee status has been recognized shall be kept by the competent age in the republic or autonomous province.

The competent agency in the republic or autonomous province shall report to the federal administrative agency competent for affairs of health and social welfare on expenditure of funds referred to in Paragraph 1 of this article.

VII. Authorization and Oversight

Article 99

The official heading the federal administrative agency competent for internal affairs is hereby authorized as follows:

1) to prescribe the manner of issuance of travel and other documents and visas to foreigners, the manner of approval of temporary sojourn, the manner of approval of permanent residence, the manner of recognition of refugee status, the reporting of arrival at and departure from domicile and residence and procedure for keeping the register of aliens;

2) to prescribe the form of the travel document for foreigners, the tourist pass, the alien identity card, the permit for permanent residence, the permit for temporary sojourn and the visa issued to foreigners, as well as the forms of applications for their issuance;

3) to prescribe the form on which arrival at and departure from domicile and residence shall be reported and the forms of records which are to be kept under the provisions of this law by organizations of associated labor, other self-managed organizations and individuals providing lodgings to foreigners;

4) to prescribe the manner of keeping records and of reporting on foreigners who are permanent residents, foreigners who are temporary residents or who are crossing the territory of the Socialist Federal Republic of Yugoslavia and on travel documents and visas issued to foreigners by the competent agencies in the republic or autonomous province;

5) to fix the price which the competent agencies shall collect for the forms of the documents which they issue to foreigners.

Article 100

The official heading the federal administrative agency competent for foreign affairs is authorized to prescribe the following in agreement with the official who heads the federal administrative agency competent for internal affairs:

1) the manner of issuance of travel documents and visas to foreigners in diplomatic or consular missions of the Socialist Federal Republic of Yugoslavia abroad;

2) the form and manner of issuance of the special identity card issued to members of diplomatic or consular missions of foreign states or to members of other foreign missions which have diplomatic status in the Socialist Federal Republic of Yugoslavia;

3) the manner of issuance of visas to members of diplomatic or consular missions of foreign states or to members of other foreign missions which have diplomatic status in the Socialist Federal Republic of Yugoslavia;

4) the manner of keeping records and of reporting on travel documents and visas issued to foreigners in diplomatic or consular missions of the Socialist Federal Republic of Yugoslavia abroad.

Article 101

With respect to the matters of entry, movement and sojourn of foreigners, personal name, association, purchase, possession and bearing of arms, the official who heads the federal administrative agency competent for internal affairs may issue binding instructions for enforcement of this law to agencies in the republic or autonomous province.

Article 102

With respect to the matters of issuing travel documents to foreigners, approval of sojourn (temporary sojourn, permanent residence), recognition of refugee status, recognition of right of asylum, notification of arrival at and departure from domicile and residence, and associations of foreigners, the federal administrative agency competent for internal affairs may also conduct inspection concerning enforcement of federal regulations.

The agency in the republic or autonomous province in which inspection is conducted under the provision of Paragraph 1 of this article must facilitate scrutiny of articles which pertain to enforcement of the respective federal regulations and furnish the necessary data and reports.

If it finds that the agency in the republic or autonomous province in which an inspection is conducted is not enforcing federal regulations in the areas enumerated in Paragraph 1 of this article or if it establishes irregularity in enforcement of these regulations, the official conducting the inspection shall so inform the official who heads that agency and the official who heads the federal administrative agency competent for internal affairs and shall propose the steps which should be taken.

Article 103

Oversight over the expenditure of funds for housing and material support of foreigners whose refugee status has been recognized shall be performed by the federal administrative agency competent for matters of health and social welfare.

VIII. Punitive Provisions

Article 104

An organization of associated labor or other legal person shall be fined up to 20,000 dinars for a misdemeanor in the following cases:

1) if it does not inform the competent agency in the republic or autonomous province of the arrival of members of foreign armed forces or foreign security forces (Article 4, Paragraph 3);

2) if within the prescribed period it does not seek approval for the temporary sojourn of foreigners (Article 32, Paragraph 2);

3) if within the prescribed period it does not report to the competent agency in the republic or autonomous province the sojourn of a foreigner to whom it furnishes housing or if it files a late report (Article 81, Paragraph 1);

4) if it does not keep or does not keep up to date the book of foreigners to whom it furnishes lodgings (Article 82, Paragraph 1);

5) if it does not allow an authorized individual of a competent agency to examine the book of foreigners to whom it has furnished lodgings (Article 82, Paragraph 4).

The individual responsible in the organization of associated labor or other legal person shall also be fined up to 2,000 dinars for the misdemeanor referred to in Paragraph 1 of this article.

Article 105

An individual furnishing lodgings to foreigners for compensation shall be liable to a fine up to 3,000 dinars or imprisonment up to 30 days for a misdemeanor in the following cases:

1) if within the prescribed period he does not report to the competent agency the sojourn of a foreigner to whom he furnishes lodgings or if he submits a tardy report (Article 81, Paragraph 1);

2) if he does not keep or does not keep up to date a book of foreigners to whom he furnishes lodgings for compensation (Article 82, Paragraph 1);

3) if he does not make it possible for an authorized individual of a competent agency to examine the book of foreigners to whom he has furnished lodgings (Article 82, Paragraph 4).

An individual whom a foreigner has visited shall also be liable to a fine up to 2,000 dinars for the misdemeanor referred to in Paragraph 1, Subparagraph 1, of this article.

The protective measure of prohibition of the furnishing of lodgings may also be pronounced for a period of time not to exceed 2 years against an individual furnishing lodgings to foreigners for compensation.

Article 106

A foreigner shall be liable to a fine up to 3,000 dinars or imprisonment up to 30 days for a misdemeanor in the following cases:

1) if he enters the Socialist Federal Republic of Yugoslavia when his entry has been prohibited under the provisions of Article 25 of this law;

2) if he gives inaccurate information about himself or uses a false document (Article 34, Subparagraph 2);

3) if he uses someone else's travel document or gives his own travel document to someone else to use (Article 34, Subparagraph 3);

4) if he has entered the Socialist Federal Republic of Yugoslavia in an unlawful manner and his refugee status or right of asylum has not been recognized (Article 34, Subparagraph 4);

5) if he has helped someone else or instigated someone else to cross the national border of the Socialist Federal Republic of Yugoslavia in an unlawful manner (Article 34, Subparagraph 6);

6) if he enters the Socialist Federal Republic of Yugoslavia during the period in which his temporary sojourn has been revoked (Article 36, Paragraph 2);

7) if within the period specified in the decision of the competent agency he does not leave the territory of the Socialist Federal Republic of Yugoslavia (Article 61, Paragraph 1).

The protective measure of removal from the territory of the Socialist Federal Republic of Yugoslavia may also be pronounced against the foreigner for the misdemeanor referred to in Paragraph 1 of this article.

Article 107

A foreigner shall be liable to a fine up to 2,000 dinars or imprisonment up to 15 days for a misdemeanor in the following cases:

1) if he moves, resides or takes up permanent residence in a particular place or in a particular area in which the movement, sojourn or settlement of foreigners is restricted or prohibited (Article 4, Paragraph 1);

2) if he remains in the Socialist Federal Republic of Yugoslavia more than 2 days beyond the date stated in the visa, tourist pass or permit for temporary sojourn or if within the prescribed period he does not file an application for approval of temporary sojourn (Article 16, Paragraph 1; Article 31, Paragraph 1; and Article 32, Paragraph 1);

3) if he leaves his place of residence designated for him by the competent agency (Article 63);

4) if during sojourn in the Socialist Federal Republic of Yugoslavia he wears a foreign military, police or customs uniform contrary to the provisions of law (Articles 65 and 66);

5) if within the prescribed period he does not report to the competent agency his taking up domicile, change of address in his domicile or if he does not report removal from his domicile before he leaves the place or town which is his domicile (Article 80);

6) if he evades reporting to the competent agency his residence or change of address at the place or town of his residence (Article 81, Paragraph 2);

7) if he refuses to show to an authorized individual of a competent agency the document whereby he proves his identity (Article 83, Paragraph 2);

8) if he gives his identity card to someone else to use or if he uses someone else's alien identity card (Article 91, Paragraph 2).

An authorized individual of the agency in the republic or autonomous province competent for monitoring the crossing of the national border may collect a fine of 300 dinars on the spot from a foreigner for the act referred to in Paragraph 1, Subparagraph 2, of this article.

Article 108

A foreigner shall be liable for a fine up to 1,000 dinars for a misdemeanor in the following cases:

1) if he does not report to the competent agency his sojourn and change of address at the town or place of his residence when he is not staying in the facility of an organization of associated labor, other self-managed

organization or individual offering lodgings to foreigners or if he does not stay with an individual he is visiting (Article 81, Paragraph 2);

2) if within the prescribed period he does not file application for issuance of an alien identity card (Article 88);

3) if within the prescribed period he does not file application with the competent agency for replacement of his alien identity card (Article 92, Paragraph 2);

4) if within the prescribed period he does not report to the competent agency in the republic or autonomous province the disappearance or loss of his alien identity card, travel document or other document proving identity (Article 94, Paragraph 1).

IX. Final Provisions

Article 109

The Law on Movement and Sojourn of Foreigners in Yugoslavia (SLUZBENI LIST SFRJ, No 6, 1973) shall cease to be valid on the day when this law takes effect.

Article 110

This law shall take effect on the eighth day after publication in SLUZBENI LIST SFRJ.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

CURRENT TASKS OF COMMUNISTS IN TRADE UNIONS

Prague ZIVOT STRANY in Czech 22 Sep 80 No 20, 22 Sep 80 pp 42-44

[Interview with Ludvik Opletal, chairman of the Regional Trade Union Council in Brno, by Jiri Novotny: "Current Tasks of the Communists in Trade Unions"]

[Text] The Communist Party of Czechoslovakia has always considered it one of its foremost tasks to involve wide masses of our working people in implementation of the party policy, and therefore, the attitude of the party to the broadest mass social organization, which has a membership of over 7 million workers, reflects its close unity with the workers' class, cooperative farmers and intelligentsia. Communist officials and members of the Revolutionary Trade Union Movement play an important role in the party's relations with trade unions.

Comrade Ludvik Opletal, chairman of the Regional Trade Union Council in Brno, answered our questions about the current and prospective tasks that must be resolved now and in the future by the communists in organs and organizations of trade unions in the South Moravia kraj.

[Question] The coresponsibility of our trade unions for the development of socialism finds its specific expression in inspiring our workers to demonstrate initiative in their fulfillment of tasks in production, in their integration into the decisionmaking processes when resolving problems of production, and in their participation in the management of production. What is the task of the communist members of trade unions in that area, particularly in conjunction with the application of the Set of Measures for Improving the Planned Management System of the National Economy after 1980?

[Answer] We regard the coresponsibility of our trade unions for the development of socialism as a fulfillment of a dual function. I would express this most succinctly, saying that there can be no rights without obligations, conversely, no obligations without rights, when it concerns the solution of our economic and social affairs. The unity of the rights and obligation comes into the focus more clearly in conjunction with a gradual introduction of the Set of Measures for Improving the Planned Management System of the National Economy after 1980.

By the application of the Set of Measures we also implement the decisions of the 15th CPCZ Congress. The Set of Measures expresses objective needs of the further development of our socialist society and a higher level of our economic relations.

For that reason, the communists in trade unions must approach this task in a responsible and creative manner, and prepare promptly and thoroughly for its fulfillment. Within the system of party education our party offers its members and candidates appropriate opportunities to improve their knowledge. A search for criteria of its efficiency continues; one of them should assess how it helps the principles stipulated in the Set of Measures to penetrate into the people's thoughts and deeds.

[Question] What specific role will the communists in trade unions play in explaining and clarifying the Set of Measures to our workers?

[Answer] The communists in trade unions, with a far-reaching efficient cooperation of other officials in the ROH [Revolutionary Trade Union Movement], must vigorously assist in creating such conditions and such a climate that the tender plant of the Set of Measures may take a healthy root. For that purpose we are organizing, first of all, a lecture to explain the Set of Measures--its basis, its purpose, and new ideas for consideration of its aspects. We held a seminar of the expanded plenum of our Regional Trade Union Council where comrades from the Antonin Zapotocky Central School of the ROH in Prague lectured. We made that lecture and additional materials available to workshops of trade union education at district trade union councils where we demand a close cooperation with the institutes of political education at the CPCZ District Committee, as well as with the Regional Political School in Brno.

Our trade union associations are concurrently acquainting our workers with the application of the Set of Measures in individual branches and ministries. The measures must be explained to workers' collectives in branches. For that purpose we are preparing standard plans of trade union education. We intend to appoint an aktiv of our leading economists to act as teams of lecturers for consultations on the contents of the Set of Measures so that everybody can understand it. Furthermore, we conducted a seminar on the implementation of long-range cadre, personnel and social programs in the Seventh Five-Year Plan. Thus far, comprehensive plans for social development, applied with various degrees of success, have been focused primarily on workers' rights and advantages. However, long-range cadre, personnel and social programs also obligate the people to fulfill their duties by creating financial and material preconditions for the satisfaction of their needs and interests.

[Question] Concern in the development of labor initiative must become an integral part of the economic management and of all activities in our trade unions. Communists in trade unions in particular must promote this task as stipulated in the document of the CSSR Government and of the URO [Central Council of Trade Unions] concerning the development of labor initiative in the 1979-1980 period. What experience have you gained in your kraj in this respect?

[Answer] In 1979-1980 we organized the workers' activity and initiative in honor of the 35th anniversary of our liberation, and directed their efforts toward higher efficiency and quality of all work and toward higher economic consciousness. Nevertheless, it would not be sincere to think that we have completed a major part of that work. The truth is, of course, that systematically, step by step, we are focusing on vital areas underscored in the documents of the CSSR Government and of the URO. Let us consider, for instance, our attention to the construction of power

engineering projects in the South Moravia kraj, in which our workers are participating. It is our satisfaction and, at the same time, obligation that the words "our building" and "we" are already beginning to be accepted in the nuclear power plant in Dukovany, okres of Trebic. Tens of working teams have become closely acquainted, and the towering construction which looms behind them will dominate the skyline of the Dukovany area in the future. We concluded agreements with the Regional National Committee and the Regional Trade Union Council on mutual cooperation, for example, in organizing competitions to conserve electricity and fuels. We discussed the contribution rendered by our technical intelligentsia in fulfilling the tasks of the plan. We assessed the contribution of the long-term socialist pledges adopted for the Sixth Five-Year Plan. It is now confirmed that when applying the Set of Measures, the long-term socialist pledges for the Seventh Five-Year Plan will represent an essential method in the development of our workers' initiative.

[Question] Our current and prospective tasks demand that the communists in trade unions unify their procedures for further development of trade union programs. What tasks are being carried out in this direction by the communists in the basic party organization of the Regional Trade Union Council in Brno?

[Answer] The activity of this basic party organization affects to a considerable degree improvement of work performed by political workers in the Regional Trade Union Council and in the regional committees of trade union associations who participate in the management of district trade union councils and district trade union assiciations, enterprise committees and plant organizations of the ROH in our kraj, in other words, a total of almost 800,000 members of the trade union base. Our party organization has united the communists who serve as political workers in the Regional Trade Union Council and the Regional Association of Education and Culture system for the purpose of implementing superior, tested forms and methods in the fulfillment of party decisions within trade unions. In their membership meetings the communists discuss methods of general application of their experience in individual branches and the problems they encounter. Furthermore, our organization participates in the development of proper dimensions in relations of the all-union and federation activities, and individual associations are steered toward cooperation in the solution of problems exceeding the framework of a single branch. Higher responsibility for the implementation of the decisions is also being enforced within the party. Membership conferences which analyzed the results of individual meetings of the CPCZ Central Committee offered in the discussion numerous proposals. On the agenda were, for example, methods to improve the work with the trade union aktiv and to direct more efficiently trade union education and the activity of trade unionists in workers' teams.

[Question] The 15th meeting of the CPCZ Central Committee recently underscored that our ideological educational system must be further improved. In your field this means upgrading of trade union education, better schools of socialist labor, economic propaganda and agitation, educational programs to be carried out in workers' teams and in particular, among the youth. What tasks does that impose on communists-trade unionists?

[Answer] In June 1980 plenary session of the Regional Trade Union Council discussed the decisions of the 15th meeting of the CPCZ Central Committee. Our trade union organization got very favorable conditions for the fulfillment of its share of

responsibility for our workers' education. A solid system of trade union education is at its disposal. Our topmost task is to upgrade its activities. Basic ROH organizations and district trade union councils reviewed recently the 1979-1980 academic year and the situation in planning for next year. Without overestimating the results achieved in trade union education, our aktiv of voluntary propaganda workers, lecturers and distributors of literature with a total of 17,000 members, has accomplished a great deal of honest work in cooperation with institutes of political education of the CPCZ district committees, the Regional Political School in Brno, and schools of socialist labor. Nevertheless, we feel that we still have considerable gaps, which the results of the 1979-1980 academic year have also confirmed. For instance, the development of our mass political work in places of work and through person-to-person canvass are unsatisfactory.

Our trade union education often lacks efficiency in those places where political training had just been completed. This concerns, for instance, a lack of understanding that the work must be done in shifts, the schedule of work adjusted, capital assets well utilized, and in general working discipline observed. In this respect, the Plants for Precision Engineering, for example, have been doing a splendid job by including in their trade union educational programs also lectures focused on better quality of production, exploitation of capital assets, and application of Soviet methods of competition. What is the result? They announced a long-range socialist pledge for the Sixth Five-Year Plan which, though difficult, is advantageously reflected in the quality of their production, the volume of production of spare parts, and the development of a competition to achieve the highest shift rate. Naturally, economic propaganda and agitation alone could not resolve every problem, but they helped the workers' teams realize many facts and steer their efforts in the right direction. An analysis of the educational work following the 15th meeting of the CPCZ Central Committee has shown that in the future we must proceed more vigorously in organizing schools of socialist labor wherever we can find unexploited opportunities for such schools. We must upgrade our work with the lecturers and propaganda workers, increase attendance at lectures to maintain their quality, and eliminate boring reading of haphazardly prepared reports.

We must reexamine creative programs for lecturers, so that they do not regard their work only as a job, but also as an opportunity for their own self-fulfillment by advancing their own education and spreading knowledge among the workers. Furthermore, a review has shown that the control of trade union education must be unconditionally intensified, beginning with sectors and ending with the regional political school. In trade union education we face an uncommonly challenging task to acquaint our workers with the Set of Measures.

In the final analysis, we have every right to regard trade union education as preparation for our young unionists' membership in the CPCZ. Our target is to make every basic organization of the ROH feel coresponsible for the training of its most promising members for membership in our party, because the decision as to who will lead and guide our society in the future is made today. This requires the trade unionists to work more thoroughly and over a prolonged period with our youth. Many basic ROH organizations have gained good experience with the movement of reserves of the socialist labor teams. The work with young people, however, must begin much sooner, as, for instance, in case of the comrades in the CKD [Ceskomoravska-Kolben-Danek] of Blansko, who organized a station of young technicians in the basic 9-year

school, where they work with children, influencing, among other things, also the choice of their vocation.

An agreement with the Regional Administration of the Ministry of the Interior in Brno aids us in our work; according to it the communists from the regional trade union council and regional committees of trade union associations, together with its employees, are fighting juvenile delinquency by expanding the young people's knowledge of the law and intensifying their attitude toward our socialist society.

[Question] Attention concentrated on the solution of the workers' personal and labor-related problems, and on their suggestions and proposals, is part of daily activities of our trade unions. What are the measures adopted by the party organization of the Regional Trade Union Council for reviewing workers' suggestions, proposals and complaints promptly and responsibly?

[Answer] The communists in our trade unions have an enormous duty to strengthen democracy. A tried and true method in that process involves consultations on production, to which we must pay even more attention. The basic party organization in the Regional Trade Union Council fosters in the communists personal responsibility for prompt, responsible and expert review of such suggestions and complaints, more intensive activity on the part of arbitration commissions in plants, and advanced professional and political knowledge of officials at every level as a precondition for adroit and competent decisionmaking.

Upon the decision of the URO six additional okresses in the South Moravia kraj were recently granted the right to publicly supervise the implementation of the labor code. As a result, the number of complaints addressed to the highest trade union has declined, as have the instances of repeated complaints. This proves that the process of dealing with them has been qualitatively upgraded.

SED SOCIOLOGIST DISCUSSES ECONOMIC, SOCIAL POLICY FOR 1980'S

East Berlin SONNTAG in German Vol 34 No 33, 17 Aug 80, No 35, 31 Aug 80

[Articles by Prof Dr Otto Reinhold, director, Institute for Social Sciences, SED Central Committee: "The Challenge of the 1980's"]

[No 33, 17 Aug 80 p 9]

[Text] A Consideration of Economic Problems

The Tenth Party Congress will provide an answer to the question what we must do to be able--under the new conditions--further to pursue our present policy, which is oriented toward accomplishing our principal task, and what new prerequisites must be established, what tasks must be accomplished to this end. Even now it is clear that from an historical point of view the decisions that have to be made in this respect will be no less important than the resolutions adopted by the Eighth and the Ninth SED Congress.

In the course of the 1970's, it was possible to bring into play the advantages of socialism in a quantitatively and qualitatively new way. Even though a number of complex problems had to be solved--especially in the last half of the past decade--the development of the economy proceeded at a steady pace and in the last few months the rate of growth has noticeably accelerated. This has provided a solid foundation for the implementation of extensive sociopolitical programs. Even today it is clear that the respective targets of the present five-year plan will be met and exceeded. Thus, while the people's net monetary income for these 5 years was targeted at a total of M 552 billion, the actual amount will be at least M 554 billion. The retail turnover target was set at M 461 billion, but the actual turnover will be in excess of that amount. For social funds, M 207-210 billion were originally targeted, but M 233 billion will actually be made available. The housing construction plan stipulated construction or modernization of 750,000 apartments, but this target will be exceeded by at least 60,000 units. These figures are based on the results achieved during the period from 1976 to 1979 and on the plan targets for 1980. However, the results obtained during the first 6 months of 1980 indicate

that the figures quoted may very well be exceeded.

Three Factors

What are the new conditions under which we will have to implement the policy objectives hitherto pursued? There are three factors that are of special importance in this regard: Firstly, the new dimensions of our work. Secondly, the aggravation of the international situation and thirdly, the momentous world-economic changes. We will examine these new conditions somewhat more closely.

First of all, there is the fact that during the past 10 years the dimensions of our work have changed considerably. In order to be able to continue and gradually to extend the comprehensive sociopolitical measures in the 1980's, we will need a much more solid material foundation than the one we had at the time of our Eighth Party Congress. Thus, as compared to that period, it is now necessary year after year to build twice as many apartments. The monthly earned income of workers and salaried employees (M 1016) has exceeded by M 254 the average income of 1970. During this period, total pensions increased from M 9.7 billion to M 15.3 billion. The net monetary income of the population increased by approximately 50 percent. From the social funds of the state, each citizen receives twice the amount he or she received in 1970. Calculated for a family of four, the monthly state subsidies intended to stabilize prices, rents and rates and to promote cultural concerns and support health services rose from M 360 in 1970 to M 730 in 1979. Thus the present level of purchasing power calls for a considerable increase in the commodity supply. In this respect, we are not merely concerned with the quantity of the consumer goods, but with their quality and with the changes in the structure of demand. As the people's income increases, the demand for high-quality goods increases as well. At present, the individual citizen's retail trade turnover exceeds by approximately M 2,000 that of 1970. For example, the annual consumption of meat and meat products rose during this period from 66 kilograms to approximately 90 kilograms. The total working time reductions implemented in these 10 years--including extended vacations and the "baby year"--are equivalent to the working time store of 1 million workers.

Thus, since our policy in the coming years will be oriented toward safeguarding and gradually improving the results achieved, the productive capacities of our national economy must be expanded considerably, as compared to the beginning of the 1970's. For example, the volume of industrial goods produced in 1970 in the course of the whole year must now be produced in approximately 6 months, and in the coming year, it must be produced in 5 months. The foreign trade turnover must increase 2.5-fold. This target must be met with the same number of workers, and the volume of energy and raw materials can be increased only slightly.

Naturally, there are other reasons why new demands are being made on economic management. From 1970 to 1979, the basic assets of the national

economy increased by M 220 billion, and in industry alone, by M 120 billion. The influence of science on the reproduction process has been growing considerably and the workers' level of education has been markedly raised; the number of university and technical college graduates has nearly doubled. The cooperation between the GDR and the Soviet Union and the other socialist countries has reached a new level. This means that today continuous increases in production and in the efficiency of socially beneficial work can no longer be achieved with the means and methods that were sufficient at the time of the Eighth Party Congress.

New Situation

Another new factor is the aggravation of the international situation resulting from the aggressive policy pursued by the United States and other reactionary forces. The primary objective of this policy is by the mid-1980's to ensure the United States' military superiority over the Soviet Union and the superiority of NATO over the Warsaw Pact. Several goals are to be attained thereby. Above all, the reactionary forces aim at creating the conditions necessary for pursuing a policy of force and blackmail vis-a-vis the Soviet Union and the other countries of the socialist community. In this way, they want to regain unlimited control over the raw material and fuel resources of the developing countries and to reestablish the old power position of the United States in the framework of the capitalist world.

The socialist states seek to establish a military equilibrium and--through arms limitation and disarmament measurew--to peg it at the lowest level possible. The Warsaw Pact states have made it perfectly clear that they can and will take any steps necessary to prevent--even under changed circumstances--any changes in the military equilibrium that would be to their disadvantage. It is clear, however, that this would require significant economic and scientific-technological capacities, that the struggle for peace and detente makes heavy demands on the productive capacity of the national economy.

For the GDR, there is yet another important aspect: The country is situated not only at the point of contact of the two social systems, but also at the borderline between the two great military alliances--NATO and the Warsaw Pact. At no other border is there a greater concentration of military forces than at the Western border of our country. Most of the nuclear weapons stationed by the United States in Europe are in the FRG. The FRG's Armed Forces are the strongest military force in capitalist Europe and the second strongest force in NATO. In 1979, NATO conducted maneuvres at this border, in which a total of 260,000 troops participated. One need not be an expert to realize that at this border any provocation may lead to a military catastrophe. Thus, next to military security at this border, it is the GDR's political stability that is of primary importance for peace and security in Central Europe. In the long term, however, political stability cannot be ensured without economic and social stability. Economic and social stability in its turn is inconceivable without economic growth.

In other words, a policy that is oriented toward full employment, affluence, growth and stability is in accord with the inner laws and requirements of socialist construction. For the GDR, such a policy also is a prerequisite for the preservation of peace in Europe. A successful policy aimed at developing the advanced socialist society must take these two requirements into consideration.

As is well known, the world economy has been undergoing great changes. As far as the development of our national economy is concerned, there are a number of problems that are of special importance. Most important is the safeguarding of the raw material and fuel supply so as to ensure continuous economic development. In the course of the 1970's, the expenditures involved here increased extraordinarily. Thus a barrel of oil (159 liters) that in 1972 cost $2.40 in the world market costs today an average of $34. However, the prices of other raw materials have sharply increased as well. Moreover, expenditures on the domestic market--e.g. the cost involved in brown coal production--are steadily rising.

Facts and Possibilities

Thus we are confronted with two incontrovertible facts: In the 1980's, the cost of raw materials and fuel will continue to rise and in the coming years, we must bring about economic growth with a volume of raw materials and fuel that is unlikely to show any marked increase. In the past 10 years, the GDR's national income increased at an annual rate of approximately 5 percent. From 1971 to 1975, the volume of raw materials and fuel increased at an average annual rate of 3.7 percent; from 1976 to 1978, the increase amounted to approximately 2.3 percent, and presently, to approximately 0.5 percent. In regard to raw materials and fuel, one must always keep in mind that they account for approximately 60 to 70 percent of the production costs and that they must for the most part be imported.

So how can we solve this problem? Our policy is oriented toward three points of main emphasis. Firstly, maximum utilization of our own resources, e.g. intensification of brown coal production. In regard to the procurement or raw materials and fuel, our long-term cooperation with the Soviet Union and the socialist economic integration within the framework of CEMA are of crucial importance. Secondly, further intensification of the recycling of secondary raw materials. And thirdly, economical use of the available raw materials and fuel. This means above all extensive application of raw material- and fuel-saving technologies and maximum refinement. The dialectics of the situation lie in the fact that while there have emerged new problems in this connection, modern science and technology have opened up new ways of solving these problems. Thus extensive employment of microelectronics entails a reduction of material and energy input. So the acceleration of scientific-technological progress is the key to the solution of the problems in this field.

One of the changes affecting the world economy is the fact that all over the world scientific-technological progress has been accelerating and will continue to accelerate. In this respect, microelectronics, robot and computer technology and bio-technology are of great importance. These technologies have already brought about extensive structural changes of the world economy. The production processes are being rapidly transformed. The hitherto customary mechanical work principles are increasingly being replaced by electronic principles; material- and energy-saving technologies are becoming more and more prevalent; there is an obvious trend toward maximum improvement of raw materials and fuel, and extensive changes are taking place in the services sector and in office technology.

Dynamism Sets Standards

In many respects, our present world is undergoing radical change. It is a dynamic, very mobile world. In the 1980's, this change will be further accelerating. In this decade, the scientific-technological revolution and its extensive practical effects will obviously be approaching a new climax. Those who are not able to keep up with this process of change, those who are not able through their own efficiency to exert an influence on the rate and direction of the development in important sectors are bound to lose their standing in international life and above all in the world economy. Since the internationalization of economic life is steadily progressing, this is bound to have an effect on the internal development of every country, on the productive capacities and, naturally, on the standard of living.

At present, the GDR is allocating approximately 30 percent of the national income to foreign trade. Imports are absolutely essential for ensuring a sufficient supply of raw materials and fuel, for accelerating scientific-technological progress and for safeguarding a sufficient commodity supply. Very likely, this share will be increasing further. As is well known, in the last few years, the prices of raw materials and fuel--which account for most of our imports--have been increasing much more rapidly than the prices of finished goods--which account for most of our exports. This means that in order to ensure the imports required, we must every year increase our exports by several millions worth of goods.

Consideration of these problems naturally gives rise to the question how they can be solved and what we must do to be able--under these conditions--to ensure the further growth of the national economy, to maintain and gradually raise the standard of living. Indisputably, there is the desire to do all this. But what concrete possibilities are open to us?

[No 35, 31 Aug 80 p 10]

[Text] Capacities for Solving the Economic Problems

During the past decade, the conditions underlying the GDR's economic development have changed in many respects. These changes are quite different

in nature--some are positive and some are negative. On the one hand, the economic and scientific-technological capacities of the GDR have increased considerably and the cooperation within the framework of the socialist community has reached a new level; on the other hand, the international situation has been aggravated on account of the policy pursued by the United States and other imperialist forces, and the development of the world economy, the explosive rise in the prices of raw materials and fuel and the crisis of the capitalist world economy have given rise to new, great difficulties. On the one hand, the extraordinary acceleration of scientific-technological progress is making new, heavy demands on us; on the other hand, it is this acceleration that produces important tools, the efficient use of which makes it possible to solve many of the new economic problems.

In consideration of all these new conditions and of the resultant challenge to the economy and society of our country, the 11th and 12th Central Committee sessions concluded that in the coming years as well it will be possible to pursue the present policy of implementation of the principal task, i.e. the unification of economic and social policy. However, the development of the economy cannot be determined by subjective wishes. The crucial question is whether or not there are the concrete prerequisites, whether or not we have at our disposal the necessary capacities and reserves. This question can be answered in the affirmative. For such an increase in performance, for quantitative and qualitative growth under the new conditions, we can fall back on a solid material foundation.

Naturally, the question is what these capacities and possibilities consist in. In this context, we will discuss only the most important ones.

Four Good Reasons

Firstly, the GDR has great scientific capacities which in the course of the past decade have been significantly expanded. In the last 9 years alone, approximately M 50 billion were spent on research and development. During this period, the scientific potential of the national economy increased by approximately 48 percent. In the course of the present five-year plan, approximately 4.5 percent of the national income will be spent on research and development. If this amount is considered on a per-capita basis, the GDR occupies a leading position among the first five countries in the world. However, at its 11th session the SED Central Committee emphatically pointed out that the efficient and effective use of this potential falls far short of its possibilities. There is no doubt that elimination of this inconsistency will greatly stimulate growth.

Secondly: An extraordinaryly high level of education has been attained in the GDR. Over 70 percent of all workers graduated from the 10-grade polytechnical high school and completed an apprenticeship program. During the last 10 year, the number of university and technical college graduates almost doubled. These graduates account for just under 17 percent of the total number of gainfully employed persons. Sociological studies and

practical experience have shown, however, that this educational potential has by no means been optimally utilized. Moreover, the subject matter of the training programs has not always been in accord with the requirements of scientific-technological progress. Undoubtedly, this high level of education represents one of our most valuable reserves for expanding the productive capacities of the national economy.

Thirdly: The GDR economy has at its disposal a huge stock of basic assets, i.e. machines, equipment and buildings. Since the Eighth Party Congress, these assets have been expanded by approximately M 220 billion and presently amount to M 686 billion. In the course of this expansion, the degree of automation was raised from 33 percent in 1970 to 47 percent in 1979. However, efficient utilization lags far behind this quantitative expansion of the basic assets of our economy. While in good GDR combines modern machines and equipment are in operation for at least 20 hours per day--which is in keeping with international standards--the GDR average during the first 6 months of 1980 was approximately 14.9 hours, and in many economic sectors and combines it was even lower. It is well known, however, that under conditions of optimal utilization the efficiency of modern technology increases rapidly.

A related factor is the effectiveness of investments. In this sector, the targets set by the current five-year plan will most likely be exceeded. However, only about 50 percent of the investments are directed toward rationalization. But in the interest of scientific-technological progress it is necessary considerably to increase this rationalization share and radically to curtail the construction share. In some countries, including the FRG, this share at times accounts for over 80 percent. Similar figures obtain in regard to the utilization of raw materials and energy and of the working time fund.

Fourthly: The increasingly close cooperation with the Soviet Union and the other socialist countries represents a great potential for growth. Through this cooperation, we are assured a steady supply of raw materials and fuel (e.g. most of our oil imports). The agreed-upon target programs and the agreements of specialization and cooperation make possible the joint solution of important economic problems, acceleration of scientific-technological progress and improvement of efficiency. The last CEMA conferences have made it quite clear that considerable reserves for increased economic performance on the part of the participant countries have not yet been tapped. Thus for all the problems and contradictions that still exist, we can proceed from the assumption that we have at our disposal the concrete and especially the material prerequisites for attaining--even under the new conditions--that steady economic growth that is necessary for continuing the policy of implementation of the principal task.

Measures

The crucial problem is the question what we must do to be able actually to utilize these available reserves and significantly to improve the efficiency of work. Toward implementation of such a policy, important steps have been taken, only the most important of which can be mentioned in this context. A key project is the formation or reorganization of the combines so as to link science, research, production and marketing in a new way so that the focus will be on the improvement of efficiency as a crucial source of growth. The results of the economic development during the first 6 months of 1980 show that this policy is beginning to take effect.

Significant changes in the management and planning system have been initiated. Great importance is attached to the efforts to emphasize--along with the quantitative expansion--the qualitative factors, especially in connection with material motivation. In the investment sector, important measures have been taken that are intended to increase investment effectiveness. There can be no doubt that the implementation of the performance principle is a key problem.

For some time, a large number of enterprises, combines and scientific institutions have been engaged in implementing a program for the development and application of microelectronics and of robot and computer technology.

The impending University Conference will concern itself with the problem of establishing a closer link between the universities and technical colleges and the world of practical work. The Party, the state management organs and the initiatives of the socialist enterprises and workers will continue to focus their attention on the task of finding ways and means of translating the available potential and possibilities into increased economic efficiency and productive capacity. The challenge of the 1980's is bound up with a great many intellectual problems. The actual development has confirmed the statement contained in the SED Program, namely that the development of the advanced socialist society is a process involving radical political, economic, social and intellectual-cultural changes. The first conclusion to be drawn from this is that the view, according to which the continuing socialist construction is a smooth, simple process free from inconsistencies, is more than ever at variance with Marxist-Leninist conceptions and with practical experience. The development of advanced socialism is an extremely dynamic process. Of necessity, both the internal and the international development lead to ever new questions, problems and tasks of various kinds. This involves--again of necessity--certain contradictions. Thus it is necessary continuously to resolve contradictions, with new contradictions arising constantly. For example, the increasingly important role of science in the production process and the transition from extensive to predominantly intensive reproduction have led to a situation where the hitherto customary structure of organization and a number of hitherto successful management methods are at variance with the new requirements. The rising level of education is inconsistent with the fact that some of the modern technologies

entail a great deal of monotonous work.

Naturally, this gives rise to the question what attitude we are going to adopt vis-a-vis these dynamics and the contradictions involved. Are we going to view this process as extraordinary, as disturbing the "quiet", as a morally defective process or as the normal form of socialist development? As Marxists-Leninists, we can only view it as a normal form of social development.

Intellectual-Moral Sources of the Will To Produce

In the last few years, the dialectics of internal and international development has been attracting more and more attention and has increasingly become part of the realm of practical work. Theoretically, it has always been justified and recognized that--in keeping with the character of our age--the struggle between the two systems determines the international development and that this struggle is hard and inexorable. But obviously it makes a big difference whether one recognizes this fact in both theory and practice and acts accordingly or whether one is surprised about the fact that practice is in accord with this theoretical insight.

Today it is obvious that the growth of the GDR economy, its increased productive capacity is of great importance in the international arena, that accomplishment of the tasks involved here is an important contribution in the struggle for peace and security in Europe.

In contrast to any other society, the productive capacity of the socialist economy is based on the working people's performance and will to produce. As Marx and Engels pointed out, the performance principle is a basic law of the economic and social development of socialism. Practical experience has shown that the mental attitude, the willingness to produce outstanding results for the socialist society is one of the most important driving forces of the socialist society. This is all the more true, since we have attained a high standard of living and a high level of social security. In high degree, the quantitative and qualitative growth of our economy is presently determined by the intense will to produce on the part of millions of workers.

Naturally, we must keep asking ourselves whether inside and outside of our educational system, in the intellectual life, in the art and culture of our republic all possibilities are being exploited so as to encourage such an attitude toward outstanding achievements, whether indifferent conduct in this regard is indifferently accepted or whether it meets with resolute criticism.

Once scientific-technological progress and its effective application have become the key to economic development, there naturally arises the question how important science is to the workers, what their mental attitude is toward its results and possibilities. It goes without saying that this is

not a matter of theoretical explanations, but of the role of science in the realm of everyday work. The broad, effective application of new scientific findings in all sectors of the economy largely depends on an appropriate attitude. It is the attitude that determines whether or not there is an atmosphere of scientific creativity, a creative climate which represents an important foundation for new insights.

On the basis of these few questions, we can state without exaggeration that there exists now--more than ever--a complex, close interaction between the economic tasks and the intellectual realm. The correct structuralization of these interrelationships is one of the key prerequisites for the solution of those problems that in the 1980's are bound up with the further development of the advanced socialist society in the GDR.

PRO-CCP ORGAN INTERVIEWS BIELINSKI, WALESA ON UNION EFFORT

SOLIDARNOSC'S Konrad Bielinski Interviewed

Stockholm GNISTAN in Swedish 17-23 Oct 80 p 1

/Report on interview with Konrad Bielinski/

/Text/ In the middle of work on the SOLIDARNOSC, the newspaper of Poland's free trade union, the telephone message arrives: Czeslaw Milosz has won the Nobel Prize!

One of the newspaper editors has double reason to be happy. Konrad Bielinski is also one of the editors of the underground publishing house NOWA. Only NOWA has published the banned Polish author in his home country.

Konrad Bielinski is one example of how closely the politically oppositional intellectuals work with the new trade union. Bielinski was the one who wrote the first issue of SOLIDARNOSC, under supervision by the leaders of the workers. The issue was published on the fourth day of the strike, at the end of September.

That work has borne fruit for Bielinski. Now comes the next reward. The underground company will get its Nobel Prize winner. What a triumph for those who have worked long and hard to spread free speech in Poland!

"In 14 days we will publish our 100th book," Konrad Bielinski says. "The first one came in 1977. Editions are between 2,000 and 4,000 copies."

"Milosz is banned in Poland. No one knows who he is. In 1948-50 he was the cultural attache at the Polish Embassy in Paris. Then in 1950 he published a book which was critical of the treatment of intellectuals in Poland. He was called a traitor and defected.

Konrad Bielinski speaks of the presecutions which have made life difficult for NOWA.

"Previously we had semi-secret selling places, about 20 in Warsaw and in other parts of the country. But the security police came and confiscated the books."

"This is why we have gone over to another system. Instead, we announce a number of people who sell the books. Then people can call us and order a book. We then arrange a meeting in some place and deliver the book."

"In this way we never have more than one book with us. The remainder of the books is hidden."

Economically, the Nobel Prize means nothing to NOWA.

"But it gives us a lot of self-satisfaction," Konrad Bielinski concludes.

Customs Seize Printing Press

Stockholm GNISTAN in Swedish 17-23 Oct 80 pp 2,3

/Article by Thomas Kanger: "Polish Customs Took Their Printing Press"/

/Text/ Stop! Customs!

The one in military uniform stares grimly at us when we submit our papers.

As he reads his facial expression undergoes a complete change. His eyes open wide and his chin drops.

"Get the chief," he shouts.

We have arrived with a van full of offest printing presses for the free trade union in Gdansk, Poland.

The machines are a gift from the trade unions in Oslo, because the free trade union in Poland had specifically asked for printing equipment.

But the Norwegians had trouble with the visa. In a roundabout way I was asked if I could help with the transportation.

The car was driven from Oslo by Ewa Orlowski, a Swedish woman born in Poland and residing in Oslo. She is active in the Norwegian municipal workers' union.

I hitched on in Stockholm.

At Nynashamn we caught the ferry to Gdansk. The problem was to get the machines into the country. The strategy was that I would drive the car and Ewa would disembark in order to meet Piotr, a trade union man who would be waiting.

We decide that both of us will ride in the car, however. The questions will come anyway and we have enough to explain to the authorities.

Now all other cars are allowed to go around us while the "chief" and a security policeman bring Ewa into a room. Piotr is nowhere to be seen.

The last ones to pass through customs -- besides us -- are three motorcyclists. I ask them to drive to the trade union headquarters and alert them.

But they are afraid to.

Ewa returns. The authorities are going to call the capital, Warsaw, in order to get instructions concerning the cargo and us.

After yet another hour we find out that customs will confiscate the machines. The trade unions have not yet been approved, is the formal reason.

Everything in the car is lifted out. Inside the customs building every box is opened and everything is recorded, down to each individual plastic bottle and tube of paint.

We make contact with Piotr, who is anxiously following what goes on.

Two hours later everything is finished. The machines and all accessories are stowed in a room which is sealed.

The Trade Union Headquarters

We are allowed to continue into Gdansk, however. In the morning of the next day, last Thursday, we drove down to the trade union headquarters at Grunwaldska Street, in the center of Gdansk.

The house has several stories and banners and Polish flags attached to the balconies. Down at street level information and pictures are glued to the wall. There is always a cluster of interested people.

Once upstairs in the building we end up at the office for propaganda. One by one the trade union functionaries read the typed list of what customs have seized.

Great commotion. It is believed that it is a matter of time before the trade union will get the machines out.

We soon understand what these printing presses mean to the union. We get to see the equipment they now work with. At the same time this provides a good picture of the conditions under which the trade union is working.

In a locked room at the headquarters two men sit at a table. On the table is a pad of printing ink under a glued-down cloth. On top of the cloth is a stencil.

One of the men places a sheet of paper on top of the stencil. The other one pulls a rubber roller over the paper. In this way thousands and thousands of leaflets are "printed."

Secret Printing Shop

In another, secret, place is the collected machinery of the union. It consists of two run-down stencil machines.

Two workers are printing today's SOLIDARNOSC, SOLIDARITY, the trade union newspaper. It consists of a folded quarto sheet.

The two are named Leszek Zborowski and Kazik Zabczynski. They are both among the true foot-soldiers of the union and have participated in and worked for the cause for a few years.

"In 1978 a leadership group of 6-7 shipyard workers was formed," says Leszek, who is a trained mason. The leaders were Lech Walesa, Anna Walentynowicz, Joanna Duda-Gwiazda and Andzej Gwiazda. These are the ones who are now at the head of the free trade union.

"The two of us belonged to a subgroup. Our duties were to, for example, paint slogans on the walls and to distribute leaflets."

The distribution of leaflets did not function as in Sweden.

"We got up at 0400 hours in the morning in order to distribute to those who took the streetcar to work. We were always afraid of being caught by the police. That meant -- at best -- 48 hours' detention."

"At the same time we were afraid to lose the leaflets. A great deal of work has gone into those sheets, as you can see. We couldn't very well throw them away."

"There were also a lot of police checks at my home," Leszek recounts.

"The most important task was to fight for people's rights, however. People knew us, we functioned as contact persons for the trade union, In this way we learned about the injustices committed against people and we were able to help them. In this manner confidence was built."

In the morning of the day the strike at the Lenin Shipyard began, Leszek and Kazik distributed leaflets about the harassment of Anna Walentynowicz. These events were the spark. The first shift went on strike and the other shifts followed suit.

"During the strike our task was to print information," Kazik says.

Continued Struggle!

Now they are not quite as harassed as before, although the free trade union has not yet been formally approved. But the free union in Poland is a fact. It gives workers such as Leszek and Kazik the opportunity to avoid having the police at their heels.

"But we haven't won yet," Leszek says. "Right now those at the top of the party are arguing about how they should act. In 1 month they must decide. This is why it is important that people have the strength to continue struggling. We must keep our heads above water, otherwise we will have to fight for another 30 years in order to get where we are today."

I ask if they think the Russians will come if the trade union continues its struggle for freedom.

"All the good things we have come from the Russians," Leszek says ironically and laughs. "No, I don't think the Russians will come now. But if in their eyes things go too far they will certainly come. We have to go forward in small steps."

"But," says Leszek, "I would rather live for 5 minutes with my head held high than a lifetime on my knees."

Walesa: Government 'Sabotage' Attempts

Stockholm GNISTAN in Swedish 17-23 Oct 80 pp 2,3

/Report on interview with Lech Walesa by Thomas Kanger: "It Would Be Strange If the Authorities Did Not Sabotage Us"

/Text/ "He can see you now."

The whole thing happens so quickly that I don't have time to get nervous. Through the throng of people we are funneled into a small office at the end of a corridor.

Sunk deep in a chair behind a desk, there he sits, the legendary strike leader and newly elected chairman of Poland's free trade union -- Lech Walesa.

There are two other people in the little room. One is Walesa's personal bodyguard. The other one is his closest coworker, a worker in his fifties or sixties who looks as if he has made at least a couple of round trips to the salt mines of Siberia.

Lech Walesa gets up and kisses Ewa Orlowski's hand. He is content to shake mine forcefully.

I begin by congratulating him on his successes. He waves it away.

"No congratulations are needed," he says. "There is much we have not accomplished. The authorities have been forced to agree to our demands, the 21 points. They have promised us this, but as yet no item has been completely accomplished. Some demands have been fulfilled in certain parts or half-fulfilled."

"But," Walesa says, "it would be strange if the authorities didn't sabotage us."

"The 1-hour strike on 3 October was a means of pressure to achieve the demands. We also have other effective means that can be used at the places of work in the country. And then I sit here in my chair and work, of course."

Lech Walesa laughs. He is very cordial the whole time and jokes a lot. It is even difficult to get him to give serious answers.

Delegations

"We have much left, but the struggle has been easier than I anticipated," he says.

A large group of people comes through the door. These are older workers from another part of Poland. A delegation which is to meet with Walesa. He talks with them for a few minutes, then out they go again.

All the time people enter and interrupt. If it isn't visitors it is colleagues or Walesa's secretary, a toothless older woman.

I get help from the bodyguard to conclude the interview. He tries to quiet the people in the room. I ask how many members the trade union has today.

"I don't know," Walesa says. "We don't have a calculator."

He laughs again.

I turn around and fish out my mini-calculator from the jacket pocket. I hand it to Walesa. As a present.

Walesa is thrilled and asks for instructions. Then he pulls out photos of himself and the Pope and signs them. He hands over the pictures, hugs me and tells Ewa to take a picture.

Then it's Ewa's turn to be photographed and Walesa kisses her cheek as I press the button.

After that the interview becomes orderly.

Organizational Problems

"We have 8-10 million members," he says. "It is difficult for the organization to take care of everyone. But since they want to belong they are of course welcome."

"So far everyone is part of the same organization. We will gradually divide the organization intc several smaller ones. The salaried employees separately, various professional categories among the workers separately. This will take 1 to 2 years."

"We have organizational problems. We look up to the unions in Scandinavia and want positive criticism and help from them."

Lech Walesa says that the economic situation for the workers had deteriorated in the last few years. It has become much worse in the last few months alone. Right now potatoes can hardly be found.

The average worker's wage is 5,000 zloty a month. That is 700-800 [Swedish] crowns, according to the normal rate of exchange. On the black market you get 5,000 zloty for only 200 crowns.

The members of the free trade union pay one percent of their wages to the trade union, Walesa tells me. Thirty percent of the dues will go for administration of the union, the remainder to the workers in various forms.

Poland Needs Help

I ask what role the old party-controlled trade unions are playing today. He waves his hands.

"They don't exist for me," he says.

How does the economic situation in the country affect the opportunities for realizing the demands?

"It is clear to me that Poland's economic situation is difficult. The country needs help in order to cope with it."

Walesa doesn't want to comment on the latest events at the top of the party. But to the question of what role the political opposition plays, he replies:

"We work together with the Workers' Defense Committee, KOR. We use some of their members in the work. It is good for the trade union and this is what we will continue to do."

What will happen next in the struggle?

"We will continue to strike for our demands. But it is wrong as has been written in the Western newspapers that we will go on strike on 20 October.

We have given the authorities that date as a deadline. Then we will take a stand on what we intend to do if they don't keep their promises."

When I ask about the Russian threat, he at first replies evasively.

"I don't see them either," he says.

The he leans forward and says:

"I don't believe they will come. To begin with, it is we who maintain order in Poland. We don't disturb the Russians. Second, we have too much support abroad for them to dare."

New groups of people enter the room.

The interview ends by itself. When Lech Walesa says goodbye to us my eyes fall on his lapels. On one lapel he has a picture of a Catholic saint. On the other a button with a U.S and a Polish flag.

How else would the coat lapels of a Polish labor leader look?

BEREZOWSKI COMMENTS ON DUPLICITY OF WEST'S POLICY

Warsaw TRYBUNA LUDU in Polish 12 Aug 80 p 6

[Article by M. Berezowski: "Detente and West European Strategy; Destructive Duplicity"]

> [Text] No one today needs to be persuaded that the dialog between the USSR and the United States is of fundamental importance to world security, just as it is not necessary to explain that of late the Americans are maintaining an aloofness in this regard. Thus it is increasingly important that lines of communication with Western Europe be kept open. Nevertheless, the duplicity in the policies of many West European countries is obvious. While maintaining an East-West dialog, they are also expanding their military operations.

As a result of the United States' interruption of dialog with the Soviet Union after the events in Afghanistan and the strong words directed towards the USSR during the American elections campaign, a distinct cooling in international relations has taken place. Under these circumstances, particular advantages to the detente structure existing in Europe appeared. Promotion of cooperation between both parts of the continent and maintenance of contact between governments had a positive influence on the situation.

The West European countries tried to convince Washington that obvious differences in viewpoints and interests should not block the path to a search for a way out of the impasse, to discussions and gradual agreements. When their arguments were rejected, they undertook a series of measures, with which their American ally reluctantly agreed. The meetings of France's president and the FRG's chancellor with the head of the USSR played a constructive role, as Leonid Brezhnev emphasized in his talks with leaders of the socialist countries.

The Credits

The USSR proposal on negotiations regarding the missile arsenal in Europe, which aroused Western interest, improved the climate of the Vienna talks

on reduction of armed forces and armaments in Central Europe. It is possible that a serious discussion on strategic weapons will begin when the United States elections are over.

Many West European countries would like to see the fall meeting in Madrid, which will be attended by the CSCE countries, i.e., 33 European countries, the United States and Canada, conducted in an atmosphere of calm deliberation. Efforts are being made to avert heated confrontations and to make this meeting the start of an expanded dialog.

There is talk in Western Europe about arranging a conference on military detente and disarmament in Europe. This coincides with a similar proposal which, as is known, emanated from the socialist countries. Poland suggests that the conference be held in Warsaw.

Some West European countries also put forth ideas in an attempt to change the American position. They advise acceptance of a broader plan of participation in negotiations on the subject of stabilization in the Near East and rejection of military solutions on Iran. They oppose the United States' deeper involvement in military supplies for China and warn against an abrupt playing of the "China card" against the USSR.

This is one column of the policy account of Western Europe, the "credits" column.

The Liabilities

On the "debits" side, the list is long.

Although many West European countries are concerned about whether they acted correctly at the NATO Council session last December in accepting the American proposal for forming a European strategic nuclear arsenal, the necessary preliminary work is underway. Although Holland and Belgium are wavering on whether to accept "Cruise" missiles on their land, because the NATO decision threatens a new arms race in Europe, other countries have assured the United States of their readiness to fulfill these resolutions.

The first to do this was the British government, creating a precedent being utilized by the originators of the new atomic system. Also, despite strenuous objections from the Labourites, this government has placed orders in the United States for the "Trident" underwater long-range missiles which will be placed on British ships. The purchases of "Tridents," replacing the "Polaris" missiles, will greatly increase Great Britain's nuclear capability. Even before this decision was made, the government increased its military operations: in 1979, the British military budget increased six percent, i.e., almost double in relation to growth of these expenditures in other European NATO countries.

The Acrobatics Requirement

The FRG government stipulated that it would accept American strategic missiles if at least one other NATO country in continental Europe did likewise. In view of Italy's readiness, this condition is not difficult to meet. Also, the FRG expanded its military involvement outside Europe.

First, FRG naval forces appeared on the Indian Ocean, assisting U.S. naval patrols. Second, on the basis of the NATO agreement, it will greatly extend its range of operations: heretofore the Bundesmarine did not operate beyond a 24-hour navigation distance from the Baltic straits. Now the FRG fleet will extend its operation range on the North Atlantic to the coast of Iceland, the Shetland Islands and Greenland. Third, the West European Union lifted restrictions on warship tonnages, placed on the FRG after World War II.

France, which since 1966 has not been a party to the military organization of the Atlantic Alliance but has cooperated with it, has begun to modernize and strengthen its nuclear capability. We learned recently that work on neutron weapons has reached an advanced stage, although no decision has been made as to whether these weapons will be used by the French armed forces.

Thus we have a situation in which many West European countries are concerned (to different degrees, of course) about the vitality of the fiber of political detente, while at the same time, using the increase in Warsaw Pact forces as a justification and often without regard to it, they are increasing their armaments and strategic operations on a broad scale.

A highly destructive duplicity results: the same governments which participate in the policy of detente, pull Europe backwards in the strategic field. Maintaining a security balance under these conditions requires acrobatic skills, but it is obvious that acrobatics cannot be perpetual.

CULTURAL PROBLEMS VIEWED IN LIGHT OF RECENT EVENTS

Poznan GAZETA ZACHODNIA in Polish 19, 20, 21 Sep 80 p 3

[Conversation with Feliks Fornalczyk, first secretary of the [POP] Primary Party Organization at the Poznan branch of the Union of Polish Writers, conducted by Z. Beryt: "Citizens' Concern over the Development of Socialist Culture"]

[Text] A great heated discussion continues throughout Poland with unabated force. The reform of the Republic is spoken of in all circles. The causes of the crisis are analyzed with the greatest zeal and are the subject of the most frequent discussion among the working class, particularly the working class concentrated in large centers of the key industries, who, at the same time, propose solutions to be incorporated immediately into life, through honest work, above all. But artistic circles are also making their deposit in the general bank of Polish thought.

The Poznan literary environment is not an exception in this process. What are the major directions of discussion? What in particular arouses the unrest and concern of the Poznan writers? What is the subject of their most important demands? These are the questions I put before Feliks Fornalczyk, literary critic, essayist and publicist who serves in the capacity of first secretary of the [POP] Primary Party Organization at the Poznan branch of the Union of Polish Writers. I shall present the crucial questions discussed in our long, frank conversation.

Problems in various aspects of our communal life have many times been the subject of discussions during meetings of the POP of the Poznan literary circle. In addition, for many years proposals, demands and suggestions based on our attempts at analysis have been formulated and may be found in the minutes of our meetings and other party documents. In each instance we relayed them to higher officials and state authorities. Unfortunately, most of them had no effect. Perhaps the opinion of such a small circle was not taken into consideration because it was thought that it was not representative...A significant number of the issues raised by us on various occasions have resurfaced recently with greater intensity. This has occurred because the working class has raised them, particularly the working class concentration in large industrial plants on the coast.

This great complex of issues of which the circle of party and nonparty writers in Poznan spoke with concern has been the subject, of course, of literary questions and books, but it has also encompassed questions of the state of the economy, market supply and guaranteeing the suitable means of subsistence for every working family, as well as for pensioners and retired employees. We have observed with

concern the symptoms of uneconomical management and waste, as well as the growing indebtedness of the nation to foreign countries, the sometimes senseless purchase of investment equipment and licenses for industrial products, which have not brought about the anticipated improvement in the economic and social status of the nation.

As the cricis symptoms have increased, various fields of intellectual and artistic life have become more and more limited, including the status of books and the social position of their authors. Of course, this does not mean that in the area of culture we have not recorded endeavors of lasting value. But real degradation, pushing cultural matters and needs into a corner, has been an increasing issue. Relevant demands issuing from an awareness of the situation and linked with the development of various fields of artistic and intellectual endeavor have been relegated to the sphere of promises or have found their way into file folders in various oversized desks in offices.

It is enough to call attention to the example of even the average number of books per inhabitant of Poland, which, according to comparative counts, puts our country in last place among socialist countries. Pertinent resolutions of the highest party unit and promises of the ministry projecting a reduction in the distance separating Poland from other countries of our camp have, unfortunately, not been implemented.

Recent difficulties connected with the economic crisis and with the lack of possibility to purchase paper and other raw materials indispensable for the production of books (paints, varnishes, and the like) have stood in the way of the improvement of our position in the field of book production. To this may be added the catastrophic state of the Polish printing base, for example, in Poznan. For years together with the Poznan printers and publishers we have demanded the erection of a new printing firm in our city; thus far our efforts have been fruitless.

Added to the problem with paper is the continuing irrational management of it. It is well known that the small portion of raw materials designated for the printing of literature which is at the disposal of the Ministry of Culture and Art is in use by other ministries. Accordingly, taking into consideration the matter of the limited quota of paper, we are led to the implementation of the demands of the circle, which aims at the establishment of priorities for those fields of writing which rest on the assumption that the workings of culture and the intellectual life are necessary. Thus, the priorities should be school and academic textbooks, indispensable readings in the process of teaching, and guaranteeing the development of literary production and contemporarily practiced literature. The problem of the selection of titles to be published is also important. We cannot have bookstores out of reprints of the classics and the works of contemporary authors which have passed inspection, as well as dictionaries, encyclopedias, and synthetic studies.

Within the circle of writers, the question of the various kinds of censorship applied by the Administration of Inspection of Publications and Spectacles has been undertaken for many years. It is well known that this very question was quite clearly elaborated in the texts of the agreements concluded by the government representatives and the striking workers of the coastal cities. We also spoke of

the problem of censorship more than once at party and union meetings at the ZLP [Union of Polish Writers] branch. We presented examples of nonsensical interference into artistic texts. We called attention to the fact that such fields, for example, as literary criticism or the history of contemporary literature are simply impossible to pursue as a result of the seal of silence on several contemporary currents of the literature of our country, and on several names of authors of the older and younger generation. And these limitations have encompassed disputes about the complex of subjects and events of several decades of the contemporary history of our country.

Thus, the status of the author who would have liked to treat various problems of our social and political life which are essential to our history in his writings is not an enviable one...Even though the call has gone out in official pronouncements to the creators of literature to deal with contemporary subjects and to treat political themes--which have had practically no opportunity to appear in print. The literary circle has even been subject to criticism on this account. But the critics have not taken into consideration the real imponderables of the workings of the contemporary literary life of our country.

Thus the complex of problems to which we devoted many hours of discussion at the last meeting of our primary party organization is not a set of new problems. I should once again like to emphasize the fact that we have been speaking of these problems with growing intensity and concern for many years, and that our demands in this area remained without an echo.

The system of guarantees which has been spoken of recently in all vocational environments of our country also creates the hope for the writers of our region that these demands will soon see their constructive and fruitful resolution. This is important for the cultural good of the nation, taken in its best sense, as well as for the stabilization of the moods which we observe anxiously in various workers' environments.

It is for this reason that, in the course of our discussion in the circle of party writers of Poznan, we have concentrated our attention on the indispensable elements for guaranteeing social stability. One problem relative to this is the honest and unprocrastinating attitude of state officials to the legal proceedings which are now taking place in the realm of the formation of new trade and artistic unions. Another is the problem of the creation of conditions for reliable information in the means of mass communication and of the facilitation of the possibilities for the exchange of thought on the pages of periodicals by the broader range of people given over to questions of the socialist future of our country. In the case of the Poznan circle, this relates, e.g., to the improvement of conditions of the publication of one of our sociocultural periodicals, NURT. Finally a third, extraordinarily essential point, the matter of the necessity of broadening the role of lower party organizations and the voices of the member masses and of changing the attitude to their demands and criticisms once and for all. This leads us finally to one proposition: to a reduction in the distance between the basic organizations and party units at the higher levels.

JOURNALISTS' AGGRESSIVE QUESTIONING CRITICIZED

Sarajevo OSLOBODJENJE in Serbo-Croatian 10 Oct 80 p 3

[Article by Petar Jovic: "The 'Bravery' of Newsmen's Caviling Questions"]

[Text] In Yugoslavia's field of journalism and public life one can recognize what might be called the circle of so-called brave newsmen. In conversations in which they put questions these "brave" newsmen of ours--who will be our topic here--actually want to prove that all the others are mute, pusillanimous, frightened and scared, that they "do not know" or "do not dare" to put the "right" questions.

Since we are talking about "well-informed" individuals--newsmen, they know "something else"--that foreign newsmen are "freer" and do not hold back from putting even "the most sensitive" questions.

And now these "heroes" of ours would like--directly and by their counter-example--to cast aspersions on those who put "pointless" questions. Since they are "ours," "natives," but, of course, above the average, brilliant and the like in both knowledge and bravery, they will put those questions which on the basis of the state of affairs in the past we might expect only from foreigners. What is the purpose and what is the objective significance of questions in these "frank," "free," "exhaustive," and "agreeable" conversations of the "former" and similar kind?

Not to dispute certain contributions to the processes of demystifying various phenomena, functions and tasks, relations among people and social groups, we must state clearly at the outset: it is incomprehensible that such questions could appear at all in our public media. After all, they are foreign in the true sense of that word both in view of their purpose, their character and their undertones as well as in their number. They are foreign above all in their recognizability and at times even by their aggressive bourgeois or liberalistic commitment. This is unquestionably the most general description that can be applied to all the examples we have in mind.

How otherwise to understand questions which are persistently put, which vary in the variety of follow-up questions, and in which actually theses and theories are set forth whose origin and purpose we are aware of? For example, that every nationalism is not equally dangerous, that there are those "nationalistic actions" which have been more dangerous than others? Or the "question" about the different inclinations of the various religions toward the development of socialist self-management? Exploration of the essential differences in the behavior of the various churches in particular intervals of our more recent history. These "questions" contain a plea for a differentiated approach to the various nationalities (!?), and the "courage" does not fudge even when the conclusion is framed (!): "Does that mean that we therefore must be tolerant in a way toward nationalism?"

Tones of an Orchestra

Such questions undoubtedly represent the most serious case, but we should emphasize that they are only one of several examples we are referring to. That is, somewhat milder questions have been published in certain of our periodicals and have been (even with some answers) the subject of public criticism. We emphasize, our criticism pertains to all of them, to all the questions of the "brave" newsmen in which there is recognizable that same liberalistic and bourgeois tendency of refractoriness, of privatization of newspapers, of banalization and vulgarization of serious social issues, of experimentation with the past and of hypothesizing the future, and so on. Hand in hand with this goes the reckless pursuit of larger circulation, cheap popularity, paid for, of course, with society's expensive money, and of easy earnings. It is in this, then, that our quasinewsmen actually go "furthest," and not in bravery, knowledge, eloquence and resourcefulness, as they suppose and believe. The varying intensities of this tendency and the tones produced by this orchestra, the seeking of shelter behind various institutions and the use of positions on newspapers cannot conceal the essential intonation that runs through it all. We, of course, do not doubt for a moment the good intentions of some of these "newsmen," but we are pointing to the objective significance of their caviling questions.

It is well known that in spite of such far-reachingness, garrulousness and bravery, those true, essential and if you like even sensitive questions of our society find no place in the notebook of our newsmen, that is, they never occur to them.

Though here we are analyzing only the questions, that is, the motives and aims of the "fearless" newsmen, we should say that the answers to these and similar caviling questions are by and large correct. We can also understand the readiness of those they are interviewing to enter into an exhaustive and obviously provocative conversation, but we would mention that it is not difficult to conclude that they were unable to resist the aggressive "newsmen" and to calm down their vehemence.

The answers given by the League of Communists of Yugoslavia, which have been given by all our progressive forces, concerning relations between the nationalities, concerning the sources of nationalism and other delegate questions, are, as is well known, axioms of our reality, of our community life, of our present and of our future. This, of course, does not mean that there is nothing left to talk about concerning them. But certainly not with questions of that kind, which are provocative to say the least.

Threshold of Inside Knowledge

It is certain that we need more conversations, that we must both as newsmen and other public figures learn quite a bit more, both how to converse and how to ask questions and also how to listen carefully to the person we are talking to, how to give him an occasion to speak, to elucidate his ideas. But those questions which are referred to as the most delicate undoubtedly require a more open and broader discussion. That kind of discussion, however, is not only desirable, but it is indeed a reality of our authentic and deep democratic processes.

Some questions can, of course, be examined more broadly and frankly even in interviews or conversations, and there is nothing unclear about that. That is, in criticizing certain questions we do not wish to diminish the value of interviews in general and to dispute the important place they have in news activity as a whole.

Aside from the essential and meaningful aspects we have talked about, the questions in the interviews that go "the furthest" strive to break records even in their length and not merely to cross what have in the past been the thresholds of inside knowledge (authentic) and courage. What is the basis of the frightening number of these questions? This "unfortunate long-windedness" is an expression and a result of the ambition of the "bold" newsman to have the last word himself, to use his questions to state, construct and round out his own theory, his own vision, to extort from the person he is interviewing at least some sort of confirmations of his own theses.

What is the objective meaning of questions in which more nationalism of a more dangerous variety is sought first in the smaller ethnic groups? When an affirmative answer is not forthcoming, this extra amount is sought in the economically less developed, and this formula is suggested: the lower the level of development, the more nationalism there is, and then to drag in the epithet of the "deprived" ethnic group. Sometimes the attribute "primitivism" turns up. All of this, however, is not enough, and other ways are used, by a series of follow-up questions, to check out assertions that the large nationalities, those which are more advanced and more civilized, carry a smaller burden of nationalism. It is a question, then, of making certain in any case, of checking out the thing from several angles.

"Privileged Positions"

Though it is not our purpose to enter in polemics with those questions and to expose their objective significance by citing the judgments and positions of the LCY, that is, of the theoreticians and strategists of our socialist revolution concerning relations between the nationalities, we will recall that in examining the large differences in economic development of the various parts of Yugoslavia E. Kardelj did among other things point out the nationalistic tendency behind the "privileged positions of this or that ethnic group." Kardelj warned of the harmfulness and danger of a tendency "that would attempt to conserve differences in level of development of the various regions of Yugoslavia or to underestimate them and leave them to spontaneous development." The socialist forces must combat with ideological and political means all forms of nationalism and chauvinism, and also, within that same framework, Kardelj said, "nationalistic and other egoistic tendencies that arise ... in the advanced republics and aspirations for privileged economic positions...."

Our readers are not unaware as to which nationalities in the Yugoslav context are "large" and which are "small," nor are they unaware of whose arsenal uses the descriptions "primitive" and "deprived."

The prurience and curiosity that use the terminology of those forces which cannot reconcile themselves to our theory and practice in the domain of relations among the nationalities cannot lead us to any sort of clarification or to anything good.

Our "knights without fault or fear" even go out of their way to suggest the notion that opportunism has more to do with the former revolutionaries who "have set out on the road of nationalism or chauvinism" than deep personal belief! Who is this supposed to justify? Does the essence of the thing lie in that? Against whom and whose judgments is this kind of polemics directed?

"Advocates and Adherents"

Why do the questions of certain "brave" and eloquent newsmen in Yugoslavia represent a false bravery, why are they defective? It has to do with nationalities and relations among them, and they insist on the question as to where there is more and where there is less nationalism. We cannot avoid the conclusion, then, that some are being accused and others defended either intentionally or involuntarily, but recognizably. In both cases, however, this is unacceptable as a tendency and especially as a position. This is a distorted approach to the nationality, since its point of departure is that of those members of the nationality who, as we know, are working most directly against its real interests.

Moreover, no nationality needs advocates and adherents who want to argue that that nationality has less nationalism. On the other hand, it is unacceptable in any manner and for whatever purpose, even though it be a desire

to make the interview "frank," "more interesting," and the like, to examine relations among the nationalities exclusively in terms of their negative characteristics, that is, in terms of the bad side.

It is also incomprehensible that the concepts of economic equality and community spirit never crop up in such questions. Yet there is no accident in this, and this is the best proof of the unhistorical, metaphysical and bourgeois approach to the sources of nationalism. This kind of curiosity and caviling questions about relations among the nationalities and about the sources and forms that nationalism takes obviously sees nothing relevant in questions concerning interest--economic, cultural and others--of the working class, about the struggle for socialism, for socialist self-management, for equality, particularly economic, and about the resistance that is being offered concerning these matters.

"Peeking at the Past"

Even with respect to certain purely external features the questions in the these interviews are petit or more accurately grand bourgeois. It is no accident at all that expressions turn up in the questions like "poking around," "peeking at the past," "what would happen if," and the like. In the face of cautions by those they are interviewing, our "brave" men continue with undiminished persistence to vary their questions and their theses concerning certain social topics. Embittered by numerous "incompetents," "scaredy cats," "cowards," and the like in the past, and obsessed by their own "resourcefulness" and "courage," they make an assault with their questions and do not give up even when the possible serious adverse consequences are made known to them.

The true source of their loquaciousness and curiosity, their undisguised intention to "get under the skin" of the person they are interviewing, and through him certain others as well, is certainly not always and exclusively of a personal, egoistic or even a professional, news-gathering, journalistic or other similar nature. In essence and objectively it is sometimes a question of revivals of bourgeois consciousness which in this way is attempting to nourish itself and of a tendency to turn back not only the debate, but even time, history, at least by poking around and going on about imaginary experiments with the past and by posing problems of the future in a manner that is barely disguised.

Since the sources that favor the survival and reproduction of bourgeois consciousness are still a reality that cannot be eliminated, it is also certain that the "noble" mission of the "courageous" newsmen does not go without a certain quiet applause. Their task is not at all easy, that is very clear and evident. After all, they are not "toiling" just for themselves. They are performing a substantial part of the job and taking the place of possible curious foreigners, but also on behalf of our internal and domestic foreigners, whose unfamiliarity with certain things in the development of this society and whose questions and whose caviling--contrary

to the theses of their spokesmen--are not psychological and are not aimed at obtaining knowledge, but are above all of a political nature.

The essential motivation and interest of the loquaciousness, curiosity, resourcefulness, and "courage" of our quasinewsmen is, then, petty political activity, paternalism and the role of a self-styled guardian angel. The common denominator and headline that runs over all these questions might be, to put it most mildly: beyond all measure.

RIOT AT PRISTINA SOCCER STADIUM DETAILED

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1553, 5 Oct 80 pp 28-30

[Article by Zvonko Simic, Milan Milosevic and Milisav Krstic: "Riot Against Soccer?"]

[Text] Yugoslav soccer has a rich tradition of disturbances at games, but what happened in Pristina the week before last at the match between the Pristina club and Teteks of Tetovo never occurred before in matches in the first and second leagues. NIN has attempted to shed light on this event and to place it in context with events at soccer stadiums elsewhere in the country and indeed in the world. We have attempted to get to the roots of these irrational and sometimes fatal incidents which have become a constant comcomitant of soccer affairs. We talked in Pristina, Tetovo and Belgrade with several dozen participants and witnesses of the soccer drama in Pristina which at certain moments could have become a tragedy. Perhaps there is no true, simple and direct explanation for what happened. We hope that all our conversations at the three key points can cast the events and the causes in a sharper light.

First about the event in the strict sense.

Pristina, the soccer team, was leading 1-0 when at the very end of the match the referee Radovan Joksic of Obrenovac called for a penalty kick, a call that was debatable at the very least. As has become the rule on our soccer fields, none of those whose responsibility it was to see what happened either confirmed or disputed the correctness of Joksic's call--neither of the two assistant referees, nor the umpire. At least that is what they said in their official reports.

How It Began

Bogdan Vukovic, the game's delegate, who was not called upon to evaluate the calls of the referees, says that there was no foul. In any case 12,000 spectators were convinced that the referee had intentionally deprived them of the joy of a victory. The umpire Mioljub Petrovic gave the referee

Joksic a 1 [a failing grade--translator's note], but he explained that he did not do this because he had called the penalty kick, but because the referee had not stopped the match when members of the Pristina team began to haul him around the field demanding that he change his call.

The real volcano erupted in the stadium at the point when the Teteks player Cupi shot a goal from the 11-meter penalty line. The Pristina players began to chase him around the field, and the referee whistled the end of the game and himself ran toward the runway that leads to the lockerroom under the stadium. Perhaps it was that flight which encouraged the fans to rush out onto the field.

A mutiny began in which it was difficult to recognize who was delivering and who was receiving all the blows. It is precisely those moments that were recorded in the only two photos we were able to find. In those photographs one person in uniform, probably a policeman, is calmly watching what is happening. On the field there were 13 policemen on duty and approximately the same number again in the grandstand, we were told by people in the city's Socialist Alliance. It is not clear why they were not effective in protecting the referees and the visiting players. The attempts by NIN's newsman to get an answer to this question and to others were in vain. At the moment when this issue of NIN was being put to bed, 10 days after the event, the public still had not been informed even about the number of those arrested for disturbing the peace. Yet Yugoslav readers were informed--just 2 days after the event--that following similar disturbances in Athens some 30 troublemakers had been arrested there.

In the principal and supplemental reports of the match the head judge described the events in two contradictory versions: in the first, which went into the report written at the stadium itself, the referee said that Dimovski, the coach of the home team, had protected him from the enraged spectators (this was also stated by eyewitnesses in Pristina), but in the supplemental report (from the City Hospital in Belgrade) he said that the coach Dimovski held him in the runway while two ushers beat him and broke his rib. He also said that a policeman who was there also hit him. He explains these and other essential differences between the first and the supplemental report by saying that he was allegedly coerced to put into the official report only what suited the people there in Pristina.

The commission responsible for matches of the association of the clubs in the Eastern Group of the Second Federal League did not for all practical purposes take his supplemental report under consideration, and the delegate of the match, who was present when the report was written at the stadium, said that referee Joksic dictated his report to the Pristina secretary Milan Dutina without any sort of pressure.

The Teteks coach Zoran Colakovic says that some of the ushers attempted to stop the referees and the Teteks players rather than the spectators. The door to the lockerroom was locked. In those dramatic moments, Colakovic

says, real hell broke out. We were beaten not only by the unrestrained fans, but also by the ushers responsible for stadium security. Some of our players broke the glass in the door of the lockerroom (that must have been Memeti, whose hands were cut).

NIN has learned unofficially from circles other than the police that six troublemakers are in jail and that during the game two Teteks fans were also arrested and then released after interrogation.

Blagoje Kostic, president of the Pristina team, told NIN's reporter that during halftime those two threw some object at assistant referee Popev (an ear of corn, a stone or bottle, or a flashlight--there are differing interpretations of the event), from which the conclusion is drawn that this should have been a reason for stopping the game in Teteks' favor. Popev, the assistant referee from Skopje, has declared that he insisted that the head judge not stop the game.

Enraged Fans

Thus the Teteks players nevertheless managed to get into the lockerroom and barricade themselves. Their coach says that they are all of them deeply grateful to the Pristina players Trajkovic, Josifovski and Rajcevski, who "practically intervened with their bodies in order to protect us from the enraged fans."

One group of fans headed for the Grand Hotel, that imposing edifice about 400 meters away. Their anger was turned against the people from Tetovo--one car with Tetovo plates was turned over, several others were damaged, they tried to set fire to one but did not succeed, they broke the windows of the bus the visiting team came in, they also attempted to turn it over, but unsuccessfully. Summoned by walkie-talkie, the police withdrew from the stadium and concentrated in front of the hotel. The stadium emptied, and the gates were closed.

Perhaps 100 young people, perhaps more, went back to the stadium looking for the referee. According to the stories told by people from Pristina, they armed themselves along the way with sticks and rods from the construction site of the athletic center which is located between the hotel and the stadium.

In the meantime the referees and officials left the lockerroom and went off with members of the administration of the Pristina Soccer Club to the rooms belonging to the club at the goal line under the west stands, which has one wall of glass that looks out on the field.

As the report in dispute was being written there, the troublemakers broke into the lockerroom where the Teteks players had remained; using a lever, they bent the bars on the window.

The players withdrew from the lockerroom into the showerroom, leaving behind their things and equipment (NIN's reporter came upon a bag all torn open that was still there, everything else had vanished). Nor did the door of the showerroom hold. The equipment manager of the Pristina team says that he hid the Teteks players in an equipment storeroom 3 meters long and 2 meters wide. The troublemakers shattered that door with an ax.

In a way these moments were the culmination of the drama, at least for the Teteks players. One of them sobbed out loud, "Surely you're not going to kill us over a ball?" The troublemakers were particularly looking for Zimer Cupi, who had scored the goal on the penalty kick in the game. Cupi said: "The one with the ax wanted me to explain why I didn't miss the penalty kick. I begged him on my knees to spare me and my comrades."

In the end the offenders went first for the referee. When they didn't find him, they went on to the offices of the Pristina Soccer Club, in the upper corner of the west stands.

Zoran Tasic, Miodrag Savic and five other players from Tetovo did not dare to leave the stadium, fearing they might be lynched, so they hid in a pile of iron and boards underneath the stands. Mirko Petrov, one of those who withdrew, said that he was rescued by Karabeg, Pristina's assistant coach. "I set off to look for the Teteks coach and I saw that some 50 troublemakers had surrounded Petrov in the street and beat him. I bundled him into the car and went off home," went Karabeg's version.

The official representative of Teteks, Bogdan Dejanovski, said that as he was leaving the stadium with the delegate of the game and a member of the administration of the Pristina team he came upon a crowd of people which began to ask them who they were and what they were, and while delegate Vukovic was explaining, "I fled to a [illegible]y house. In the courtyard a car was parked, I slipped underneath it, so that the small group of young men who were chasing me fortunately did not find me." Dejanovski added that later in the Grand Hotel he was with a small group of players and members of the administration of Teteks, that at about 2230 hours they left Pristina, but leaving behind six players, the assistant coach and one member of the management, whose fate they learned of only on Monday morning. The other members of the expedition from Tetovo returned to their homes during the night each on his own, by taxi, by bus or in some other way.

Many members of the administration of the Pristina Soccer Club attempted to protect the guests from Teteks as well as they knew how and as well as they could. The club's director Zecir Govori was injured when he was attempting on the stairs in front of the entrance to the offices of the Pristina Soccer Club to stop a group which had set off to settle accounts with the referee once again.

Between Vandalism and Lynching

"They simply walked right over me," Zecir Govori told our newsman in Belgrade in an intermission during the session of the commission for games of "his" league. Zoran Tasic, a Teteks soccer player, said that he saw him lying on the concrete.

Milan Dutina, secretary of the Pristina Soccer Club, showed the NIN reporter the corner in which the referee Joksic hid when the stones began to fly. "I also tried to hold them back, they pushed me away, and they knocked referee Joksic down into the corner and beat him."

The assistant referee Andreja Antic said that he also received blows at that time.

In the opinion of the victims the police were slow in coming. Milan Dutina said that they called the police from the stadium, when the last wave came. Apparently it seemed that the heart of the struggle was in front of the Grand Hotel, where a crowd had gathered. That was also the assessment of Mehmed Mustafa, president of the Socialist Alliance, whom we talked with. In any case the event went far beyond the domain of athletics, ranging somewhere between vandalism and lynching. Not only did the property of the referees and the Teteks players disappear from the lockerroom, but the offices of the Pristina Soccer Club were also ransacked, soccer equipment disappeared, and one of the offenders was seen putting a telephone under his coat. The immediate damage suffered by the Pristina Soccer Club is estimated at about 40 million dinars. The nonmaterial loss is practically beyond assessment.

Differing motives are always crisscrossed in this kind of explosion of resentment and violence. It seems that the Pristina incident was above all a rebellion against soccer and all the dirty games, whether they have to do with the judges, scandals or whatever, which have been part of it for years now.

Mehmed Mustafa expressed the unanimous opinion of people of Pristina about the nature of the event when he said to NIN: "There weren't any nationalistic or any sort of other slogans at all except those against soccer."

In Pristina Joksic's refereeing of this game is referred to scandalous, and they add along the same line that the referee was not merely a victim of the rage of the most aggressive fans, but in fact the one who started it all. Sensing that the temperature of the spectators was rising dangerously, one public prosecutor was told by a friend, half in jest: "Go down on the field and arrest the referee." "There's no evidence," the prosecutor said. "You have 12,000 witnesses, isn't that enough?"

Yet this version would be much more convincing if the visiting players, visiting fans and even the home club Pristina had not also been victims of the attack.

If we look for prior events which contributed to the explosive atmosphere, we should remember the notorious game on the same field against OFK [Youth Soccer Club] of Belgrade, which decided whether OFK or some other team would go up into the first league. Aside from their dissatisfaction with Abdulahu, the referee, on that occasion the fans also bared their teeth to their own club or at least to certain of its players. They demonstrated that they do not believe that even their hands are clean.

Djemal Hasani, president of the Kosovo Soccer Federation, feels that the rebellion was caused by the pent-up dissatisfaction of the spectators because of a series of games on this field where the refereeing was biased. The public has gotten the impression that the "referees have turned against us." The Kosovo Soccer Federation pronounced penalties at the end of the last championship. Had that orientation been adopted everywhere, Hasani said, I am convinced that we would have a better situation in soccer.

A Tough League

The Pristina Soccer Club until recently had a small public, no more than would fit into a theater, says Safet Preka, secretary of the SIZ [Self-Managed Special-Interest Community] for Physical Education. The city has grown from 15,000 in 1945 to a population of 120,000. On coming to Pristina people continued to root for the teams from the places they came from--those from Kosovska Mitrovica for Trepca, those from Djakovica for Vlaznimi.... But recently this public has taken up ambitions of getting into the first league, and they have a firmer emotional attachment to the Pristina Soccer Club.

The Eastern Group of the Second Federal League is supposed to be a "tough league." The competition here is among several teams from cities of similar size which have grown up very rapidly in demographic, industrial and even financial expansion. Tension runs high at all the games among the principal rivals.

It is a fact that an "excessive number of spectators" have already been attending the soccer games in Pristina. It seems that the team has the largest attendance at its soccer games in the league.

The people from Pristina are particularly upset that it looks as though they are poor hosts. The sacredness of hospitality, well known in the regional folklore, has still not been erased by urbanization. Even a waiter in a restaurant will not let you pay the check if you sit down with a friend who says: "He is not from here." He will collect from the friend. And those who are knowledgeable say that in Albania the same word is used for guest and friend.

The fact that the Pristina players Josifovski, Trajkovic and Tajcevski were suspended in a meeting of the commission for games of the "eastern group," because they attacked the referee when he called a foul also belongs among

the special irrationalities of the Pristina drama; the same three players also turn up in the statements of the people from Tetovo and the men who rescued them at the sacrifice of their own skin. Several soccer players had come from Teteks to play for the Pristina Soccer Club. The coaches of the two teams were once on the same team. And after everything that happened, the representatives of the two teams and with them the entire commission for games--at the meeting in Belgrade 6 days later--devoted incomparably more attention and time to the dispute over whether the referee whistled the regular end of the game or cut the game short than to the causes of the unfortunate event. One point more or less in the standings overshadowed the essence of the matter on this occasion once again, overshadowed the essence of the game of soccer and of wholesome relations and athletics in general.

Like a Member of a Religious Sect

Milenko Karan, a psychologist, says that you cannot expect a fan to be objective. The very word itself means [in Serbo-Croatian] that he is wound up, and he behaves like the member of a religious sect.

Sometimes it is even worse than that, he is like a member of a belligerent in a war.

On 26 March 1978 this journal wrote: "Fortunately we have not had in Yugoslavia what has already become customary in England, Italy, and the countries of South America--mass skirmishes which move from soccer stadiums into the streets of the city...." Unfortunately events have betrayed us. It is a "brief schizophrenia," as one psychiatrist refers to the behavior of soccer spectators, that caused the fierce incidents in recent years at the games in this "tough league" to which Pristina and Teteks belong.

To continue with the terminology of psychiatry, the stadiums are "doctors' offices for group abreaction of urban aggressiveness," or, if you like, the "largest psychiatric clinic in the world."

In the urban anthill which imposes restraint and self-discipline, beginning with the job, including municipal transportation, and ending with the ban on "walking on the grass" in the city park, people seem to be looking for a place where they can let themselves go. They find it unfortunately in the soccer stadium.

Last winter during a game between the city rivals Roma and Lazia in Rome, a Roma fan fired an antihail rocket (!) on the Lazia fans on the other side of the field who were clustered around a banner; it injured a Roma player and killed one person whom it hit directly in the face.

Should we be content that nothing like that has happened in our country?

If under certain circumstances a contemporary stadium can become a "temporary madhouse," the kind of soccer we play and the kind of soccer we watch contribute to this. Judging that is biased and even bribed, scores agreed on, games fixed, and a war over a point in the standings in which there is no shame and no restraint multiply many times over the explosive effect of a stadium crammed with between 10,000 and 15,000 spectators. Nevertheless, a cleaner soccer would be the best pledge to keeping the curve of such incidents from rising any more.

LIES BY JOB HUNTERS FOUND 'JUSTIFIED' IN COURT DECREES

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1552, 28 Sep 80 pp 24-25

[Article by Vuk Draskovic]

[Text] Is every lie immoral? Aren't we forced at times to lie? And finally, how are we to take a court decision which directly or indirectly sanctions the right to falsehood?

First of all, a few concrete examples. Neither embellished nor dramatized: simply randomly chosen from the reality in which we work and in which we live.

Why Not Tell the Truth

First Case. An unemployed young man answers a want ad for which he meets all the conditions sought: he has senior postsecondary specialized training, he knows English and he has no medical problems. He learns from a friend, however, that applications will not even be examined from those who have not resolved their housing problem. To put it simply, this does not pay from the collective's standpoint. The young man resorts to cunning and assumes "full moral, financial and criminal liability" by stating that he has a privately owned apartment and is permanently taken care of in that respect. The way it actually worked out was this: the lad was hired and soon submitted an application to obtain an apartment. In the collective the alarm was sounded. Some demanded that he be discharged for having given false information, while others said that in line with what he wrote in his application, his housing question "should be regarded as resolved." The second view prevailed, the "liar" was not fired, but his right to housing was taken away from him. Had the deception been discovered during the proceedings to fill the vacancy, it is almost certain that he would not have been hired.

Second Case. A woman wrote in her application that she has two children and that she will not have any more. She also did this after certain indications that the commission was reluctant to hire pregnant women, both

present and future, because of the long childbirth leave. She was hired, and in 7 months she gave birth.

Third Case. In competing for an editor's position in a publishing work organization, an applicant said that he was a member of the LCY [SKJ]. He assumed this would "help him along." It later turned out that he had never been a member of the party [LCY]. But actually he was rather clever and explained that he hadn't lied at all, because he actually was a member of the Federation of Yugoslav Writers [SKJ].

Many other variations of these and similar deceptions are possible and occur in practice. For example, for a worker to say there are six members rather than three members in his family so as to obtain a larger apartment and get it more quickly, or to "assume full liability" and state that because of dampness in his dwelling the children have gotten chronic bronchitis, and then after he has moved to a new apartment it turns out that he doesn't even have any children.... The question is this, What is to be done then? Fire him, declare the competition unlawful, deprive people of their right to housing, or simply throw up one's hands in the face of this deception?

Judges Are Protecting "Immorality"

In examining a similar appeal by a worker from Nis, the Constitutional Court of Serbia decided in principle that a provision (Article 50) of the Social Compact on Employment in that opstina was unconstitutional and unlawful: that article says that a person shall be dropped from the competition or a decision already made shall be annulled if it turns out that to obtain a job more easily a worker has concealed something about himself or his family or has given inaccurate information. The bodies of self-management, the court said, are required to act on the basis of the real situation, that is, the truthful one, and not that which a worker inaccurately stated for this or that reason. In other words, regardless of what he wrote or stated, he cannot be deprived of his right to housing if he actually does not have a roof over his head. Much less can he be discharged for this or some similar reason and thereby deprived of the right to work which is guaranteed by the constitution.

In ruling on a similar case the Serbian Court of Associated Labor (decision dated 18 June of this year) explicitly said that "the furnishing of inaccurate information in an application for an apartment cannot affect a worker's right to participate in the allocation of apartments." Otherwise, by the same logic and because of petty "deceptions," his right to personal income might be infringed, and that in and of itself is absurd and unthinkable.

As we see, the judges have had to overlook this falsification. But a lie is a lie regardless of how serious it is or what its motives were. So, however unenviable the real position of the unemployed and subtenants, it is difficult to conceive how such cases can be given society's blessing.

But the problem has two sides. People are compelled to distort the facts in order to obtain housing or a job more easily because circumstances have driven them to this means of obtaining something which they are otherwise entitled to without any sort of inventions and deceptions.

It is first of all unconstitutional to make hiring conditional upon the applicant's possession of housing or renunciation of motherhood. Or to make it conditional upon membership in the party, or to make it conditional upon presentation of a certificate on permanent residence in a particular town or region.

First, certain comrades obtain jobs and apartments, then they raise their children and all of a sudden on behalf of "stewardly" business operation, they have thought of depriving others of what they themselves possess.

Looked at from this angle, the judges have made the only possible and fair decision.

ANONYMOUS EX-CONSCRIPT DESCRIBES EXPERIENCES IN ARMY

London NOVA HRVATSKA in Serbo-Croatian 29 Jun, 13, 27 Jul 80

[29 Jun 80, pp 15-16]

> [Text] A young Croatian living in Yugoslavia has secretly sent to the editors of NOVA HRVATSKA a report on his time in the Yugoslav Armed Forces, from which he was recently discharged. Only those details which might expose the author have been altered in the text.

There were only a few soldiers with puffy faces and glazed eyes in the dirty little train station of a town in southern Serbia. They had obviously had quite a bit to drink. Their caps were pushed back on their heads, and they had their fingers stuck in their notched belts, so as to make them prominent: each "notch" represented a month spent in the army. Their bayonets hung from their right hip and bumped against their bodies, which were keeping their balance with increasing difficulty....

The brakes screeched loudly and the worn-out cars whined as the train finally came to a stop at the first platform. The group of young men left the train hesitantly and cast frightened looks in all directions.

The sun was resting on a distant hill, and the heat mixed with the stench from a nearby toilet which had been built who knows when. Garbage and trash represented the first picture of the town we had just arrived in.

"Come on, lizards, let's see where you will be assigned," the half-drunk soldiers called out. "Recruits with the military post office number 7356/2 over here!" ordered one of the soldiers, who had two red stripes on his sleeve, referred to as "slashes" in military language, which meant that he had the rank of corporal. Beside him stood a tall lad with one "slash." He was a private first class. I assumed from his speech that he was from the south.

"Is there anyone from Kljuc?" the private first class asked, but no one spoke up. "So, no one from my home town," he said in answer to his own question.

"Fine, lads, let's get started: first, turn over whatever alcohol you have! You can't take it on the post! But we still have time ... here is a bar, and we'll wet our whistle a little bit.... You, lizards, once you pass the gate, you won't be out again for a month if not more...."

The corporal just laughed and turned without a word toward the bar, which was three or four steps from the toilet. We recruits, numbering five or six, went into the "Trainman" bar without a word. Only the fellow from my home town showed any signs of cheerfulness. "We're lucky to be at the same post," he said with relief.

There were only a few tables in the bar at which some other recruits were sitting along with a few soldiers, and there was the fat bartender with a red face, with a mustache over his thick lips, who was gasping for air it was so stifling. Swarms of flies were almost the only vital signs in what was almost a still life.

When we sat down at a table in the corner near the bar, the fat guy came up to us and asked: "What will you have?" The soldiers ordered rum and coffee, and the recruits Coca Cola. "Afraid, huh? Today you could drink something stronger...," the corporal said, poking fun at them. I ordered a Badel cognac, but I had hardly got out the words when the fat guy drew himself up like a gorilla: "Hey, you, where do you think you are? We don't have that here. Listen, fella, you can have Prokupac or Navip, and if you want wine, there's Colt's Blood, Tsar Lazar...." "Thank you," I interrupted him, "I still have a little grappa in my bag, and that will be enough for me...." "Want a glass?" "No, thanks, I prefer it from the bottle...."

"Are you a Dalmatian?" the corporal asked me. I swallowed my saliva and reluctantly said: "Brdjak."

The corporal bragged to the others: "Today this is my 14th rum with coffee, but come on, boys, let's drink this grappa so as not to throw it away, or this bear of a man will sell it if we leave it here...."

"So we're from the same region," the corporal went on to say, "I'm from Capljina myself. Better for you to put that back in your bag, and we'll have a few swigs along the way...."

The First Night in the Barracks

The post was quite far from the railroad station. We walked a good half a hour to the other end of the town. It had already gotten dark; moonlight and a sky full of stars. A breeze that came from the mountain drove away the heat of the June night.

At the entrance to the post the corporal offered what was left of the grappa to the sentry, who was happy to take it and greedily swallowed down a good

swig. We headed for a nearby building, and the corporal remained with the soldier on guard duty to finish what was still left in the bottle.

From the "gate," for which they used the Turkish word, it was about 300 meters to the barracks. In front of me there was a high one-story building which had obviously once been the mansion of some rich man. We entered a broad corridor where there were two soldiers, one at one end and the other at the other end of the corridor. Wrapped in their military overcoats, they looked a little like ghosts.

The thick walls of the old mansion were full of dampness and cold--in the middle of summer. Against the wall there was a "rack" for a "modern" weapon--an M-48 rifle, the "Kragujevka [that is, manufactured in the arsenal in Kragujevac], such as no one else in the world has," I was to learn later from the officers. There were also two machineguns, so old it was difficult to determine when they were made. The recruits quietly whispered to one another: "Which one will we get?"

There were four doors off the corridor. We came to the last, near the bottom of the staircase. Over the door was written: "Welcome, comrades and soldiers," but beyond the door we were awaited by a real welcome such as it is difficult to imagine in any civilized country: the recruits were lying on old mattresses, fully clothed under the blankets, which probably had once been horse blankets when the cavalry still existed. The heavy odor was almost intolerable in the stifling room.

My neighbor Ante took the bed next to me. For a long time we could not go to sleep, and we talked quietly until we left each other each to his own thoughts. In this black and stinking darkness many verses about freedom constantly come into one's head.

It seemed to me that I had not slept an hour when sweet-smelling bodies began to hop over me. It was 0500 hours. A figure at the door screeched: "Get up, soldiers!" Some soldiers, I thought.

"Hold it there, fella, where are you going! First you make the beds, then you wash up, and only then you go to breakfast!" I lay there a bit longer and looked at the bustle around me. "And what are you waiting for? Mama's not gonna bring you your breakfast in bed here!" "Take it easy, friend, there's no hurry!" I retorted and refused to hurry. When I passed in front of the corporal after washing up, he said through his teeth: "You, just wait till I get my hands on you...."

I went back into the dormitory. Absolute chaos. Some were looking for their shoes, others their jackets, still another bewailing his missing bag or money. "The old hooks" (soldiers who had served longer) had come into their own and had gathered up booty. They would soon be going home, so they were making sure they had civilian clothes....

I looked at these beardless boys, who looked like lambs in a sheep pen surrounded by wolves. This was to be their first experience...!

Finally breakfast time came. My friend Ante was next to me in formation, and the older soldiers standing around called out to us: "Lizards, things with tails, you'll never last to the end," and they stamped with their boots on the crumbling and cracked concrete as though they were stamping on someone's tail.

The unpleasant smell from the place that bore a sign saying "Mess Hall" struck us from the very entrance. Breakfast consisted of a little piece of bacon the size of a matchbox, a little cup of tea and a small piece of bread. Few of the newly arrived recruits ate anything. The tea had almost no taste, and the bacon was rancid. At the table were my friend Ante and I and three young Albanians. When the Albanians saw that we were not eating our bacon, they asked in broken Macedonian what religion we were. "Catholics, Croats," I answered. "We have Catholic Albanians at home. They root for Dinamo or Hajduk," one of them said to us confidentially. They were glad to see we were not eating the bacon, and when we told them that we also root for Dinamo and Hajduk [soccer teams of Zagreb and Split, respectively], there was a warm atmosphere at our table as though we had been friends for years.

"Hey, you Shiptars! Send that bacon over here if it doesn't smell good to you!" someone from a neighboring table shouted. The Albanians gave him a dirty look and only muttered through their teeth: "Chusha nona!" (Albanian curse)

We left the mess hall together. We formed up on the path and then went off for haircuts, baths and the issuing of uniforms. The trousers I got were too large, and I tried to exchange them, but the captain overseeing the issuing of clothes and military equipment shouted at the top of his voice: "OK, everyone out! What are you thinking of, buddy?!" I wasn't thinking of anything, everything was clear to me already....

After that a corporal took me to my unit and told me: "Your unit is called 2/3, which means second battalion, third company. Pick one of these bunks. Upper or lower?" (They were double bunks.)

I laid out my clothes in the wooden cupboard which in "professional" military language is called a locker, and at that point I noticed the traces of its having been forced open several times. I looked about me for a safer cupboard, but I saw that all the lockers were the same--all of them had been broken into.... Along the way I counted the bunks in the dormitory--27 double bunks, so 54 bunks in all. There was just enough space left in the room so the soldiers could get to their bunks.

At about 1000 hours the corporal came and told us to go with him to the classroom. We were to meet the captain. The classroom was almost the same

as in school, except that each cadet had a three-legged stool instead of a chair with a back. Here as everywhere there was a picture of "our beloved."

I sat down in the last bench and looked at the close-cut heads in front of me. One of the seven corporals gathered there warned us in soldierly fashion: "Lizards, when I say Attention, you must all stand up as one!" He had hardly finished when the captain appeared at the door holding his cap in his hand. The corporal shouted: "Attention!" but the agreement didn't hold--everyone stood up at his own "command"....

The captain ordered us to sit down, and reminded the corporal that he should already have taught us how to greet him. "Don't greet me again that way tomorrow, comrade corporals, I hope you understand me." "We do, comrade Captain!"

The captain, about 180 cm tall, with a keen look, a large mouth with spaces between his teeth, getting a little gray at the temples, finally turned to the soldiers: "Comrades, I am Captain Milija Matic. You make up a unit consisting of 44 new soldiers and 18 older comrades. I have already told you who I am and I want to hear from you who you are, what are your names and where you are from and what you are.

"We will begin in order.... Don't speak until I do," he said, suddenly changing his tone, and then he resumed, "Who are you, comrade?"

The young man in the first row stood up and answered: "Redzepi, Redzep" and then he took his seat again. "Who, soldier, told you to sit down? Get up!" Redzep stood up again, but slower than the first time. "You are not to stand up, soldier, as though you liberated Belgrade, but as soon as I say 'You soldier!' you should already be on your feet. Do you understand?" "I do, comrade Captain!" "And you should say: 'If you please, comrade Captain, I am soldier so and so' and you should ask: 'Comrade Captain, allow me to sit down,' and I will then give you permission to sit down....

"And you soldier?" the captain asked the soldier next to Redzep. This one stood up quickly and in his haste turned over the stool, which fell to the floor very noisily: "If you please, comrade Captain! Soldier Miletic, Zarko, Bosnian from Zenica." "Sit down!" the captain said. The soldier sat down, but again he made a mistake: "Who told you, soldier, to sit down without saying 'Yes sir, comrade Captain'?" It was all we could do to restrain our laughter.

"And who are you, comrade?" "Jovanovic, Aca!" We could no longer restrain ourselves, and the classroom began to shake with laughter--Jovanovic had again forgotten military protocol.

[13 Jul 80, pp 14-15]

[Text] The uncontrollable laughter in the classroom died out only at the captain's third appeal: "Enough, soldiers, I don't want to hear another word!" After Aca Jovanovic, to whom it was still not clear what mistake he had made, a tall broad-shouldered lad with a robust voice stood up on the captain's order: "If you please, comrade Captain! I am Brzica, Ante, Croat, Catholic!" the young soldier answered in a clipped speech. The captain gave him a glance that was like a slap in the face: "What are you doing, soldier, blurting out what no one has asked you, huh? Who cares what religion you are? Where are you from, that's what I want to know!"

"From Siroki Brijeg, comrade Captain, Listica, if you have heard of it...." The captain didn't hear the comment and only mumbled: "So, from Hercegovina...."

Then my turn came to introduce myself: "Dalibor Ter, Croat from southern Croatia!" At this the captain set his jaw, and his pupils jumped about nervously several times in his lean face. "Well, you surprise me the most, Dalibor! You might have learned from the others to put your last name first, and then your first name, and then where you're from, yes, I want to hear you say where you are from, do you understand!?"

"From the little village of Raseljka in southern Croatia, Livanjska Krajina." The capitain as though with sudden relief, concluded: "Dalmatian, so why didn't you say so...." "But I am not a Dalmatian by nationality, but a Croat, and that is what you asked me...." I said, standing my ground. "Is that so, well, I will have some other questions for you, damn your hide," the captain said, bristling once again, "You just wait, we will be talking again...."

Later the rest of the soldiers satisfied the captain; one introduced himself as from Zagorje, another from Slavonia, a third from Lika, another from Kordun, a Bosnian, a Serb, a Slovene, a Moslem, a Macedonian, a Montenegrin; no one else aroused the captain with that objectionable word--CROAT.

The first days of our life as soldiers were taken up by preparations and drills for the "solemn oath." The drill was conducted by a second lieutenant, and the captain whom we had already become acquainted with conducted our class in political instruction.

After 2 or 3 days the second lieutenant also started to pick on me. During the morning drill an open conflict even occurred between us: "Do you hear me, soldier?! I'll stick it up your ass' stocking!" he shouted in front of the entire formation of soldiers. He stared at me all in a froth: "I want this unit to stand as an example, as those before you have stood, and those who don't toe the line, we will have other methods for them...."

"Are those curses meant for me, comrade second lieutenant?" I asked him without a bit of fear, and I looked him straight in the eyes. "Yes, for you, f--- your...," he answered, still more angry, but he nevertheless held back from finishing his last thought: "It is good that you publicly confirm this in front of the entire unit...." The second lieutenant reflected a bit and fell silent. But a bit later, still excited, he again addressed me: "At 1400 hours you will report to the captain! You will dress up in a new uniform and appear in full battle dress!"

Ten minutes before the appointed time I was standing in front of the office of Captain Matic. After I waited half an hour the clerk called me in and said in passing: "What the hell did you do that for?" (He was a Serb from Mostar.) Holding my cap in my hand, I entered in silence.

"Do you see how I can see through people immediately? I told you we'd be seeing each other. And you come in without a salute, as though we were your subordinates. Lieutenant, when you send someone to me, first teach him how to salute." After the captain's introduction, the second lieutenant tried to say something: "Comrade Captain...." "That's enough, lieutenant!" he interrupted him, and then again turned to me: "What was the problem, soldier?" "Well, this fella insulted me...." "He is not 'this fella' to you!" "Excuse me, the second lieutenant. He accused me of encouraging the soldiers to shirk, he called me names and swore at me...."

It seems to me that I softened the captain a bit with my choice of words. He reflected briefly about something, and then muttered absently: "You can go!" Only later did I realize that I was not rescued so much by my own "cleverness" as by the bad blood between the captain and the second lieutenant. For a long time already they had had a cat-and-dog relationship.

While I had been on report, the other soldiers had been at lunch. By the time I returned, the mess hall was closed. I again put on my fatigues and went off to my "duty." The second lieutenant (we called him PP [initial letters of second lieutenant in Serbo-Croatian]): "Your rifle has not been cleaned. I want it to be clean by 1700 hours and shine like the sun! Do you understand?" Perfectly. I took the gun in my hands and looked through the barrel. You could hardly see the light at the other end. "What did you do to it?" I asked myself....

After some 20 days of practicing the "oath" and marching, the day came when we had no choice: in front of the picture of "our beloved" we young soldiers, numbering between 400 and 500, had to take the oath. A table with red carnations and photographs of the "commander in chief" was set up in front of each unit. We all had to repeat after the officers: "I solemnly swear that I will defend the independence, constitutional order and integrity of self-managed socialist Yugoslavia...." Several soldiers around me merely opened their mouths and probably were thinking the same thing I was.

[27 Jul 80, p 15]

[Text] An exhibition of "modern weapons" was held the first week after the "oath" on the grounds of the post; it was also open to the public. Already by about 0800 hours Captain Matic marched us up to examine the weapons.

"This is a heavy cannon which takes a crew of six or seven soldiers. It was used in the Vietnam War and showed good results. It is accurate against targets up to 15 km away," the captain declaimed in chosen words. "The shells weigh as much as 25 kg and they can kill within a radius of up to 500 meters."

I noticed that there were more Soviet guns between 105 and 122 mm than anything else. There were also T55 tanks from the war and old machineguns. Hand grenades, mortars and multiple-barrel launchers, which are operated by an electronic trigger, were manufactured in Yugoslavia. The "more recent" models of machineguns were manufactured in 1952. The small antiaircraft guns were also very outdated. They had a manual training mechanism "as though the aircraft would wait in the air while the gunner takes aim," as my friend Tugomir noted. The captain went on ensuring everyone around him that these were "the most up-to-date weapons in hitting and bringing down airplanes..."

For days we prepared for our first target practice with the M-48 rifle. For the captains this was the question of prestige. The tension among them also increased for a particular reason: They had to conceal the scores very well from one another. These scores were catastrophically poor. Anyone who hit the target with just one out of six shots had to be proud. But in the end it all turned out right: if you had five bull's-eyes, they gave you another 10, and if you had seven, they would mark down 20. "The best score" was 45 bull's-eyes.

Some soldiers, however, did not even dare to fire, and the captains, showing the soldiers how to do this, shot at the targets, but even they did not get hits with the "good and accurate rifle, the Kragujevka, a rifle such as no one else in the world has...."

After target practice the scores were read out. It was ridiculous to listen to the obvious lies, but "that is the way it must be," Captain Matic admitted to us in confidence: "What would the commanding officer say if he heard that only one had a passing score out of 60 soldiers? But that is a military secret, comrades and soldiers! Don't tell anyone about this or write home, especially not abroad. Anyone who does will have a hard time. It is a very dangerous matter to divulge military secrets, and you know what happens to such people...."

Political Instruction: "When I Say So, You Know That It's the Opposite...!"

Every day we had political instruction which the captain conducted personally. We learned about capitalism, Marxism, imperialism and the benefits of socialism. After almost every charge against the West the captain would end with a sentence: "Isn't that right, Vladimir?" Vladimir, whom I'd also made friends with, would each time confirm what the captain requested from him.

This was a little strange to me, since we knew that before going into the army Vladimir had worked abroad and would tell us about how "it had not been bad." After one lecture I happened to catch him alone. I asked him openly: "So, Vladimir, before you told us that you lived well in Germany, and now when the captain asks for confirmation from you who has been there, you back everything bad he has to say about the West. How is that?" "I will tell you if you don't tell anyone," Vladimir told me in confidence. "The captain called me in once and told me: 'We know that you have been in a capitalist country. We also know how it is there, but we must talk to the soldiers about the negative consequences of capitalism. So when I ask you, you back up what I say. You will be able to tell whether you should say yea or nay to what I say. We have to collaborate, but let it stay between us two. Do you understand?'

"'Yes, comrade Captain. In other words, we have to break down the soldiers' illusions about the benefits of the West....' 'Right, that's exactly what I want you to do. And, you know, there will be rewards ... extra leave and other privileges.' So now you understand, he ordered me to back up what he said so that you would no longer believe those things. If I had not consented, I would have a hard time, and he would certainly find someone else. So, when I confirm something, you know that the truth is the opposite!"

This was a worthwhile experience; later we followed political instruction with more "comprehension."

The Soldier's Life in the Mountains

During military exercises we all had to go in the field. We spent 20 days on Golija with other units from Belgrade, Negotin, Kragujevac, Vranje and other places. Only some dozen soldiers were left on the post.

We slept in some old tents (an entire squad in one tent, and sometimes an entire platoon). During the field exercises there were no baths, we slept in our clothes and boots. Before departure we had taken some sort of injections to increase the resistance of the organism. Without that who knows what we would have come back with.

For those 20 days we ate only dry food and canned food 10 years old or more! In the evening the officers went into the settlement to drink and returned to the camp just before dawn. One morning Captain Matic said to

me in a good humor: "Listen here, soldier, the longer these exercises last, the better. Now, look here, don't you serve any more cognac to those fat asses (at that time I was working in the improvised canteen), let them slobber, sons of whores...." That is, his fellow captains.

The officers hated each other with a passion. They gossiped about one another and envied each other for having a larger apartment, for having a better wife or car, for having gotten credit, for one having pulled the wool over the other's eyes, and the like. In their hatred and primitivism the officers went so far as not to conceal their mutual relations even from the soldiers. As a matter of fact, they even talked about their colleagues in front of us.

I often wondered, then, how these commanding officers would behave in wartime? What would drive them to help one another? Even in ordinary conversations about sports you could easily see that they were ready to find a pretext for showing their enmity:

"Listen, Georgie, Ivan says that the Red Star soccer team will not end up in first place! Hell, I'll hang him up by his b----! Come on, man, who would dare to take away our title, eh?" Captain Ivan is a Croat by nationality, but he has utterly renounced his origin. In order to survive in this society, he has replaced his Croatian language with Serbian; I never heard him display his Croatian nationality in any way whatsoever. He groveled before the Serbs, but in spite of all that he never ceased to be a Croat in the eyes of the Serbs. They never received him into their society, nor do they recognize him as their equal. Perhaps precisely because he has lost his human and ethnic dignity.

During the military exercises on Golija we fired the heavy guns, Russian and American howitzers. When the war in Vietnam ended, it no longer paid the Americans to transport their weapons back to America, so they sold them. Some were bought by Yugoslavia. An old T55 tank, a relic from the war, was even used in the exercises. If someone from outside had seen this, he might have thought that some old Partisan film was being made and not that these were exercises of the "up-to-date Yugoslav People's Army!"

We also carried mortars from the post, but on Golija we fired only a few blanks, because of the lack of ammunition. Quite a few of the soldiers were trained in handling mortars, but during their service in the army they didn't fire a single shell.

Nighttime Alerts--By Agreement

From time to time alerts were organized on the post or in the field to check military preparedness. Of course, the time of the alert was supposed to be a secret. However, the captain of our unit would always tell us in advance, "So that no one will be surprised." That is probably how the others acted as well.

The captain first warned us that there would be an alert, and then he would usually add: "No one must know that I told you! Each unit has its destination in case of an alert. You will all have to be in full battle dress. Jump on the first truck and start right off...."

And as a matter of fact no one looked to see whose truck was whose at those times. "No one knows which end is up around here!" one of the commanders would say after the mess with the alert. This circus was repeated two or three times to "check our alertness and military skill."

After target practice and this kind of military training, there were few other important events on the post. The principal soldier's preoccupation at that time was to count the days to discharge from the armed forces. Everyone can hardly wait for the end of this most miserable life to come as soon as possible.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

EXTRACTS FROM 'THE KHRUSHCHEVITES' BY ENVER HOXHA

PART 1

Tirana ATA in English 0900 GMT 9-19 Oct 80

["Extracts From the Book by Comrade Enver Hoxha 'The Khrushchevites' (Memoirs)"--ATA headline]

[9 Oct 80]

[Text] Tirana, 9 Oct (ATA)--Beginning with today we begin to broadcast extracts from the new book by Comrade Enver Hoxha "The Khrushchevites" (Memoirs) which came off the press recently. This book which is another work in the series of the author's memoirs, following that "With Stalin," contains memoirs and impressions of the author from the direct meetings and other contacts with the leaders of the C.P.S.U. and other communist and workers' parties during the years 1953-1961, from Stalin's death till the final break off with the Khrushchevites. The talks, meetings, mutual visits, the joint meeting over political, ideological, economic and military problems constitute mainly the basic materials of this book.

At the beginning of this work Comrade Enver Hoxha writes:

Two decades have gone by since the meeting of 81 communist and workers' parties of the world, which has gone down in history as one of the most important events in the struggle which is being waged between Marxism-Leninism and opportunism. At this meeting our party opened fire on the revisionist group of Khrushchev which was ruling in the Soviet Union and struggling in every way to subjugate the entire international communist movement, all the communist and workers' parties of the world, and set them on its road of betrayal.

> The counterrevolutionary attack on Khrushchevite revisionism at the meeting in November 1960 was a logical continuation of the Marxist-Leninist stand which the Party of Labour of Albania had always maintained.

Our open and principled attack on Khrushchevite modern revisionism at the meeting in November 1960 was not a surprise move. On the contrary, it was the logical continuation of the Marxist-Leninist stand which the Party of Labour of Albania

had always maintained, was the transition to a new, higher stage of the struggle which our party had long been waging for the defence and consistent application of Marxism-Leninism.

From the time the Khrushchevites took power to the moment when we came out in open confrontation with them, the relations of the Party of Labour of Albania with the Communist Party of the Soviet Union passed through a complicated process, with zig zags, with periods of exacerbation and periods of temporary normalization. This was the process of each getting to know the other through encounters in the course of the struggle and the continual clash of views. After the Khrushchevite Revisionist Putchists came to power, our party, basing itself on the events that were taking place there, on certain stands and actions, which were ill-defined at first, but which, step by step, were becoming more concrete, began to sense the great danger of this clique of renegades, which hid behind a deafening pseudo-Marxist demagogy, and to understand that this clique was becoming a great threat both to the cause of the revolution and socialism as a whole, and to our country.

> The PLA [Party of Labor of Albania] refused to swallow what the Soviet leaders served up to us.

We became more and more aware that the views and stands of Nikita Khrushchev on important questions of the international communist movement and the socialist camp differed from our views and stands. The 20th Congress of the CPSU, in particular, was the event which made us adopt a stand of opposition to Khrushchev and the Khrushchevites. As Marxist-Leninists and in a Marxist-Leninist way, time after time we had pointed out to the Soviet leaders our reservations and objections to their conciliatory stands towards the Yugoslav revisionists, about many aspects of their unprincipled foreign policy, about many of their wrong and completely un-Marxist stands and actions on major international problems, etc. Although they sometimes feigned a retreat, they continued on their course, while we refused to swallow what they served up to us, but on the contrary, defended our views and implemented our internal and external policy.

With the passage of time this brought about that we became better acquainted with each other's positions, and neither side trusted the other. For our part, we continued to preserve our friendship with the Soviet Union, with its peoples, continued to build socialism according to the teachings of Lenin and Stalin, continued as before to defend the great Stalin and his work and to fight unwaveringly against Yugoslav revisionism. Our existing doubts about the Soviet revisionists increased and deepened from day to day, because day by day Khrushchev and company were acting in opposition to Marxism-Leninism.

> After the attempts to take the Albanian fortress from within, Khrushchev went openly to the attack to subjugate the P.L.A.

Khrushchev was aware of our reservations about the 20th congress, and about the policy which he followed with the Titoites, imperialism, etc, but his tactic was not to hasten to exacerbate the situation with us Albanians. He hoped to profit from the friendship which we displayed for the Soviet Union to take the Albanian fortress from within and to get us into the bag through smiles and threat, through giving us some reduced credits, as well as through pressure and blockades. Khrushchev and the Khrushchevites thought: "We know the Albanians, however

stubborn they are, however hot-tempered they are, they have nowhere else to turn to, because we have them pinned up and, if they prove difficult, if they don't obey us, then we will show our teeth, we'll cut them off and boycott them, and overthrow all those who oppose us."

The Khrushchev group prepared this course of action, promoted and deepened it, thinking that it would achieve its aim "quietly and gently" and "without any fuss." However, the reality was convincing them that this tactic was yielding no fruit, and thus their impatience and arrogance began to emerge. The situation became tense. Then it was "eased" only to grow tense again. We understood where this course would lead Khrushchev and company, therefore we strengthened our vigilance, and while replying to manifestations of their despotism, we tried to prolong the "peace" while safeguarding our principles.

But the moment came when the cup was full to overflowing. The "peace," which had seemed to exist before, could continue no longer. Khrushchev went openly on to the attack to subjugate and force us to follow his utterly opportunist line. Then we told Khrushchev bluntly and loudly "no," we said "stop," to his treacherous activity. This marked the beginning of a long and very difficult struggle in which our party, to its glory and the glory of the people who gave birth to it and raised it, consistently defended the interests of its socialist homeland, persistently defended Marxism-Leninism and the genuine international communist movement.

> Time fully confirmed how right the Party of Labour of Albania was to fight the Khrushchevites and refuse to follow their line.
>
> Albania did not become and will never become a protectorate of the Russians or anyone else.

At that time many people did not understand the stand of the Party of Labour of Albania. There were even well-wishers of our party and country who considered this action hasty. Some had not yet completely understood the Khrushchevites' betrayal, some others thought that we broke away from the Soviet Union to link up with China, etc. Today, not only the friends, but also the enemies of socialist Albania have understood the principled character of the uninterrupted struggle which our party has waged and is waging against opportunists of every hue.

Time has fully confirmed how right the Party of Labour of Albania was to fight the Khrushchevites and refuse to follow their line. To this fight, which demanded and still demands great sacrifices, our small homeland owes the freedom and independence it prizes so highly and its successful development on the road of socialism only thanks to the Marxist-Leninist line of our party did Albania not become and never will become a protectorate of the Russians or anyone else.

> We do not maintain and will never establish state relations with the Soviet social-imperialists.
>
> Brezhnev and company have proved to be "worthy pupils" of their ill-famed teacher.

Since 1961 our Party of Labour has not had any link or contact with the Khrushchevites. In the future, too, it will never establish party relations with

them, and we do not have and will never have even state relations with the Soviet social-imperialists. Up to now, our party will consistently wage the ideological and political struggle for the exposure of these enemies of Marxism-Leninism. We acted in this way both when Khrushchev was in power and when he was brought down and replaced by the Brezhnev clique. Our party had no illusions, but on the contrary, was quite certain that Brezhnev, Kosygin, Suslov, Mikoyan, etc, who had been Khrushchev's closest collaborators, who had jointly organized and put into practice the revisionis counter-revolution in the Soviet Union, would persist in their former line.

They eliminated Khrushchev with the aim of protecting Khrushchevism from the discredit which the master himself was bringing upon it with his endless buffoonery, eliminated the "father" with the aim of implementing the complete restoration of capitalism in the Soviet Union with greater intensity and effectiveness.

In this direction Brezhnev and company have proved to be "worthy pupils" of their ill-famed teacher. Within the Soviet Union they established and strengthened the dictatorial fascist regime, while they turned the foreign policy of their state into a policy of great-state chauvinism, expansion and hegemonism. Under the leadership of the Brezhnev Khrushchevites, the Soviet Union has been turned into an imperialist world power and, like the United States of America, aims to rule the world. Among the bitter evidence of the utterly reactionary policy of Soviet social-imperialism are the tragic events in Czechoslovakia, the strengthening of the domination of the Kremlin over the countries of the Warsaw Treaty, the deepening of their all-round dependence on Moscow and the extension of the tentacles of Soviet social-imperialism to Asia, Africa and elsewhere.

The correct assessments and forecasts of our party about the reactionary internal and foreign policy of Brezhnev have been and are being constantly confirmed. The most recent example is Afghanistan, where the Brezhnev Khrushchevites undertook an open fascist aggression and now are trying to quell the flames of the people's war with fire and steel in order to prolong their social imperialist occupation.

> The fact that Albania did not suffer the fate of those who are now languishing under imperialist and social-imperialist slavery is the best testimony to the correctness of the principled, courageous and consistent line of the PLA.

The fact that our small homeland and people have not suffered the tragic fate of all those who are now languishing under imperialist or social-imperialist slavery is the best testimony to the correctness of the consistent, courageous and principled line which our Party of Labour has always followed.

The merit for this correct course belongs to the whole party and, in particular, to its leadership, the Central Committee, which, imbued with and loyal to the teachings of Marxism-Leninism, our guiding theory, has always led the party and the people correctly. In the great tests which we have had to withstand, the unity of the party with its leadership and the unity of the people around the party have been brilliant and have become further tempered. This steel unity gave the party support and strength in the difficult but glorious struggle against the Khrushchevite revisionists, too. This unity has been and is the foundation of the stability and confidence with which Albania has marched and is marching forward, withstanding the pressure and blackmail, the blandishments and demagogy of enemies of all hues.

As a communist and leader of the party, I, too, have had to take part actively and make my contribution to all this heroic struggle of our party. Charged by the party and its leadership, since the liberation of Albania, and especially during the years 1950-1960, I have headed delegations of the party and the state many times in official meetings with the Soviet leaders and with the main leaders of other communist and workers' parties. Likewise, many times we have exchanged reciprocal visits, I have taken part in consultations and international meetings of communist parties at which I have expressed and defended the correct line, decisions and instructions of the party. In all these meetings and visits I have become closely acquainted with glorious, unforgettable leaders, like Stalin, Kimitrov, Gottwald, Bierut, Pieck and others, and likewise, I have had to enter into contact with and know the Khrushchevite traitors, who, through a long and complicated process, gradually usurped power in the Soviet Union and in the former countries of people's democracy respectively.

The relations with them and the stands maintained by our party during this period have been reflected in the documents of the party, in my writings which are being published by decision of the central committee, as well as in other documents which are found in the central archives of the party. Now I am handing over these notes for publication as my reminiscences andimpressions from the many contacts and clashes with the Khrushchevites, which cover the period from 1953, after the death of Stalin, to the end of 1961, when the Khrushchev group broke off diplomatic relations with the People's Republic of Albania. Taken together with other published materials and documents covering that period, these notes, too, I believe, will serve to acquaint the communists and working masses better, both with the counter-revolutionary activity of the Soviet revisionists inside and outside the Soviet Union, and with the always correct and consistent struggle of our party in defence of Marxism-Leninism, the people and our socialist homeland.

[10 Oct 80]

[Text] Tirana, 10 Oct (ATA)--At the beginning of his new book "The Khrushchevites (Memoirs)" Comrade Enver Hoxha speaks of his impressions from the contacts with the Soviet leaders who came to power following Stalin's death, pointing out the lack of unity between them and the in-fighting, Krushchev's sudden and quick advent to power. Through facts he also shows that the new Soviet leaders were ill-disposed towards Albania.

Comrade Enver Hoxha writes:

In-Fighting Among the Top Soviet Leaders

> Stalin dies. Next day the top Soviet leadership divides up the portfolios. Khrushchev climbs the steps to power. Disillusionment from the first meeting with the "new" Soviet leaders in June 1958. Ill-intentioned criticism from Mikoyan and Bulganin. The end of Beria's short-lived reign. The meeting with Khrushchev in June 1954: "You helped in the exposure of Beria." Khrushchev's "theoretical" lecture on the roles of the first secretary of the party and the prime minister. The revisionist Mafia spins its spider's web inside and outside the Soviet Union.

The way in which the death of Stalin was announced and his funeral ceremony was organised, Comrade Enver Hoxha stresses in his memoirs, created the impression amongst us, the Albanian Communists and people, and others like us, that many

members of the Presidium of the Central Committee of the Communist Party of the Soviet Union had been awaiting his death impatiently.

> Hidden hands had prepared the plot long before for the destruction of the Bolshevik Party and socialism in the Soviet Union.

One day after Stalin's death on 6 March 1953 the Central Committee of the party, the council of ministers and the Presidium of the Supreme Soviet of the USSR were summoned to an urgent joint meeting. On occasions of great losses, such as the death of Stalin, urgent meetings are necessary and indispensable. However, the many important changes which were announced in the press one day later showed that this urgent meeting had been held for no other reason but...the sharing out of posts. Stalin had only just died, his body had not yet been placed in the hall where the final homage was to be paid, the program for the organization of paying homage and the funeral ceremony was still not worked out, the Soviet Communists and the Soviet people were weeping over their great loss, while the top Soviet leadership found the time to share out the portfolios. Malenkov became premier, Beria became first deputy-premier and minister of internal affairs, and Bulganin, Kaganovich, Mikoyan, Molotov shared the other posts. Major changes were made in all the top organs in the party and the state within that day. The presidium and the bureau of the Presidium of the Central Committee of the party were merged into a single organ, new secretaries of the Central Committee of the party were elected, a number of ministries were amalgamated or united, changes were made in the Presidium of the Supreme Soviet, etc.

These actions could not fail to make profound and by no means favourable impressions on us. Disturbing questions arose automatically: How were all these major changes made so suddenly with one day, and not just any ordinary day, but on the first day of mourning! Logic compels us to believe that everything had been prepared in advance. The lists of these changes had been worked out long before in suspicious secrecy and they were simply waiting for the occasion to proclaim them in order to satisfy this one and that one...

It is never possible to make such extremely important decisions within a few hours, even on a completely normal day.

However, if at the start these were only doubts which shocked and surprised us, later developments, the occurrences and the facts which we were to learn about subsequently, made us even more convinced that hidden hands had prepared the plot long before and waited the opportunity to commence the course of the destruction of the Bolshevik Party and socialism in the Soviet Union.

The lack of unity in the Presidium of the Central Committee was made quite obvious at Stalin's funeral, too, when there was strife among the members over who would take pride of place and who would speak first. Instead of displaying unity at a time of misfortune before the peoples of the Soviet Union and all the communists of the world, who were deeply shocked and immensely grieved by the sudden death of Stalin, the "comrades" were competing for the limelight. Khrushchev opened the funeral ceremony, and Malenkov, Beria and Molotov spoke before the Lenin Mausoleum. Khrushchev and the conspirators behaved hypocritically over Stalin's coffin and rushed to get the funeral ceremony over as quickly as possible in order to shut themselves up in the Kremlin again to continue the process of the division and redivision of the posts.

The way in which Khrushchev rose was astonishing and suspect.

We, and many like us, thought that Molotov, Stalin's closest collaborator, the oldest and the most mature Bolshevik, with the greatest experience and best known inside and outside the Soviet Union would be elected first secretary of the Central Committee of the Communist Party of the Soviet Union. But it did not turn out so. Malenkov was placed at the head, with Beria in second place. Behind them in those days, a little more in the shade, stood a "panther" which was preparing itself to gobble up and liquidate the former two. This was Nikita Khrushchev.

The way in which he rose was truly astonishing and suspect: He was appointed only as chairman of the central commission to organize the funeral ceremony for Stalin, and on 7 March when the division of posts was made public, he had not been appointed to any new post, but had simply been freed from the task of first secretary of the Party Committee of Moscow, since "he was to concentrate on the work in the Central Committee of the party." Only a few days later, on 14 March 1953, Malenkov, "at his own request," was relieved of the post of secretary of the Central Committee of the party and Nikita Khrushchev was listed first in the composition of the new secretariat elected that same day.

Stalin has fought consistently for the Marxist-Leninist unity of the C.P. of the Soviet Union.

After his death the Khrushchevites encouraged the split.

Such actions did not please us at all, although they were not our responsibility. We were disillusioned in our opinions about the stability of the top Soviet leadership, but we explained this with our being totally uninformed about the situation developing in the party and the leadership of the Soviet Union. In the contacts which I had had with Stalin himself, with Malenkov, Molotov, Khrushchev, Beria, Mikoyan, Suslov, Voroshilov, Kaganovich, and other main leaders, I had not seen even the smallest division or discord amongst them.

Stalin has fought consistently for and was one of the decisive factors of the Marxist-Leninist unity of the Communist Party of the Soviet Union. This unity in the party for which Stalin worked was not created by means of terror, as Khrushchev and the Khrushchevites claimed later, continuing the slanders of the imperialists and the world capitalist bourgeoisie, who were striving to destroy and overthrow the dictatorship of the proletariat in the Soviet Union, but was based on the triumphs of socialism, on the Marxist-Leninist line and ideology of the Bolshevik Party and on the indisputably great personality of Stalin. The trust which all had in Stalin was based on his justice and the ability with which he defended the Soviet Union and Leninism. Stalin waged the class struggle correctly, dealing merciless blows at the enemies of socialism (and he was quite right to do so). The concrete daily struggle of Stalin, the Bolshevik Party and the whole Soviet people proves this squarely, as do the political and ideological writings of Stalin, the documents and decisions of the Communist Party of the Soviet Union, and also the press and the mass propaganda of those times against the Trotskyites, Bukharinites, Zinovievites, the Tukhachevskies, and all other traitors. This was a stern political and ideological class struggle to defend socialism, the dictatorship of the proletariat, the party and the principles of Marxism-Leninism. For this Stalin has great merits.

Stalin proved himself to be an outstanding Marxist-Leninist with clear principles, with great courage and cool-headedness, and the maturity and foresight of a Marxist revolutionary. If we just reflect on the strength of the external and internal enemies in the Soviet Union, on the manoeuvres and unrestrained propaganda they indulged in, on the fiendish tactics they used, then we can properly appreciate the principles and correct actions of Stalin at the head of the Communist Party of the Soviet Union. If there were some excesses in the course of this just and titanic struggle, it was not Stalin who committed them, but Khrushchev, Beria and company, who for sinister hidden motives showed themselves the most zealous for purges at the time when they were not yet so powerful. They acted in this way to gain credit as "ardent defenders" of the dictatorship of the proletariat, as "merciless with the enemies," with the aim of climbing the steps in order to usurp power later. The facts show that when Stalin discovered the hostile activity of a Yagoda or a Yezhov, the revolutionary court condemned them without hesitation. Such elements as Khrushchev, Mikoyan, Beria and their apparatchiki hid the truth from Stalin. In one way or another, they misled and deceived Stalin. He did not trust them, therefore he had told them to their faces, "...when I am gone you will sell the Soviet Union." Khrushchev himself admitted this. And it turned out just as Stalin foresaw. As long as he was alive, even these enemies talked about unity, but after his death they encouraged the split. This process was being steadily extended.

From the visits which I made from time to time to the Soviet Union after 1953, for consultations over the problems of the political and economic situation, or over some problems of international policy which were raised by the Soviets, who allegedly sought our opinion, too. I saw more and more clearly the sharpening of contradictions among the members of the Presidium of the Central Committee of the Communist Party of the Soviet Union.

> This behaviour of the new Soviet leaders was supposed to show the pride of the great state.

A few months after Stalin's death, in June 1953, I went to Moscow at the head of a party and government delegation to seek an economic and military credit.

It was the time when Malenkov seemed to be the main leader. He was chairman of the Council of Ministers of the Soviet Union. Although Khrushchev had been listed first among the secretaries of the Central Committee of the party since March 1953, apparently he had not yet seized power completely, had still not prepared the putsch.

We normally made our requests in advance in writing, thus the members of the Presidium of the Central Committee of the party and government of the Soviet Union had long been aware of them and, indeed as it turned out, they had decided what they would give us and what they would not give us. They received us at the Kremlin. When we entered the room the Soviet leaders stood up and we shook hands with them. We exchanged the normal greetings.

I had met them all in the time of Stalin. Malenkov looked just the same--a heavy-built man with a pale, hairless face. I had met him years before in Moscow, during meetings I had with Stalin, and he had made a good impression on me. He worshipped Stalin and it seemed to me that Stalin valued him, too. At the 19th Congress

Malenkov delivered the report on behalf of the Central Committee of the party. He was one of the relatively new cadres who came into the leadership and who were liquidated later by the disguised revisionist Khrushchev and his associates. But now he was at the head of the table, holding the post of chairman of the Council of Ministers of the USSR. Beside him stood Beria, with his eyes glittering behind glasses and his hands never still. After him came Molotov, quiet and good-looking, one of the most serious and most honoured comrades for us, because he was an old Bolshevik from the time of Lenin and a close comrade of Stalin's. We still thought of Molotov in this way even after Stalin's death.

Next to Molotov was Mikoyan, his dark face scowling. This merchant was holding one of those thick pencils, half red half blue (something you could see in all the offices of the Soviet Union), and was keeping the "score." Now he had taken even greater authority into his hands. On 6 March, the day the posts were shared out, it was decided that the Ministry of Foreign Trade and that of Internal Trade should be combined in one, and the Armenian wheeler-dealer grabbed the portfolio.

Finally there was the bearded Marshal Bulganin, with white hair and pale blue eyes, sitting a little bit bemused at a corner of the table.

"Let us hear what you have to say," said Malenkov in a very grave tone. This was not at all a comradely beginning. This was to become the custom in talks with the new Soviet leaders, and no doubt this behaviour was supposed to show the pride of the great state. "Well, say what you have to say to us, we shall listen to you and pronounce our final opinion."

I did not know Russian well, I could not speak it, but I could understand it. The talk was conducted through an interpreter.

I began to speak about the problems that were worrying us, especially about military questions and the problems of the economy. First, I gave an introduction about the internal and external political situation of our country, which was causing us some concern. It was essential to give solid reasons for our needs, to back up our requests in both the economic and military sectors. In connection with the latter, the aid which they provided for our army was always insufficient and minimal, regardless of the fact that in public we always spoke very highly of the value of that small amount of aid which they granted us.

My concern was to make my expose as concrete and concise as possible. I tried not to go on at too great a length and I had been speaking for no more than 20 minutes, when I heard Beria, with his snake's eyes, say to Malenkov, who was sitting listening to me as expressionless as a mummy:

"Can't we say what we have to say and put an end to this?"

Without changing his expression, without shifting his eyes from me (of course, he had to maintain his authority in front of his deputies), Malenkov said to Beria:

"Wait."

I was so annoyed I was ready to explode internally, but I preserved my aplomb and, in order to let them understand that I had heard and understood what they said, I cut down my talk and said to Malenkov:

"I have finished."

"Pravilno." That's right (Russian in the original), said Malenkov and gave Mikoyan the floor.

Malenkov and Beria seemed to be the two "cocks of the walk."

Mikoyan made some vicious and venomous remarks.

Beria, pleased that I had finished, put his hands in his pockets and tried to work out what impression their replies were making on me. Of course, I was not satisfied with what they had decided to give us in response to the very modest requests we had made. I spoke again and told them that they had made heavy reductions in the things we had asked for. Mikoyan jumped in to "explain" that the Soviet Union itself was poor, that it had gone through the war, that it had to assist other countries, too, etc.

"When we drafted these requests," I told Mikoyan, "we took account of the reason you have just given, indeed we cut our calculations very fine, and your specialists who work in our country are witnesses to this."

"Our specialists do not know what possibilities the Soviet Union had. We who have told you our opinions and possibilities know these things," said Mikoyan.

Molotov was leaning on the table. He said something about Albania's relations with its neighbours, but he never raised his eyes. Malenkov and Beria seemed to be the two "cocks of the walk," while Mikoyan who was cold and bitter, did not say much, but when he did speak, it was only to make some vicious and venomous remark. From the way they spoke, the way they interrupted one another, the arrogant tone in which they gave "advice," the signs of discord among them were quite clear.

[11 Oct 80]

[Text] Tirana, 11 Oct (ATA)--Bulganin slanders against the cadres of the Albanian Army and requires that purges be carried out.

In continuation of his notes on the first meeting with the Soviet leadership in June 1953, after Stalin's death, Comrade Enver Hoxha quotes also Bulganin's slanders at this meeting, who said among the other things that he had been informed that many cadres of the Albanian Army were the sons of Beys and Aghas, of dubious origin and activity. "We must be certain about those into whose hands these weapons, with which we shall supply you, will be put, he went on, therefore we advise you to study this problem deeply and carry out purges..."

This made my blood boil, Comrade Enver Hoxha writes, because it was a slanderous accusation and an insult to the cadres of our army. I raised my voice and asked the marshal:

"What is the source of this information which you give me with such assurance, why do you insult our army?"

The atmosphere of the meeting became as cold as ice. They all lifted their heads and looked at me while I waited for Bulganin to reply. He found himself at a tight spot because he had not expected this cutting question, and he looked at Beria.

Beria began to speak, the movements of his hands and eyes revealing his embarrassment and irritation, and said that according to their information, we allegedly had unsuitable and dubious elements, not only in the army, but also in the apparatus of the state and in the economy. He even mentioned a percentage. Bulganin sighed with relief and looked around, not concealing his satisfaction. But Beria cut short his smile. He openly opposed Bulganin's "advice" about purges and stressed that the "elements with a bad past, but who have since taken the right road, must not be purged but should be pardoned." The resentment and deep contradictions which existed between these two were displayed quite openly. As it turned out later, the contradictions between Bulganin and Beria were not simply between these two persons, but were the reflection of deep contradictions, quarrels and opposition between the Soviet State Security Service and the intelligence organs of the Soviet Army. But we were to learn these things later. In this concrete case we were dealing with a grave accusation raised against us. We could never accept this accusation, therefore, I stood up and said:

"Those who have given you this information have committed slander, hence they are enemies. There is truth in what you said. All the cadres of our army have fought in the war, have emerged from the war, and not only do I not accept these accusations but I am telling you that your informers are deceiving you, are concocting slanders. I assure you that the weapons that we have received and will receive from you have been and will be in reliable hands. that the Party of Labour, and no one else, has led and still leads our peoples army. That is all I had to say." And I sat down.

When I had finished, Malenkov began to speak to close the debate. After stressing that he agreed with what the preceding speakers had said, he issued a load of "advice and instructions" for us, and then dwelt on the debate which we had with Bulganin and Beria about the "enemies" in the ranks of our army.

"As for undertaking purges in the army, I think that the problem should not be presented in this way," said Malenkov, opposing the "advice" which Bulganin gave me about purges. "People are not born ready-formed, and they make mistakes in life. We must not be afraid to excuse people for their past mistakes. We have people who have fought against us with weapons, but now we are bringing out special laws to pardon them for their past and in this way to give them the possibility to work in the army and even to be in the party. The term 'purge' of the army is not suitable," repeated Malenkov and closed the discussion.

Utter confusion: One said irresponsibly, "You have enemies" and "carry out purges," the other said, "We are bringing out laws to pardon them for their past."

However, these were their opinions. We listened to them carefully and openly expressed our opposition to those things over which we disagreed.

Meeting which showed that the leadership of the Soviet Union was ill-disposed towards our country.

The "changing of the guard" was taking place in the Kremlin.

My conclusion from this meeting was unpleasant. I saw that the leadership of the Soviet Union was ill-disposed towards our country. The arrogant way they behaved during the meeting, their refusal to give those few things that we sought, and their slanderous attack on the cadres of our army were not good signs.

From this meeting I observed also that there was no unity in the Presidium of the Communist Party of the Soviet Union: Malenkov and Beria were predominant, Molotov hardly spoke, Mikoyan seemed to be on the outer and spouted venom, while what Bulganin said was bullshit.

It was apparent that the in-fighting had begun among the leaders in the Presidium of the Central Committee of the Communist Party of the Soviet Union. However hard they tried to avoid giving the impression outside that the "changing of the guard" was taking place in the Kremlin, they were unable to hide everything. Changes had been and were being made in the party and the government. After he kicked out Malenkov, leaving him only the post of prime minister, Khrushchev made himself first secretary of the Central Committee in September 1953. It is evident that Khrushchev and his group of close cronies hatched up the intrigue in the Presidium carefully, by setting their opponents at loggerheads and eliminating Beria and apparently "taming" the others.

The version on Beria's liquidation resembles the detective films.

There are many versions about the arrest and execution of Beria. Amongst others it was said that men from the army, headed by General Moskalenko, arrested Beria right in the meeting of the Presidium of the CC of the party. Apparently Khrushchev and his henchmen charged the army with this "special mission," because they did not trust the state security, since Beria had had it in his hands for years on end. The plan had been hatched up in advance: While the meeting of the Presidium of the CC of the party was being held, Moskalenko and his men got into a nearby room unobserved. At the given moment, Malenkov pressed the bell and within a few seconds Moskalenko entered the office where the meeting was being held and approached Beria to arrest him. It was said that Beria reached out to take the satchel he had nearby, but Khrushchev, who was sitting "vigilant" by his side, was "quicker" and seized the satchel first. The "bird" could not fly away, the action was crowned with success precisely as in a detective film, but this was no ordinary film: The actors of this one were members of the Presidium of the CC of the CPSU.

This is what, was said, took place and Khrushchev himself admitted it. Later, when a general, who I believe was called Sergatskov, came to Tirana as Soviet military adviser he also told us something about the trial of Beria. He told us that he had been called as a witness to declare in court that Beria had allegedly behaved arrogantly towards him. On this occasion Sergatskov told our comrades in confidence: "Beria defended himself very strongly in the court, accepted none of the accusations and refuted them all."

Khrushchev's clownish nature in the treatment of problems.

In June 1954, a few months after Khrushchev's elevation to the post of first secretary of the Central Committee of the Communist Party of the Soviet Union, together with Comrade Hysni Kapo, we had to go to Moscow where we sought a meeting with the Soviet leaders to talk about the economic problems over the solution of which they were proving uncooperative. Khrushchev received us, together with Malenkov, who was still prime minister, in the presence of Voroshilov, Mikoyan, Suslov and one or two others of lower rank.

Having mentioned that he had met Khrushchev once or twice in Ukraine before the death of Stalin, Comrade Enver Hoxha continues: Khrushchev's unexpected and rapid rise to power did not make a good impression on us. Not because we had anything against him, but because we thought that the role and figure of Khrushchev was not so well-known either in the Soviet Union or in the world, that he could so rapidly take the place of the great Stalin as first secretary of the Central Committee of the party. Khrushchev had never appeared at any of the meetings we had had for years on end with Stalin, although nearly all the top leaders of the party and Soviet state took part in most of those meetings. However, we did not express this and never mentioned our impression about this promotion of Khrushchev so high. We considered this an internal matter of the Communist Party of the Soviet Union, thought that they knew what they were doing, and wished with all our heart that things would always go well in the Soviet Union, as in the time of Stalin.

And now the day had come for us to meet Khrushchev face to face in our first official meeting.

I spoke first. I briefly presented the economic, political and organizational situation of the country, the situation in the party and our people's state power.

Khrushchev spoke immediately after me and right from the start displayed his clownish nature in the treatment of problems:

"We are informed about your situation and problems from the materials we have studied," he began. "The report which Comrade Enver gave us here made matters clearer to us, and I describe it as a 'joint report,' yours and ours. But," he continued, "I am still a bad Albanian and I am not going to speak now either about the economic problems or about the political ones, which Comrade Enver raised, because, for our part, we have still not exchanged opinions and reached a common view. Therefore, I am going to speak about something else."

And he began to give us a long talk about the importance of the role of the party.

He spoke in a loud voice with many gestures of his hands and his head, looking in all directions without concentrating on any one point, interrupted his speech here and there to ask questions, and then, often without waiting for the reply, went on with his speech, hopping from branch to branch.

"The party leads, organizes, controls," he theorized. "It is the initiator and inspirer. But Beria wanted to liquidate the role of the party." And after a moment of silence he asked me: "Have you received the resolution which announced the sentence we passed on Beria?"

"Yes," I replied.

He left his discourse about the party and started to speak about the activity of Beria, he accused him of almost every crime and described him as the cause of many evils. These were the first steps towards the attack on Stalin. For the time being, Khrushchev felt that he could not rise against the figure and work of Stalin, therefore, in order to prepare the terrain he started with Beria. At this meeting, moreover, to our astonishment, Khrushchev told us:

"When you were here last year, you assisted in the unmasking and exposure of Beria."

I stared in amazement, wondering what he was leading up to. Khrushchev's explanation was this:

"You remember the debate which you had last year with Bulganin and Beria over the accusation they made against your army. It was Beria who had given us that information, and the strong opposition which you put up in the presence of the comrades of the Presidium helped us by supplementing the doubts and the facts which we had about the hostile activity of Beria. A few days after your departure for Albania we condemned him."

Malenkov was the "scapegoat."

However, in that first meeting with us Khrushchev was not concerned simply with Beria. The "Beria" dissier had been closed. Khrushchev had settled accounts with him. Now he had to go further. He dealt at length with the importance and the role of the first secretary or general secretary of the party.

"To me it is of no importance whether he is called 'first' secretary of 'general' secretary," he said in substance. "What is important is that the most able, qualified person with the greatest authority in the country must be elected to that post. We have our experience," he continued. "After the death of Stalin we had four secretaries of the Central Committee but we had no one in charge, and thus we had no one to sign the minutes of meetings."

After going all round the question from the aspect of "principle," Khrushchev did not fail to launch a few gibes which, of course, were aimed against Malenkov, although he mentioned no names.

"Imagine what would occur," he said in his cunning way, "if the most capable and authoritative comrade were elected chairman of the Council of Ministers. He would have everyone on his back, and thus there would be a danger that the criticism put forward through the party would not be taken into account and hence the party would take second place and be turned into an organ of the Council of Ministers."

While he was speaking I glanced several times at Malenkov who sat motionless while his whole body seemed to be sagging, his face an ashen hue.

Voroshilov, his face flushed bright red, was watching me, waiting for Khrushchev to finish his "discourse." Then he began. He pointed out to me (as though I did not know) that the post of prime minister was very important, too, for this or that reason, etc.

"I think," said Voroschilov in an uncertain tone, as though he did not know with whom to side and whom to oppose, "that Comrade Khrushchev did not intend to imply that the Council of Ministers does not have its special importance. The prime minister, likewise..."

Now Malenkov's face had become deathly pale. While wanting to soften the bad impression which Khrushchev had created, especially about Malenkov, with these words, Voroshilov brought out more clearly the tense situation which existed in the Presidium of the CC of the party. Klim Voroshilov went on with this lecture about the role and importance of the prime minister for several minutes.

Malenkov was the "scapegoat" which they displayed to me to see how I would react. In these two lectures I saw clearly that the split in the Presidium of the CC of the CPSU was growing deeper, that Malenkov and his supporters were on the way out. We were to see later where this process would lead.

The green lights were given for all the revisionist elements in the other parties too.

At this same meeting Khrushchev told us that the other sister parties had been told of the Soviet "experience" of who should be first secretary of the party and who prime minister in the countries of people's democracy.

"We talked over these questions with the Polish comrades before the congress of their party," Khrushchev told us. "We thrashed matters out thoroughly and thought that Comrade Bierut should remain chairman of the Council of Ministers and Comrade Ochab should be appointed first secretary of the party..."

Hence, right from the start Khrushchev was for pushing Bierut aside in the leadership of the party (and later for his elimination), since he had insisted that Ochab, "a very good Polish comrade," as he stressed to us, should be elected first secretary. Thus they were giving the green light for all the revisionist elements, who, up till yesterday, were wriggling and keeping a low profile, awaiting the opportune moments. Now these moments were being created by Khrushchev who, with his actions, stands and "new ideas," was becoming the inspirer and organizer of "changes" and "reorganizations."

Bierut was completely eliminated by a sudden "cold" caught in Moscow.

However, the Congress of the Polish United Workers' Party did not fulfill Khrushchev's desires. Bierut, a resolute Marxist-Leninist comrade, of whom I have very good memories, was elected first secretary of the party, while Cyrankiewicz was elected prime minister.

Khrushchev "reconciled" himself to this decision because there was nothing he could do about it. However, the revisionist Mafia, which had begun to stir, was thinking about all the ways and possibilities. It was creating its spider's web. And although Bierut was not removed from the leadership of the party in Warsaw, as Khrushchev wanted and dictated, later he was to be eliminated completely by a sudden "cold" caught in Moscow.

[12 Oct 80]

[Text] Tirana, 12 Oct (ATA)--By vividly presenting the facts in his book "The Krushchevites (Memoirs)," Comrade Enver Hoxha analyses the factors that brought about the great tragedy in the Soviet Union. He stresses the correctness of J.V. Stalin's line and the counter-revolutionary role of Krushchev, Mikoyan, etc. He writes:

Khrushchev's Strategy and Tactics Within the Soviet Union

> The roots of the tragedy of the Soviet Union. The stages through which Khrushchev passed towards seizing political and ideological power. The Khrushchevite caste corrodes the sword of the revolution. What lies behind Khrushchev's "collective leadership." Khrushchev and Mikoyan--the head of the counterrevolutionary plot. The breeze of liberalism is blowing in the Soviet Union. Khrushchev and Voroshilov speak openly against Stalin. Khrushchev builds up his own cult. The enemies of the revolution are proclaimed "heroes" and "victims."

One of the main directions of Khrushchev's strategy and tactics, writes Comrade Enver Hoxha, was to seize complete political and ideological power within the Soviet Union and to put the Soviet Army and the state security organs in his service.

The Khrushchev group would work to achieve this objective step by step. At first, it would not attack Marxism-Leninism, the construction of socialism in the Soviet Union and Stalin frontally. On the contrary, this group would base itself on the successes achieved and, moreover, would exalut them to the maximum, in order to gain credit for itself and create a situation of euphoria, with the aim of destroying the socialist base and superstructure later.

First of all, this renegade group had to get control of the party in order to eliminate the possible resistance of those cadres who had not lost their revolutionary class vigilance, to neutralize the waverers and win them over by means of persuasion or threats, as well as to promote to the key leading positions bad, anti-Marxist, carreerist, opportunist elements of whom, of course, there were some in the Communist Party of the Soviet Union and the apparatus of the Soviet state.

After the great patriotic war some negative phenomena appeared in the Communist Party of the Soviet Union. The difficult economic situation, the devastation and destruction, the great human losses which occurred in the Soviet Union, required a total mobilization of the cadres and the masses for its consolidation and progress. However, instead of this, a falling-off in the character and morale of many cadres was noticed. On the other hand, through their conceit and boasting about the glory of the battles won, through their decorations and privileges, with their many vices and distorted views, the power-seeking elements were overwhelming the vigilance of the party and causing it to decay from within. A caste was created in the army which extended its despotic and arrogant domination to the party, too, altering its proletarian character. The party should have been the sword of the revolution, but this caste corroded it.

Stalin's correct line was distorted and sabotaged by the enemy elements.

Khrushchev and his collaborators acted under cover.

I am of the opinion that even before the war, but especially after the war, signs of a deplorable apathy appeared in the Communist Party of the Soviet Union. This party had a great reputation, and had achieved colossal successes in the course of its work, but at the same time it had started to lose the revolutionary spirit and was becoming infected by bureaucracy and routine. The Leninist norms, the teachings of Lenin and Stalin had been transformed by the apparatichiki into stale platitudes and hackneyed slogans devoid of operative worth. The Soviet Union was a vast country, the people worked, produced, created. It was said that industry was developing at the necessary rates and that the socialist agriculture was advancing. But this development was not at the level it should have been.

It was not the "wrong" line of Stalin which held up the progress. On the contrary, this line was correct and Marxist-Leninist, but it was frequently applied badly and even distorted and sabotaged by enemy elements. Stalin's correct line was distorted also by the disguised enemies in the ranks of the party and in the organs of the state, by the opportunists, liberals, Trotskyites and revisionists, as the Khrushchev,s Mikoyans, Suslovs, Kosygins, etc. eventually turned out to be.

Before the death of Stalin, Khrushchev and his close collaborators in the putsch were among the main leaders who acted under cover, who made preparations and awaited the appropriate moment for open action on a broad scale. It is a fact that these traitors were hardened conspirators, with the experience of various Russian counter-revolutionaries, the experience of anarchists, Trotskyites and Bukharinites. They were also acquianted with the experience of the revolution and the Bolshevik Party, although they learned nothing of benefit from the revolution, but learned everything they needed to undermine the revolution and socialism, while escaping the blows of the revolution and the dictatorship of the proletariat. In short, they were counter-revolutionaries and double-dealers. On the one hand, they sang the praises of socialism, the revolution, the Bolshevik Communist Party, Lenin and Stalin, and on the other hand, they prepared the counter-revolution.

Hence, all this accumulated scum carried out sabotage with the subtlest methods, which they disguised by praising Stalin and the socialist regime. These elements disorganized the revolution while organizing the counter-revolution, displayed "severity" against internal enemies in order to spread fear and terror in the party, the state and the people. It was they who created a situation full of euphoria which they reported to Stalin, but in reality they destroyed the base of the party, the base of the state, caused spiritual degeneration and built up the cult of Stalin to the skies in order to overthrow him more easily in the future.

This was a diabolical hostile activity which had a stranglehold on the Soviet Union, the Communist Party of the Soviet Union and Stalin, who, as the historical facts showed, was surrounded by enemies. Almost none of the members of the Presidium and the Central Committee raised their voices in defence of socialism and Stalin.

If a detailed analysis is made of the political, ideological and organizational directives of Stalin in the leadership and organization of the party, the war and the work, in general, mistakes of principle will not be found. But if we bear in mind how they were distorted by the enemies and applied in practice, we will see the dangerous consequences of these distortions and it will become obvious why the party began to become bureaucratic, to be immersed in routine work and dangerous formalism which sapped its strength and strangled its revolutionary spirit and enthusiasm. The party became covered by a heavy layer of rust, by political apathy, thinking mistakenly that the head, the leadership, operates and solves everything on its own. From such a concept the situation was created that in every instance and about everything they would say, "this is the leadership's business." "The Central Committee does not make mistakes." "Stalin has said this, and that's all there is to it," etc. Stalin might not have said many things, but they were covered with his name.

The apparatus and the officials became "omnipotent," "infallible" and operated in bureaucratic ways under the slogans of democratic centralism and Bolshevik criticism and self-criticism, which were no longer Bolshevik in reality. There is no doubt that in this way the Bolshevik Party lost its former vitality. It lived on with correct slogans, but they were only slogans. It carried out orders, but did not act on its own initiative. With the methods and forms of work which were used in the leadership of the party, the opposite results were achieved.

> A worker aristocracy made up of bureaucratic cadres was being created in the Communist Party of the Soviet Union.

In such conditions bureaucratic administrative measures began to predominate over revolutionary measures. Vigilance was no longer operative because it was no longer revolutionary, regardless of all the boasting about it. From a vigilance of the party and the masses, it was being turned into a vigilance of bureaucratic apparatus and transformed, in fact, if not completely from the formal viewpoint, into a vigilance of the state security organs and the courts.

It is understandable that in such conditions, non-proletarian, non-working class feelings and views began to take root and to be cultivated in the Communist Party of the Soviet Union and in the consciousness of many of the communists, careerism, servility, charlatanism, unhealthy cronyism, anti-proletarian morality, etc. began to spread. These evils eroded the party from within, smothered the feeling of class struggle and sacrifice and encouraged seeking the "good life," with comforts, with privileges, with personal gains and the least possible work and effort. Thus, a worker aristocracy made up of bureaucratic cadres was being created in the Communist Party of the Soviet Union.

Regrettably, such a process of degeneration developed under the "joyful" and "hopeful" slogans that "everything is going well, normally, within the laws and norms of the party," which in fact were being violated, that "the class struggle is still being waged," that "democratic centralism is safeguarded," "criticism and self-criticism continues as beofre," that "there is steel unity in the party," "there are no more factional, anti-party elements," "the time of Trotskyite and Bukharinite groups is passed," etc, etc. Generally speaking, even the revolutionary elements considered such a distorted concept of the situation to be a [word indistinct] reality and, this is the essence of the drama and the fatal mistake.

Therefore, it was considered that there was nothing to be alarmed about. Hence, according to them, life was proceeding normally, and thus it was reported to Stalin: "Everything is going normally." We are convinced that if Stalin, as the great revolutionary he was, had known the reality of the situation in the party, he would have struck a crushing blow at this unhealthy spirit and the entire party and the Soviet people would have risen to their feet to support him because, quite correctly, they had great trust in Stalin.

Not only did the apparatuses misinform Stalin and bureaucratically deform his correct directives, but they had created such a situation among the people and in the party that even when Stalin went among the masses of the party and the people, to the extent that his age and health permitted, they did not inform him about the shortcomings and mistakes which were occuring, because the apparatus had implanted the opinion amongst the communists and the masses that "we must not worry Stalin."

> The great hullabaloo the Khrushchevites made about the so-called cult of Stalin was a bluff.

The great hullabaloo the Khrushchevites made about the so-called cult of Stalin, writes Comrade Enver Hoxha further on, was really only a bluff. It was not Stalin, who was a modest person, who had built up this cult, but all the revisionist scum accumulated at the head of the party and the state which apart from anything else, exploited the great love of the Soviet peoples for Stalin, especially after the victory over fascism. If one reads the speeches of Khrushchev, Mikoyan and all the other members of the Presidium, one will see what unrestrained and hypocritical praises these enemies poured on Stalin as long as he was alive. It is sickening to read these things when you think that behind all this praise they were hiding their hostile work from the communists and the masses who were deveived, thinking that they had to do with leaders loyal to Marxism-Leninism and comrades loyal to Stalin.

Even for some time after Stalin's death, the "new" Soviet leaders, and Khrushchev above all, still did not speak badly about him. Indeed they described him as a "great man," a "leader of indisputable authority," etc. Khrushchev had to speak in this way to gain credit inside and outside the Soviet Union in order to create the idea that he was "loyal" to socialism and the revolution, a "continuer" of the work of Lenin and Stalin.

Khrushchev and Mikoyan were the bitterest enemies of Marxism-Leninism and Stalin. These two headed the plot and the putsch which they had prepared long before, together with anti-Marxist, careerist elements of the Central Committee, of the army, and leaders at the base. These putschists did not show their hand immediately after the death of Stalin, but, when it was necessary and to the extent it was necessary, continued to administer the poison along with their praises for Stalin. It is true that Mikoyan, in particular, in the many meetings I have had with him, never boosted Stalin, irrespective of the fact that in speeches and discourses the putschists heaped praises and glory on Stalin on every occasion. They fostered the cult of Stalin in order to isolate him as much as possible from the masses, and, hinding behind this cult, they prepared the catastrophe.

Khrushchev and Mikoyan worked to a plan and after the death of Stalin found an open field for their activity, also because of the fact that Malenkov, Beria

Bulganin and Voroshilov proved to be not only blind, but also ambitious, and each of them struggled for power.

They and others, old revolutionaries and honest communists, had now turned into typical representatives of that bureaucratic routine, of that bureaucratic which developed, and, when they made a feeble attempt to use this against the obvious plot of the Khrushchevites, it was already too late.

Khrushchev and Miloyan, in complete unity, knew how to manoeuvre amongst them and to set one against the other. In a few words, they applied this tactic: Split and divide in the Presidium, organize the forces of the putsch outside, continue to speak well about Stalin in order to have the millions strong masses on their side, and thus bring closer the day of the seizure of power, the liquidation of opponents, and of a whole glorious epoch of the construction of socialism, the victory of the patriotic war, etc. All this feverish activity (and we sensed this) was aimed to create the popularity of Khrushchev inside the Soviet Union and outside it.

Under the umbrella of the victories which the Soviet Union and the Communist Party of the Soviet Union had scored under the leadership of Lenin and Stalin, Khrushchev did his utmost to make the Soviet peoples and the Soviet communists think that nothing had changed, one great leader had died, but a "greater" leader was rising, and what a leader he was. As principled a Leninist as the former, if not more so, but liberal, popular, smiling, all humour and jokes.

> Revisionist viper pours out its poison about the figure and work of Stalin.

Meanwhile the revisionist viper, which was becoming active, started to pour out its poison about the figure and work of Stalin. At first this was done without attacking Stalin by name, but attacking him indirectly.

In one of the meetings which I had with Khrushchev, in June 1954, in an allegedly principled and theoretical way he began to expound to me the great importance of "collective leadership," and the great damage which comes about when this leadership is replaced by the cult of one person, and mentioned isolated excerpts from Marx and Lenin, so that I would think that what he was saying had a Marxist-Leninist basis.

He said nothing against Stalin, but he fired off all his batteries at Beria, accusing him of real and non-existent crimes. The truth is that in this initial stage of Khrushchev's revisionist assault, Beria was the appropriate card to play to advance the secret plans. On the pretext of the struggle against the damage caused by Beria, Khrushchev, on the one hand, established himself in the leadership of the party and state and took control of the Ministry of Internal Affairs, and on the other hand prepared public opinion for the open attack which he was to undertake later on Joseph Vissarinovich Stalin, and on the real work of the Bolshevik Communist Party of Lenin and Stalin.

Many of these surprising actions and changes made an impression on us, but it was too early to be able to grasp the true proportions of the plot which was being carried out. Nevertheless, even at that time we could not fail to notice the

contradictory nature of various actions and opinions of this "new leader" who was taking over the reins in the Soviet Union. This same Khrushchev who was now parading before us as a "disciple of collective leadership" a few days earlier in a meeting which we had with him, when he spoke to us about the role of the first secretary of the party and the prime minister, presented himself as an ardent supporter of the "role of the individual" and the "firm hand."

After Stalin's death it seemed that an allegedly collective leadership was established by these "adherents to principle." The collective leadership was publicized to show that "Stalin had violated the principle of collective leadership," that he "had degraded this important norm for Leninist leadership," and that the "leadership of the party and the state had been transformed from collective leadership into individual leadership." This was a big lie, publicized by the Khrushchevites to prepare the ground for themselves. If the collective leadership principle had been violated, the blame for this must be laid not on the correct ideas which Stalin expressed on different problems, but on the hypocritical flattery of those others and on the arbitrary decisions which they themselves took, distorting the line in the various sectors which they led.

In the campaign allegedly for the establishment of the collective leadership Khrushchev was trying to perform a slight-of-hand trick, under cover of a deafening clamour about the struggle against the cult of the individual. There were no more photographs of Khrushchev on the daily press, no more big headlines boosting him, but another stale tactic was used: all the newspapers were filled with his public speeches, his discourses, reports about his meetings with foreign ambassadors, his nightly attendances at diplomatic receptions, his meetings with delegations of communist parties, his meetings with American journalists, businessmen and senators and Western millionaires, who were friends of Khrushchev.

Khrushchev's and Varoshilov's slanderous tale.

I was in Moscow on the occasion of a meeting of the parties of all the socialist countries. I think it was January 1956, when a consultative meeting was held about the problems of economic development of the member countries of COMECON. It was the time when Khrushchev and the Khrushchevites were advancing in their hostile activity. We were together with Khrushchev and Voroshilov in a villa outside Moscow, where all the representatives of the sister parties were to have lunch. The others had not yet arrived. I had never heard the Soviet leaders openly speak ill of Stalin, and I, for my part, continued as before to speak with affection and deep respect for the great Stalin. Apparently these words of mine did not sound sweet in Khrushchev's ears. While waiting for the other comrades to come, Khrushchev and Voroshilov said to me:

"Shall we take some air in the park?"

We went out and strolled around the paths of the park. Khrushchev said to Klim Voroshilov:

"Do tell Enver something about Stalin's mistakes."

I pricked up my ears, although I had long suspected that they were crooks. And Voroshilov began to tell me that "Stalin made mistakes in the line of the party, he was brutal, and so savage that you could not discuss anything with him."

Voroshilov went on, "He even allowed crimes to be committed, and he must bear responsibility for this. He made mistakes also in the field of the development of the economy, therefore it is not right to describe him as the 'architect of the construction of socialism'. Stalin did not have correct relations with the other parties..."

Voroshilov went on and on pouring out such things against Stalin. Some I understood and some I didn't, because, as I have written above, I did not understand Russian well, but nevertheless I understood the essence of the conversation and the aim of these two and I was revolted. Khrushchev was walking ahead of us, carrying a stick with which he hit the cabbages that they had planted in the park. (Khrushchev had planted vegetables even in the parks in order to pose as an expert in agriculture.)

As soon as Voroshilov ended his slanderous tale I asked him:

"How is it possible that Stalin could make such mistakes?"

Khrushchev turned to me, his face flushed, and replied.

"It is possible, it is possible Comrade Enver, Stalin did these things."

"You have seen these things when Stalin was alive. But how is it that you did not help him to avoid these mistakes, which you say he made?" I asked Khrushchev.

"It is natural that you ask this question, Comrade Enver, but you see this kapust (cabbage Russian in the original). Here Stalin would have cut off your head just as easily as the gardener will cut this kapusta," and Khrushchev hit the cabbage with his stick.

"Everything is clear." I said to Khrushchev and said no more.

We went inside. The other comrades had arrived. I was seething with anger.

> Unrestrained demagogy and efforts to build up the cult of charlatan, clown and blackmailer of Khrushchev.

Khrushchev was advancing more rapidly towards the seizure of power, writes Comrade Enver Hoxha further on. He was creating the figure of a "popular" Moujik leader, who was opening the prisons and concentration camps, who not only did not fear the reactionaries and the condemned enemies in the prisons in the Soviet Union, but by releasing them, wanted to show they had been condemned even when they were "innocent."

Everyone knows what Trotskyites, conspirators and counter-revolutionaries Zinoviev, Kameniev, Rykov, and Pyatokov were, what traitors Tukhachevsky and the other generals, agents of intelligence service or the Germans, were. But to Khrushchev and Mikoyan they were all fine people and a little later, in February 1956, they were to present them as innocent victims of the "Stalinist terror." This was being built up slowly, public opinion was being carefully prepared. The "new" leaders, who were the same as in the past, with the exception of Stalin, were posing as liberals in order to say to the people: "Breathe freely, you are free,

you are in genuine democracy because the tyrant and the tyranny have been eliminated. Now everything is proceeding on Lenin's road. Plenty has been created. The markets will be so full that we won't know what to do with all the products."

Khrushchev, this disgusting, loud-mouthed individual, concealed his wiles and manoeuvres under a torrent of empty words. Nevertheless, in this way he created a situation favourable to his group. Khrushchev let no day go by without indulging in unrestrained demagogy about the development of agriculture, transferring people and changing methods of work and making himself the only "competent boss" of agriculture, the one who undertook such personal "reforms."

Khrushchev had even "inaugurated" his elevation to the post of the first secretary of the Central Committee of the Communist Party of the Soviet Union with a long report on the problems of agriculture, which he delivered at a plenum of the Central Committee in September 1953. This report, which was described as "very important," contained those Khrushchevite ideas and reforms which, in fact, damaged Soviet agriculture so severely that their catastrophic consequences are being felt to this day. All the boastful clamour about the "virgin lands" was empty advertising. The Soviet Union has bought and is still buying millions of tons of grain from the United States of America.

However, the "collective leadership" and non-publication of Khrushchev's photographs in the newspapers did not last long. The cult of Khrushchev was being built up by the tricksters, the liberals, the careerists, the lick-spittles and the flaterers. The great authority of Stalin, based on his immortal work, was undermined inside and outside the Soviet Union. His place and authority was usurped by that charlatan, clown and blackmailer.

[13 Oct 80]

[Text] Tirana, 13 Oct (ATA)--In continuation of the book "The Khrushchevites (Memoirs)," Comrade Enver Hoxha describes the difficult talks on economic matters with the new Soviet leaders and their stand of hucksters in the relations with Albania. He discovers the efforts of the Khrushchevites to hinder the development of Albanian economy.

In continuation of the book "The Khrushchevites (Memoirs)," Comrade Enver Hoxha describes the difficult talks on economic matters with the new Soviet leaders and their stand of hucksters in the relations with Albania. He discovers the efforts of the Khrushchevites to hinder the development of Albanian economy.

Comrade Enver Hoxha also points out the discontent and quarrels among the revisionist chiefs in COMECON.

Not Marxist-Leninists but Hucksters

> Mikoyan, a cosmopolitan huckster and inveterate anti-Albanian. Difficult talks in June 1953 on economic matters--the Soviet leaders are bargaining over aid for Albania. Khrushchev's "advice" one year later: "You don't need heavy industry," "We shall supply you with oil and metals," "Don't worry about bread grain, we'll supply you with all you want." Quarrels with Mikoyan. Discontent in COMECON from the revisionist chiefs. Ochab, Dej, Ulbricht. The June 1956 COMECON consultation in Moscow--Khrushchev: "...we must do what Hitler did." With Khrushchev again. His "advice:" "Albania should advance with cotton, sheep, fish and citrus fruit."

We were determined to carry on and develop even further the practice, which was begun at the time when Stalin was alive, writes Comrade Enver Hoxha, of exchanging opinions with and seeking the aid of the Soviet leadership over our economic problems. We felt the need for continual consultation with our friends, and first of all with the leaders of the Communist Party of the Soviet Union. Likewise we felt the need for some material aid and credits from them. These we never considered as charity and never sought them as such.

However, in this field of our relations and contacts with the post-Stalin Soviet leadership, too, we very soon saw the first sign that things were no longer going as before. There was something wrong, there was no longer that former atmosphere, when we would go to Stalin and open our hearts to him without hesitation and he would listen and speak to us just as frankly from his heart, the heart of an internationalist communist. More and more each day, in his successors, instead of communists we saw hucksters.

To Mikoyan, Albania was a "geographical notion."

Mikoyan, in particular, was the most negative, the most dubious element and the greatest intriguer among the members of the Presidium of the Central Committee of the Communist Party of the Soviet Union. This huckster, who was constantly grinding and clicking his false teeth, was also ruminating on diabolical anti-Marxist, conspiratorial, putschist plans, as was proved later. This individual, with an unpleasant face and a black heart, behaved in a very menacing way, especially towards us Albanians. Our relations with this tight-fisted dealer and money-changer were economic and commercial. Everything in connection with Albania, both in according credits, and in commercial exchanges, this individual looked at simply from the angle of a trader. The friendly, internationalist socialist feelings had been wiped out as far as he was concerned.

To Mikoyan, Albania was a "geographical notion," a country with a people of no value. I never heard him say one word about our war, our people, or the efforts we made in the struggle with the great difficulties for the revival of the country and our economy ruined by the war. He who had visited nearly every country, never once said that he would like to come to Albania. It seemed that the Soviet leadership based itself on the "great economic experience" of this cosmopolitan huckster, who, as history showed, plotted with Nikita Khrushchev against Stalin, whom they had decided to murder. He admitted this with his own mouth to Mehmet and me in February 1960. After the putsch they linked up with American imperialism, and set about the destruction to its foundations of the great work of Lenin and Stalin, socialism in the Soviet Union. It was Mikoyan who decided what aid the Soviet Union would provide for Albania, as for the other countries.

In relations with us Mikoyan was not only the most miserly but also the most insulting. This anti-Albanian line of his was permanent, even when Stalin was alive.

With all our economic delegations Mikoyan behaved like the hard-faced trader he was.

After the death of Stalin the anti-Albanian nuances in the attitude of the wheeler-dealer minister of the Soviet Union became a permanent line. However, now he was no longer on his own. His pencil, which always tended rather to mark crosses and write "no's" to our modest requests, now found backing and support among the others. I have spoken above about the meeting in June 1953 with Malenkov, Beria,

Mikoyan, and others in Moscow. Apart from other things, from the way they behaved towards us and how they handled the economic problems which we raised, I felt that now it was not only the body of the unforgettable Stalin that was missing in the Kremlin, but also his generous humane spirit, his attentive, friendly behaviour and his outstanding Marxist-Leninist thought.

Ill-intentioned stands.

Describing in detail the difficult talks with the Soviet leaders in June 1953 on economic matters, Comrade Enver Hoxha mentions also these words by Mikoyan:

"You are building a hydro-power station in Mat. We ask you: Where are you going to use the electric power? We do not see where you will use it. You have no need for so much electric power."

His reasoning seemed very astonishing to me, and I objected, writes Comrade Enver Hoxha.

"When it is finished, the hydro-power station on the Mat River will provide about 25,000 kw. Does this seem a large and unnecessary amount to you? Bear in mind, Comrade Mikoyan, not only that we need electric power just now, but also that the planned development of our economy in the future cannot be guaranteed without taking timely measures to ensure the necessary supply of electric power."

"The hydro-power station is costing you an enormous amount and you won't know what to do with the current," he persisted. "Likewise you have planned to build unnecessary factories, like those for steel, timber-processing, paper, glass, linseed, bread, etc. Does Albania need all these factories? Why are you building the refinery? (this refers to the oil refinery which was going up in Cerrik at that time). Have you enough oil or will you build this refinery to have it lie idle? Have a good look at these things and remove what is unnecessary. The question of agriculture is very critical, therefore reduce your investments in industry and strengthen agriculture."

I listened to him saying this, continues Comrade Enver Hoxha, and for a moment it seemed to me that I was facing not a member of the Presidium of the Central Committee of the Communist Party of the Soviet Union and the Soviet deputy prime minister, but Kidric, Tito's envoy, who with his associates, 7 to 8 years earlier, had done everything possible to convince us to abandon industry and not set up any industrial project. "Agriculture, agriculture," insisted the men of Belgrade. "Agriculture, only agriculture," I was hearing them advise me now, in Moscow in 1953...

This whole meeting, which set out to examine our economic problems, continued in this spirit to the end.

A few days later, we sat down again with Mikoyan and one or two other Soviet officials and again "thrashed out" the economic problems. Seeing the unhelpful pre-disposition of the friends, we ourselves cancelled many of our requests.

Although the least that could be said about our impressions from this trip to the Soviet Union is that they were not good. Still we continued to preserve our feelings of friendship with and love for the great land of the Soviets, for the

homeland of Lenin and Stalin. Those things in their actions and gestures which had an unpleasant sound to us we kept strictly to ourselves, discussed them anxiously with one another, but in our hearts we did not want things there to take a wrong direction. We said to one another that the Soviet comrades themselves had great economic difficulties in their own country, the loss of [figure indistinct] undoubtedly confused them a little, it was not so easy for them to take over the work of leadership completely, and we ardently hoped that these would be transient manifestations that would be put right in time.

A few months later, however, we again experienced something unpleasant and not correct on their part.

Disdainful and insulting tone of the new Soviet leadership.

On 22 December 1953, we sent the Central Committee of the Communist Party of the Soviet Union a long letter in which, after speaking about the measures we had taken for the strengthening of the people's power, our economic development, the improvement of life in the village and the progress of agriculture, we also presented a series of problems for consultation and some modest requests for aid and credits for our coming five-year plan. We had drafted this letter according to their instructions, based on an extensive study we had carried out over several months and our opinion was that its requests were very well founded and accurate.

The Soviet specialists and advisers who had come to our country in the framework of the aid and collaboration between our two countries were of the same opinion.

No more than 5 to 6 days after we sent our letter to Moscow, the reply of the Central Committee of the Communist Party of the Soviet Union arrived in Tirana. The whole letter consisted of 15 or 20 lines. "You have not presented the situation well," "you have viewed the situation hastily," "you have not gone into things deeply," "you have not taken the necessary measures," "prepare the plan better and write to us again." This was the entire content of those few lines signed by the Central Committee of the Communist Party of the Soviet Union. The disdainful and insulting tone of the new Soviet leadership could not fail to hurt us. We could not fail to ask in astonishment: "How can those people in Moscow know whether we have presented our problems rightly or wrongly, when it is we who live and work in Albania and not they?"

However, the earlier meetings, especially with Mikoyan, had already taught us what should be done to make our letter pleasing to the Soviets: we cut out many of the requests we had presented, removed from the draft of the future plan some of the things we had envisaged and proposed, especially in the field of industry, and sent a second "edited," or more accurately, mutilated letter. We were not mistaken: they informed us they were awaiting us in Moscow to "consult with and help us."

As to the opinions and "directions" which he gave us for the development of our economy, we could not agree with Khrushchev at all.

We held the first meeting with the Soviet leaders on 8 June 1954. It was precisely that meeting at which Khrushchev did not want to speak about our economic problems, since he was still "a bad Albanian," as he told us, but gave us a lecture about the role of the first secretary of the party and the prime minister.

Nevertheless, at the end of his lecture, Khrushchev also spoke about economic problems, in general, allegedly in the form of orientation and advice, especially about the line we should follow in our economic policy.

"In the development of your economy," he said, "you must be careful with your calculations. Let us take oil, for example. Is it in your interest to invest so much for oil? he asked.

I understood immediately what he was getting at. Despite the "instructions" that they had given us previously that we should give up prospecting for and extraction of oil in Albania, in the second letter which we sent them, we persisted in our opinions and asked them to assist us in this sector. Now, since he raised the matter, I took the opportunity to put forward our opinion once again.

Then Comrade Enver Hoxha dwells on the reasons he presented to Khrushchev concerning the prospecting and extraction of oil.

"Very well, very well," said Khrushchev, "the thing is that calculations must be made well, in detail and you must see whether it is worthwhile."

After giving me a good lecture with figures about the "profitability" and "non-profitability" of the extraction of oil, with the aim that I "should not make mistakes" like Stalin, Khrushchev came round to the point:

"Hence we must make our reckoning on economic questions very carefully, both in our country and in yours, and if you have profitable sources of oil, fine, we give you credits. However, reckoning things this way, it turns out that it is more profitable for us to supply you from our oil...

"We must have regard for profitability in everything," continued Khrushchev. "Let us take industry. I am of the same opinion as you that Albania should have its own industry. But what sort of industry? I think that you ought to develop the food industry, such as preserving and processing fish, fruit, vegetable oil, etc. You want to develop heavy industry, too. This should be looked at carefully," he said and after mentioning that we could set up some engineering plant for repair work and spare parts, he added:

"As for the mineral-processing industry, for the production of metals, this is unprofitable for you. We have metals and we can supply you with what you want. If we give you one day's production from our industry, your needs will be fulfilled for the whole year."

"Likewise in agriculture. In Albania, too, those crops which do best and yield the greatest production, such as cotton, citrus fruit, olives, etc., should be developed. In this way Albania will become a beautiful garden and we will fulfill each other's needs."

"One of the main directions of the development of agriculture in our country," I said, "is that of increasing bread grain production. Bread has always been and still is a great problem for us."

"Don't worry about growing bread grain," interjected Khrushchev immediately. "We shall supply you with all the wheat you want, because even one day's overfulfillment of the plan in the Soviet Union is sufficient for Albania to live on for 3 years. We are advancing rapidly in agriculture," he continues. "Let me read you some of the statistics about the fulfillment of the plan of the spring sowing in our country: the planting has been fulfilled...percent...hectares of land more than last year have been planted...million hectares above the plan...." And he went on to stuff us with figures, which he rattled off, one after the other, to give us the impression that we were dealing not with any sort of leader, but with one that had the situation at his fingertips.

As for his figures, we had no reason to doubt their accuracy, therefore we were pleased and wished the Soviet Union the greatest possible progress. As to the opinions and "directions" which he gave us for the development of our economy, however, we could not agree with Khrushchev at all. I do not want to say that as early as this first official meeting with him, in June 1954, we managed to realize that we were facing the future chief of modern revisionism. No, we were to realize this later, but at this meeting we noticed that his ideas, both about oil and the orientation of industry and agriculture in our country, were not correct, did not respond to the needs of our country, and were not compatible with the basic principles of the construction of socialism in a country or with the teachings and experience of Lenin and Stalin. Therefore, we decided to oppose his ideas and defend our own views.

At this meeting, however, Khrushchev left no room for debate.

"I expressed these opinions so that you will bear them in mind," he said in conclusion. "As to the discussion of the concrete questions you raised here in connection with the development of your economy, for our part we have appointed a group of comrades headed by Mikoyan. Finally, we shall meet again and make the decision jointly."

[14 Oct 80]

[Text] Tirana, 14 Oct (ATA)--Limited credits, arrogant criticism with lashings of "advice."

For several days on end, writes Comrade Enver Hoxha, we battled with Mikoyan, who now set to work with his pruning shears. In order to reject our requests for the development of industry, which were modest enough, but on which we insisted, he and his comrades, as usual, repeated the same old refrain:

"Why do you need industry? Don't you see the state of your countryside?"

Naturally we knew the situation in our countryside much better than they, knew the backwardness of our agriculture inherited from the past, and precisely because we knew these things well we had always devoted special attention to the progress of agriculture and to the raising of the standard of living in the countryside. But you can't achieve everything overnight. Moreover, we were well aware of the Marxist-Leninist truth, and we felt it in our daily practice, that agriculture could never advance without the development of industry, without the creation and strengthening of those basic branches which would favour the harmonious development of the whole of our people's economy. Therefore in these meetings with the Soviet leaders we stuck to our opinions and persisted in our requests.

"Despite all the progress it has made," we told them among other things, "today our industry produces only a limited range of products and is quite unable to fulfill the needs of the working people. In many cases, too, securing our products depends on the delivery of many goods from abroad, such as fuel, steel, rolled steel, tyres, chemicals, chemical fertilizers, spare parts, instruments and many other things.

"The Central Committee of the party and our government think that the existing situation cannot be altered, except by developing industry along with agriculture, the industry which, step by step, will relive us of that great burden of imports, which we are obliged to cope with at present," we told them.

In the end Mikoyan and his group gave way.

"All right," he said, "we shall refer those things on which we have not reached agreement to the leadership and decide on them jointly at the final meeting."

At the final meeting of this visit, which was held 2 or 3 days before we left for Albania, Khrushchev's behaviour was more friendly and more open. After our insistence on those things we were seeking (undoubtedly Mikoyan had informed him of the debates we had had), Khrushchev showed himself "more generous," repeated several times, "We will assist little Albania," and agreed that some of our requests for credits and aid would be fulfilled.

At this meeting he spoke well about our party, the Central Committee and me, and as usual, was unsparing in his "boastful promises." We were soon to understand why he acted like that: It was still the beginning of the elevation of him and his group and for this he needed popularity, good opinion, the idea within the Soviet Union and abroad that we had to do with a jolly good fellow, a warm-hearted, skillful and wise leader, who knows how to put up opposition, but can also back down, who is not tight-fisted, but prudent and a consummate accountant.

Thus, it was the time when Khrushchev was "making investments" in favour of his secret action, and to this end, according to the occasion, he had to appear "generous," "friendly" and "humane." However, behind this fine, "friendly" facade, the guard of the Mikoyans and other functionaries of commerce was extremely active, and both with us and with others, they behaved like real hucksters in the talks over economic problems. They were Khrushchev's men who, with his knowledge and on his instructions, employed all kinds of pressure and trickery during "working meetings" and "the concrete examination of matters" to prune our requests and to "smooth" matters over in such a way that when we finally met Khrushchev all that remained for him to do was to smile, flatter and propose toasts.

Once we had a bitter wrangle with Mikoyan in connection with granting us a credit for mass consumer goods. There is no need here to dwell on what a grave situation we had during those years for such goods, or on the urgent needs which our country had in this direction. The Soviet leadership was aware of the situation. But, in support of our request for the credit I mentioned, we had written it a letter in which we gave a brief outline of how we fulfilled the needs of the population. However, before beginning the examination of our request, Mikoyan levelled the following charge against us:

"You are using up the credits we have granted you for the development of the economy in other sectors. You buy mass consumer goods with them."

I replied: "We have had and still have very great needs for consumer goods, but I am not aware of what you charge us with. We have never permitted the credit for the development of industry or agriculture to be used to purchase commodities."

"Yes, you have." repeated Mikoyan. "You have used up...million rubles," and he mentioned a figure which I don't remember precisely, but which amounted to more than 10 million.

"I'm hearing this for the first time," I said, "nevertheless we shall look into the matter."

"I shall convince you." said Mikoyan in a stern and angry tone and ordered one of the nearby functionaries to bring in the documents.

A little later he came in, looking pale, and laid the accounts before Mikoyan.

"There is no violation," he said. "The Albanian side has bought the goods you mentioned with the credit which our side accorded it precisely for consumer goods."

Mikoyan, in a tight spot, muttered something between his teeth, and then, in connection with our request for a new credit for the purchase of consumer goods, he replied:

"We can no longer give you such credits because we make deals over these things: you give us something, we give you something in return."

"What else do you want us to give you?" I replied. "We supply you and the countries of people's democracy with the chrome, oil and copper we extract. Do you expect us to give you the bread from the mouths of our people, who still have insufficient food? I do not consider your reasoning in order," I told the Armenian, "and I ask you to re-examine the matter."

They did re-examine it, but they accepted our requests after making big cuts. They gave us some limited credits, but they gave us arrogant criticism wholesale with lashings of "advice."

> Sincerity, the genuine internationalist spirit was lacking among the COMECON countries.

All these stands, and others like these, in our relations with them, continued up to the time of the meeting of the 81 parties, which was held in Moscow in November 1960.

During this time we had many bilateral meetings with the Soviet leaders, at which we discussed economic problems with them and sought some aid and credits, and we also had many contacts with them in the meetings, talks and consultations which were organized in the framework of the Council of Mutual Economic Aid.

The way in which these meetings were organized and our friends behaved towards us, towards the problems we raised and the difficulties we had, more and more impelled us to ask ourselves, are we dealing with Marxist-Leninists or hucksters? Ulbricht, Nomotny, Ochab, Dej, Kadar, Gomulka, Cyrankiewicz, Zhivkov, and the others were at one another's throats. Each of them complained that he was in dire straits, they all called for "more aid" from their friends, because they had "pressure from below," they tried to elbow one another out, presented all kinds of "arguments" and figures, they tried to dodge their obligations and to grab as much as possible at the expense of others. Meanwhile Khrushchev or his envoys would get up, deliver lectures on the "socialist division of labour," support one or the other, according to their own interests in a given situation, and demand "unity" and "understanding" in the "socialist family." And in all this wrangling Albania went almost unmentioned, as if it did not exist for them.

The talks and consultations went on for 2, 3 or 4 days on end, whole dossiers were filled with speeches, requests, decisions, balances, but socialist Albania was treated with disdain by the others as if we were a nuisance. We were well aware of the situation in our country, were conscious that our economic potential was nowhere near that of the other countries, we knew also that these countries had their own big problems and difficulties, but these should never have served as a reason for them to underrate and ignore us. With great efforts, after many meetings and talks, we managed occasionally to squeeze some aid or credit out of them. We thanked them wholeheartedly for what they gave us, thanked the fraternal peoples, first of all, and for our part, not only did we fully repay the credits on time, but with what we had, we honestly fulfilled every other obligation of ours towards our friends. It was precisely sincerity, the genuine internationalist spirit, that was lacking amongst them. When it came to practical fulfillment of their commitments to provide aid for our country, each of them would make excuses:

"We have shortages and needs ourselves," said Ulbricht, "we have pressure from Federal Germany, therefore we are unable to help Albania."

"The counter-revolution caused us damage," was Kadar's justification. "Cannot fulfill our commitment about aid."

All of them, one after the other, acted in this way. And in the end the "solution" was found:

"The Council of Mutual Economic Aid recommends to the Albanian comrades that the problems raised by them here should be solved with the Soviet Government through bilateral meetings."

> Contradictions in the COMECON. The "demons" which Khrushchev released from the bottle were stirring and poking out their tongues to their liberator. Khrushchev waves the whip of bread.

Among many such meetings of the COMECON countries, the one that was held in Moscow in June 1956 has stuck in my mind. Now Khrushchev was going headlong down his road of betrayal, but the others, too, were galloping after him.

The 20th Congress of the CPSU, about which I shall speak later, was having its effect. Lack of unity, division and contradictions are the natural outcome and concomitants of revisionism.

This was apparent at this meeting, 3 or 4 months after the 20th Congress.

Ochab, who had become first secretary of the Polish United Workers' Party, got up and declared:

"We have not fulfilled the obligations with which we have been charged for coal and are not going to do so. We cannot fulfill the plan, its targets are set too high and must be reduced. The coal workers live badly, they work to exhaustion."

As soon as he finished, Gero, Ulbricht and Dej got up, one after the other, and levelled every kind of charge against the Poles. The atmosphere was very heated.

"If you want coking coal, invest in Poland," replied Ochab. "We must improve the standard of living. Things have reached such a state that the Polish workers are about to go on strike and abandon the mines...."

"Where should we invest first?" replied the others. "In the steel plants of the Soviet Union or in your coal mines?"

"We must examine these things," said Khrushchev, trying to cool the tempers. "As for the question of workers, if you Poles have insufficient, or those you have walk out, we can bring workers from other countries."

At this Ochab jumped up.

"It is not fair," he shouted, "you must help us. We are not going back to Poland without settling this matter. Either reduce the plan or increase the investment..."

"Once taken, the decisions must be carried out," interposed Dej.

"The decisions are not being carried out," said Gero, adding fuel to the flames. "We have several factories in which we have been told to produce arms and special equipment, but no one is buying the products from us."

"They don't take them from us, either," said Ochab, jumping up again. "What are we to do with them?"

"Let us not speak here like factory managers," said Khrushchev to Ochab. "Things can't be discussed in this way. You must look at the profitability. We, too, have changed direction in many plants. For example," continued Khrushchev, "we have turned some arms plants into plants producing water pumps. I have some suggestions about these problems," continued Khrushchev, and he began to bring out those "gems" which he had on the tip of his tongue:

"In regard to a number of special products of industry," he said among other things, "we must do as Hitler did. At that time Germany was alone and he produced all those things. We must study this experience and we, too, must set up joint enterprises for special products, for example, weapons."

We could not believe our ears. Could it be true that the first secretary of the Central Committee of the Communist Party of the Soviet Union wanted to learn from the experience of Hitler and even recommended it to others? But this is what things were coming to. The others listened and nodded approval.

"You must provide us with designs," said Ochab.

"You don't deserve to get them," shouted Khrushchev angrily, "because the West steals them from you. We gave you the patent of an aircraft and the capitalists stole it from you."

"That occured," admitted Ochab, and pulled in his horns a little.

"We gave you the secret report of the 20th Congress and you printed it and sold it at 20 zloty a copy. You don't know how to keep secrets."

"Right." whispered Ochab, and drew in his horns even further.

"We have given you another four top secret documents and they have flown from you," added Bulganin, numbering them off one by one to his face.

"Yes," said Ochab, and now his voice could hardly be heard. "Someone stole them from us and fled to the West."

"The situation in Poland is not good," continued Khrushchev. "You are following an opportunist policy towards the Soviet Union and the countries of people's democracy, let alone within your own country."

"In the context of collaboration," interjected Ulbricht, "we must collaborate with all, especially with the Social-Democrats."

For a moment Khrushchev was at a loss for words. "Collaboration with all," rehabilitations, a gentle policy towards enemies, were his ideas, the continuation of his opportunist and pacifist policy, the very policy which he was following in the Soviet Union. The others were not lagging behind, indeed, some of them were trying to outstrip him.

"Agreed, collaboration," shouted Khrushchev, "but not to rise against the Soviet Union and our camp. This is what is happening in Poland." He turned to Ochab and Cyrankiewicz, who during the whole time had sat smoking French gauloises, without saying a single word. "You must improve the situation. You must build up the people's trust in you."

"We have released all the imprisoned Social-Democrats," said Ochab.

"You should have kept some of them," said Saburov ironically. "To whom are we going to drink the toast today, to the Social-Democratics?"

Khrushchev provided the answer:

"Let us drink to collaboration."

It was quite obvious that things in the camp were taking the wrong road. The "demons" which Khrushchev released from the bottle were stirring and poking out their tongues even at their liberator. He tried to manoeuvre, to get them on side, to set the others on to one (this time Ochab was in the dock), and then, when he saw that the quarrel was not dying down, he poured out threats and warnings to all.

And as the inveterate trickster he was, he knew how to find the best means of pressure. This time he used the weapon of bread. One of the Soviet Chinovniki (bureaucratic functionaries of Czarist Russia, Russian in the original), of COMECON reported briefly on the state of agriculture in the camp and sounded the alarm about the deficits in bread grain.

Khrushchev got up at once and exploited the opportunity:

"Bread is a vital problem," he said in a grave tone, in which both the pressure and the threat were clear. "We have given you what we had to give. Now we have no more to give you. Therefore, think well about bread, there is no other way..."

After continuing for several minutes to wave the whip of bread, suddenly his face brightened and he hopped with great pleasure to his favourite theme--maize. I cannot remember any of the meetings I have had with him, even those purely for political and ideological problems, in which Khrushchev did not eulogize the plant so dear to his heart.

"In recent years," he said, "we have given importance to maize and have achieved marvellous results. With maize," he continued, "we solved the problem of meat, milk and butter."

"Without meat, milk and butter there is no socialism," put in Mikoyan to sweeten up his "chief."

"No, there is not" replied Khrushchev and continued, "every leader must give importance to maize. Look, I took my native village under my patronage, and allow me to report to you the results: I found 60 pigs in the first year, increased them to 250 2 years ago, and now there are 600 of them."

And after this "colossal" report, imagine how befitting this was in the mouth of the number one leader of the Soviet Union, he hurled criticism at all of them--Ulbricht, Hegedus, Cyrankiewicz in turn.

"As to Albania," he added, "I have nothing to say because I do not know it."

I seized the opportunity and interjected:

"Come for a visit and get to know it."

"I can't give you an answer now, we shall meet separately," he said, and pressed on with his lecture, afraid that the inspiration might escape him.

He spun out the problem at great length, brought up examples, made criticism, and finally added:

"In regard to Bulgaria and Albania, which are countries with a large peasantry, but especially about Albania, we must think somewhat more deeply and help them."

As usual, the council decided that we should solve the problems we raised there with the Soviets.

Khrushchev's "gems" about "the construction of socialism" in Albania.

A few days later we met Khrushchev and talked for about an hour.

"First of all," I said, "we would like you to visit Albania. Your visit will have great importance for enhancing the authority and prestige of our country."

"I, too, would like to come," he told me, "but there are certain difficulties. How far is Albania from Moscow?"

He deserved to be told, "Just another 20 minutes beyond Belgrade," since he had become accustomed to that line long ago, but I bit my tongue. I told him that on a TU-104 the flight from Moscow to Tirana would take about 3 hours, and added:

"Let us establish this line."

"But the TU-104 has many seats. Would there be enough passengers to fill it?" he asked me, quick to catch at the "profitability."

"Our comrades and yours are always travelling from Moscow to Tirana and back and there is no reason for the aircraft to travel empty," I said.

"I would like to come," he repeated to excuse himself. "Indeed I told Tito that I wanted to visit Albania, but first I must take a holiday."

"You can have your holiday in our country," I said. "We have very fine beaches, as well as mountains."

"Oh, if I come I won't be able to rest." he said to close this question.

There was no reason for me to persist any further.

"As you wish," I said, and went on into economic matters. I gave him a brief outline of the situation and presented some of the problems, which were causing us most concern.

"The problem is," said Khrushchev, "that from now on we must think how to find sources of income so that Albania can advance. This is how the friends, also, should look at this problem. The question of Albania has great importance," he continued, "because by means of your country, we want to attract the attention of Turkey, Greece and Italy, that is, to have them take you as an example. Now this matter must be well thought out and we must find the proper ways."

He was silent for a moment, apparently in order to find one of these roads, and I thought that he would come up with Maize. But I was wrong.

"Do you grow cotton?" he asked me, "what area do you employ for this crop? What yield do you get?"

I replied to his questions.

"That is nothing," he said to me, and went on: "We think that you should develop the cotton crop, and in such a way that it will become a great asset, because it brings in a handsome income for you and our friends, for the countries of people's democracy which do not have cotton. Hence, you have great possibilities to profit from cotton. This is the first thing," he said, and raised one finger.

"Secondly," he continued, "the question of sheep raising is a problem for you," and he asked me about the number of sheep, the yield of wool, milk, meat, etc. After my replies he continued:

"Sheep must become another great asset for you. You must breed fine-wooled sheep. You have pastures and the sheep can be developed. Therefore you must find the most suitable breed, commence artificial insemination on a broad scale, and increase them."

After giving us his "second road" of development, Khrushchev began on the "third road" that would lead us to salvation. This had to do with fish.

"Fish," he said, "is another great asset for you. In the Scandinavian countries, in Norway, for example, they have created such a great wealth with fish, that not only do the people eat plenty of it, but they also export large quantities. They catch fish not only in their territorial waters, but also in the open seas. This is what you must do, too," instructed Khrushchev, "so that fish becomes a great asset for Albania. You must do these things without fail, and we shall help you, and send you specialists, a fishing fleet, etc."

Since the first three "roads" were leaving my mind boggling, all curiosity, I awaited a "fourth road" and he did not fail to make this clear to me also.

"The question of citrus fruit is important for you," he said. "They, too, should become a great asset for you, became lemons, grape fruit, oranges, etc, are in great demand."

These were his instructions for the "construction of socialism" in Albania. Finally he added:

"Thought must be given to other assets, too, for instance to minerals, but the main ones are those I mentioned.

"We will assist you to develop cotton, fishing, citrus fruit and sheep. Both you and we must study these things" he concluded, "and we are convinced that in this way Albania will quickly become an example for Greece, Turkey and Italy."

It was useless to enter into discussion about the "gems" of wisdom he presented to us. I thanked him for his "advice" and we parted.

Now everything was becoming more clear. The Council of Mutual Economic Aid recommends that we solve the economic problems with Khrushchev, Khrushchev recommends that we solve them with cotton, sheep and with...the miracle of fish."

All these stands and actions, seen in the compexity of political, ideological, military and other problems, were making us more than ever convinced that in our

camp, first of all in the Soviet Union, things were on the decline. Other events were to follow and we, living through them intensively, would learn and would prepare ourselves more for the coming battles.

[15 Oct 80]

[Text] Tirana, 15 Oct (ATA)--In continuation of his book "The Khrushchevites (Memoirs)," Comrade Enver Hoxha exposes Khrushchev's attempts to rehabilitate the Yugoslav revisionists. At the same time he reflects the determined stand of the PLA in regard to this question.

The Touch-Stone

> Khrushchev has his eyes on Yugoslavia. The first sign of the flirtation: The Soviet letter of June 1954, Khrushchev blames the information bureau for the Yugoslav leadership's betrayal. Intense exchange of cordial correspondence between Khrushchev and Tito. Khrushchev decides to rehabilitate the renegades. Our clear-cut opposition: The letters of May and June 1955. Talk with Ambassador Levichkin: "How can such decisions be taken so lightly and in a unilateral way?" Insistent invitation to go to the Soviet Union "on holiday." Meeting with Suslov. Mikoyan telephones at midnight: "Meet Tempo, iron out your disagreements." The meeting with S.V. Tempo.

All these things which occurred in the Soviet Union after the death of Stalin worried our party and its leadership, writes Comrade Enver Hoxha. Of course at that period, especially before the 20th Congress, our suspicions were based on isolated facts, which the Soviet leaders covered up with torrents of demagogy. Nevertheless, the stands they maintained in their meetings with us, their actions at home and abroad made us wary. Khrushchev's flirtations with Tito were particularly unpleasant for us. We, for our part, continued to fight Titoite Yugoslav revisionism with the greatest severity and defended the correct Marxist-Leninist stands of Stalin and the information bureau towards the Yugoslav revisionist leaders. We did this not only while Stalin was alive, but also in the transitional period that the Soviet Union went through after Stalin's death, when Khrushchev triumphed with his putsch and made the law there, as well as after Khrushchev fell. And this is the stand we shall always maintain towards Yugoslav revisionism until it is completely destroyed ideologically and politically.

We watched every action of Khrushchev's with great vigilance and attention. On the one hand, we saw that in general nothing was being said against Stalin, that there was talk of the unity of the socialist camp headed by the Soviet Union, that Khrushchev spoke against American imperialism in "strong" terms and made some superficial criticism of Titoism, while on the other hand, he waved the white flag of reconciliation and submission to them. In this situation we followed the course of friendship with the Soviet Union, struggled to safeguard and strengthen this friendship and this was not a tactic, but a matter of principle for us. Nevertheless, we did not allow wrong actions and deviations in line to go uncriticized when they appeared.

> Khrushchev wanted at all cost, if not to subjugate the Yugoslav leadership, to line it up on his side.

For us, stresses Comrade Enver Hoxha the struggle against American imperialism and Yugoslav Titoism was a touch-stone to assess the stands of Khrushchev and the

Khrushchevites with the Marxist eye. In fact Khrushchev prattled against capitalism and Ameircan imperialism, but we did not like those half dozen daily meetings and priyoms, (receptions (Russian in the original)) with all kinds of American senators, multi-millionaires and businessmen. Khrushchev became a clown who performed all day and every day, lowering the dignity of the Soviet Union.

On the Yugoslav question, which was clear to us, and that is why we did not shift from our stand, the Khrushchevites chopped and changed, and ebbed and flowed like the tide. The Khrushchevites sometimes abused and sometimes kissed the Yugoslav leaders. When they were abusing the Titoites, the Soviet revisionists said we were right, when they were kissing them, they tried to make us soften our stand towards the Titoite revisionists.

Comrade Enver Hoxha underlines that Khrushchev had his eyes fixed on the leadership of Yugoslavia and wanted at all costs, if not to subjugate it, to line it up on his side. Of course, in Tito he was seeking both an ideological ally and a leader whom he could take under his wings as the "big brother" he was. In other words, Tito was very dear to Khrushchev, because he was the first to attack Stalin and reject Marxism-Leninism. In this direction they were in complete accord, but while the Belgrade chief operated openly, Khrushchev wanted to retain his disguise. In the international arena, Tito had become the "communist" dear to American imperialism and world capitalism, which lavished credits and aid on him, so that he would howl against the Soviet regime and the Soviet state and at the same time sell Yugoslavia to foreign capital.

After pointing out that Khrushchev wanted to manoeuvre Tito in his favour, Comrade Enver Hoxha writes that, Tito, for his part, had long dreamed of shifting the epicentre of the leadership of this alleged communism from Moscow to Belgrade, and that Belgrade should replace Moscow in eastern and south-eastern Europe. Tito's scheme had made no progress from the time he fell out with Stalin, who detected and sternly attacked the diabolical work of this renegade. Having the assistance of the Americans, Tito brought out this plan again when he saw that Nikita Khrushchev and his group were smashing the work of Lenin and Stalin.

Khrushchev distorts the historical truth.

During the days of our stay in Moscow, the Soviet leadership handed us a long letter, signed by Khrushchev, addressed to the central committees of the sister parties, in which they informed us about the conclusions which the Soviet leadership had reached on the Yugoslav question.

Distorting the historical truth, Khrushchev and company had reached the conclusion that Yugoslavia's breaking away from the socialist camp and the "isolation of the Yugoslav working class from the ranks of the international workers' movement" were entirely due to the "breaking off of relations between the CPY and the international communist movement" in 1948. According to them, the stand that was taken in 1948 and 1949 towards the Yugoslav party was wrong. Exposing Khrushchev's reasoning according to which this stand allegedly "forced the leading circles of Yugoslavia to make approaches to the USA and etc, Comrade Enver Hoxha writes:

According to this logic of Khrushchev's when our Party of Labour came into open confrontation and broke off contact with Khrushchevite revisionism, it would have

to sell itself and the country to imperialism, because otherwise it could not exist. And we heard this later from Khrushchev's own mouth when he accused us of selling ourselves "to imperialism for 30 pieces of silver."

This was nothing but an anti-Marxist, capitalist logic. Our party opposed Khrushchevite revisionism heroically, just as it had opposed Yugoslav revisionism earlier, and just as it fought resolutely against any other variant of revisionism, but it did not sell out and never will sell out to imperialism or anyone else, because as long as a party considers itself and respects itself as a genuine Marxist-Leninist party, whatever the conditions and situations it is in, it never allows itself to be bought or sold, but resolutely pursues its course, the course of uncompromising struggle against imperialism, revisionism and reaction.

In the letter which he handed us, Nikita Khrushchev went so far as to say openly that "many of the problems which served to cause differences between the Communist Party of the Soviet Union and the Communist Party of Yugoslavia did not constitute serious reasons for dispute and even the misunderstandings that had arisen could have been settled." Nothing could have pleased Tito and the Yugoslav leadership more. With one stroke of his pencil, Khrushchev cancelled out major problems of principle which had been the basis of the struggle against Yugoslav revisionism, described them as "not serious reasons" and "misunderstandings," and hence, begged the traitors' pardon because they had allegedly been attacked over trifles.

But who were to blame for these "misunderstandings?" In his letter Khrushchev did not attack the information bureau, Stalin, the Communist Party of the Soviet Union, or the other parties which supported the information bureau decisions of 1949 by name. Apparently, he considered it still too early to make these attacks. And those who were to blame were found to be Beria among the Soviets, who with his actions had caused "justifiable dissatisfaction among the Yugoslav leadership," and Djilas among the Yugoslavs (who had been condemned by Tito in the meantime), who "openly propagated liquidationist views," was "an active partisan for the orientation of Yugoslavia towards the Western countries," etc.

Thus, according to Khrushchev, the problem turned out to be very simple. The breach with Yugoslavia was based not on real reasons but on fabricated pretexts, so "we wronged you for nothing and the culprits have been found: Beira on our side, and Djilas on yours. Now we both have condemned these enemies, therefore, all we have to do is to kiss and make up and forget the past. What is more, in this letter, which disturbed us profoundly, Khrushchev vowed that everything he did was "in favour of Marxism-Leninism and socialism."

Unchangable stand of the PLA to wards the Yugoslav leadership.

Speaking about the reply in writing the PLA sent to the Soviet leadership, Comrade Enver Hoxha writes:

In this reply, without openly opposing Khrushchev, we stressed our permanent stand towards the revisionist leadership in Belgrade, emphasized the importance of the information bureau decisions of 1948 and 1949 and did not permit any allusion to the re-examination of the stand adopted previously towards the deviations in line of the Yugoslav leadership.

In our written reply we countered Khrushchev's idea that the "breaking off of relations drove the Yugoslav leaders into the lap of imperialism," with the thesis that it was the Yugoslav leaders themselves who betrayed Marxism-Leninism and set their people and their homeland on the course of enslavement and under the dictate of Anglo-American imperialists, that it was their anti-Marxist line which was the factor that gravely damaged the vital interests of the peoples of Yugoslavia, that it was they who took Yugoslavia out of the socialist camp, who changed the Yugoslav party into a bourgeois party and isolated it from the world movement of the proletariat.

While clearly pointing out these truths, we went on to stress that we agreed that efforts should be made by the communist parties to help resuce the peoples of Yugoslavia from enslavement and poverty, but we stressed once again that in our opinion the Yugoslav leaders had gone a long way down their anti-Marxist road, the road of submission to American and British imperialists.

With this we told Khrushchev indirectly that we did not agree with the hopes and illusions which he nurtured towards the Yugoslav leaders and especially towards "Comrade Tito," as he began to call him. I expressed these opinions to Khrushchev, also, in the next talk I had with him on 23 June 1954. However, he pretended not to notice the different stands each of us adopted over the Yugoslav problem. Perhaps he did not want to create conflicts with us in the first official meetings we had with him. Perhaps he underrated us and did not bother his head about our opposition. I remember that he was all euphoria and spoke with the assurance of some one who has everything running smoothly. He had just returned from a lightning visit to Czechoslovakia (he was a master of every kind of visit: lightning, incognito, official, friendly, much publicized, secret, day, night, announced and unannounced, short, long, with his suite or quite alone, etc.).

"In Prague," he told me, "I took up the Yogoslav problem again with representatives of several sister parties who were there. They were all fully in agreement with me and considered the efforts of our party very important."

Then looking me right in the eye, he added:

"Recently we, the Hungarians, the Bulgarians, Romanians, and others have taken good steps towards the normalization of relations with Yugoslavia..."

I sensed why he stressed this. He wanted to say to me: "See, we are all agreed. Hence you Albanians should join us, too."

I told him briefly that there is a very long history of our relations with the Yugoslav party and state, that the Yugoslav leadership itself was to blame for ruining our relations, and that if the Albanian-Yugoslav state relations were at a very low ebb, this was no fault of ours but a consequence of the unceasing and anti-Albanian stands and actions of the leaders in Belgrade.

"Konechno, konechno." (of course, of course (Russian in the original)), said Khrushchev jumping up and I understood that he did not want me to go any further with the discussion of this problem.

"We have taken all measures," he said. "Tomorrow our ambassador in Yugoslavia goes to meet Tito in Brioni. We think that there are great possibilities of achieving our objective. If nothing is achieved," he said in conclusion, "then we still have other methods."

This is how the romance of the Khrushchev-Tito love affair began. A few days later Khrushchev handed his opinions or "conclusions" about the "new analysis" of the Yugoslav problem in writing to Tito.

Tito's conditions for the relations with Khrushchev.

After leaving Khrushchev on tenterhooks for some time, in order to play on the strings which were out of tune, Tito finally replied to him by the middle of August 1954, also in writing.

The essence of the letter from the revisionist in Belgrade was more or less this: I am pleased that you, Nikita Sergeyevich, are proving to be a reasonable and broad-minded man, but go a bit further, come out more clearly for the new course of reconciliation and embraces. We Yugoslavs agree that we should be reconciled, Tito told Khrushchev, but as you know, we have taken up with new friends with whom we have strong and deep links. Therefore reconciliation with you "must develop in the direction which responds to our policy of international cooperation," that is to say, the Yugoslav's links with imperialism must not be damaged but must be further strengthened.

Likewise, in dictatorial tones, Tito did not fail to set Khrushchev a series of other conditions for their future relations:

First, Tito demanded that the Soviet side should work harder to eliminate the "negative elements" and remove the obstacles which had exerted an influence on the break in 1948 and obviously, with this the "master" in Belgrade was openly demanding that the whole correct and principled line followed by the information bureau, Stalin and the other communist parties in 1948, should be revised.

Second, the coming reconciliation, dictated Tito, must not imply "complete unanimity in our assessment of and stand towards events." Hence, let us be reconciled, but let each of us act on his own account, according to his own ideas.

Third, the road I follow and the road you follow for the construction of "socialism" is a matter for each of us to decide and must not influence the normalization of relations. Hence, I shall build "specific socialism" and you must accept this without any quibble.

Fourth, the causes of the conflict, said Tito, are neither Beria nor Djilas. The causes go deeper, therefore you, the Soviets, and the others united with you, must completely abandon the line of the time of Stalin, abandon your former principles, because in this way the true causes of the conflict are automatically overcome.

Finally, Tito rejected Khrushchev's proposal on a bilateral top-level meeting, making this conditional "on the achievement of preliminary successes in the direction of normalization." The implication was quite plain: If you want to meet me

and come to terms with me, you must take further steps on the course on which you have set out, must act more quickly and boldly within the Soviet Union and other countries and parties to spread and extend this "new" course, which had been and was his old course.

And Khrushchev, sometimes apparently resentful and sometimes enthusiastic in his actions, began to submit to and zealously apply Tito's conditions and orders.

> Khrushchev's stands were leading the Soviet Union on an anti-Marxist course the PLA condemned Khrushchev's going to Belgrade.

Amongst us who followed this process with attention and concern, underlines Comrade Enver Hoxha, suspicions increased that these stands were leading the Soviet Union on an anti-Marxist course. Day by day we were becoming more convinced that Khrushchev was covering up a diabolical game with his clowning. We saw that he was lowering the prestige of the Soviet Communist Party and state by bending the knee to Tito. We watched this with regret, but, after all, the improvement of the relations between the Soviets and the Yugoslavs was their internal problem and we had no reason to oppose it. However, we were not and could never be in agreement with his efforts to wipe out the past and to treat the causes and reasons for the condemnation of the Yugoslav revisionists as something quite different from what they were in fact. Likewise, we could not agree to become Khrushchev's partners in this dubious and dangerous ideological and political gamble. What the Romanians, the Hungarians and the Bulgarians did was their affair. For our part, we were not going to kiss and make up with the Titoites.

Apart from his own revisionist convictions, Khrushchev was undoubtedly urged by Tito to take this anti-Marxist step. He did not want to bend the knee to Khrushchev, therefore he persisted in his demand that Khrushchev should come and bend the knee to him in Belgrade, should go to make a self-criticism in Canossa (Belgrade). And this is what was done. Khrushchev could hardly wait to rush off to Belgrade, where he kissed and embraced Tito, made a self-criticism and "resolutely wiped off the accumulations of the past," and opened the "epoch of friendship between the two peoples and the two parties."

Our party condemned Khrushchev's going to Belgrade and especially his decision to cleanse the uncleansable Tito. Just 2 or 3 days before he set out for "Canossa," Khrushchev informed us of the step he was about to take, but we had expected this, because the waters into which Khrushchev had plunged were bound to carry him to that mill. To go or not to go to Belgrade, that was his affair, let him do as he wished, writes Comrade Enver Hoxha. What revolted and profoundly disturbed us was the announcement he made in the same letter that he had decided to annul as unjust the decision of the information bureau of November 1949, in connection with the condemnation of the Yugoslav leadership, to communicate this new decision of his to Tito and to publish a communique about it in the organ "For Lasting Peace, for People's Democracy." In this communique, Khrushchev said that the communist and workers' parties, that were members of the information bureau, had allegedly reexamined the question of the third resolution of the meeting of the information bureau on the Yugoslav problem adopted in November 1949 and had decided that the accusations contained in that resolution against the leadership of the Yugoslav Communist Party should be considered as without foundation and the resolution of the information bureau on the Yugoslav question should be annulled.

We wrote a letter to the Central Committee of the Communist Party of the Soviet Union on this and protested sternly. Such a decision about an enemy of international communism, that had been condemned jointly by all the parties, could not be taken unilaterally by the Communist Party of the Soviet Union without consulting the other parties, including ours. The other parties submitted to the decision of Khrushchev and the desire of Tito that, after Khrushchev, the leaders of the parties of the socialist camp should go to Belgrade, kiss Tito's hand and beg his forgiveness. Dej and company went there, but we did not. We continued the struggle against the revisionists. It was in vain for Levichkin, the Soviet ambassador in Tirana, to come and try to convince us to withdraw our opposition.

[16 Oct 80]

[Text] Tirana, 16 Oct (ATA)--We continue to transmit extracts from the book by Comrade Enver Hoxha "The Khrushchevites(Memoirs)."

We continue to transmit extracts from the book by Comrade Enver Hoxha "The Khrushchevites (Memoirs)."

> Sudden changes in the stand of the Soviet leadership towards the Yugoslav question.

I received Levichkin--writes Comrade Enver Hoxha--and once again put forward in principle to him what we had written in the letter to the Soviet leadership.

Comrade Enver Hoxha writes that he told Levichkin that in connection with the Yugoslav question there are many differences between the content of earlier letters of the Soviet leadership and that of the last letter, confirming this with the content of letters.

In connection with this Comrade Enver Hoxha writes:

"Let us see," I said, and took the letters of the Soviet leadership. "Here for example, in the letter of 4 June 1954, your leadership writes: 'Reexamining the materials which have to do with the history of the breaking-off of relations between the Yugoslav Communist Party and the communist and workers' parties, as well as Yugoslavia's subsequent leaving the democratic camp, the Central Committee of the Communist Party of the Soviet Union holds that the leading nucleus of the Yugoslav Communist Party has undoubtedly made serious departures from Marxism-Leninism, has slipped into the positions of bourgeois nationalism and launched attacks against the Soviet state. The leaders of the Yugoslav Communist Party also extend their hostile policy, in regard to the Soviet Union, to the countries of people's democracy, towards which, up till before the break of relations, they maintained a boastful and disdainful stand, while seeking for themselves recognition of priorities and special merits which they did not have.'

"That letter also stresses," I told Levichkin, "that 'the criticism which the communist and workers' parties made of the nationalist deviations and other deviations from Marxism-Leninism of the leaders of the Yugoslav Communist Party was necessary and completely correct. It contributed to tempering the communist and workers' parties from the Marxist aspect, to sharpening the vigilance of communists and to their education in the spirit of proletarian internationalism'."

"That is true," murmured Levichkin.

"Even after the initial efforts of the Soviet leadership to improve relations with Yugoslavia," I continued, "the Yugoslav leadership persisted in its former course and stands and, only 2 or 3 months ago, in February this year, the Soviet comrades wrote to us that 'the leadership of the Yugoslav party is seriously entangled with the capitalist world in its political and economic relations'."

"That is true, that is true," repeated Levichkin in a low voice.

"Then how did the opinion and stand of the Soviet leadership towards these very important problems change so surprisingly and suddenly?" I asked. "And how can they so readily take a unilateral decision such as that to throw out the 1949 decision of the information bureau?

"Our political bureau discussed the problems which are raised in your letter of 23 May with great attention and concern and in our reply we openly and sincerely expressed a series of opinions to Comrade Khrushchev.

"First, we think that the general line, the main content and principle of the November 1949 resolution of the meeting of the information bureau is correct and the content of this resolution should not be taken separately from the resolution of July 1948. The daily experience of our party in our relations with the Yugoslavs, both before the break with them in 1948 and to this very day, confirms this correctness.

"Second, the procedure, which is proposed to follow for the cancellation of the November 1949 resolution of the meeting of the information bureau, does not seem to us correct. It seems to us that the very short time allowed the communist and workers' parties, members of the information bureau, to express their views in connection with the content of your letter is inadequate to decide such an important matter as that which is raised in the letter. In our opinion, such a hasty decision on a matter of major importance of principle, without first making a thorough analysis, together with all the parties interested in this question, and moreover, the publication of this decision in the press and its announcement in the Belgrade talks, would not only be premature, but would cause serious harm in the general orientation in connection with Yugoslavia.

"In regard to our Party of Labour, for 7 years it has been fighting to implement its general line in regard to Yugoslavia, which is founded on the resolutions of the information bureau and endorsed by the 1st Congress of our party. We are convinced that the general line of our party in connection with relations with Yugoslavia is correct, but even if we thought for one moment that there is something to be changed in this line, for this the congress of the party would have to be called together, or at least a conference of the party, and the change could be made only after first thoroughly analysing the general line of all the communist and workers' parties in regard to Yugoslavia as well as the decisions and conclusions of the information bureau.

"Therefore," I said to Levichkin in conclusion, "we propose that the matters which are raised in the recent letter of the Soviet leadership should be analysed at a meeting of the parties which participate in the information bureau, in which our party, too, could possibly take part and have its say. Only there can a joint decision on this question be taken."

Levichkin, who had gone pale as he listened to me, tried to convince me to change my opinion, but when he saw my insistence he retreated:

"I shall report what you have said to me to the leadership of the party."

"We have written everything I told you in our letter to Comrade Khrushchev," I concluded, "but I repeated it to you, too, to make clear to you what impelled us to adopt this stand."

> Stalin and information bureau acted with great care and wisdom. Khrushchev and company trampled with both feet over the most elementary rules of relations between parties.

Our opposition, writes Comrade Enver Hoxha further on, was completely correct and within the Marxist-Leninist norms of relations between parties. We were well aware how correct, substantiated and well based were the analyses and decisions of the information bureau and the Central Committee of the Communist Party of the Soviet Union in connection with the Yugoslav problem during the years 1948 and 1949. When the decision was taken to condemn the anti-Marxist activity of the Yugoslav leadership, we were not members of the information bureau. However, during that period, Stalin, the CPSU and the other parties that were members of the information bureau frequently consulted us and listened carefully to what we had to say in connection with our relations with the Yugoslav leadership. Stalin and his comrades did this, not only because ours were sister parties and, according to the Leninist norms, there should be wide-ranging and exhaustive exchanges of opinions, but also due to the important fact that, because of the special links we had had since the wartime years with the Yugoslav leadership, we had a lot to say about it.

Among the many meetings and consultations on this problem was my incognito meeting with Vyshinsky in Bucharest, at which Dej was also present. There we exchanged opinions about the common stand we should adopt towards the treacherous activity of the Yugoslav leadership. The many incontestable arguments and facts which I brought to that meeting were valued very highly by Vyshinsky and Dej, who described them as a valuable contribution which our party made to better knowledge of the hostile and anti-Marxist activity of the Belgrade leaders. This is not the place to speak at length about that meeting, from which I have many memories. I mention it only to show with what great care and wisdom Stalin and the information bureau acted at that time in the analyses they made and the decisions they took.

Now quite the opposite was occurring with Khrushchev and the other Soviet leaders. Precisely those who were now condemning the information bureau and Stalin for allegedly having acted and judged matters in an incorrect way, were trampling with both feet over the most elementary rules of relations between parties, were posing as indisputable masters who did not deign to seek the opinion of others. This could not fail to dismay and worry us.

> The PLA in open opposition to the Khrushchevites.

Levichkin came to see us several other times during those days. Apparently they were urgently demanding from the centre that he convinced us to give up our opinions and reconcile ourselves to Khrushchev's stands. Those were very difficult and grave moments. From what we could see, Khrushchev must have reached agreement in advance with the leaderships of other parties over what he was going to do in Belgrade. Thus our proposal that the information bureau should meet to examine

the problem in detail, would fall on deaf ears. After we discussed the matter at length in the political bureau, we decided that I should summon Levichkin once more to make our stand clear to him. I met him on 27 May, one of the days on which Khrushchev was in Belgrade, and the things which I told Levichkin were also written in a second letter to the Soviet leadership. Later, Khrushchev used this letter of ours as an "argument" allegedly to prove that we were wrong in our first letter of 25 May, and that 2 days later we allegedly made a "self-criticism" and "retreated" from our former opinion. But the essence of the truth is not as Khrushchev and company said.

Both in the meeting with Levichkin on 27 May, and in the second letter to the Soviet leadership, we explained once again why we were in open opposition to them on this occasion.

In this letter we again stressed to the Soviet leadership that although we had been and were agreed that every effort must be made to solve the disagreements over principles with Yugoslavia in a Marxist-Leninist way, we were still convinced that the Yugoslav leaders would neither recognize their grave mistakes, nor abandon their course.

We have been and continue to be particularly sensitive on the Yugoslav question and especially towards the anti-Marxist activity of the leadership of the Yugoslav Communist Party, we said in the letter, because this hostile activity against the Soviet Union, the countries of people's democracy and the whole movement of the proletariat has been carried out in a specially ferocious way against our party and the sovereignty of our homeland.

Seeing the problem in this way, we continued, when we read that part of your letter which says that eventually it might be communicated to the Yugoslavs that the resolution of the information bureau of November 1949 should be revoked and that a communique about this would be published in the organ "For Lasting Peace, for People's Democracy," we were profoundly shocked and said that if this were done it would be a very grave mistake. We considered that resolution should not be revoked, because it reflects the logical development of the hostile and anti-Marxist activity of the leadership of the Yugoslav Communist Party in practice.

This is how we reason: If this resolution is annulled, all that has been written there is cancelled out, and the trials of Rajk in Hungary and Kostov in Bulgaria, for example, are also annulled. By analogy the trial of the traitor gang headed by Koci Xoxe and company ought to be annulled, too. The hostile activity of the traitor gang of Koci Xoxe had its source in and was linked with the anti-Marxist, liquidationist and bourgeois-nationalist work of the leadership of the Yugoslav Communist Party. The just and principled struggle against this hostile activity was one of the directions of the line of our party at its 1st Congress.

"We will never budge from this correct line," we stressed in the letter. Hence, we thought that if this resolution is annulled as wrong, not only will the truth be distorted but a grave situation will be created for our party, confusion will be created, anti-party and enemy elements will be encouraged to become active against our party and state, as well as against Soviet Union. We can never allow such a situation to be created.

We went on to say to the Soviet leadership: "We have been in a grave situation and we regret that, on this point, we cannot be of the same opinion as you."

That was the essence of the content of our second letter to the Soviet leadership.

If there is any room to use the word "retreat" in regard to this, the only such thing on our part was the non-repetition of the proposal that a meeting of the information bureau should be organized first. By this time this proposal would have been valueless, because Khrushchev had made the whole affair a fait accompli and had left for Belgrade. On the other hand, although we expressed our opinion in defence of principles, we could not come out openly against the Soviet leadership and the others at a time when the problem was still developing. However, we made our vigilance even sharper and kept our eyes even wider open. For us, both in the past and even after this, the stand towards the revisionists of Belgrade has been and still is the touch-stone to prove whether a party is following a sound Marxist line or a wrong anti-Marxist line. In the future, we were to put Khrushchev and the Khrushchevites to this test.

The most pressing invitation to go "for a holiday in the Soviet Union."

Not long after this event, writes Comrade Enver Hoxha in the summer of 1955, I received a most pressing invitation to go "for a holiday in the Soviet Union."

In Stalin's time I went there for work and very rarely for a holiday. In Khrushchev's time they began to put such pressure on us to go for holidays that it was difficult to refuse, because the Soviets, for their part, put the matter forward on the political plane. However, I did not like to go because, in fact, I could not rest there.

Once in Moscow the meetings with the Soviet leaders would begin, but these meetings were no longer pleasant like those with Stalin. Now they were held sometimes with smothered anger, sometimes with open flare-ups.

This is what occurred on this occasion. As soon as I arrived in Moscow I had two meetings with Suslov.

In his opening words he told me that we would talk about the Yugoslav problem and stressed in a dictatorial tone:

"The leadership of your party must take careful account of this question. It must not look at the Yugoslav problem in a rigid way."

I did not take my eyes off him as I listened. Sensing my displeasure, he back-pedalled a little.

"Their mistakes remain mistakes," he said, "but our objective is to become friends and to advance the friendship with Yugoslavia. At its last meeting, our Central Committee once again analysed our relations with Yugoslavia," he continued, "and we shall give the report delivered there to you personally, because it is top secret."

He was silent for a moment, trying to assess what impression his words were making on me, and then went on:

"The main problem is that the Central Committee of the Communist Party of the Soviet Union has examined the Yugoslav question in a realistic light, bearing in mind the traitorous work of Beria, and we made self-criticism about this. Our central committee came to the conclusion that the breaking off of relations with Yugoslavia was a mistake, that is, we were hasty."

"In what way, hasty?" I said. "At that time, thorough analyses were made, long and thorough discussions were held and the true ideological and political causes of the existing disagreements were uncovered."

"The main cause for this break," continued Suslov, "was not the ideological issues, although they were making mistakes, and they have been pointed out openly to the Yugoslavs. The main cause lies in the slanders that were made against the Yugoslav leaders and in our lack of patience. The Yugoslavs' mistakes of principle should have been discussed, backed up by facts, and ironed out. This was not done.

"From all the facts examined," he continued, "it turns out that there is no basis at all for saying that the Yugoslav comrades have deviated and have sold Yugoslavia, just as it does not turn out that the Yugoslav economy is dependent on foreigners."

"Pardon me," I said, "but let us not go back to those things we have analysed and decided in 1948 and 1949. Let us take only your correspondence with the Yugoslav leadership during the last 2 years. Not only in several of your letters, but the Yugoslavs themselves in their letters, admit that they have created strong links with the West. What are we to think now of your opposite assessment of these matters?"

"A number of mistakes have been made, but they must be examined carefully," said Suslov, and started to list a series of "arguments" to convince me that the Yugoslav leaders were allegedly not on a wrong road. Naturally he also tried to lay the blame on Beria and Djilas and the efforts of imperialism "to attach Yugoslavia to itself."

"Molotov, too, has maintained a very sectarian stand on this problem," continued Suslov. "He personally made mis s in state relations with Yugoslavia while insisting that it was the Yugoslav comrades that made the mistakes. However, the Central Committee demanded that Molotov proved where the Yugoslavs had been wrong, and we criticized him severely for his stand. Finally he, too, expressed his solidarity with the Central Committee."

I began to speak and gave a detailed presentation of our relations with the Yugoslav leadership, beginning from the years of the national liberation war. I mentioned their main activities as an anti-Albanian agency, which they had undertaken and were undertaking against us continually, and I concluded by saying:

"It is these and many other facts, one more grave than the other, which convince us that the Yugoslav leadership has not been and is not on the right road. Nevertheless, we have always been and still are in favour of developing state relations with them normally."

"Agreed, agreed," said Suslov. "We must act with open hearts. This is in the interest of our camp, we must not allow the imperialists to take Yugoslavia from us."

At the end of this meeting, as though in passing, he said to me:

"During past years you have condemned many enemies, accused of links with the Yugoslavs. Have a look at their cases and rehabilitate those that ought to be rehabilitated."

"We have never accused and condemned anyone for nothing," I said bluntly, and as we parted, he instructed me to be "more broadminded."

Manoeuvres of the Khrushchevites in their course of betrayal.

It was clear, writes Comrade Enver Hoxha, why they had invited me to come for a holiday. However, the Khrushchevites did not content themselves just with this. They had hatched up diabolical plans to compel our party, too, to follow their course of conciliation with the revisionists of Belgrade.

Comrade Enver Hoxha writes how Mikoyan had phoned him after midnight, saying:

"Comrade Enver, Comrade Svetozar Vukmanovic-Tempo is here in Moscow and I was with him till now. You know him and it would be good if you were to meet, he is ready to meet you tomorrow."

For a time I remained silent on the telephone, while Mikoyan, who had no intention of asking, said: "Tomorrow then, you agree," in a tone as if he were giving an order to the party secretary of an oblast (region--Russian in the original).

"How could I agree to this, Comrade Mikoyan," I said. "I talked with Comrade Suslov, and expressed the view of our party about the position of Yugoslavia and Tito."

Mikoyan began to deliver a standard monologue about "socialist Yugoslavia," about Tito who was "a fine chap," about Beria's mistakes and the sins they had allegedly committed (the Soviet Union and the information bureau), and then he concluded:

"You ought to take this step, Comrade Enver. You know Tempo, talk with him and try to iron out your differences, because this is in your interest and in the interest of the camp. You, too, must help ensure that Yugoslavia does not go over to the imperialist camp...So, you agree, tomorrow."

"All right, I agree, tomorrow," I replied, clenching my teeth in rage. I went back to bed but I was so disgusted over these backstage manoeuvres and faits accomplis which the Khrushchevites were hatching up in the course of their betrayal that I could not sleep. I had met Tempo twice in Albania during the time of the war and both times we had quarrelled, because he was arrogant and a real megalomaniac. He made unfounded accusations against our war and the people who led it, or made absurd proposals about the "Balkan staff," without mentioning how this staff was to function in those conditions, when we could communicate from one zone to the other within the country only with difficulty, let alone mentioning the ulterior

motives hidden behind the organization of this "staff." [Sentence as received] What was I to say to Tempo now, after all those things which Tito, Rankovic, their envoys Velimir Stoynic, Nijaz Dizdarevic and their agents Koci Xoxe and Co., had done to us? Must we swallow this too? I tossed and turned sleepless all night thinking about what should be done. The time had not come yet to settle accounts with the Khrushchevite revisionists.

The next day we met Tempo. I began to speak about those things that had occurred.

"Let bygones be bygones," he said and began to speak about the situation in Yugoslavia. He told me that they had made progress in the sector of industry but were short of raw materials.

"Our agriculture is in a very bad state," he said, "we are very far behind, therefore, we think we should devote more forces to it. The mistakes we have made in agriculture have left us hard pressed."

He went on to tell me about the difficulties they had had and said that they had been obliged to accept aid at heavy interest rates from the Western countries.

"Now the Soviet Union is helping us and our agreement with the Soviets is going well," he concluded.

I, too, spoke about the progress which our country had made during this time and the difficulties which we had had and still had. I spoke about the commission on the Ohri Lake, in which the discussions were being dragged on by their side, but he told me he knew nothing about it because "these were the plans of the Macedonians."

"Nevertheless, we must look more carefully at the question of the Shkodra Lake where the benefits will be greater for both sides, especially for your side," he added.

And that is how the meeting which the Soviets had arranged between Tempo and me, passed. After this meeting, when I met Mikoyan and Suslov, they both said to me:

"You did well to meet Tempo because the ice has been broken."

According to them, the moutain of ice created between us and the Titoite revisionists could be broken with one chance meeting or contact, but this was not our opinion. There would be no "spring thaw" in the ideological field in our relations with Yugoslavia and we had no intention of plunging into the murky waters of the Khrushchevites and the Titoites.

[17 Oct 80]

[Text] Tirana, 17 Oct (ATA)--In the pages of his book "The Khrushchevites (Memoirs)," Comrade Enver Hoxha exposes and condemns through numerous facts the attempts of Krushchev for hegemony in the world communist movement, his attacks on the COMINTERN and the information bureau, his feverish activity to eliminate the revolutionary leaders and to bring anti-Marxist elements in the leadership of other parties.

The "Mother Party" Wants to Be the Conductor

> Khrushchev seeks hegemony in the world communist movement. His attack on the COMINTERN and the information bureau. The Khrushchevites extend their tentacles to other parties. The sudden deaths of Gottwald and Bierut. Unforgettable memories from the meeting with Dimitrov and Kolarov. Correct but formal relations with Romania. The opportunist zig-zags of the Romanian leadership. Pleasant impressions from Czechoslovakia. Wandering at will and visits to historical sites. Suffocating atmosphere everywhere in the Soviet Union. The Chinovniki surround us everywhere. Our relations with the East Germans.

I spoke earlier about the "lecture" which Khrushchev gave me on the role of the first secretary of the party and the "opinion" which he had expressed to the Polish comrades about the replacement of Bierut by Ochab in this post. This fact, writes Comrade Enver Hoxha, not only astounded me but seemed to me completely unacceptable, as a tactless undertaking (to put it mildly) towards a sister party.

Further developments were to make clear to us and convince us that such "undertakings" were Khrushchev's normal forms of "work" to put the international communist movement under his personal domination.

> The opinion of Khrushchev and other modern revisionists against the COMINTERN was in complete accord with the monstruous accusations of capitalism and the reactionary bourgeoisie throughout the world.

This activity did not lack its demagogic cloak. The essence of this demagogy was: "Stalin kept the communist and workers' parties in his grip through force, through terror, and dictated actions to them in the interests of the Soviet Union and to the detriment of the world revolution." Khrushchev was for struggle against the COMINTERN, except, allegedly, for the period when Lenin was alive. For Khrushchev and the other modern revisionists, the COMINTERN operated simply as a "Soviet agency in the capitalist countries." Their opinion, which was not expressed openly, but was implied, was in complete accord with the monstruous accusations of capitalism and the reactionary bourgeoisie throughout the world, that fought the betrayal by social-democracy and the second international.

By means of the COMINTERN, Lenin and later Stalin consolidated the communist and workers' parties and strengthened the struggle of the proletariat against the bourgeoisie and the rising fascist dictatorship. The activity of the COMINTERN was positive and revolutionary. The possibility that some mistakes may have been made is not ruled out, but it is necessary to bear in mind the difficult circumstances of illegality in which the parties and the leadership of the COMINTERN itself were obliged to work, as well as the fierce struggle waged against the communist parties by imperialism, the bourgeoisie and reaction. The true revolutionaries never forget that it was the COMINTERN which assisted to set up and strengthen the communist parties after the betrayal by the second international, just as they never forget that the Soviet Union of Lenin and Stalin was the country in which hundreds of revolutionaries found refuge to escape the reprisals of the bourgeoisie and fascism and carry on their activity.

In his incorrect assessment of the work of the COMINTERN and Stalin, Khrushchev also had the support of the Chinese.

In his assessment of the work of the COMINTERN and Sta , Khrushchev also had the support of the Chinese, who continue to make criticism, although not publicly, in this direction. When we have had the opportunity, we have expressed our opinion about these incorrect assessments of the overall work of the COMINTERN and Stalin to the Chinese leaders. When I had the opportunity to talk with Mao Zedong during my only visit to China in 1956, or in the meetings with Zhou Enlai and others in Tirana, I have expressed the well-known viewpoint of our party about the figure of Stalin and the COMINTERN. I do not want to extend on these matters because I have written about them at length in my political diary and elsewhere.

The decisions of the COMINTERN and Dimitrov's direction-giving speech in July 1935 have gone down in the history of the international communist movement as major documents which mobilized the peoples, and first of all the communists, to create the anti-fascist front and to organize themselves for armed struggle against Italian fascism, German Nazism and Japanese militarism. In this struggle, the communists and their parties were in the forefront everywhere.

Therefore, it is a crime to attack the great work of the COMINTERN and the Marxist-Leninist authority of Stalin, which played a major role in the creation and the organizational, political and ideological consolidation of the communist and workers' parties of the world. For its part, the Bolshevik Party was a powerful aid for those parties, and the Soviet Union, with Stalin at the head was a great potential in support of the revolution in the international arena.

Imperialism, the capitalist bourgeoisie and its fascist dictatorship fought the Soviet Union, the Bolshevik Party and Stalin, with all their might, waged a stern struggle against the COMINTERN and the communist and workers parties of every country and ruled the working class with terror, bloodshed and demagogy.

When Nazi Germany attacked the Soviet Union, the communist and workers' parties of various countries took up arms, united with the other patriots and democrats in their own countries and fought the fascist invaders. Because of this natural struggle, the enemies of communism said: "The communist and workers' parties have put themselves in the service of Moscow." This was a slander. The communist and workers' parties fought for the liberation of their own peoples, fought for the working class and people to take power. In the great alliance of the anti-fascist war, the sympathies of these parties were with the Soviet Union because it was the most reliable guarantee for the victory.

It was Stalin himself, who, on behalf of the executive committee of the COMINTERN, announced the decision for the disbanding of the COMINTERN and the reason given was that no further need was felt for its existence. This stand was completely correct, because by that time the communist and workers' parties had become mature and militant, had been tempered in class battles and in the great war against fascism and had gained colossal experience. Now, each party could march on its own feet and had Marxism-Leninism as its unerring guide.

> The information bureau of the communist and workers' parties was necessary. Khrushchev took his unilateral decision and liquidated the information bureau, without asking anyone about it. The big Indian reactionary, Nehru heard the news of the breakup of the information bureau before our communist parties.

After the second world war the information bureau of communist and workers' parties was formed. It was necessary to create this, becuase the parties of socialist countries and those of capitalist countries, especially of Europe, needed to exchange their very valuable experience. The exchange of experience between our parties was especially necessary in the unsettled period immediately after the war, when American and British imperialism wanted to interfere by any means in the internal affairs of the countries which had won their freedom.

The book reads further on: The "Marxist" Tito made a major issue of the Venezia Giulia Province, claiming that the Soviet Union was not assisting him to take this province, which he described as entirely Yugoslav, while this same "Marxist" not only did not raise the issue of Kosovo, which was truly Albanian, in order to give it to Albania to which it belonged, but did his utmost to prevent any talk about it. The Belgrade clique massacred people from Kosovo, alleging that they were Ballists, and later also attempted to gobble up the whole of Albania and turn it into the seventh republic of Yugoslavia.

The information bureau uncovered the treachery of the Yugoslav revisionists and this was one of its historic deeds and a tribute to the revolutionary vigilance of Stalin. Tito was exposed and condemned with ample, incontestable facts and subsequent events completely confirmed his betrayal. In this just action, which came after a patient stand, first with comradely explanation, then with rebuke and finally, with condemnation, all the communist and workers' parties took part, not because they "submitted to the arbitrary decision of Stalin" as has been slanderously alleged, but because they were convinced by the true facts which were brought out about the betrayal of the Yugoslav chiefs. Later, all these parties, apart from the Party of Labour of Albania, ate the very words which they themselves had said and endorsed against Tito and Titoism. One after another, the chiefs of these parties made self-criticism, went on pilgrimages to him, kissed his hand, begged his forgiveness and declared that he was a "genuine Marxist-Leninist," while according to them, Stalin was "an anti-Leninist, a criminal, an ignoramus and a dictator."

Khrushchev's plan, as all his work and his successive actions showed, was to rehabilitate Tito by going to Belgrade and denouncing Stalin for the "crime" and the [as received] which he had allegedly committed in this direction. In order to carry this problem through to the end Khrushchev took his unilateral decision and liquidated the information bureau, without asking anyone about it. He dropped this on us as a fait accompli (French in the original) at one of the meetings which was organized in the Kremlin over a problem which had nothing at all to do with the information bureau.

Khrushchev announced the decision, and while administering the last rites to the information bureau said: "When I informed Nehru of this, he was pleased and told me that it was a wise decision which everybody would approve." The big Indian reactionary heard the news of the breakup of the information bureau before our

communist party. This fact, too, apart from others, showed what this renegade, this revisionist-Trotskyite, who had come to the head of the Soviet Union and the Communist Party of the Soviet Union, was.

> Khrushchev aimed to get control of the whole world communist movement. The sound leaders were eliminated through intrigues, putsches or even assassinations.

With cunning Trotskyite forms and methods, such as flattery, balckmail, criticism and threats, Khrushchev aimed to get control of the whole world communist movement, to have all the other parties under his "conductor's baton." And they, without his telling them openly, were to proclaim the Communist Party of the Soviet Union the "mother party," and moreover to think, as Liri Belishova, a secret agent of the Soviet revisionists whom we exposed later, put it, that "Khrushchev is our father." This is the direction in which Khrushchev and the Khrushchevites worked.

Of course, the Khrushchevites had begun this work when Stalin was still alive, behind his back. We base this conviction on the experience of our relations with the Soviet leaders, the arrogant, huckster's stand of Mikoyan and some others.

After Stalin's death, their attack to destroy socialism in the other countries mounted continuously. Both in the Soviet Union and in Bulgaria, Czechoslovakia, Poland, Romania, and Hungary, as well as in Albania, Khrushchev began to incite the disguised and undisguised anti-Marxist elements. Wherever these elements were in the leadership, Khrushchev and company struggled to get these elements under his control, and where they were not in the leadership, to put them there by eliminating the sound leaders through intrigues, putsches or even assassinations, as they wanted to do with Stalin (and it is very likely they did this).

Immediately after the death of Stalin, Gottwald died. This was a sudden, surprising death. It had never crossed the minds of those who knew Gottwald that this strong, agile, healthy man would die...of a flu or a chill allegedly caught on the day of Stalin's funeral ceremony.

I knew Gottwald. When I went to Czechoslovakia and met him in Prague, we talked at length about our problems. He was a modest, sincere comrade, not a man of many words. I felt I could talk to him freely, he listened to me attentively, puffing away at his pipe and spoke with much sympathy about our people and our fight, and promised me that they would help us in the building of industry. He promised me neither mountains nor miracles, but a very modest credit which Czechoslovakia accorded us.

"This is all we can do," he said. "Later, when we have our economy going, we shall re-examine matters with you."

Gottwald, an old friend and comrade of Stalin and Dimitrov, died suddenly. This grieved us, but also surprised us.

Later came the equally unexpected death of Comrade Bierut, not to mention the earlier death of the great George Dimitrov. Dimitrov, Gottwald and Bierut, all died in Moscow. What a coincidence--the three of them were comrades of the great Stalin.

Edward Ochab replaced Bierut in the post of first secretary of the party. Thus Khrushchev's old desire was realized. Later, however, Khrushchev "fell out" with Ochab, apparently because he did not fulfill Khrushchev's demands and orders as he should have done. That is why Khrushchev later launched attacks on Ochab at those meetings at which we, too, were present.

Ochab came and went like a shadow, without being a year in that position.

It is clear that with the death of Bierut the road to the throne of Poland was opened to the reactionary Gomulka. This "communist," brought out of prison, after a number of ups and downs and writhings of a heterogeneous leadership, in which agents of Zionism and the capitalist powers were not lacking, was to be brought into the leadership by his friend Nikita Khrushchev.

Poland was the "big sister" of the Khrushchevite Soviet Union. Then came Bulgaria, with which the Khrushchevites played and are still playing their game shamelessly, to the point that they have turned it into their "obedient daughter."

Further on Comrade Enver Hoxha writes about his reminiscences from the meetings with Dimitrov and Kolarov.

I met Dimitrov and Kolarov, these outstanding Bulgarian communists only once in my life, but they left an indelible impression on my memory. After Dimitrov, Kolarov became prime minister and was one of the initiators of the condemnation of the Titoite agent, Kostov. But only a few months later Kolarov died. His death, too, grieved me greatly.

Comrade Enver Hoxha also writes about the changes which were made in the leaderships of the parties of other countries of people's democracy underlining also the relations of Albania with these countries.

In continuation of his book Comrade Enver Hoxha describes the heavy sense of isolation he felt in Moscow after Khrushchev took over the reins. As soon as we arrived in Moscow, he writes, they allocated us a dacha (country villa, Russian in the original) on the outskirts of the city, where we remained isolated for whole days. Officials such as Lesakov, Moshatov, Petrov and some other minor functionaries of the apparatus of the Central Committee of the party would be there or would come and go, usually to accompany us, but also to eat and drink. They were all peoples of the security service, dressed as functionaries of the Central Committee, i.e., people of the apparatus.

I was never free, I always had an escort. They were all Khrushchev's men, informers for the Central Committee and the Soviet security service, without taking account here of the official guards and the bugging devices with which they filled the various villas in which we stayed. But that is another story. Let us pass over the devices and concentrate on the people.

These Soviet employees tried to find our our nastroyenie (humor, Russian in the original), in order to learn what we were seeking, what we would raise, with whom we would raise it, what the situation was in our country, what we thought about the Yugoslavs, about the leaders of the Greek Communist Party, or any other matter. They knew why they came and we knew who sent them and why they were sent, therefore

both sides were friendly, we talked about what interested us and waited for news to come from the Central Committee about when we were to meet. The Chinovniki did not talk about politics, no doubt because they had orders about this, but even if they had wanted to open some conversation they did not dare, because they knew that every word would be recorded. We talked especially against the Titoite revisionists. You could not visit any collective farm or state farm, or make contact with the comrades or the people without giving 2 or 3 days notice. And if you did go on a visit, they would sit you down at a table laden with drinks and fruit and you would see nothing, no cattle stall or collective farmer's house.

Comrade Enver Hoxha stressed further on in his book that the Khrushchevites wanted to have not only the countries of people's democracy, but also the whole international communist movement, under their direction.

I shall speak elsewhere about the revisionist and opportunist views and stands of such leaders as Togliatti, Thorez, etc, but I want to stress here that, after the death of Stalin both Togliatti and the others began to express their revisionist views more openly, because they sensed that Khrushchev and his circle were their ideological and political allies, because they saw Khrushchev's opportunist line towards the Titoites, the Social-Democrats, the bourgeoisie, etc. This line which Khrushchev was building up suited Togliatti and Co, who, to one degree or another, had long been following the line of collaboration with the bourgeois parties and the bourgeois governments of their own countries and fighting and dreaming that they would become the sponsors of marriages of convenience and take seats in those governments. These tendencies were latent at first, were displayed hesitantly, but after the 20th Congress they bloomed into "theories," like Togliatti's famous "polycentrism," or his "Italian road to socialism."

Of course, within the world communist movement, the Khrushchevites did not come out with a completely open revisionist platform right from the start. Just as within the Soviet Union, they tried to adopt a flexible line, in order to avoid arousing an immediate reaction in either their own party of the others. The "Leninism" of which they spoke, the odd good word dropped here or there about Stalin, their noisy advertisement of "Leninist principles in the relations among the socialist countries," served to disguise the plots they were hatching up, and to gradually prepare the ground for their subsequent frontal attack. This they launched at the 20th Congress of the Communist Party of the Soviet Union. There they laid their cards on the table, because Khrushchev and Co. had worked for a long time to paralyze any possible reaction inside or outside the country.

[18 Oct 80]

[Text] Tirana, 18 Oct (ATA)--Further on Comrade Enver Hoxha writes in his book about the preparations and the holding of the ill-famed 20th Congress of the CPSU which legalized the thoroughly anti-Marxist theses of Khrushchev, about the "secret" report of Khrushchev against Stalin, about the liquidation of the opponents of Khrushchev in the leadership of the CPSU and about the constant pressure on the PLA to divert it from its principled and correct stand.

The Official Proclamation of Revisionism

> The 20th Congress of the CPSU. Khrushchev's theses--the charter of modern revisionism. The "secret" report against Stalin. Togliatti demands recognition of his "merits." Tito in the Soviet Union.

> Molotov is dismissed from the task of foreign minister. Abortive attempt of the "anti-party group." The end of the career of Marshal Zhukov. Another victim of the Khrushchevites' backstage manoeuvres: Kirichenko. May 1956: Suslov demands that we rehabilitate Kock Xoxe and company. June 1956: Tito and Khrushchev are displeased with us. July 1957: Khrushchev arranges a dinner in Moscow so that we meet Rankovic and Kardelj.

The betrayal at the top of the Communist Party of the Soviet Union and of the country where the October socialist revolution was carried out, writes Comrade Enver Hoxha, was an all-round attack on the name and great teachings of Lenin, and especially on the name and work of Stalin.

> The "striving" and the big expenditure of imperialism to force Khrushchev and company to go further and further down the road of capitulation and betrayal were not in vain.

In the framework of its post-Second World War strategy, imperialism headed by American imperialism, when it saw the first vacillations and retreats of the new Soviet leadership, further intensified its all-round attacks and pressure to force Khrushchev and company to go further and further down the road of capitulation and betrayal. The "striving" and big expenditure of imperialism in this counter-revolutionary direction were not in vain. Having set out on their course of concession and betrayal, Khrushchev and his henchmen were continually justifying the long-standing efforts and the old desires of imperialism.

> The 20th Congress officially legalized the thoroughly anti-Marxist, anti-socialist theses of Khrushchev and his collaborators.

When they thought that they had strengthened their positions, had control of the army through the marshals, had turned the security force to their course, had won over the majority of the Central Committee, Khrushchev, Mikoyan and the other Khrushchevites prepared the notorious 20th Congress held in February 1956, at which they delivered the "secret" report against Stalin.

This congress of the Communist Party of the Soviet Union has gone down in history as the congress which officially legalized the thoroughly anti-Marxist, anti-socialist theses of Nikita Khrushchev and his collaborators, as the congress which flung the doors open to the penetration of alien, bourgeois-revisionist ideology in a series of communist and workers' parties of the former socialist countries and the capitalist countries. All the distortions of the major issues of principle, such as those about the character of our epoch, the roads of transition to socialism, peaceful coexistence, war and peace, the stand towards modern revisionism and towards imperialism, etc, etc, which later became the basis of the great, open polemic with modern revisionism, have their official beginning in Khrushchev's report to the 20th Congress.

> Many were misled by the demagogy of the Khrushchevite traitors. However, the Party of Labour of Albania was not misled.

From the time Stalin died to the 20th Congress, the Khrushchevite conspirators manoeuvred cunningly with "bureaucratic legality," "the rules of the party,"

"collective leadership" and "democratic centralism" shed crocodile tears over the loss of Stalin, thus step by step preparing to torpedo the work of Stalin, his personality and Marxism-Leninism. This is a period full of lessons for the Marxist-Leninists, because it brings out the bankruptcy of "bureaucratic legality," which represents a great danger to a Marxist-Leninist party, brings out the methods which the revisionists used to profit from this "bureaucratic legality," brings out how leaders, who are honest and experienced but who have lost the revolutionary class spirit fall into the traps of intriguers and give way, retreat before the blackmail and demagogy of revisionist traitors disguised with revolutionary phraseology. In its transition period we saw how the Khrushchevites, in order to consolidate their power, operated allegedly with "a great party spirit," "free from the fear of Stalin" "with truly democratic and Leninist forms," about which they set up a great clamour, while they worked actively to organize the filthiest slanders which only the bourgeoisie has been able to concot against the Soviet Union, Stalin and the entire socialist order. All these monstrous calumnies of the Khrushchevite revisionists, all their destructive activity, were intended to "prove," allegedly with legal documents, with "arguments" and "analyses in the new," the slanders which the reactionary bourgeoisie had been spreading for many years against Marxism-Leninism, the revolution and socialism.

Every good thing of the past was distorted, allegedly in the light of the "new situations," "new developments," "new roads and possibilities," in order to go ahead.

Many were misled by this demagogy of traitors. However, the Party of Labour of Albania was not misled. It has made a detailed principled analysis of this question and has had its say in defence of the Marxist-Leninist truth long ago.

> The liberal spirit pervaded the whole atmosphere, the Soviet press and propaganda like an ominous cloud during the days of the 20th Congress.

Together with Comrades Mehmet Shehu and Gogo Nushi, I was appointed by our party to take part in the proceedings of the 20th Congress. The opportunist "new spirit," which Khrushchev was arousing and activating, was apparent in the way in which the proceedings of this congress were organized and conducted. This liberal spirit pervaded the whole atmosphere, the Soviet press and propaganda of those days like an ominous cloud, it prevailed in the corridors and the congress halls, it was apparent in people's faces, gestures and words.

The former seriousness, characteristic of such extremely important events in the life of a party and a country, was missing. Even non-party people spoke during the proceedings of the congress. In the breaks between sessions, Khrushchev and company strolled through the halls and corridors, laughing and competing with one another as to who could tell the most anecdotes, make the most wisecracks and show himself the most popular, who could drink the most toasts at the heavily laden tables which were placed everywhere.

With all this, Khrushchev wanted to reinforce the idea that the "grave period," the "dictatorship" and "gloomy analysis" of things were over once and for all and the "new period" of "democracy," "freedom," the "creative examination" of events and phenomena, whether inside or outside the Soviet Union, was officially beginning.

> The bourgeoisie and reaction gave exceptional publicity to Khrushchev's "new developments."

In fact, the first report delivered by Khrushchev at the congress, which was trumpeted loudly as a "colossal contribution" to the fund of Marxism-Leninism and a "creative development" of our science, constitutes the official charter of modern revisionism. From those days on, the bourgeoisie and reaction gave exceptional publicity to Khrushchev's "new development," spoke openly about the radical changes which were occurring in the Soviet Union and in the political and ideological line of the Communist Party of the Soviet Union.

While they gleefully welcomed Khrushchev's great and radical about-turn, reaction and the bourgeoisie, at the same time did not fail to describe this turn on some occasions as "more dangerous" to their interests than the line of the time of Stalin. Khrushchev and the Khrushchevites used these "criticisms" by the bourgeoisie as arguments to convince the others that the "new line" was "correct" and "Marxist," but in fact, the fear of the international bourgeoisie had another source: in Khrushchev and his "new policy" it saw not only a new ally, but also a new and dangerous rival for spheres of influence, plunder, wars and invasions.

> The report against Stalin was with catastrophic consequences for the Soviet Union and the communist and worker movement.

On the last day, the congress proceeded behind closed doors because the elections were to be held, and we were not present at the sessions. In fact that day, besides the elections, a second report by Khrushchev was read to the delegates. It was the notorious, so-called secret report against Stalin, but which had been sent in advance to the Yugoslav leaders, and a few days later it fell into the hands of the bourgeoisie and reaction as a new "gift" from Khrushchev and the Khrushchevites. After it was discussed by the delegates to the congress, this report was given to us and all the other foreign delegations to read.

Only the first secretaries of sister parties taking part in the congress read it. I spent all night reading it, and extremely shocked, gave it to Mehmet and Gogo to read. We had known in advance that Khrushchev and company had cancelled out the glorious work and figure of Stalin and we saw this during the proceedings of the congress in which his name was never mentioned in favourable terms. But we could never have imagined that all those monstruous accusations and calumnies against the great and unforgettable Stalin could have been put on paper by the Soviet leaders. Nevertheless, there it was in black and white. It had been read to the Soviet Communists, who were delegates to the congress, and had been given to the representatives of other parties taking part in the congress to read. Our hearts and minds were deeply and gravely shocked. Amongst ourselves we said that this was a villany which had gone beyond all bounds, with catastrophic consequences for the Soviet Union and the movement, and that in those tragic circumstances, the duty of our party was to stand firm on its own Marxist-Leninist positions.

After we had read it we immediately returned the terrible report to its owners. We had no need for that package of filthy accusations which Khrushchev had concocted. It was other "communists" who took it away to give to reaction and to sell by the ton in their book-stalls as a profitable business.

We returned to Albania heart-broken over what we had seen and heard in the homeland of Lenin and Stalin, but at the same time we returned with a great lesson that we must be more vigilant and more alert towards the activities and stands of Khrushchev and the Khrushchevites.

> The black smoke of the ideas of the 20th Congress began to spread very quickly: the revisionist elements, who up till yesterday had kept under cover, now came out openly.

Only a few days later the black smoke of the ideas of the 20th Congress began to spread everywhere.

Palmiro Togliatti, our near neighbour, who had shown himself to be the most remote and unapproachable towards us, was among the first to come out in his party beating his breast. Not only did he praise to the skies the new "prospects" which the congress of the Soviet revisionists opened, but he demanded that his merits should be recognized as the precursor of Khrushchev in regard to many of the new theses and as "an old fighter" for those ideas. "In regard to our party," declared Togliatti in March 1956, "it seems to me that we have acted courageously. We have always been interested in finding our own way, the Italian way, of development towards socialism."

The revisionists of Belgrade rejoiced and aroused themselves as never before, while the other parties of the countries of people's democracy began, not only to envisage the future, but also to re-examine the past, in the spirit of Khrushchev's theses. Revisionist elements, who up till yesterday had kept under cover while they poured out their poison, now came out openly to settle accounts with their opponents. The wave of rehabilitations of condemned traitors and enemies erupted, the doors of prisons were opened and many of those who had been condemned were placed directly in the leadership of the parties.

> Khrushchev fulfilled the condition set by Belgrade: Molotov was removed from the post of the foreign minister of the Soviet Union.

The Khrushchev clique was the first to set the example. At the 20th Congress, Khrushchev boasted that more than 7,000 persons condemned in the time of Stalin had been liberated from the prisons of the Soviet Union and rehabilitated. This process was to continue and be deepened.

Khrushchev and Mikoyan began to liquidate, one by one, and finally all together, those members of the Presidium of the Central Committee of the party whom they were to describe as an "anti-party group." After they brought down Malenkov, replacing him temporarily with Bulganin, Molotov's turn came. This took place on 2 June 1956. That day the newspaper "PRAVDA" carried a huge photograph of Tito on the front page and the dobro pazhalovat (welcome, Russian in the original) to the head of the Belgrade clique arriving in Moscow, and page four ended a report of daily events with the "news" about the removal of Molotov from the post of foreign minister of the Soviet Union. The report said that Molotov had been released from this position "at his own request," but in fact he was released because this was a condition laid down by Tito for his coming to the Soviet Union for the first time since the breaking off of relations in 1948-1949. And Khrushchev and company immediately fulfilled the condition set by Belgrade for Tito's satisfaction, since

Molotov, together with Stalin, had signed the letters which the Soviet leadership had sent the Yugoslav leadership in 1948.

> Polyansky's admissions on the dismissal of Khrushchev in the summer of 1957 and how Khrushchev was restored to power.

The positions of the revisionist reactionaries were becoming stronger and their opponents in the Presidium, Malenkov, Molotov, Kagenovich, Voroshilov and others, now began to see more clearly the revisionist intrigue and the diabolical plans which Khrushchev hatched up against the Communist Party of the Soviet Union and the state of the dictatorship of the proletariat. At a meeting of the Presidium of the Central Committee of the party in the Kremlin in the summer of 1957, after many criticisms Khrushchev was left in the minority, and, as Polyansky told us from his own mouth, Khrushchev was dismissed from the task of the first secretary and was appointed minister of agriculture, since he was an "expert on kukuruza" (maize, Russian in the original). However, this situation did not last more than a few hours. Khrushchev and his supporters secretly gave the alarm, the marshals surrounded the Kremlin with tanks and soldiers and gave orders that not even a fly was to leave the Kremlin. On the other hand, aircraft were sent to the four corners of the Soviet Union to gather up the members of the plenum of the CC of the CPSU. "Then," said Polyansky, this product of Khrushchev, "we entered the Kremlin and demanded admission to the meeting. Voroshilov came out and asked what we wanted. When we told him that we wanted to enter the meeting, he cut us short. When we threatened to use force he said: 'What does all this mean?' But we warned him: 'Mind your words, otherwise we shall arrest you.' We entered the meeting and changed the situation." Khrushchev was restored to power.

Thus, after this forlorn attempt, these former co-fighters of Stalin's, who had associated themselves with the slanders made against his glorious work, were described as an "anti-party group" and received the final blow from the Khrushchevites. No one wept over them, no one pitied them. They had lost the revolutionary spirit, were no longer Marxist-Leninists, but corpses of Bolshevism. They had united with Khrushchev and allowed mud to be thrown at Stalin and his work. They tried to do something, but not on the party road, because for them, too, the party did not exist.

All those who opposed Khrushchev, in one way or another, or were no longer necessary to him, were to suffer the same fate.

> The Khrushchevites liquidated Zhukov from the political scene after having exploited him for their own ends.

For years on end the "great merits" of Zhukov were publicized, his activity during the great patriotic war was used to throw mud at Stalin, and as minister of defence his hand was used for the triumph of Khrushchev's putsch. But later, we suddenly learned that he had been discharged from the functions he held. During those days Zhukov was on a visit to our country. We welcomed him warmly as an old cadre and hero of the Stalinist Red Army, talked about problems of the defence of our country and the socialist camp, and did not notice anything disturbing in his opinions. On the contrary, since he had come from Yugoslavia, where he had been on a visit, he told us: "With what I saw in Yugoslavia, I

don't understand what sort of socialist country it is." From this we sensed that he was not of one mind with Khrushchev. On the very day that he left, we learned that he had been removed from the post of minister of defence of the USSR for "mistakes" and "grave faults" in his application of the "line of the party," for violations of the "law in the army," etc, etc. I cannot say whether or not Zhukov was guilty of mistakes and faults in these directions, but it is possible that the reasons went deeper.

In one meeting at Khrushchev's their attitude towards Zhukov had made an impression on me. I can't remember what year it was, but it was summer and I was on holiday in the south of the Soviet Union. Khrushchev had asked me to lunch. The local people there were Mikoyan, Kirichenko, Nina Petrovna (Khrushchev's wife), and some others. Apart from me, Ulbricht and Grotewohl were there as foreign guests. We were sitting outside, eating and drinking on the veranda. When Zhukov came, Khrushchev invited him to sit down. Zhukov seemed out of sorts. Mikoyan got up and said to him:

"I am the tamada, (master of ceremonies, Russian in the original). Fill your glass."

"I can't drink" said Zhukov, "I am not well."

"Fill it, I say," insisted Mikoyan in an authoritarian tone. "I give the orders here, not you."

Nina Khrushcheva intervened:

"Don't force him when it harms him, Anastasiy Ivanovich," she said to Mikoyan.

Zhukov said nothing and did not fill his glass. Khrushchev changed the subject by cracking jokes with Mikoyan.

Can it be that the contradictions with Zhukov had begun to arise as early as that. And that they had begun to insult him and to show him that others were giving the orders and not he? Perhaps Khrushchev and company had begun to fear the power which they themselves had given Zhukov in order to seize state power, and that is why they accused hig of "bonapartism" later? Could it possibly be that information about Zhukov's views on Yugoslavia reached Khrushchev before Zhukov returned to the Soviet Union? In any case, Zhukov was eliminated from the political scene despite his four "hero of the Soviet Union" stars, a series of orders of Lenin, and countless other decorations.

[19 Oct 80]

{Text} Tirana, 19 Oct (ATA)--Kirichenko also was slapped down by Khrushchev.

After the 20th Congress, Khrushchev elevated Kirichenko to the top and made him one of the main figures of the leadership. I had met him in Kiev many years before, when he was first secretary of the Ukraine. This big florid-faced man who did not make a bad impression on me, did not welcome me haughtily or as a mere formality. He did not fail to respond to my love for Stalin with the same terms and expressions of admiration and loyalty. However, since he was from the Ukraine, Kirichenko did not fail to speak about Khrushchev, too, about his "wisdom, ability, energy," etc. I did not see anything wrong with these expressions which seemed natural to me at that time.

In the Kremlin I frequently had occasion to sit at the table beside Kirichenko and talk to him. After Stalin's death, many banquets were organized, because at that period it was usually only at banquets that one met the leaders of the Soviet Union. The tables were set day and night, laden with food and drink to the point of revulsion. When I saw the Soviet comrades eating and drinking, I was reminded of Gargantua of Rabelais. These things occurred after the death of Stalin, when Soviet diplomacy was carried out through priyoms, and Khrushchevite "communism" was illustrated, apart from other things, with banquets, with caviar, and the wines of the Crimea.

At one of these priyoms, when I was sitting near Kirichenko, I said to Khrushchev in a loud voice:

"You must come to visit Albania some time, because you have gone everywhere else."

"I shall come," replied Khrushchev.

Kirichenko jumped in at once and said to Khrushchev:

"Albania is far away, so don't promise when you will go and how many days you will stay."

Of course, I did not like this intervention of his and asked:

"Why are you ill-disposed towards our country?"

He feigned regret over the incident, and to explain his gesture, said to me:

"Nikita Khrushchev is not well at present. We must look after him."

This was just a tale. Khrushchev was as healthy as a pig, and ate and drank enough for four.

Another time (at a reception, of course, as usual), I happened to be seated near Kirichenko again. Nexhmije was with me, too. It was July 1957, the time when Khrushchev had fixed things up with the Titoites and was flattering them, as well as exerting pressure on them. The Titoites seemed to like the flattery, while as to the pressure and the stabs in the back, they gave as good as they got. Khrushchev had informed me the night before, "In order to get my permission," that he was going to ask me to this dinner at which Zhukov and his wife, as well as Rankovic and Kardelj, with their wives, would be present. As was his custom, Khrushchev cracked jokes with Mikoyan. This is the way they combined their roles, with Khrushchev accompanying his arrows, trickery, wiles, lies, and threats with jibes at "Anastasiy" who played the "king's jester."

When he finished his introduction with jokes with the "king's jester," Khrushchev, in proposing a toast, started to give us a lecture about the three-sided friendship that ought to exist between Albania, Yugoslavia and Bulgaria, and the four-sided friendship between the Soviet Union, Albania, Yugoslavia and Bulgaria.

"The relations of the Soviet Union with Yugoslavia have not proceeded in a straight line," he said. "At first they were good, then they were cool, then they were

broken off, and later, following our visit to Belgrade it seemed they were put right. Then the rocket went up (he was referring to events of October-November 1956 in Hungary), and they were ruined again, but now the objective and subjective conditions have been created for them to improve. Meanwhile the relations of Yugoslavia with Albania and Bulgaria have not yet been improved, and as I told Rankovic and Kardelj earlier, the Yugoslavs must stop their undercover activity against those countries."

"It is the Albanians who do not leave us in peace," interjected Rankovic.

Then I intervened and listed for Rankovic the anti-Albanian actions, sabotage, subversion, and the plots which they organized against us. That night we had Khrushchev "on our side," but he soft-pedalled his criticism of the Yugoslavs.

"I don't understand this name of your party, the 'League of Communists of Yugoslavia'," said Khrushchev, waving his glass. "What is this word 'league'? Besides, you Yugoslavs don't like the term 'socialist camp'. But tell us, what should we call it, the 'neutral camp'. The 'camp of neutral countries'? We are all socialist countries, or are you not a socialist country?"

"We are, of course, we are," said Kardelj.

"Then come and join us, we are the majority," replied Khrushchev.

Khrushchev was on his feet throughout all this discourse, interspersed with shouts and gestures, and full of "criticism" of the Yugoslavs, which he delivered in the context of his efforts to stand over Tito, who never agreed to consider Khrushchev as the "head" of the council.

Kirichenko, who was beside me, listened in silence. Later he asked me in a low voice:

"Who is this woman beside me?"

"My wife, Nexhmije," I replied.

"Couldn't you have told me earlier? I have been keeping my mouth shut, thinking that she is the wife of one of them," he told me, indicating the Yugoslavs. He exchanged greetings with Nexhmije and then began to abuse the Yugoslavs.

Meanwhile Khrushchev continued his "crigicisms" of the Yugoslavs and tried to convince them that it was me (of course, under the name of the Soviet Union and the Soviet Communist Party), and no one else who ought to be at the "head." He was getting at Tito, who, for his part, tried to place himself and the Yugoslav party above everyone.

"It would be ridiculous," he told them, "for us to be at the head of the camp if the other parties did not think us worthy, just as it would be ridiculous for any other party to consider itself at the head when the others do not consider it so."

Kardelj and Rankovic replied coolly making great efforts to appear calm, but it was very easy to understand that internally they were boiling. Tito had instructed them to defend his positions well and they wanted to do their master's bidding.

The dialogue between them was dragging on, frequently interrupted by the shouts of Khrushchev, but I was no longer listening. Apart from the reply I gave Rankovic, when he made the accusation that we had interfered in their affairs, I exchanged not one word with them. I talked the whole time with Kirichenko, who left nothing unsaid against the Yugoslavs and described the whole stand of our party towards the revisionist leadership of Yugoslavia as very correct.

But, this Kirichenko, also, was slapped down by Khrushchev later. Although foreign observers for a time considered him to rank second after Khruschev, he was sent to a small remote town of Russia, without doubt, virtually in exile. One of our military students told us when he returned to Albania:

"I was travelling on a train and a Soviet passenger came and sat down beside me, pulled out the paper and began to read. After a while he laid down the paper and, as is customary, asked me: 'Where are you going?' I told him. Noticing the accent with which I spoke Russian, he asked me: 'What is your nationality?' 'I am an Albanian,' I said. The traveller was surprised, but pleased, looked at the door of the carriage, turned to me, and shook my hand warmly, saying: 'I admire the Albanians.' I was surprised by his stand," siad our officer, "because at this time the fight with the Khrushchevites had begun." It was the period after the meeting of 81 parties. "'Who are you?' I asked," related the officer. "'I am Kirichenko,' he told me. When he told me his name, I realized who he was," our officer told us, "and I prepared myself to talk to him, but he straight away said: 'Shall we play dominoes?' 'All right,' I replied, and he pulled the box of dominoes out of his pocket and we began the game. I quickly understood why he wanted to play dominoes. He wanted to tell me something and to cover his voice with the rattle of the dominoes on the table. And he began: 'Good for your party, which exposed Khrushchev. Long live Enver Hoxha. Long live socialist Albania.' And in this way we continued a very friendly talk, covered by the rattle of the dominoes. While we were talking, other people entered the compartment. He placed the last domino saying: 'Don't yield, give Enver my best wishes.' And took the newspaper and started to read it as if we had never met," said our officer in conclusion.

> Khrushchev and company did the utmost to spread and cultitate their anti-Marxist and putschist actions and methods in all the other communist and workers' parties.

Speaking about the efforts made by Khrushchev and company to spread and cultivate their anti-Marxist and putschist actions and methods in all the other communist and workers' parties, Comrade Enver Hoxha writes in his book that the process of large-scale rehabilitations, disguised as the "correction of mistakes made in the past," was transformed into an unprecedented campaign in all the former countries of people's democracy. The doors of the prisons were opened everywhere, the chiefs of other parties were competing with each other as to who would be quickest to release the most condemned enemies from the prisons, and who would give them the most positions right up to the head of the party and the state. Every day the newspapers and magazines of these parties published communiques and reports about this spring of the revisionist Mafia, the pages of the press were filled with the speeches of Tito, Ulbricht and other revisionist chiefs, while "PRAVDA" and TASS hastened to report these events and to spread them as "advanced examples."

Plots against and open pressure on the Party of Labour of Albania.

We saw what was occurring and felt the pressure mounting against us from all sides, but we did not waver a fraction from our course and our line.

This could not fail to anger Tito and company, first of all, because, exalted by the decisions of the 20th Congress and what was occurring in other countries, they expected a cataclysm in Albania, too. The activity of the Titoites who worked in the Yugoslav Embassy in Tirana, against our party and country, was stepped up.

Taking advantage of our correct behaviour and the facilities we had provided for them to carry out their task, the Yugoslav diplomats in Tirana, on orders and instructions from Belgrade, started to arouse and reactivate their old agents in our country, instructed them and gave them the signal to attack. The attempt to attack the leadership of our party at the Tirana conference in April 1956, an attempt which failed, was the work of the Belgrade revisionists but, at the same time, it was also the work of Khrushchev and the Khrushchevites. With their revisionist theses and ideas, the latter were the inspirers of the plot, while the Titoites and their secret agents were the organizers.

When they saw that this plot had failed, the Soviet leaders, who posed as our friends to the death and men of principle, did not fail to make demands and exert pressure on us openly.

On the eve of the 3rd Congress of our party, which was held at the end of May and the beginning of June 1956, Suslov quite openly demanded that our leadership should "re-examine" and "correct" its line in the past.

"There is nothing for our party to re-examine in its line," we told him bluntly. "We have never permitted serious mistakes of principle in our line."

"You should re-examine the case of Koci Xoxe and his comrades, whom you condemned earlier," Suslov told us.

"They were and still are traitors and enemies of our party and people, enemies of the Soviet Union and socialism," we replied bluntly. "If their trials were reviewed a hundred times, they would be described only as enemies a hundred times. Such was the nature of their activity."

Then Suslov began to speak about the things that were occurring in the other parties and the Soviet party in regard to looking at this problem with a "more generous," "more humane" eye.

"This has made a great impression on and has been welcomed by the peoples," he said. "This is what should occur with you too."

"If we were to rehabilitate the enemies and traitors, those who wanted to place the country in the chains of a new slavery, our people would stone us," we told Khrushchev's ideologist.

When he saw that he was getting nowhere with this Suslov changed his tack.

"All right," he said, "since you are convinced they are enemies, that is what they must be. But there is one thing you should do: You should refrain from speaking of their links with the Yugoslavs and should no longer describe them as agents of Belgrade."

"Here we are speaking of the truth," we said. "And the truth is that Koci Xoxe and his collaborators in the plot were downright agents of the Yugoslav revisionists. We have made known world-wide the links of Koci Xoxe with the Yugoslavs for hostile activities against our party and country and the great mass of facts which prove this. The Soviet leadership knows them very well. Perhaps you have not had the chance to acquaint yourself with the facts and, since you persist in your opinion, let us present some of them to you."

Suslov could hardly contain his temper. We calmly listed some of the main facts and finally stressed:

"This is the truth about the links of Koci Xoxe with the Yugoslav revisionists."

"Da, da," yes, yes (Russian in the original) he repeated impatiently.

"And how can we distort this truth?" we asked him. "Is it permissible for a party to conceal or distort what has been proved with countless facts, to please this or that person?"

Suslov snorted, "But there is no other way you can repair your relations with Yugoslavia."

Everything had become more than clear to us. Behind the "fraternal" intervention of Suslov lurked the Khrushchev-Tito deals. The Tito group, which had now gained ground, was certainly demanding as much as possible space, along with economic, military and political advantages. Tito had insisted with Khrushchev that the Titoite traitors such as Koci Xoxe, Rajk, Kostov, etc, be rehabilitated. While Tito achieved this aim in Hungary, Bulgaria and Czechoslovakia, he was quite unable to do so in our country. In those countries the traitors were rehabilitated and the Marxist-Leninist party leaderships were undermined. This was the joint work of Khrushchev and Tito. With our resolute and unwavering stand towards him, we were a thron in Tito's flesh. And if the enemies dared to undertake actions against us, we would counteract. Tito had long known this, and Khrushchev knew it and was becoming convinced of it, too. He, of course, was inclined to restrict Tito's roads and not allow him to graze in the "pastures" which Khrushchev considered his own.

Result of lack of principle in Khrushchev's political stand.

About 15 to 20 days after the 3rd Congress of our party, in June 1956, I was in Moscow for a consultation, about which I spoke above, in which the leaders of the parties of all the socialist countries took part. Although the purpose of the consultation was to discuss economic problems, Khrushchev, as was his custom, took the opportunity to raise all the other problems.

There, in the presence of all the representatives of the other parties, he admitted with his own mouth the pressure which Tito had exerted on him for the rehabilitation of Koci Xoxe and other enemies condemned in Albania.

"With Tito," said Khrushchev among other things, "we talked about the relations of Yugoslavia with the other states. Tito was pleased with the Poles, the Hungarians, the Czechs, the Bulgarians and the others, but he spoke very angrily about Albania, thumping his fist and stamping his feet. 'The Albanians are not in order, they are not on the right road,' Tito told me, 'They do not recognize the mistakes they have made and have understood nothing from all these things that are taking place'."

In fact, by repeating Tito's words and accusations Khrushchev found the opportunity to pur out all the spite and ire he felt against us, because at the congress we did not rehabilitate Koci Xoxe, "whom Tito described as a great patriot," stressed Khrushchev.

"When Tito spoke about the Albanian comrades he was trembling with rage, but I opposed him and said to him, 'These are the internal affairs of the Albanian comrades, and they will know how to solve them,'" said Khrushchev, continuing his "report," trying to convince us that he had had a great "quarrel" with Tito. However, we were now well aware of the meaning of the neverending kisses and quarrels between these two heralds of modern revisionism.

Up to his neck in treachery, Tito hatched up numerous plots against the socialist countries. However, when Khrushchev betrayed, he strutted like a "peacock" and posed as Khrushchev's "teacher." Tito was quite right to demand a great deal from him, and did not hang back in this direction. He aimed to make Khrushchev obey him and act according to his orders. Tito had the backing of American imperialism and world reaction, therefore Khruschev, for his part, followed the tactic of making approaches to Tito, in order to flatter him and win him over, to embrace him and eventually strangle him. However, he was dealing with Tito, who had his own tactic of making approaches to Khrushchev in order to impose himself on him and to submit to him, to dictate to him and not to take orders from him, to get the maximum possible unconditional aid and to compel Khrushchev to subjugate all Belgrade's opponents, first of all, the Party of Labour of Albania.

It is precisely for these reasons that we see many zig zags in Khrushchev's line towards Tito--sometimes they got on well, sometimes their relations were embittered, sometimes he attacked and cursed him and at other times he retracted only to criticize him again. This was the result of lack of principle in his political stand. Tito and Khrushchev were two revisionists, two agents of capitalism, who had things in common, but also contradictions, which were expressed in the zig zags and erratic behaviour of that time, which continue to this day between Tito and Khrushchev's heirs.

There was nothing Marxist-Leninist in their actions and stands. They were guided by counter-revolutionary aims and had assumed the leadership of revisionism, which is capitalism in a new form, the enemy of the unity of peoples, the inciter of reactionary nationalism, of the drive towards and establishment of the most ferocious fascist dictatorship which does not permit even the slightest sign of formal bourgeois democracy. Revisionism is the idea and action which leads the turning of a country from socialism back to capitalism, the turning of a communist party into a fascist party, it is the inspirer of ideological chaos, confusion, corruption, repression, arbirarity, instability and putting the homeland up for auction. This tragedy occurred in the Soviet Union and the other revisionist countries. Khrushchev and the Khrushchevites, incited and assisted by American imperialism and world capitalism, created this situation.

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPPS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

EXTRACTS FROM 'THE KHRUSHCHEVITES' BY ENVER HOXHA

PART 2

Tirana ATA in English 0900 GMT 20-31 Oct 80

["Extracts From the Book by Comrade Enver Hoxha 'The Khrushchevites' (Memoirs) (Continues)"--ATA headline]

[20 Oct 80]

[Text] Tirana, 20 Oct (ATA)--In his book "The Khrushchevites" (Memoirs) Comrade Enver Hoxha further exposes the policy of the Soviet revisionist leadership to turn the socialist countries into dominions dependent on Soviet metropolis. Comrade Enver Hoxha also points out the influence the theses of the notorious 20th congress and especially the attack against Stalin had for the revival of the revisionist elements in the other parties.

Designing the empire

--Towards turning the socialist countries into Russian dominions. Changes in the Bulgarian leadership dictated by Moscow. Zhivkov's "clock" is wound up in Moscow. The Danubian complex and the Romanian's "fall-out" with the Soviets. The official elimination of the information bureau. The reformist illusions of the Italian and French parties--Togliatti, the father of "polycentrism." Unforgettable meeting with two beloved French comrades, Marcel Cachin and Gaston Monmousseau. The vacillations of Maurice Thorez. Destruction of the unity of the communist movement. A colossal service for world imperialism.

The theses of the 20th congress and especially the attack made on Stalin in Khrushchev's "secret" report, Comrade Enver Hoxha points out, enthused the revisionist elements, both in the parties of the socialist countries and

in the other parties. Following the example of the rehabilitation of the enemies of socialism in the Soviet Union, the "cases" of Rajk, Kostov, Gomulka, Slansky and other enemies, condemned by the dictatorship of the proletariat, were brought up again.

> Khrushchevite revisionism intended at creating its own colonial empire, part of which would be the countries of the socialist camp

All the counterrevolutionary subversion which the Khrushchevite clique carried out within the Soviet Union also served its aims in foreign policy. At first, its main aims in this direction were: to strengthen its domination in the parties and former countries of people's democracy, which it thought were under its control, and to clamp down on those parties and countries which still had not submitted to it: to place the communist and workers' parties of the capitalist countries completely in its service, to win the trust of American and world imperialism by attacking socialism in the Soviet Union and elsewhere, while propagating "creative Marxism" through a series of opportunist theses.

Khrushchev thought that by slandering Stalin he would make the Soviet Union and especially himself "acceptable" to everybody. He calculated that in this way world reaction would be satisfied, all the other parties would gather round him, Tito's heart would be softened and they would be reconciled, and together, like a reunited family, they would reach accord and join hands with imperialism and world capitalism on their course.

As I pointed out above, Khrushchev had to get rid of his opponents, not only in the Soviet Union but also in the countries of people's democracy. Those who believed in the Marxist-Leninist line of Stalin had to be culled from the party leaderships. Likewise, those who were against Tito, with whom Khrushchev had come to agreement, had to be urged, while those who had condemned Tito's agents in their own countries had to rehabilitate these traitors and themselves be removed from the leadership. Khrushchev used all methods: Gottwald died, Beirut died, Gomulka and Kadar were returned to power, Dej turned his coat, Rakosi and Chervenkov were liquidated. We were the only ones whom Khrushchev was unable to liquidate.

Of course, in seeking rapprochement with American imperialism, Khrushchevite revisionism intended to come out on the arena as its powerful partner, a country with developed industry and agriculture, able to compete with those of the United States of America (as was loudly proclaimed) and with its own colonial empire, part of which would be the countries of the socialist camp.

Khrushchev and company had begun their work for the making of this "empire" and now they continued it further. In some places this work went smoothly, in others there was friction, while in Albania these ambitions were never realized.

Bulgaria, for example, never caused the Soviet revisionists any trouble. After the deaths of Dimitrov and Stalin, apparently the "authority" of Velko Chervenkov could no longer be imposed on the Bulgarian Communist Party. He had become an obstacle in Khrushchev's way and, without doubt, the Soviet intrigues, the intrigues of Khrushchev, who seized power and did what he did, must have played a part in his liquidation.

Immediately after the 20th congress, Chervenkov, who was prime minister at that time, was attacked over the "cult of the individual," the "mistakes" he had committed, etc. However, Velko did not seem to have been one of those who created a cult around themselves. He was used more as a "scapegoat" in order to justify the "corrections" which were made with the rehabilitation of Kostov and company. Chervenkov made way without any fuss and left his post as prime minister in favour of Anton Yugov, who did not keep this position for long, either.

When Chervenkov was removed from the post of general secretary of the party, he was replaced by Zhivko, (ironical diminutive for Zhivkov) while Yugov remained where he was, as deputy prime minister. As the cunning devil he was, Khrushchev preferred Todor, who would do the work for him better. Khrushchev could not maneuvre with Yugov as he wanted.

One fine morning Yugov, too, was liquidated quietly like Chervenkov.

With his elimination, Khrushchev named Todor Zhivkov as the leader of Bulgaria or, more precisely, the "steward" of the Soviets in Bulgaria. Dimitrov raised the prestige of the Bulgarian Communist Party and of Bulgaria very high, but Todor Zhivkov completely reversed this process.

Bulgaria has become a bridge-head of the Russian social-imperialists against Albania and the other Balkan countries

By following the road and "advice" of Khrushchev, Zhivkov became a "personality" and, simultaneously with the build-up of his "personality" the Khrushchevite revisionists got everything in Bulgaria under their control. Every corner and sector of Bulgaria is run by the men of the Soviets. Nominally, the Bulgarian Government, party and administration exist, but, in fact everything is run by the Soviets. The Khrushchevites have turned Bulgaria into a dangerous arsenal. Bulgaria has become a bridge-head of the Russian social-imperialists against our country and the other Balkan countries. This is the work of Zhivkov and his team, who eat the bread of Bulgaria and serve Soviet social-imperialism.

Khrushchev's annexationist plan

As the facts of history show, Dej and his associates also, were and still are satellites of Khrushchev. They swung whichever way the wind blew. Khrushchev thought that he had Dej in his waistcoat pocket like the small ivory knife which he would bring out and toy with in meetings. He thought he would use Dej just like this knife. Judging that the situation was ripe, after 1960 Khrushchev brought up the annexation plan under which the Romanian territory from the province of Bucharest up to the border with the Soviet Union, would be united economically with the Soviet Ukraine in an "industrial-agricultural complex." This was a very clumsy idea. Dej has swallowed many other things, but this time he kicked out.

Only when Khrushchev trod on Romania's corns, did Dej silence the attacks on us, but even after this Dej never had sufficient civil decency, let alone the Marxist-Leninist courage, to make the slightest self-criticism over all the things he had said and done in regard to our party.

Even after the contradictions which the Romanians had with the Soviets, their state relations with us remained just the same--cold, stale, tasteless and unpleasant. We do not have party relations with the Romanian party and we will not have them, so long as that party does not publicly acknowledge the mistakes it has made in regard to our party.

> Why did the Khrushchevites eliminate and, moreover, blacken the information bureau?

The Soviet Khrushchevites replaced Marxist-Leninist trust and friendship with the domination of the great "socialist" state, in order to create the "socialist family," the "socialist community," in which Brezhnev and the Soviet marshals rule today with the iron fist by threatening any "wayward son" of the family with the bludgeon of the Warsaw Treaty.

Khrushchev and co. were intolerant of any kind of criticism or complaint from the others, opposed to any kind of discipline and mutual control, however formal. For them the joint meetings, statements and decisions were formal and null and void if they hindered them in their plans.

Why did the Khrushchevites eliminate and, moreover, blacken the information bureau? They did this because the information bureau had condemned Tito, because they considered it the offspring of Stalin, which had earned a "bad reputation" in the eyes of the imperialists. It is clear that here they were not concerned with the organisational forms, because, after all, what difference would there be, in form, between the information bureau and the "bureau of contacts," which Khrushchev proposed (and which was never created)? The aim was to rehabilitate Tito and please imperialism.

Later, however, at a consultation of the parties of the socialist camp, the proposal for this "bureau" was rejected, partly because the Khrushchevites had changed their minds about it and partly because it was opposed, especially by the Poles. They (Ochab and Cyrankiewicz) were very actively opposed to this idea. Indeed, even when it was decided to publish a joint organ, they said: "Well, then, let us have it eventually, because it seems we have to have it."

> The Italian Revisionist Party was in the forefront of the hostile work against international communism and socialist countries

From this fruitless meeting, I remember the enthusiasm with which Togliatti embraced Khrushchev's idea and there and then advanced it further, by insisting on the creation of two "bureaus of contacts"--one for the parties of the socialist countries and one for the parties of the capitalist countries. The future father of "polycentrism" took matters even further and proposed that the Communist Party of the Soviet Union should not take part in the latter, "although," added Togliatti, trying to sweeten the pill, "it will be our leadership."

The Italian Revisionist Party was in the forefront of the hostile work against international communism, against the communist and workers' parties and the countries of the socialist camp.

The Italian and French communists had great illusions about bourgeois democracy and the parliamentary road. In the period immediately after World War II, both these parties took part in the first bourgeois governments. And this was a tactic of the bourgeoisie to avoid strikes and chaos, in order to re-establish the economy and especially to strengthen not only its economic positions but also its military and police positions. This participation of communists in the bourgeois governments was a flash in the pan. The bourgeoisie threw the communists out of office, disarmed them, pushed them into opposition and promulgated such electoral laws that, despite the great number of votes the communists had received, the number of their deputies in parliament was reduced to the minimum.

As became clear later, even at that time, Tito and Togliatti ate from the one trough, and that is why the Italian party came to the aid of Tito's party, although not openly at first. Togliatti, who was a disguised inveterate revisionist, and all the leadership of the Italian Communist Party, which participated in the information bureau, were sorry that Tito was condemned. They voted for this condemnation along with the others, because they did not have the courage to come out openly against it, but time showed that the Italian revisionists were among the most ardent in their desire to kiss Tito.

Khrushchev's visit to Belgrade and his reconciliation with Tito opened the way for Togliatti and co., not only to go to Belgrade to meet the Titoites and make peace with them, but also to develop their disruptive revisionist views openly against Stalin and the Soviet Union, not only as a state but also as a system. Togliatti and his followers openly took the side of Tito and did not follow Khrushchev's zigzag tactics. On his part, Khrushchev manoeuvred with Togliatti, too. He praised him and gently reproved him, in order to keep him in check.

The leaders of the Italian party, such as Togliatti, Longo and company proved especially susceptible to the revisionist theses of the 20th congress and, in particular, to Khrushchev's slanders against Stalin. Shortly after this congress, in an interview given to the magazine NUOVI ARGUMENTI," Togliatti launched his attacks on the socialist system, the dictatorship of the proletariat and Stalin. Here he also launched his idea of "polycentrism," which was the idea of the fragmentation and splitting of the international communist movement.

Thorez's zig-zags. Thorez's missions charged by Khrushchev

As to the leaders of the French Communist Party, such as Thorez, Duclos and others, however, it is a fact that at first they were dismayed at Khrushchev's "secret" report against Stalin and did not accept it. After this report was published in the Western press, the Political Bureau of the French Communist Party made a statement in which it condemned this report and expressed its reservations about the attacks on Stalin. Thorez personally, told me in regard to this problem: "We sought explanations from the Soviet comrades, they gave them to us, but we are not convinced." I pointed out to Thorez, "You are not convinced, while we do not agree in the least." Thus Thorez and the French Communist Party had long been aware of our opinion of the 20th congress and of the Khrushchevites' slanders against Stalin.

The French and Italians were like cat and mouse. I had talked with Thorez and Duclos about the stands of the leaders of the Italian Communist Party against the Marxist-Leninist line, in defence of the Titoite revisionists and against our party. At first, they and the French as a whole seemed to behave well towards us. We stuck to our views and they to theirs. We continued our ceaseless attacks against the Titoites and they seemed to have no trust in Tito. We were on the same course in our stand towards the Italian leaders, too.

Prior to the events which brought the split, comrades Marcel Cachin and Gaston Monmousseau, two glorious veterans of communism, came to our country. Our whole party and people welcomed them with joy and affection. I had very open and cordial talks with them. They visited our country, spoke to me about it with great sympathy, and wrote in glowing terms about our party and people in L'HUMANITE. Monmousseau also published a very pleasant book about our country. Sitting with me in front of the fire, he told me about the visit he made to Korca and his participation with the cooperativists of Korca in the grape harvest. In the course of our talk, I asked the author of "Jean Becot," who is from Champagne, the place of famous wines:

"Comrade Monmousseau, what do you think of our wine?"

He replied pince-sans-rire: (dryly (French in the original).)

"Like vinegar."

I laughed heartily and said:

"You are right, but tell me, what should we do about it?"

Monmousseau went on to speak for a whole hour about wine and this helped me greatly. I listened with admiration to the old man whose cheeks were glowing and eyes sparkling with enthusiasm, who had the colour of the wine of his birthplace, Champagne.

Before we went to the 81 parties' meeting in Moscow, Maurice Thorez asked to come to our country for a holiday. We welcomed him with great pleasure. We thought (and we were not wrong) that he was sent by the Soviets to "soften us up."

When he was on holiday in Durres, I told Thorez about all the vile things the Soviets had done to us.

Maurice listened attentively. He was astounded because he did not know these things. They had hidden everything from him. I spoke about the Bucharest meeting and our stand at that meeting. He said that they had been informed about the stand of the Party of Labour of Albania at the Bucharest meeting by the delegation from their party, and since this stand had impressed them, he had set out for Albania with the intention of talking about this question with us. Thorez said that the Bucharest meeting was useful and did not pronounce himself at all on whether or not it was in order. He did not criticize our stand in Bucharest and when he had heard me out, all he said was:

"Comrade Enver, you must clear up these things they have done to you with the Soviet leadership."

As to the struggle against Titoism, Maurice Thorez approved everything. We saw him off by ship for Odessa.

In Moscow, before I spoke at the 81 parties meeting, Maurice Thorez invited us to dinner. This time it was obvious that he had come from Khrushchev to persuade us not to speak against the revisionist betray at the meeting, but he failed in his mission. We did not accept the mistaken "advice" he gave us.

Maurice Thorez criticized us in the meeting, but in moderate terms. However, after I had spoken, Jeannette Vermeersch, Thorez's wife, met me and said:

"Comrade Enver, where are you heading on this course you have begun? We do not understand you."

"You do not understand us today, but perhaps you will understand us tomorrow," I replied.

Everyone knows how things turned out for the French Communist Party. It, too, set out with determination on the revisionist road. It betrayed Marxism-Leninism and, with some nuances, followed the line of Khrushchev and Brezhnev.

Meanwhile Togliatti had no such zig zags as the French, and came out openly, like Tito, with his revisionist views, which he left as his behest to Longo and Berlinguer in his "testament." He is the father of "polycentrism" in the international communist movement. Of course "polycentrism" was not to the benefit of Khrushchev who aimed to wield the "conductor's baton," just as it is not to the benefit of the Khrushchevites who are ruling in the Soviet Union today. The followers of Togliatti countered, and still counter, the meetings of Khrushchev and Brezhnev with the "meetings" of communist parties of the capitalist countries of Europe, Latin America, etc. The French, who leaned towards Khrushchev, did not approve Togliatti's proposals and fought them. I shall say no more in this direction because I have written elsewhere about this theory and the anti-Marxist actions of these revisionists.

The Italian revisionists have never looked on socialist Albania or the Party of Labour of Albania with a kindly eye

The Italian revisionists, Comrade Enver Hoxha continues, have never looked on socialist Albania or the Party of Labour of Albania with a kindly eye. In the first years following liberation, for his own ends, the elderly Terracini came to Albania on a visit together with a young woman artist. He stayed one or two days and left as silently as he came. Later, Pajetta came. He stayed two days, decorated Mehmet and me with the "Garibaldi" order of the Spanish War and the resistance, and he too, departed just as silently. The Italian revisionists wrote almost nothing about socialist Albania in their organ L'UNITA. Perhaps they did not want to upset the Italian neo-fascists who were in power, whose armies we had smashed in the war, or perhaps it was because we exposed their comrade, Tito.

The Italian Communist Party, with a longstanding opportunist line, was openly a front to catch votes. There were continual squabbles in the leadership over positions, salaries, nomination of deputies and senators. One leader of that party, who was removed from his position by Togliatti, met us and complained to us, but immediately after this, as soon as they threw him a bone and made him a senator, he became as quiet as a lamb.

I remember a meeting I had in Karlovy Vary with one of them, a member of the leadership of Togliatti's Italian Communist Party.

"I am against Togliatti and his views," he told me.

"But why?" I asked.

He listed one or two "arguments," but in the end the true reason emerged:

"Togliatti does not allow publication of the speeches I make in parliament. Both Togliatti and Pajetta not only do not publish them in Italy, but also intervene with the Soviets to ensure that they are not published in Moscow, either. Please, Comrade Enver, intervene with Khrushchev about this."

Of course, I was astonished and told him there and then:

"How can I intervene? I could have an influence whether or not they are published in Albania, let us say, but in the Soviet Union?--you must address yourself to the Soviet comrades. They are hosts there and decide this."

After the break with the Khrushchevites he, too, had "contradictions" with the Italian revisionist leadership. But these were not a principled basis, they were nothing but squabbles over positions and money. As soon as he was made a senator he, too, quietened down and never raised his voice. This is what the Italian revisionists were and still are--collaborators with both the Italian and the international bourgeoisie.

> What world capitalism had been quite unable to do, the Khrushchevite clique did for it

All this revisionist activity ruined, destroyed the Marxist-Leninist cooperation and harmony which existed in the international communist movement. Khrushchev and the Khrushchevites rendered world imperialism an incalculable service and placed themselves directly in its service. Khrushchev and the Khrushchevites of every hue, wherever they were, consumated that work of sabotage which imperialism and its lackeys had been unable to achieve in whole decades. By slandering Stalin, the Soviet Union, socialism and communism, they lined themselves up with the capitalist slanderers and weakened the Soviet Union, and this was the dream and the aim of the capitalists. They disrupted that monolithic unity which the capitalists fought, raised doubts about the revolution and sabotaged it, a thing which the capitalists had always tried to do. They carried the quarrel and split into the ranks of various communist and workers' parties, bringing down or elevating to their leaderships cliques which would better serve the hegemonic interests shaken by the great earthquake. These enemies have attacked Marxism-Leninism in

every direction and in every manifestation and replaced it with the social-democratic reformist ideology, thus opening the way to liberalism, bureaucracy, technocracy, decadent intellectualism and capitalist espionage in the party, in other words, to degeneration. What world capitalism had been quite unable to do, the Khrushchevite clique did for it.

However, neither American imperialism nor world capitalism considered this collosal aid, this great sabotage which Khrushchev and the Khrushchevites carried out against Marxism-Leninism and socialism, sufficient. Therefore, the attack of the bourgeoisie and reaction began on the revisionist parties, in order to deepen the crisis to the maximum, not only to discredit Marxism-Leninism and the revolution, not only to deepen the split amongst the communist and workers' parties and to advance their rebellion against Moscow, but also, through all these activities to weaken, to subjugate and enslave the Soviet Union, as a great political, economic and ideological power regardless of the fact that the Khrushchevite ideology was not Marxism, but anti-Marxism. World capitalism, headed by American imperialism, had to fight to prevent Khrushchevite hegemonism from remaining alive and consolidating itself on the ruins which it caused.

Therefore, American and world imperialism intensified the work of sabotage in the countries of the socialist camp in order to undermine the colonial empire which Khrushchev was designing. From the very nature of revisionism itself, as well as from the pressure and work of agents of imperialism, in many parties individuals who were dissatisfied with the way things were going towards "democratization" and liberalization, began to raise their heads. In Hungary, Poland, Czechoslovakia and Romania, the enemies of socialism wanted to run at a gallop on the road of the restoration of capitalism, flinging aside the tattered demagogic disguise which the group of Soviet leaders wanted to preserve. The traditional links of the bourgeoisie of these countries with the West and the desire to escape as quickly as possible from the fear of the dictatorship of the proletariat (although the Khrushchevites had destroyed it), oriented these enemies towards Washington, Bonn, London and Paris.

Khrushchev hoped to get the demons back into the bottle from which he had released them. But once released, they wanted to browse at their pleasure in the pastures which the Khrushchevites considered their own and were obedient no longer to Khrushchev's "magic flute." Then he had to contain them by means of tanks.

[21 Oct 80]

[Text] Tirana, 21 Oct (ATA)--In his book "The Khrushchevites" (Memoirs), Comrade Enver Hoxha writes about his journey to China in 1956, about his disappointment and concern over the 8th congress of the CPC and the meeting with Mao Zedong.

My first and last visit to China

> Our relations with the CPC and the PRC up till 1956. Invitations from China, Korea and Mongolia. An astounding event in Korea: two members of the Political Bureau flee to...China--Ponomarev

defends the fugitives. Mikoyan and Peng Dehuzi "tune up" Kim Il-song. The meeting with Mao Zedong: "Neither the Yugoslavs nor you were wrong," "Stalin made mistakes," "it is necessary to make mistakes." Li Lisan at the 8th congress of the CPC: "I ask you to help me, because I may make mistakes again." Disappointment and concern over the 8th congress of the CPC. Meeting in Beijing with Dej, Yugov, Zhou Enlai and others. Bodnaras as intermediary to reconcile us with Tito.

In regard to the relations between our party and the Communist Party of China, from 1949 to 1956, and indeed for several years later, writes Comrade Enver Hoxha, the term "normal," more or less in the sense that it is used in diplomatic language, would be quite appropriate. For our part, however, from the years of the national liberation war, and especially after the liberation of our homeland, we had followed with sympathy the just war of the fraternal Chinese people against the Japanese fascists and aggressors, Chiang Kai-shek reaction and the American interference, and we had backed up and supported this struggle with all our strength. Moreover, we rejoiced at the fact that, at the head of this struggle there was said to be a communist party recognized by the Comintern, which enjoyed the support of the Communist Party of the Soviet Union, led by Stalin.

We knew also that at the head of the Communist Party of China was Mao Zedong, about whom personally, as well as about the party which he led, we had no information other than what we heard from the Soviet comrades. Both during this period and after 1949 we had not had the opportunity to read any of the works or writings of Mao Zedong, who was said to be a philosopher and to have written a whole series of works. We welcomed the victory of October 1, 1949 with heartfelt joy and we were among the first countries to recognize the new Chinese state and establish fraternal relations with it. Although greater possibilities and ways were now opened for more frequent and closer contacts and links between our two countries, these links remained at the level of friendly, cultural and commercial relations, the sending of some second-rank delegation, mutual support, according to the occasion, through public speeches and statements, the exchange of telegrams on the occasion of celebrations and anniversaries, and almost nothing more.

Things which were quite incomprehensible to us and which could not be described as in conformity with Marxism-Leninism

We continued to support the efforts of the Chinese people and the Chinese leadership for the socialist construction of the country with all our might, but we knew nothing concrete about how and to what extent this great process was being carried out China. It was said that Mao was following an "interesting" line for the construction of socialism in China, collaborating with the local bourgeoisie and other parties, which they described as "democratic," "of the industrialists," etc., that joint private-state enterprises were permitted and stimulated by the communist party there, that elements of the wealthy classes were encouraged and rewarded, and even placed in the leadership of enterprises and provinces, etc. All these things were quite incomprehensible to us and however much you racked your brains, you could not find any argument to describe them as in conformity with Marxism-Leninism. Nevertheless, we thought, China was a very big country, with a

population of hundreds of millions, it had just emerged from the dark, feudal-bourgeois past, had many problems and difficulties, and in time it would correct those things which were not in order, on the right road of Marxism-Leninism.

> Visit to China at a time when modern revisionism was bringing out all its inherent filth

This is more or less what we knew about the Communist Party of China and the Chinese state up till 1956, when the Central Committee of our party received Mao Zedong's invitation to send a party delegation to take part in the proceedings of the 8th congress of the CP of China. We welcomed the invitation with pleasure and satisfaction, because we would be given the opportunity to gain first-hand experience of and direct acquaintance with this sister party and fraternal socialist country. At this same period we had also received invitations from the People's Republic of Mongolia and the People's Republic of Korea to send top-level government and party delegations to those countries for friendly visits.

We discussed the invitations from our friends in the Political Bureau and decided that, using the occasion of the trip to China for the 8th congress of the CP of China, on the way to China, our top-level delegation should also go to Mongolia and Korea.

The Political Bureau appointed me, comrades Mehmet Shehu and Ramiz Alia, and our then foreign minister, Behar Shtylla, as the delegation. Comrade Mehmet would lead the delegation in Mongolia and Korea, since it would be a government delegation, while I would lead the party delegation in China.

We made the necessary preparations and set out at the end of August 1956.

It was the time when modern revisionism, advanced by the 20th congress of the Communist Party of the Soviet Union, had not only spread in the Soviet Union and the other countries of people's democracy, but was bringing out all its inherent filth, the split, the quarrels, the plots, and the counter-revolution. In Poland the cauldron, which had been simmering for a long time, was bringing out the notorious Gomulka as the finished product. In Hungary black reaction had broken out as never before and was feverishly preparing the counter-revolution. During those days Tito had been invited to the Crimea "on holiday" and together with Khrushchev, Rankovic and others, was putting the nails in Gero's coffin. It seemed as if the revisionists of various countries were engaged in a villainous contest to see who could outdo the other in the practical application of Khrushchevism. In Europe the revisionist earthquake was rocking the foundations of everything, with the exception of our party and country.

After speaking about his visits to Mongolia and Korea, Comrade Enver Hoxha writes further on:

In Beijing, which we reached on September 13, they welcomed us with crowds of people, music and flowers, not forgetting the horde of portraits of Mao Zedong. Liu Shaoqi, Zhou Enlai and Deng Xiaoping, and others whose names I can't remember, had come out to the airport.

We exchanged greetings with them, wished them success in the congress, which was to begin two days later, and could hardly cope with their stereotyped "great honour," "great assistance," "brothers from the distant front of Europe," "please, offer us your criticism," etc., etc., expression with which, in a few years' time, we would be full up to our necks. (However, in those days these expressions, which were served up ready-made everywhere, did not make any bad impression on us--we considered them expressions of the Chinese simplicity and modesty).

Disappointment over Mao Zedong's opinions about the information bureau, Stalin and the Yugoslav question

Mao Zedong received us during an interval between sessions of the congress in one of the adjoining rooms. This was the first time that we met him. When we entered the reception room, he stood up, bowed a little, held out his hand, and thus, without shifting from the spot, waited to give his hand and a smile to each of us in turn. We sat down.

Mao begain to speak. After saying that they were very happy to have friends from distant Albania, he said a few words about our people, describing them as a valiant and heroic people.

"We have great admiration for your people," he said among other things, "because you have been liberated much longer than we."

Immediately after this he asked me:

"How are things between you and Yugoslavia."

"Cold," I replied, and immediately noticed that he expressed open surprise. "Apparently he is not well acquainted with our situation with the Yugoslavs," I thought, therefore I decided to explain something from the long history of the relations of our party and country with the Yugoslav party and state. I gave him a brief outline, dwelling on some of the key moments of the anti-Albanian and anti-Marxist activity of the Yugoslav leadership, expecting some reaction from him. But I noticed that Mao only expressed surprise and from time to time looked at the other Chinese comrades.

"On this question," said Mao, "you Albanians have not made mistakes towards the Yugoslavs, and neither have the Yugoslav comrades made mistakes towards you. The information bureau has made great mistakes here."

"Although we did not take part in the information bureau," I replied, "we have supported its well-known analyses and stands towards the activity of the Yugoslav leadership and have always considered them to be correct. Our long-standing relations with the Yugoslav leadership have convinced us that the line and stands of the Yugoslavs have not been and are not Marxist-Leninist. Tito is an incorrigible renegade."

Without waiting to hear the end of the translation of what I said, Mao asked me:

"What is your opinion of Stalin?"

I said that our party had always considered Stalin a leader of very great, all-round merits, a loyal disciple of Lenin and continuer of his work, a...

He interrupted me: "Have you published the report which Comrade Khrushchev delivered in the 20th congress of the Communist Party of the Soviet Union?"

"No," I replied, "we have not done and never will do such a thing."

"You Albanian comrades have acted very correctly and the line of your party is right," he said. "We, too, have acted as you have done. As long as the Soviet leadership does not publish this report officially, there is no reason for us to act as some have done."

After a pause, he continued:

"Stalin made mistakes. He made mistakes towards us, for example, in 1927. He made mistakes towards the Yugoslav comrades, too."

> A method of "Education of Mao Zedong: "It is necessary to make mistakes"

Then he continued calmly in a low voice:

"One cannot advance without mistakes." And he asked me: "Has your party made mistakes?"

"We cannot say that there have been no mistakes," I told him, "but the main thing is that we struggle to make as few mistakes as possible or none at all, and, when mistakes are discovered, we struggle to eliminate them immediately."

I was too "hasty." The great philosopher was getting at something else:

"It is necessary to make mistakes," he said. "The party cannot be educated without learning from mistakes. This has great significance."

We encountered this method of "education" of Mao Zedong's materialized everywhere. During the days we were at the congress, a Chinese comrade told us:

"A terrible fear has existed amongst us. People tried to avoid making mistakes, because they were afraid of being expelled from the party. However, with the correct policy of Chairman Mao, that fear has now disappeared, and initiative and drive in creative work has increased among the party people.

"You see that comrade who is speaking?" he said. "He is Li Lisan, one of the founders of our communist party. During his life he has made grave mistakes, not just once, but three times on end. There were comrades who wanted to expel this old man from the party, but on the insistence of Chairman Mao, he remains a member of the Central Committee of the party, and now he works in the Central Committee apparatus."

Meanwhile Li Lisan was making a new "self-criticism" before the 8th congress.

"I have made mistakes," he said, "but the party has helped me. "Comrades," he continued, "I ask you to help me still because I might make mistakes again..."

But let us return to the meeting with Mao Zedong. After he philosophized about the "great significance of making mistakes," I seized the opportunity to add to what I had previously said about the Yugoslavs and spoke about the work of the Belgrade revisionists through their agents to organize the plot in the party conference of Tirana of April 1956.

"In our opinion," I said, "they are incorrigible."

Mao's reply, in the Chinese style, was a phrase out of context:

"You have a correct Marxist-Leninist line."

The time had come for us to leave. We thanked him for the invitation, for receiving us and for the aid given us by the People's Republic of China.

"There is no need to thank us," interrupted Mao, "first, because the aid we have given you is very little," and he closed one finger. "Second," he continued, closing the other finger, "are members of the great family of the socialist camp, which has the Soviet Union at the head, and it is just the same as passing something from one hand to the other, parts of the same body."

We thanked him once again and stood up. We had several photographs taken together, shook hands again and departed.

To tell the truth, our impressions from this meeting were not what we had expected, and when we came out, I talked over with Mehmet and Ramiz what we had heard. From the talk with Mao we did not learn anything constructive, which would be of value to us, and the meeting seemed to us mostly a gesture of courtesy. We were especially disappointed over the things we heard from the mouth of Mao about the information bureau, Stalin and the Yugoslav question.

> At the 8th congress of the CPC we felt that the epidemic of modern revisionism had infected China, too. The Chinese leaders were hurrying to grab the motley flag of the Khrushchevites with their own hands

However, we were even more surprised and worried by the proceedings of the 8th congress. The whole platform of this congress was based on theses of the 20th congress of the Communist Party of the Soviet Union, indeed, in certain direction, the theses of Khrushchev had been carried further forward by Mao Zedong, Liu Shaoqi and other top Chinese leaders.

We felt that the epidemic of modern revisionism had infected China, too. To what proportions the disease had been spread we could not judge at that time, but the things which had occurred and were occurring in China, showed that at that time the Chinese leaders were hurrying to avoid lagging behind, and indeed, to grab the motley flag of the Khrushchevites with their own hands.

Apart from other things, in the reports which Liu Shaoqi, Deng Xiaoping and Zhou Enlai delivered one after the other at the 8th congress they defended and further deepened the permanent line of the Communist Party of China for extensive collaboration with the bourgeoisie and kulaks, "argued" in support of the great blessings which would come to "socialism" from treating capitalists, merchants and bourgeois intellectuals well and placing them in high leading positions, vigorously propagated the necessity of collaboration between the working class and the national bourgeoisie, and between the Communist Party and the other democratic nationalist parties, in the conditions of socialism, etc., etc. In fact, the "hundred flowers" and the "hundred schools" of Mao Zedong, which blossomed and contended in the sessions of the congress, blossomed and contended throughout the whole Chinese party and state. This Mao Zedong's theory of a hundred flags, widely proclaimed in May 1956 by the alternate member of the Political Bureau of the CC of the CP of China, Lu Dingyi, constituted the Chinese variant of the bourgeois-revisionist theory and practice about the "free circulation of ideas and people," about the coexistence of hotch-potch of ideologies, trends, schools and coteries within socialism. (It turned out later that Mao Zedong's utterly revisionist dialogue "on the ten major relationships" belongs precisely to this period of the "spring" of modern revisionism. Authors note.)

Time confirmed that in no instance did the C.P. of China act from the positions of Marxism-Leninism

Many a time later I have turned back to this period of the history of the Communist Party of China, trying to figure out how and why the profoundly revisionist line of 1956 subsequently seemed to change direction, and for a time, became "pure," "anti-revisionist" and "Marxist-Leninist." It is a fact, for example, that in 1960 the Communist Party of China seemed to be strongly opposing the revisionist theses of Nikita Khrushchev and confirmed that "it was defending Marxism-Leninism" from the distortions which were being made to it, etc. It was precisely because China came out against modern revisionism in 1960 and seemed to be adhering to Marxist-Leninist positions that brought about that our party stood shoulder to shoulder with it in the struggle which we had begun against the Khrushchevites.

However, time confirmed, and this is reflected extensively in the documents of our party, that in no instance, either in 1956 or in the 60's did the Communist Party of China proceed or act from the positions of Marxism-Leninism.

In 1956 it rushed to take up the banner of revisionism, in order to elbow Khrushchev out and gain the role of the leader in the communist and workers' movement for itself. But when Mao Zedong and his associates saw that they would not easily emerge triumphant over the patriarch of modern revisionism, Khrushchev, through the revisionist contest, they changed their tactic, pretended to reject their former flag, presented themselves as "pure Marxist-Leninist," striving in this way, to win those positions which they had been unable to win with their former tactic. When this second tactic turned out no good, either, they "discarded" their second, allegedly Marxist-Leninist, flag and came out in the arena as they had always been, opportunists, loyal champions of a line of conciliation and capitulation towards capital and reaction. We were to see all these things confirmed in practice, through a long, difficult and glorious struggle which our party waged in defence of Marxism-Leninism.

After speaking about his visits to several cities and people's communes of China, Comrade Enver Hoxha continues:

Apart from meetings with Mao Zedong and other Chinese leaders, during the days of our stay in China, we also had occasion to meet a number of delegations of communist and workers' parties which had attended the 8th congress of the CP of China.

All of them enthusiastically hailed the "new line" of the period after the 20th congress.

Comrade Enver Hoxha writes about the meetings and talks he had had with delegations of the other parties and continues:

It was interesting: everyone we met was talking about rehabilitations and Tito. Even Zhou Enlai said to us in a meeting we had with him:

"Tito has invited me to go on a visit to Yugoslavia and I have accepted the invitation. If you agree, I can come to Albania too, on this occasion."

"We agree whole-heartedly that you should come to Albania," we told him and thanked him for making the proposal, although it did not sound at all pleasant to us that the premier of China linked his coming to Albania "with the occasion" of his visit to Yugoslavia.

> Visits to Belgrade to receive the blessing and the "experience" of the veteran of modern revisionism

However, as I wrote above, it was the time when the fever of revisionism had infected everyone and they were all trying to go to Belgrade as quickly as possible to receive the blessing and "the experience" of the veteran of modern revisionism. One day Scoccimarro came up to me and complained that Togliatti had gone to Belgrade but had not got on well with Tito.

"What do you mean?" I asked, not without irony. "Did they quarrel?"

"No," he replied, "but they did not agree about everything. "Nevertheless, he continued, "for our part we are going to send a delegation to Belgrade to gain experience."

"In what direction?" I asked.

"The Yugoslav comrades have fought bureaucracy effectively and now there is no bureaucracy in Yugoslavia," he replied.

"How do you know that there is no bureaucracy there?" I asked.

"Because there the workers, too, get profits," was his reply. I told him about the stand of our party on this problem, but the Italian could think of nothing but Tito. Mehmet intervened and asked him:

"Why do you want to send people 'to get experience' only to Yugoslavia? Why haven't you sent such delegations to the countries of people's democracy, too, such as Albania, for example?"

The Italian comrade was confused for a moment and then he found the solution:

"We shall send them," he said. "For example, the experience of China in regard to the collaboration of the working class with the bourgeoisie and of the Communist Party with the other democratic parties is very valuable to us. We shall study it..."

He had hit the nail on the head. And from now on, the Italian revisionists could go not only to Yugoslavia and China, but everywhere, to give and take experience of the betrayal of the cause of the proletariat, the revolution and socialism. Only to our country they did not come and they had no reason to come, because only Marxism-Leninism is implemented in our country. But this experience was of no use to them.

On October 3, 1956, we set out on our return journey. This whole trip made us even more convinced about the great and dangerous proportions which Khrushchevite modern revisionism had assumed.

In Budapest we were to see one of the monstrous consequences of the Khrushchevite-Titoite "new line": the counter-revolution. It had been simmering for a long time, now it was about to burst out.

[22 Oct 80]

[Text] Tirana 22 Oct (ATA)--Speaking about the counter-revolution in Hungary and Poland, Comrade Enver Hoxha analyzes its causes and once again stresses the correct and principled stand of the Party of Labour of Albania with regards to this event.

The "demons" escape from control

> The counter-revolution in action in Hungary and Poland. Matyas Rakosi. Who cooked up the "broth" in Budapest? Talk with Hungarian leaders. Debate with Suslov in Moscow. Imre Nagy's "self-criticism." Rakosi falls. Reaction surges ahead. Khrushchev, Tito and Gero in the Crimea. Andropov: "We cannot call the insurgents counter-revolutionaries..." The Soviet leadership is hesitant. The Hungarian Workers' Party is liquidated. Nagy announces Hungary's withdrawal from the Warsaw Treaty. Part of the back-stage manoeuvres: the Tito-Khrushchev letters. Poland 1956--Gomulka on the throne. In retrospect: Bierut. Gomulka's counterrevolutionary program. What we learn from the events of 1956. Talks in Moscow, December 1956.

The infection of the 20th congress encouraged all the counter-revolutionary elements in the socialist countries and the communist and workers' parties, emboldened all those who had disguised themselves and were awaiting the moment to overthrow socialism wherever it had triumphed, writes Comrade Enver Hoxha.

The counter-revolutionaries in Hungary, Poland, Bulgaria, Czechoslovakia and elsewhere, the betrayers of Marxism-Leninism in the parties of Italy and France and the Yugoslav Titoites gleefully welcomed Khrushchev's ill-famed theses about "democratization," the "cult of Stalin," the rehabilitation of condemned enemies, "peaceful coexistence," "peaceful transition" from capitalism to socialism, etc. These theses and slogans were embraced with enthusiasm and hope by the revisionists, in or out of power, by social-democracy, by the reactionary bourgeois intellectuals.

The events in Hungary and Poland were the visible prologue of the counter-revolution which was to be carried out more extensively and thoroughly, not only there, but also in Bulgaria, in East Germany, in Czechoslovakia, in China and especially in the Soviet Union.

> Hungary became the field for intrigues and combinations between Khrushchev, Tito and counter-revolutionaries (behind whom stood American imperialism)

After securing its positions to some extent in Bulgaria, Romania, Czechoslovakia and elsewhere, the Khrushchevite clique attacked Hungary, the leadership of which was not proving so obedient to the Soviet course. However, Tito, together with the Americans, had his eyes on Hungary.

As was becoming apparent, Hungary had many weak points. There the party had been created, headed by Rakosi, around whom there were a number of veteran communists like Gero and Munnich, but also young ones who had just come to the fore, who found the table laid for them by the Red Army and Stalin. The "construction of socialism" in Hungary began, but the reforms were not radical. The proletariat was favoured, but without seriously annoying the petty-bourgeoisie. The Hungarian party was allegedly a combination of the illegal communist party (Hungarian prisoners of war captured in the Soviet Union), old communists of Bela Kun and the social-democratic party. Hence, this combination was a sickly graft, which never really established itself, until the counter-revolution and Kadar, together with Khrushchev and Mikoyan, issued the decree for the total liquidation of the Hungarian Workers' Party.

I have been closely acquainted with Rakosi and I liked him. I have often talked with him, because I have visited him several times both on business and as a family, with Nexhmije. Rakosi was an honest man, an old communist and a leader on the Comintern. His aims were good, but his work was sabotaged from within and from without. As long as Stalin was alive everything seemed to be going well, but after his death the weaknesses in Hungary began to show up.

Hungary became the field for intrigues and combinations between Khrushchev, Tito and counter-revolutionaries (behind whom stood American imperialism), who eroded the Hungarian party and the positions of Rakosi and sound elements in the leadership of the party from within. Rakosi was an obstacle both for Khrushchev, who wanted to put Hungary under his control, and for Tito, who wanted to destroy the socialist camp and had a double hatred for Rakosi as one of the "Stalinists" who exposed him in 1948.

The role of the Khruschevites in the Hungarian tragedy

In April 1957, when the "anti-party group" of Malenkov, Molotov, etc., had still not been liquidated, I was in Moscow with a delegation of our party and government. After a non-official dinner in the Kremlin, in Yekaterinsky Zal, we sat down in a corner to take coffee with Khrushchev, Molotov, Mikoyan, Bulganin, etc. In the course of the conversation Molotov turned to me and, as if joking, said:

"Tomorrow Mikoyan is going to Vienna, to try to cook up the same broth as he did in Budapest."

To keep the converstation going I asked him:

"Did Mikoyan prepare that broth?"

"Who else?" said Molotov.

"Then Mikoyan can't go back to Budapest again," I said.

"If Mikoyan goes there, again, they will hang him," Molotov continued.

Khrushchev had dropped his eyes and was stirring his coffee. Mikoyan frowned, ground his teeth and then said with a cynical smile:

"Why should I not go to Budapest? If they hang me, they will hang Kadar, too, because we prepared that broth together."

The role of the Khrushchevites in the Hungarian tragedy was clear to me.

The efforts of Khrushchev and Tito to liquidate everything healthy in Hungary united them, therefore they coordinated their activities. With Khrushchev's visit to Belgrade they aimed their attacks to rehabilitate the Titoite conspirators, Koci Xoxe, Rajk, Kostov, etc. While our party did not budge a fraction from its correct principled positions, the Hungarian party gave way and Tito and Khrushchev triumphed. With Rajk, the betrayal was rehabilitated. Rakosi's positions were greatly weakened.

Difficult situation in the Hungarian party, the line of its leadership was wobbly

Possibly the leadership of the Hungarian party, under Rakosi and Gero, made economic mistakes, too, but these were not what caused the counter-revolution. The main mistake of Rakosi and his comrades was that they did not stand firm, but wavered under the pressure of external and internal enemies. They did not mobilize the party and the people, the working class, to nip the attempts of the reaction in the bud, made concessions to it, rehabilitated enemies like Rajk, etc., and weakened the situation to the point that the counter-revolution broke out.

In June 1956, on my way to Moscow for a meeting of Comecon, I had a talk with the comrades of the Political Bureau of the Hungarian Workers' Party in Budapest. I did not find Rakosi, Hegedus, who was prime minister, or

Gero there because they had left for Moscow by train. (In fact, in Moscow I did not meet or see Rakosi in any consultation or anywhere else. No doubt he was "resting" in some "clinic" where the Soviets "convinced him to hand in his resignation." Only two or three weeks later he was discharged from the duties he held.) The Hungarian comrades told me that they had some difficulties in their party and their Central Committee.

"A situation against Rakosi has been created in the Central Committee," they told me. "Farkas, who was a member of the Political Bureau, has taken up the banner of opposition to him."

"The time has come for Farkas to be expelled not only from the Central Committee, but also from the party," said Bata, the minister of defence. "His stand is anti-party and hostile," he continued... "His thesis is: 'I have made mistakes, Beria is a traitor. But who ordered me to make those mistakes? Rakosi.'"

"This question has also been raised by Revay, who proposed that 'we should set up a commission to study the faults of this one and that one, the mistakes of Rakosi, etc.," the Hungarian comrades told me.

Here I interrupted and asked:

"Then the Central Committee has no confidence in the Political Bureau?"

"So it turns out" they said, "we were obliged to accept the commission but we decided that its report would go to the Political Bureau first."

"What is this commission?" I asked. "The Political Bureau must be charged by the Central Committee with such matters and the report should be discussed in the Central Committee. If it is considered necessary, the Central Committee removes the Political Bureau."

Amongst other things the Hungarian comrades told me that Imre Nagy, who had been expelled from the party is a counter-revolutionary, had put on a big dinner on the occasion of his birthday to which he had invited a hundred and fifty people, including members of the Central Committee and the government. Many of them had accepted the traitor's invitation and had gone to the dinner. When one member of the Central Committee had asked the comrades of the leadership whether he should go or not they had replied: "This is up to you to decide." Of course, such a reply was astonishing to me and I asked the Hungarian comrades:

"But why did you not tell him flatly that he should not go because Imre Nagy is an enemy?"

"We left him to judge and decide for himself with his own conscience," was the reply.

During this conversation the Hungarian leaders admitted that they had a difficult situation in the party. The 20th congress had added to these troubles.

"There are groups in the party, writers, etc," they told me, "who are not on the rails, who want to avail themselves of the 20th congress. These elements tell us, 'the 20th congress confirms our theses that there are mistakes in the leadership. Therefore, we are right.'"

"Togliatti's interview has caused us many problems," said one of those present. "There are members of the Central Committee who have said to me: 'What are we doing? It would be better to act, to have a different, independent policy in Hungary, too, as in Yugoslavia.'"

In fact, things there had gone from bad to worse. Another member of the Central Committee had said to them angrily: "Are you of the Political Bureau still hiding from us issues like those of the 20th congress? Why aren't you publishing Togliatti's interview?"

"And we published it, because the party had to be informed..," the comrades of the Political Bureau told me.

From this conversation I formed the conviction that their line was wobbly. Apart from this, it seemed that the sounder elements in the Political Bureau were under pressure from counter-revolutionary elements, and therefore they themselves had vacillated. The Political Bureau seemed to be solid, but was completely isolated.

> The Soviets were preparing Imre Nagy, thinking they would master the situation in Hungary through him

Speaking about his arrival to Moscow, Comrade Enver Hoxha writes: I met Suslov in his office in the Kremlin. As usual, he welcomed me with those mannerisms of his, prancing like the ballerinas of the Bolshoi, and when we sat he asked me about Albania. After we exchanged opinions about our problems, I raised the question of Hungary. I told him my impressions and my opinions frankly, just as I had expressed them to the Hungarian comrades. Suslov watched me with those penetrating eyes through his horn-rimmed spectacles, and as I spoke I noticed signs of discontent, boredom and anger in his eyes. These feelings and this disapproval were accompanied by doodling with a pencil on a sheet of paper he had on the table. I carried on speaking and concluded by saying that I was astonished at the passivity and "lack of concern" of the Hungarian comrades.

Suslov began to speak in that reedy voice of his and in essence said:

"We cannot agree with your judgments over the Hungarian question. You are unnecessarily alarmed. The situation is not as you think. Perhaps you have insufficient information," and Suslov talked on and on, trying to "calm" me and convince me that there was nothing alarming in the situation in Hungary. I was not in the least convinced by his "arguments," and the events which occurred in the subsequent days confirmed that our observations and opinions about the grave situation in Hungary were completely correct. About two months later, at the end of August 1956, I had another bitter argument with Suslov about the Hungarian question. In passing through

Budapest when we were going to the congress of the Chinese party, from a talk which we had at the airport with the Hungarian leaders of that time, we became even more convinced that the situation in Hungary was becoming disastrous, that reaction was moving, while with its action the Hungarian leadership was favouring the counter-revolution. During the stop-over we made in Moscow, Mehmet, Ramiz and I met Suslov and told him of our apprehensions so that he would transmit them to the Soviet leadership. Suslov maintained the same stand as in the meeting I had with him in June.

"In regard to what you say, that the counter-revolution is on the oil," said Suslov, "we have no facts, either from intelligence or other sources. The enemies are making a fuss about Hungary, but the situation is being normalized there. It is true that there are some student movements, but they are harmless and under control. The Yugoslavs are not operating there, as you say. You should know that not only Rakosi but also Gero have made mistakes..."

"Yes, it is true that they have made mistakes, because they rehabilitated the Hungarian Titoite traitors who had plotted to blow up socialism," it interjected. Suslov pursed his thin lips and then he went on:

"As for Comrade Imre Nagy, we cannot agree with you, Comrade Enver."

"It greatly astonishes me," I said, "that you refer to him as 'comrade' Imre Nagy when the Hungarian Workers' Party has thrown him out."

"Maybe they have done so," said Suslov, "but he has repented and has made a self-criticism."

"Words go with the wind," I objected, "don't believe words..."

"No," said Suslov, his face flushing, "we have his self-criticism in writing," and he opened a drawer and pulled out a note signed by Imre Nagy, addressed to the Communist Party of the Soviet Union, in which he said that he had been wrong 'in his opinions and actions' and sought the support of the Soviets."

"Do you believe this?" I asked Suslov.

"Why shouldn't we believe it," he replied, and went on, "comrades can make mistakes, but when they acknowledge their errors we must hold out our hand to them."

"He is a traitor," I told Suslov, "and we think that you are making a great mistake when you hold out your hand to a traitor."

This brought the conversation with Suslov to an end and we left disagreeing with him. From this meeting we formed the impression that, after having definitely condemned Rakosi, the Soviets were fearful and alarmed about the situation in Hungary, that they did not know what to do and were seeking a solution before the storm broke. Without doubt they were talking with Tito about a joint solution. They were preparing Imre Nagy, thinking they would master the situation in Hungary through him. And so it turned out.

The decision to remove Rakosi was taken in Moscow and Belgrade

The decision to remove Rakosi was taken in Moscow and Belgrade. He gave way and did not resist the pressure of the Khrushchevites and the Titoites, and the intrigues of their agents in the Hungarian leadership. They forced Rakosi to resign, allegedly for "health reasons" (because he suffered from hypertension) while admitting "his mistakes in violation of the law." At first there was talk about the merits of "Comrade Matyas Rakosi" (thus they "buried" him with honour), then there was talk about his mistakes, until the point was reached of talking about the "criminal Rakosi gang." In the preparation of the backstage manoeuvres which preceded the removal of Rakosi, a major role was played by Suslov, who, precisely at this time, went to Hungary on holiday.

Apparently Rakosi was the last obstacle that hindered the revisionist wagon from going full speed ahead. It is true that Gero was elected first secretary and not Kadar, as the Soviets and the Yugoslavs wanted, but his days were numbered.

We considered the removal of Rakosi from the leadership of the Hungarian party a mistake which did great damage to and seriously weakened the situation in Hungary, and we expressed this opinion to the Soviet leaders when we went to Moscow in December. The events themselves showed how right we were.

The "happy" period of liberalization began, the period of dragging from the prison and the grave those whom the dictatorship of the proletariat had justly condemned.

In all that was taking place, Gero, who was one of the oldest leaders of the party, stresses Comrade Enver Hoxha, further on, proved to be an opportunist and a coward who swung from side to side and moved like a puppet manipulated by the real actors behind the scenes in the Hungarian tragedy. When Tito was on "holiday" in the Crimea, Gero went to talk with him in Kruschchev's villa and the three of them, together with their suites," took walks along the seashore, talked and had photographs taken." If the history of intrigues and diabolical manoeuvres to the detriment of the peoples is ever written, these will be "historic photographs." Here, in Khrushchev's villa at Yalta, the first steps of conciliation were taken and, a few days later, Gero with Hegedus and Kadar, went to Belgrade, where they talked with Rankovic. Not much later, when the disturbances began, they threw Gero into the rubbish bin and Kadar, with the blessing of Khrushchev and the manoeuvres of Mikoyan and the revisionist ideologist Suslov, was elevated to first secretary.

The scabby bird--Imre Nagy--had flown from the hands of Khrushchev and Suslov

Meanwhile Imre Nagy emerged from his hole, took power, shouted in triumph, proclaimed "democracy," and Tito was at the culmination of his victory. Reaction came to power, gangsters swarmed in from abroad, and the fascist horthyite and clerical parties of the bourgeoisie were reformed. Imperialism filled the country with spies and was pouring in arms wholesale from Austria. Radio "Free Europe" urged on the counter-revolution day and night and called for the overthrow and total liquidation of the socialist order.

After showing how the counter-revolution swept Budapest and was spreading to other parts of Hungary, Comrade Enver Hoxha writes:

The scabby bird--Imre Nagy--had flown from the hands of Khrushchev and Suslov. This traitor, in whom Moscow had placed its hopes, like a drowning man clutching at his own hair to save himself from death, showed what he was, and in the upsurge of the counter-revolutionary fury, announced his reactionary policy and made public declarations about Hungary's withdrawal from the Warsaw Treaty. The Soviet ambassador in Hungary was a certain Andropov, a KGB man, who was elevated to power later and played a dirty role against us. This agent, with the label of ambassador, found himself surrounded by the counter-revolution which broke out. Even when the counter-revolutionary events were taking place openly, when Nagy came to the head of the government, the Soviets still continued to support him, apparently hoping that they could keep him under control. During those days, after the first half-hearted intervention of the Soviet Army, Andropov told our ambassador in Budapest:

"We cannot call the insurgents counter-revolutionaries because there are honest people among them. The new government is good and it is necessary to support it in order to stabilize the situation."

"What do you think of Nagy's speeches?" our ambassador asked him.

"They are not bad," replied Andropov, and when our comrade pointed out that what was being said about the Soviet Union did not seem to be correct, he replied:

"There is anti-Sovietism, but Nagy's recent speech was not bad, it was not anti-Soviet. He wants to maintain links with the masses. The Political Bureau is good and has credit."

The counter-revolutionaries acted with such arrogance that they forced Andropov, together with all his staff, out into the street and left them there for hours on end. We instructed our ambassador in Budapest to take measures for the defence of the embassy and its staff, and to place a machine-gun at the top of the stairs. If the counter-revolutionaries dared to attack the embassy he was to open fire without hesitation. But when our ambassador asked Andropov for weapons to ensure the defence of our embassy, he refused:

"We have diplomatic immunity, therefore no one will touch you."

"What diplomatic immunity?" said our ambassador, "they threw you out into the street."

"No, no," said Andropov, "if we give you arms, some incident might be created."

"Very well," said [our] representative, "I am making you an official request on behalf of the Albanian Government."

"I shall ask Moscow," said Andropov, and when the request was refused our ambassador declared:

"All right, only I am letting you know that we shall defend ourselves with the pistols and shotguns we have."

The Soviet ambassador had shut himself up in the embassy and did not dare to stick his head out. A responsible functionary of the Foreign Ministry of Hungary, who was being chased by the bandits, sought refuge in our embassy and we admitted him. He told our comrades that he had gone to the Soviet Embassy but they had turned him away.

> While the counter-revolutionaries were wreaking havoc, Khrushchev was afraid, hesitating to intervene

The Soviet troops stationed in Hungary intervened at first, but were then withdrawn under the pressure of Nagy and Kadar and the Soviet Government declared that it was ready to begin talks about their withdrawal from Hungary. While the counter-revolutionaries were wreaking havoc, Moscow trembled. Khrushchev was afraid, hesitating to intervene. Tito was king of the situation and the supporter of Imre Nagy, indeed, he had assembled his army and was ready to intervene. Then Moscow sent the appropriate person to Budapest, the huckster Mikoyan, along with the cocky Suslov.

Here in Tirana we did not fail to speak up. I called the Soviet ambassador and told him angrily:

"We are completely uninformed about what is going on in a number of socialist countries. Tito and company have a finger in the organization of the counter-revolution in Hungary. You are abandoning Hungary to imperialism and Tito. You must intervene with arms and far piazza pulita (make a clean sweep, Italian in the original) before it's too late."

I mentioned Tito's aims and condemned the trust Khrushchev had in him, as well as Suslov's trust in Imre Nagy's "self-criticism."

"You see what Imre Nagy is," I said. "Now blood is being shed in Hungary and the culprits must be found."

He replied:

"The situation is grave but we shall not allow the enemy to seize Hungary. I shall transmit the opinions you expressed to me to Moscow."

Everyone knows what happened in Hungary and Budapest.

The Soviet Embassy was surrounded with tanks and Mikoyan, Suslov, Andropov and who knows who else, continued to intrigue inside.

Reaction, headed by Kadar and Imre Nagy, shut up in the parliament building, where they indulged in idle talk, sent out continuous appeals to the Western capitalist states to intervene with arms against the Soviets. In the end, the frightened Nikita Khrushchev was obliged to give the order. The Soviet armoured forces marched on Budapest and fighting began in the streets. The intriguer Mikoyan put Andropov in a tank and sent him to parliament to bring

back Kadar, in order to manipulate matters through him. And this is what occurred. Kadar again changed his patron, again changed his coat, returned to the bosom of the Soviets and, protected by their tanks, called on the people to cease the disturbances and appealed to the counter-revolutionaries to hand in their arms and surrender.

> Nagy was executed without trial because he could have brought to light the dirty linen of those who pulled the strings in the counter-revolutionary plot

That was the end of the Nagy government. The counter-revolution was put down, and Imre Nagy took refuge in Tito's embassy. It was clear that he was an agent of Tito and world reaction. He had Khrushchev's support, too, but he slipped from his grasp, because he wanted to go further, and did so. Khrushchev quarreled with Tito for months about handing over Nagy. Tito refused until they reached a compromise that Nagy should be handed over to the Romanians. At the time when negotiations over this problem were going on with Tito, Krylov, the Soviet ambassador in Tirana, sought our opinion whether or not we agreed that Nagy should go to Romania.

"We have declared previously," I replied to Krylov, "Imre Nagy is a traitor who opened the doors to fascism in Hungary. Now it is proposed that this traitor, who has killed communists and progressives, who has killed Soviet soldiers and called on the imperialists to intervene, should go to a friendly country. This is a big concession and we do not agree with it."

After tempers cooled and the victims of the Hungarian counter-revolution, a deed of Tito in particular, as well as Khrushchev, were buried, Nagy was executed. The way this was done was not right, either. Not that Nagy did not deserve to be executed, but not secretly, without trial and without public exposure, as was done. He ought to have been publicly tried and punished on the basis of the laws of the country of which he was a citizen. But of course, neither Khrushchev, Kadar, nor Tito wanted him brought to trial, because Nagy could have brought to light the dirty linen of those who pulled the strings in the counter-revolutionary plot.

[23 Oct 80]

[Text] Tirana, 23 Oct (ATA--Further on Comrade Enver Hoxha writes:

> Facts revealing Khrushchev-Tito collaboration before and during the October events in Hungary. The PLA expresses its opposition to these anti-Marxist actions of the Soviet leadership

When the counter-revolution in Hungary had been suppressed, many facts came to light which proved the complicity of the Soviet leaders in the Hungarian events. We, of course, suspected what role the Soviets played especially in regard to the removal of Rakosi, the support for Nagy, etc. However, at that time we did not know precisely how the Khrushchev-Tito collaboration had developed and neither did we know about the secret meetings of Khrushchev and Malenkov with Tito in Brioni. These things were revealed later and we adhered to our stand of opposition to these actions of the Soviets.

Some days after order was restored in Hungary, the Soviet leadership informed us of the correspondence which it had exchanged with the Yugoslav leadership over the Hungarian question. The facts which were revealed in those letters disturbed us profoundly, because the problems were serious and critical. At that time, the interests of socialism and the communist movement required that the Soviet Union should be defended from the attacks of imperialism and reaction and our unity preserved. On the other hand, our party had to have its say about these anti-Marxist actions of the Soviet leadership. Therefore, everything had to be carefully considered and weighed up, bearing in mind the interests of the party, our country, the revolution and socialism. That is how we judged these problems, we expressed our opinions to the Soviet leaders in a comradely tone, so that everything would be corrected and kept between ourselves.

During those days, after we received the letters, I summoned Krylov:

"I have called you here," I said, "to clear up some matters which arise from these letters. First, I want to tell you that the allusions which Tito made to certain evil men, clearly implying the leadership of our party, seem to us unacceptable. Such a thing, on his part, does not surprise us because we are accustomed to Tito's attacks. However, we are extremely surprised about the fact that in the reply of the Central Committee of the Communist Party of the Soviet Union there is no clear-cut stand to be seen in connection with these insinuations of Tito's. Have you anything to say about this question?"

"I have nothing to say about this," replied Krylov, faithful to his manner of playing dumb.

Then I continued:

"Tito should have been told bluntly that we are not evil men and enemies of socialism, as he says. We are Marxist-Leninists, resolute people, who will fight to the end for the cause of socialism. Tito, on the contrary, is an enemy of the revolution and socialism. There are many facts to prove this."

Krylov was silent, and continuing the talk, I dwelt in particular on another problem which had attracted our attention in these letters. Khrushchev wrote to Tito: "In connection with the removal of Rakosi, you were completely satisfied that the Central Committee of the Communist Party of the Soviet Union tried, as early as the summer of this year, to ensure that Kadar would become first secretary."

Besides this, the letter clearly indicated their collaboration, not only before the events of October, but also during them, a collaboration which was concretized in the plan hatched up during secret talks in Brioni. These actions of the Soviet leaders were unacceptable to us. In our opinion, the Titoites continued their disruptive secret activity, and this was clearly apparent in Hungary in particular. We had informed the leadership of the Soviet Union of this opinion.

I questioned Krylov about this matter?

"We are not clear about where the Central Committee of the Hungarian Workers' Party was formed, in Budapest or in the Crimea?"

Of course Krylov did not like this question and, biting his words, said:

"This is how matters must stand: The Hungarian comrades have gone to the Crimea and talked with our comrades. There the question has been raised of who should be placed in the leadership. The Central Committee of the Communist Party of the Soviet Union has said that 'it would be good if Kadar were elected.'"

"Does it mean that the leadership of the Communist Party of the Soviet Union was not for Gero but for Kadar?" I continued.

"That is what emerges from the letter," replied Krylov.

"Apart from that," I said, "the Kadar government has been formed in close collaboration between your leadership and Tito. Is that not so?"

"Yes, it seems to be so," Krylov was obliged to admit.

Continuing the talk, after informing him of the concern which the events in Hungary aroused in our party, I pointed out to the Soviet ambassador:

"The unanimous opinion of our Political Bureau is that these actions of the comrades of the Presidium of the Central Committee of the Communist Party of the Soviet Union, who talk with Tito about the composition of the leadership of the Hungarian party and government, are not correct. The Soviet leadership is well aware of our views on all these matters, because we have expressed them to it. Is that not so?"

"Yes, it is so," said Krylov.

"Have you transmitted all our views to Moscow?"

"Yes," he replied, "I have transmitted them."

At the end of this talk, as though by chance, the Soviet ambassador asked me:

"Will Dali Ndreu be put on trial?"

Of course this question was not accidental. Apparently, the trial and expose of the agents of the Yugoslav revisionist, Liri Gega and Dali Ndreu, was not pleasing to the Soviets.

"The trial has been prepared and will be held," I told Krylov, "because they are traitors and agents. When their attempts to carry out the plot against our party and state failed, Dali Ndreu and Liri Gega, sensing that they would have to render account for their activity as agents, attempted to flee the country, and were captured near our state border. Their hostile activity has now been completely proved and they themselves have admitted it. And

if Tito continues his hostile activity, we shall publish the truth about these agents, with facts and tape-recordings. We think that we can no longer tolerate the Titoites, who want to stab us in the back and to make accusations against us."

"I understand your situation," murmured Krylov and went away with his tail between his legs!

On the factors that influenced in the counter-revolutionary manifestations in Poland

The same phenomena as in Hungary developed in Poland, too, almost at the same time, although there the events did not assume those proportions and that dramatic character they did in Hungary. In Poland, too, the dictatorship of the proletariat had been established under the leadership of the United Workers' Party, but, despite the aid which the Soviet Union provided, socialism did not develop there at the necessary rates. As long as Bierut was at the head and the Polish party was in correct positions, successes were achieved in the socialist development of the country. However, the initial reforms and measures which were taken there, were not carried through to the end and the class struggle was not waged at the proper level. The proletariat increased, industry was developed, efforts were made to disseminate Marxist ideas among the masses, but, de facto, the elements of the bourgeoisie retained many of their dominant positions. The land reform was not carried out in the countryside, and the collectivization went only half-way, untul Gomulka declared the cooperatives and state farms unprofitable, and favoured the growth of the kulak strata in the Polish countryside.

As in Hungary, East Germany, Romania and elsewhere, the Polish party was formed through a mechanical merger of the existing party with the bourgeois parties, so-called workers' parties. Perhaps such a thing was necessary in order to unite the proletariat under the leadership of a single party, but this union should have been brought about through a great deal of ideological, political and organizational work, to ensure that the former members of other parties were not only assimilated, but what is more important, were thoroughly educated with the Marxist-Leninist ideological and organizational norms. But this was not done either in Poland, Hungary, or elsewhere and all that happened in fact was that the members of the bourgeois parties changed their names, became "communists," while retaining their old views, their old outlook. Thus, the parties of the proletariat were not strengthened, but on the contrary, were weakened, because social-democrats and opportunists like Cyrankiewicz, Marosan, Grotewhol, etc., established themselves and their views in them.

Apart from this, there was another factor in Poland which had an influence in the counterrevolutionary manifestations: The old hatred of the Polish people for Czarist Russia. Through the work which reaction did inside and outside the party, the old hatred, which was completely justified in the past, was now turned against the Soviet Union, against the Soviet people, who, in fact, had shed their blood for the liberation of Poland. The Polish bourgeoisie, which had not been hit as hard as it should have been, did everything in its power to incite the nationalist and chauvinist sentiments against the Soviet Union.

The death of Bierut created suitable conditions for the plans of the counter-revolution

After the death of Bierut, things were expressed more openly, and the weaknesses of the party and the dictatorship of the proletariat in Poland also emerged more openly. Thus, partly from the weaknesses in the work, partly from the efforts of reaction, the church, Gomulka and Cyrankiewicz, and partly from the interference of the Khrushchevites, the disturbances of June 1956 and the events which followed them, came about. Of course, the death of Bierut created suitable conditions for the plans of the counter-revolution. I had met Bierut long before, when I went to Warsaw. He was a mature, experienced comrade, quiet and kindly. Although I was younger than he, he behaved in such a good comradely manner with me that I can never forget him. When I met him at meetings in Moscow, too, it was a special satisfaction to talk with him. He listened to me attentively when I spoke about our people and their situation. He was sincere, just and principled. I remember when we talked in Warsaw he mentioned a discussion he had had with Comrade Mehmet.

"Your comrade spoke to me frankly when he criticized the stand of our prime minister. I like comrades who speak frankly," said Bierut.

I met him for the last time in Moscow when the 20th congress of the CPSU was held.

Shortly before his death, Bierut and his wife as well as Nexhmije and I were in a box together in the "Maly Teatr" to see a play about the revolutionary navy of Leningrad.

In the interval we had a cordial conversation in the small room behind the stage. Amongst other things, we spoke about the Comintern, because at that time the Bulgarian Ganev joined us and he and Bierut reminisced about when they had met in Sophia, when Bierut had been sent there illegally on a task.

Only a little while after this meeting, we heard the bad news: Bierut had died, like Gottwald..." of a cold." Great grief and astonishment.

We went to his funeral in Warsaw, it was the beginning of March 1956. Many speeches were delivered by Khrushchev, Cyrankiewicz, Zhu De, etc., over Bierut's coffin. Vukmanovic Tempo, who had come to take part in the funeral as the envoy of Belgrade, also spoke. Even here, the Titoite representative took the opportunity to launch revisionist slogans and to express his satisfaction over the new "possibilities and perspectives" which had just been opened by the 20th congress.

While the speeches were going on, not far from me, I saw Nikita Khrushchev leaning against a tree, exchanging words with Wanda Wassilewska. Without doubt, he was striking deals over the body of Bierut, whom they were putting in the grave.

A few months after these bitter events at the start of 1956, Poland was engulfed in confusion and chaos which smelled of counter-revolution.

Astonishing parallels between the development of the counter-revolution in Poland and that in Hungary

The events which occurred in Poland were almost identical with those in Hungary. The revolts of the Poznan workers began before the outbreak of the Hungarian counter-revolution, but in fact, these two counter-revolutionary movements matured at the same time, in the same situation and with the same inspiration. I am not going to go into a detailed description of them because they are known, but it is interesting to point out the analogy of facts in these countries, the astonishing parallels between the development of the counter-revolution in Poland and that in Hungary.

Both in Poland and in Hungary the leaders were changed: in the one country Bierut died (in Moscow), in the other Rakosi was removed (the work and Moscow). [as printed] In Hungary, Rajk, Nagy, Kadar were rehabilitated, in Poland, Gomulka, Spychalski, Morawski, Loga-Sowinski and a whole series of other traitors. There Mindzenty came on the scene, here Wyszynski.

Even more significant is the ideological and spiritual identity of these events. Both in Poland and in Hungary, the events took place under the aegis of the 20th congress, with the slogans of "democratization," liberalization and rehabilitation. The Khrushchevites played an active role, a base counter-revolutionary role, in the development of events in both these countries. The Titoites also had their influence in Poland, although not so directly as in Hungary, but the ideas of "self-administration," the "national roads to socialism," and the "workers' councils," which were taken up in Poland, were certainly inspired by the Yugoslav "specific socialism."

In Poland reaction found its own Nagy: this was Wladyslaw Gomulka

In Poland reaction found its own Nagy: This was Wladyslaw Gomulka, an enemy brought out of prison, who immediately became first secretary of the party.

The advent of Gomulka to power, continues Comrade Enver Hoxha further on, convinced us that events in Poland were not developing in favour of socialism. We not only knew Gomulka's sinister past, but we were able to judge him also from the slogans he launched and the speeches he made.

The revisionist Gomulka made his moves with such unprecedented arrogance that I pointed out some of his actions to Khrushchev when I met him in Yalta. We were sitting in a pavilion with a stone floor at the edge of the sea, and when he had heard me out, Khrushchev admitted I was right and said to me textually: "Gomulka is a real fascist." But the two counter-revolutionaries later came to agreement and had only honeyed words for each other. Their contradictions and differences were softened.

The speech which Gomulka delivered at the plenum of the Central Committee which elected him first secretary was a "programmatic" speech of a revisionist.

The Soviets were worried that Poland was in danger of escaping from their influence

The Soviets, writes Comrade Enver Hoxha further on, were worried and frightened about the events in Poland, because they saw that the "new course," which they

themselves proclaimed, was taking the Polish leaders further than they desired and that Poland was in danger of escaping from their influence. During the days in which the plenum, that was to restore Gomulka to power, was held, Khrushchev, Molotov, Kaganovich and Mikoyan went urgently to Poland. At the airport Khrushchev shouted angrily at the Polish leaders: "We have shed our blood to liberate this country, while you want to give it to the Americans." But stressed Comrade Enver Hoxha, in the end, Khrushchev gave Gomulka his blessing and, after he made a "pilgrimage" to Moscow, Gomulka received credits and spoke about the Soviet-Polish "Leninist friendship."

Gomulka implemented his "program," set up his "workers' councils," "self-administrative cooperatives," and "rehabilitation committees," stimulated private trade, introduced religion in the schools and the army and opened the doors to foreign propaganda. He, too, spoke about the "national road" to socialism.

Gomulka's views and actions were so extremely open and undisguised that many did not accept them, or could not accept them openly. Even Khrushchev was obliged from time to time to throw some small stone at Gomulka's garden. The Czechs, the French, the Bulgarians, and the East Germans, who kept one eye and ear on Moscow, likewise adopted stands of reserve or opposition. Obviously, we were opposed to Gomulka and his actions and this we had made known to the Soviet leaders with whom we had talked. The Poles did not like this attitude and their press complained openly that the other parties did not understand the changes that were occurring in Poland. An article published in those days mentioned our press and that of some other countries as examples of this "misunderstanding," in contrast to the Italian, Chinese, Yugoslav and other parties which had "properly understood the profoundly socialist character of the changes in Poland."

The Yugoslavs welcomed these "socialist" changes with enthusiasm and shouted that "those forces which fought for political democratization, economic decentralization and the system of self-administration had triumphed" in Poland.

The PLA makes no concession of principle

The Soviets did not give us any information about the events in Poland, either, but only sent us a letter in which they told us that the situation was very grave and informed us that a Soviet delegation was to go there. Apart from this nothing more, no news, no information. In the Soviet press we found an occasional article which attacked the events in Poland, but we also found articles which supported them. As I have said, from the talks with Krylov, the Soviet ambassador in Tirana, we had nothing definite. In one meeting which I had with him I spoke about the question of Poland and our concern about what was occurring there.

"How is it possible," I asked him, "that we are not kept informed? How is it possible that we are left in the dark about these matters, which concern all of us? This is not right."

"That is a fair request," Krylov replied.

"Transmit our view to your Central Committee," I concluded.

In the context of the events which were taking place, the differences of opinion between us and the Soviets were becoming ever clearer. In connection with this, the stand of our party was: We must not make these differences public, because this would harm the Soviet Union and the socialist camp, but on the other hand, we must make no concessions of principle, must adhere to our stands and express our views openly to the Soviet leaders.

When I was in Moscow in December of that year, among other things, I talked with the Soviet leaders about the question of Poland. I shall deal separately with the talks of December 1956, but here I want to mention the support which Khrushchev and company gave Gomulka to consolidate himself in power. When we put forward our views and doubts about Gomulka to Khrushchev and Suslov, they tried to convince us that he was a good man and should be supported, while we were convinced that the disturbances which had occurred in Poland and which were very like the Hungarian counter-revolution, were the work of Gomulka and served to bring this fascist to power, where he remained until he was purged by the Khruschevites and Gierek. The latter is a ferocious enemy of the Party of Labour of Albania. In Poland all of them fell one after the other. Cyrankiewicz, this old agent of the bourgeoisie, lasted longest and pulled the strings with the Soviet Army which had occupied Poland.

[24 Oct 80]

[Text] Tirana, October 24 (ATA)--In connection with the events in Hungary and Poland Comrade Enver Hoxha writes further on:

The events in Hungary and Poland quite rightly worried our party and its leadership because they damaged the cause of the revolution and weakened the positions of socialism in Europe and the world.

After these events ended, or more precisely, lost their open and acute form, because now they were carried on in secrecy, the moment came to make the necessary analyses and draw the proper conclusions. Both Khrushchev and Tito made analyses according to their own interests and reckonings and the anti-Marxist views which they held. In essence, the Titoites and the Khrushchevites were united in their "analysis," laying the blame on the mistakes of the leadership of the Hungarian Party and Rakosi, in particular. Kadar, too, as the servant of two masters, sang in harmony with them, declaring that the revolt of the masses was justified because of the mistakes of the criminal clique of Rakosi and Gero."

Conclusions of the PLA on the counter-revolution in Hungary

To the extent it was acquainted with the development of events and based on the facts which had emerged from the darkness which shrouded the plot, our party had analysed these events and has drawn its own conclusions. In our opinion, the counter-revolution was provoked and organized by world capitalism and its Titoite agency at the weakest link in the socialist camp, at the moments

when the Khrushchev clique had still not consolidated its positions. The Hungarian Workers' Party and the dictatorship of the proletariat in Hungary melted away like snow in the rain at its first stern confrontation with reaction. From all that had occurred, certain facts drew our attention:

In the first place, the events revealed the weak and superficial work of the Hungarian party for the education and leadership of the working class. Despite its revolutionary traditions, the working class of Hungary did not know how to defend its power during the counter-revolution. On the contrary, a part of it became a reserve of reaction. The party itself did not react as a conscious organized vanguard of the class. It was liquidated within a few days, and this gave the counter-revolutionary Kadar the possibility to bury it once and for all.

The events of October and November 1956 underlined once again the vacillating character of the Hungarian intellectuals and student youth. They became the cat's paw of reaction, and the assault squad of the bourgeoisie. An especially base role in this was played by the counter-revolutionary writers headed by the reactionary and anti-communist Lukacs, who also became a member of the Nagy government.

The case of Hungary proved that the bourgeoisie had not lost its hopes of restoration but, on the contrary, had prepared itself in illegality, even preserving its old organizational forms, which was shown by the immediate formation of clerical and fascist bourgeois parties.

What occurred in Hungary further convinced our party of the correctness of the stand we had maintained towards the Yugoslav revisionists. The Titoites were the inspirers and main supporters of the Hungarian counter-revolution. Official personalities and the press of Yugoslavia welcomed these events with enthusiasm. The inflammatory speeches delivered in the "Petofi" Club were published in Belgrade and the "theories" of Tito and Kardelj, together with the theses of the 20th congress, were the banner of these speeches.

To us these things were neither new nor unexpected. What worried us most was the role which the Soviet leadership played in these events, its co-ordination of plans with Tito, its backstage deals hatched up to the detriment of the Hungarian people, which had profound and bitter repercussions for them.

Experience showed that the counter-revolution in Hungary was suppressed by counter-revolutionaries

The counter-revolution in Hungary was put down by the Soviet tanks because Khrushchev could not fail to intervene (that would have exposed him once and for all), and here the imperialists and Tito did not make their calculations well. However, experience showed that this counter-revolution was suppressed by counter-revolutionaries who restored capitalism, but in a more camouflaged way, retaining their colour and disguise, as the Soviet Khrushchevites did in their own country.

The facts in Hungary increased our doubts about the leadership of the CPSU and worried and saddened us. We had always had great faith in the Bolshevik Party of Lenin and Stalin and we had expressed this faith together with our sincere love for it and the land of the soviets.

With this feeling of doubt and worry I went to Moscow in December 1956, together with Hysni, who supported and assisted me in the difficult talks and discussions with the Khrushchevites, in which the poison was mixed with hypocrisy.

Efforts by Khrushchev and the other Soviet leaders to soften the just revolt of the PLA over their wrong stands

As we had decided earlier in the Political Bureau, writes Comrade Enver Hoxha, we went to the Soviet Union to discuss with the Soviet leaders the acute problems of the situation, the events in Hungary and Poland, as well as relations with Yugoslavia.

It must be said that at that period Khrushchev and company were not getting along so well with Tito. Their friendship seemed to have cooled off somewhat. Meanwhile, Tito had delivered his notorious speech at Pula, which had aroused a great deal of opposition in many parties of the socialist camp. In this speech, the Belgrade chieftain attacked the Soviet system, attacked socialism, attacked the parties which did not follow the "original Marxist-Leninist" course of Tito and also condemned the Soviet intervention in Hungary. These theses were not to the advantage of Khrushchev and company, or were too open, and they were obliged to take a stand for appearances' sake.

Thus the Khrushchevites had made one or two attacks in the newspapers, although not very strong ones (in order to avoid making Comrade Tito too angry). And indeed even with some praise, and, as was their custom, they had begun to exert economic pressure on Yugoslavia, a thing which Khrushchev admitted to me in the talks. At that time PRAVDA had also published an article of mine in which Yugoslav "specific socialism" and its spokesmen were attacked in harsh terms.

I am relating all this to explain why the welcome for us at that time was more "cordial" and why our views, especially with regard to the Yugoslavs, were not opposed, and indeed, even seemed to be approved by the Soviet leaders.

Comrade Enver Hoxha writes further on that the Presidium of the Central Committee of the Communist Party of the Soviet Union put on a dinner in honour of the Albanian delegation, right after its arrival in Moscow.

That evening, underlines Comrade Enver Hoxha, Khrushchev did not spare his attacks against the Yugoslav leaders.

"Their positions are anti-Leninist and opportunist," said Khrushchev among other things. "Their policy is a mishmash. We shall make no concessions to them. They suffer from megalomania," he continued. "When Tito was in Moscow, he thought that with the majestic welcome put on for him, the people were saying he was right, and that they condemned our policy. In fact we need only have whispered one word to the people and they would have torn Tito and company to pieces."

Speaking about our attitude to the Titoites, he said, "The Albanian comrades are right but they must keep cool and maintain their self-control.

"Your hair is going gray, but we are bald," said Khrushchev, concluding his toast.

While the feast continued, "the bald head" told us that Albania was a small country, but had an important strategic position. "If we build a submarine and missile base there, we can control the whole Mediterranean." Khrushchev and Malinovsky repeated this same idea when they came to visit our country in 1959. It was the idea which was concretized in the Vlore base, which the Khrushchevites used to put pressure on us, later.

As I said, Khrushchev and the other Soviet leaders showed themselves very "cordial," there was no lack of flattery, and all this was done to soften the just revolt of our party over their wrong stands. I remember that during the evening we had some discussion about Khrushchev's coming to our country, because although he had left hardly any country unvisited, he had not come to us, either openly or secretly. However, that evening there was a predisposition to reply positively to our request. Not only Khrushchev, but many other members of the Presidium expressed their desire to come to Albania and someone, I don't remember who, jokingly proposed they should hold a meeting of the Presidium or even of their Central Committee in Albania. There was talk there, also, about the "love" which Khruchshev allegedly had for our country (which he displayed later) and they nicknamed Khrushchev "Albanyets" (the Albanian, Russian in the original).

Among many other I remember that Molotov, too, proposed a toast:

"I belong to that category of people who have not given much importance to Albania and have not become acquainted with it," he said, "now our people are proud that they have such a loyal, resolute and militant friend. The Soviet Union has many friends, but they are not all the same. Albania is our best friend. Let us drink this toast wishing that the Soviet Union will have friends as loyal as Albania!"

In general our correct line was praised and the Yugoslav revisionists were condemned by all the Soviet leaders that evening indeed Marshal Zhukov told us that they had proof that the leaders in Belgrade had supported the counter-revolution in Hungary not only ideologically, but also organizationally, and that the Yugoslavs were operating as an agency of American imperialism.

Suslov was one of the greatest demagogues of the Soviet leadership

Two or three days later we had a preliminary meeting with Suslov, secretary of the Central Committee, who was considered a specialist in ideological matters and, if I am not mistaken, was also charged with international relations.

Suslov was one of the greatest demagogues of the Soviet leadership. Clever and cunning, he knew how to wriggle out of difficult situations and perhaps that is why he was one of the few who had escaped the purges carried out time after time in the Soviet revisionist leadership. Several times I have

talked with Suslov and I always had a feeling of unease and annoyance from the meetings with him. I had even less desire to talk with Suslov now, following the Hungarian events, after that debate which I had had with him earlier about Nagy, the situation in Hungary, etc., and knowing his role in those events, especially in the decision for the removal of Rakosi. However, the work required this and I met Suslov.

> Brezhnev was always kept in the background, in "reserve" you might say. He is comedian only in his eyebrows, while his work is tragic from start to finish

Brezhnev took part in this meeting, too, but in fact, he was merely present, because only Suslov spoke during the whole talk. From time to time Leonid moved his thick eyebrows, but sat so immobile that it was difficult to gather what he was thinking about what was being said. I had met him for the first time at the 20th congress in intervals between sessions (and then later, on the occasion of the 40th anniversary of the October Revolution in November 1957), and from the time of that brief, chance meeting he had impressed me as a conceited, self-satisfied man. As soon as he was introduced to us he immediately brought the conversation around to himself and told us "in confidence" that he was engaged with "special weapons." From the tone in which he spoke and the expression of his face, he implied to us that he was the man in the Central Committee dealing with the problems of atomic weapons.

The 20th congress elected Brezhnev an alternate member of the Presidium of the Central Committee, and about a year later, the plenum of June 1957 of the Central Committee of the CPSU, which condemned and purged "the anti-party Molotov-Malenkov group," promoted Brezhnev from alternate to full membership of the Presidium. Apparently he was rewarded for the "merits" which he must have displayed in the elimination of Molotov, Malenkov and others from the leadership of the party.

After these events, up till 1960 I had to go many other times to Moscow, where I met the main leaders of the Soviet party but, just as before the 20th congress, I never saw Brezhnev or heard him speak anywhere. He always remained or was kept in the background," "in reserve," you might say. After the inglorious end of Khrushchev, precisely this ponderous, stern-faced person was brought out of the shade in place of the renegade, in order to carry on the filthy work of the Khrushchevite mafia, but now without Khruschev.

It seems that Brezhnev was brought to the head of the party and the Soviet social-imperialist state, not so much on account of his abilities, but as a modus vivendi, to balance and even up the opposing groups which were feuding and squabbling in the top Soviet leadership. But let us give him his due: he is a comedian only in his eyebrows, while his work is tragic from start to finish. Ever since this Khrushchevite took power our party has continually had its say about him and his aggressive, hostile, anti-Marxist work. But this is not the place to dwell at length on Brezhnev. Let us return to the meeting of December 1956.

We parted with Suslov still disagreeing with each other

Speaking about this meeting, Comrade Enver Hoxha, writes, at the start Suslov suggested that we should speak briefly about the problems we were going to discuss, especially about the historic aspect, while he gave us an exposition about the events in Hungary. He criticized Rakosi and Gero, who, with their mistakes, had "caused great discontent among the people," while they left Nagy outside their control.

"Nagy and the Yugoslavs," he continued, "have fought against socialism."

"But why did they re-admit Nagy to the party?" I asked.

"He had been unjustly expelled, because his faults did not deserve such a punishment. Now, however, Kadar is following a correct course. In your press there have been some notes critical of Kadar, but it must be borne in mind that he should be supported because the Yugoslavs are fighting him."

"We are not well acquainted with Kadar. We know that he was in prison and was with Imre Nagy."

Replying to our complaint that we had not been informed about the development of events in Hungary, Suslov said that the events took place without warning and there was no time for consultations.

"No consultations were held with the other parties, either. Only when we intervened for the second time we consulted the Chinese, while Khrushchev, Malenkov and Molotov went to Romania and Czechoslovakia," he said.

"How was time found to consult Tito over the appointment of Kadar, while we were not informed about anything?" I asked.

"We did not consult Tito about Kadar," he said. "We simply told him that there was no longer any place for Nagy's government."

"These are issues of principle," I stressed. "It is essential to hold consultations, but they are not being held. The consultative political council of the Warsaw Treaty, for example, has not met for a year."

"A meeting had been set for January, while in those days, every day's delay would cause great bloodshed," he replied.

Amongst other things I told him that the term which was now being used, the "criminal Rakosi-Gero gang," seemed astonishing to us and we thought this did not help in uniting all the Hungarian communists.

"The mistakes of Rakosi created a grave situation and discontent among the people and the communists," said Suslov.

We asked him to tell us concretely about the mistakes of Rakosi and Gero, and Suslov listed a number of general things, by means of which he tried to lay the blame on them for all that had occurred. We demanded a concrete example, and he told us:

"For example, the question of Rajk, who was described as a spy without any documentary proof."

"Were these things discussed with Rakosi? Was he given an advice?" I asked.

"Rakosi did not accept advice," was the reply.

Likewise, we had opinions quite opposite to Suslov about the attitude towards Gomulka and his views.

"Gamulka removed the communists, the old loyal leaders and officers, and replaced them with others, who had been condemned by the dictatorship of the proletariat," I told Suslov.

"He relies on the men whom he knows," said Suslov. "Gomulka must be given time and then we can judge him."

"But his views and activities can be judged very well already," I objected. "How can you explain the anti-Soviet slogans he used when he came to power?"

Suslov scowed and said quickly:

"It was not Gamulka who did these things and now he is stopping them."

"But what about his stands and statements about the church, for example?"

Suslov went into a long rigmarole," arguing "that these were pre-election tactics," that Gomulka was "taking correct stands" towards the Soviet Union, the socialist camp, etc. We parted still disagreeing with each other.

> The PLA frankly expresses its views on the events in Hungary and Poland as well as on the relations with Yugoslavia

That same day we held the official talks with Khrushchev, Suslov and Ponomaryov. I opened the discussion by presenting the views of our party in connection with the events in Hungary and Poland, as well as in connection with relations with Yugoslavia. Right at the start I said:

"Our delegation will express the views of the Central Committee of our party on these matters frankly, even although on a number of issues we have differences with the Soviet leadership. "These opinions, whether pleasant or otherwise," I continued, "we shall state openly, as Marxist-Leninists, and discuss in a comradely way whether or not we are right, and if we are not right, we must be convinced why."

In connection with Hungary, once again I stressed the lack of information and consultations over this painful problem of the socialist camp.

"We believe the consultative political council of the Warsaw Treaty should have been called together in that situation," I said. "At such moments, consultations are essential to co-ordinate our actions and stands. This would demonstrate our strength and unity."

I continued on the Hungarian problem and conveyed to them our impressions about the Hungary party, Rakosi and Gero. Here I stressed in particular, that the assessment which Kadar was making of them, calling them "a criminal gang" seemed to us astonishing. In our opinion the mistakes of Rakosi and Gero were not of that magnitude to warrant such a description." In regard to the mistakes in the economic development of Hungary, we were not aware that Hungary was in such a serious situation as to justify the 'revolt of the masses.'"Here the Soviet agreed with our opinion and admitted that the economic situation was not grave.

I went on to speak about the stand towards Nagy, Kadar, etc. In regard to Kadar, I expressed the distrust of our party in him and added that, nevertheless, our stand towards him had been very prudent.

In regard to the events in Hungary, I underlined the role of the revisionists and expressed the disapproval of the Party of Labour of Albania that Tito had been placed in the role of arbiter in connection with those events.

In regard to relations with Yugoslavia, after outlining the history of the problem, as was decided in the Political Bureau, I declared in essence:

"The Yugoslavs have carried out hostile activity against our party and country for a long time and they are continuing to do so now. We believe that the Yugoslav leaders are anti-Marxists, and together with the agencies of American imperialism, are among the main inspirers of the events in Hungary. Our relations with Yugoslavia should be normalized only on a Marxist-Leninist road, without making any concessions such as have been made. The Party of Labour of Albania thinks that the Soviet Union should not fulfil the request for weapons, which Yugoslavia has made through Gosniak. We, for our part, will maintain only state and commercial relations, but will not in any way maintain party relations with the Yugoslavs."

In particular, in the name of the Central Committee of our party, I once again expressed our opinion that Khrushchev's visit to Belgrade in 1955 should not have been made without consulting the sister parties and without calling together the information bureau, which had condemned Tito as an anti-Marxist.

> The evil and the tragedy did not come to an end. Only the curtain came down, while behind the scenes Kadar, Gomulka and Khrushchev continued their crimes

After I spoke, Nikita Khrushchev took the floor, and began by telling us how he had criticized the Yugoslav leaders over their stand towards our party and country. Khrushchev posed as though he approved and supported our views and stands, but still did not fail to make criticism and give us "advice." Thus, speaking about my article published in PRAVDA, he said:

"Tito was furious about that article. In the Presidium we thought about removing certain parts of it but you had said that no alterations should be made to it, and we published it as it was. However, the article could have been done in a different form."

In regard to events in Hungary and Poland, Khrushchev continues to harp on his old tune, and apart from other things, "instructed" us that Kadar and Gomulka must be supported. In regard to the latter he said:

"Gomulka is in a difficult situation, because reaction is mobilizing itself. The things which are written in the press are not the views of the Central Committee, but the views of some who have risen against Gomulka, The situation there is gradually being stabilized. Now the elections which will be held in Poland are important. That is why we have to support Gomulka. To this end, Zhou Enlai is to go there and this will greatly assist to strengthen Gomulka's positions. We thought it would be better for the Chinese to speak and not us, because reaction is mobilized against us."

And Zhou Enlai went to Poland in agreement with Khrushchev and to his aid.

Then Khrushchev "advised" us to keep our tempers with the Yugoslavs, and posing as a "great politician" told us of the difference amongst the Yugoslav leaders.

At the end of his speech Khrushchev tried to "sweeten" the atmosphere by promising that they would study our economic demands and would help us.

So ended these talks in which we told them of our opinions and the Soviet leaders tried to avoid any responsibility for what had occurred. So ended the discussion of this tragic page in the history of the Hungarian and Polish peoples. The counter-revolution was suppressed, here with Soviet tanks, there with Polish tanks, but it was suppressed by the enemies of the revolution. However, the evil and the tragedy did not come to an end. Only the curtain came down, while behind the scenes Kadar, Gomulka and Khrushchev continued their crimes until they completely consumated their betrayal by restoring capitalism.

[25 Oct 80]

[Text] Tirana, October 25 (ATA)--In continuation of his book "The Khrushchevites" (Memoirs), Comrade Enver Hoxha exposes the aims about which Khrushchev organized the Moscow meeting of 1957 pointing out the degeneration, disagreements and quarrels in the fold of those that followed the line of Khrushchev and the attempts of the Khrushchevites to subjugate the others and establish their leadership over them.

Temporary retreat in order to take revenge

> The Soviets demand "unity." The Moscow meeting of 1957. Khrushchev's negotiations to bring Tito to the meeting. Khrushchev's shortlived "anger." Debate over the formula: "Headed by the Soviet Union." Gomulka: "We are not dependent on the Soviet Union," Mao Zedong: "Our camp must have a head because even a snake has a head." Togliatti: "We must open new roads," "We are against a single leading center," "do not want to use Lenin's thesis 'the party of the new type' "Mao's sophistry: 80 per cent, 70 per cent and 10 per cent "Marxists." The Moscow declaration and the Yugoslav reaction. Khrushchev disguises his betrayal under the name of Lenin.

The aim of the Khrushchevites, who were restoring capitalism in the Soviet Union, writes Comrade Enver Hoxha, was to make it a great social-imperialist power, and hence, it had to be armed to the teeth, because the storm which they raised would not only destroy the unity of the socialist camp but would also make the contradictions with American imperialism acute. The Khrushchevites knew that the United States of America had greater strength than the Soviet Union, both in the economy and in armaments.

The demagogic policy of the Khrushchevites about the "new epoch of peace" and "disarmament" was a policy to mislead the gogos (innocents, French in the original) The United States of America and world capitalism took advantage to it to deepen the crisis of communism, to avoid the rapid onset of the economic and political crisis which was threatening America itself, and to consolidate their markets and alliances, and especially NATO. For their part, the Khrushchevites struggled for the consolidation of the Warsaw Treaty, to turn it into a strong Soviet means to shackle our countries. Under the disguise of "defence against NATO," they managed to turn the stationing of Soviet troops into a military occupation of many countries of the Warsaw Treaty.

In fact, the imperialist threat had been and still was real, but with the advent to power of the Khrushchevites, our countries were considered as battlefields outside the Soviet borders and our peoples as cannon-fodder for the Soviet revisionists. They tried to put the army, the economy, culture and everything under their control and direction. All the parties of the socialist countries fell into this Khrushchevite trap, with the exception of the Party of Labour of Albania.

> Things were not going smoothly for the Khrushchevites. Their ranks had begun to disintegrate

However, friction, disagreements and quarrels would inevitably arise, even amongst those who followed and submitted to Khrushchev's line, all of them proceeding from unprincipled aims and an unprincipled policy. The bourgeoisie and international reaction fanned up these disagreements in order to deepen the splits within the "communist bloc."

Khrushchev and co. saw this process and used all means and ways to restrict and isolate it.

To achieve their strategic aims, the Khrushchevites needed the "friendship" of all, especially of the parties and countries of the socialist camp, therefore, they used various tactics to "consolidate their relations," to smooth over the disagreements, to subjugate the others and establish their leadership over them.

Their method of operation in the service of their aims included meetings and contacts, almost always in Moscow, in order to make Moscow, if not de jure, at least de facto, the centre of international communism, in this way, always having the advantage of their bugging devices and being able to work on, and keep one or the other under control through their men. It was clear that things were not going smoothly for the Khrushchevites. The Soviet Union had many

different contradictions with Albania, China and even other countries of people's democracy. The line of "freedom" and "democracy" bombastically proclaimed at the 20th congress, was now boomeranging back on the Soviet leadership itself. The ranks had begun to disintegrate, However, the Khrushchevites needed to preserve the political-ideological "unity" of the socialist camp and the international communist movement at all costs, at least in appearance. In this direction and for this aim, the 1957 Moscow meeting was organized.

Khrushchev and Co. made feverish efforts to ensure that Tito take part in the Moscow meeting of 1957

Khrushchev and Co. made feverish efforts not only to ensure that the League of Communists of Yugoslavia would take part in that meeting as a "party of a socialist country," but if possible also, to ensure that Tito would reach agreement with Khrushchev over the platform, the method of procedure and the conclusions of the meeting. In this way, the "unity" of and urgently sought by the Khrushchevites, would have looked more complete than ever. However, Tito was not one to be easily rounded up with Khrushchev's flock. Many letters were exchanged and several bilateral contacts were organized between the men of Khrushchev and Tito on the eve of the meeting, but just when it seemed that an understanding had been reached, everything was upset and the gulf became even deeper. Each side wanted to exploit the meeting for its own aims: Khrushchev, to declare "unity," even with painful concessions to satisfy and draw in Tito, while the latter to urge the others to openly and finally abandon Marxism-Leninism, the struggle against modern revisionism and any principled stand. Ponomaryov and Andropov went to Belgrade, engaged in free bargaining with Tito's representatives, displayed their readiness to retreat from many of their apparently principled former positions, but Tito from afar ordered:

"We shall come to the meeting, but only on condition that no declaration is published, because the international atmosphere will become tense and the imperialists will be angered and accuse us of communist menace.

"We Yugoslavs cannot accept any kind of declaration, because our Western allies will think that we are linked with the socialist camp, and consequently might break off their close relations with Yugoslavia.

"We shall come to the meeting on condition that no mention will be made of the terms opportunism and revisionism there, because, otherwise, we are directly attacked.

"We shall come to the meeting on the condition that the policy of the imperialist powers is not attacked, because this would not serve the policy of reducing tension," etc.

In other words, Tito wanted the communists of the world to get together in Moscow to drink tea and swap stories.

However, it was precisely the declaration that Khrushchev needed, a declaration which would confirm "unity" and carry the maximum number of signatures.

The discussions came to an end. Tito decided not to go to Moscow.... Khrushchev's anger erupted, the terms "were made strong," the smiles and pats on the back for the "Marxist, Comrade Tito," were replaced for a moment with the epithet of the "opportunist," who "has nothing at all to do with Leninism," etc.

However, Khrushchev used these "strong terms" about the chief of Belgrade only in the corridors and chance contacts, whereas in meetings he did not say one word against "Comrade Tito," On the contrary, when he had to speak "against" revisionists and all those who expressed opposition to the Soviet Union, he mentioned only two corpses thrown on the rubbish heap, Nagy and Djilas.

He still hoped that Tito might come to Moscow to confirm the "unity of the 13" as he had promised a little earlier, in Bucharest. But Tito was suddenly "ill!"

"A diplomatic illness!" said Khrushchev angrily, and asked us and the others what should be done in the situation when the Yugoslavs did not agree even to take part in the first meeting of the communist parties of socialist countries, let alone sign the declaration.

"We have told you our opinion of them long ago, and every day is proving that we were and are right, we replied. "We should not retreat because the Yugoslavs do not want to come."

> Gomulka openly comes out against the formula "the socialist camp headed by the Soviet Union"

However, although the Yugoslav revisionists did not take part in the first meetings, the meeting of parties of the socialist countries, they were present at its proceedings, because they were represented by their ideological brothers, Gomulka and co. They came out openly in favour of Tito's theses and demanded advance from Khrushchev and others in the direction of further corruption and disorganization.

"We do not agree that we should speak of 'the socialist camp headed by the Soviet Union,'" declared Gomulka. "In practice we have given up the use of this term, in order to show that we are not dependent on the Soviet Union as in the time of Stalin."

Soviet leaders themselves engaged in a cunning manoeuvre around this problem. In order to demonstrate their alleged adherence to principles in relations with the other sister parties, they had "proposed" that the term "headed by the Soviet Union" should not be used, because allegedly we are all "equal." However, they made this proposal only tentatively, in order to sound out the others on this, because in essence they were not simply for the term "headed by..," but, if possible "under the direction of the Soviet Union," hence "dependent on the Soviet Union." This was what they intended and fought for, and time fully proved what the aims of the Khrushchevites were.

When Gomulka made his proposal at the meeting, the Soviet representatives scowled angrily and without coming out openly themselves first, urged the others to attack Gomulka.

A lengthy debate broke out around this problem. Although the opinion was being crystallized amongst us more and more clearly each day that the leadership of the Soviet Union was deviating from the road of socialism, we continued to defend the thesis headed by the Soviet Union for reasons of principle and tactics, we were well aware that in coming out against this expression, Gomulka and his supporters, in fact, wanted to reject openly and without hesitation everything proven good and valuable from the decades of experience of the Soviet Union led by Lenin and Stalin, to reject the experience of the October Revolution and the socialist construction in the Soviet Union in the time of Stalin, and to deny the role which it was up to the Soviet Union to play for the triumph and progress of socialism in many countries.

In this way, the revisionists, Gomulka, Togliatti and others, added their voices to the furious attack which imperialism and reaction had unleashed in those years against the Soviet Union and the international communist movement.

To us, the defence of these important Marxist-Leninist achievements was an internationalist duty, therefore, we strongly opposed Gomulka and the others. This was a matter of principle. On the other hand, the defence we made of the Soviet Union and the thesis headed by the Soviet Union, both in 1957 and for two or three years after this, was one of the tactics of our party to attack Khrushchevite modern revisionism itself.

Although Khrushchev and the others knew our views and stands, at that time we had not yet come out openly before all the parties against the revisionist line which they were crystallizing, therefore, by strongly opposing the revisionist theses of Tito, Gomulka, Togliatti and others in the eyes of all, at the same time, indirectly, we found the opportunity to attack the theses, stands and actions of Khrushchev himself, which in essence were identical with those of Tito and co.

For entirely different aims and reasons, alien to Marxism-Leninism, Ulbricht, Novotny, Zhivkov, of course, Dej, etc., also attacked Gomulka. They were wooing the favour of the Soviet Union and Khrushchev and, to this end, they left their ideological brother in the minority.

"Arguments" of "Marxist" Mao in defence of Khrushchev

From the place he sat Mao Zedong brought out his "arguments."

"Our camp must have a head, because even the snake has a head, and imperialism has a head," he said. "I would not agree that China should be called the head of the camp," went on, "because do not merit this honour and cannot maintain this role, we are still poor. [sentence as printed] We haven't even a quarter of a satellite, while the Soviet Union has two. Then, the Soviet Union deserves to be the head because it treats us well. See how freely we are speaking now.

If Stalin were here, we would find it difficult to speak like this. When I met Stalin, before him I felt like a pupil in front of his teacher, while with Comrade Khrushchev we speak freely, like equal comrades."

And as if this were not enough, he continued in his own style:

"With the criticisms against the cult of the individual, it seemed as if a heavy roof, which was pressing down on us and hindered us from understanding matters correctly, was lifted from us. Who lifted this roof from us, who made it easier for all of us to understand the cult of the individual correctly?" asked the philosopher, who was silent for a moment, and there and then supplied the answer: "Comrade Khrushchev, and we thank him for this."

This is how the "Marxist" Mao defended the thesis "headed by the Soviet Union" and he defended Khrushchev in the same way. However, at the same time, in order to avoid angering Gomulka, who was opposed to this thesis, Mao, as the equilibrist he was, added:

"Gomulka is a good comrade and must be supported and trusted!"

Debates in connection with the stand towards modern revisionism. Togliatti proclaimed his ultra-revisionist theses

Very long debates were held, also, in connection with the stand towards modern revisionism.

Gomulka, in particular, supported by Ochab and Zambrowski, in the first meeting of the 12 parties of the socialist countries, and later Togliatti, in the second meeting of 67 parties, in which Tito's envoys also took part, were strongly opposed to the attack on modern revisionism, against defining it as the main danger in the international communist and workers' movement, because, as Ochab said, "With these formulations we alienated the wonderful and valiant Yugoslav comrades, and now you are alienating us Poles, too."

Palmiro Togliatti got up in the meeting and proclaimed his ultra-revisionist thesis:

"We must go further with the line of the 20th congress to turn the communist parties into broad mass parties, must oepn new roads, and bring out new slogans," he said in essence, "now we need great independence in working out slogans and forms of collaboration," he continued, therefore we are opposed to a single leading centre. This centre would not be advantageous to the development of the individuality of each party and to bringing the broad masses of Catholics and others closer around us."

Jacques Duclos, who was sitting beside me, could not contain himself:

"I am going to get up and attack him openly," he said to me, "do you hear the things he is saying, Comrade Enver?"

"Yes," I said to Duclos, "he is expressing here what he has been thinking and doing for a long time."

"In 1945," continued Togliatti, "we declared that we wanted to create a new party. We say a 'new party' and do not want to use Lenin's thesis, 'the party of the new type' because, if we were to put it in this way, this would mark a great theoretical and political error, would mean to create such a communist party, which would break with the traditions of social-democracy. "If we had built a party of the new type," continued Togliatti, "we would have alienated the party from the masses of the people and we would never have created the situation we have today, when our party has become a great mass party."

After these and other theses of Togliatti, tempers flared up. Jacques Duclos rose to speak:

"We listened carefully to Togliatti's speech," he said among other things, "but we declare that we do not agree in the least with what Togliatti said. His views opened the way to opportunism and revisionism."

"Our parties have been and are hindered by sectarianism and dogmatism," interjected Togliatti.

Mao's sophisms

At one moment Mao Zedong got up to calm the tempers, speaking in his style of allegories and implications. He said:

"On every... human issue one must go into battle, but also towards conciliation. I have in mind the relations between comrades: when we have differences let us invite each other to talks. In Panmunjon we had had negotiations with the Americans, in Vietnam with the French."

After several phrases of this type, he came to the point:

"There are people," he said, "who are 100 per cent Marxists, and others who are 80 per cent, 70 per cent or 50 per cent, indeed there are some who may be only 10 per cent Marxists. We ought to talk even with those who are 10 per cent Marxists, because there are only advantages in this."

He was silent for a moment, looked around the room as though a little lost, and continued:

"Why should we not gather, two or three of us, in a small room to talk things over? Why should we not talk, proceeding from the desire for unity? We have to act with both hands, with the one we must fight against those who make mistakes, and with the other we must make concessions."

The Khrushchevites held back temporarily, in order to gather strength and take their revisionist revenge in the future

Suslov got up and was obliged to maintain a "principled" stand, to stress that the struggle against opportunism and revisionism is important, as is the struggle against dogmatism, but "revisionism constitutes the main danger, because it leads to splits, damages unity," etc.

The whole concern of the Soviet Khrushchevites was "to preserve unity," to keep the socialist countries and the communist parties of different countries in check, therefore if they "accepted" and "defended" a series of correct theses on this occasion, they did this, first of all, because they were compelled by the resolute struggle of the genuine Marxist-Leninists taking part in the meeting, but they did this, also, for the sake of their strategic plan. They retreated, held back temporarily, in order to gather strength and take their revisionist revenge in the future.

Our delegation had its Marxist-Leninist say about all the problems raised at the meeting, especially in regard to the struggle against modern revisionism, against American imperialism as the main threat to peace and the peoples, the road of transition to socialism, the preservation of the Marxist-Leninist unity in the communist and workers' movement and the defence of the experience of the October Revolution and the socialist order, etc.

In the face of the struggle which was waged in the meeting against opportunist views on the problems discussed, the revisionists retreated. As a result, the 1957 Moscow declaration, in general, was a good document.

At this meeting, revisionism, right opportunism, was defined as the main danger in the international communist and workers' movement.

This infuriated the Yugoslavs. They had held long debates with Khrushchev's men before the meeting, especially over this thesis.

"What are you worrying about?" said the Khrushchevites, trying to calm them, "your name is not mentioned. We shall speak about revisionism in general, without any definition."

"Yes," replied the Yugoslavs, "but look at the articles by Enver Hoxha, which you publish even in PRAVDA! When Enver Hoxha speaks against revisionism, he has us in mind and mentions us by name. But even when we are not mentioned by name, everybody understands that we are implied, and that is why we do not take part in the meeting or sign the declaration of parties of socialist countries."

And they did not sign this declaration.

Mao Zedong expressed his deep regret:

"They are not going to sign the 12 parties declaration," he said. "As a rule, there ought to be 13 countries, but the Yugoslav comrades stood aside. We cannot force them. They are not going to sign. I say that in ten years' time they will sign the declaration." (Mao was wrong only in the time he set. In fact, not ten years, but twenty years later a "declaration" was signed with the Yugoslavs in Beijing. The Maoists signed their submission to Tito. Author's note.)

The declaration which was worked out jointly and adopted at the meeting, summed up the experience of the international communist movement, defended the universal laws of the socialist revolution and socialist construction, and defined a series of common tasks for the communist and workers parties, as well as the norms of relations among them.

Thus the adoption of the declaration was a victory for the revolutionary Marxist-Leninist forces. Over all, it constituted a correct program of joint struggle for the coming battles against imperialism and revisionism.

> The modern revisionists did not cease their evil work and had no intention of doing so

Nevertheless, although the modern revisionists were checked, and temporarily drew in their horns, they did not cease their evil work and had no intention of doing so. Khrushchev was to exploit the Moscow meeting of 1957 as a means to prepare the terrain for the implementation of the diabolical anti-communist plan which he was to carry further.

He did his utmost to disguise his betrayal under the name of Lenin and, therefore, he made use of pseudo-Leninist phraseology, mobilized all the liberal pseudo-philosophers, who were awaiting the moment to adapt to revisionist lines (which they drew from the old social-democratic arsenal), Leninist disguises appropriate to the modern situation of the economic development of "our epoch of the superiority of socialism" and "the attainment, especially in the Soviet Union, of the stage of the construction of communism."

Khrushchevism distorted Marxism-Leninism, considered it outdated, therefore it was to consider the phase of the dictatorship of the proletariat outdated, too, and would announce its replacement with the "state of the entire people." Consistent in his course of betrayal, Khrushchev, likewise, was to replace the party of the proletariat with the "party of the entire people," consequently, according to Khrushchev, the Soviet Union was going over to "a higher phase, communism," at a time when, in reality, that country was still backward in industry and agriculture and its markets were empty." The Soviet Union was going over to the phase of communism" only in the declarations of the Khrushchevites, because the reality testified to the opposite. Above all, that country especially needed a strong Marxist-Leninist party which would undertake the education of the Soviet man and the Soviet society which was degenerating.

This liberal bluff was trumpeted by Khrushchev and his theoreticians from daylight to dark. In the press, the radio and the whole of the Soviet propaganda, a great hullabaloo was made in this direction, in the streets, on the facades of buildings and the industrial projects, they put placards written in big letters," dognat i peregnat s.sha." (overtaken and outstrip the United States, Russian in original). From the tribunes of meetings, the traitor shouted: "We have overtaken America in this or that sector, we shall outstrip it in agriculture (and even set the dates), we are going to bury capitalism," etc. The revisionist theories were developed, elaborated and spread by the traitorous leaderships of pseudo-Marxist parties and a motley crows of pseudo-Marxist philosophers, Trotskyites like Serven, Garaudy, Krivin, Fischer and others, in all the capitalist countries, who had been lurking in the ranks of the communist parties, and who sprang up as Khrushchevite revisionists like mushrooms after the rain.

The genuine communists were taken by surprise. In this direction, the unhealthy anti-Marxist sentimentality, which prevented them from raising their voices against their parties which were degenerating, against old leaders who were betraying, against the Soviet Union, which they loved so much, from realizing the catastrophe for which the homeland of Lenin and Stalin was heading, played a negative role.

The capitalist bourgeoisie helped to deepen this confusion as much as possible with all its forces and economic and propaganda means.

In this way, Khrushchev's cunning plan was developed in detail through intrigues, pressure, demagogy, blackmail, false accusations and violation of the treaties, agreements and accords, which had existed between the Soviet Union and China, as well as between the Soviet Union and Albania, until the Khrushchevites arrived at the "famous" Bucharest meeting.

[26 Oct 80]

[Text] Tirana, 26 Oct (ATA)--Further on, in his book "The Khrushchevites" (Memoirs) Comrade Enver Hoxha reveals the ways and methods used by the Khrushchev group in power to break the principled and firm stand of the PLA.

> "The carrot" and "the stick."Our party and government delegation goes to the Soviet Union. Khrushchev's manoeuvres: the "carrot" in evidence--the Soviet Government converts the credits into grants. Leningrad: Pospyelov and Kozlov censor our speeches." We should not mention the Yugoslavs." Our official talk with Khrushchev and others. Khrushchev gets angry: "You want to take us back to Stalin's course," "Tito and Rankovic are better than Kardelj and Popovic. Tempo is an ass... is unstable." A chance meeting with the Yugoslav ambassador in Moscow, Micunovic. Khrushchev's visit to Albania, May 1959. Khrushchev and Malinovsky ask us for military bases: "We shall control the whole Mediterranean from the Bosporus to Gibraltar." The adviser on the extermination of dogs. The Soviet Embassy in Tirana, a centre of the KGB.

Our party and its Central Committee, Comrade Enver Hoxha writes, saw the tragic course on which the Khrushchevites were leading the Soviet Union and other socialist countries, as well as the directions which events were taking, and therefore they were in a great dilemma. The steps that we took had to be carefully measured: we should not be hasty, but neither must we go to sleep. Foreseeing difficult moments, we were greatly interested in strengthening the situation within the country and building up and further developing the economy and strengthening the army. In the first place and above all, we had to keep the party on the rails of Marxism-Leninism, to fight the penetration of revisionism, and wage this fight by persistently defending the Leninist norms and protecting the unity in the leadership and in the party. This was the main guarantee to keep us immune from Titoism and Khrushchevism. The Khrushchevites were keeping up their disguise and had no way to attack us openly in this field. Quite correctly, we defended the Soviet Union when all were attacking it. As I have written above, this was another important question of principle and, at the same time, our tactic against the Khrushchevites, who did not find weak spots in our stands.

The PLA did not give any ground in the face of the demagogy, the blackmail and the threats of Khrushchev. The Khrushchevites had "to settle matters" with us

Comrade Enver Hoxha writes that the Khrushchevites could not or did not want to exacerbate the contradictions with us. Perhaps, underrating the strength of our party and the vitality of the Albanian people, they thought that they would strangle us because we were small, or that they would take the fortress from within by preparing their agency (as time showed, they had acted in this direction with Liri Belishova, Maqo Como, Panajot Plaku, Beqir Balluku, Petrit Dume, Hito Cako, and other collaborators and conspirators, whom we uncovered later). But irrespective of their efforts to "be on good terms" with us and to avoid hot-tempered actions, both they and we saw that the gulf was widening.

As before, the Yugoslav question was one of the main issues that divided us from the Khrushchevites, who did everything in their power to have us reconcile ourselves to the Yugoslav revisionists. Khrushchev wanted our reconciliation with them, because by means of this reconciliation he wanted us to relinquish our resolute Marxist-Leninist course, to relinquish any correct and principled stand on the internal and international planes, that is, to submit to the Khrushchevite line.

We had long understood this and did not give any ground in the face of the demagogy, the blackmail and the threats of Khrushchev. Apart from the instances which I related above, our meeting with the Soviet leadership in Moscow in April 1957 is typical in this direction. It was the period after the events in Hungary and Poland and after the plenum of the Central Committee of our party, held in February 1957.

At this plenum, we once again made a profound analysis of the bitter events in Hungary and Poland. We openly expressed our views about the tense international situation at this period, spoke about the true causes of the disturbances which were occurring in the socialist camp, hit hard at the manoeuvres of imperialism, headed by American imperialism, exposed modern revisionism and expressed and defended the basic principles of Marxism-Leninism. The whole report, which I delivered at this plenum on behalf of the Political Bureau, opposed many of the theses of the 20th congress, without mentioning it by name. Immediately after the plenum we made this report public, printed it in ZERI I POPULLIT and broadcast it over the radio. Without doubts this infuriated the Khrushchevites. They were unable to oppose our principled theses and stands openly, because they were trying to preserve their disguise. Inwardly, however, they were seething. It was necessary to "settle matters" with us, to clamp down on us. They asked us to send a top level delegation to Moscow in the context of "strengthening our friendship."

The Khrushchevites "carrot"

We left for the Soviet Union in April 1957. The delegation consisted of Mehmet Shehu, Gogo Nushi, Rita Marko, Ramiz Alia, Spiro Koleka, Xhafer Spaniu, Behar Shtylla, me and others.

Having described the welcome extended to the delegation in Odessa, Kiev and Moscow Comrade Enver Hoxha points out that the welcome of the Soviet leaders was several degrees warmer than on other occasions. Both at the station and at the reception to welcome us, he writes, they were unsparing with their flattering words.

"We are proud of the friendship we have with you, your party is a young party but it has shown itself to be very mature, you are playing a very great role..." Khrushchev, Bulganin, Pospyelov and the others hastened to declare.

Very quickly we realized that this was the "carrot." They would bring out the stick a little later.

"We must assist you in a more organized way. We have given you something, but we have not thought well enough about what we have done," said Khrushchev, trying to sweeten us up at the first [word indistinct], and here, too, he did not forget to repeat his great "desire" that Albania should become an "example for the countries of Asia and Africa, for Greece and Italy."

After stressing several times "we shall assist you more" and "better," Khrushchev considered it appropriate to test the effect of his promises there and then.

"We roared with laughter in the Presidium," he said, "when we read Tito's speech at Pula. He abused Comrade Enver Hoxha, but Tito's eyes have been blinded."

"We immediately gave him the reply he deserved," I said.

"Of course, of course," said Khrushchev and his smile faded, "but we must restrain our legitimate anger and show ourselves generous towards them, for the sake of the peoples of Yugoslavia and the unity of the camp.

"We shall go among the people and speak to them," he continued, "we must show ourselves to be reasonable. We should not mention the Yugoslavs by name, but should speak about revisionism, in general, as a phenomenon..."

It was the welcoming reception and I did not oppose him. However, the Yugoslav problem was to pursue us everywhere.

Two days later we went to Leningrad. Kozlov welcomed us with the friendliest words:

"I am crazy about Albania," he told us. "I have become a great admirer of your country." (It was this same Kozlov who, two or three years later, in the unforgettable events of Bucharest and Moscow, was to prove that he was such a great "admirer" of our country, that, apart from anything else, he threatened us with the loss of the freedom and independence of the homeland, saying to us: "One atomic bomb dropped by the Americans would be enough to snuff out Albania and its population.")

The workers of Leningrad gave a really warm welcome to our delegation

Amongst others we visited the "Lenin" machine-building plant, a big plant of historic importance. There, in the grave conditions of Czarism, Lenin had set up the first communist groups and had many times delivered speeches to the workers.

"No other foreign delegation has visited this plant," said Pospyelov, who accompanied us on this visit.

The workers had not been prepared because our visit was a spontaneous one, but they gave us a really warm welcome. One worker, who worked on a turbine for our hydro-power station on the Mati River, gave us some tools which we were to give as a souvenir to an Albanian worker. The workers of the plant to whom we talked, told us that they knew Albania, that they nurtured a special love for the Albanian people and considered them an heroic people, etc.

They immediately organized a rally at the plant, in which 4,000-5,000 people took part, and asked me to speak. I spoke and expressed the profound love and gratitude which the Albanian people and the Party of Labour of Albania nurtured for them and the whole Soviet people. I told them about the struggle of our people and party against imperialist and revisionist enemies. These enemies were real, had names, had engaged in concrete activities against us. I had to speak openly to the workers, although this was not going to please Khrushchev. At the first reception he had given us his "orientation" on the question of Yugoslavia. [sentence as printed] But neither I nor my comrades would have had a clear conscience if we had not spoken out, therefore in my speech I told the workers that the Yugoslav leaders were anti-Marxists and chauvinists, that they had done hostile work, etc.

The workers listened to me attentively and cheered with great enthusiasm.

Pressures and "operations" of Khrushchevites on the speeches of Albanian delegation

After the meeting, Pospyelov said to me:

"I think we should tidy up the part about Yugoslavia a little, because it seems to me a bit too hard-hitting."

"There is nothing exaggerated," I said.

"Tomorrow your speech will be published in the press," said Pospyelov. "The Yugoslavs will be very angry with us."

"It's my speech. You are in order," I said to him.

"Comrade Enver, you must understand us," insisted Pospyelov. "Tito says that it is we who incite you to speak openly against them like this. We must soften that a bit."

This dialogue took place in one of the rooms of the "Kirov" opera theatre in Leningrad. It was time for the performance to begin, the people were waiting for us to enter the hall.

"Let us postpone this discussion till after the performance," I said, "time is getting on."

"We'll postpone the beginning of the performance," he insisted, "I'll tell the comrades."

We argued a bit and in the end we reached a "compromise": the word "hostile" would be replaced with "anti-Marxist."

The revisionists were jumping for joy as if they had gained the heavens. After a little reflection, Kozlov wanted another "concession":

"'Anti-Marxist' does not sound too good either," he said, "how about if we alter it to 'non-Marxist.'"

"All right, then," I said in an ironical tone. "Do as you wish."

"Let us go out to the foyer of the theatre," Kozlov then proposed, and we circled once or twice among the people, so that Kozlov could greet them. Meanwhile, the others went to make the "correction" and Ramiz accompanied them. However, when Ramiz returned, he told me that they had removed all I had said about the Yugoslavs. I instructed him to tell them that we insisted on our opinions, but Khrushchev's men replied:

"It is impossible to make any change now, because we would have to inform the comrades at the top again in order to do such a thing."

In one of the intervals of the performance I expressed our dissatisfaction to Pospyelov.

"The truth is that they are what you say," he told me, "but we must not be hasty, because the time will come..."

Thus, what I said at the meeting in connection with Yugoslavia, came out differently in PRAVDA. Mehmet, too, who had gone to Tashkent with a part of the delegation, was subjected to the same pressures and "operations" on his speeches.

PLA openly tells Khrushchev and Company why we disagreed with them on the Yugoslav problem

Although the Soviet leaders were very well aware of our stand towards the Yugoslav revisionists, we had decided in advance to raise this problem in Moscow again and openly to tell Khrushchev and Company why we disagreed with them. We met on April 15.

Right from the outset, I told Khrushchev and his associates that I would speak mainly about the Yugoslav problem.

"We have discussed these matters continually in our party," I said amongst other things, "and have done our utmost to be as patient, coolheaded and prudent as possible in our opinions and actions towards the Yugoslav leadership.

"For their part, the Yugoslav leaders have gone on in the same old way. I do not intend to go over all the bitter history of our relations with them over 14 years, because you know about it, but I want to stress that, even to this day, the Yugoslav leadership is continuing its hostile secret activities against us and permanently maintains a provocative stand.

"We believe that these persistent stands on the part of the Yugoslav leadership, and especially the part of their legation in Tirana," I continued, "are intended to completely destroy relations with us in order to put us in a difficult position in regard to our friends, on the pretext that 'we have achieved good relations with all the other parties, while it is not possible to reach agreement with the Albanians.'"

I went on to tell them of new facts in connection with a number of activities of the minister and the secretary of the Yugoslav legation in Tirana, spoke about the underhand work they were doing to organize anti-party elements and activate them against our party and people and told them of our efforts to make them stop their anti-Albanian activity.

"These activities cannot be done on their personal initiative," I told Khrushchev, "but are done on the orders of the top Yugoslav leadership. This is the conclusion we have drawn from their actions."

Further on, I raised the problem of the harmful activity which the Yugoslav leaders continued to carry out in Kosova.

"This is a delicate and important question for us," I said, "because they are not only organizing intense activity against our country from Kosovo, but are also trying to liquidate the Albanian population of Kosovo, by displacing them en masse to Turkey and other countries."

After speaking in detail about the efforts of the staff of the Yugoslav legation in Tirana to organize the internal enemies of our party and people, about the plot they had tried to organize in the Tirana conference in April 1956, and about the subsequent hostile activity with Tuk Jakova, Dali Ndreu, Liri Gega, etc., I pointed out:

"All these facts and others, of which we have ample have convinced us that, to this very day, the Yugoslav leadership has never given up its aim of overthrowing the people's power in Albania. Thus, the Yugoslav revisionists are a danger, not only to our country but also to all the other socialist countries because, as they themselves have declared and as their activity towards us confirms, they are not reconciled to our socialist system, are opposed to the dictatorship of the proletariat and have totally abandoned Marxism-Leninism.

"We have always wanted to have good relations with Yugoslavia," I continued, "but to put it bluntly, we do not trust the Yugoslav leaders, because they speak against the social system in our countries and are opposed to the foundations of Marxism-Leninism. In all their propaganda, they do not say one word against imperialism, on the contrary, have joined the chorus of the Western powers against us. In 14 years, we have not seen the Yugoslav

leadership make the slightest change that would make us think it has understood any of its grave mistakes and deviations, which have long been under attack. Therefore, we cannot put any trust in this leadership.

"But what stand are we to maintain towards it?" I continued. "We shall keep our temper, we shall be patient and vigilant. But there is a limit to patience. We are not going to take any step which would damage the interests of socialism and Marxism-Leninism, we are not going to wage war on them and neither will we interfere in the internal affairs of Yugoslavia. We are not and never have been for such actions, but we consider it our permanent duty to defend our correct ideological and political line and to unceasingly expose opportunism and revisionism.

"These were the things I had to tell you," I said in conclusion. "In regard to our political situation, it is very good. The people stand firmly united around the party and have mobilized themselves in the work to implement its line. That is all I have to say."

Khrushchev speaks angrily: "Our views differ with yours"

Khrushchev, who up till now had listened in silence to what I presented, his face flushing red and turning pale alternately, although he managed to maintain his "aplomb," began to speak. Apparently he wanted to show us that "one can remain silent" even when one does not agree with what one's counter-part is saying.

"I wanted to stress our opinion," he began. "We are in complete agreement with you and support you."

Immediately after this phrase, however, Khrushchev showed us how they "supported" us:

"We thought that this party meeting would end more quickly and had no idea that you would present matters in this way.

"You are somewhat touchy in your view of relations with Yugoslavia," he continued. "When you speak, you present the question of relations with Yugoslavia as hopeless. The way you speak about the Yugoslav leadership implies that this leadership has betrayed, that it is completely off the rails, that nothing can be done with it, and therefore we should break off relations. I do not think that it has betrayed, but it is true that it has slipped seriously from the course of Marxism-Leninism. According to you, we ought to return to what Stalin did, which caused all these things we know about. If we take things as you present them, it turns out that Yugoslavia is against the Soviet Union, in the first place, and also against you and others. When I listen to you speaking I see that you are seething with anger against them. The Italians, Greeks and Turks are not better than the Yugoslavs. I would like to ask you: With whom have you the best relations?"

"We have no relations with the Greeks and the Turks," I replied.

"Let us examine how the Yugoslavs behave towards us," he continued, "they attack us more than the Greeks, the Turks and the Italians--but there is something specific, proletarian, about Yugoslavia. Hence, can we break off relations with Yugoslavia?"

"We do not say this," I replied.

"You did not say it but from your words it is obvious that you think it. Certainly Yugoslavia will not become the cause of a war against our camp, like Germany. Italy or any other country. Do you consider Yugoslavia as the enemy number one?" he asked me.

"We are not speaking about Yugoslavia. We are speaking about the revisionist activity of the Yugoslav leaders," I said. "What are we to do after those things which they hatch up against us?"

"Try to neutralize their work. What else can you do? Are you going to war with them?" he asked me again.

"No we have not made war on them and we are not going to do so. But if the Yugoslav minister goes tomorrow to photograph military objects, then what are we to do?"

"Take the film," answered Khrushchev.

"They will use such a measure as a pretext to break off relations and put the blame on us," I said.

"Then what do you want from us, Comrade Enver?" he said angrily. "Our views differ from yours and we are unable to advise you. I do not understood you, Comrade Hoxha. Adenauer and Kishi are no better than Tito, but nevertheless, we are doing everything in our power for rapprochement with them. Do you think we are wrong?"

"This is not the same issue," I replied. "When there is talk about Tito, the improvement of relations on the party road is implied, while he is an anti-Marxist. However, the Yugoslav leadership is not correct even in state relations. What stand are we to adopt, if the Yugoslavs continue to hatch up plots against us?"

"Comrade Hoxha," shouted Khrushchev angrily, "you are constantly interrupting me. I listened to you for an hour without interrupting you once, while you do not allow me to speak even for a few minutes, but interrupt me continually. I have nothing more to say," he declared and stood up.

"We have come to exchange opinions," I said, "then, as soon as you express an idea, you ask my opinion. Are you annoyed that I reply to you?"

"I have told you and I am telling you again: I listened to you for an hour, Comrade Hoxha, while you did not listen to me even for a quarter of an hour but interrupted me again and again. You want to build your policy on sentiments. You say there is no difference between Tito, Kardelj, Rankovic, Popovic, and so on. As we have told you previously, they are people and

differ from one another. The Yugoslavs say that they are all of the same opinion, but we say otherwise: Tito and Rankovic maintain a different, more reasonable, more approachable stand towards us, while Kardelj and Popovic are totally hostile towards us. Tempo is an ass..., is unstable. Let us take Eisenhower and Dulles. They are both reactionaries, but we must not lump the two of them together. Dulles is a savage war-monger, while Eisenhower is more human.

"We told you at the first meeting: We are not going to attack anyone and not going to provoke any attack. Our attacks and counter-attacks must be made in such a way as to ensure that they are in favour of rapprochement and not alienation.

"We have asked Zhou Enlai to become the intermediary to arrange a meeting between our parties in which the Yugoslavs will take part. (The reference is to Khrushchev's efforts, in collaboration with the Chinese leadership, to organize a meeting of all the communist parties of socialist countries in which Tito was to take part, too. This meeting was organized in Moscow in November 1957, but despite the efforts of Khrushchev and Mao Zedong, the Yugoslavs did not take part in it. For more details see this volume pp 326-329.) He was pleased to undertake this task. Such a meeting can be held. The Yugoslavs have agreed to it. But it should not be thought that everything will be achieved at such a meeting. However, with opinions like yours, why should we go to such a meeting? I do not understand what you are aiming at, Comrade Enver. Are you trying to convince us that we are not right? Have you come here to convince us that we, too, should adopt the same stand as you towards Yugoslavia. No, we know what we are doing. Do you want to convince us that your line is right? This does not lead to any good solution and is not in the interest of our camp. In connection with the counter-revolution in Hungary we have considered the stand of the Party of Labour of Albania correct, but your tactic in connection with Yugoslavia is wrong. I had thought that you should meet Micunovic (the Yugoslav ambassador in Moscow), not to exacerbate relations but to improve them. However, seeing the way you treat the problem, I doubt that anything will emerge from it. You talk about the provocations of the Yugoslav minister in Tirana. In our country, too, the Yugoslav minister has gone in a demonstrative way to photograph military objects. Our militiaman took his camera and bid him good day.

"Let me repeat: We shall follow the line of improving both state relations and party relations with Yugoslavia. Whether or not we achieve it, that is another matter, but the fact is that we shall have a clear conscience and will serve our party and all the other parties well. We must not make matters worse. The Romanian comrades are right in describing you in SCINTEIA as 'quarrel-some.'"

"We are opposed not only to this grave insult, but also to the spirit in which a sister party, such as that of Romania, deals with this problem in its central organ," I told Khrushchev. "To be quarrelsome means that you make unprincipled attacks. We have never acted with anyone in this way. SCINTEIA itself and those who wrote that article are inciting unjust and unprincipled actions. We have our criticism and reservations about many

stands of the Polish comrades, too, but we have not criticized them in the press, because we do not want to become inciters of quarrels and splits. We have had and still have criticism of the Italians, and certain stands of the Romanian comrades themselves. But we have displayed prudence, have not criticized them in the press, because we do not want to settle the problems outside the norms and rules governing relations between sister parties."

Having received his answer for his "agreement" with SCINTEIA, Khrushchev continued, but in a somewhat lower tone:

"Take things quietly, comrades, always quietly, and we shall triumph. Do you know what Stalin used to tell us?" he continued, "'before we take decisions we should take a cold shower, as the Romans did.' This is what Stalin advised us to do, but he never took a shower himself. Let us do what Stalin did not do."

> Khrushchev openly took our enemies under his protection, imagining Albania as a country in which his order had to be applied

Comrade Enver Hoxha writes that Khrushchev being silent for a moment launched off into his accusations again:

"You do not take a shower before taking decisions, either," he said, "you condemned Dali Ndreu and Liri Gega. We consider this action of yours a grave mistake, very grave."

"We have discussed the question of these agents on another occasion," I said. "Nevertheless, if you wish I can give you endless details about their anti-party and anti-Albanian activity. They have acted continually to the detriment of our country."

"Nevertheless, nevertheless," shouted Khrushchev, "they should not have been condemned so severely. The Yugoslavs are furious."

"Of course, they were their loyal agents," I said, and I could see that Khrushchev had been just as infuriated by the verdict of our court as the Yugoslavs were.

"When we heard what you intended to do we sent an urgent radiogram to our ambassador in Tirana, Krylov. We told him that the decision of your court must be annulled without fail. Apparently, you did not listen to him. That order was ours."

"I am hearing this for the first time and I am astonished that you could have given such an order," I said, trying to control my anger. "However, you ought to know that during the trial the criminal activity of these dangerous agents was proved to the full. Our people would not pardon a soft stand towards them. We do not pat enemies on the head, but give them what they deserve, according to the laws for which the people have voted."

Khrushchev was squirming in his seat.

"After Tito's speech at Pula," put in Ponomarev, "we sent a radiogram to Krylov, that he should tell you to keep cool in your reply, that we would publish an article and it should not appear as an organized action. We also told him what you should do about Dali Ndreu and Liri Gega."

"He told us about the article," I replied, "but we could not leave matters without replying to Tito, and therefore we wrote it. As for Dali Ndreu and Liri Gega, I know that your ambassador asked us after we arrested them and we told Krylov about the activity of those agents. He did not mention any kind of order, and it was just as well he did not. However, even if he had told us about it, we could never come out against the decision of the people's court."

Turning to his comrades, Khrushchev said: "Our ambassador has not carried out his task. That action should have been stopped."

This individual always openly took our enemies under his protection, imagining Albania as a country in which his orders, and not the laws of our state, had to be applied. I remember that another time he said to me:

"I have received a letter from a person called Panajot Plaku, in which he asked me to help him."

"Do you know this man?" I asked him (I knew that he was well acquainted with the traitor and agent of the Yugoslavs, Panajot Plaku, a fugitive in Yugoslavia, who wanted to go to the Soviet Union).

No," replied Khrushchev, "No, I do not know him."

He was lying.

"He is a traitor," I said, "and if you accept him in your country we shall break off our friendship with you. If you admit him you must hand him over to us to hang him publicly."

"You are like Stalin who killed people," said Khrushchev.

"Stalin killed traitors, and we kill them, too," I added.

Since there was nothing else he could do, he retreated. He still hoped to make us submit by using other ways and means. After pouring out all he had to say, he fell silent, laid his hands on the table, softened his stern tone and began his "advice" again.

Khrushchev threw the bait to deceive us and make us submit to him

The tactic of the "stick" was finished. At the discussion table Khrushchev again resorted to the "carrot."

"You must understand us, comrades," he said, "we speak in this way only with you, because we love you greatly, you are close to our hearts," etc., and after all this he made a gesture of "generosity": He excused us from repaying the credits, which the Soviet Union had provided for our country up to the end of 1955 for its economic and cultural development. Of course, we thanked them, thanked the Soviet working class and the fraternal Soviet people, in the first place, for this aid which they gave a small, but valiant, industrious and indomitable country. However, we all clearly understood what "motives" lay behind this "generosity" of Khrushchev. He wanted to "smooth us over," to relieve the tense atmosphere which had been created during the talk, to some extent, wanted to bribe us with this "aid," which to Khrushchev was not aid but charity, a bait which he threw us to deceive us and make us submit to him. However, he was soon to be convinced that we were the sort of people who would even accept to eat grass but would never bend the knee to him or any other traitor.

[27 Oct 80]

[Text] Tirana, 27 Oct (ATA)--The PLA will never give up the struggle against opportunism and the revision of Marxism-Leninism

In continuation of his book "The Khrushchevites" (Memoirs) Comrade Enver Hoxha writes that some days after the April 15, 1957 meeting Khrushchev also invited Micunovic to a big dinner for our delegation, He saw him standing apart and called to him:

"Come over here. Why do you stand so far off?"

He introduced us and laughing said to us:

"Try to understand each other," and off he went, glass in hand, leaving us "to understand each other." We quarrelled.

I reeled off to Micunovic all the things I had told Khrushchev at the meeting and said to him:

"We have been and are ready to improve our state relations and, for our part, have made every effort, but you must give up your anti-Albanian activity once and for all."

"You call us revisionists," said Micunovic. "How can you have relations with revisionists?"

"No," I said, "we shall never have relations with revisionists, but I am speaking about state relations. We can and should have such relations. In regard to the ideological contradictions which exist between us, you must understand clearly that we will never give up the struggle against opportunism and the revision of Marxism-Leninism."

"When you speak of revisionism you have us in mind," said Micunovic.

"That is true," I said, "whether or not we mention Yugoslavia, the reality is that we are referring to you, too."

Micunovic stuck to his point of view. The debate was becoming heated. Watching us from a distance, Khrushchev sensed the mounting tension and rejoined us.

Micunovic began to repeat to him what he had said to me previously, and continued to make accusations against us. However, at that dinner we had Khrushchev "on our side."

"When Tito was in Corfu," he said to Micunovic, "the King of Greece said to him" "Well, shall we divide up Albania?" Tito did not reply, while the Queen pointed out that they should not talk about such things."

Micunovic lost his head and said:

"That was only a joke."

"Such jokes should never be made, especially with the monarcho-fascists, who have been claiming southern Albania throughout their existence. And you have made similar 'jokes' before this too," I told him. "We have a document of Boris Kidric in which he has included Albania as the 7th republic of Yugoslavia."

"This was something done by one individual," replied Micunovic.

"One individual, true, but he was a member of the Political Bureau of your party and chairman of the State Planning Commission," said Mehmet.

This was too much for Micunovic and he walked away. Khrushchev took me by the arm and asked me:

"How did this come about? Did you quarrel again?"

"How else could it go? Only badly, as with the revisionists."

"You Albanians astound me," he said, "you are stubborn."

"No," I said, "we are Marxists."

We parted displeased with each other.

Khrushchev wanted Albania to be turned into a fruit growing colony

But Khrushchev was versatile in his scheming. As I have said, sometimes he softened the situation with Tito, sometimes he exacerbated it. When things were tense with Tito he was gentle with us. I remember when Khrushchev spoke at the 7th congress of the Bulgarian Communist Party, he attacked Tito in strong terms and everyone applauded him. When we came out at the interval, all the heads of the delegations went to a room to drink coffee, there Khrushchev said:

"And for all I said about Tito, Comrade Enver Hoxha is still not satisfied."

"You are right," I said, "Tito must be exposed more vigorously and ceaselessly."

However, it was not always like this. Before Khrushchev came to visit Albania in May 1959, the Soviet leadership sent us a radiogram in which it informed us that "for understandable reasons he will not touch on the Yugoslav question in his speeches and hopes that in their speeches the Albanian friends will bear this properly in mind."

This was a condition which they imposed on us and they were awaiting our reply. We discussed this problem at length in the Political Bureau, where all of us expressed our regret and anger over such a visit with conditions and made a balance of the benefits and evils which would result from our acceptance or non-acceptance of Khrushchev's condition. We knew that the Yugoslavs and all reaction would rub their hands and declare:

"See, Khrushchev went to Albania and shut the Albanians' mouths. And where? In their own home."

However, the visit to Albania of the chairman of the Council of Ministers of the USSR and first secretary of the Central Committee of the Communist Party of the Soviet Union was of special importance for strengthening the international position of our country.

Therefore we decided unanimously to agree to Khrushchev's condition just for the days that he would stay in Albania and as soon as he left Albania we would continue our unwavering fight as before against the Yugoslav revisionists. Fearing that something might occur as in Leningrad in April 1957, as soon as he arrived in our country on his visit at the end of May 1959, Khrushchev spoke first, without waiting for me to welcome him, saying:

"You must know that I am not going to speak against Tito."

"We consider a guest a guest and impose nothing on him," I replied.

I spoke, said what we had to say, naturally in a friendly manner, but he did not fail to grasp the allusions.

Nevertheless, we behaved in a friendly way with him and tried to create the best possible impressions about our country and our people. On every occasion he behaved as was his habit: sometimes with jokes and sometimes in a grave tone he poured out all he had in mind.

We talked about our economic problems. Besides information about the achievements up to date, I was speaking about our prospects for the future. Among the main branches I mentioned oil, and informed him that in recent days we had struck a new gusher of oil.

"Is that so?" he said, "but what quality is it? I know you have bad, heavy oil. Have you calculated how much it will cost to process it? Then, where will you sell it? Who needs your oil?"

I went on to speak about our mining industry and its very good prospects, mentioning our iron nickel, chromium and copper ores.

"We have ample amounts of these minerals and we think that we should follow the course of processing them at home. We have raised the necessity for building the metallurgical industry in Albania with you last year and several times in the meetings of Comecon," I said. "Up till now we have received no positive reply, but we are persisting."

"Metallurgical plants?" he interrupted me. "I agree, but have you considered the matter well? Have you calculated what a ton of smelted metal will cost you? If it is going to cost you dearly it is no good to you. I repeat: one day's production in our country will fulfill all your needs for several years."

This is how he replied to all our requests and problems.

When I finished, Khrushchev began to speak:

"Comrade Enver's expose made the situation in your country clearer to us," he said. "However, in regard to your needs, I want to tell you that we have not come to examine them. We have not been authorized by our government to discuss such matters. We have come to get to know you, to exchange opinions."

Then laughing, he cracked a joke which was not simply a joke:

"We think that things are going well with you. Albania has advanced, and if you offered us a loan we would accept it with the greatest of pleasure."

"We have ample stones, sea and air," put in Mehmet in the same tone.

"We have much more of those than you. Have you any dollars?" asked Khrushchev, and then, in a different tone:

"Enough of this," he said, "the truth is that you have made progress, but you are not satisfied. We gave you a credit last year and now you want another one. But we have popular saying: 'cut your coat according to your cloth.'"

"We have the same saying," I said, "and we know it and implement it well."

"But," he said, "you are asking for credits again." He shrugged his shoulders, was silent for a moment and resumed his jocular tone:

"Or is it that you gave us a good lunch and thought it a fine opportunity to ask us for another credit? If we had known this we would have brought our own lunch?"

"The Albanians have a special respect for a guest," I said. "Whether they have plenty and whether they have nothing, they always provide for their guest. They treat him with every respect when he comes to their home and even swallow something that they do not like."

"I was joking," he said and burst into a laugh. But it was more a snarl than a laugh. Wherever he went he criticized us. About the big vineyards at Shtoi he said:

"Why do you throw your money away? You will get nothing from this land."

Regardless of the opinions of this "agricultural expert," however, we continued the work and now the vineyards at Shtoi are marvelous.

He criticized the work to drain the Terbuf swamp. In Vlora he summoned the main Soviet oil expert in our country and he, no doubt "well prepared" by the Soviet Embassy in Tirana, delivered a report in our presence which was extremely pessimistic, saying that Albania had no oil. However, a group of Albanian oil experts also came there and refuted what the Soviets said with many facts and arguments. They spoke in detail about the history of the oil industry in our country, about the great interest of the foreign imperialist companies in Albanian oil in the past and about the great and encouraging results which had been achieved in the 15 years of the people's power. Mehmet, for his part, spoke in detail about the great prospects for oil extraction in Albania and also mentioned to Khrushchev the recent discoveries in this field.

"Fine, fine," repeated Khrushchev, "but yours is a heavy oil and contains sulphur. Have you calculated things properly? You will process it, but a litre of benzine will cost you more than a kilogram of caviar. You must look closely at the commercial aspect. It has not been decreed that you must have everything yourselves. What are your friends for?"

In Saranda he advised us to plant only oranges and lemons for which the Soviet Union had great need.

"We shall supply you with wheat. The mice in our country eat as much wheat as you need," he said, repeating what he had said in Moscow in 1957. He also gave us a lot of "advice."

"Don't waste your land and marvellous climate on maize and wheat. They bring you no income. The bay tree grows here. But do you know what it is? Bay is gold. Plant thousands of hectares of bay because we shall buy it from you."

He went on with peanuts, tea and citrus fruit.

"These are what you should plant," he said. "In this way Albania will become a flourishing garden."

In other words he wanted Albania to be turned into a fruit-growing colony which would serve the revisionist Soviet Union, just as the banana republics in Latin America serve the United States of America.

But we could never allow ourselves to take this suicidal course which Khrushchev advised.

Khrushchev and Malinovsky speak as masters of the seas, countries and peoples

He even criticized our archaeological work as "dead things." Whe he visited Burtinti he said:

"Why do you employ all these forces and funds on such dead things. Leave the Hellenes and the Romans to their antiquity."

"Apart from the Hellenic and Roman culture," I told him, another ancient culture, the Illyrian culture, developed and flourished in these zones. The Albanians stem from the Illyrian trunk and our archaeological studies are confirming and providing evidence of our centuries--long history and of the rich and ancient culture of a valiant, industrious and indomitable people."

However, Khrushchev was truly an ignoramus in these fields. He could see only the "profitability."

"Why are these things of value to you? Do you increase the well-being of the people?" he asked me. He called Malinovsky, at that time minister of defence, who was always at hand:

"Look, how marvellous this is," I heard them whisper. "An ideal base for our submarines could be built here. These old things should be dug up and thrown into the sea (they were referring to the archaeological finds at Butrint). We can tunnel through this mountain to the other side," and he pointed to Ksamil. "We shall have the most ideal and most secure base in the Mediterranean. From here we can paralyze and attack everything."

They were to repeat the same thing in Vlora a day or two later. We had come out on the verandah of the villa at Uji I Ftohte.

"Marvellous, marvellous," Khrushchev cried and turned to Malinovsky. I thought he was referring to the truly breath-taking landscape of our riviera. But their mind was working in another direction:

"What a secure bay at the foot of these mountains," they said. "With a powerful fleet, from here we can have the whole of the Mediterranean, from Bosporus to Gibraltar, in our hands. We can control everyone."

It made my flesh creep to hear them talk like this, as if they were the masters of the seas, countries and peoples. "No, Nikita Khrushchev," I said to myself, "we shall never allow you to set out to enslave other countries and shed their peoples' blood from our territory. You will never have Butrint, Vlora, or any inch of the Albanian territory, to use for those evil purposes."

> Economic pressures by the Khrushchevites. In those places where the Soviet [word indistinct] had declared "there was nothing," we found oil, chromium, copper, iron nickel, coal, etc.

The fictitious "peace" being more and more thoroughly rocked to its foundations, Khrushchev and his followers were seeing our resistance ever more clearly and tried to make us yield by exerting economic pressure, while secretly orchestrating a discrimination against our leadership by means of their specialists who were working in all sectors in our country, such as in oil and the economic enterprises in which we lacked sufficient experience,

in the army, where we had advisers etc. The Soviet Embassy, with its innumerable "councillors," who were diplomats only in name, because in reality they were security officers, maintained contact with all these "experts," and gave then the necessary instructions. The first thing they did was to issue instructions to the Soviet experts in the economy to neglect their work in Albania. To a greater or lesser degree, these experts began to become more interjected in buying suit lengths and other things, which they sent to the Soviet Union to sell on the black market, than in working with our comrades.

Those experts who remained sincere with us were removed by the embassy, one after the other, on fabricated pretexts and against their will. When they parted from our people, these specialists expressed their dissatisfaction. Those who remained in Albania, of course, had received orders to sabotage the key sectors of our economy, especially the oil industry and geological prospecting. As was proved later, the Soviet oil "experts" had recruited some agents from the ranks of our geologists and, as they themselves eventually admitted had charged them with the mission of keeping from our party and government accurate data about the discoveries which they made, of hiding the results of these discoveries, of using all the means of sabotage, so as to make us start drilling in the wrong places, of violating the rules of prospecting and extracting technique and wasting hundreds of millions of leks, etc. The Khrushchevite revisionists taught the agents they had recruited in our country various methods of sabotage. And the agents carried out the instructions of their patrons. These oil "experts" and "geologists" made two reports: an accurate one, with exact and positive data on discoveries of different minerals, and a false one, which said that the prospecting had allegedly yielded negative results, i.e., the minerals sought were not discovered. The first report was sent to Moscow and Leningrad through the KGB centre, which was called the Soviet Embassy in Tirana, and the second report was sent to our Ministry of Industry and Mines. This whole vile business was discovered and proved after the Soviets cleared out of Albania. Convinced that there had been sabotage, our Central Committee gave orders that the reports must be studied, that our geological teams must go to all those places where the Soviet saboteurs had said the results are negative, and begin prospecting. This was done. Precisely in those places where they had declared "there was nothing," we found oil, chromium, copper, iron-nickel, coal, etc.

This was an economic pressure which they exerted on us in order to force us to accept their views. But they broke their heads. Our party's resistance steadily increased, but still without burning the bridges. The Soviet revisionists also operated prudently to avoid burning the bridges with us. The Soviet ambassador came frequently to sound us out on some international problems on which I would give my opinion frankly, or to learn about some internal matter and I filled him up with reports about the weather, about the planting, about the harvests, and about some general decision of the party about economic and cultural matters.

> The task of the Soviet ambassadors was that of the informer.
> Provocation by the Soviet "specialists"

Such were the Soviet ambassadors after Khrushchev mounted the throne. They thought we were blind. They never expressed any opinion on the questions we asked them. On these occasions their stand was: "Shall inform you," or

"I shall ask Moscow." Their task was that of the informer. They rarely had any understanding of the problems of our industry and agriculture.

The Soviet ambassador Krylov, who preceded Ivanov in Albania, visited some regions of southern Albania. When he returned he paid me a visit.

"Are you satisfied with what you saw?" I asked him.

He said nothing concrete, because it was dangerous to tell me about the things he had gone to see there. All he said was something... "colossal."

"I have noticed that you keep many dogs in the villages and in the towns and I have made a calculation that there could be such and such number of dogs in Albania, which must eat such and such quantity of food..., and if this food is reckoned in grain it comes to such and such a number of quintals."

"Well, well," I said to myself, "look what an ambassador they have sent us." And I said to him:

"You may be right, but in our country you don't find barber's shops and restaurants for dogs as in Paris. But what measures do you advise, Comrade Ambassador?"

"You should kill them," he said.

"The 'Society for the Protection of Animals' protests, as they are accusing us enough already about killing traitors and agents of reaction," I said.

This same ambassador once told me not to speak in harsh terms about Tito in a meeting of the People's Assembly. I replied:

"Comrade Ambassador, I do not take orders from anyone except from my [as printed]."

"We understand this, but if Tito is going to be attacked I shall not attend the meeting of the assembly," he protested.

"Tito will be exposed even more than from what I have written and the session of the People's Assembly will open even if you do not come," I said.

And the "famous" Soviet ambassador came to the assembly and tucked himself away in a corner of the box, behind other ambassadors, which was not his place.

It was clear that this threatening gesture of the ambassador, which we slapped back, came from Moscow.

After a short time the "adviser" on the extermination of dogs in Albania was recalled from Tirana and became a director in the Central Committee of Khrushchev's Communist Party. Day by day, Khrushchev and his gang were increasing their pressure on us in the direction of the economy. Not only did they not provide us with all the aid we sought, but even what they did provide was quite insufficient. They supplied only a few cases of tractor spare parts,

which they sent by aircraft. In this way they sought to force us to our knees, but in vain, because they had no success. To put pressure on us to accept their conditions, Khrushchev said to us once (while we were talking about our economic problems): "In our relations with the Yugoslavs it has always been our principle to give them half of what they ask for. When they behave well we act more generously. This is how we act with all those who behave badly towards us." The implication was quite clear, they were openly putting pressure on us. We quarrelled so fiercely that time that the talks were almost broken off.

All over the country the Soviets began to commit many provocations against our people everyday. Once, a person complained to the head of his office that a Soviet "expert" had made a proposition to recruit him as an agent. Our comrade refused indignantly. Our Ministry of Foreign Affairs protested to the Soviet Embassy about this. Naturally, the embassy denied that there were such people among the Soviet experts, but a few weeks later it removed its exposed agent from the country. This was the first time we had to do with such a denunciation and therefore our party and government recommended vigilance, prudence and the greatest cool-headedness. It was quite obvious that with the passage of time the situation was getting worse, although the leadership in Moscow preserved the external forms of "friendship."

For us, the leadership of the Communist Party of the Soviet Union was finished. Khrushchev and the Khrushchevites were revisionists, traitors, war would be declared. The time of the declaration of war was only a matter of months, while our relations continued to hang on a thread.

[28 Oct 80]

[Text] Tirana, 28 Oct (ATA)--A prominent place in the book "The Khrushchevites (Memoirs) is held by the important events of 1960, the Bucharest meeting and that of Moscow, in which the PLA openly opened fire on Khrushchevite revisionism. Comrade Enver Hoxha points out the principled stand adopted by the PLA which did not vield before the pressure and intrigues of the Khrushchevites. He writes:

> From Bucharest to Moscow
>
> February 1960: Mikoyan on the Chinese-Soviet differences. Exacerbation of the situation between Moscow and Beijing. Kosygin pays a "visit" to Mehmet Shehu in Moscow. The Bucharest plot. Hysni Kapo does not bat an eyelid at Khrushchev's pressure. The Soviets set their secret agents in motion and establish the blockade to starve us. The struggle in the preparatory commission for the Moscow meeting. Our delegation in Moscow. Icy atmosphere. The Soviet gargantuas. Pressure, flattery, provocations again. The Kremlin marshals. A brief meeting with Andropov. Khrushchev's tactic: "There should be no polemics." The mercenaries react against our speech. The last talks with the Khrushchevite renegades.

All the representatives of the communist and workers' parties, who were at the congress of the Romanian Workers' Party, writes Comrade Enver Hoxha, know the

stand of our party in connection with the diabolical plot which the Khrushchevites had hatched up there. I shall not go into details here because Volume 19 of my works tells about the struggle of our party, which opened fire on the Khrushchevites and fought with revolutionary Marxist-Leninist courage.

Judging from the aims which the Khrushchevites sought to achieve, politically, ideologically and organizationally, the Bucharest meeting was a Trotskyite, anti-Marxist, revisionist putsch. From the form of its organization too, this meeting was a plot from start to finish.

The revisionist renegades needed another meeting of international communism to gain approval for their old plan for the final legitimization of modern revisionism, which was defeated at the Moscow meeting in 1957. Therefore they raised the need for the organization of a new meeting of communist and workers' parties, where we would allegedly discuss the "problems of the movement," which had come up since the previous meeting in 1957. To this end, at the beginning of June 1960, the Central Committee of the Communist Party of the Soviet Union sent us a letter in which it was proposed that the meeting of the communist and workers' parties of the countries of the socialist camp should be held, taking advantage of the occasion of the 3d congress of the Romanian Workers' Party. We replied to this proposal in positive terms and decided to send a delegation, which I was to head.

> Mikoyan tries to create the impression on us that the Soviet leadership allegedly stood on principled positions

Meanwhile, we had been informed about the disagreements which had developed between the Soviets and the Chinese. In February that year, Mehmet and I went to Moscow for a consultation of the representatives of parties of the socialist countries about the development of agriculture, as well as for a meeting of the political consultative committee of the Warsaw Treaty. As soon as we arrived at Moscow airport, a functionary of the apparatus of the Central Committee of the Soviet party introduced himself to me.

"I have been sent by Comrade Mikoyan, who wants to meet you personally tomorrow morning about a very important matter," he told me.

This urgency surprised me, because Mikoyan could have met me later. We were to stay several days in Moscow. Nevertheless I said:

"All right, but I shall bring Comrade Mehmet with me."

"They told me the invitation was only for you," replied Mikoyan's Chinovnik, but I repeated:

"No, I shall come together with Comrade Mehmet."

I insisted on taking Mehmet with me because I guessed that in this urgent meeting about a "very important problem," Mikoyan would speak to me about complicated and delicate matters. The fact that I was well-acquainted with Mikoyan and his anti-Marxist and anti-Albanian stands made me all the more determined.

The next day we went to meet Mikoyan in his villa in Leninskie Gori. After the usual greetings, Anastasiy entered directly into the theme of the talk:

"I am going to inform you about the disagreements we have with the Communist Party of China, I stress, with the Communist Party of China. We had decided to tell these things only to the first secretaries of the sister parties. Therefore, I ask Comrade Mehmet, not to misunderstand us, but this is what we had decided and not that we did not trust him."

"Not at all " replied Mehmet. "Indeed I can leave."

"No," said Mikoyan.

Then Mikoyan spoke to us at length about the differences with the Chinese party.

Mikoyan spun his tale in such a way as to create the impression that they themselves stood in principled Leninist positions and were fighting the deviations of the Chinese leadership. Amongst other things, Mikoyan used as arguments several theses of the Chinese which, in fact, for us, too, were not right from the viewpoint of the Marxist-Leninist ideology. Thus, Mikoyan mentioned the pluralist theories of "one hundred flowers," the question of the cult of Mao, the "great leap forward,"etc.

Of course, we had our own reservations about these things, to the extent that we were acquainted with the activity and concrete practice of the Communist Party of China at that time.

"We have Marxism-Leninism and do not need any other theory," I told Mikoyan, "while as to the 'one hundred flowers' we have neither accepted this view nor have we ever mentioned it."

> Mikoyan states: At one time, together with Khrushchev, he had considered organizing a pokushenie against Stalin

Among other things, Mikoyan spoke about Mao and compared him with Stalin, saying:

"The only difference between Mao Zedong and Stalin is that Mao does not cut off the heads of his opponents, while Stalin did. That is why we could not oppose Stalin," continued this revisionist. "At one time, together with Khrushchev we had considered organizing a pokushenie (assassination attempt, Russian in the original) against him, but we gave up the idea because we were afraid that the people and the party would not understand."

> Serious Sino-Soviet differences. The matters were being exacerbated in a way which was not at all Marxist-Leninist

We made no pronouncement about the problems which Mikoyan raised, and after we had heard him out, I said:

"The major differences which have risen between you and the Communist Party of China are very serious matters and we do not understand why they have been allowed to reach this point. This is neither the time nor the place to discuss them. We think that they should be solved between your parties."

"That is what we shall do," said Mikoyan, and just as we were parting he asked us: "Please don't discuss these matters I raised with you, even with the members of your Political Bureau."

From this meeting we understood that the differences and contradictions had come to a head and were serious. Since we were already acquainted with Khrushchev and Mikoyan, we were quite clear that they did not proceed from principled positions in the accusations they were making against the Chinese party.

As became even clearer later, the differences were over a series of matters of principle towards which, at that time, the Chinese seemed to maintain correct stands. Both in the official speeches of the Chinese leaders and in their published articles, especially in the one entitled "Long Live Leninism," the Chinese party treated the problems in a theoretically correct way and opposed the Khrushchevites. This was particularly damaging to the latter and therefore they were trying to forestall the evil.

We discussed what Mikoyan told us only with the comrades of the bureau, because the matter was extremely delicate and we had to act with caution and patience. Then there was also the request of the Soviet leadership that this problem should be kept secret.

Thus, on the eve of the Bucharest meeting we had been informed of the Sino-Soviet differences.

At that time, I think, at the end of May or the beginning of June, Gogo Nushi, who was in Beijing at a meeting of the General Council of the World Federation of the Trade Unions, informed us by radiogram of the contradictions which had erupted in Beijing between the Chinese and the Soviet delegations. The Chinese delegation to the meeting opposed many theses of the report which was to be delivered, because in essence they were nothing but Khrushchev's revisionist theses about "peaceful coexistence," war and peace," the seizure of power in a "peaceful way," etc.

The Chinese invited the heads of several delegations (those who were members of the leadership of the communist and workers' parties) to a dinner, which they wanted to turn into a meeting, at which they would once again express their views in connection with the erroneous theses of the draft-report of the meeting. Liu Shaoqi and Deng Xiaoping spoke first, followed by Zhou Enlai.

Gogo Nushi's stand was that these things should not be disclosed at that gathering, but should be settled through party channels, because the delegations had gone to attend the meeting of the General Council of the Trade Unions and not to discuss those matters. Many of the other delegations were of the same view. As a result, Zhou Enlai retreated and said: "All right, we shall find another occasion."

All these things, together with what Mikoyan had told us in Moscow in February, as well as the indirect attacks which were being exchanged in the Soviet and Chinese press, showed that matters were being exacerbated in a way which was not at all Marxist-Leninist. The indications were that the joint meeting which was to be held in Bucharest, to which we had agreed to go, might reach an impasse or be a complete failure.

> The Khrushchevites had prepared the Bucharest plot in advance. Intensified efforts were made by them to involve the PLA in that plot

In this situation, a few days after the first letter we received another letter from the Central Committee of the Soviet Party, which said that several parties proposed that the meeting of the communist and workers' parties should be postponed and that the parties of the countries of the socialist camp should meet in Bucharest only to set the date and place of the future meeting of all parties. "Apart from setting the date and the place, at this meeting," said the Soviets, "opinions could be exchanged without taking any decision." We agreed on this proposal and decided to send a party delegation to Bucharest, headed by Comrade Hysni Kapo, to take part, both in the congress of the Romanian party and in the joint meeting to set the date and place for the coming meeting.

Why did I not go to Bucharest? I, personally, and the other comrades of the Political Bureau who knew about it, suspected that the problem of the differences which had emerged between China and the Soviet Union would be discussed there. We were not in agreement with such a thing because, first, we had heard only of one side of the argument, the Soviet side, and were not acquainted with the objections of the Chinese. Second, the differences had to do with cardinal problems of the theory and practice of the international communist movement and we could not go to a meeting of such responsibility and make pronouncements without discussing and deciding our stand in the plenum of the Central Committee. However, we were unable to do this, because such problems could not be put forward in the Central Committee hastily. They had to be thrashed out thoroughly, had to be studied carefully, and time was required for this.

Therefore our party sent Comrade Hysni Kapo to Bucharest to discuss only the date of the future meeting, as well as to take part in the free exchange of views on problems of the international situation after the failure of the Paris conference, as our parties had agreed.

As we saw later, the Bucharest meeting was to be transformed into a plot, which the Khrushchevites had prepared in advance. In our direction, too, intensified efforts were made, sometimes openly, sometimes in disguised form (because the Khrushchevites knew how our party adhered to principle), in order to involve us in that plot.

When Comrade Gogo Nushi was returning to Albania from Beijing, in Moscow Brezhnev, who at that time had become chairman of the Presidium of the Supreme Soviet, sought a meeting with him. Gogo met Brezhnev, who spoke to him at length about the differences with the Chinese.

Comrade Mehmet Shehu replies coldly and bluntly to Kosygin

Four to five days before the meeting in Bucharest began, when Hysni and I were discussing the stand he was to take in the congress of the Romanian party, we received a radiogram from Mehmet, who had been for some days in Moscow for medical treatment. In the radiogram Mehmet informed us about an unexpected "visit" which Kosygin had paid him. When he saw him come in, Mehmet was surprised and thought it was a courtesy visit, although somewhat late.

"Comrade Mehmet, I have come to talk about a very important matter," said Kosygin, without even bothering to inquire about his health, although he knew very well that Mehmet had gone there for medical treatment.

"Go ahead," said Mehmet.

Kosygin spoke for an hour and a half about the contradictions they had with the Communist Party of China. Mehmet listened and listened and then said:

"All these things you have told me are very grave. We are astonished that they have been allowed to become as serious as this."

"We are not going to make a concession to the Chinese," said Kosygin.

"We told Mikoyan, when he informed Comrade Enver and me about this business, that these things should be solved between the two parties," said Mehmet.

"We are not going to make any concession at all," repeated Kosygin, and added, "We were very pleased with the courageous, heroic stand of Comrade Belishova in the talks with the Chinese in Beijing. The counsellor of our embassy in Beijing informed us of what she had told him after the talks with the Chinese."

Mehmet still had no knowledge of these actions and intrigues of Liri Belishova, but he told Kosygin coldly and bluntly:

"I do not know what Liri Belishova has told you because I have been here. I know when we talked with Mikoyan, he instructed us not to discuss these matters with anyone. Our opinion has been and is that these things should be settled between your two parties. But since they are not being settled in this way, then they should be placed before the meeting of the parties. The stand of our party will be Marxist-Leninist and not opportunist or sentimental."

Kosygin got up scowling and when he was about to go out the door, Mehmet dealt him a slap:

"Comrade Kosygin," he said quietly, "you did not give me the opportunity to ask you--How is your health?"

Kosygin turned back, and as if to excuse hinself, he, too, asked Mehmet how he was feeling.

"I am very well," said Mehmet, without prolonging the subject, and immediately after this conversation he stopped the treatment and made arrangements to return home by aircraft the following day.

Now everything had been made clear to us: Khrushchev was preparing the Bucharest plot and wanted to manipulate us, to compel us at all costs to agree with his revisionist views and stands.

The Soviet ambassador tries to sound us out

Here in Tirana, too, the Soviet ambassador, Ivanov, came almost every other day, sometimes to bring some book catalogue, sometimes for some unimportant information, but in fact, he came to sound us out, to learn whether I would go to Bucharest, what stand we would take, etc. However, I sent him off with the usual talk without telling him anything apart from what was known officially.

I remember that in the middle of June, Ivanov came to me in my office to "inform" me of a news item which I had heard two or three hours earlier over the radio. I understood that he was after something else, as usual. It was the period when the Soviets and Khrushchev were giving great publicity to the Paris summit conference, which was to bring "peace" to mankind. If I am not mistaken, Khrushchev had already gone to Paris, although the U-2 incident, in which an American spy-plane was shot down by a Soviet missile, had occurred.

"What is your opinion of the Paris conference?" Ivanov asked me.

"Since they have gone there let them meet," I said, "but in our opinion nothing will come out of this conference. The imperialists are what they have always been, aggressive and dangerous to the peoples and the socialist countries. Thus, I do not think that the Paris conference will yield any result."

After two days or so the conference burst like a bubble, because the Americans not only did not apologize, but, on the contrary, declared that they would continue their espionage, and Khrushchev was obliged to go home after hurling a few "smoke bombs" against the imperialists. Ivanov came back and said to me:

"Things turned out just as you said, Comrade Enver. Did you read Khrushchev's statements?"

"I read them," I replied, "and that is how he should always speak against the imperialists, because they have not become 'reasonable' and 'peace-loving,' and never can do so."

The Bucharest meeting--a blot on the history of the international communist and workers' movement. Revisionist superpower logic

Such was the situation on the eve of the Bucharest meeting, which, from beginning to end, was to remain a blot on the history of the international communist and workers' movement. The Khrushchevites were organizing it allegedly to set the date of the future meeting, but the setting of the date was a formality. The Khrushchevites had another objective. What was important to them was the taking of a series of decisions to go "as a bloc" to the future meeting of all parties. "As a bloc," according to them, meant to go closely united around the Khrushchevite revisionists in order to give unquestioning support to their betrayal of the Marxist-Leninist theory and the correct revolutionary Marxist-Leninist practice in all international and national problems. In short, Khrushchev thought that the time had come to establish his iron law over the herd he wanted to command.

However, the Khrushchevites were seeing and were convinced that two parties, in particular the Party of Labour of Albania and the Communist Party of China, were not joining this herd, which they wanted to have completely under their control. What is more, in our resolute and principled stand they saw the danger of the exposure and defeat of their secret counter-revolutionary plans. Therefore, Khrushchev had made his calculations like this: In order to make the meeting of all parties a meeting of "unity" and "solidarity," that is, total submission, accounts first had to be settled with Albania and China. Since he was an inveterate revisionist, Khrushchev's logic went even further: "As to the Party of Labour of Albania," he deceived himself, "I shall leave it aside for the time being, will not attack it directly, because after all it is a small party of a small country. The Albanians are stubborn," he thought, "they will get angry and jump up and down, but in the end they will surrender, because they have no one else to turn to. Whatever they do, I have them in my pocket." This was his revisionist superpower logic. China remained the urgent problem for Khrushchev. This is how he saw things: "Either China will submit and quietly and tamely join the herd, or I shall condemn it and throw it out of the camp forthwith. In this way I condemn China as a splitter, and neutralize the Party of Labour of Albania, and I tighten the screws on any other head-strong element who wants to kick out." In short, Khrushchev had to have a preliminary meeting to clamp down on the "disobedient," so that the future meeting would be crowned by "unity" without any splits. This is why he wanted and organized the meeting at Bucharest."

[29 Oct 80]

[Text] Tirana, 29 Oct (ATA)--Comrade Enver Hoxha writes furtheron: All the parties of the European people's democracies sent their first secretaries to Bucharest, therefore Khrushchev was not pleased that I did not go and asked:

"Why hasn't Comrade Enver come? Could you inform him that he should come?"

Hysni told him:

"Comrade Enver is not coming now. He will come to the meeting of parties, the time and place of which we shall decide here."

> The Bucharest meeting, which set out to decide a date, was ending up in a crusade. The dice had been cast, the "peace" [with] Khrushchevites had come to an end

At first we knew nothing about what Khrushchev and company were hatching up in Bucharest. However, the first radiograms from Hysni soon arrived. All we had foreseen was being confirmed. The Bucharest meeting, which set out to decide a date, was ending up in a crusade. Khrushchev insisted that the disagreements between the Soviet Union and China should be raised and discussed at the meeting, of course, in the direction and the way he wanted." Decisions can be taken at this meeting, said Khrushchev, and demanded that the other parties speak about the "grave mistakes of China," express solidarity with the Soviets and "come out with a common stand." I was completely convinced that we were facing one of the most perfiduous and savage plots and immediately raised the question in the Political Bureau.

These were days and nights of ceaseless, careful, intensive work, well-considered and thrashed out from all angles. The dice had been cast, the "peace" with the Khrushchevites had come to an end. They had opened fire and we would reply to their fire with all our strength. Now there was not and could not be any further conciliation and tactical "agreement" with the Khrushchevites. The great fight had begun. It would be a great and extremely difficult fight, full of sacrifices and repercussions, but we would carry on to the end with confidence and optimism, because we knew that right was on our side, on the side of Marxism-Leninism.

Everyone knows how the meeting developed: a voluminous material from the Soviets against China was handed out quickly, it was decided that meeting of the parties of the camp would be held a few hours later, and then all the heads of the delegations of the communist and workers' parties that took part in the congress of the Romanian party would be brought together and Khrushchev would confront them with his desire that the "Communist Party of China should be condemned as anti-Marxist, as a Trotskyite party," etc.

> Comrade Hysni Kapo, in the name of the PLA, attacked Khrushchev and the others for their anti-Marxist aims and conspiratorial methods

In the former meeting which was organized by Khrushchev, Comrade Hysni Kapo, in the name of the party and on the basis of detailed directives, which we sent him every day and frequently twice a day, attacked Khrushchev and the others for their anti-Marxist aims and the conspiratorial ax which they used, defended the Communist Party of China and opposed the continuation of such a meeting.

Khrushchev did not expect this. In the meetings which were held he talked all the time, stamping his feet and thumping his fist, became angry and spluttered with indignation. But Comrade Hysni Kapo, armed with the correct line of our party and the special instructions we sent him continually, and with his characteristic coolness and courage, not only did not yield, but gave Khrushchev as good as he got with his cutting replies.

In appearance Khrushchev aimed his many speeches at Peng Chen, who was the leader of the Chinese delegation, but always found the occasion to attack our party and its representative. His aim was not only to attack our resolute stand, but also to say to the representatives of the other parties that the Albanians "are playing the game of the Chinese."

"You, Comrade Peng Chen," railed Nikita Khrushchev, "made no mention of peaceful coexistence last evening, you did not speak about it at all. Did he, or did he not, Comrade Kapo?"

"I represent the Party of Labour of Albania," replied Hysni. "There you have Peng Chen, ask him."

"We cannot agree at all with Mao Zedong and the Chinese, nor they with us. Do you want us to send you, Comrade Kapo, to reach agreement with them?" Khrushchev asked Comrade Hysni on another occasion.

"I do not take orders from you," replied Hysni. "I take orders only from my party."

Nothing could make him budge from the courageous, revolutionary, principled stand of the party. He never flickered an eyelash at the screams and the pressure of the charlatan Nikita Khrushchev. Cool, calm and principled, Comrade Hysni Kapo declared in the name of the party that the Party of Labour of Albania considered the discussion of these questions in the Bucharest meeting to be out of order, just as it considered misplaced the efforts which the Chinese made in the beginning to discuss these matters with the trade union delegations. "The PLA considers the open or disguised polemic in the press harmful," he declared. "As to who is right, let us judge this in the forthcoming meeting of the parties."

The Khrushchevites were alarmed that the plot was going to explode in their own hands. Then the visits back and forth, the "advice" the "friendly consultations and talks" and the pressures disguised with jokes and smiles, began. Andropov, the man of backstage deals and intrigues (that is why they have made him chief of the KGB), was one of the most active and did everything in his power to compel our party to take part in the plot.

The Soviets did not fail to involve their lackeys in the other parties in this [word indistinct]. Andropov picked up a certain Moghioros and went to Hysni for a "visit." Andropov sat back implying, "I am not going to speak," and Moghioros prattled on and on about the "correctness of the Marxist-Leninist line of the Soviet party."

"What is Albania doing?" asked Zhivkov. "Only you do not agree."

"What do you mean by that?" asked Hysni.

"Nothing, I was only joking," said Zhivkov, changing his tune.

"Joking about what? You had something in mind when you said that 'Albania does not agree.'"

The stand of the PLA at Bucharest and Moscow was absolutely right and the only correct stand

While the meeting was going on in Bucharest, here we met almost every day in the Political Bureau, maintained continual contact with Hysni Kapo, instructed him, and followed with attention and concern how events were developing. By now we had reached the unanimous conclusion:

The Bucharest meeting is an organized plot against Marxism-Leninism, there Khrushchev and company are revealing their faces as rabid revisionists, therefore we are not going to make any concessions to the revisionists even if we remain alone against them all.

Our stand was correct and Marxist-Leninist. The black deed organized by Khrushchev had to be defeated.

It is a publicly known fact that our party defended China at Bucharest with Marxist-Leninist courage and adherence to principles. We were well aware of the consequences of this stand. Today, so many years after the Bucharest plot, when unfortunately the Chinese party, too, is skidding irretrievably on the rails of betrayal, revisionism and counter-revolution, I want to stress once again, that the stand of our party at Bucharest and Moscow was absolutely right and the only correct stand.

As I have written above, we had had reservations about certain views which had been expressed by Mao Zedong and other Chinese leaders, we had reserve about the 8th congress of the Communist Party of China, but after 1957 it seemed as if a positive change had been made in that party and their former opportunist mistakes had been put aside. Any party can make mistakes, but these can be corrected, and when this is done, the party is strengthened and the work progresses. In China there was no longer any talk about the 8th congress, the rightist views of Peng Dehuai had been attacked, and the "one hundred flowers" had been dropped. In their official statements and in published articles the Chinese openly attacked Yugoslav revisionism, defended Stalin and maintained theoretically correct stands on war and peace, peaceful coexistence, the revolution and the dictatorship of the proletariat.

This is not the place and time to analyse the motives which impelled the Chinese leaders, and to explain whether or not there was something principled in these stands of theirs at that period (I have written about these matters in my diary), but one thing was clear: at that period the Communist Party of China came out as a defender of Marxism-Leninism.

The Khrushchevites accused us of "breaking with the 200 millions to unite with the 600 millions." In defending China, we did not proceed from any financial, economic, military or demographic motive. If we had proceeded from these anti-Marxist pragmatic motives, then it would have been more "advantageous" for us to have lined up with the Khrushchevites, because the Soviet Union was more powerful and Khrushchev would not have hesitated to give us credits and "aid" immediately (of course, in order to demand the freedom and independence of our people, our homeland and our party in recompense later).

Hence, in Bucharest and Moscow, we did not defend China as a big country from which we might get aid, but we defended the Leninist norms and Marxism-Leninism. We did not defend the Communist Party of China because it was a big party, but we defended our principles, we defended Marxist-Leninist justice. At Bucharest and Moscow we would have defended any party or country, be it big or small numerically, provided only that it was with Marxism-Leninism. We proclaimed this loudly at that time, and time has fully confirmed it.

The struggle in defence of Marxism-Leninism against revisionism was the only basis which placed us in the one trench with the Communist Party of China.

These were the motives which impelled us to maintain the stands we did in Bucharest and later in Moscow. Our party, tempered in struggles and battles, clear about and determined on its Marxist-Leninist course, said "stop" to the Khrushchevite attack, resisted this attack heroically and did not waver in the face of pressure and blackmail of every type.

> Pressure, interference, and sabotage in the dirtiest forms. In the Albanian communists, the provocations of the Soviet revisionists ran into an insurmountable barracade, an immovable rock

Khrushchev could not forgive us for what we did to revisionism. But neither could we forgive him for what he had done against Marxism-Leninism, against the revolution, against the Soviet Union, against Albania and the international communist and workers' movement.

The open fight began. The Soviet Embassy in Tirana, through its KGB agents, intensified the pressure, interference and sabotage in the dirtiest forms. The Soviet militarymen and civilians working in Albania committed provocations against our people by attacking the leadership, alleging that we had taken wrong positions, that we attacked the Soviet Union, that we did not keep our word, and other base things. The officials of the Soviet Embassy in Tirana, with Ambassador Ivanov at the head, tried to recruit agents and provoked our officers by asking them, "Who is the army with?" and tried to work on certain elements to put them in opposition to the line of the party, etc.

This activity had two objectives: on the one hand, to incite our party and people against the leadership, by hiding behind "all the good things" which the Soviet Union had allegedly done for Albania, and on the other hand, to seize the slightest opportunity to sow confusion by exploiting the sincere love which our party and people nurtured for the Soviet Union.

At these difficult moments, the steel unity of the ranks of our party, the loyalty of the members and cadres of the party to the Central Committee of the party and our Political Bureau, once again stood out brilliantly. In the Albanian communists, the provocations of the Soviet revisionists ran into an insurmountable barricade, an immovable rock. The only treacherous elements who opposed the monolithic unity of our ranks were Liri Belishova and Koco Tashko, who surrendered to the pressure of the Soviets and, in those moments of severe storms and tests, showed their true faces as capitulators,

provocateurs and anti-Marxists. As events confirmed, both these elements had long placed themselves in Khrushchev's service, had become his agents and fought to attack our party and its leadership from within. The party and the people unmasked them and condemned them with hatred and contempt.

The provocations which the Soviet Embassy in Tirana organized ceaselessly were now co-ordinated with the external pressures which were exerted on our party and country by the Soviet revisionist leadership and its allies. These were of many kinds: economic, political and military.

> The Khrushchevites went so far as to threaten Albania with the blockade to starve us

In their efforts to overcome the resistance of the PLA and the Albanian people, the Khrushchevites abandoned every scruple, going so far as to threaten our country with the blockade to starve us. These rabid enemies of socialism and of the Albanian people in particular, refused to supply us with grain at a time when our bread grain reserves would last us only 15 days. At that time we were obliged to use our hard currency to buy wheat in France. The French merchant who came to Tirana sounded us out to find what was the reason that impelled Albania to buy grain from the Western countries when it had the Soviet Union as its "great friend." Of course, we told the bourgeois merchant nothing. On the contrary, we told him that the Soviet Union had supplied us with grain, with maize, but we had "used it for the livestock."

"Why worry yourselves about bread grain," Khrushchev had said to us. "Plant citrus-fruit. The mice in our granaries eat as much grain as Albania needs." And when the Albanian people were in danger of being left without bread, Khrushchev preferred to feed the mice and not the Albanians. According to him, there were only two roads for us: either submit or die. This was the cynical logic of this traitor.

> The PLA was not a party which comes to agreement with traitors

However, the great rift in our relations with the Soviet leadership could not be covered up for long, especially when the Khrushchevites themselves were revealing it more and more each day.

The Soviet and Bulgarian ambassadors in Yugoslavia applauded the hangman Rankovic during those days, when, at a rally in Sremska Mitrovica, he described Albania as "a hell enclosed with barbed wire," the Bulgarians published a map of the Balkans and "by mistake" included our country within the boundaries of Yugoslavia, in Warsaw, Gomulka's men forced their way into the embassy of the PR of Albania and attempted to kill the Albanian ambassador, Khrushchev tolerated and whetted the appetite of the Greek monarcho-fascists, like Venizelos, when they played the worthless card of the annexation of the so-called northern Epirus, etc. During those days, these and tens of such things occurred from all directions against our party and country. The hand of Khrushchev, who strove at all costs to force us to yield and submit was apparent, directly or indirectly, in all these anti-Albanian activities.

However, our party and people stood firm on the correct Marxist-Leninist line. We told the communists and cadres what was occurring in the communist and workers' movement, told them about the betrayal of the Khrushchevites, and the masses of the party closed their ranks around the Central Committee to face the storm which was being raised by the Khrushchevites. They found no breaches in this block of steel and the banner of the party waved and will always wave proud and unyielding in the teeth of any storm.

The Central Committee called on the party and people to close their ranks, to safeguard and strengthen their unity and patriotism, to keep cool, to avoid falling for provocations, to be vigilant and fearless. We told the party that this was the way to ensure the triumph of the correct Marxist-Leninist line which we were following. We told the party that irrespective of the fact that the enemies were many and powerful, we would triumph.

With the provocations which were hatched up in Moscow or the other capitals to vassal countries, as well as through the Soviet Embassy in Tirana and its staff, the Khrushchevites were also pursuing another aim: they wanted to fabricate and gather false facts to have as weapons in connection with the accusation that we Albanians were allegedly ruining the relations and thus counterbalance our well-founded theoretical and political arguments. Moscow was terrified of this confrontation, especially if this were to take place at the meeting of the communist and workers' parties of the world. This would be a serious defeat for modern revisionism, headed by Khrushchev and the Khrushchevites, therefore they did not want matters to reach that point. At all costs they needed our submission, or at least, "reconciliation" with us.

To this end, during the time that the Soviet Embassy in Tirana was operating through provocations, Moscow, through Koziov, wearied itself sending letter after letter to the "Central Committee and Comrade Enver Hoxha." In these letters they demanded that I should go to Moscow so that we could talk and reach agreement as "the friends and comrades we are." "We must eliminate that minor misunderstanding and disagreement which occurred at Bucharest." Neither side must allow a small spark to kindle a big conflagration," etc.

Their aim was clear: to compel our party to keep quiet, to reconcile itself to them and become collaborator in the betrayal. They wanted to drag us to Moscow and to operate on us in the "workshop" of their Central Committee in order to "convince" us. However, we knew with whom we were dealing and our answer was curt: "Comrade Enver Hoxha cannot go to Moscow except for the meeting of the communist and workers' parties. We told you what we had to say in Bucharest, we shall state our views and our stand at the coming meeting of the parties."

The Khrushchevites were more than ever convinced that neither their flattery, their credits, their sickly smiles, nor their blackmail and threats would have any effect on the Party of Labour of Albania.

The other accomplices did not fail to participate in their efforts to persuade the PLA to give up its struggle against the revisionist betrayal. A series of parties of countries of the socialist camp sent us copies of the letters

they had sent to the Communist Party of China. The Khrushchevites wanted to threaten us with these letters: "We are all in one flock, therefore consider matters well before you break away."

Those who danced to Khrushchev's tune also received the reply they deserved from us. "In Bucharest it was you who were wrong and not we. Ours was a correct Marxist-Leninist stand. We did not associate ourselves with you and we will express our opinion in Moscow."

These letters all arrived at the same time and without doubt this was something suggested and arranged by the Soviets. It was interesting that when they affirmed the alleged "complete unity of all communist and workers parties" at the Bucharest meeting, they did not define clearly on what problems this "unity" was displayed. Indeed in the letter from the Soviets, this expression did not exist. No doubt, the Soviets did not want to appear involved in this manoeuvre but had made a cat's paw of the others. However, the Party of Labour of Albania was not confused by these base and banal tactics. In our letter we gave them a clear-cut reply to these distortions of the truth and we made this reply known to all, so that all the parties which rushed to "bring the Party of Labour of Albania to its senses" would understand clearly that the PLA was not a party which comes to agreement with traitors.

The PLA did not maintain its stand out of spite or any chance caprice. No. The letter referred to, like all the other documents of this period, with their lofty adherence to principle, their sound Marxist-Leninist spirit and the profoundity of their judgments and scientific arguments, were not only a blow at the attempts to set our party on a wrong road, but also a contribution and aid which we gave the sister parties, including the Soviet party, on how the issues should be judged, where the truth lay and how it should be defended with courage and adherence to principles.

> The struggle in the preparatory commission of the Moscow meeting was only the prologue to the drama

Now we were preparing for the Moscow meeting where we foresaw that a fierce struggle would be waged. Our party had decided that at the coming meeting of the parties it would openly attack the betrayal of the Khrushchevite revisionists who had put themselves in opposition to the Marxist-Leninist theory. We would fight against their traitorous practice and policy, would defend the Soviet Union, Leninism and Stalin, would attack the 20th congress of the Communist Party of the Soviet Union and hit out at all the vile, anti-Albanian actions of the Khrushchevites and Khrushchev personally.

The battle began in the commission which was to prepare the draft-declaration for the meeting. There the Soviets had Suslov, Pospyelov, Kozlov, Ponomariov, Adropov and some others. A "solid" delegation this, saturated with "big brains" to impress us. [sentence as printed] Apart from us and the Chinese, almost all the other delegations were made of of low-ranking, third- or fourth-rate people. It was clear that everything had been co-ordinated and agreement had been reached, so that they had nothing further to discuss.

We understood clearly that the struggle in the commission was only the prologue to the drama. We foresaw that the Soviets and their hangers-on would make concessions, insignificant ones, of course, and would struggle to ensure that the declaration that would emerge from the meeting should be "neither fish nor fowl," with dubious formulations, with everything smoothed over, with some minor retreats and formulations about the "factions and groupings" in which they classified our party too. Therefore, the Political Bureau advised our delegation comprised of Comrades Hysni Kapo and Ramiz Alia, to fight for a strongly-worded declaration.

That was not all. We also foresaw the other variant, that the Khrushchevites might accept a declaration with correct and accurate formulations, provided that the meeting itself would go smoothly, without struggle or exposure, without any lifting of the piecrust to reveal what lay inside. We foresaw this because we knew they feared debate like the devil fears holy water. They would be ready to make concessions when they felt themselves hard pressed and would say: "You don't like this? Well, let us make it even stronger. Only there must be no fight. We shall make the declaration and sign it, without any condemnation of Bucharest, without principled struggle." And.. what of it? Then, when everything is over, the spokesman will come out: "Bucharest was poljezen (useful, Russian in the original). Our line pravilna, the Chinese and the Albanians were condemned for dogmatism but were corrected," while for them the declaration would be a worthless piece of paper just as it happened in fact.

This was not what we wanted. The declaration must not be a cover for the revisionists' corruption, but must be the result of the debate, struggle and exposure. In the correspondence which we kept up with our delegation in Moscow we cabled: "Our aim and task is not to collect declarations but to attack and expose the mistakes. We are not short of declarations."

> The representatives of the PLA fought hard and exposed the attempts of the Khrushchevites to include the revisionist theses of the 20th congress in the draft-declaration

A stern struggle was waged in the preparatory commission. Suslov directed the whole thing in order to have the revisionist theses of the 20th congress and approval of the line followed by the Soviet leadership included in the draft-declaration. Our comrades fought hard, exposed these views, and insisted that the formulation in the draft must be precise, Marxist-Leninist, and in unequivocal terms. "No unclarity, no inferred meaning or expression which can be interpreted at will tomorrow can be permitted," declared the representatives of our party, Comrades Hysni and Ramiz.

They attacked the theses of the Khrushchevites about the taming of imperialism and told them bluntly that "the tendency to prettify imperialism, which has been observed, is dangerous," and defended Stalin's thesis that peace can be achieved only when the peoples take this question into their own hands. "To say that it is possible to build a world without wars today (Khrushchev's thesis) when imperialism exists," stressed Comrade Hysni Kapo, "is contrary to the teachings of Lenin."

Contrary to the desires of the Khrushchevites, our delegation in the commission insisted that the draft-declaration stress that "revisionism is the main danger in the communist movement" and that Yugoslav revisionism should be mentioned specifically as an imperialist agency. Our comrades pointed out emphatically the danger of the thesis that "revisionism has been defeated ideologically" which Khrushchev and company wanted to impose on all the other parties. "Not only does revisionism exist but its horns are growing today," said Comrade Hysni Kapo.

The representatives of our party were faced with virtually a united front of revisionists. The Khrushchevite puppets, directed by Suslov and others, attacked them in order to force them to abandon the correct line which they defended. But Hysni Kapo told them, "Our party will never agree to speak according to the wishes of this or that person, or as a result of pressures exerted on it." He routed the accusations and provocations of Khrushchev's lackeys and once again condemned the plot in Bucharest and the efforts to carry it out in Moscow.

When Suslov, this revisionist devoid of any scruple, dared to throw mud at our party and likened its views to those of the counter-revolutionary Kerensky, Comrade Hysni slapped right back in his face:

"You have got the wrong address, Comrade Suslov, in talking to me about Kerensky. I want to declare that the Party of Labour of Albania was not formed by Kerensky. Kerensky is yours. We have recognized and still recognize Lenin and the party of Lenin. Our party, founded by Enver Hoxha on the basis of the teachings of Marxism-Leninism, is fighting to defend Marxism-Leninism loyally and it will continue to do so." In conclusion he added:

"Those who were the supporters of the counter-revolutionary traitor, Imre Nagy, cannot accuse the Party of Labour of Albania of being a bourgeois party or the Albanian communists as being Kerensky's.

"There's a misunderstanding here," said Suslov trying to somewhat soften the crushing effect of the reply he received.

"Everything is clear to us, although perhaps not to you," replied Comrade Hysni.

Confronted with incontestable arguments, the Soviets were obliged to retreat during the sessions [words indistinct], because Khrushchev had tweaked the ears of Suslov and company.

The Syrian, Baghdash, a very docile lackey of Khrushchev's, got up and made the accusation that our party, in criticizing the Soviet leadership, was allegedly wanting a "new communism." Hsyni Kapo made ready to reply to this base accusation from Baghdash. In a second speech which Hysni wanted to deliver in the meeting of the commission, amongst other things he stressed:

"Our party sent us here to express its views. It has not intended and does not intend to formulate any new textbook of Marxism-Leninism, nor is it seeking any

other communist movement, as Comrade Baghdash has suggested. Our party has fought and is fighting courageously for the communism of Marx, Engels, Lenin and Stalin and, because it has done this, it is in power and is successfully building socialism. You, Comrade Baghdash, have apparently made a mistake in the address. Please direct your criticisms about the 'new communism' to those who claim such a thing, the revisionists, and not to us."

Despite the persistence of Comrade Hysni, however, the Presidium of the meeting of the commission, manipulated by the Khrushchevites, did not allow him to read his second speech, the text of which is kept in the archives of our party.

As usual, besides the attacks and accusations, there was no shortage of expressions of hypocritical "friendship" towards our comrades. One day Kozlov invited Comrade Hysni to lunch, but he thanked him and declined to go.

The struggle of the delegates of the Party of Labour of Albania, the representatives of the Communist Party of China and of some other party, brought about that many of the revisionist theses were left out and Marxist-Leninist formulations were made on many questions. However, there were still unresolved issues, and about these Kozlov wanted th bring out "internal communiques." Afraid that they were losing the battle, the Khrushchevites were striving to save what they could. This was only the prologue to the fight. The real battle was still ahead of us.

We knew that it would be difficult, stern, and that we would be in the minority. But this did not frighten us. We prepared ourselves carefully for the meeting so that the judgments and analyses of our party were mature and well-considered, courageous and principled. We discussed the speech which I was to deliver to the Moscow meeting at a special meeting of the plenum of the Central Committee of our party, which endorsed it unanimously, because it was an analysis which the Party of Labour of Albania made of the problems of our doctrine and the anti-Marxist activity of the Khrushchevites. In Moscow we were to expound the unwavering line of our party, and display the ideological and political maturity and the rare revolutionary courage which has characterized our party throughout its whole heroic existence.

[30 Oct 80]

[Text] Tirana 30 Oct (ATA)--On the way to Moscow. Cool reception

In continuation of his book "The Khrushchevites" (Memoirs), Comrade Enver Hoxha writes:

The documents of the party deal at length with the proceedings of the meeting of 81 parties, with the speeches and contributions of our delegation at those decisive and historic moments through which the communist world, and especially our country and party, were passing, therefore it it not necessary to elaborate on these things.

Mehmet, Hysni, Ramiz and I, as well as a number of comrades assisting the delegation, set out for Moscow to take part in the meeting of 81 communist and workers' parties. We were convinced that we were going to a country in which the enemies had seized power and where we would have to be very careful because they would behave like enemies and would record every word and every step of ours. We had to be vigilant and prudent. We were convinced too, that they would try to break the code of our radiograms in order to discover our aims and our slightest tactic.

In passing through Budapest we were met by several of the main "comrades" of the Hungarian party, who behaved correctly with us. Neither they nor we made any allusion to the problems. We boarded the train for the Ukraine. The staff of the train looked at us coldly and served us without speaking at all, while men who were certainly security officers, patrolled the corridors. We had not the least desire to open the slightest conversation with them because we knew who they were and what they represented.

At the Kiev station, two or three members of the Central Committee of the Ukraine had come to meet us. They gave us a cool reception, and we remained as cold as ice, even refusing to drink their coffee. Then we boarded the train and continued the journey to Moscow where Kuzlov, Yefremov, member of the Central Committee, and the deputy chief of protocol of the Ministry of Foreign Affairs had come out to meet us. At the Moscow station they had also brought out a guard of honour, a band played anthems and soldiers paraded with martial step, just to keep up the custom as for all the delegations. No young pioneers came out to welcome us with flowers. Kozlov offered us his cold hand, accompanied with an artificial smile from ear to ear, and in his deep voice bid us welcome. But the ice remained ice.

As soon as the anthems and the parade were over we heard cheering, clapping and enthusiastic calls, "Long live the Party of Labour." We saw that they came from several hundred Albanian students who were studying in Moscow. They were not permitted to enter the station, but finally they were allowed in to avoid causing a scandal. Paying no attention to Kozlov and Yefremov, who never left us, we greeted our students who were shouting with joy, and together with them, we cheered for our party. This was a good lesson for the Soviets to see what sort of unity our party and people have with their leadership. The students did not leave us until we climbed into ZIL cars. In the car Kozlov was unable to find anything to say except "your students are unruly."

"No," I said, "they are great patriots and love the party and their leadership whole-heartedly."

Kozlov and Yefremov accompanied us to the residence which they had allocated to us at Zarechie, some 20-25 km outside Moscow. This was the villa where I had stayed many times with the comrades and with Nexhmije when I came on holiday. They told me once, "We have reserved this villa for Zhou Enlai and you, we put no one else here." Even in the villa they had united us with the Chinese. As we proved later with the special detector we had brought with us, they had filled the villa with bugging devices.

Comrade Enver Hoxha writes further on that on other occasions, usually they took us to the house and left. But this time Kozlov wanted to show that he was a "friendly comrade." He took off his coat and went straight into the stolovaya, which was full of bottles, snacks and black caviar.

"Come along, let us have something to eat and drink," said Kozlov, but this was not what he was really concerned about. He wanted to talk with us to learn with what opinions and predispositions we had come.

He began the conversation by saying:

"Now the commission has finished the draft and we are virtually all in agreement. The Chinese comrades are in agreement, too. There are four or five matters on which a common opinion has not been reached, but we can bring out an internal communique about them."

Turning to Hysni for his approval he asked, "Isn't that so?"

Hysni replied:

"No, it is not so. The work is not finished. We have objections and reservations which our party has presented in the written statement we forwarded to the commission."

Kozlov frowned, he did not get the approval he wanted. I intervened and said to Kozlov:

"This will be a serious meeting in which all the problems must be put forward correctly. Many questions have been put forward in a distorted way, not just in the draft, but especially in life, in theory and practice. Everything must be reflected in the declaration. We shall not accept internal notes and addenda. Nothing in obscurity, everything in the light. That is why the meeting is being held."

"It doesn't need a great deal of talk," said Kozlov.

Mehmet jumped up and said in a derisive tone:

"Even in the UN we speak as long as we like. Castro spoke there for four hours, while you apparently think you can restrict us."

Hysni said:

"You interrupted our speech twice in the commission and did not allow us to continue to speak."

"These things should not occur," I added. "You ought to know that we do not accept such methods."

"We must preserve unity, otherwise it is tragic," said Kozlov.

"Unity is safeguarded by speaking openly, in conformity with the Marxist-Leninist line and norms," replied Mehmet.

Kozlov got his reply, proposed a toast to me, helped himself to something to eat and left.

> The tactic of the Khrushchevites was to do everything in their power to prevent us from speaking out at the meeting and openly putting forward our criticisms about the crimes they had committed

The whole period until the meeting of the parties began was filled with attacks and counter-attacks between us and revisionists of all ranks. The revisionists had opened war on us on a broad scale and we replied to their attacks blow for blow.

Their tactic was to do everything in their power to prevent us from speaking out at the meeting and openly putting forward our criticisms about the crimes they had committed;certain that we would not budge from our correct opinions and decisions, they resorted to slander, alleging that the things we would raise were unfounded, would cause "division," that we were making "tragic" mistakes, that we were "at fault" and should change our course, etc. The Soviets made great efforts to brainwash all the delegations of sister communist and workers' parties which were to take part in the meeting, in this direction. For their own part, they posed as "infallible," "blameless," "principled," and as though they held the fate of the Marxist-Leninist truth in their hands.

The pressure and provocations were exerted against us openly. In the reception put on in the Kremlin on the occasion of November 7, Kosygin approached me, his face as pale as wax, and began to give me a sermon about friendship.

"We shall safeguard and defend our friendship with the Soviet Union on the Marxist-Leninist road," I told him.

"There are enemies in your party who are fighting this friendship," said Kosygin.

"Ask him," I said to Mehmet, who knew Russian well, "can he tell us who are these enemies in our party?"

Kosygin found himself in a tight spot. He began to mumble and said:

"You did not understand me well."

"Enough of that," said Mehmet, "we understood you very well, but you lack the courage to speak openly. We shall tell you openly in the meeting what we think about you."

We walked away from that revisionist mummy.

(During the whole evening the Soviets acted towards us in such a way as not to leave us alone in peace, but isolated us from one another and surrounded us, according to previously prepared stage directions.)

A little later the marshals Chuikov, Zakharov, Konev, and others, surrounded Mehmet and me. As instructed, they sang another tune: "You Albanians are fighters, you fought well, you resisted properly until you triumphed over Hitlerite Germany," and Zakharov continued to cast stones at the German people. At that moment Shelepin joined us. He began to oppose Zakharov over what he said about the Germans. Zakharov got angry and disregarding the fact that Shelepin was a member of the Presidium and chief of the KGB, told him: "Go away, why do you butt into our conversation? You want to teach me what the Germans are when I was fighting them. You were still drinking your mother's milk," etc.

In the midst of this talk of the haughty marshals, full of vodka, Zakharov, who had been director of the "Voroshilov" Military Academy, where Mehmet and other comrades were sent to learn the Stalinist military art, said to Mehmet: "When you were here you were an outstanding student of our military art." Mehmet cut short his words and said: "Thank you for the compliment, but do you want to say that this evening too, here in Georgievsky Zal, we are superior and subordinate, commander and pupil?"

Marshal Chuikov, who was no less drunk, intervened and said: "We want to say that the Albanian army should always stand with us..." Mehmet replied there and then, "Our army is and will remain loyal to its own people and will loyally defend the construction of socialism on the Marxist-Leninist road, it is and will remain solely under the leadership of the Party of Labour of Albania, as a weapon of the dictatorship of the proletariat in Albania. Do you still not understand this, Marshal Chuikov? So much the worse for you."

The marshals got their reply. One of them, I don't remember, whether Konev or some other, seeing that the talk was getting out of hand, intervened: "Let us end this talk. Come and drink a glass to the friendship between our two peoples and our two armies."

> Tell Khrushchev it is not he who decides whether Albania is or is not a socialist country

Along with this feverish anti-Albanian and anti-Marxist activity, Khrushchev and the Khrushchevites attacked us openly in the material which they sent to the Chinese, in which they also attacked them. They distributed this material to all delegations, including ours. As is known, in this material, Albania no longer figured as a socialist country as far as the Khrushchevites were concerned. Apart from this, during a talk with Liu Shaoqi, Khrushchev had said: "We lost Albania, but we did not lose much, you won it, but you did not win much, either. The Party of Labour has always been a weak link in the international communist." [sentence as printed]

The Khrushchevites' tactic was clear to us. The intention was, first, to threaten us by saying: "It depends on us whether you are or are not a socialist country, and hence, in the document which we hand you, Albania is no longer a socialist country," and second, to threaten the others that, "the Party of Labour of Albania is not a Marxist-Leninist party, and whoever defends it as such will be wrong and will be condemned together with the

Party of Labour of Albania." This meant in other words: "You communist and workers' parties that are coming to the meeting should be clear already that the things Enver Hoxha is going to say at the meeting are slanders, are the words of an anti-Soviet element."

At the meeting, it was quite clear how they had groomed Ibarruri, Gomulka, Dej. etc., well in advance.

A few days before I spoke at the meeting, Khrushchev sought a meeting with me, of course, to "convince" us to change our stand. We decided to go to this meeting in order to make it quite clear to the Khrushchevites once again that we would not budge from our positions. Meanwhile, however, we read the material of which I spoke above. I met Andropov, who during those days was running back and forth as Khrushchev's courier.

"Today I read the material in which Albania does not figure as a socialist country," I told him.

Without a blush, Andropov, who had been one of the authors of that base document, asked me, "What connection does this letter have with Albania?"

"This letter makes my meeting with Khrushchev impossible," I replied.

Andropov frowned and murmured:

"That is a very serious statement, Comrade Enver."

"Yes," I said, "very serious.... Tell Khrushchev it is not he who decides whether Albania is or is not a socialist country. The Albanian people and their Marxist-Leninist party have decided this with their blood."

Once again Andropov repeated like a parrot:

"But that is a material about China and has nothing to do with Albania, Comrade Enver."

"We shall express our opinion in the meeting of the parties. Good-bye," and I ended the conversation.

> As it turned out, the Chinese delegation had come to the Moscow meeting with the idea that the tempers could be cooled

The written indictment of China which was distributed was a dirty anti-Marxist document. With this the Khrushchevites had decided to continue in Moscow what they had not achieved in Bucharest. Once again they used a cunning, Trotskyite tactic. They distributed this voluminous material against China before the meeting, in order to prepare the terrain and to brainwash the delegations of other parties, and to intimidate the Chinese, to compel them to take a moderate stand, if they would not submit. This anti-Chinese material did not surprise us, but it strengthened the conviction we had in the correctness of the line and the Marxist-Leninist stands of our party

in defence of the Communist Party of China. The material cast a deep gloom over the participants in the meeting and would not be welcomed as the Khrushchevites expected. Splits would be created in the meeting and this was in favour of Marxism-Leninism. We could count on 7 to 10 parties which would adhere more to our side, if not openly, at least by not approving the hostile undertaking of the Khrushchevites.

As it turned out, the Chinese delegation had come to the Moscow meeting with the idea that the tempers could be cooled, and initially they had prepared a material in a conciliatory tone, tolerant towards the stands and actions of the Khrushchevites. Deng Xiaoping was to deliver it. As was becoming obvious, they had prepared a stand of "two or three variants." This seemed astonishing to us after those savage attacks which had been made on the Communist Party of China and Mao Zedong in Bucharest. However, when the Khrushchevites launched even more vicious attacks, like those which were contained in the material they distributed before the meeting, then the Chinese were obliged to completely alter the material they had prepared, to put aside the conciliatory spirit and to take a stand in reply to Khrushchev's attacks.

> Khrushchev wanted to keep all the communist and workers' parties of the world under his conductor's baton, under his dictate

There was a tense atmosphere when the meeting opened. Not without a purpose, they had put us near the speaker's rostrum so that we would be under the reproving finger of the anti-Marxist Khrushchevite "prosecutors." But, contrary to their desires, we became the prosecutors and accusers of the renegades and the traitors. They were in the dock. We held our heads high because we were with Marxism-Leninism. Khrushchev held his head in his two hands, when the bombs of our party burst upon him.

Khrushchev's tactic at the meeting was cunning. He rose and spoke first, delivered an allegedly moderate, placatory speech, without open attacks, with phrases put together to set the tone for the meeting and create the impression that it ought to be calm, that we should not attack one another (they made their attacks in advance), that we should preserve unity (social-democratic), etc. With this he wanted to say: "We don't want quarrels, we don't want splits, nothing has happened, everything is going well."

In his speech Khrushchev expressed the revisionist views completely and attacked the Communist Party of China and the Party of Labour of Albania, as well as those who were going to follow these parties, but without mentioning any names. With this tactic in his speech he wanted to warn us: "Take your pick, either general attacks without any names, but with everybody understanding for whom they are intended, or if you don't like it that way, we shall attack you openly." In fact, of the 20 puppet delegates who spoke, only 5 or 6 attacked China, basing themselves on the Soviet material.

Khrushchev and his puppets knew that we were going to declare war on Khrushchevite and world modern revisionism, and that is why they insisted, both in the commission and in their speeches, that the question of factions

and groupings in the international communist movement as well as the assessments of the 20th and 21st congress of the Communist Party of the Soviet Union and several other points, which we opposed, should be included in the draft. It was clear that Khrushchev, who had abandoned Leninism and the Leninist norms, and who, as he himself claimed, had the "heritage and the monopoly of Leninism," wanted to keep all the communist and workers' parties of the world under his conductor's baton, under his dictate. Whoever came out against his line, defined at the 20th and 21st congresses, was a factionist, an anti-Marxist involved in groupings. Obviously, this is how he prepared the stick for the Communist Party of China and the Party of Labour of Albania, and tried to take the measures to expel us from the international communist movement, which he intended to subject to his anti-Marxist ideas.

After him, 15 or 20 others, carefully brainwashed and prepared, got up one after the other and spoke on Khrushchev's line: "Nothing has occurred, there is no problem amongst us, peace reigns, everything is going well." What a disgraceful bluff by the Khrushchevites, who manipulated these hired lackeys in order to pose before us as men of principle. This was the general tone. "They had synchronized their watches," as Zhivkov had said in one of his speeches, and which Khrushchev cited in Bucharest as an "historic" saying.

> The PLA did not fall into the traps of the Khrushchevites, concocted with threats and hypocritical promises

While the meeting continued, the Soviets and Khrushchev were terrified of our speech and wanted at all costs to convince us, if not to abandon our ideas, at least to soften our stand. They sent Thorez to mediate when they saw that we refused the meeting with Khrushchev. Thorez invited us to dinner, gave us a lecture about "unity" and advised us to be "cool and restrained." Maurice Thorez certainly knew the issues, because we had discussed them together, but it was clear that now he was acting as Khrushchev's envoy. But he strove in vain. We refused every proposal and he threatened us:

"The meeting will attack you."

"We fear no one because we are on the right path," we replied.

When they saw that they had failed with Thorez, the Soviets persisted with requests that we should meet Mikoyan, Kozlov, Suslov, Pospyelov and Andropov. We accepted. At this meeting in the villa in Zarechie, the Soviets presented matters as if nothing had occurred, as if they were not to be blamed at all, but on the contrary, according to them, the blame lay on the Party of Labour of Albania. Allegedly it was we who were worsening the relations with the Soviet Union and they asked us to tell them openly why we were doing this.

We rejected these accusations and claims and demonstrated to them with incontestable facts that it was not we, but they, with their stands and actions, who had exacerbated the relations between our parties and countries.

For their part, Khrushchev's men, with utter shamelessness, denied everything, including their ambassador in Tirana, whom they called "durak" (fool, Russian in the original), when they attempted to lay the blame for their faults on him.

They wanted to get on good terms with us at all costs so that we would shut our mouths. They even offered us credits and tractors. But after exposing them, we told them, "If you do not admit and correct your grave errors, all your efforts are in vain." The following day Kozlov and Mikoyan came back again but they achieved nothing.

The time for our speech was approaching and they made their final effort--they asked that we meet Khrushchev in the Kremlin. Apparently Khrushchev was still kidding himself that he could "convince us," and we accepted the invitation, but not at the hour he set, in order to tell him that "not you, but we decide even the hour of the meeting" let alone other things. Apart from this, before we met him we wanted to send him an "oral message." We checked the residence they had allocated us with our detector and found that they had bugged us with microphones in every part of it. The only room unbugged was a toilet. When it was cold and we could not talk outside we were obliged to talk in the toilet. The Soviets were intrigued to learn where we talked and, when the idea struck them, they sent someone to put some microphones in the toilet, too. One of our officers caught the Soviet technician when he was carrying out the "operation," allegedly to repair a defect in the toilet but our man told him: "There's no need because the toilet functions well."

Our embassy, also, was filled with bugging devices and, knowing this, after we set the time of the meeting, we left the Kremlin and went to the embassy. We set up our apparatus and it signalled that they were bugging us from every direction. Then Nehmet sent Khrushchev and the others "a message" lasting ten to fifteen minutes, describing them as "traitors" saying "you're eavesdropping on us," etc., thus, when we went to the Kremlin, the revisionists had received our "greetings."

The meeting was held in Khrushchev's office and he began as usual:

"You have the floor. We are listening."

"You requested the meeting," I said, "you speak first."

Khrushchev had to accept. Right from the start we were convinced that, in fact, he had come with the hope that, if he could not avoid, at least, he could soften the criticism that we were going to make at the meeting. Then, even if this meeting did not yield any result, he would use it, as usual, as an "argument" for the representatives of other parties to tell them, "See, we offered our hand to the Albanians once again, but they persisted in their course."

Khrushchev and the others tried to cast the blame on our party and feigned astonishment when we related historically how the differences between our parties had arisen.

"I am unaware that I had any conflict with Comrade Kapo in Bucharest," said Khrushchev without a blush.

"The Central Committee of our party was not and is not in agreement with Bucharest," I told him.

"That is of no importance, but the fact is that even before Bucharest you were not in agreement with us and you did not tell us this."

Of course, the charlatan was lying and lying deliberately. Was it not this same Khrushchev who, in April 1957, wanted to arrogantly break off the talks, and even earlier in 1955 and 1956, had we not told Khrushchev and Suslov of our opposition over Tito, Nagy, Kadar and Gomulka?

Mehmet mentioned some of these facts to them and Mikoyan was obliged to mutter agreement.

But when he saw that he had his back to the wall, Khrushchev hopped from branch to branch, from one theme to the other, and it was impossible to discuss with him the major issues of principle which were in essence the source of the differences. Of course, he was not interested in touching on these things. He wanted the submission of the Party of Labour of Albania and the Albanian people, he was their enemy.

"You are not in favour of putting our relations in order," said Khrushchev.

"We want to put them in order, but first you must acknowledge your mistakes," we told him.

The talk with us irritated Khrushchev. Of course, he was not used to having a small party and a small country resolutely oppose his stands and action. Such was the chauvinist logic of overlords of these anti-Marxists who, just like the imperialist bourgeoisie, considered the small peoples and countries vassals, and their rights commodities to be traded. When we told him openly of his mistakes and those of his men he jumped up:

"You are spitting on me," he screamed. "It is impossible to talk to you. Only MacMillan has tried to speak to me like this."

"Comrade Enver is not MacMillan, so take back your words," both Mehmet and Hysni snapped back at him.

"Where shall I put them?"

"Stick them in your pocket," Mehmet said.

The four of us got up and left without shaking hands with them, without falling into their traps, concocted with threats and hypocritical promises.

As we were leaving the meeting room, Mehmet went back and said to Khrushchev: "The stone which you are throwing against our party and people will fall on your own head. Time will show this." And he closed the door and joined us.

This was our final talk with these renegades, who still sought to pose as Marxist. However, the struggle of our party and the genuine Marxist-Leninist parties and their own counter-revolutionary actions would tear the demagogical disguise from them more and more each day.

Thus, these pressures had no result. We did not give way a fraction in our stand and neither did we tone down or change anything in our speech.

Khrushchev's followers act as puppets manipulated by the strings behind the scene

I am not going to dwell on the content of the speech which I delivered on behalf of our Central Committee in Moscow, because it has been published and the views of our party on the problems which we raised are already known world-wide. I merely want to underline the way in which Khrushchev's followers reacted when they heard our attacks on their boss. Gomulka, Dej, Ibarruri, Ali Yata, Baghdash and many others mounted the tribune and competed in their zeal to take revenge on those who had "raised their hand against the mother party." It was both tragic and ludicrous to see these people, who posed as politicians and leaders "with a load of brains," acting in this way as mercenaries, as hommes de paille (men of straw, French in the original), as puppets manipulated by the strings behind the scene.

In a break between sessions Todor Zhivkov approached me. His lips and chin were trembling.

"Can we have a discussion, brat?" (brother, Russian in the original), he asked me.

"With whom are we to talk," I replied. "I said what I had to say and you heard me, I believe. Who has sent you to talk, Khrushchev. I've nothing to discuss with you, go up on the tribune and speak."

He went waxy pale and said:

"I certainly shall get up and give you your answer."

When we were coming out of the Georgievsky Zal to go to our residence, Anton Yugov, at the head of the stairs, said to us in a shocked tone:

"Where's this road leading you bratya?" (brothers, Russian in the original).

"Where's Khrushchev's road leading you, because we are on and always will proceed on Lenin's road," he told him. He dropped his head and we parted without shaking hands.

At the Moscow meeting, the delegation of the PLA carried out the task charged by the party with success, with Marxist-Leninist determination

After I delivered the speech, Mehmet and I left the residence in which the Soviets had put us and went to the embassy, where we stayed for the rest of the time we were in Moscow. When we left their residence a Soviet security officer told Comrade Hysni in confidence, "Comrade Enver did well to go, because his life was in great danger here." The Khrushchevites were capable of anything and we took our own measures. We sent the comrades of the embassy and the collaborators of our delegation out to the shops to buy food supplies. When the time we decided to leave came, we did not agree to go by aircraft, because an "accident" could happen more easily. Hysni and Ramiz stayed on in

Moscow, as they had to sign the declaration, while Mehmet and I left the Soviet Union by train and ate nothing that came from their hands. We arrived in Austria, went down by train through Italy and from Bari returned safe and sound to Tirana on our own aircraft and went directly to the reception organ on the occasion of the 28th and 29th of November. We felt a great joy because we had carried out the task with which the party charged us successfully, with Marxist-Leninist determination. The guests, too, wartime comrades, workers, officers, cooperativists, men and women, old and young were unrestrained in their enthusiasm and united firmly as a fist, as always, and all the more in difficult days.

Khrushchev and all those who followed him tried hard to ensure that the endorsed document of an international character would include the whole line of the Khrushchevite revisionists, which distorted the fundamental theses of Marxism-Leninism on the nature of imperialism, the revolution, peaceful coexistence, and so on. However, in the commissions, the delegations of our party and the Communist Party of China strongly objected to and exposed these distortions. We managed to get many things corrected, many theses of the revisionists were rejected and many others were put correctly, until the final document emerged and was accepted by all the participants in the meeting.

The Khrushchevites were obliged to accept that document, but Khrushchev had declared beforehand: "The document is a compromise and compromises don't last long." It was clear that Khrushchev himself would violate the declaration of the Moscow meeting and would accuse us as though it were we who were violating the directives and decisions of that meeting.

After the Moscow meeting our relations with the Soviet Union and the revisionists of Moscow grew continually worse until they, unilaterally, broke off these relations entirely.

On November 25, in the final meeting which Mehmet and Hysni had in Moscow with Mikoyan, Kosygin and Kozlov, the latter made open threats. Mikoyan said to them, "You cannot live a day without economic aid from us and the other countries of the socialist camp." "We shall tighten our belts and eat grass," Mehmet and Hysni told them, "but will not submit to you. You cannot conquer us." The revisionists thought that the sincere love of our party and people for the Soviet Union would play a role in favour of the revisionists of Moscow. They hoped that our many cadres who had been trained in the Soviet Union would return united as a block to split the party from the leadership. Mikoyan expressed this, saying: "When the Party of Labour hears of your stand it will rise against you." "Come and attend some meeting of our party when we raise these problems," Mehmet told him, "and you will see what sort of unity exists in our party and around its leadership."

These threats of the revisionists were not just words. They acted. The economic sabotage from Moscow and their experts mounted to a crescendo.

[31 Oct 80]

[Text] Tirana, 31 Oct (ATA)--Concluding his book "The Khrushchevites" (Memoirs), Comrade Enver Hoxha hails the steel unity in the party and the Albanian people in front of the provocations, pressure, blackmail and disruptive attempts of the Soviet revisionists till they reached to the final act--the unilateral break off of diplomatic relations with Albania.

The Final Act

Steel unity in the party and our people. The Soviet want to occupy the Vlore base. Tense situation at the base. Admiral Kasatonov goes off with his tail between his legs. The enemies dream of changes in our leadership. The 4th congress of the PLA [Albanian Party of Labor]. Pospyelov and Andropov in Tirana. The Greek and Czechoslovak delegates get the answer that they deserve to their provocations. Khrushchev's envoys to Tirana fail in their mission. Why do they "invite" us to go to Moscow again? Khrushchev's public attack on the PLA at the 22nd Congress of the CPSU. The final breach. In December 1961 Khrushchev cuts off diplomatic relations with the People's Republic of Albania.

The whole party and the people, writes Comrade Enver Hoxha, were informed of the events and the situation created especially after the Moscow meeting. We knew that the attacks, provocations and blackmail would be increased and intensified as never before. We were convinced that Khrushchev's anger would be poured upon us, our party and people, to force us to submit. We spoke to the party and people with open hearts, explained everything that had occurred, and made the dangerous activity of the Khrushchevite revisionists clear to them.

The year 1961 was turned into a year of glorious tests for the party and the Albanian people

As always, the party and the people displayed their high level of maturity, their brilliant revolutionary patriotism, their love for and loyalty to the Central Committee of the party, and the correct line we had always followed. They thoroughly understood the difficult situation we were going through, therefore they strained all their mental and physical energies to the maximum, mobilized themselves totally, further tempered their unity, and the Soviet revisionists found themselves up against a concrete wall. The year 1961 was turned into a year of glorious tests. Everywhere, in every sector, the provocations, insinuations and sabotage of the Khrushchevites were fearlessly and resolutely repelled. Nothing was allowed to pass. Moscow, followed immediately by the capitals of its satellites, began economic pressure on us. As the first serious pressure, the revisionists suspended action on the signed contracts and agreements of every kind, and later tore them up in Hitlerite style. They began to withdraw their experts, thinking that everything in our country would come to a standstill. But they were gravely mistaken

The Khrushchevites got the answer they deserved in connection with the Vlore base

The question of the Vlore base was the pretext for a quarrel. There was no doubt that the base was ours. We would never allow even an inch of our territory to be under the control of foreigners. By clear official agreement signed by the two governments, without leaving the slightest ground for equivocation, the Vlore base belonged to Albania and, at the same time, was to serve the defence of the camp. It was stated in the agreement that the Soviet Union would provide twelve submarines and a number of auxiliary ships. We were to train the cadres and we trained them, were to take over the ships and we did so, as well as four submarines. Our crews were trained and were waiting ready to take over the remaining eight.

However, the ideological differences between the two parties had begun, and with Khrushchev, they were bound to have repercussions on such a sensitive spot as the Vlore Naval Base. He and his men would distort the official agreement for two aims: First, to put pressure on us, to make us submit, and second, if we did not bend the knee, they would try to seize the base themselves, as a powerful starting point from which to occupy the whole of Albania.

Especially after the Bucharest meeting, the Soviet experts, advisers and other militarymen at the Vlore Naval Base stepped up the frictions, quarrels and incidents with our sailors. The Soviet side stopped all supplies of the materials they were supposed to provide for the base according to the agreement concluded. All the work commenced was suspended unilaterally and the provocations and blackmail were increased. The staff of the Soviet Embassy in Tirana, as well as the main representative of the general command of the armed forces of the Warsaw Treaty, General Andreyev, placed themselves at the head of this savage anti-Albanian and anti-socialist activity. Countless acts of the filthiest vandalism were carried out by the Soviet personnel at the base on orders from above, and despite this, "to be in order," they tried to accuse our people over the acts of hooligans they committed themselves. Their shamelessness and cynicism reached the point that the "chief representative," Andreyev, sent a note to the chairman of the Council of Ministers of the People's Republic of Albania in which he claimed that "unpleasant acts were occurring at the base" from the side of the Albanians. And what were these "acts?" "Such and such an Albanian sailor threw his cigarette butt on the deck of the Soviet ship," "the children of Dukat tell the Soviet children 'go home.'" "The Albanian waiter in a club told our officer, 'I am in charge here and not you,'" etc. General Andreyev even complained to the chairman of the Council of Ministers of the Albanian state that an unknown child had allegedly relieved himself secretly near the building used by the Soviets.

With completely just indignation one of our officers answered Andreyev:

"Comrade General," he said, "why do you not take up the key problems, but involve yourself with such trifles, which do not come within the authority

even of the ships' commanders, but of the boatswains and the volunteers of the front organization in charge of the residential blocks?"

Keeping cool, we vigilantly watched the development of the situation and continually instructed our comrades to act cautiously and patiently, but never to submit and never fall for the provocations of Khrushchev's agents.

"In order to avoid disorder and incidents, the Vlore base should be placed completely under the command of the Soviet side," proposed the Soviets.

We would never, never accept such a solution. It would be signing ourselves into slavery. We firmly opposed them and referred them to the agreement, under which the base was ours and ours alone.

In order to give their proposal the colour of a joint decision, in March 1961, they exploited a meeting of the Warsaw Treaty, at which Grechko insisted that the Vlore base should be left entirely in Soviet hands, and placed "under the direct command" of the general commander of the Warsaw Treaty, that is, of Grechko himself.

We firmly and indignantly opposed this proposal and, although the decision was adopted by the others, we declared:

"The only solution is that the Vlore base must remain in the hands of the Albanian army. We will not permit any other solution."

Then the Khrushchevites decided not to hand over to us the eight submarines and other ships which, according to the agreement, belonged to Albania. We insisted that they were ours and demanded that the Soviet crews should be withdrawn and everything handed over to our sailors, as had been done with the first four submarines. Besides the "chief representative," Andreyev, the Soviet revisionists also sent a certain rear-admiral to Tirana. This whole team was comprised of officers of the Soviet security services, sent to organize disturbances, sabotage and diversion at the Vlore base.

"We shall not give you the ships," they said, "they are ours."

We confronted them with the state agreement and they found another pretext.

"Your crews are not ready to take them over, they are not completely trained."

These were all pretexts. Our sailors had gone through the respective schools, had been training for years and had always proved they were completely capable of taking over the submarines and the other ships. Just a few months before the situation became tense, the Soviets themselves had declared that our crews were ready to take over the vessels that belonged to us.

On this, too, we gave them the answer they deserved. Our officers and sailors at the base carried out all the orders we gave them coolly, with determination and iron discipline. The Soviet provocations at the base were stepped up,

especially at the time when we were in Moscow at the meeting of the 81 parties. The comrades of our Political Bureau kept us informed from Tirana about everything that occurred, and from Moscow we gave them guidance and advice to keep cool, to guard against provocations and to strengthen their vigilance, as well as on the military measures they had to take in Vlore and throughout the whole country to ensure that the army was in full readiness.

The orders to the Soviet officers in Albania on how they should behave came from Moscow, where we were holding fierce debates with Khrushchev, Mikoyan, Suslov, etc., during those days.

At the first meeting we had with Mikoyan and his colleagues in Moscow, on November 10, as soon as he started speaking, he tried to frighten us:

"Your officers are behaving badly with ours at the Vlore base. Do you want to leave the Warsaw Treaty?"

We immediately gave Mikoyan the reply he deserved. After years of filling us up to the neck with his "criticism" and "advice," now he was threatening us. We mentioned the unworthy behaviour of Soviet officers at the Vlore base, especially the villainous actions of one of the Soviet "read-admirals," who, I told Mikoyan, "might by anything, but certainly not a rear-admiral." I mentioned the statements of Grechko and Malinovsky, who had also threatened that they would expel us from the Warsaw Treaty, etc.

My reply made him wriggle and squirm, trying to dodge my responsibility, but two days later Khrushchev made the same threat.

"If you like, we can dismantle the base," he shouted, while we were talking about the major disagreements created.

"Are you trying to threaten us with this?" I said.

"Comrade Enver, don't raise your voice," Khrushchev interrupted, "the submarines are ours."

"Yours and ours," I said, "we are fighting for socialism, the territory of the base is ours. We have a signed agreement about the submarines, which recognizes the rights of the Albanian people. I defend the interests of my country. Therefore, take good note that the base is ours and will remain ours."

When we returned from Moscow, the provocations at the base were increased and in order to exert pressure on and impress us, the Soviet deputy foreign minister, Firyubin, came to Tirana with two other "deputies": the first deputy-chief of the general staff of the Soviet army and navy, Antonov, and the deputy chief of the supreme staff of the Soviet nay, Sergeyev.

They came allegedly "to reach agreement," but in fact they brought us an ultimatum:

The Vlore base must be put completely and solely under Soviet command, which was to be subordinate to the commander-in-chief of the armed forces of the Warsaw Treaty.

"We are the masters here," we told them clearly and bluntly. "Vlore has been and is ours."

"This is the decision of the command of the Warsaw Treaty," threatened Firyubin, the former Soviet ambassador in Belgrade, at the time of the Khrushchev-Tito reconciliation.

We gave him the reply he deserved and, after trying to frighten us by saying, "We shall take the ships and the imperialists will gobble you up," he left, accompanied by the two other generals.

After them, the commander of the Black Sea Fleet, Admiral Kasatonov, came to Tirana with the mission of seizing not only the eight submarines and the floating dock with Soviet crews, which were also the property of the Albanian state, but even the submarines which we had taken over earlier. We told him bluntly: either you hand the submarines over to us according to the agreement, or within a short time (we set the date) you must withdraw immediately from the bay, with only those ships on which your crews serve. You are violating the agreement, you are stealing our submarines, and you will pay for this stand.

The admiral wriggled and tried to soften us, but in vain. He did not hand over the submarines, but went to Vlore, boarded the command submarine and lined up the others in fighting formation. We gave orders to close the Sazan narrows and to train the guns on the Soviet ships. Admiral Kasatonov, who had wanted to frighten us, was frightened himself. He was caught like a rat in a trap and if he attempted to implement his plan he might find himself at the bottom of the sea. In these conditions the admiral was obliged to take only the submarines with Soviet crews, and he sailed out of the bay back home with his tail between his legs, a great evil was removed from our land, once and for all.

In the last year in particular, the Soviets at the Vlore base committed innumerable vile and revolting acts. However, at those delicate moments the group of our officers at the base capably and intelligently defended the party against the plotters, provocateurs and chauvinists, who corrupted the feelings of the Soviet sailors to the ultimate degree. They holed the reservoirs, smashed the beds and windows in the buildings where they lived and worked, etc. They tried to take away everything, down to the last nut and bolt, but did not succeed in their aims. We took a stern stand, defended our rights properly and replied to the attacks and provocations with cool tempers, while they lost their heads.

> Efforts made by the Khrushchevites to split the Party of Labour of Albania. The steel unity of our party around its Central Committee was outstanding at the 4th Congress of the P.L.A.

The Soviet revisionists were furious. They committed every act of sabotage and broke the agreements. They were compelled to recall Ambassador Ivanov

and sent a certain Shikin in his place. He was to try to prepare the final act of the hostile work of the Soviet revisionists--to split the party. The Khrushchevites hoped to bring about the split at the 4th congress which we were preparing. They deceived themselves that what they had failed to achieve in other ways, might occur at our congress. They expected that the congress would denounce the line pursued by the leadership of our party in Bucharest and Moscow. At that period, the bourgeoisie and reaction, informed and directly and indirectly incited by the Khrushchevites, Titoites and their agents, had launched a campaign of slanders against our country and party. They hoped that the revisionist cataclysm would occur in Albania, too. "Enver Hoxha, chief of the Albanian Communist Party, will soon be relieved of his post, as a result of the conference of communist leaders of the world which was held last month in Moscow," reported a Western news agency, in a commentary stemming from Belgrade, on the eve of the opening of our 4th congress.

"Observers of Eastern Europe say that Moscow will use its influence to bring about changes in the Communist Party of Albania, which took a hard line at the Moscow conference,"said the imperialist news agencies during those days, and continued: "Although even Communist China accepted the Soviet line, the Albanians have persisted in their stand."

We read these reports of the sooth-sayers of imperialism with scorn and knew very well who had a hand in compiling them.

At the meeting which was organized on November 25, 1960, between the delegations of the PLA and the CPSU, Mikoyan personally, told comrades Mehmet and Hysni:

"You will see what difficult situations will come about within your party and people with this change you are making in your relations with the Soviet Union."

We heard such threatening statements, sometimes open, sometimes camouflaged, from all directions.

Nevertheless, we calmly continued our course: We invited delegations from the Communist Party of the Soviet Union and from other communist and workers' parties. From the Soviet Union came Pospyelov and Andropov, from Czechoslovakia a certain Barak, who was minister of the interior and was later jailed as a thief, etc. Let them come and see with their own eyes what the Party of Labour of Albania and the Albanian people were, let them try to achieve their secret aims. They would catch their own fingers in the trap.

The congress opened in an atmosphere of indescribable enthusiasm and unity of the party and our people. The opening day was turned into a real people's celebration. The people, singing, dancing and carrying flowers, escorted the delegates to the entrance of the building where the congress was to be held and while the work began within, the celebration continued outside. This was the initial reply which the Khrushchevites, Titoites and other revisionists received right at the start. They would continue to receive other crushing blows inside.

It had never crossed the minds of Pospyelov, Andropov and their lackeys that they would find themselves in the midst of such a fire, which warmed and strengthened our hearts and seared and blinded them. Throughout all the days of the congress, the steel unity of our party around its Central Committee, the high degree of maturity and keen Marxist-Leninist sense of the delegates, the vigilance, keen-wittedness and readiness of every delegate to give the proper reply to any provocation on the part of revisionist "friends," were outstanding.

> Pospyelov's speech was received with contempt by the delegates to the 4th Congress of the PLA

Pospyelov's speech, with which the revisionists hoped to create the split in our congress, was not applauded at all. On the contrary, it was received with silence and contempt by the delegates to the congress. From his box Andropov openly directed his puppets as to when they should clap, when they should remain seated, or rise to their feet. It was a ludicrous spectacle. They discredited themselves completely, both with the stands they adopted and with the base things they did.

> The representative of the C.P. of China Li Xiennian "advised" us to be patient and cautious and not to break off the talks with Khrushchev. We went about with our own business

The representative of the Communist Party of China at the congress was Li Xiennien, who sat in stony silence through the sessions when he saw the enthusiasm of the delegates. From the tribune he said some good words addressed to our party, but "advised" us to be patient and cautious and not break off the talks with Khrushchev. We went about our own business.

> The Khrushchevites intensified their interference, pressure and blackmail

When they saw that our ranks were very solid, without any sign of a breach, the Khrushchevites intensified their interference, pressure and blackmail. They provoked us everywhere.

"What is this?" Andropov angrily asked one of our comrades, a functionary at the apparatus of the Central Committee of our party who was accompanying him. "Why do the delegates cheer so much for Enver Hoxha?"

"Go and ask them," said our comrade. "But tell me," he continued, "for whom should they cheer, apart from Marxism-Leninism, the party and its leadership, or do you intend to propose that we should put someone else at the head of the party?"

The blow went home and Andropov pulled in his horns. The Greek delegate and Rudolph Barak of Czechoslovakia were brought into action. Apart from other things, the Greek delegate considered incorrect the reply which we had given to the anti-Albanian talk which Sophocles Venizelos had held with Khrushchev about "northern Epirus." "Venizelos is not a bad man, he is a progressive bourgeois democrat," the Greek delegate told our comrade accompanying him.

Our comrade replied that the views of the "democrat" Venizelos about "northern Epirus" were no different from those of the rabid chauvinist and anti-Albanian, Eleutherios Venizelos. Apart from other acts, even the speech which the Greek delegate was to deliver at our congress was in an openly provocative spirit, and Mehmet, becoming angry, gave the Greek the reply he deserved in front of everybody, by describing him with this true name: provocateur.

Khrushchev's other agent, Barak, also exploited the occasion along with others, who through actions worthy of the dirtiest scoundrels, tried to vent their spleen, but only discredited themselves and those who had sent them even more. They operated from the boxes, or in the intervals between sessions. In the meantime, the Soviet journalists had also gone into "action."

What did they and those who commanded them not do in order "to discover" some shortcoming at which they could grasp to launch their attack. But they achieved nothing. The congress went like clock-work. With a profound sense of responsibility, the Albanian communists drew up the balance of the past and defined the tasks for the future. However, the revisionists could not go away entirely "empty-handed," because they would have to render account to their masters. And they found the "shortcoming":

"There are many ovations and consequently the sessions go on for more than one hour and a half," an alleged journalist of TASS, just arrived from Moscow to follow the proceedings of the congress, "protested" angrily.

"What can we do? Should we tell the delegates not to applaud?" asked our comrade accompanying him, in a sarcastic tone.

"The time-table should be respected, an hour and a half and tochka," (full stop, Russian in the original) said the "journalist."

"However, it's not the journalists, but the elected Presidium that presides over the congress," replied our comrade. "Nevertheless, if you consider it reasonable, make some protest against ovations..."

> At a meeting with the envoys of Khrushchev. Khrushchevites' hostile demands, which concealed sinister plans

Before they departed after the congress, Pospyelov and Andropov sought a meeting with us.

"We want to talk about some matters which have to do with our mutual comradely relations," said Pospyelov, who spoke first. "We want to strengthen the friendship between us, to have a strong friendship."

"This is what we have always wanted, too," I said, "but don't think that this close friendship will be strengthened through the 'holy spirit.' This friendship can be achieved by applying the principles of Marxism-Leninism and proletarian internationalism correctly and consistently."

I went on to list to Pospyelov some of their anti-Marxist and anti-Albanian actions, and I stressed that there could never be friendship on the course which the Soviet leadership was following.

"You are interfering in the internal affairs of the Soviet leadership," he said.

I told Pospyelov: "To say that this or that view or action of this or that leader is not right, is not in any way interference in the internal affairs of a leadership. We have never intended to interfere in your internal affairs. However, you must understand clearly that neither have we permitted, nor are we going to permit the Soviet leadership to interfere in the internal affairs of our party in any way. Every party is master of its own house.

"Is it true," I continued, "that there are major ideological differences between our two parties. We told you of our opinions about these things openly and according to all the Leninist norms. You reacted angrily to this, and apart from other things, extended these ideological differences to other fields. Mikoyan wanted to frighten us with 'the difficult situations' which would emerge for us in the party and this was a threat. You have seen our situation," I said, "therefore tell Mikoyan what you saw at the 4th congress of our party and tell him to what degree our party is 'split.'"

The aim of these scoundrels was to tell us that, among other things, all the agreements and protocols on credits, which they had accorded us for the five-year plan, would have to be reexamined. To this end they demanded that I should go to Moscow.

We resolutely rejected these hostile demands, which concealed sinister plans.

"The economy is another field to which you have extended the ideological differences which exist between us," he told Pospyelov and Andropov. "This is not Marxist, nor is it befitting a party and state such as yours."

"We do not understand you," interrupted Pospyelov. "In what do you see this?"

"There are scores of facts," we said, "but let us look at your stand towards our economic delegation, which went to the Soviet Union last November. This delegation was kept hanging around in Moscow for months on end. No one received it, no one listened to it. Apart from other attempts, our economic delegation sent more than 20 letters and telegrams to the respective organs of your side, just during the days of its stay there, but no reply came, nothing was discussed and nothing was signed. Do you think that we don't understand these stands of yours, which have the smell of blackmail?"

"When the Yugoslavs go there you finish the talks with them in 10 days," said Mehmet.

"The war minister of Indonesia went to Moscow and agreements were signed immediately. You gave him big credits for armaments," I said, "while you neglected little socialist Albania, with which you have agreements."

"You must come to Moscow for talks," they said, repeating Khrushchev's constant demand that I should go there.

"We have replied to you in writing," I told them. "There is no reason for me and Mehmet to go to Moscow to discuss problems which have been discussed and decided long ago. As you are well aware we have discussed and jointly drafted the agreement on credits for our coming five-year plan, not just in principle, but giving details of all the projects. On the basis of this agreement, Soviet experts came here, drew up the designs, etc., while now you want us to go back there to re-examine the agreements. Why? We cannot agree to remove one comma from all those very detailed documents, which have been signed at the top level by the two sides," I replied to the revisionists, and went on:

"There is no reason for me to go to Moscow and I do not want to go. As for the agreements, there are two ways open to you: either you respect them or you violate them. It depends on you which way you choose. If you violate the agreements and continue your hostile anti-Marxist course, the world will judge you and condemn you. We told you openly, like Marxists, everything we had against you. Now you must choose: either the road of Marxist-Leninist friendship or the road of hostility."

The Khrushchevites became more furious and more shameless in their actions. Imperialist-revisionist plot to launch a military aggression against Albania

As was natural for them, the Khrushchevites chose the road of hostility to the People's Republic of Albania and the Party of Labour of Albania. They became more furious and more shameless in their actions. As is known, at that period we discovered and smashed the plot of several imperialist and revisionist foreign powers, which, in collaboration with their agents in our ranks, wanted to launch a military aggression against our country and people. At the 4th congress of the party we announced that the plot had been discovered and that the conspirators, Teme Sejko and others, would render account to the people's court. The conspirators admitted everything with their own mouths.

Precisely at this time, our "friends," members of the Warsaw Treaty, headed by Khrushchev, apart from their threats, declared to us: "A special commission of the Warsaw Treaty should come to Albania to verify how well-founded were the things you said about the plot." Their perfidy had gone as far as this. They wanted to come to Albania to achieve what the others were unable to achieve. For this, too, we gave them the reply they deserved.

Khrushchev's final act against Albania

Khrushchev was left without another move. He tried all his manoeuvres, cunning, traps, and blackmail on us and none of them yielded results. Then he came out openly against us. At the 22nd congress of his party, in October 1961, Khrushchev publicly attacked and slandered the Party of Labour of Albania.

We replied at once, openly, to his base anti-Albanian attacks and through the press made known to the party and the people both Khrushchev's accusations against us and our stand towards those accusations and attacks.

Khrushchev immediately received not only our reply but also that of the whole Albanian people: In thousands of thousands of telegrams and letters which came to our Central Committee from all corners of the country, from the most varied strata of the population, the communists and our people, while expressing their profound and legitimate indignation at the treacherous actions of Khrushchev, supported the line of the party with all their strength and pledged that they would defend and apply this correct line to the end in the face of any test or sacrifice.

Then Khrushchev undertook his final act against us--the only thing left undone--unilaterally, he broke off diplomatic relations with the People's Republic of Albania. This was his final desperate gesture of revenge: "Since they did not want to stay under my wing, let the imperialists gobble them up," he thought. But he was terribly wrong, just as he had been wrong all his life. We gave a resolute reply to his hostility and that of the Khrushchevite lackeys. Heroically and with Marxist-Leninist maturity, the Party of Labour of Albania resisted the attacks of modern revisionism led by Khrushchev and counter-attacked hard, with exemplary solidarity, with great Marxist-Leninist clarity and with indisputable and undeniable arguments and facts.

> The struggle of the PLA against the treacherous, fascist, social-imperialist activity of the Khrushchevite and Brezhnev revisionists did not cease and will not cease

The revolutionary words and opinions of the Party of Labour of Albania were listened to with respect everywhere in the world. The proletariat saw that this small party was successfully and gloriously defending Marxism-Leninism agaisnt the revisionist cliques that were in power. Modern revisionism, headed by Soviet revisionism, was exposed and is still being exposed with revolutionary courage by our party.

The revisionist Soviet Union has suffered colossal defeats in every field. Its pseudo-Marxist disguise was torn from it and it lost the prestige and authority which had been forged by Lenin, Stalin and the Bolshevik party which they led. The communists, the revolutionaries and fighters for people's liberation were not to be deceived by the demagogy of the Khrushchevite revisionists. Our party has made, is making and always will make its contribution to this revolutionary work.

Thus, the relations of socialist Albania with the revisionist Soviet Union came to an end. However, our struggle against the treacherous, fascist, social-imperialist activity of the Khrushchevite and Brezhnev revisionists did not cease and will not cease. We have attacked them and will go on attacking them until they are wiped from the face of the earth, until the joint struggle of the peoples, revolutionaries and Marxist-Leninists all over the world triumphs everywhere, including the Soviet Union.

One day the Soviet people will sternly condemn the Khrushchevites and will honour and love the Albanian people and the Party of Labour of Albania, as they loved us in better times, because our people and party fought unflinchingly against the Khrushchevites, who are our common enemies.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

REPORT ON CONFERENCE OF FIREFIGHTERS FROM SOCIALIST COUNTRIES

Bucharest PAZA CONTRA INCENDIILOR in Romanian Sep 80 pp 10, 11, 14, 15, 16

[Article by Mircea Marinescu]

[Text] The 14th Conference of Firefighters From Socialist Countries was held in Brasov Municipality from 2-9 September 1980. In the attendance were delegates of firefighters from the People's Republic of Bulgaria, the Czechoslovak Socialist Republic, the Korean People's Democratic Republic, the Republic of Cuba, the German Democratic Republic, the Polish People's Republic, the Hungarian People's Republic, the Union of Soviet Socialist Republics, and the Socialist Republic of Romania. Invitees included officers and engineers from the Firefighters' Command, commanders of some county firefighters' groups, experts from design and research institutes, representatives of a number of enterprises and institutions, and newsmen.

After the opening of this important meeting, George Homostean, member of the Central Committee of the Romanian Communist Party, minister of interior, conveyed a warm welcome to the foreign guests. He pointed out the concern shown in this country by the party and state executives and party secretary general Nicolae Ceuasescu himself for the activity of protection of human life and the national wealth against fire. After emphasizing that the proceedings of the conference which is held in this country provide an opportunity for asserting our party and state foreign policy of friendship and cooperation with the socialist countries, with all countries in the world, the minister wished every success to the participants of the conference and stressed that the conference's role is to upgrade the humanitarian and noble work of firemen in protecting human life and material assets from fire.

On behalf of the delegations in the attendance thanking for the greeting were the heads of the Soviet and GDR delegations. The participants of the conference then saw the philatelic show "Pompierfila IV" and the exhibit of posters which displayed instructional-educational material combating various causes of fire printed in most countries represented at the conference. Both shows were well appreciated.

Subsequently, proceeding from the idea that the tremendous economic development of each socialist country and the rapid introduction of scientific and

technical advances in production require the constant upgrading of the activity of protection against fire, the participantsin the conference proceeded to debating the topics set forth at the September 1978 meeting in Riga (USSR), that focus on the current concerns of firefighters' bodies in the participant countries.

For instance, the report "Greater Safety Against Fire in High-Rise Buildings" given by the Polish delegation aroused great interest. The matter discussed, the recommendations made, and the conclusions presented at the conclusion of the debates by the head of the Romanian firefighters' delegation, major-general Gheorghe Briceag, commander of the firefighters, pointed out the chief directions in the effort of firefighters' organs to handle the problems posed by safety against fire in high-rise buildings. They involve the determination of designers to follow the safety regulations prescribed; continuation of research for a technical solution to the problems posed by smoke and toxic gases, so as to prevent the occurrence of human victims; ensuring of the evacuation of persons; elimination of panic, which, as a rule, creates difficulties in the firefighters' work, and so forth. In light of the Soviet experience gained during the construction of the Moscow Olympic facilities, the participants in the conference endorsed the Soviet firefighters' delegation's proposal on continuing to study the problem of protection against fire in high-rise buildings, with a subsequent exchange of information in this area.

On the topic "Upgrading Statistics in Protection Against Fire," presented by the Czechoslovak delegation, those who participated in the discussions were unanimous in stating that statistics is a tool which could be an important factor in improving prevention and control and also in making effective decisions in protection from fire. Experience, however, shows that the data available at one point on a fire are not sufficient and that there must be a greater concern of the firefighters' units in training the personnel that provides the statistical figures. The participants of the conference endorsed the proposal on the Soviet and Czechoslovak delegations' continuing their research in this field and providing the data obtained to the parties concerned.

Another topic which aroused great interest involved "Prevention of Fire in High Plant of Chemical and Petrochemical Combines," discussed by the delegation of Romanian firefighters. The report and speeches of the Hungarian, GDR, Bulgarian and Soviet delegates pointed out the great fire hazards involved in chemical and petrochemical plant with tall columns and hence, the constant concern of firefighters and specialists to eliminate the factors that generate explosions and fire. The speakers also pointed out that it was necessary, in the designing stage, to specify adequate measures for prevention, provision of facilities with efficient extinguishing equipment and provision of measurement and control apparatus which adequately signals the critical levels. The complexity of the problems involved in the protection of the facilities concerned during operation (observance of the technical parameters, ensuring of tightness, quality of control and inspection and training of personnel) focused the attention of the participants,

who agreed with the proposal for achieving a permanent exchange of information in this area.

The report " Safety Regulations Against Fire in Large Agricultural Facilities (Large Warehouses, Silos, Complex Zootechnological Units), in Designing, Building and Operation" was presented by the Hungarian firefighters' delegation. The matters surveyed in detail, with specialized data on the conditions of location, the technical measures characteristic of the various functions of agricultural facilities, the procedures for storing and ensilaging the feed, plus the additions provided by speakers who discussed the report and enlarged on issues involved in heating systems of large zootechnological facilities, evacuation of animals and ensuring intervention in fire extinguishing were factors in achieving a useful exchange of experience and clarification of the questions tackled.

Furthermore, the participants listened with great interest to the reports given by the delegation of Soviet firefighters on the "Current Status and Prospects for the Development of Means of Extinguishing With Powder" and "Use of Scientific Methods of Control in Protection Against Fire." During the debate on the first topic emphasis was placed on the efforts which are being made to obtain powder that is very effective in extinguishing and recommendations were made for mutual transmission, for the purpose of testing and comparison, of samples of extinguishing powder produced in the countries represented at the conference and documentary material on methods and equipment employed to determine their qualitative features. Moreover, on the second report, recommendations were made for intensifying the study on the scientific control of prevention and extinguishing of fire and for organizing national debates on this matter (together with economic experts) so that at the next conference each country may provide the conclusions drawn.

Great interest also was aroused by the report "Unified Terms in Technically Characterizing Substances and Materials" given by the delegation of GDR firefighters. The participants in the deliberations pointed out the need for expanding the exchange of documentation on the standardization of the specialized terminology and for requesting the national standardization organizations to develop and supplement the terminology standards with the input of experts who use the notions involved in the context of international cooperation.

The participants in the Brasov conference also warmly received the announcement of the head of the Polish firefighters' delegation, colonel Tomasz Ostrovsky, regarding his country's agreement on organizing in 1982 the 15th Conference of Firefighters From Socialist Countries and the 11th International Firefighters' Contests. Equally warmly received was the announcement of the head of the Hungarian firefighters' delegation, colonel Karoly Varga, on the organization of the 1984 conference and contests in Hungary.

At the Brasov conference, in the protocol concluded on the basis of the proposals made by the participating countries, it was stated that at the next conference, which will be held in Poland, the following topics will be

developed and discussed: "Fire prevention and extinguishing in mechanized warehouses with tall stacks;" "Fire protection in museums, art galleries and historical structures;" "Fire prevention and extinguishing in major cable centers. Standards in designing and operation of cable centers. Methods for determining the combustion characteristics of electrical cables. Methods and means for extinguishing fire;" "Psychological training of firefighters for action under special conditions;" "Optimal methods for directing the action of firefighters, by using modern means of television, radio and computer technology;" "Conclusions and lessons derived from big fires."

Moreover, the conference recommended that firefighters from participating countries focus their efforts on resolving problems which will be considered in specifying the topics for the 16th meeting in 1984. The topics include: "Tactical procedures and technical methods used to ensure saving people during a fire;" "Modern trends in building and utilizing fighting machines for various types of fire;" "Research on determining fireproof substances for man-made fibers and yarn;" "Methods and substances for extinguishing light metal fires;" "Evolution of fires in light of the nature of combustible substances and their burning speed;" "Research on the prospect for using airplanes in extinguishing building fires" and so forth.

The 14th Conference of Firefighters From Socialist Countries developed in a spirit of full understanding and friendship, of solidarity and fraternal cooperation. It opened new and broad prospects for fire prevention and control and marked a significant stage in the further development of the cooperative relations among firefighters from participating countries. Moreover, the warm reception extended to the members of the delegation by minister George Homostean and by Ion Bujenaru, first vice chairman of the People's Council of Brasov Municipality, the cultural-artistic and sports events held on the Tractorul Stadium, which was the scene of the 10th International Contests of Firefighters and of the exhibit on the modern fighting technology used by Romanian firefighters, plus the visits organized in Brasov Municipality and in the adjacent areas and counties closely acquainted the guests with the accomplishments of working people in this country, the scenic beauty of Romania and the well-known hospitality of the Romanian people.

Views of Guests

Lieutenant Colonel Engr Georgi Stefanov Bozukov, head of the Bulgarian firefighters' delegation: The proceedings of the 14th Conference of firefighters From Socialist Countries in Brasov were characterized by a high scientific-technical standard. Due to the organizers' efforts, the tasks set were successfully completed. The conference pointed out the trend toward resolving the problems with which firefighters' bodies are confronted in a more profound manner and at a high scientific level, for the purpose of expanding the activity of protecting material assets. We also thank our hosts for the fact that, simultaneously with the examonation of the topics at the conference, they provided us with the opportunity for getting acquainted with fire prevention and control in the Socialist Republic of Romania. The same as in the other socialist countries, fire prevention and control in Romania has

developed considerably. Primarily noticeable is the significant involvement of citizens in fire prevention.

Moreover, we have been especially impressed with the provision of technical equipment for the Romanian firefighters, who now have ample and diversified technical facilities, such as, for instance, the turbojet. Significant also is the structuring of the interaction between the military units and civilian units of firefighters.

The conference provided us with the opportunity for discussing a number of issues and also for getting acquainted with life in firefighters' units in some towns and regions. The outstanding tidiness, the order and discipline have impressed us considerably.

All this results in high appreciation for the 14th Conference of Firefighters From Socialist Countries.

., myself, am grateful to the organizers of this conference and to Romanian firefighters who provided the conditions for discussing the major problems of prevention and control at this stage, for usefully exchanging opinions and getting to know the latest accomplishments in our area of activity.

I want to use the opportunity provided for wishing the Romanian firefighters new successes in the fight to protect the wealth of the socialist country.

Major Engr Ian Olsansky, head of the Czechoslovak firefighters' delegation: Prepared in detail, the proceedings of the conference developed on the highest level, as the proceedings of such a conference of firefighters from socialist countries ought to develop. From the outset I would like to point out that the organizers and the other agencies on our visit gave us much consideration, and we wholeheartedly thank them for this. The decisions taken at the conference must be discussed and examined by the proper bodies of each participating state. Steps must be taken so that all the proposals made at the conference may be implemented by everyone, in compliance with the conditions in the state involved.

I want to wish good health to the readers of this journal and to the Romanian firefighters, to obtain, under the leadership of the Romanian Communist Party, new achievements in fire prevention and control.

Senior Colonel So Denk Yong, head of the delegation of firefighters of the Korean People's Democratic Republic: We are grateful to the Romanian comrades for organizing the 14th Conference of Firefighters From Socialist Countries. We point out not only the conference but also the international contests in which the Romanian firefighters recorded outstanding results. The conference and the contests were valuable factors in strengthening the friendship among firefighters from our socialist countries and also involved a useful exchange of experience for working as well as possible. We shall use in the future all that we have learned here, the experience of the other socialist countries. The conference and the other events were very well organized by the Romanian comrades, who prepared a very detailed work program.

We wish the Romanian firefighters even greater successes in their work to protect the national wealth against fire.

Lieutenant Colonel Engr Rafael Pupo Santiesteban, head of the Cuban firefighters' delegation: We feel that this meeting, this conference was a positive thing. The reports given were of a very good quality. Of course, our activity has not reached the high level which was attained in the other socialist countries. That is why the discussions held at this conference will be of great use in our future activity.

The scientific and technical standard of the reports given and the proper organization provided optimal conditions for the development of the conference proceedings.

The Romanian firefighters who took part in the sports contests obtained good results. I take this opportunity to warmly congratulate them.

Colonel Herbert Pohl, head of the GDR firefighters' delegation: The participants in the 14th Conference of Firefighters From Socialist Countries thank the local bodies and the organizers of this conference, that was characterized by a high scientific standard. It was determined that the socialist countries have obtained added results in socialist construction. The firefighters in socialist countries do their share in building socialism in their countries. This was also reflected in the reports given and in the discussions held on these reports.

We have been very impressed with the progress of fire prevention and control in the Socialist Republic of Romania. We visited with several firefighters' units and noted their good provision with technical equipment for accomplishing their missions.

The conference was instrumental in strengthening the friendship and cooperation of firefighters. Therefore, we thank the organizers for the good conditions provided, forthe amity with which we were surrounded. We also thank the organizers for the opportunity created for our getting better acquainted with the people of this country and for witnessing the successes obtained in building socialism in Romania. We, all of us, are making efforts to stabilize peace and therefore we wish to obtain greater and greater successes.

In regard to the international contests, I would like to point out that the sports competitions of firefighters have helped to strengthen their fighting capacity. We have been impressed with the good results obtained by the Romanian team and wish to take this opportunity for warmly congratulating them.

We are returning home with the firm belief that the proceedings of the conference will help to upgrade the future activity of firefighters.

Again we thank for the efforts made for the success of the events in which we took part.

Colonel Engr Tomasz Ostrovsky, head of the Polish firefighters' delegation: The 14th Conference of Firefighters From Socialist Countries was very well organized. It discussed a wide range of topics on fire prevention and the methods and equipment for fire control. I wish to emphasize that this conference was prepared in detail by the organizers and this made it possible for us to survey and discuss all the topics proposed.

I am confident that the exchange of knowledge on fire prevention and control in various areas, the exchange of information and experience conducted at the conference were of great use to all participants. I also believe in the usefulness of sports competitions of firefighters from the participating countries. This kind of meeting of firefighters from socialist countries for discussions on fire prevention and control and for international sports events are organized every 2 years. Consequently, the next conference and contests will be organized in the Polish People's Republic.

Now that the conference has concluded and all of us will be going home, I wish to wholeheartedly thank the organizers for their concern with the proper preparation and development of the conference and sports events. I take this opportunity to point out the outstanding training of the Romanian firefighters and congratulate them for taking the first place in the contests.

We are very moved by the warmth of the reception, by the hospitality and attention shown to us at every step by the organizers and everyone we met on various occasions.

We take home impressions of your beautiful and rich country.

Colonel Karoly Varga: It is our view that we have attended a well prepared conference. The Romanian comrades have provided the best possible conditions for the successful development of the conference proceedings. The topics included in the agenda were well selected and meet current requirements. They involve a useful experience which all will be able to use in their own activity.

At the conference, by common consent, were specified the most topical issues which we must handle, in the context of mutual support and information. The future tasks on which we have agreed involve the need for further cooperation in the area of fire prevention, for sharing of the results obtained. As we agreed on this matter, we may firmly assert that everyone's work will improve.

We also attended contests of a high caliber and noted that each participating country made efforts to obtain best possible results. All this provides lessons for our delegation and, I believe, for the other delegations as well.

Colonel Dimitri Ivanovitch Iurchenko, head of the Soviet firefighters' delegation: The conference proceeded at a very high scientific-technical level and, consequently, was of great use to all the participating countries. This

conference discussed the problems which concern us all and devised approaches to handling them.

The delegates to the conference are pleased with its high level in terms of preparation and thank the organizers for this. We also thank them for having organized the 10th professional contests which were very interesting. Moreover, the opening and closing mass events were very impressive.

I would like to also thank the organizers for the opportunity afforded for seeing the firefighting technique and the provision with specific equipment. We thank the hosts for the opportunity afforded for visiting the splendid city of Brasov and its environs and for getting acquainted with its industrious people and the results obtained. We wish them even greater further successes.

Furthermore, we were very impressed on visiting the firefighters' units in the city of Brasov, where we noted perfect discipline, tidiness and a high level of training, both in the area of town fires and fires in industrial facilities.

LABOR CODE APPROVED BY PEOPLE'S ASSEMBLY

Tirana GAZETA ZYRTARE in Albanian No 4, Jul 80 pp 65-92

[The Labor Code of the People's Socialist Republic of Albania; passages between slantlines printed in boldface]

[Text] The Labor Code of the People's Socialist Republic of Albania

The People's Assembly of the People's Socialist Republic of Albania has decided:

To approve the Labor Code of the People's Socialist Republic of Albania.

Chapter I

/Content, Bases and Tasks of the Labor Legislation of the People's Socialist Republic of Albania/

Article 1

The Labor legislation expresses the will of the working class and of the other working masses and is an important tool of the state of the dictatorship of the proletariat to regulate the social labor relations of workers and of employees, Liberated from exploitation of man by man in the enterprises, institutions and social organizations.

Article 2

Labor legislation is guided by the policy of the Albanian Workers Party and is based on the ideology of the working class, on Marxism-Leninism.

Labor legislation stems from the Constitution of the People's Socialist Republic of Albania.

Article 3

Labor legislation has the task of assisting the building of socialism in the country, in accordance with the principle of relying on one's own forces, of helping in the perfecting of socialist organization of work, of stimulating the uninterrupted increase of labor productivity, the rapid development of social production and the continuing improvement of the wellbeing of the workers.

Labor legislation ensures the full implementation of the rights and tasks of workers and of employees, serves to educate them to maintain a socialist attitude toward work and socialist property and to strengthen proletarian discipline at work, in the struggle against bureaucratic and liberal manifestations.

Chapter II

/The Main Principles of Labor Legislation/

Article 4

Labor legislation adheres to the principle of the development of the class struggle in the field of socialist labor relations.

Article 5

The enterprises, institutions and social organizations, in protecting and developing socialist labor relations, execute the mass line and rely on the principle of democratic centralism, by interweaving centralized and planned management with the initiative and the creative thought of the workers and employees.

Article 6

The working class, as a leading class of the society, under the leadership of the Albanian Workers Party, exercises its direct control over the activity of institutions, of enterprises and of social organizations in the field of labor relations and of the execution of labor legislation.

Article 7

Work is at the foundation of the socialist social order and is the main source of earning a living for the workers and employees.

Article 8

Work is a duty and a right for every citizen able to work.

The state guarantees to the citizens work there where the needs of the economic and cultural development of the country require it.

Aware that only through work can socialism be built and the socialist social order strengthened, the workers and the employees work where they are assured work.

Labor legislation is permeated by the socialist principle "from each one according to his abilities, to each one according to his work."

Article 9

In particular, the state protects minors and women.

The female worker and employee, liberated from political oppression and economic exploitation, enjoys equal rights with the man in work, vacation, compensation,

social security, in all other areas associated with work, as well as other benefits specified in this Code and by special decrees.

Article 10

The state assures material means for living to the workers and employees for work disability and old age.

Article 11

The enterprises, institutions and social organizations, as well as all the workers and employees are obligated to fully honor socialists labor legislation.

Chapter III

/Trade Unions/

Article 12

The workers and employees have the right to join the Trade Unions.

The Albanian Trade Unions are political-social organizations of the working class, which voluntarily accept in their ranks workers and employees, citizens of the People's Socialist Republic of Albania who work in enterprises, institutions and social organizations. They act according to their statute.

Article 13

The Albanian Trade Unions, as schools of communism, carry out a general activity for the communist education of the workers, for the strengthening of the dictatorship of the proletariat, for the deepening of socialist democracy and for the moral-political unity of the workers around the Worker's Party. They take care of the educational, cultural and technical-professional development of the workers and employees, and their physical and military training, so they will be ready and able to defend the freedom and independence of the fatherland.

Article 14

The workers and the employees, organized in the Trade Unions, aware of the role of the rapid, uninterrupted, planned and harmonized development of the socialist economy, take part in the drawing up and executing of state plans. The Trade Union develop socialist competition, inspire creative thinking, study and expand progressive experience, help to expand the technical-scientific revolution, increase labor productivity and improve the quality of production.

Article 15

The Albanian Trade Unions work to increase among their members the awareness of their responsibility for their duties, to strengthen proletarian discipline, to protect socialist property, to know and execute socialist legislation.

They are concerned about the continuous improvement of the working and living conditions of the workers, the implementation of the rights of the workers and employees, and work to resolve disagreements at work.

Article 16

The Trade Unions cooperate with state organs and with other social organizations to draw the working masses in an organized manner in the economic management and administration of the country. They struggle for the participation of the workers in exercising direct worker control, under the leadership of the party, over the activity of the administration of the enterprise and of the institution for the proper functioning of their work, against manifestations of bureaucracy and liberalism.

Article 17

The Trade Unions make proposals, take active part in the discussions for the drawing up of the main draft laws which have to do with the work and life of the workers and employees, exercise control over the implementation of the decrees which regulate work relations and living conditions, and listen to the reports of the administrations of enterprises or of institutions regarding these problems.

Article 18

It is the task of state organs to listen to the opinion of the Trade Unions on the issuance of normative acts which deal directly with the job status, with work, wages, living conditions, and the state social insurance of the workers and employees.

Article 19

The administration of the enterprise, of the institution and of the organization creates for the Trade Union organs the means for the normal exercise of their activity and provides them offices and the necessary equipment, free of charge.

Trade Unions administer vacation homes for workers, employees and their dren.

Article 20

The elected organs of the Trade Unions are legal entities.

/Chapter IV/

/Employment/

Article 21

Employment takes place through an agreement between the worker or the employee and the administration of the enterprise, of the institution or social organization.

The work agreement with the workers is concluded according to the special provisions of the Council of Ministers, and for the employee after approval by the competent organs for employment.

The work relations of the workers and employees, who are elected to state organs or to social organizations, develop on the basis of the rules established by law.

Article 22

A citizen becomes eligible for employment when he reaches the age of 15.

A person is employed on the basis of profession, abilities and personal inclinations and in accordance to the needs of the society.

Article 23

The work agreement is signed for an unspecified period.

When the agreement is signed for a set period, it cannot be longer than 6 months; it is made in writing and, when necessary, it can be extended up to 3 months.

For the workers and employees who are employed on a temporary basis, special rules can be applied by provision of the Council of Ministers.

Article 24

The worker and the employee, for work which continues for a long time, can be placed on a trial basis prior to employment. The trial period can be up to 12 work days, and in special cases, up to 3 months.

When the worker or employee is employed, the trial period is calculated as work seniority.

Article 25

The worker or the employee has no right to transfer his job assignment to someone else.

Article 26

When a person is employed for the first time he receives a work card from the enterprise, institution or social organization.

Article 27

Any work agreement which contains conditions in violation of legal provisions is invalid.

When the work agreement is invalid and the worker or employee has entered the agreement in good faith, relations between the individual and the administration of the enterprise, institution or social organization are regulated on the basis of the provisions of this Code.

/Chapter V/

/Work and Vacation Time/

Article 28

The normal work time for workers or employees is 8 hours a day.

For workers or employees who work in difficult jobs or those harmful to health, and for some categories of workers who besides their main job, are also involved in creative scientific, literary, artistic and sports activities, a shorter work time, without reduction in pay, is set by decision of the Council of Ministers.

For minors under 16 years of age, work time cannot exceed 6 hours a day.

Article 29

For night shift work between 2200 hours and 0600 hours, work time is reduced by one hour without reduction in pay.

For work or services when the job is carried out without interruption for 24 hours, night work time is the same as for day work time, but in this case the worker or employee receives overtime pay for one hour.

Article 30

For some week-days a longer work time can be set, and for other days a shorter, but on condition that the weekly norm of work hours is not exceeded. Moreover, the normal work time for some seasonal jobs may be extended, with a proportional increase of payment.

The extension of the normal work time can also be set for workers and employees who are paid state wages for work in agricultural cooperatives and in social and cultural institutions in the village.

The types of these jobs stipulated by decision of the Council of Ministers.

Article 31

In special cases, for essential needs of work, the worker, on written request by the administration and with his own assent, may work overtime.

Overtime work is that which is carried out in the same enterprise, institution or organization before or after normal work time, or in excess of the weekly or monthly norm of work hours.

For seasonal work, overtime work is that which is completed beyond the limit of the extended work time.

The work of employees, and workers, which because of its nature, cannot be completed within the established time is not considered to be overtime. The types of these jobs are stipulated by provisions of the Council of Ministers.

Article 32

Overtime is allowed when:

1) work is carried out which is necessary for the defense of the People's Socialist Republic of Albania, or to help overcome various calamities;

2) it is necessary to complete a job which has been begun and, which, because of unforeseen delays or due to circumstances, caused by the technical conditions of production, could not be completed within the normal work time, and the interruption of the job may cause harm to material or machinery;

3) it becomes necessary to take measures to protect socialist property from damages which may be caused by natural phenomena or other things;

4) temporary operations are carried out for the repair or reconstruction of machines, installations or work sites, if the failure to execute them on time creates work shutdowns for a large number of workers.

5) large and pressing seasonal jobs must be completed and there is a lack of workers or the number of workers cannot be increased due to technical reasons;

6) there is an essential need to execute loading and unloading work, to empty warehouses and to transport the goods, so the means of transportation will not be idle;

7) Essential works are carried out for the replacement of the water supplies, electricity, the sewer system, transportation and the telephone and telegraphic lines.

The total amount of overtime hours cannot exceed 180 hours per year for every worker.

Article 33

Pregnant women or women with infants up to one year of age, minors who have not reached the age of 16 and the workers with medical problems are not allowed to work between 2200 hours and 0600 hours and past the normal work period.

Article 34

A female worker or employee with children up to the age of 9 months, receives every 3 hours after breast-feeding, a rest period of no less than half an hour to feed the child. This rest period is calculated in the work time.

Article 35

The worker or the employee has one day off per week, as well as on official holidays.

The worker or the employee who has worked during the weekly day off or during official holidays, gets a day off during the week, and on special occasions,

with his approval, these days may be used consecutively within the month. In the foreign maritime transportation service, the weeks' days off may be used successively, as a rule, within 3 months.

The worker who is assigned to work during an official holiday which does not coincide with the week's day off, and, with his approval, does not get another day off, receives normal pay.

Article 36

The weekly rest period for the worker or the employee extends without interruption for no less than 36 hours, with the exception of shift work, when it cannot be less than 24 hours.

Article 37

The worker or the employee receives an annual leave of 12 working days.

Annual leave is used within the calendar year and, in special cases, no later than the end of the first quarter of the following year. Within the context of annual leave, the time of temporary work disability is also calculated in the work time.

Minors who have not reached the age of 16, receive 24 working days.

Supplementary leave is also given in addition to annual leave. The length of this leave and the categories of the workers or employees who receive this leave is determined by decree of the Council of Ministers. When the worker or the employee is eligible for supplementary leave for one or more reasons, he enjoys only the more favorable leave.

Article 38

The worker or employee, who is concerned with scientific, sports or artistic-amateur activities, receives special annual leave with pay.

This leave is not calculated against the normal or supplementary leave. Its length of time and the criteria are determined by decision of the Council of Ministers.

Article 39

The worker or white collar worker who gets married, or the one who has a death in his family, receives special leave of up to 5 days.

Article 40

The enterprise, institution or social organization, when it considers as legitimate the request of the worker or of the employee to stay away from work, and when this does not cause any harm to the work, it may provide leave without pay for up to 12 work days per year.

The criteria and length of this leave are determined by the Council of Ministers.

Article 41

The female worker or employee, in cases of pregnancy and childbirth, receives, leave with pay for from 12 to 15 weeks, according to the provisions of state social insurance.

The woman who has used up maternity leave without being able to find a nursery for the child, may receive unpaid leave for up to 3 months.

The female worker or employee, who has children up to the age of 3, may receive unpaid leave up to 3 months per year.

The length of unpaid leave is calculated by the work seniority for state social insurance purposes.

Article 42

When the worker or employee misses work due to occupation with state or social tasks or due to annual, supplementary or sick leave, the enterprise, the institution or social organization has the right to employ another person on a temporary basis as a worker or employee, until the person replaced returns to work.

Chapter VI

/Wages, Salary Increases and Compensations/

Article 43

The worker or white collar worker is paid according to the quantity and quality of work completed.

Equal pay is given for equal work, regardless of sex, race, nationality and age.

In setting wages, the state is concerned that the wages of employees are in correct proportion to those of the workers in order not to allow great differences in the level of income and in the way of living and in order not to allow the creation of some privileged stratum.

The state harmonizes the correct use of moral and material incentives, by giving priority to moral incentives, so that the worker or employee is stimulated for highest achievements possible in work.

Article 44

The state, on the basis of the achievements in the field of narrowing down differences between mental and physical work, between work in industry and work in agriculture, between skilled work and simple work, is also concerned about narrowing down the respective differences in wages, without permitting equalitarianism and by maintaining the interest of the workers in improving their skills and increasing labor productivity.

The wage is set on the basis of the level achieved in the development of the socialist order, of socialist production and labor productivity and on the basis of the fulfillment of the needs necessary for living, by maintaining a correct proportion between personal work and work for society, between the personal consumption fund and the social consumption fund.

Article 45

The worker or employee is compensated on the basis of the work measured and verified in terms of quantity and quality, and according to work and production norms, or on the basis of the effective time of completed work and of the category of the work process or place of work. In special cases, in the apportionment of work compensation, the level of skills of the worker or employee is taken into consideration.

Article 46

The work norms are set in accordance with work conditions, with the technical and technological level, and the organization of production.

The work norms can be reexamined when changes have taken place in work organization and conditions, in techniques and technology, which influence labor productivity. They may be reexamined also when it is noticed that mistakes have been made in their calculation and establishment.

The rules for the establishment of norms and for their types, the period and the procedure for reexamination and approval are decided by the Council of Ministers.

The setting and changing of work norms is done only following their discussion with the workers and after listening to their opinions.

The workers are notified about the new work norms at least 12 days before they go into effect.

Article 47

The categorization of work processes and work places are approved by the ministries and other central institutions, by taking into consideration the level of complexity of the work, the preciseness which it requires and its responsibility, work hazards and the difficulties encountered in doing the work.

Article 48

The worker or employee under the age of 16, in addition to the payment for the completed work, also receives overtime pay equal to two hours of work per day, which is given according to the level of categorization.

Article 49

For the workers or employees of some branches, by special provisions of the Council of Ministers, pay or compensation increases can be set for seniority in work, difficult work and work places.

Article 50

The worker and employee is compensated for the annual leave time on the basis of the average wage of the preceding year, which he receives prior to commencement of leave.

Article 51

The worker receives overtime pay for each case of overtime work in the amount of 25 percent above the base salary for the category of the work process or work place.

Article 52

During the period of trial work the worker or employee is paid according to work completed.

Article 53

The worker or employee is not paid when he is not working because of work stoppage caused by him.

When work interruption occurs due to no fault of the worker, and the administration of the enterprise, of the institution or social organization does not provide him with other work, the worker along with the administrative, engineering-technical and economic management personnel who have caused work interruption or have not provided other work, receive half pay for the period of the interruption.

Persons who work in the highest organs also receive half pay when work has been interrupted due to their fault.

Article 54

Some 50 percent of the pay of the person who is guilty of work stoppage, is withheld by order of the manager of the enterprise, institution or social organization.

Appeal can be made against the order to withhold wages within ten days from the date of notification, to the immediately higher organ.

When work interruption occurs due to the fault of the manager of the enterprise, institution or social organization or due to the fault of other persons in the highest organs, wages in the amount of 50 percent are set, according to the case, by decision of the chairman of the executive committee of the district people's council, or by decision of the minister or manager of another central institution. The order in this case is irrevocable.

Article 55

It is considered to be work interruption when the worker or employee is forced not to work for the following reasons:

a) atmospheric conditions;

b) lack of raw materials, other materials, work tools and electric energy;

c) breakdown of machinery, equipment and other work tools.

d) interruption of work due to failure to observe regulations on technical and hygiene and health safety.

Article 56

When the production, construction or service is totally useless, the guilty worker or employee receives no payment and is obligated to make restitution.

When production, construction or service is partially useless (the quality does not meet set conditions) due to the fault of the worker or employee, reduced wages are given for the time spent on the production, construction or services, which cannot exceed half of that established in the wage scale.

The amount of wages is decided by the enterprise, institution or social organization in proportion to the value of wasted production, which is assessed according to the instructions of the ministry of other respective central institutions, not exceeding half of the wage.

Article 57

The worker or employee receives payment for the time which he has remained unjustly unemployed, but no longer than for one month, and when he leaves work for reasons of penal responsibilities and the case is decided to be closed or he is found to be innocent, payment is received for the entire period of unemployment.

Article 58

The worker or employee is paid by the enterprise, institution or social organization in which he works when he:

a) participates in the meetings of the People's Assembly or in the people's councils in the capacity of the people's representative;

b) performs the duty of assistant judge, is summoned as a witness or as an expert by the court or the organs of investigation;

c) takes part as a delegate in congresses, conferences and plenums;

d) is summoned by the military commands or offices for control or for military educational training (the worker or employee, when called for military training, receives 3/4 of his wage);

e) or when provided for in the provisions of the Council of Ministers.

Article 59

The wages of the worker and employee and any other compensation due to him for completed work are untouchable. Exception is made for the return of advance-pay, of overpayment, or if called for by law.

The total sum of withholdings cannot exceed 50 percent of the wage of the worker or employee; withholding continues until the entire sum is repaid.

Article 60

Withholdings for the return of wages, increases and compensation above the set wage, may be carried out no later than three years from the date of their payment, and for advance pay, from the day decided for their return.

Article 61

Wages and every other compensation due the worker or white collar work for his work, may be demanded within the three years from the day of eligibility.

/Chapter VII/

/The training of workers and employees/

Article 62

The state is concerned about the continuous raising of the ideopolitical, educational, cultural and technical level of the workers and employees.

The training of the workers or employees and the continual improvement of their skills is carried out in accordance with the demands presented by the growth of social production on the basis of the uninterrupted deepening of the technical-scientific revolution, and in accordance with their participation in the management of the economy and in governing the country.

Article 63

For the training of young workers, and for teaching skills and specialized knowledge to workers and technical-administrative workers and employees, the following forms are used in addition to the schools of the educational system;

a) lower technical-vocational schools for the training of young workers on the basis of eight-year education with a fixed profile;

b) courses on the basis of eight-year and middle education for the training of young workers who are not engaged in work;

c) courses on the basis of eight-year and middle education to raise the level of skills, for specialization and to teach second professions to the technical-administrative workers and employees who are engaged in work;

ch) courses and other forms for teaching skills and specialized knowledge to workers who have completed higher education;

d) school children in the economy who are being trained for ordinary professions and simple jobs in special branches of production, construction and services.

Article 64

The skill-training and specialization of workers or employees, is organized, as a rule, without separation from work. In special cases, when it is necessary, training is also organized with separation from work, according to special provisions.

Article 65

The administration of the enterprise, of the institution or of the social organization creates for the workers and employees proper conditions to attend various schools without separation from work as well as the forms for their further skill-training and specialization, according to special provisions.

Article 66

The worker or employee who continues school without separation from work has the right to paid leave, the length of which is set by decision of the Council of Ministers.

Article 67

The right which the workers or employees enjoy according to article 66 of this Code, also benefit those workers and employees who have completed the general middle school and, when the needs of the enterprise, of the institution or social organization require it, follow courses without separation from work in order to acquire professional education.

Article 68

The worker or employee who has been absent from school without explanation or who has not participated in consultations or in laboratory work, who has not taken examinations or has missed seminars and who has profited from easy conditions, receives no pay compensation for that particular period. The order is the executive title.

The worker or employee who repeats a year, enjoys only one leave for examinations, but with the right of pay.

Article 69

The worker or employee, who pursues courses with separation from work for further skill-training specialization, for raising his ideological and professional level and for acquiring a second profession, for the time separated from work enjoys the right to pay in the amount decided by the provisions of the Council of Ministers. The wages of the school-children in the economy are regulated in the same manner.

Article 70

The criteria and the rules of procedure to evaluate the skill-training of workers, and to acquire scientific grades and titles, are decided by special provisions.

/Chapter VII/

/Work Safety/

Article 71

The state is concerned about and takes measures for work safety, so that the worker or employee can work in normal conditions and without risks to his life and health.

Article 72

The mines, plants, factories, loading sites and the construction projects, as well as their branches and sectors, are designed, built, re-built and utilized according to the rules of technical safety, and health and work hygiene rules.

The putting into operation of the machines, equipment and mechanisms is permitted only after receiving approval from the respective inspectorate, and when they have been equipped with safety means.

Article 73

The administration of the enterprise, of the institution or of the social organization is obliged to provide the workers and employees with normal technical and hygenic conditions for work, in compliance with the requirements and rules for work safety established by the ministries and by other central institutions.

The administration is obliged to explain, prior to work commencement and continually, to the workers and employees the rules of technical safety to avoid hazards at work, to protect health, and all the other rules which have to do with work safety.

Article 74

In enterprises, institutions and social organizations social-cultural projects are set up to serve workers and employees.

Article 75

Any worker or employee who has not reached the age of 18, and anyone who works in heavy jobs or in places which are potentially harmful to life and health, is hired to work after taking a medical examination, which is repeated according to the rules established by the Ministry of Health.

Article 76

The female worker, the minor has not reached the age of 18, and the worker with a medical problem, is not allowed to work underground or in heavy jobs, harmful to health, which are specified in the rules and recommendations for technical safety and work hygiene.

Article 77

The worker or employee who works in work processes which are potentially harmful to life and health, or when clothing is quickly damaged or contaminated, receives gratis from the enterprise, institution or social organization safety devices, special clothing, antidotes, polyvalent and supplementary foods, soap, and when required by the conditions of social hygiene, work clothes too, according to the criteria set by the Council of Ministers, after receiving the opinion of the Central Council of Trade Unions.

Article 78

The administration of the enterprise, of the institution or social organization is obliged to hire and to place in a suitable job, within the plan of the approved number of workers, the disabled and workers with medical problems, and take measures for their rehabilitation.

Article 79

State control over the implementation of the provisions of this Code, of the ordinances, decisions and recommendations concerning the issues related to working conditions, to the length of work and of leave, and to work safety, is exercised by the respective inspectorates, by the organs of state social insurance and by the other state organs, the rights and the tasks of which are determined by special provisions.

/Chapter IX/

/Work discipline/

Article 80

The administration of the enterprise, of the institution or social organization is obliged: to take measures for the fulfillment of the state plan, for the protection and correct administration of socialist property, for the fulfillment of tasks in the field of defense, for the socialist organization of work, for the education of the workers and of employees and to raise their level of skills, for the strengthening of work discipline, of the rules of technical safety and of hygiene at work, for knowing, strengthening and implementing socialist legislation, as well as to solve the demands and the complaints of the workers and employees.

Article 81

The worker and employee is obligated to work with a high socialist awareness, to fulfill the plan tasks, to produce goods, or to execute constructions and services with high quality, to protect socialist property, to conserve raw materials and other materials, to raise the ideopolitical level and the technical-professional capabilities, to carry out the tasks for the defense of the country, to respect the rules of work safety, to implement accurately the laws, decisions, orders, recommendations and the demands of proletarian discipline at work.

Article 82

The worker, employee or working collective, who works with a high awareness for the fulfillment and over-fulfillment of the plan tasks in quantity, quality, types and assortments, for the increase of labor productivity, for reduction in cost, for the protection of socialist property, for implementing the new elements of science and technology, for inventions and rationalizations, is honored, according to special provisions, with various moral and material incentives, with priority being given to the moral incentives.

Article 83

The worker or employee, for the non-fulfillment of set tasks, as well as for acts committed at work which harm the moral-political standing, is first of all, criticized and helped by the collective; but, when necessary, the administration of the enterprise, of the institution or social organization takes against that person the following measures with an educational character:

a) advising;

b) pointing out;

c) warning;

ch) demotion at work or assignment to a job with less pay for up to six months in the same enterprise, institution and social organization, or in special cases, in another enterprise, institution or social organization within the district, through the executive committee;

d) dismissal from work, according to letters "dh," "e," and "ee" of article 98 of this Code.

Article 84

In selecting the disciplinary measure of an educational character, the degree of violation of discipline, the circumstances under which this has been violated, the former behavior of the worker or employee and, the attitude toward work and society are taken into consideration. The disciplinary measures, as a rule, range from light to heavy; in special cases they may be taken without following the order set in article 83 of this Code.

Article 85

The disciplinary measures of an educational character, which are called for in the letters "a," "b," and "c" of article 83, are taken by the manager of the enterprise, of the institution or social organization, of the factory, of the sector, of the department, as well as by their highest organs, whereas those which are called for in letters "ch" and "d" are taken only by the competent organ for work placement.

The disciplinary measures of an educational character are given within one month of the day of the discovery of the violation and not later than a year from the

day it was committed. They cannot be given prior to listening to the worker or employee, against whom the measure will be taken.

Article 86

The disciplinary measures of an educational character, with the exception of those called for in letters "ch" and "d" of article 83 of this Code, are invalidated if within one year from the day they have been issued against the worker or employee no other disciplinary measure has been taken.

The measure may be retracted earlier by the organ which has issued it, on request of the person concerned or on proposal of the basic organization of the Trade Unions and when it is considered that the worker or employee has improved.

/Chapter X/

/Material Responsibility/

Article 87

The worker or employee who during the execution of his job intentionally or unintentionally causes material damage to the enterprise, the institution or social organization where he works, is obligated to make restitution for the actual damage.

When the damage has been caused by several workers or employees, indemnity is charged according to the degree of each one's fault.

Article 88

The management-administrative, engineering-technical and economic personnel are materially responsible, up to one month's salary for all damage caused during work by the other employees who are under their direction, if these damages or violations of plan discipline and financial discipline have occurred due to their fault in management activity.

The criteria and the cases of this responsibility are established by decision of the Council of Ministers.

Article 89

Indemnities are decided, according to the case, by order of the manager of the enterprise, institution, organization, factory, sector, work site or also by other organizational units with their own financial assets. When the damage has been caused by the managers themselves, or when the damage is discovered by the financial control and auditing organs of the executive committee of the district people's council, of the ministry or of another central institution, indemnities are decided, according to the case, by order of the chairman of the executive committee of the district people's council, or by order of the minister or of the manager of the other central institution. These same organs order indemnity even when the damage has been caused by the manager together with his subordinates.

Article 90

The setting of indemnity is done within 6 months from the day of the discovery of the damage, but not later than three years from the date on which it occurred.

Indemnity cannot be fixed without first hearing the worker or the employee who has caused the damage.

When indemnity cannot be implemented because of the passing of these deadlines, the guilty person who has failed to meet the deadline becomes materially responsible.

For acceptable reasons, the organ which examines the complaint against the indemnity order can reestablish it with a new deadline.

Article 91

The indemnity accepted by the worker or employee is deducted from the wages and other incomes according to the provisions on deductions of income.

Article 92

When the worker or employee is penally punished for the damage which he has caused to the enterprise, institution, or social organization, indemnity is decided by the court.

When it is decided to close the penal case initiated or innocence is established, indemnity is set by the enterprise, institution or social organization within 6 months from the day of the notification of the decision.

Article 93

In special cases, by taking into consideration the circumstances under which the damage has been caused and the personal conditions of the worker or employee, indemnity can be reduced to 50 percent of the value of the damage caused.

/Chapter XI/

/Transfer and separation from work/

Article 94

The employee or the worker with low, average or high skills, when it is necessary may transfer, according to his profession, to another enterprise, institution or social organization, regardless of location.

The transfer within the district or within the enterprise, institution or social organization is done, by decision of the executive committee of the district people's council or of the administration of the enterprise respectively, and. outside the district, by decision of the minister or of the managers of the other central institution.

Article 95

The worker or employee, when there has been work interruption or for reasons of production, may be transferred temporarily to another job by the manager of the enterprise, of the institution or of the social organization.

Article 96

The enterprise, institution or social organization is obliged to transfer the worker or employee to a more suitable job within the same enterprise, institution or social organization, if, because of sickness (or for women, because of pregnancy) he or she is unable to carry out the former job, for as long a period as stated in the medical report.

The enterprise, institution or social organization, when there is a lack of suitable places compatible with the health condition of the worker or employee, is obligated to place him in a suitable job in another enterprise, institution or social organization, in the same place, through the executive committee of the district people's council.

Article 97

The worker or employee, when there are justified reasons and when he considers that leaving his work does not hurt the interests of the enterprise, institution or social organization, may leave his job by giving a 15 days notice.

The enterprise, institution or social organization, when it considers that the departure of the worker or employee hurts the work, may lengthen the time that he remains on the job up to 30 days for the worker with low skills and up to three months for the worker with simple, average and high skills, and also for the employee.

Article 98

The administration of the enterprise, of the institution or of the social organization has the right to suspend the worker or employee from work when:

a) he has achieved the right to a full old-age pension;

b) he is unable to perform the work or assigned task;

c) the enterprise, institution or social organization is dissolved, a reduction takes place in the staff's personnel or in the number of workers, or there is interruption in work;

ch) conditions are lacking for completing the work or the assigned task;

d) he has been employed in violation of the legal provisions;

dh) he violates work discipline repeatedly and seriously;

e) he damages socialist property seriously or in a repeated manner;

ee) he commits a penal act in connection with his job, and this is proven by clear decision of the court, or sentences with loss of freedom for longer than two months, or a measure of internment or expulsion has been taken against him;

f) according to the decision of the respective organ he must be replaced by another worker or white collar worker who first had this job, but who quit without authorization.

g) he does not return to work before 6 months from the date that he has become temporarily disabled for work.

In the cases specified in letters "b," "c," and "ch" of this article, the worker or employee cannot leave his job without being placed in another job.

In the cases specified in letter "f" the worker or employee is given a 15 day notification.

Article 99

When the worker or employee is on normal, supplementary or health leave, the enterprise, institution or social organization cannot suspend him from work, with exception of cases when he is punished for a penal act with loss of freedom.

The work place is kept for the worker or employee in cases when disciplinary measures are taken against him according to the letter "ch" of Article 83 of this Code.

/Chapter XII/

/Settling of Disagreements/

Article 100

In regard to disagreements which arise between him and the administration of the enterprise, of the institution or social organization, when it has not been possible to solve them directly between them, the worker or employee has the right to appeal to the trade committee of the basic-organization of the Trade Unions of his work center.

The appeal is made within 10 days from the day of the notification of the decision of the administration, and the trade committee of the basic-organization of the Trade Unions must examine the appeal within 10 days from the date of its presentation.

Article 101

The worker or employee, when he does not accept the decision of the trade committee of the basic-organization of the Trade Unions, may appeal himself to the district court within 10 days from the issuing of this decision.

When the manager of the enterprise, of the institution or of the social organization does not accept the decision of the trade committee, he is obligated to notify the worker or the employee in writing within 3 days. In these cases too, the worker or employee can appeal to the court within 10 days from receiving this notification.

For the disciplinary measures of an educational character which are called for in letters "a," "b," "c," and "ch" of article 83 of this Code, the decision of the professional committee is final.

An appeal made within the deadline in the case stipulated by letter "ch" of article 83 of this Code, cancels the execution of the decision.

Article 102

The trade committee and the district court may examine the appeal presented by the worker or employee even after the deadlines set in articles 100, 101, under circumstances which are considered legal.

/Chapter XIII/

/Final provisions/

Article 103

With the coming into force of this Code, the Law No 4170, of 12 September 1966, "the Labor Code of the People's Republic of Albania," as well as any other provision which comes in contradiction with this Code, is abrogated.

Article 104

This Code comes into force on 1 October 1980.

Tirana, 28 June 1980

Law No 6200

Secretary of the Presidium of the People's Assembly of the People's Socialist Republic of Albania
Xhafer Spahiu

Chairman of the Presidium of the People's Assembly of the People's Socialist Republic of Albania

GREATER EFFORTS REQUIRED TO COMBAT 'UNCULTURED' ACTS OF STUDENTS

Tirana ZERI I POPULLIT in Albanian 30 Sep 80 p 1

[Article: "A Continuing Duty of the School"]

[Excerpts] The revolutionary education of the youth is a continuing process. The party constantly tells us that we must keep our youth pure and always educate them in the revolutionary spirit, with a relentless attitude toward foreign traces and manifestations. Our society reacts in a critical manner not only when it comes across unsuitable, foreign manifestations in the attitude toward work and property, in life styles, in attitudes, in appearance and in artistic tastes, but also when it comes across cases of a liberal attitude toward these things.

The bases of the multilateral communist education of the younger generation are laid, in an organized and programmed manner, at a very early age in the kindergartens and, especially, in the 8-year school. This education continues in the intermediate and higher schools, inside and outside the classrooms. The perfection of all activity in this field requires that the cases of narrow concepts of educational work in the schools be strongly combatted, attitudes which restrict this activity to one or two class hours a week or to some special educational activities. As a result of such a weak understanding and inadequately developed activity in the entire educational and teaching process, some pupils in schools in Berat, Shkoder, Tirana, Vlore and other districts have manifested foreign attitudes, especially in the areas of the damage and abuse of state and cooperative property, as well as uncultured behavior in regard to adults and have committed uncultured acts, etc. The pupils who have acted in this way are mainly those who have repeated grades, who have had poor attendance and poor progress, who have dropped out of school, etc. This shows the need for the further improvement of the work of the school in the entire teaching and educational process.

The teacher plays an important role with his personality and his role as an educator. The multilateral education of the teacher, his intellectual world, his moral figure, scientific training, culture and speech, his use of the language and his ethics, and his appearance are of special importance for the children. The further improvement of work in this field requires a closer and more specialized cooperation of the school with the family,

without the globalism and formalism which are manifested in some cases. A broader activity is required on the part of the cultural front so that social, pedagogical and psychological studies are undertaken and the quality of publications, broadcasts, newspaper columns and artistic events is improved in order to put the scientific work for the moral and civic education of our younger generation on scientific bases.

BACKWARD RELIGIOUS, FAMILY CUSTOMS PERSIST IN KRUJE

Tirana ZERI I POPULLIT in Albanian 24 Sep 80 p 2

[Article: "In the Struggle Against Old Customs, New Socialist Norms Are Affirmed"]

[Excerpts] In Kruje District, we still meet traces of the customs and prejudices of the past. In the village areas there are various instances and forms of backward customs in life styles, in regard to food, in regard to heavy clothing for women, in personal hygiene, etc. Instances of this type appear especially in the mountainous areas of Kruje and in Ndoje, Gallate and other localities. In some cases, attention is given to furnishing and supplying with beds only the homes of friends and not the homes of family members.

Backward customs are often linked to religious prejudices. The organizations of the Democratic Front where such cases have appeared have done and are still doing work on an individual basis with those who have such prejudices, explaining the emptiness and danger of their beliefs. Good work has been done in replacing religious feasts with new popular socialist festivals, such as the Liberation Day, 1 May, and New Year festivals, the festival for the liberation of the district, etc. There has been noticeable progress in the area of marriage relations, in the further democratization of the family, etc. However, there are still, here and there, foreign manifestations which are remnants of backward customs. They are an obstacle to the contracting of marriages on the basis of the young people's knowing each other.

CSO: 2100

BRIEFS

NEW DEPUTY MINISTER OF AGRICULTURE--Recently appointed deputy minister of agriculture, Dr Janos Eleki was born in 1939. He has been a party member since 1967. He holds a degree in agricultural engineering with a specialty in seed management. He has worked as a member of an agricultural cooperative, as chief agronomist and as TSZ head. He was elected to this position in 1978. His 20 years of practical experience are combined with 15 years in managerial positions. He was organizer of the foreign trade association known as Hungaroseed. He has held various jobs at the council and county level. In the course of his county work he served on economic policy committee of the county party committee. This year he was elected National Assembly representative. In his new assignment Dr Eleki will be responsible primarily for tasks related to agricultural production, organization and technical development. FOREIGN MINISTRY OFFICIAL INTERVIEWED ON POLAND'S FOREIGN POLICY

Warsaw WALKA MLODYCH in Polish No 33-34, 17-24 Aug 80, pp 5, 10

[Interview with First Vice Minister of Foreign Affairs Jozef Czyrek, by Ludwik Luzynski; date and place not given]

[Text] [Question] With the beginning of the 1980's we have entered a difficult phase in international politics. During the final years of the preceding decade, phenomena and tendencies existed which were at odds with international security and detente. The decisions of NATO in the field of armaments, particularly with relation to the constant increases in military budgets and the introduction of medium-range nuclear missiles in Europe, and the reaching out across a broader area for an economic weapon have had repercussions on the atmosphere of international relations. Nevertheless, the efforts of socialist countries, including Poland, aimed at reversing these unfavorable trends have continued unabated in this difficult period for peace. Comrade Minister, can you characterize these efforts?

[Answer] Indeed, the efforts of socialist countries, including Poland, aimed at reversing unfavorable tendencies in the development of the international situation have continued unabated. These efforts have been undertaken both on a bilateral and on a multilateral plane.

Among these multilateral efforts should be numbered, above all, a meeting of the Political Consultative Committee of Warsaw Pact nations in our capital. At this anniversary meeting an accounting of 25 years of the work of our alliance was given. This accounting may be briefly characterized as the guarantee of security and peace on our continent through this period.

Of principal significance was the designation of the directions we must travel to reduce international tension and to solve the resounding problems of the international situation. The Political Consultative Committee has developed such programs as a common line of States-Sides policy of the Warsaw Pact.

In characterizing this program, I would like to note the importance of the corroboration by socialist countries of a course for strengthening peaceful coexistence both in Europe and throughout the world.

This represents the affirmation of the most important task of the present era--protecting humanity from a stage in the armaments race, which is even more

threatening in military and economic terms, by means of political and military detente and the building of confidence.

A significant initiative in this area for our continent has been the presentation of a proposal concerning the convocation of a conference on military detente and disarmament in Europe, and the outlining of the contents of the first stage of such a conference devoted to confidence-building measures.

Alongside the multilateral efforts, bilateral efforts were very significant (although certain ones went beyond that framework). I would include among those efforts the meeting in Wilanow of Leonid Brezhnev and President Valery Giscard d'Estaing with the participation of the first secretary of the PZPR Central Committee Edward Gierek. This meeting represented the initiation of a dialogue at the highest level between representatives of East and West, and by the same token represented the affirmation of a policy of international relations which favors resolution of problems by means of discussion, contacts and negotiations, and which opposes the policy of escalation of tensions, of armaments and of the various so-called means of retaliation. For this very reason international public opinion has attached such great importance to the meeting.

Without a doubt, the contacts which took place in Vienna in conjunction with the anniversary of the signing of the state treaty with Austria should also be included in this series of meetings. I mean, above all, the first meeting in a long time of representatives of the Soviet Union and the United States, i. e., Minister Andrey Gromyko and Secretary of State Edmund Muskie. Very important contacts among heads of state also came about in Belgrade on the occasion of the funeral ceremonies of Marshall Tito. Among these contacts was the meeting of the first secretary of the PZPR Central Committee with FRG Chancellor H. Schmidt, among others. These contacts also include the visit of Chancellor Schmidt to Moscow, in the course of which Leonid Brezhnev introduced new initiatives and a new impetus towards avoiding the danger of so-called Eurostrategic armaments. As we know, Brezhnev's proposals received much attention on our continent. The appropriateness, importance and timeliness of these proposals is attested to by the fact that the U. S. Government expressed its readiness in principle to take up this initiative and begin discussions with the Soviet Union.

[Question] Certainly, indications of a developing dialogue must be seen as a positive sign for the atmosphere of international relations. Thus we may hope that this process will have a favorable effect on the meeting in Madrid, which is devoted to a discussion of the situation in the context of the Final Act of Helsinki, which was signed exactly 5 years ago.

[Answer] The meeting in Madrid should be as autonomous a meeting as possible with regard to the order of the day, work procedure and the like. However, with regard to the content and atmosphere of the meeting, the Final Act and the situation on our continent will certainly have an effect on the course of the Madrid meeting itself. In any event, at this point there is a clear consensus that the Madrid meeting should be held at the appointed time and that the topics under discussion should be consistent with the spirit and determinations of the CSCE Final Act. It should be concerned with equalizing all of the "baskets" of the Final Act as much as possible and should not deal selectively with only certain subjects, as was the case in Belgrade. Finally--and this is most important--it should bring about positive results and incentives for detente in Europe.

[Question] Does this consistency refer to the detailed discussions of subjects as well?

[Answer] With regard to the contents of the meeting in detail, it is possible that several countries will make use of the topic of the so-called evaluation of the status quo of the implementation of the Final Act, or of certain international occurrences to attempt to present issues in the course of deliberations which are not only of a controversial, but even of a confrontational nature. However, the decisive majority of states, as indicated both in our discussions with them and in the many consultations which we have had recently (including the visit of Premier Babiuch in Vienna, of the Norwegian and Danish ministers of foreign affairs in Poland, of our minister in Paris and the Netherlands, and consultations with the UK, Spain, Italy and the FRG) is opposed to encumbering the Madrid meeting with topics and problems which could threaten the course of the meeting and hamper the process of European dialogue and detente.

The passage of a mandate by the Madrid meeting concerning a conference on military detente and disarmament in Europe would have special significance for Poland and the issue of detente. Such a mandate could apply both to the convocation of the conference itself as well as to the setting in motion of preparations for the conference.

Conversations with our partners in the West have shown that most of these states appreciate the importance of and the need for the passage of such a mandate at the Madrid meeting. Many of these nations share our view that the inception of the process of military detente and disarmament can be an act as important on a military plane as the decision concerning the creation of the CSCE was on a political plane. To put it concisely, what would occur here could routinely be called complementing political detente with military detente. In any event it would be the inception of a process which would be in complete accord with the feeling of community of interests of European security and would have a decisive significance in lending a universal and irreversible quality to the processes of detente.

[Question] From what you say, Comrade Minister, it is understood that the majority of European states accepts the idea of calling a European conference on detente and military disarmament in Warsaw. I would like to ask you, however, whether the initial conditions on which the states of Western Europe base the setting in motion of this conference have been manifested in conversations and consultations?

[Answer] I do not think the phrase "initial conditions" is appropriate here, although some states have expressed specific requests with reference to such a conference. These include, e. g., the definition of the territorial range of the first stage of the conference which is to be devoted to donfidence building measures.

As is known, both the proposal of socialist countries with regard to such a conference and the proposals of France concerning a European disarmament conference have projected two stages. The first stage is to be devoted to confidence building measures on our continent. The second stage is to be devoted to concrete steps in disarmament, i. e., reducing the human potentials and armaments arsenals connected to these potentials.

[Question] What is involved in the confidence building measures? Why are they so important for ideas of disarmament?

[Answer] In the most general sense confidence building measures are those steps taken to strengthen a sense of security, although they do not comprise a reduction in armed forces and armaments. They are measures of a political nature or a political-legal nature, such as for example, the idea of concluding an agreement not to be the first to strike with atomic weapons, or the idea of concluding an agreement relinquishing the use of force and the threat of its use in international relations. They are also such measures as, for example, being informed of the movement of troops in general or within a specified zone, or being informed beforehand of maneuvers and the number of troops participating in these maneuvers. We also number among these measures several national, and not only national, measures of observation or control, as for example the possibility of inviting representatives of foreign nations for maneuvers in the role of observers, as provided for by the CSCE Final Act in Helsinki. This is an important, already tested method of mutual information and strengthening of confidence that no unfriendly steps of a military nature will result from a given operation.

I am of the opinion that even these confidence building measures given as examples convey the idea that, at least at a certain stage, until a lower ceiling of armed forces and armaments is achieved, they can indeed lead to the strengthening of confidence, to reinforcing the feeling of security and in this way they can bring about the establishment of premises for the second very complex stage, the reduction of armed forces and of armaments.

[Question] I propose that we return to the subject.

[Answer] Yes, the second matter relates to the voluntary or the obligatory character of duties in the area of confidence building measures and control. The Final Act of Helsinki was based on the voluntary character of states' obligations. On the other hand, the NATO states advance the idea of the obligatory character of these measures. It seems to us that what is most important is that these measures be effective. Thus, one of the basic premises of the effectiveness of these measures is the voluntary assumption by states of the obligations connected with their observance and application. In other words, we would favor the voluntary character of obligations as more effective and conforming to the letter and spirit of the CSCE Final Act.

In summary it may be stated that the idea of calling a European conference on military detente and disarmament may be approved by the Madrid conference, or a mandate may be passed to make preparations for such a conference and to convene it. I would like to supplement this by saying that several countries have advanced the proposal that, in between the proposition of the Warsaw Pact and the proposition of Poland and France, which receives the support of NATO and the Common Market countries, a rapprochement of both propositions should be worked out before the Madrid meeting enabling a general European consensus on this basis. Of course we are in the midst of such efforts. It appears, however, that setting ourselves the task of achieving a full substantive understanding between the positions of the West and East before the November meeting, before the beginning of the conference itself, would be indeed unrealistic. It would be impossible to achieve in such a short time, even with the best feelings of good will on the part of both

sides. The process of preparing the CSCE itself lasted years and not months, as experience demonstrated. Practically speaking we have 2 months before the Madrid meeting begins on 11 November 1980.

[Question] Should we not take it for granted, however, that the dialogue which has taken place concerning detente in recent weeks can be brought to a standstill by some force?

[Answer] Can this process be interrupted by any force? If we take as 100 percent certain and real what the Republicans presented in the United States on the platform of their nominating convention, then the danger is evident, since their plank in the international field is based on the idea of a policy of force and a policy of confrontation and arms race.

I believe, however, that the existing structure of power between the detente tendency and the Cold War tendency gives no indication that the antidetente tendency may become dominant. I think that every condition and possibility exists for guaranteeing that the detente tendency will dominate.

[Question] In conclusion I would like to ask about something which often rankles our readers, namely: how is our foreign policy developed and what role do diplomats play in this regard?

[Answer] Although I have worked in diplomacy for nearly 30 years, I certainly am not an adherent of an isolated emphasis on the role of diplomats and diplomacy. Diplomacy in this way is understood as a group of measures and efforts which are to lead to a specific goal. On the other hand, if what is underlying is the activity of specific services, groups of people, then I think that the role of diplomacy in the classic sense of this word is undergoing greater and great transformation. For example, with the existence of mass means of information and communication and all such phenomena which have caused the world to become small indeed, but more diverse--characterized by a growing interdependence of various issues, regions and interests--informational functions of the diplomatic service have become more limited. At present, policy is conducted on an unusually broad front. Let us take, for example, international contacts. The important practice of meetings at the highest and at high government levels has developed, and these are not meetings of ministers of foreign affairs alone, but ministers of various fields, representatives of political powers, parliaments and the like, a practice which virtually did not exist before World War II. Today, comprehensive national interests decide actions in foreign policy. For this reason it may also be said today that the deciding factors with regard to the directions of the policy of a given country--besides its basic structural and ideological assumptions and class interests--are its economic problems, its guarantee of the best peacetime conditions of development of the country through international cooperation, its raw materials needs, its technological, educational and credit needs, and all of its other needs.

For this reason as well, the highest agent in determining our foreign policy is the congress of the leading political force of our country, the PZPR, its Central Committee and Politburo. Of course, in thinking of the party, I also think of other allied parties, which--in the case of the last program of our foreign policy for 1980--joined to consider and undertake decisions with regard to its content.

With regard to the international situation and the foreign policy of the country, the place of Poland in the international arena is thus determined by almost every one of its citizens through his contribution to the development of the country--whether he is a technician or a worker producing for export, or an artist who makes a significant contribution to the wealth of culture, or a sportsman whose attitudes and successes create the so-called mass portrait and understanding of a given country. All of this plays a part today in the building of the international position of the nation, its role, its significance and the good name of Poland throughout the world.

FRENCH JOURNALIST IN POLAND SAYS STRIKE RESULTS POSITIVE OVERALL

Paris REVOLUTION in French 26 Sep-2 Oct 80 p 51

[Article by Jacques Estager: "This Summer - Positive On the Whole"]

[Text] The Polish crisis, that wave of strikes all over the country, the unions being challenged, the crisis of confidence affecting the party, the tremendous working class pressure resulting in changes in the party leadership and in the government, an entire nation hanging on the Gdansk negotiation, days of extreme tension and afterwards the agreement, the right to strike, the independent unions, the door opened to pluralism, the great debate over democracy, 18 days which changed the face of Poland: since all of this had never been seen in a socialist country, how was a French Communist journalist whose work put him in the middle of events to feel about it? Nothing fit the traditional image of socialist countries any longer. And journalists from the international press, rapturously discovering strikes and strikers here which they had always ignored in their own countries, were already proclaiming if not the end at least the failure of socialism and ironically asking the question: "Well then, has it been positive on the whole?"

It is true that anything could happen during those events which were no longer being ordered by any kind of logic. But even during the periods of extreme tension Poland never departed from its tranquil state. The working class carried on its battle in its own environment, in the factories. There was no demonstrating or disorder or violence. There was an extraordinary political maturity on both sides. And in that movement in which the workers by their action made their right to strike a legal one, the socialist state paid wages for strike days, gave the strikers job guarantees, treated them as equal partners, and proclaimed its respect for their demands and its intention of meeting them, the only limitation being the country's actual resources.

Faced with the most serious crisis of the entire history of the Polish People's Republic, the socialist state announced: "We will settle the crisis on a political level and with political means. Our only weapons will be dialogue and negotiation, a joint search with the working class for solutions to the problems we are presented with." This is a line from which neither the party nor the government was to depart, going above and beyond leadership changes.

Yes, it has been positive on the whole.

Taking either October 1956, December 1970, or 1980: Socialist Poland has set out and resolved its problems in terms of a sequential social and political crisis which

on each occasion has entailed leadership changes in the party and in the state. The fact that the solution for contradictions arising from within the Socialist society's evolution itself could be found through the confrontation of the governed and those who govern in a country where the state is designed to be the state of all the people, this at the very least bears witness to the failure of democracy's political structures to adjust and unclog. The crisis itself could not have been a positive phenomenon. It brought weakness, backwardness and error to light. It gave expression to unsatisfied aspirations. And yet Engels' phrase about the violent labor pains of any society pregnant with a new society could be applied to it. For the crisis did not challenge socialism but rather the deficiencies of socialism. Many people reckoned too quickly on socialism's defeat. When the working class has less and less intention of delegating its powers and more and more intention of exercising them itself, when it has recourse to striking in order to give democracy real substance and to obtain the guarantee of fully exercising workers' rights, this is not a defeat, but a step forward for socialism. It is the real exercise of the working class' leadership role. "Nothing," they say here, "will ever be like it was before. Neither the party nor the state nor society."

Yes, it has been positive on the whole.

That catastrophic vision of Poland that an entire press corps tried to convey - did it conform to reality? No, it did not. The actual crisis did throw all the negative factors into relief. But for all that, it did not obscure the economic and social achievements. During the decade which has just run its course Poland has made great progress. It has shortened the distance which separated it from highly developed countries: but it has yet to adjust to that. It faces contradictions which by a priori reasoning are surprising. Its industry is modern and well developed, but its economic strength is dwindling and productivity is not increasing. Industrial potential is considerable; the land can produce much more than it does. But neither industry nor agriculture are satisfying the actual needs of the population. Those are the problems faced today. They stem in large part from the methods used to manage the economy. A Paris weekly has written that Polish workers have just won what French workers gained in the nineteenth century. What is true about that is that strikes and the right to strike are taboo subjects in a Socialist society. That restraint has just been removed in Poland. What is false is to attempt in that way to say that social gains do not exist in that country, that Polish workers in that sense are still in their nineteenth century. A comparison of social legislation in France and Poland does not show the latter at a disadvantage. Better still, when the strikers called for and obtained veto rights over all the decisions made by factory management, they were starting out from an already considerable base of established rights. And it was in the name of the principles of socialism that the working class reacted against abuse, against privelege, and against violation of social ethics.

Yes, it has been positive on the whole.

The problems of democracy have been at the heart of this crisis. French Communists are not surprised by that. But it is not that the Polish political system did not include democratic structures. There are in particular structures in place for social self-government and for self-government in factories. They work badly. There is too much congestion. One of the major strike demands was for self-government to really function, starting from what is in place, and based on new more extensive

rights. The problems Poland is currently presented with serve to verify what Stanislaw Kania has expressed in these terms: "Democracy is not a gesture towards society but a growing and fundamental need of socialism." The anticommunist press has made an error of judgment regarding the Polish crisis. This crisis is not and has never been a challenge to socialism. It is a demand for further democracy and further socialism. It is leading to the implementation of new forms of political life and of participation by the masses allowing contradictions which have occurred naturally in the development of socialist society to be overcome.

Yes, it has been positive on the whole.

And this Polish summer has been on the whole positive because of the amount of reflection it will force, the challenges it implies, and the perspectives it opens up.

'ERA SOCIALISTA' CHIEF EDITOR CRITICIZES 'LUCEAFARUL'

Bucharest ERA SOCIALISTA in Romanian No 19, 5 Oct 80 pp 50-51

/Article by St. Voicu: "Foot Literally and Figuratively"/

/Text/ The column "Review of the Journals" in LUCEAFARUL No 38, 1980, devoted to ERA SOCIALISTA rates as "varied and interesting the ideological and cultural-artistic section" in our journal No 16, 1980. We were about to thank the entire collective of LUCEAFARUL for this, who get the credit for the entire content of the "Review of the Journals" because the column is unsigned and therefore expresses the editors' opinion.

But we gave up thanking them with regret because as we went on reading the column we saw that a sensible reference to a review signed here by Petru Berar is followed by an avalanche of distortions and mystifications of an article in our journal, spread over seven columns at the foot (foot literally and figuratively) of the second page of LUCEAFARUL. You inevitably wonder whether it is a matter of inability to understand the content of a "varied and interesting ideological and cultural-artistic section," bad faith, or who knows what else.

An article was published in our journal wherein Victor Ernest Masek advocates (and we along with him) "accessibility and effectiveness of the artistic message," as the very title of the article says.

From this article the editors of LUCEAFARUL extract a certain passage in which the author speaks of "the necessity of bringing an entire people, in our case one of nearly 20 million, up to the spiritual and cultural level at which the need of art and the capacity to receive it become definite needs of each."

LUCEAFARUL's interpretation of this passage is incredible. It says, "According to V. E. Masek, the 20 million have lived in caves until now waiting for the providential missionary V. E. Masek to liberate them." Rubbish!

But V. E. Masek states (And it seems to us a perfectly correct theoretical and political point) that once a people (any people) have begun to construct socialist society, for the first time in history it is no longer enough to form a relatively limited category of people who fill a few concert halls, a theater or an exhibition but it is a question of "the necessity of bringing an entire people, in our case one of nearly 20 million, up to the spiritual and cultural level..." (See the above quotation).

The necessity of elevating millions of people to a high cultural and spiritual level is determined by the circumstance, more than evident on the social-historical level and very clearly expressed in the passage incriminated by LUCEAFARUL, that "Socialism is not built with an elite but with the contribution of all."

It is my personal opinion that those at LUCEAFARUL agree with this point and do not think it possible either to build socialism with an elite alone. Therefore I do not in the least understand why they dishonestly and incorrectly cut Masek's sentence in two, quote it in truncated form to distort its meaning without reproducing its conclusion, and distort it.

But if, absurdly enough, they hold another opinion (which is incredible because it would be too great a blunder) they have the right to state it openly.

We shall refer to another quotation taken out of context, truncated and interpreted in the same manner. V. E. Masek's article brings the gratifying fact that, thanks to the party's and our socialist state's cultural policy of course, Alecsandri, Eminescu, and Caragiale are known to practically anybody today and that the paintings of Aman, Grigorescu and Luchian are eliminating the old errors of the "gang picture" from more and more interiors.

The author of the article in our journal says this is a good thing, but he adds, "It is not enough" because "The art of the past centuries, however good, cannot answer all the questions or meet all the spiritual needs and expectations with which the public approaches contemporary art."

How does LUCEAFARUL interpret this text? It says, "ERA SOCIALISTA asks us no more and no less than to put 'aside Alecsandri, Eminescu, Caragiale, Aman, Grigorescu and Luchian...' and to install 'the great hieroglyph of the latest contemporary art' in their place."

Of course it is primarily the business of literary, dramatic and artistic criticism to decide whether our contemporary art is entirely or only partly a "great hieroglyph." What we can state, even without any more detailed study, is the fact that a good many of the poems published in LUCEAFARUL are unintelligible and devoid of "the accessibility and effectiveness of the artistic message" and are indeed "hieroglyphs." If the evaluation in LUCEAFARUL were of any self-critical nature at all, we could regard it with some good will. But it is in no way noble or correct of this publication with a literary mission and published by the Writers' Union to disseminate this judgment and to declare "hieroglyphic" in a pejorative sense our entire contemporary literature and even our entire latest or recent contemporary art.

What we are to do with a false, disloyal evaluation is indicated by the very collection of LUCEAFARUL, which has contained, in addition to many "hieroglyphs," a great many literary creations of high artistic value (prose, verses, fewer literary criticisms) with "accessibility and effectiveness of the artistic message" and acclaimed by us and Masek in ERA SOCIALISTA.

But to return to LUCEAFARUL's rancor, we wonder if we can be satisfied solely with the outstanding art of centuries past, the precious treasure of Romanian and world culture upon which we rightly pride ourselves and the wide dissemination of which among the masses is an accomplishment and a gratifying fact, as our journal clearly says?

It would be very hazardous and awkward for the literary and artistic critics at LUCEAFARUL to try to show that "Alecsandri, Eminescu, Caragiale, Aman..." and the other great creators of art in the past answered "all the questions and spiritual needs and all the expectations with which the public approaches contemporary art today."

If we heeded the statement in LUCEAFARUL, the creators of art in our day (writers, painters etc.) would have nothing to communicate and would not be the bearers of any message and, in the words of those at LUCEAFARUL, we could proclaim "Down with contemporary art, down with the art that will answer the questions and spiritual needs of the members of socialist society. We do not need it because they were all answered in the last century and at the start of our century by Alecsandri, Eminescu, Caragiale, Aman, Grigorescu, etc. etc."

Anyone can see in what an absurd position LUCEAFARUL is placed by its reckless remarks.

I do not think there is need of any theoretical demonstration to convince our creators of art that we must not stop artistic creation today because we had great artistic values in the past. On the contrary, we must go on, we must demand of the creators of art that they give us great new artistic values, better than those of the past if they can, artistic creations that will meet the spiritual needs and social aspirations of the people of today as well as the ethical, aesthetic and ideological requirements of the historical process in full course in Romania, that of forming the new man as a purposeful builder of the socialist society.

This in no way means "down with Alecsandri, Eminescu, Caragiale, Aman, Grigorescu, etc., etc." but just the opposite. I stop and wonder how our colleagues at LUCEAFARUL got such a thing into their heads!

The stand taken by the footnote in LUCEAFARUL No 38, 1980 is a strange one because this publication, as its entire collection shows, is not satisfied itself solely with Alecsandri, Eminescu, Caragiale etc. but fills its pages week after week with contemporary literature either hieroglyphic, unfortunately, or of good and sometimes even very good artistic quality.

Since this is so (and this is my position too), I am puzzled and wonder why they cheat and why this avalanche of distortions and mystifications? Of what use are they?

The fact is they are of no use to anyone and are even harmful.

In the same "Review of the Journals" in LUCEAFARUL we have also read a brief reference to a note published in our journal by Ion Pop of Cluj-Napoca, entitled "Rejection of the Bourgeois Way of Life. A Constant of the Literary Avant-Garde Movement Between the Wars."

In this note Ion Pop shows very clearly that the literary avant-garde movement between the wars was a chaotic and anarchic form of criticism and challenge of the bourgeois way of life, and that under the ideological influence of the antifascist movement and the revolutionary workers movement some of the most talented avantgardists in Romania began to challenge capitalist society, taking the stands of the Romanian working class.

It is good that LUCEAFARUL has discovered what we have known for over 50 years, namely that the confused and anarchic individualism of avantgardism cannot be equated with

the radical militantism of the left perceived in the political program of the working class. But our comrades of the aforesaid journal have not yet discovered (but they still have time to discover it) that the anarchic individualism of avantgardism in Romania was not "bourgeois" but antibourgeois, which favored the evolution toward the purposeful left.

And the moral of the note in ERA SOCIALISTA is that any evaluation of the role of the literary avant-garde (and that too, we now add, of any literary trend or in general of any ideological and artistic-cultural trend) in any given historical period must "allow for the particular dialectics of the phenomenon, its program background, and the many motivations of a language impossible to judge outside of the social-historical context that determines it and to which it reacts."

I do not think that those at LUCEAFARUL have any other opinion, since this is an interesting problem in the history of Romanian literature and the political history of the 1930's, and more than that, a problem of the philosophy of history. They are now acting as if they would like to say something but they do not know what or how, because Ion Pop's point (and ours) is invulnerable. They do not like this. The errata in the following number of LUCEAFARUL, occasioned by an error in proofreading (We are inclined to take them at their word), do not change matters in the least. As it is well said in the same "Review of the Journals" in No 39, 1980 (third column, line 11 from the bottom), LUCEAFARUL has made "a prize blunder."

SHORTCOMINGS IN SCHOOL, EXTRACURRICULAR ACTIVITIES

Bucharest ERA SOCIALISTA in Romanian No 19, 5 Oct 80 pp 13-15

/Article by Prof Toma Mares: "Requirements for Education of School Youth"/

/Text/ Nicolae Ceausescu said, "Development of socialist awareness and education of of the workers and of the young generation in general are among the problems of vital -- I might even say essential -- importance to formation of the man and the young builder of the socialism and communism of tomorrow."

Education is a continuous process, a function that is performed throughout the individual's whole life by the family, school, children's and youth organizations, the collective of the institution or enterprise wherein he works, public opinion and the mass media. And the effectiveness of education is indicated by the extent of the individual's social integration and participation and by the responsibility with which he thinks and acts at his place of work, in his family and in his social existence in general.

Unquestionably the educational process as a whole is based primarily upon the schools. They have a varied arsenal of educational means and center around themselves all the contributing factors. In addition to the classes, which are the basic unit of the process of instruction, productive experience is provided in workshops or enterprises, which activities were initiated by the youth organizations in collaboration with the teachers and families. Continued improvement of the material base of the schools and the educational system as a whole as well as the efforts to modernize the programs, textbooks and teaching methods require emphasis upon the educational and formative function of the process of instruction and education. The need of an interdisciplinary and long-range view, constant correlation with the facts of social experience, and encouragement of youth's creative capacity are aspects of the new and the qualitative leap that must be achieved in the field of education.

Activities of the circles and clubs for organized ideological discussions in schools, in youth's homes and in the houses of the Pioneers and Falcons of the Fatherland are highly important. These activities are also intended to familiarize pupils with the laws of the state and to explain some concepts in philosophy, political economics, sociology and political science. The ways of conducting these activities are many and varied (visits and meetings with leading workers in enterprises, subject excursions, conferences, evenings of questions and answers followed by cultural and

educational performances from the National Cintarea Romaniei Festival, etc.).

But this kind of educational activity is not satisfactory in all schools, mainly because some teachers, as I have observed, fail to make these activities as attractive as possible in keeping with the age and particular interests of the young pupil. In general the main emphasis is upon organizing the number of events planned in a month or a quarter and much less consideration is given to the effectiveness expected of the various events. Naturally, with such an approach to educational work the criteria of quality are subordinated to those of quantity.

This tendency to emphasize the quantity of the actions is often aggravated by inadequate coordination among the educational elements of the schools, resulting in duplications, overloading and tiring of the pupils by the form and content of educational efforts that have become monotonous and dull through repetition. The plans and subject matter of the hours of classroom instruction and the programs of the children's and youth organizations often overlap (analysis of the situation in studies, discussion of the same political events, health, traffic and other subjects of instruction).

This situation is maintained not only by the school elements but sometimes even by the organs whose duty it is to guide and control educational and instructive activity. The school inspectors generally judge professors solely as specialists in a discipline and their recommendations are confined to the methodology of the specialty and rationalization of the scholastic documents (plans of lessons, records of regular and extracurricular activities, instructor's notebook, etc.).

The elements contributing to the education and formation of school youth have made a practice of periodically discussing various aspects of the educational process. This is very good, but the reason is unclear for instituting other measures and other methods every time even before conclusions can be drawn about the effectiveness of the previously adopted ones. This results in many programs, and sometimes well-established and efficient methods of political indoctrination as well as good experience and ideas are abandoned in the desire to keep lending them novelty and originality. I think this is illustrated by the way some schools have given up organizing and holding some cultural-artistic and sports events and the applied technical demonstrations, excursions etc. that are highly regarded by school youth. And so the question arises of a better selection of those called upon to guide and control educational activities, which selection should take more account of the calling and preparation of the persons in question.

The ineffectiveness of the various educational efforts, especially those aimed at the pupils' political-civic education, is largely due to disregard of some elementary pedagogical standards. It is well known that a lively exposition or presentation that is richly illustrated by audio-visual aids and directly related to specific realities and the audience's concerns is followed with interest and has a high educational effectiveness. And as I often found in schools, the most frequent defect in efforts of this kind is failure to adapt them to the pupils' age characteristics. Forms and procedures suited to adults are borrowed, the children's comprehension and mentality are strained, and a knowledge and judgment of social relations as well as an experience of life in general that they do not have are demanded of them. Sometimes too many theoretical concepts are presented, with recommendations, instructions, principles and definitions, without giving the pupils sufficient opportunities to understand them, to say nothing of applying them purposefully.

In attending a number of activities with a political-educational content initiated by the Pioneer and UTC /Union of Communist Youth/ organizations or the hours of classroom instruction, I could see the tendency of some teachers to conduct education in a forbidding and imperious fashion, to the neglect of the basic pedagogical principle that feelings and convictions can be formed only by specific reasoning and demonstration.

Pupil's Spare Time and Family Participation in Education

Use of young pupils' spare time is a problem with major implications for education that is still an open question. In general the pupils are involved in many activities both in school and outside it during the period of instruction and vacations as well. A good deal of their spare time is taken up by the sports events in the Daciad or those in the National Cintarea Romaniei Festival and social-public activities (agricultural, embellishment of communities, environmental protection etc.). But the organization and proportioning of these activities and attraction of pupils by providan interesting content and attractive ways of conducting them are still not up to the standards of high educational effectiveness in all cases. The pupils' lack of interest and sometimes poor participation in the spare-time activities are also due to misuse of meetings and lack of variety in the forms the educational efforts take.

If the pupils are to take an interest in these activities they must be more individualized, organized for smaller groups, and conducted outdoors with much activity and the broadest possible horizon of knowledge. Certainly this wish, often expressed by the pupils themselves, is feasible if the professors and teachers themselves have the necessary time. I think a study of the use of teachers in various scholastic activities and especially extracurricular ones would be illuminating, because the opinion still persists at points that the educational activities in school are less urgent than the extracurricular social-public tasks.

Of course organization of spare time also involves proper proportioning of the time the school and the children's and youth organizations reserve for organized activities and that left available to the pupil. Monopolizing all the young pupil's spare time with organized activities is to be entirely avoided.

In their relations with the family, the schools mainly emphasize points in connection with the standard of instruction, discipline etc., and that is necessary. Three years ago the civic committees were formed as consultative bodies constituted up to the national level in order to expand the schools' field of cooperation with the family and with representatives of the various institutions and public organizations on the entirety of educational problems. Although these committees are composed of various elements engaged in instructive-educational activity, including the pupils' parents, it cannot be said that they invariably succeed in making any really substantial contribution to improvement of the content and forms of education. They are generally limited to solution of managerial problems in schools, and in many schools family participation is still confined to periodic discussions with some pupils' parents.

Many teachers complain of inadequate cooperation from parents, especially the parents of pupils with poor results in their studies and unsuitable behavior, pupils sometimes regarded as "problem cases." I do not think there is any family that is not interested in raising and educating its children. But parents' cooperation with the schools

very heavily depends upon their attitude and the tact with which the teachers know how to proceed. The parents' attitude will be one thing if the professor only comments and reproaches them for their child's behavior and another thing when they see and understand the educator's efforts to change certain unsatisfactory situations.

Lectureships have been organized in all communities for parents' pedagogic instruction. But I think their structure and subject matter should be better defined by determining the problems that actually and specifically interest the pupils' families and avoiding too particular points that concern only some parents as well as too general advice and treatments that are banal and quite useless for that reason. Discussion of problems in experience, with adequate psychological and pedagogical documentation, would interest and greatly encourage the families in their regular collaboration with the schools.

Integration of education with production is basic to Romanian schools. One third of the instruction time of the pupils, especially of those in the higher grades, is devoted to practical activities in shops and enterprises. Hence the importance of the educational influence that the workers and youth organizations in enterprises can and must exert upon school youth in order to form their moral and political traits in direct contact with productive work and its exponents. In this way the enterprise collectives are added with a great responsibility to the other elements with an educational role.

But I do not think the important educational potential of the activities and the actual presence of the pupils in enterprises is being adequately exploited. The fact that there still are workers who, by their attitude toward work, set a bad example for the pupils who have come for experience, while the youth organizations in many enterprises take no steps at all to strengthen the ties between school and plant, has an undesirable effect upon the image the pupils form of work in production and the qualities and traits characteristic of the worker.

Training of Educators

The demands of education on all levels require a good preparation and continuing improvement of the teachers. In the 1971-1978 period over 250,00 educators, teachers and professors were improved, with a favorable effect upon the entire process of education and instruction. But some defects still appear in the teachers' practical activity. Many teachers regard their improvement and self-improvement to do effective educational work merely as a formal, professional obligation. This mistaken view is brought about, among other things, by the very way in which the improvement system is designed. It is true that in general the teachers attend professional improvement courses, but without interest and to no great advantage. The chief reason is that essential problems of educational work are not presented or discussed in these courses, not much attention is paid to innovations, and ways of enhancing the educational function of teaching the various disciplines are timidly advanced. Moreover, few practical activities are specified in the schedules of courses of this kind. When all Romanian education is integrated with research and production, why is improvement of teaching personnel still excluded from this principle?

Development of the creative spirit, originality and innovation in all workers is one of the basic requirements of Romanian social progress. But can the teachers' creativity as to the instructive-educational process be developed solely by speeches, seminars and colloquiums in which matters are usually discussed that have been known to

them since their college years? I am convinced that it cannot. Therefore I think there must be a shift from talk to action in the system for improving all teaching personnel, and consequently they must be trained not by speeches alone, however masterly they may be, but through practice and discussion to the point. Discussion entails exchanges of ideas, comparison of opinions, and presentation of personal experience in educational work.

The papers the teachers are required to write to maintain grade I and to graduate from the retraining courses should reflect the result of a personal investigation in a field of instructive-educational work. But it can be seen that these papers often reflect the essential defects of the improvement system. They include generalities emphasizing thoroughly familiar theoretical principles and abound in quotations from other works. Such shortcomings could be avoided if the teachers were encouraged to devote their efforts and interests to creative research to improve their work.

The houses of the teaching staff should not be limited to routine activities, since their sole function is often that of requesting guests from outside to collaborate by giving speeches. They must initiate more field studies as well as practical activities required by the local conditions and followed by discussions. They must direct beginning educators and present them periodically with the conclusions from innovating experiments concerning particular aspects of educational work that are more difficult to resolve.

In higher education the future teachers' practical psychopedagogic training is limited to 10-12 hours of class and 3-4 final teaching lessons. But the professor, whatever his specialty, should be an educator who knows how to work with pupils and how to collaborate with all the elements engaged in education. Therefore he should be trained not only as a good specialist who will impart knowledge in a given field but also as a pedagogue able to form convictions and attitudes and to mold the youths' moral and political makeup.

Inadequate psychopedagogic training of the future professors causes many deficiencies and difficulties in educational work, some of which I have mentioned above. When he reports to a department, the young professor-educator is often unprepared for the many and varied problems of education because he was given no opportunity during his university training to familiarize himself with the ways of collaborating with families and youth organizations or with the performance of the various forms of political-educational work included in the scholastic program or in the extracurricular activities.

To be sure these aims are pursued in the pedagogic high schools especially, but their practical application is not always adequate. It is hard to imagine the effectiveness of a pedagogic experience of 1 month that the pupils in the pedagogic high schools receive, after the pupils of grades I-IV have gone on vacation. This leads to improvisations that detract from the educational value itself of the experience, making it a mere formality.

In order to eliminate the foregoing defects in the teachers' psychopedagogic training, I think it would be advisable to review the very objectives of psychopedagogic training (both theoretical and practical) as well as its structure and duration, because the professors often consider themselves obligated to concern themselves solely with the scientific aspects of the discipline they teach, ignoring its educational implications and generally minimizing their vital role as molders of the consciousness, to

say nothing of the fact that poor psychopedagogic training often leads to lack of initiative on the teachers' part, and fear of error. That is why they wait for instructions, directives and ready-made outlines and plans of activities or the arrival of a representative of the guidance and control organ to help them organize and conduct the various political-educational demonstrations. This adversely affects the permanence and efficiency of political-educational work and interferes with its adjustment to the local conditions and the particular requirements of the school.

A common effort of all elements responsible for the education of the young generation and continuing improvement of the teachers' training for this purpose will bring about the qualitative leap so necessary in the formation of the new man.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

CONSERVATIVE ATTITUDE IN ADMITTING WOMEN TO PARTY ATTACKED

Tirana ZERI I POPULLIT in Albanian 18 Sep 80 p 2

[Article by Agron Lekdushi, worker in the apparatus of the Central Committee of the Albanian Workers Party: "Bringing New Blood Into the Party and the Struggle Against Sectarianism"]

[Excerpts] A secretary of the basic party organization in the "21 December" construction enterprise in Tirana, when discussing the fact that admissions to the party were not going well in his organization, said, as an excuse, "there are no elements with the qualities required by the party in our sector." Other opinions of this nature can be found. These create obstacles in some basic party organizations for young and necessary elements to enter these groups. The petit-bourgeois concepts and practices manifested and held by some communists nurture sectarianism. One of these concepts is lack of confidence in young elements. This happens where communists overestimate their experience and seniority in party work. Actually, the various organizations need new blood and their leadership is not up to the level of the requirements of the party at the present time.

Patriarchal family concepts also nurture sectarianism in some cases. There are some cases where relatives are admitted to the party so they can take control in basic organizations. These cases have been criticized and strongly combated by the party organs in the districts and basic organizations where they have appeared. The necessary organizational measures have been taken and educational work has been done to explain the ideological sources of these manifestations and their danger. Concrete duties have been assigned to communists who have such concepts. But this attention and concern should not be relaxed; it must be constantly increased.

Underestimating concepts in regard to women are also nurtured by sectarianism intertwined with conservatism. There are some basic party organizations who know the strength of the women but, when it is time to accept the most outstanding women into the party, show lack of confidence in their abilities as political militants of the party line and as social activists. For example, the basic organization of the clothing enterprise in Elbasan, although the majority of the workers are women, does not admit them as party members.

The causes of sectarianism are both ideological and social. The patriarchal attitude of some male communist comrades is present whenever there is lack of confidence in female comrades. The forms of the manifestations of sectarianism

and conservatism are varied. Sometimes they appear as "concern for protecting female comrades as mothers since they are very busy," sometimes they say, openly, "they do not perform their jobs."

As a result, only 20 and 30 percent of the young people admitted to the party in Tropoje and Elbasan districts, respectively, during the first half of this year were young women. Shortcomings of this nature also exist in Durres, Kruje and other districts.

This matter must be raised to the highest level of work of the basic party organizations and must be combated on the two fronts: The struggle against manifestations of liberalism and against manifestations of sectarianism, manifestations and attitudes which seek to close the doors of the party to those who deserve party membership.

ATTEMPT OF 'TRAITORS' TO UNDERMINE UNITY AT PEZE RECALLED

Tirana BASHKIMI in Albania 15 Sep 80 pp 1, 3

[Editorial article by Xhorxhi Robo: "The Peze Conference--An Event of Great Historic Importance"]

[Excerpts] At the initiative of the Communist Party of Albania, the Albanian National Liberation Conference was held in Peze on 16 September 1942, marking an event of extraordinary great importance for the future of the country. The Peze Conference was held a few months after the establishment of the Albanian Communist Party. The situation in the country was very serious. The fascist occupiers were trying to maintain their hated system by means of arms. The Anti-Fascist National-Liberation Struggle, under the leadership of the party, was beginning to take on a broader character.

In this situation when the enemy was gathering its forces to act, by all means, against the party and the Anti-Fascist National-Liberation Struggle, the Albanian Communist Party prepared its platform of the militant unity of the Albanian people in a single anti-fascist front. This unity was the key link which would assure the execution of the great tasks of the struggle against the occupiers and traitors. The bases of this unity were cast in the anti-fascist stand but this had not yet developed as it should have. It had to be placed on the appropriate political and organizational bases. For this purpose, the Central Committee of the Albanian Communist Party decided to convoke a national-liberation conference at the national level. In addition to the Communist Party, various currents of Albanian nationalists would be represented in order to unite the people in a single National-Liberation Front, to approve the political platform of this Front and to set forth appropriate forms for organizing the revolutionary people.

during the proceedings of the conference, the traitor Abaz Kupi and someone else who called himself a nationalist did not dare to openly oppose the leading role of the Albanian Communist Party but tried to prevent a further increase in its authority. They proposed that the cells should not be called "partisans" and that they should not display the red star, etc. Their aim was to undermine the Front and the program of the party so they set forth the idea that the youth should not take part in the struggle saying that the youth "is the future of the country" and that they "do not have the maturity for serious work." They set forth these hostile ideas to weaken the Front, excluding from it the largest part of the members of the various partisan units and of the National-Liberation Army.

SOCIALIST INTERNATIONALISM REASSERTED AS GOVERNING PRINCIPLE FOR BLOC

West German Commentary

Bonn IWE-TAGESDIENST in German No 147, 29 Sep 80 p 2

[Report from Berlin: "East Berlin Defends 'Brezhnev Doctrine.'" A translation of the East Berlin NEUE JUSTIZ article cited below follows this commentary]

[Text] The East Berlin journal NEUE JUSTIZ [No 9, 1980] emphatically defended the principle of "socialist internationalism" (known simply as the 'Brezhnev Doctrine" in the West) in the relations of socialist countries with one another. The sovereignty of the socialist countries cannot be considered separately from the principle of socialist internationalism. Functionally socialist sovereignty is not characterized as separation from other socialist countries, but rather "by the organization of socialist international cooperation and mutual assistance." The protection of the sovereignty of the socialist state is "consequently not only its own concern, but is also incumbent on the entire socialist community."

Sovereignty Secondary to Cooperation

East Berlin NEUE JUSTIZ in German Vol 34 No 9, Sep 80 pp 395-398

[Article by Prof Dr Bernhard Graefrath, Jurisprudence Section, Humboldt University, East Berlin: "On the New Quality of the Sovereignty Principle"]

[Text] In addition to the right of peoples to self-determination, questions of the sovereignty of countries occupy a central place in coming to terms with the bourgeois doctrine of international law.[1] This is related to the fact that the influence of democratic forces on international relations is steadily growing and general international law is being developed increasingly more clearly as a universal international legal system which builds on the right of peoples to self-determination and on the principle of the sovereign equality of countries.

To a substantial degree ideological discussions of sovereignty are a reflex of the collision of opposing ownership structures and thus of different class interests in international relations. Almost without exception bourgeois specialists in international law proceed on the basis that advancing economic, scientific and technical internationalization will result in a breakup of sovereignty. They maintain that sovereignty stands in the way of this process, than an unsolvable contradiction exists between the advancing level of organization of international society and state

sovereignty. They attempt to overcome this contradiction by models of world states and world law, or they develop conceptions of a system of international law which integrates socialist countries and the young national states into the system of bourgeois international law. In the process, a "world government," an international legislature or the inflation of international organizations as functional international administrative organs are promoted on the one hand as instruments. On the other hand, individuals and international monopolies are declared subjects of international law and thus removed from national jurisdiction; at the same time the country's immunity in important sectors is diminished and an international protection mechanism for private capital is established.

It is obvious here that we are not dealing with theoretical children's games. Under current international conditions these conceptions are in the interest of guaranteeing and developing monopolism as compared with peoples' right of self-determination. This explains the apparent contradiction of strengthening international central authorities in respect to the individual country with simultaneous strengthening of party autonomy for the organizational forms of monopolism. The bourgeois doctrine of international law is not opposed to sovereignty per se, but rather is against any kind of sovereignty which is understood to be an expression of peoples' right of self-determination and which can take effect within this meaning.

In the models provided by bourgeois theoreticians the sovereignty principle does not have the function of guaranteeing equal and peaceful international cooperation between countries on the basis of peoples' right of self-determination. Rather, it is integrated into a regulatory system whose function consists in guaranteeing, under the conditions of contemporary social and scientific-technical development, the international development of monopolism. The process of internationalization is understood and shaped as a process of internationalizing capital and its forms of movement. Bourgeois theoreticians attempt to combine an international guarantee of private ownership and the guarantee of its freedom of movement with political power mechanisms as compared with unusual interference in the market which originates with the working class, the socialist countries and the peoples struggling to reinforce their independence.

In the ideological coming to terms with these conceptions it is essential, in my opinion, to work out the new quality of the principle of sovereign equality of countries in the system of international law and to make its new legal manifestations much more visible. In this I am obviously assuming that "absolute" sovereignty (for example, with the consequence of a "right" to war) is incompatible with present international law[2] and that the substance of the sovereignty principle cannot be limited to delimiting varying national power, although it continues to exercise this function.

Sovereignty Principle in Relations Between Socialist Countries

The new quality of the sovereignty principle is most clearly reflected in the relations relating to international law of socialist countries among themselves. "Sovereignty of socialist countries is, according to its sociopolitical content, the sovereignty of the guiding force of socialist society, the working class, which, with its allies, holds and exercises the state's power. As a result, its essence is determined by the international character of the historical mission of the working class and its exercise of power."[3] Socialist state power, which--unlike capitalist state power--

is not a patron saint of the uninterrupted development of private ownership, but rather is the organizer of social production based on socialist ownership of production means, can and must also in relations with other socialist countries, which exercise a similar function, play a different role than in relations with capitalist countries.

In respect to content, the sovereighty principle in relations between socialist countries is not restricted to peaceful international cooperation. By resting on like political and economic bases and accepting the international element of the working class it goes beyond that. It is oriented toward solidifying friendly relations for the benefit of the socialist countries, their people and the socialist community of states and toward implementing the necessary process of further reconciliation and growing together of socialist countries and nations.

Socialist internationalism as a constitutional principle of every individual socialist state[4] is at the same time the fundamental principle of relations relating to international law of socialist states among themselves. It combines the various manifestations of socialist state power which are consonant with concrete historical and national conditions. The sovereignty of socialist countries cannot be considered separately from the principle of socialist internationalism: joint international action in the struggle against imperialism, joint defense of socialism, joint help in establishing a socialist world economy and the constant reconciliation of socialist nations are part of the essential tasks of every socialist state, they are essential features of its sovereignty.

Socialist sovereignty--although an expression of political independence and territorial integrity--is functionally not characterized as separation from other socialist countries, but rather by the organization of socialist international cooperation and mutual assistance. The protection of the sovereignty of a socialist state is consequently not only its own concern, but is also incumbent on the entire socialist community.[5] This is stated in Article 5 of the Warsaw Pact, 14 May 1955, and of course in the treaties between the socialist countries concerning friendship, cooperation and mutual assistance.[6]

Cooperation between fraternal socialist states is realized in a variety of ways, and in particular through agreements relating to international law and with the help of socialist international organizations. Thus, with the 29 July 1971 comprehensive program for further deepening and perfection of cooperation and development of the socialist economic integration of the CEMA member countries, which is aimed at a systematic development of the socialist world market and the socialist community of states within the context of CEMA, cooperation has acquired a long-term definition with respect to substance.

Duty of Peaceful International Cooperation

As the UN declaration of 24 October 1970[7] concerning the principle of international law, in respect to friendly relations and cooperation between countries in accordance with the UN Charter, and the 1 August 1975[8] definition of the principle of sovereign equality in the Final Act of the Helsinki Conference concerning Security and Cooperation in Europe show, a positive definition of the sovereignty principle in respect to substance has been achieved in international law. The duty of peaceful international cooperation has been accepted as a determining element in the definition of sovereign equality.[9] Thus, it is unfounded to distinguish between an

international law of coexistence and an international law of cooperation, to set them in opposition to one another and to join the international law of cooperation with extensive renunciation of sovereignty, or to orient cooperation along the model of the so-called EC, as is frequently attempted in bourgeois writings.[10]

Extensive studies are not needed in order to determine that the existence of sovereign countries is today no longer conceivable without the obligation for peaceful cooperation. A model of sovereignty, which is reduced to the bourgeois notion of laissez-faire, contradicts current international law and is in practice no longer possible. It could not be made compatible with the prohibition on the use of threat or force (Article 2, No 4 of the UN Charter) nor with peoples' right of self-determination. In spite of distortion by imperialism, today the common interests of peoples in international relations are becoming increasingly clearer. In international law, controls that are new in respect to substance, are opposed to the individualistic bourgeois way of thinking and regulation and are aimed at realizing common goals reflect this. They do not restrict the sovereignty of the countries, rather they make possible its equitable application. Some examples of this:

The Open Sea (High Seas) was treated in bourgeois legal thinking basically either as the property of individual countries or as "ownerless property" (res nullius). The freedom of the sea guaranteed everyone the right to do on the sea anything and everything that he wanted. The idea that actually no further control was needed was quickly shown to be an illusion. The 29 April 1958 Convention on the Open Sea[11] restricted itself to identifying the freedoms in one article. All other articles, however, and many special conventions contain detailed rules which carefully control and limit the use of these freedoms. A steady stream of new conventions has become necessary in order to make use possible at all. The lack of any regulation that protects the individual country has resulted in the fact that, according to the capitalist principle of the free market economy, the economically strong powers practically monopolized use, that is, they exclude all others from enjoyment of the freedom. The efforts for new regulation of the Law of the Sea[12] were triggered by young national states precisely as a reaction to the destructive effects of the free market economy. Expansion of territorial waters and the establishment of an economic zone of 200 nautical miles are basically an attempt to counter exploitation by foreign monopolies.

As in the case of natural resources generally, sovereignty here is not really being insisted upon in order to organize equal international cooperation and to avoid letting the Open Sea become, under the pretense of "freedom for all," the object of monopolistic exploitation by several large imperialist powers or several multis.

Application of the principle of sovereign equality of countries is interesting also in respect to the Antarctic. Since 1908 various countries have laid claim to specific sectors of this continent. The 1 December 1959[13] Antarctic Treaty establishes new forms of cooperation here between the contracting states. The Antarctic may be used only for peaceful purposes; all measures of a military nature are forbidden. Scientific research is open to all countries. While the treaty is in force (30 years), no new claim and no expansion of a previously asserted claim to territorial sovereignty can be made. Forbidding new territorial claims has the same effect here as excluding claims of ownership.

The contractual regulations in respect to exploration and the use of space or to specific questions of environmental protection are additional examples of new forms which, with the application of the principle of sovereign equality of countries,

organize a kind of peaceful international cooperation which is in accord with the interests of the peoples. The 5 August 1963 agreement prohibiting tests of nuclear weapons in the atmosphere, in outer space and under water[14] as well as the 1 July 1968 treaty on nonproliferation of nuclear weapons[15] or agreements on zones free of nuclear weapons point a direction which demonstrates the fruitfulness of using these principles in the sector of questions of disarmament, too.

In any case, practical international cooperation shows that the principle of sovereign equality today is utilized and functions not as an obstacle, but rather as an instrument of organizing equal, peaceful international cooperation between different countries.

Equal Economic Cooperation Between Countries

In connection with the sovereign equality of countries and peaceful international cooperation the economic cooperation sector has been playing an increasingly greater role in the past few decades. The system of the capitalist world market thus far has destroyed all the UN's development strategies. With the aid of the free market economy the exploitation by several international multis of the wealth and the people in the developing countries is more intensive today than during periods of open colonial dominance. International monopolism endeavors to restrict the function of national governments to guaranteeing the freedom of action of capital, or in any case to establish the function. This contains a genuine threat to the sovereignty of the developing countries and the peoples' right of self-determination.

Thus, for years the developing countries have been trying to define more precisely the concept of peaceful cooperation in the economic sector. In the process, the principle of sovereign equality is clearly utilized in order to ward off the harmful effects of the capitalist world market. This is expressed in a concentrated fashion in the 12 December 1974 Charter on Economic Rights and Duties of countries, which was adopted by the UN General Assembly;[16] this was expressed in the demand for the creation of a new international economic order.

It seems to me that many studies by bourgeois specialists in international law, who concern themselves with the legal character of this charter, miss the basic question. It consists in the fact that in the universal sector, for the first time, means relating to international law are being used in order to classify economic cooperation with the principles of peoples having equal rights and the sovereign equality of countries. The problem is less one of how much legal obligation is due to the individual determinations of the Charter on Economic Rights and Duties of countries; in general it is not meant to do away with conflicting rules. Rather, the problem is more one of to what extent the peoples are in a position to implement more equitable principles of order for economic cooperation against the real power of international monopolism.

Respect of private ownership of production means and respecting freedom of action for multinational monopolies are, of course, not universal rules of international law. The attempt to pass off such rules as a binding basis for international economic relations is directed against the peoples' right of self-determination and the principle of sovereign equality of countries. Thus, it is not by chance that such attempts are linked with conceptions to restrict the sovereignty of countries, to put countries and monopolies in international relations on one level, to develop a transnational law independent of the legal system of the countries, to restrict respect for foreign acts of sovereignty and to remove foreign investments from the

jurisdiction of the receiving country. All that is countered in the Charter on Economic Rights and Duties by a conception, based on the principles of international law, of an international economic order which is oriented toward cooperation and which stimulates the development of universal rules for international economic cooperation with respect for peoples' right of self-determination.

In this connection the principle of sovereignty over natural resources occupies a central place.[18] Today it is no longer restricted at all to questions of nationalization, but rather embraces questions of economic policy in general, and in particular questions of foreign investment and the control of the activity of transnational monopolies.

In Article 2 of the Charter on Economic Rights and Duties, following the declaration of the basic principle that every country has full and permanent sovereignty over its entire wealth, its natural resources and its economic activity, three aspects of sovereignty over natural resources are stressed:

1. The right of every country to regulate and control foreign investment in its national territory in accordance with its laws.

2. The right of every country to control and supervise in its national territory the activity of transnational companies and to take the measures necessary to guarantee that their activity is in harmony with its laws and its national economic policy.

3. The right of every country to nationalize foreign property and to control questions of compensation according to its right and in the event of a dispute to decide it through its courts.

Quite rightly in this, as a basic condition for realizing sovereignty over natural resources, there is repeated reference to national legal sovereignty, to respecting sovereignty. Directly opposed to this are imperialist theories and practices which subject to review by foreign courts or arbitration courts foreign acts of sovereignty that arise when exercising national sovereignty over natural resources, or which respect national legislation only to the extent that they agree with alleged principles of international law--principles which are derived from the practice of capitalist countries. An example of this is the convention on the World Bank in respect to the settlement of investment disputes[19] or the arbitration award by Dupuy in the Libyan-American petroleum dispute.[20] As long as capitalist industrial countries and their arbitration courts maintain that acts of nationalization without prompt, adequate and effective compensation are contrary to international law, national sovereignty over natural resources is thus sobordinated to the laws of the free market economy, that is, it is virtually abolished. Transferring such principles of bourgeois laws governing aliens to current international law openly contradicts the principle of sovereign equality and would mean perpetuating economic exploitation by former colonial powers.

Sovereign Equality of Countries and Responsibility in Respect to International Law

Implementing the principle of sovereign equality as an organizational principle of peaceful international cooperation between countries with different social orders also produces interesting changes in the sector of responsibility relating to international law. This concerns the development of international crimes, doing away with pleas for immunity in the case of war crimes and crimes against humanity

(including the crime of apartheid) and also the expansion and concrete organization of the principle that countries are responsible for seeing to it that no activities emanate from their sovereign area which impair the sovereignty or security of other countries. As examples, mention may be made of the responsibility of countries according to the 14 December 1974 definition of aggression and according to the 5 August 1963 treaty prohibiting tests of nuclear weapons in the atmosphere, in outer space and under water, the responsibility of the countries for the recruiting of mercenaries within their sovereign territory and finally the duty of the countries, which is affirmed in Article 30 of the Charter on Economic Rights and Duties of countries, "to guarantee that activities which are implemented in their national territory or under their control do not cause any damage to the environment of other countries or regions outside the boundaries of national jurisdiction."

What we see here is a substantial expansion of the responsibility of countries for acts which are directed against the sovereignty of countries, the peoples' right of self-determination or international security, or which could endanger these. The responsibility of countries in these cases is in practice broadened by the fact that the obligation itself in respect to international law refers to hindering a certain result, no matter whether it is caused by state agencies or private parties.[21]

Such rules serve to implement the principle of sovereign equality. They take on special importance under the conditions of the existence of countries with different social orders. They work against a policy of the imperialist states to remove themselves from obligations relating to international law by referring to the fact that it is a question of actions by private parties, of the exercising of bourgeois freedoms. International law does not guarantee the bourgeois freedoms of the private owner, but rather the peoples' right of self-determination and the sovereign quality of countries. Guaranteeing the mutuality of basic obligations relating to international law is possible only under strict respect of the sovereign equality of countries. This requires the development of protection in respect to the economic arbitrariness of the monopolies.

It is an important task of the socialist science of international law to show in detail how, in positive international law, the principle of sovereign equality of countries fulfills its function as an organizational principle of current international society. In the theoretical analysis this makes it possible to unmask the allegedly modern antisovereignty conceptions of the bourgeois doctrine of international law as belonging totally to the past: as being constantly new attempts to perpetuate the dominance of capital vis-a-vis the peoples' right of self-determination.

POPULAR UPSET OVER NEW MINIMUM EXCHANGE RATES REPORTED

Frankfurt/Main FRANKFURTER RUNDSCHAU in German 11 Oct 80 p 3

[Article by Karl-Heinz Baum, Berlin: "Friends and Relatives Were Quickly Invited--How Citizens in the GDR Reacted to the New Exchange Rates--No More 'Secret Holidays'"]

[Text] "Bzzzzz..." The busy signal has been sounding since Thursday [9 October] from the telephone receiver in East Berlin whenever the number 849 or 0649 is dialed. These numbers are the area codes for West Berlin and the Federal Republic of Germany. Since the GDR government announced an increase of the minimum exchange rate for travel to East Berlin and the GDR, the telephone wires between East and West have been humming.

Also from West Berlin people rarely succeed in establishing a telephone connection with the eastern part of the city or with places in the GDR on the first try. What is being discussed between East and West can easily been guessed. GDR citizens are asking their friends and relatives to come to visit quickly this weekend, at the old rate in other words, before the new regulation takes effect on Monday [13 October]. Already on Friday morning [10 October] there were waiting lines of 2 hours in the West Berlin visitor office.

The "regulation concerning the implementation of a compulsory minimum exchange of currency" was published on Friday by the GDR dailies on the second page, in text but without commentary. The citizens in the second German state certainly know that they--once again--will be the sufferers from their government's actions. Above all, those citizens who have contacts with West German or western foreigners are affected. It is difficult to say how many there are. According to the Statistical Pocket Book of the GDR, in 1979 approximately 7.6 million residents traveled from nonsocialist states into the GDR. Of these, the majority came from the FRG and from West Berlin, approximately 6 million.

GDR citizens with officially censured western contacts know from experience that an increase of the mandatory exchange will directly affect the quality of their lives. A person forced to fork over more at the border no longer has so much money for gifts (the famous pound of coffee). That was the same 7 years ago when the GDR increased the exchange requirement from the then 5 to 10 marks (for East Berlin visits) and from 10 to 20 marks (for GDR visits).

The figures published by the [FRG] Inner-German Ministry show how much the action taken at that time affected the tourist and visitor traffic. After the GDR had

dropped the rates to 6.50 M and 13 M, the number of visitors took a sharp upward turn: in 1975, 1.2 million FRG citizens and 600,000 more Berliners traveled into the GDR. Also the number of short-stay crossings rose by approximately 130,000.

"My mother lives in West Berlin on a pension," an East Berliner said on Thursday evening, "and she scrimps and saves to buy gifts for our family. If she now must convert 25 marks at each visit, very little remains for us."

The mood in the GDR one day after the announcement of the new measure can be defined as "shock." As the ostensible reason, people cite the SED's fear of a possible repercussion from the Polish events on the GDR. They are starting to fear the effects of detente policy and are trying once more to close the bulkheads. The campaign of the SED press against western visitors has borne little fruit in the past, said one person and recalled that it was also said, "They eat us out of house and home." The GDR press has shot off whole broadsides against "Aunt Frieda from Hamburg" and "Uncle Kurt from Duesseldorf," who allegedly are spreading their anti-communist and revanchist slogans in the GDR.

"Politically dumb, economically foolish, and psychologically wrong"--to this short formula an East German reduced the action of his government on Friday. It is politically dumb because the GDR's best trading partner, the FRG, is inevitably annoyed. It is economically foolish becuase the GDR's action will hardly be able to bring in more money. Whatever is taken in additionally in exchange money will be lost again elsewhere. Fewer visitors leave fewer gifts and also considerably less remains for Intershop. After all, the sales in GDR Intershop stores, where western goods can be purchased in a roundabout way with "Forum checks," amount to 700 million marks a year according to the SED general secretary. On the other hand, the GDR proceeds from the mandatory exchange are estimated at only 300 million marks.

The visitors from the west are viewed by the GDR citizens as a kind of "secret western holiday." People hear about trips to distant coasts and participate vicariously in what otherwise they can duplicate only on television or radio, after a fashion. "If they take away our 'secret holiday,' internal demands for more trips to the west and for more freedom of movement will naturally increase," this speaker said to justify his opinion as to why the measure was also psychologically wrong.

It is inconceivable, he continued, that this step was dreamed up by the Politburo alone. Big brother in Moscow, with an eye cocked on Poland, must have helped considerably.

After all it is unusual that on the very day that all GDR citizens could read about the new measure in the press for the first time, the responsible GDR Finance Minister Schmieder was justifying the regulation in an interview with the SED central organ NEUES DEUTSCHLAND which had been publicized in advance. Certainly these arguments, which were given in a similar manner to the chief of Bonn's permanent mission, Guenter Gaus, on his visit to the GDR Foreign Ministry, do not clarify anything. If someone, such as Schmieder, speaks of inflationary growth, a doubling or quadrupling (as for the East Berlin visits) is hardly appropriate. The reason the GDR actually needs to introduce a minimum exchange rate is that the second German state, 31 years after its founding, has not managed to launch a convertible currency, as has almost every developing country in the meantime.

The residents of the GDR were agreed about one thing. The step taken by the GDR government can hardly be justified for economic reasons alone. Protection against Polish ideas, carried by western visitors also to the GDR doorstep, once again has first priority. This step will bring no new sympathy to the GDR. But the fear of possibly endangering the state was once again considerably greater than the desire to have a good image internationally, for example at the impending follow-up conference to the Helsinki decisions which begins at the end of this month in Madrid.

One GDR citizen, however, knew how, in spite of the increase of the exchange rates, one could sustain the stream of visitors from the West: "Now we must simply provide valuable gifts for our guests. Of course that means much running around for many days." That is an understandable, spontaneous reaction in human terms, but, considering the supplies and the GDR's strict export regulations, it will only be realized with difficulty.

HEGEDUS STRESSES NEED FOR SANCTIONED OPPOSITION IN EAST EUROPE

Hamburg DER SPIEGEL in German 25 Aug 80 pp 102-106

[Interview with former Hungarian Premier Andras Hegedus by Klaus Reinhardt and Inge Cyrus of DER SPIEGEL in Vienna about opposition in the Eastern Bloc: "'I Will Never Be a Communist Party Member Again'"]

> [Text] As Hungarian premier, Andras Hegedus in October 1956 requested the Soviets to intervene against his rebellious compatriots. On 28 October of the same year, he fled in a Russian plane to Moscow. There he studied philosophy and Western sociology, particularly Max Weber, at the Academy of Sciences. After returning to Hungary in September 1958, the former Stalinist, as a sociologist and later chief editor of the journal VALOSAG, for some years advocated social reforms and democratic developments in Hungary. Because he had publicly criticized the Soviet invasion of the CSSR, he was reprimanded by the party in 1968, and in 1973 he was definitely expelled from the party. The SPIEGEL interview with Hegedus, aged 58, took place shortly before the big strikes in Poland.

SPIEGEL: Mr Hegedus, in 1956 you were the premier of the Communist Party government which triggered the popular uprising. At that time you were considered a Stalinist. Today you are one of the leading Hungarian dissidents. Is this change due to your knowing better, to the changed world situation or simply to spite?

Hegedus: The change did not take place overnight. It was a long process, lasting from the 1956 October revolution into the 1960's. I did a great deal of thinking.

SPIEGEL: The unusual second career began in 1956 with your flight from Budapest. Why particularly to Moscow?

Hegedus: You see, I judged the situation from the stupid point of view of a person in power. I was convinced that the revolt was a counterrevolution which had to be smashed in the party's interest. Only after I had become an emigre in Moscow were doubts raised in my mind.

SPIEGEL: Because of what?

Hegedus: I began an intensive study of Western sociology.

SPIEGEL: In Moscow, of all places, where there really was no sociology in the mid-1950's?

Hegedus: Where there was none and none was allowed. The Kremlin condemned sociology in no uncertain terms as a "bourgeois science." Nevertheless the library of the Academy of Sciences had the most important sociological books--those by Max Weber, for example. Those I grabbed eagerly, wanting to understand the causes of the revolution with the help of sociology.

SPIEGEL: And did you?

Hegedus: At least I understood that what had happened in Hungary was no counter-revolution, that the rebels were not necessarily to be regarded as enemies of socialism, that there were many workers and many communists among the rebels who had good reason to be dissatisfied. I also realized my own mistakes as premier.

SPIEGEL: Do you mean to say that if Hegedus had not been the Hungarian premier at that time the revolution might not have occurred at all?

Hegedus: That would be simplistic, because what was bad was not only the premier; what was bad was the whole Stalinist regime. Radical political changes should have been made in the restructuring of party and government in July 1956; instead of Rakosi, not Erno Gero but Janos Kadar should have become the head of the party, and instead of me Imre Nagy should have become premier.

Kadar represented the critical trend in the party, and Nagy was the figurehead of the extraparty intellectual opposition. With those two heading the party and government, it probably would have been possible to avoid the revolution. In any case, thanks to Kadar, I found the domestic political situation already fairly stabilized when I returned to Budapest from Moscow in 1958...

SPIEGEL: ...and decided there to stick rather to sociology than to politics.

Hegedus: Not right away. In 1961 I was, after all, already deputy president of the Statistical Office. Such a job is highly political in East Europe. Kadar wanted to make me president of that office and take me back into the government.

SPIEGEL: And you didn't want to?

Hegedus: I told him: No, thanks; I would rather work as a social scientist; let me form a sociological research group. Kadar was very disappointed at the time. He didn't understand me. He thought I was too cowardly to bear the political responsibility together with him.

SPIEGEL: Soon thereafter Kadar was not only disappointed but furious. The entire Sociological Institute you were heading quickly steered a course that was critical of the party. As early as 1964 you had your first difficulties as chief editor of the sociocritical journal VALOSAG. In August 1968, at a party gathering, you protested the invasion by the Warsaw Pact countries of the CSSR--the only one of 200 intellectuals to do so. How did you happen to?

Hegedus: A number of things were going on then. Personally I was dealing primarily with the problem of society's control of bureaucracy. In the process all leftist-oriented movements became suspect in my eyes, regardless of whether it was a question of Trotskyites or one of supporters of the Chinese Counter-revolution.

What is the use, I wondered, smashing the current bureaucracy by means of a revolution--a counterrevolution? It is no use, no use at all, for there develops again a new bureaucracy, and it is bound to be even worse than the old one.

SPIEGEL: Despite all the differences, you were still a party member. Not until 1973, according to our data, were you expelled from the party...

Hegedus: Right.

SPIEGEL: ...following a lecture you delivered in Warsaw. There you stated that socialism existed in Europe now in name only. The Communist Party leadership in Budapest thereupon accused you of revisionism, of ideological deviation.

Hegedus: What I said was a little more complex. I and my colleague Maria Markus criticized in Warsaw the two forms of the really existing socialism--that is, both the East European system of state administration on the Soviet model and the Yugoslav system of self-administration--because each in its way is bureaucratic. We looked for a third possibility, for a new alternative of socialist democratic development.

SPIEGEL: This dream of a more democratic socialism, in accord with human dignity, you have not stopped dreaming to this day. In concrete terms, what does the third model of communism, the Hegedus brand, look like?

Hegedus: It definitely looks different from what it did originally. Initially I thought the initiative for democratic development had to come from above--in other words, from the party leadership. Now I am convinced that the decisive impetus for it must come from below.

SPIEGEL: How is that supposed to come about in a totalitarian system?

Hegedus: By autonomous--that is, independent--organizations coming into being which are not only tolerated but legalized by the communist party. They are to create a public opinion contributing to modernizing the power structure and to cuasing a gradual dissolution of the bureaucratic structures which are paralyzing economic and political life today.

SPIEGEL: Do you mean interest groups which grow into parties, form an opposition and finally strive for assuming power?

Hegedus: No, that's not what I mean. I don't want to introduce any bourgeois democracy, any multiparty system in East Europe. Look, as far as West Europe is concerned, I wholeheartedly advocate the so-called Eurocommunist way with a multi-party system and a parliament. The East European single-party system would be something awful in West Europe. Just as unsuitable, however, I think, is the idea of introducing the West European multiparty system in East Europe.

The established communist power, of course, would not ever be prepared voluntarily to cede its rule to the opposition once it is demonstrably supported by the majority. That could only end in a catastrophe, and I am definitely opposed to catastrophes.

SPIEGEL: What do you mean by "catastrophe?" The counterrevolution of ill fame?

Hegedus: Civil war--primarily civil war. It might then trigger a war of all nationalists within East Europe. After all, the Croatians are not the only malcontents.

SPIEGEL: To come back to the point of departure, what you have in mind is autonomous organizations which are independent of the party but do not want to become parties in their own right?

Hegedus: Exactly. I want not a party pluralism, but a movement pluralism.

SPIEGEL: It reminds one of the Greens in the Federal Republic, who also want to be a party but at the same time are very much afraid of becoming one.

Hegedus: With us in East Europe the arguments run quite differently. There it would be dangerous to strive for power. For a member of the East European nomenclature, the loss of his power means being flung into nothingness--all privileges gone, the nice apartment gone, as well as the official car and the secretary. He therefore concentrates completely on retaining power. If one wants to dethrone him, one risks a brutal counterblow.

SPIEGEL: Where then are the autonomous organizations to come from which you hope will democratize the regime?

Hegedus: In part they already exist. It is wrong to assume, as one does in the West, that in the East discussions take place at best in fringe groups. Our societies are not dead by any means. Conflicts also reaching the masses occur constantly. At plant assemblies, for instance, workers defend their interests just as vociferously as the managers defend theirs. And because there is no right to strike, you will have migration of labor.

SPIEGEL: The West really is not as poorly informed about the East as you assume. No one regards the Eastern societies as immobile. We know that the Czech underground publishers "Edice petlice" publish much more interesting things than all the official publishers combined. And we know that in Hungary there exists a fairly large tolerated cultural opposition operating in the literary, philosophical and sociological fields.

Hegedus: This is exactly the point I had in view. In Europe today, there are a great many tolerated semioppositionist and oppositionist groups. Nor is the party unhappy about that; it needs certain outlets for popular discontent anyway.

But, as I said, it is a question of a merely tolerated opposition. It must at last be legalized and institutionalized. It must at last be able to depend on this tolerance not turning into persecution tomorrow or the next day.

SPIEGEL: If we have understood you correctly, you demand of the communist regimes in East Europe that they not only tolerate but officially encourage, and thus legalize, a certain pluralism.

Hegedus: Exactly. My thesis is the following. The East European power structure, on the one hand, and the East European opposition, on the other, are confronting a great historical compromise. Those in power have to forgo integrating immediately every movement as they have wanted to in the past. For the first time they will have to permit autonomous organizations legally. At the same time the opposition must limit itself. It has to forgo a priori the traditional political aims--attaining power, even morally questioning the current power. In addition it must also forgo the long-term aim of forming a political party of its own and be satisfied with checking the various institutions of the power structure.

SPIEGEL: Even theoretically such a thing is difficult to imagine, and in practice a great number of hardly solvable questions arise. The most important is this: What is to induce those in power to go in for such a historical compromise? In fact, do they need to do so?

Hegedus: Very much so. I would go so far as to say that basically they have no choice. Unless they go in for the historical compromise, there remain but two somber possibilities. Either there will occur a neo-Stalinism which no one wants, or there will be social convulsions in increasingly quick succession until finally the system collapses completely.

SPIEGEL: For what reason, however, should the opposition be prepared to restrict itself as required? An opposition which declares itself that it does not wish to come to power at the first opportunity surely is ineffective from the very outset. While it can talk about everything, it cannot change anything.

Hegedus: Nevertheless I see no reasonable and feasible way to get out of dictatorship. After all, it is no trivial matter for communist parties now wielding absolute power to agree for the first time that an opposition may exist outside the party. They thus give the citizen the right to his own opinion. That is a giant step forward. It gives rise to pressure of public opinion.

SPIEGEL: And how is the pressure to work upward from below? Can you cite a concrete example?

Hegedus: When I talk of autonomous organizations, I think not so much of marginal groups as primarily of large social groups such as workers, peasants, intellectuals. Nevertheless I can give you an example of even the smallest autonomous organization being able to have an effect. Just take the few critical sociologists in Hungary. They simply brought up three subjects that were taboo long enough for the official side--the press, the movie industry--not to be able to ignore them any longer. First there was the taboo subject of the "second economy"...

SPIEGEL: You mean the problem of the private side economies which often are more important than the state-controlled economy for both the workers and market supply.

Hegedus: Yes. Secondly there was the taboo of discrimination against Gypsies, which we also made a subject for general discussion. Ten years ago it would have been quite unimaginable for a journal to criticize a bus conductor for calling out, "Ladies and gentlemen, there are Gypsies on this bus; watch your wallets." It simply was not permitted to write about racial discrimination in our good socialist society. Today this is being discussed and written about, and movies are being made about it.

The third taboo, finally, tackled by the sociologists concerns poverty. They want to see to it (and in part have already accomplished it) that official cognizance is taken of the fact that poverty exists not only in the evil capitalist system. It also exists where we are. A critical opposition, you see, can react more quickly to social problems than the authorities can.

SPIEGEL: Do you regard sociology--your present work, in other words--as a sort of test stage to see how autonomous organizations operate?

Hegedus: Yes. But I am of course in a privileged, comparatively independent position, for I am already in retirement. My young students, who still work, are far worse off. Their existence still depends on the party's good will.

Thus Zoltan Zsille, for instance, lost his teaching job at the Managers Training Institute because he refused to sign a statement condemning my views. That was in 1974. He has been unemployed since.

SPIEGEL: Let us sum up once more. What you understand by "historical compromise in the East" and what somewhere else you have described as "radical reform" is based on the premise that real socialism, such as we are experiencing in East Europe, is in need of basic reform both in principle and in method, and in fact realizes this itself. Is this a correct interpretation?

Hegedus: Reform must be comprehensive. It is a question not only of economic reforms that can be seen to be necessary but also of social reforms. The prerequisite in each instance is the legitimizing of a deviating view.

SPIEGEL: Loosely after the motto "Let a hundred flowers bloom." Evidently you hope that a more widely informed public and better communication between the base and the top, between the people of the state and the power of the state, can lead to more reasonable politics.

Hegedus: I proceed on the premise that in reality there cannot be such a thing as a harmonious socialist society. If anywhere, it exists only in communist party texts. Wherever different social interests can be expressed, there will be constant struggle. I also proceed on the premise that the diverse autonomous organizations will not be socialist ones [sic]. They will be socialist, ecclesiastical, trade unionist and also nonpolitical, but not antisocialist.

SPIEGEL: The Prague Spring rather proved the opposite. But let us assume, contrary to all experience, that the autonomous organizations would let themselves be guided by indefensible socialist values into the far future. Would it then not make more sense to modernize socialism from within, in the communist party?

Hegedus: First off, that sounds highly logical. But, as is known, the party likes to argue that an external opposition is superfluous because there exists an internal opposition anyway. And in fact it does exist...

SPIEGEL: As a marginal group in the party without any real influence...

Hegedus: I do not see the power structure as homogeneous. I know of a large number of progressive elements in that power structure, but they are impotent without external pressure. They cannot prevail against the party's orthodox and dogmatic elements until the nonintegrated oppositionists help them to do so. I therefore adhere to my view that autonomous groups are indispensable.

SPIEGEL: But do you seriously believe that those in power in East Europe would be prepared to play along with such risky example of democratization? And surely you will not lure the population into the open with improved ideology and social reforms. Whoever rejects socialism, for whatever reason, withdraws into private life and wants to be left in peace.

Hegedus: Precisely this flight into private life surely shows how sick the socialist system is. In our countries there are only two alternatives as far as public activity is concerned. One can serve those in power or, to the extent that one risks heavy repression, one can be critical and advocate reforms. If one wants neither one nor the other (and, understandably, that is the case with most people) one can only retire into private life. Only if you know that you really can change something, will you get involved.

SPIEGEL: For the time being, this is no more than a hope. Moreover, the dissidents in Prague, Warsaw and Budapest are children once burned. Their distrust of state promises is profound and, as we know, not unfounded. Who guarantees them that in the long run the state power, particularly in crisis situations, will also keep to the historical compromise, that whoever takes the floor in good faith today will not be condemned as an enemy of the state tomorrow?

Hegedus: No one could guarantee this in the present situation. None of us knows what will happen. After the institutionalization of independent movements demanded by me, the individual will be protected more or less, however. The state power will then find that its hands are tied. You see, by persecuting a critic of the system it would invalidate the whole system.

SPIEGEL: Further, who gurantees to the state power, in turn, that the autonomous groups will stick to the rules of self-limitation--in other words, will never want to try to seize power?

Hegedus: Only the power itself can guarantee that. It simply must behave in such a way that the desire for its being relived does not awaken anywhere among the people.

SPIEGEL: What political position do you see for yourself in such a reformed communism in the future?

Hegedus: None. As a politician, as I see things now, I died as early as October 1956. My present role is that of a critic of society. I want to be free to express my views.

SPIEGEL: As a model for others?

Hegedus: I want to behave in such a way as also to give others the courage to think. For, you see, a dreadful disease is spreading in East Europe: even those intellectuals who actually are not threatened by any danger forgo thinking. They have become accustomed too much to the fact that one must not think about certain questions.

SPIEGEL: Can you imagine a social development in which you at least would want to become a party member again?

Hegedus: No, that is 100 percent out of the question. After what I have experienced I could never be a communist party member again. I never again want to subject my own thinking to the thinking methods of the party.

SPIEGEL: Thank you for this interview, Mr Hegedus.

SOCIOLOGICAL EDUCATION AT COLLEGE, UNIVERSITY LEVEL SURVEYED

Budapest FELSOOKTATASI SZEMLE in Hungarian No 9 Sep 80 pp 533-537

[Article by Pal Peter Toth, research associate at the Lorand Eötvos College of Sciences: "The Teaching of Marxism-Leninism - Instruction of Sociology at Institutions of Higher Education"]

[Text] The teaching of sociology - which has been part of the curriculum at the universities and colleges for some time - has been further expanded in the last one-and-a-half or two years. The objective and subjective requisites of the instruction have been broadened, and there has been more preparatory work for establishing requisites of purport and organization for the development. The MSZMP Central Committee's Agitation and Propaganda Committee, which in the spring of 1977 looked twice at the situation in sociological research and instruction and defined the most important tasks of a further development, played an important role in this process. That definition served as a basis for the analysis, on the basis of which the Committee on Scientific Policy issued a resolution on 3 February, 1978, regarding the state of sociological research and instruction, and the tasks in their development.

Before examining the present situation in the instruction of sociology at the universities and colleges, let us briefly look at what the Agitation and Propaganda Committee emphasized at its 7 June 1977 meeting as the main tasks in the instruction of sociology and the improvement in the training of sociologists.

"As a first step", established the Agitation and Propaganda Committee, "general sociology" must gradually be made compulsory in the law departments of the colleges of sciences, in the colleges of medicine and in the appropriate departments of the humanities. As a second step, this must be accomplished - simultaneously with the development of a faculty cadre - in the technical and agricultural colleges and, finally, in the colleges of education.

"In order to insure the requisites of instruction," stated the Agitation and Propaganda Committee, "the Ministry of Education should work out the program and curriculum of general sociology."

According to this view, "the instruction of special and branch sociology must be gradually introduced or strengthened in the training programs of lawyers, physicians, engineers, economists and agrarian specialists, and the instruction of educational sociology must be expanded and improved in the departments of general education.

"In order to create the conditions for higher-quality instruction, bases and groups must be created at the universities which would be engaged in continuous research - either independently or in cooperation with other research centers.

"Beginning with the 1978-79 academic year, professional training must be reorganized at the Loránd Eötvös College of Sciences, and must be introduced at the Karl Marx College of Economics.

"In order to alleviate the shortage in sociologists, an independent two-year program must be organized under the direction of the sociology department of the Loránd Eötvös College of Sciences, and the extension training of sociologists must be institutionalized.

"All of these tasks must be carried out gradually, and simultaneously with the establishment of objective conditions."

1. The Teaching of Sociology at the Universities and Colleges

In the 1976-77 academic year, general sociology was taught at the law departments of the colleges of sciences of Budapest, Pécs and Szeged, at the Loránd Eötvös College of Sciences, at certain departments of the College of Humanities of the Lajos Kossuth Scientific University, at the Karl Marx College of Economics and at the Pécs College of Medicine.

As a result of the measures taken, general sociology was introduced in the 1978-79 academic year, in addition to the institutions above, at the College of Humanities and College of Sciences of the Attila József Scientific University in the framework of a special program of required electives, at the colleges of medicine of Budapest and Debrecen, at the Budapest Technical University and the College of Heavy Industrial Technology within the framework of a special program. In addition, general sociology was also introduced at the Semmelweis College of Medicine and certain correspondence courses (e.g., adult education, library science, scientific socialism) of the departments of humanities of the Colleges of Sciences of Budapest and Debrecen.

In the institutions above, in addition to the instruction of general sociology, a major in sociology and specialized sociology is also being offered in the framework of a special elective program.

In addition to all of these institutions, sociology is also being taught at the College of Horticulture and the College of Veterinary Medicine in the form of elective courses.

According to the practice of earlier years, special courses in sociology are still being offered mainly in the colleges under the supervision of various departments without basic training in general sociology. The College of Industrial Arts, the College of Theater and Film, the Pécs College of Education, the College of Special Education, and the Veszprém College of Chemistry, for example, have such programs of special sociology.

In order to generalize the teaching of sociology at the colleges and to conduct continuous sociological research to aid instruction of a higher quality, the past one-and-a-half to two years have seen the establishment of centers--in the university towns of Debrecen, Pécs, Szeged--which will make it possible to teach general sociology in the given city's institution of higher learning. Thus, through the concentration of sociologists and the material means in these places, units will be created which have not existed earlier in our country's higher educational structure. In addition to the units above according to plans sociological groups will begin to operate within the framework of the sociology departments or those of Marxism-Leninism at the Technical University of Budapest, the Heavy Industrial Technological College, the College of Chemistry of Veszprém and the Semmelweis College of Medicine.

In spite of the fact that the Ministry of Education has not encouraged instruction of sociology at the colleges because of a shortage of trained sociologists, there has been a certain progress. For while only the Hungarian College of Physical Education offered college-level instruction of general sociology, which since then has gained the status of a university level institution. It was offered at the colleges of education of Szeged and Szombathely and at the department of adult education of the College of Education of Nyiregyháza in the academic year 1978-79 in the form of a special required elective program. In addition to the above, instruction in political sociology, based on general sociology, has been introduced at the College of State Administration.

Under limited subjective and objective conditions, the organization of the instruction of general sociology will probably be made difficult by the fact that the students at present have a compulsory class load of 33-38 hours. In my opinion, the number of classes cannot be increased. Instead, the present class load must be examined.

The college text entitled "Sociology" will be very helpful in teaching sociology. The synopsis of the planned curriculum was discussed by the Sociology Committee of the Hungarian Academy of Sciences and the Special Committee of Sociology of the Ministry of Education; it is expected that it will be available for faculty and students in the 1980-81 academic year. In addition to the unified material, college texts of political and legal sociology, instructional and educational sociology, cultural sociology, social psychology, factory and industrial sociology, organizational sociology and sociological methods will also be written in the next 2 years.

There were, of course, certain texts and collection of lectures in the earlier years as well; indeed, even in the last 2 years, two lecture-collections and two texts were published ("Basic Political Sociology" for students of the College of State Administration, and "Introduction to Medical Sociology").

2. The Training of Sociologists

According to the view of the Agitation and Propaganda Committee and the resolution of the Committee on Scientific Policy, the training of sociologists must be accomplished through the cooperation of the Loránd Eötvös College of Sciences and the Karl Marx College of Economics. The details must be jointly worked out by the heads of the two colleges of the heads of the special departments concerned.

Training in sociology has been resumed at the Loránd Eötvös College of Sciences in the academic year 1979-80 at the daytime B division. The curriculum has been modernized on the basis of the recommendation of the Hungarian Academy of Sciences' and the Ministry of Education's special committees.

The department also made recommendations for up-dating the content of the supplementary evening sociology program. Accordingly, beginning with September, 1978, instruction at the supplementary evening program was based on this modified program.

To improve sociological training, the number of faculty and research associates was increased in 1978 at the Department of Sociology. Through the improvement of the subjective conditions, the objective conditions also improved, but there was no significant change: even today, problems of space and a lack of equipment hinder instruction and research. It was necessary to establish this, partly because, despite adverse circumstances, the department's research activity plays an important part in our sociological research and, at the same time, it is a fundamental requisite for efficient training.

Of the department's extensive research activity, the following areas must be expecially emphasized: the study of jurists, the study of medical doctors, and studies dealing with the new post-war organizations of intellectuals, national consciousness and value systems, the social life of the small-town intelligentsia, the system of higher education etc.

The department's book and periodical library was in the last one or two years also significantly expanded simultaneously with the improvement of the objective conditions. In order to process the traditions of Hungarian sociology, the collection of personal documents of Hungarian history of sociology was started on the one hand, and, on the other, a volume of studies on the pre-1945 history of Hungarian sociology will be published in collaboration with the Kossuth Publishing House.

The Karl Marx College of Economics is another important Center for the instruction and training in sociology. The instruction of sociology at the college, and the state and activity of the Socio-Economic Research Team were scrutinized already in 1977 by the Ministry of Education's Special Committee on Sociology and the college and department councils of the Karl Marx College of Economics. As a result of the above conferences, there was a significant change in the curriculum beginning with the 1977-78 academic year, e.g., general sociology is being taught as a compulsory subject in the 2nd semester of the 3rd year for almost 500 students, and there are lectures about certain questions of economic sociology in the 1st semester of the 4th year.

Falling into line with the general structure of university education, there is special training, within the framework of the so-called alternative block, for students interested in sociology. The alternative section [blokk] in sociology, for example, was chosen by 20 students in both the 1977-78 and 1978-79 academic years. And for those students who want to write their theses in sociology, the Research Team offers special seminars. In addition to all of these, general sociology has been introduced - beginning with the 1979-80 academic year - for students in the evening, correspondence and supplementary courses as well making a total of about 500 students.

3. A Two-year Course in Sociology

On the basis of the resolution of the Committee on Scientific Policy, an independent two-year program was started by the faculty and research associates of the Department of Sociology of the Loránd Eötvös College of Sciences, with the latter's supervision. This program is offered to those who do not have any training in sociology. It is a high-quality program, based on the active participation of the students. It must be emphasized that, instead of listening to lectures, the students conduct specific sociological research (studies of kindergartens) with the guidance of the faculty.

It can be said on the basis of experience that the program plays an important role in temporarily alleviating the shortage in sociologists and in training qualified sociologists who will take part in teaching and research.

But since this program can only moderate the shortage of sociologists that exist in the area of higher education, an additional independent two-year program should be started in the area of higher education (mainly in agrarian and teacher training) based on the practical demands of research and the individual special portfolios.

According to the resolution in force, the continuing education of trained sociologists must also be organized by the Department of Sociology of the Loránd Eötvös College of Sciences. But since the training and continued training of instructors of sociology, and the establishment and further development of the contents and methodology of instruction in sociology that is to be introduced at the institutions of higher learning, are beyond the tasks related to the general and sociological training in the humanities, it has become necessary for the department to give an appropriate internal structure to its future tasks which is in harmony with its functions. This will be carried out under the name of Laboratory and Continuing Training Center of the Department of Sociology.

On the basis of the experiences gained in the last one-and-a-half or two years, I think it can be clearly stated that the MSZMP Central Committee's Agitation and Propaganda Committee's view and resolution on the state and development of the instruction in sociology has played and does play an important role in the establishment of instruction in sociology and the further improvement of the training of sociologists, having created an appropriate basis for the expansion of our professional training of sociologists and the teaching of general sociology.

NEW SOCIAL CONTROL COMMITTEES SET WORK PROGRAMS

Warsaw TRYBUNA LUDU in Polish 4 Aug 80 pp 1,2

[Article by J.M.: "Social Control Initiates Activities--Focus on Economic Problems and Vital Questions"]

[Text] New WKKS [Voivodship Social Control Committees] were appointed at the meetings of the Voivodship People's Council in May and June of this year. Their teams consisting of 40 to 65 individuals are composed of experienced local activists--representatives of various centers and plants, workers of large industrial enterprises, members of social organizations and self-government, and councillors.

By appointing the WKKS national councils outlines also the program for their activities linked with the initial experience of the committees during the preceding term. The word "initial experience" is used because the control committees which have been operating in national councils for barely 2 years fulfilled--in accordance with the law--the role of organs coordinating and inspiring the activity of other links of social control in our communities. Although such committees have already had many accomplishments, they continue their search for more effective methods of work.

In the first weeks of the term the new WKKS differed in the scope of their activities. A review of their operational programs may confirm that the committees are focusing their interest on matters of considerable importance, whether in terms of quality of the management or of conditions of the people's life.

Subjects Derived From Life

The WKKS in Zielona Gora, for example, is interested in the quality of housing delivered for occupation, labor discipline in plants, principles guiding price-setting of consumer goods, etc. The WKKS in Bialystok is concerned with--among other things--establishment of shopping centers in villages as well as with the condition of services to the village population and the quality of maintenance of residential housing. The committee also examines complaints addressed to housing cooperatives.

The WKKS in Bailsko Biala intends this year to assess exploitation of secondary raw materials, the situation of agricultural land protection, the conditions of animal shelters in purchasing centers, etc. Independently from the program, numerous complaints reported by residents have already been investigated (price control of fruits and vegetables, verification of reports about waste of construction materials, and so on).

As a rule, the WKKS appeal to various links of social control for investigation of selected cases, while others assess competent control links in terms of efficiency and activity, and submit proposals to them. They organized their own control less than 2 years ago. The committees are trying to stimulate other social control organs to do more efficient work. In the voivodship of Zielona Gora, for example, the quality of housing is controlled by the forces of the NOT [Chief Technical Organization] voivodship department and by the residents' self-government. Labor discipline is observed by trade union control and by the ZUS [Social Insurance Institution]. An analysis will be presented at a WKKS meeting.

At the beginning of the term the WKKS in Legnica held a coordinating conference with representatives of all links of social control and trade union control, at which directives for operations and forms of cooperation were stipulated. As early as in May of this year the control committee, in cooperation with the Commission on Agricultural Production and Food Economy of the Voivodship People's Council, reviewed the distribution and production of fodder in the voivodship. Furthermore, control teams began checking whether housing units transferred to the use of workplaces had been allocated in conformity with regulations.

Popularization of Achievements

The WKKS in Legnica has continued some of the programs from the previous term. For instance, the autumn review of the implementation of regulations on reforms of operations in communications was an issue which received lively comments from the residents. Followup of cases under investigation and concern for close ties with our society are essential preconditions for efficient control.

When outlining their social control program, national councils focused on the fact that our society has not been adequately informed about the activities of the committees, which cuts down the rate of signals coming from the people, and thus, also the opportunity for the KKS [Social Control Committee] to react to various irregularities. Therefore, the achievements of the KKS must be popularized in various ways. In view of the advantages of such advertising the most active committees are trying to inform the public about their activities as much as possible. The source of their success in fact is that they proceed in their activities not only according to a set program, but also in response to every specific social signal.

'LE MONDE' VIEWS POLISH TU'S 'VICTORY,' EAST BLOC CONCERN

LD121331 Paris LE MONDE in French 12 Nov 80 p 1

[Editorial: "The Polish Trade Unionists' Victory"]

[Text] The Warsaw Supreme Court has finally recognized a fact: the solidarity trade union exists and the rules it submitted to the court responsible for registering them were in keeping with the law. Therefore the judges should not have "amended" the text submitted to them on 24 October. This 10 November is a historic date in socialist Poland's history: the birth of a big independent trade union. In the short term the supreme court's decision makes it possible to avoid a trial of strength which would have fearful consequences in a country whose economy has been exhausted. Nobody would dare to suggest that it puts an end to the crisis.

The latest developments in the conflict could appear to be the result of a blunder. However, in altering the text submitted to it on its own initiative the court was not unaware that it would be angering millions of trade unionists. Did the party leaders, who directed the court's action, not wish to humiliate the militant workers who had become daunting partners? Were they not trying to cause disturbances in order to impose their authority?

It is a fact that the Polish United Workers' Party is deeply divided, even in its leadership. How else can the events of the past few weeks be explained? Of course Mr Kania said that the reform process is irreversible. He stated that it is necessary to adapt to the existence of the independent trade unions since that is what a large section of the working class wants.

However there is reason to wonder whether these repeated assurances reflect a real desire to radically change an exhausted regime or whether they are merely given to appease the crowd, get it back to work and win the necessary respite for resuming control without any trouble. However, even if the first secretary's desire for reform is genuine, a section of the apparatus and the leadership is rejecting the development. In the enterprises cadres have attempted to intimidate the workers who joined the independent trade unions. At the highest level some leaders are dreaming of smashing solidarity and bringing the dissidents back into line. They have lost the battle in the supreme court. Does that mean they will abandon hope of restoring the traditional order?

In the face of a party which is a prey to doubt, there is now a trade union which has been swept to victory but which is naturally crossed by various currents of

thought. The trade union's founders have accepted compromises in order to obtain official recognition and to prevent the government from losing face. Mr Walesa also thinks that the right to strike must be used with caution. Some of his friends, especially in Gdansk, are already criticizing him for having given way too much to the "other side." Will he always be able to hold back a frequently impatient grass roots which has in places regarded as defeat what is, after all, a success: the supreme courts' decision? The Polish workers are not obtaining everything they want and many wage demands, however justified, cannot be met in the present situation. At least they now have a means of making their voices heard.

It is precisely that which is worrying other communist states. Although the Soviets are continuing to say that it is up to the Poles and them alone to solve their problems, the Czechoslovak and East German leaders are now showing the same restraint. For instance, a few hours before the supreme court's ruling, Czechoslovak communist party organ RUDE PRAVO wrote that solidarity was giving the government orders. The newspaper added that this crisis could "have repercussions at international level." How can anybody fail to see such remarks as a threat?

CSO: 3100

BRIEFS

INDEPENDENT TRADE UNION REGISTRATION--Warsaw, October 24 (XINHUA)--The Court of Warsaw Province, Poland, announced that the registration of the Independent and Self-Governing "Solidarity" Trade Union headquartered in Gdansk was approved by the court at local time 15:00 P.M. today after a five-hour debate. After the announcement, Lech Walesa, leader of the union, declared that the trade union fully agreed to principles of the constitution and the Gdansk agreement, and had no rejection of the leadership of the party. But he proclaimed that the trade union is a non-political organization refusing the control by any political force. [Text] [OW250140 Beijing XINHUA in English 0122 GMT 25 Oct 80]

INDEPENDENT STUDENT ASSOCIATION--Warsaw, October 26 (XINHUA)--A new Independent Association of Polish Students has been established here recently which will co-exist with the Socialist Union of Polish Students [SZSP] like the two parallel trade union movements. A communique of the Founding Committee of the Independent Students' Association said that the Warsaw provincial court has approved its registration submitted on October 20. A meeting attended by representatives from 59 universities and colleges all over the country held here earlier decided to form an eleven-member founding committee for the Independent Association. The communique voices the association's solidarity with the independent trade union movement. The 500,000 Polish students are facing a choice between the two students' organizations. [Text] [OW270741 Beijing XINHUA in English 0710 GMT 27 Oct 80]

RAILWAY WORKERS HUNGER STRIKE--Warsaw, October 27 (XINHUA)--Railway workers in Wroclaw, Poland, ended their hunger strike today after signing an agreement with the government on wage increases. According to PAP reports, the hunger strike was started by 34 railroaders on October 21 after the authorities refused to consider their demand for higher pay. Yesterday when the hunger strike entered the sixth day, vice-chairman of the Council of Ministers, Alexander Kopec, met with a delegation of the preparatory committee for the establishment of an Independent and Self-Governing Trade Union in Wroclaw area. At the same time, a working team headed by Janusz Obodowski, vice-minister of wages, labour and social affairs, was sent to the rolling stock plant in Wroclaw. In the negotiations, the government made compromises and agreed to the workers' demand on a wage hike. Thus, the workers stopped their strike. [Text] [OW271839 Beijing XINHUA in English 1833 GMT 27 Oct 80]

NEW DEPUTY DEFENSE MINISTER—Warsaw, 11 Oct (PAP)--At the motion of the minister of national defence, the chairman of the Council of Ministers appointed head of the Polish Army Main Political Board, Division General, Dr. Jozef Baryla to the post of vice-minister of national defence. Jozef Baryla was born in 1924 to a worker's family at Zawiercie. He joined the Polish Army in 1945. He graduated from the officer's artillery school and the military political academy where he received his M.A. and next doctor's degree in the humanities. During the many years of service in the army he filled many responsible posts in the army political apparatus: he was first deputy chief of the Polish Army Main Political Board, and, as from May, 1980, its head. [Text] [LD120838 Warsaw PAP in English 2011 GMT 11 Oct 80]

U.S. NUCLEAR STRATEGY ATTACKED—Warsaw, 16 Oct (PAP)--The Polish Army paper ZOLNIERZ WOLNOSCI today strongly came out against President Carter's Directive-59 and denounced the false concepts of the U.S. new nuclear strategy against the background of its detailed analysis. In fact, the paper concluded, the idea of this strategy is to camouflage the scope of potential losses wrought by a "limited" war. It only makes nuclear war to be more acceptable and gives grounds for an unusual adventurist philosophy, namely that this war is not only possible but also that one can win it. Such idea of war only makes the picture of it look less bleak and tries to justify the tendencies for conducting it. The paper added that it is definitely the strategy of a first strike capability and as such an aggressive one that only intensifies the threat of the outbreak of a nuclear war. "Directive-59 and the armaments resulting from it are not in the least--according to suggestions by the Pentagon--an answer to the Soviet Union's military build up. So far, all the technical novelties in the military area come from the U.S. and it is the United States that has shelved the SALT II treaty and rejected numerous proposals designed to curb the threat of nuclear war." "It is possible that in the near future the tension in Soviet-American relations will be alleviated thus creating a better climate for agreements and Directive-59 will be altered." [Text] [LD161456 Warsaw PAP in English 1400 GMT 16 Oct 80]

'LITERATURA' ON POWER ABUSE--We are of an opinion that all of the nonagricultural possessions, villas, permanent and seasonal homes which were built or acquired illegally and of which the financial and material bases originate from an abuse of power or from corruption should be turned over for public use. Wherever it is possible and essential, they should, without delay, be converted into nurseries, kindergartens, retirement homes, libraries, houses of culture, holiday camps and recreation centers. This concerns the entire administrative structure, from the gmina [rural parish] to the capital city. This is demanded by social justice, which is the foundation of our political system; this is demanded by social needs, which are severely neglected in these areas. We are requesting all newspapers, periodicals, mass communication media, trade unions, social organizations and creative and public service associations to support our appeal. We are requesting the Presidium of the Council of Ministers to issue appropriate decrees and the Presidium of the Supreme Chamber of Control to insure the implementation of the basic social interest. [signed] The staff of LITERATURA. [Text] [Warsaw LITERATURA in Polish No 43, 23 Oct 80 p 2]

'JUDASES,' 'VISITORS AVID FOR PROFIT' CONDEMNED BY CULTURAL WEEKLY

Bucharest SAPTAMINA in Romanian 5 Sep 80 p 1

[Editorial article: "Ideals"]

[Excerpts] In all times and in all their temporarily separated provinces, the Romanians have had, in addition to a unitary specific character and an acute sense of their common history, a national ideal. We can even say that when the cruelties of life were most severe, we wrapped our hearts all the more in the tricolor cloth of the ideal and we embodied all the more, in the cathedral of our hearts, the Missa Solemnis of belief in success. Our illustrious scholars, just as the anonymous brilliant creators of folklore, have left deeply disturbing testimonies in this area. And the time is not far away when they will all be seeing, once again, the light of paradise of publication. We are making a plea here, especially for the younger generation which is most desirous of culture and historic truth, for putting into circulation again the sacred texts of our civilization, grouped together in a collection which might be entitled "Bilbioteca nationala" [National Library]: the political works of Eminescu, the speeches of Simion Barnutiu, I. C. Bratianu, Vasile Boerescu, Take Ionescu, Vasile Goldis, Iuliu Maniu, Armand Calinescu, the entire historical works of Nicolae Iorga, the politicological system of Aurel C. Popovici, the trilogy of values of Lucian Blaga and many, many others. They are incomparable treasures of our heritage and even if the authors of some of these works were tributaries of errors and excesses, their works remain fundamental and are goods which have been gained, sources of an eternally alive spirit of the awareness of the Romanian character everywhere. We have the good fortune to live today closely united under the scepter of an exceptional political doctrine. It governs us and animates us; it fills our hearts with civic pride and obligates us. It obligates us to be at the summit of the ancient ideals which it is carrying on, to work with all for the prospering of the fatherland, to defend and to raise to superior heights all that has been achieved up to now with so much sacrifice. This is the Romanian line and we will never renounce it.

Of course, we are not obliged to give an accounting to anyone for what we do; we are free, of a majority and masters in our country, the historic choice of a Romanian type of communism has been made and assumed by millions of loyal sons of this country. But, to those who still accuse us we will say that if loving your country above everything else means nationalism then we are nationalists. Or we will respond with a profound thought from the great tribune, Aurel C.

Popovici: "Nationalism means concern in the present so that the future of the nationality will not be endangered" and, further on: "The culture of a people is its cult for national ideals." This is it; there is nothing more. Anyone who sees in our orientation any more than that does so on his own accord. We, the cultural figures of Romania during these heroic years, love the Communist Party not only for the new vision and fresh spirit which it has enthroned in the overall evolution of Romanian society, for the electrifying pace at which everything began to get better, to move toward quality and optimization but also, in equal measure, for its truly revolutionary courage in understanding that a nation can be built only by people of the area who have lived here for hundreds and thousands of years and who do not leave the work front when the going gets tough. The party knows this and many other things and this represents the basis of its cadre policy. It knows, for example, that those who perform patriotic deeds should receive the highest honors and, as the chronicle writer said, the honors should not go to those visitors who are avid for profit, the masters of a democratic tarantella, clothed in their foul-smelling tartan, buffoons hostile to the interests of this nation, those who jingle the spurs of their arrogance and mix some with their swindling patriotism. We do not need lazy prophets, Judases who do not have the dimensions of the Romanian sacrifice in their blood which is so easily bought. As Eminescu said so well: "A floating population cannot represent stability of institutions and cannot represent the deeply rooted sentiment of the idea of the state, of harmony and of national solidarity."

COMMISSION SET UP TO CERTIFY AERONAUTICAL PERSONNEL

Bucharest BULETINUL OFICIAL in Romanian Part I No 81, 11 Oct 80 pp 7-8

[Presidential Decree Establishing the Commission for the Certification of Aeronautical Personnel in Civil Aviation]

[Text] On the basis of Article 8 of the Statute for Personnel in Civil Aviation of the Socialist Republic of Romania, approved by Council of State Decree No 413/1979, the President of the Socialist Republic of Romania decrees:

Sole article--The Commission for the Certification of Aeronautical Personnel in the Department of Civil Aviation is established with the following composition:

Chairman--the head of the Department of Civil Aviation;
Members --the deputy in charge of flight in the civil aviation command, in the Department of Civil Aviation;

--the technical deputy of the civil aviation command, in the Department of Civil Aviation;

--the director of the airport directorate in the Department of Civil Aviation;

--the assistant secretary for organizational problems in the political council of the Department of Civil Aviation;

--the commander of the Center for the Instruction of Aeronautical Personnel;

--the chief of the personnel, education and remuneration service in the Department of Civil Aviation;

--the chief of the service for air traffic direction and control and for patents and licenses in the Department of Civil Aviation;

--the chief of the aeronautical technical service in the Department of Civil Aviation;

--the chief of the service for the protection of air navigation and aeronautical telecommunications in the Department of Civil Aviation;

--a piloting inspector in the Department of Civil Aviation;

--a chief legal counselor in the Department of Civil Aviation;

--a master, appointed by the leadership council of the Department of Civil Aviation.

BRIEFS

DATA ON FOREIGN STUDENTS--This year, approximately 21,000 foreign students from 124 countries, the majority of them developing countries, are studying in institutes of higher education in Bucharest, Bacau, Brasov, Iasi, Cluj-Napoca, Craiova, Galati, Petrosani, Ploiesti, Pitesti, Suceava and Timisoara. More than 35 percent of these students are attending the polytechnical institutes, 40 percent are enrolled in medical courses and the rest are enrolled in university, agronomic, economic and artistic education. The students gain practical experience in their field by working in school workshops, microproduction units, pilot stations, large factories and enterprises, laboratories, polyclinics and hospitals, oilfields, and agricultural research stations. Also, the student benefit from university textbooks, scientific treatises and other auxiliary works and libraries equipped with numerous volumes of works and publications which present new developments in different fields of activity. Intensive courses in the Romanian language are organized to help the foreign students to complete their higher education as rapidly as possible. SERBIAN PRIEST IN BOSNIA CRITICIZED FOR NATIONALISM

Sarajevo OSLOBODJENJE in Serbo-Croatian 6 Nov 80 p 3

[Article by Djuro Kozar: "Nationalistic Feast"]

[Text] Article 174 of the SFRY Constitution (the section on freedoms, rights and obligations of citizens) specifies that "the profession of faith shall be free and shall be a person's private affair," but a bit further on it states that it is "unconstitutional to abuse religion and religious activity for political purposes." This position is the basis for relations between society on the one hand and religious communities on the other, relations which on the whole have been very good. Nevertheless, from time to time, either openly or covertly, behind the shield of religious rites an isolated case of behavior will again occur in some church or mosque, rectory, temple or Moslem elementary school that has absolutely nothing in common with religion, but rather strikes at and is aimed against the greatest achievements of the National Liberation War and socialist revolution -- brotherhood and unity.

Outrageous Behavior at a Christening

The most recent example of activity outside the framework of religion, or, to put it more precisely, of sinister activity occurred at Borike, near Rogatica, some days ago. Nedjo Janjic, priest of a Serbian Orthodox church, together with other like-minded persons, who included Momcilo Janjic, Milos Basevic, Milomir Asanja, Milan Planincic, Vojko Neskovic, and members of the church committee along with certain others, abused the religious rite of baptism of his child in the rectory by singing nationalistic songs and by arousing those present to nationalistic euphoria. Shots were fired from a pistol, Great Serbian nationalistic slogans were exclaimed, intolerance toward other nationalities and ethnic minorities was displayed.... In short, it was outrageous behavior in the worst sense of the word. Thus the christening at the home of Pop [Orthodox priest] Janjic turned into an appeal for the Chetnik spirit, for nationalism and for fratricidal hatred.

Our people are quite well aware of what is religious and what is nationalistic, of who is a friend and who an enemy of this country, of its nationalities and its ethnic minorities. Our people still bear the scars of the Chetnik and Ustasha knife. There are also memorials in Partisan cemeteries where the victims of Fascist atrocities are buried.

The "christening" in the rectory in Borike did not of course pass without reaction, without unanimous condemnation and scorn. The clergymen in priest's habit or street clothes greatly erred if in their twisted minds they imagined that anyone would support them and join them. Pop Janjic and his band were vigorously condemned in a meeting of the Borike Local Conference of the Socialist Alliance of Working People and in the six precinct meetings held two nights ago. Honest men, believers and atheists alike, asked themselves: "Can this be possible?" They added: "Who would ever think of appealing to the Chetnik spirit today and of inciting hatred among people when we have built and achieved all the great and wonderful things we have on the basis of brotherhood and unity, socialist community spirit -- our most cherished achievements."

The parish priest Janjic had been well received when he took up his position in Borike. People who profess religious faith thought that this "churchman" was sincerely a man of faith, peace, love among men and among the nationalities and ethnic minorities. But Janjic, whose actions are premeditated and clever, had other "concerns" than religious rites. He used his priest's habit only as a screen for deeds, acts and ideas which are far from God, Orthodoxy and love for man, said the participants in the meetings of the Socialist Alliance we have mentioned. Janjic sought and found "lost souls" similar to himself, poked his nose in everywhere, he sought contacts with young people, even in the schools, where he had support even among some faculty members.

Degenerate Representatives of the Serbian People

Thus instead of the priest's nobility, Janjic openly displayed nationalism in the church and outside it. The believers listened to this and doubtfully shook their heads about what this "holy" person was muttering and saying. And then even a strange song, a nationalistic song, was heard. Older people recognized in those songs: "Sto no Drina..." [What but the Drina...], "Oj, subaro..." [Oh, fur cap of mine ...] and so on, that raving muttering practiced by the Chetniks, degenerate examples of the Serbian people, when marching off to some of their atrocities.

The people of Borike, loyal to their socialist, self-managed society, spoke out that they wanted nothing whatsoever to do with anyone who appealed to that kind of past, nor to display in any manner whatsoever anything at all that could besmirch a freedom won with bloodshed, a freedom that shines like the sun. And they added that no hostile outburst or similar action should be underestimated, regardless where it occurs. In a public place or in someone's home, in a rectory or outside it. They also concluded clearly and explicitly that all nationalism is equally dangerous -- whether it be Serbian, Moslem, Croatian or some other nationalism, regardless of whether it is displayed in a city or rural area, regardless of whether the proponent is a local person or just a passer-by, like our countryman Vojislav Lubarda, who is unceasing in his nationalistic scribbling and preaching of enmity among the nationalities.

The inhabitants of Borike were unanimous in the belief that vigorous resistance should be offered and political measures and legal sanctions undertaken against all those who openly or covertly attack the basic values of our society. In particular, they said, vigorous action should be taken against those who attack the greatest achievements of the revolution -- brotherhood and unity and the socialist community spirit of our nationalities and ethnic minorities.

It is obvious that Pop Nedjo Janjic, whose duty to perform religious services and carry on religious activity conforms to the Constitution and law, has abused religion for political purposes and has inflicted injury on this region and all the members of the Serbian Orthodox Church, insulting their patriotic and religious sentiments.

Unanimous Condemnation

Every one of our well-meaning and honest citizens, be he believer or atheist, knows that our socialist, self-managed society has guaranteed the conditions for free expression of faith and that no one has ever (except the nationalists and separatists) divided up those who are believers and those who are not. All our working people and citizens are equal regardless of ethnic background or religious affiliation, and an attack on the members of one nationality is at the same time an attack on all the others, on brotherhood and unity and on socialist community spirit. The meddling of the clergy in the field of politics has always been dangerous, but also has always been unanimously resisted and condemned and has been called by its right name.

Nor could it be otherwise. That is the error of all who think that cloaked by religious worship they can advance their own judgments and visions, "represent" believers in their relationship with society, equating the religious attribute with the ethnic attribute, appeal for a spirit of enmity, and so on. Their only destiny can be that of Pop Janjic and his band in Borike, since the people know the difference between acting as their broker and performing religious services, and no one can put anything over on them.

Finally, the conclusion of the Borike Local Conference of the SAWP: "With the blood shed by Moslems and Serbs and Croats in the concerted struggle of all the nationalities and ethnic minorities of Yugoslavia we paid dearly for the freedom we won, peace in our homes and on the borders of our country, we achieved equality, we forged indestructible brotherhood and unity, and we will not allow anyone to destroy what has been created, but rather, as Comrade Tito instructed and taught us, we will preserve brotherhood and unity like the apple of our eye.

[Box] The meeting of the Borike Local SAWP Conference on Monday and of its six precinct organizations on Tuesday took up a report on the flagrant chauvinistic outburst of Nedjo Janjic and other citizens in the Borike rectory and unanimously condemned this as a hostile act.

Both believers and atheists participated in the discussion at these gatherings, and from the abundance of opinions we have singled out some which in our judgment best indicate the political disposition of the people of that region.

Rajko Pusonja: "This is a severe blow for us all. There is no place among us for the offenders. We provided a comfortable life for this young priest and the teachers, and that is how they paid us back. There is no place in the school for educationists who have been involved in nationalistic activity. Those are terrible songs and did not come from the head of someone who was drunk, but constitute a deliberate act.... We are conscious of the number of sacrifices we made. Are we to let this priest and a handful of others among us to cast the burning ember which will return us to 1941? No, that we will not allow."

Dragica Lucic: "It hurts me to hear the Chetnik songs sung again here. I don't know what I wouldn't do to such people (sobs)... The Chetniks burned up my two sisters in a shed. They were degenerates, as are those who today remind us of them, 35 years after the end of the war."

Sejdo Poljo: "The most unfortunate part of all this is that certain teachers became implicated. Their sort can't bring up our children.... We made enormous sacrifices for brotherhood and unity, and were we to lose it, we would lose everything. We need to speak frankly about the makeup of mosque and church committees. These boards have assumed more than their rightful authority, and they are concerning themselves with matters that have no connection whatsoever with religion."

Petar Jesic: "Anyone who wants to believe in God and go to church can go right ahead. But anyone who has the intention of sowing dissension in the people and of enflaming enmity will encounter our energetic resistance and condemnation. We are preparing for defense and protection of the country, we have both units and official structure, we are constantly saying that we must recognize the adversaries of our society, while before our very eyes a priest does as he pleases, assembles people and poisons them. They had priests in Borike before him, but never before such a malicious one."

Milos Stanojevic: "I go to church. There are priests and priests. I condemn what the parish priest Janjic did. We don't need a priest like that."

Predrag Balcakovic: "I heard that Tomo Djeric, president of our precinct SAWP organization, attended the christening at Pop Nedjo's, but did nothing to put a stop to the Chetnik songs. He can no longer be our president." (Djeric was therefore unanimously dismissed from his post as president of the precinct organization.)

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

BETTER TRAINING OF FIGHTER PILOTS URGED

Sofia ARMEYSKI PREGLED in Bulgarian No 10, 1980 pp 95-99

[Article by Col Stoyan Petrov: "Some Questions Regarding the Tactical Training of Flight Personnel"]

[Text] The first-priority goal of all commanders in the training of pilots is that they achieve high skill in piloting technique and complete mastery of the combat employment of aircraft. In addition, they must also acquire the habits needed to make a comprehensive estimate of the air situation in literally minutes, even seconds, and, taking it into account, to make the most expedient combat decision, impose their will on the "enemy" and win victory.

The necessity of an attentive approach to the tactical training of flight personnel is dictated by the importance of the missions that aviation performs.

These missions in principle reduce to decisive destruction of the enemy in the air and on the ground (on the sea) by the skillful use of the entire altitude and speed range of our aircraft, at any time of the day or night, in simple and complex meteorological conditions, in varying ground and air situations and, above all, under conditions of confusion. These are very complex and crucial missions which raise the requirements set for pilot training.

For fighter pilots the increase in the complexity of their missions is due primarily to the capabilities of aviation equipment and the aggressive intentions of our potential enemy. It is known that our potential enemies have powerful combat aviation and armament meeting the requirements of modern warfare, and as well that their cadres are training intensively for successful combat employment of this equipment.

After the Vietnam war the American command drew some serious conclusions from the great losses inflicted by air defense weapons on the U.S. air forces. The experience of the war in the Near East has been thoroughly analyzed and definite conclusions drawn.

From the analysis and conclusions it can be seen that the enemy regards air defense as a powerful obstacle in the way of his aggressive schemes, for which reason ways and methods of overcoming it are persistently sought.

The countries of the aggressive blocs, and above all NATO, spare no efforts or resources to create new improved models of air vehicles for air-space attack or to improve the methods of overcoming the air defense of the Warsaw Pact participant countries.

We are witnesses of the final work on new, and the modernization of existing, models of war materiel. Everybody knows already about the deals for the installation of medium-range missiles in the territory of the states of Western Europe and the experiments with the combat employment of winged missiles. The continuous, increasingly ardent and intense race between the enemy's air-space attack weapons and the status of contemporary air defense is apparent.

And this is natural, but this dialectical paradigm must be interpreted and analysed thoroughly and in detail. From it, correct and practical inferences must be drawn, on the basis of which the training of aviation specialists will be directed towards the stern demands of modern war. Pilots must be ready at any moment for bitter skirmishes with a strong enemy well versed in military science, his own tactics and ours.

The strength of fighter aviation and its capacity to destroy the air enemy depend on the quality of the combat training of every pilot specifically.

The fighter pilot is an air soldier. He operates as part of groups with varying tactical purpose and alone encounters and destroys the air enemy in the still-distant approaches, outside the range of other destruction weapons. He finishes up what is the main object of the great and complex labor of the many people on the ground who take part in combat organization and support.

The outcome of modern air combat, the destruction of the air enemy, depends in principle on the pilot, his firing skill, tactical know-how, daring enthusiasm, moral makeup and physical hardening. Events sternly punish those who do not measure up to the serious requirements set for pilot training.

Some of the most important requirements set for the training of a pilot are that he must possess impeccable tactical skill, have excellent knowledge of the enemy and his tactics, react speedily when the situation changes, be able instantly to assess everything affecting the course and outcome of combat, carry on precise sniper fire, and be physically hardy. In pilot training there are no second-priority matters, nor can there be any.

Flights, training exercises, and the performance of alert missions must constantly enhance every pilot's training, make it approximate the training

that is necessary in order to wage modern air combat, and improve his flying and tactical expertise.

The appearance of new, and the modernization of the existing, enemy air-attack weapons and the development of methods for employing them in combat make it imperative that every pilot have thorough and all-round knowledge and study carefully and in detail everything new that the enemy comes up with daily. To be victorious in modern combat and smash the enemy, he must know the latter's combat capabilities and operational tactics inside out, as well as the methods of fighting such an enemy.

In the effort to gain the heights of tactical training we sometimes encounter phenomena such as shallow and superficial knowledge of the enemy, i.e., knowledge only as a matter of information in general outline rather than as a target to be fought against, a deadly enemy to be outwitted and destroyed. When a pilot does not know how to compare his own and the enemy's combat capabilities, he will not notice the enemy's strong and weak points or make the right analysis of the best combat alternative. Sometimes we observe an incomplete grasp of the simple truth that to estimate the situation instantly and make the right combat decision, you must know everything cold and with certainty beforehand while you are still on the ground; you have to work out thorough theoretical calculations and the alternative method of reacting to the air situation, always remembering that the combat situation will not allow the pilot time to ransack his memory or look in the textbook.

And the overhigh hopes of some pilots that for any action in combat they can get help from the combat crew on the ground surely bode dangerous consequences, don't they? This often leads to a playing down of pilots' responsibility for, and a dulling of their watchfulness over their own personal training for air combat.

During the conduct of training exercises we sometimes also encounter phenomena such as the inability to perform the calculations necessary in order to comprehend the operations in impending combat. In a very simple situation--maneuvers, groups are dispersed and unsuccessful attacks on air and ground targets are permitted. General and detailed orientation is not conducted; departures from normal requirements are tolerated.

During "pilot on foot" games, ordinary questions are answered inaccurately and incompletely; the answer must have a precise characterization of performance data and armament and a precise conclusion as to how the enemy can best be destroyed in combat in one attack without incurring losses on our side.

Requirements for raising the tactical ability of pilots to operate singly and as part of various groups are not interpreted thoroughly enough.

Usually every kind of training concludes with a flying tactical exercise for the record, from the performance of which an evaluation is afforded of the ability of the pilot or unit successfully to accomplish various missions involving the combat employment of aircraft in an air and tactical situation of constantly increasing complexity. The crews receive practice and the ability of commanders to organize and control air combat in various aviation-group strengths improves.

Unless sufficient attention is paid to organizing, performing, evaluating and analyzing record and flying tactical exercises, the improvement of pilot training will be delayed.

Under present-day conditions, pilot and group combat is closely linked with control and support agencies and with the increase in complexity of the ground and air situation. In the execution of record and tactical-flight exercises, the pilot/control-system/support-system chain is joined together.

In organizing and conducting combat training, the most important component parts--flight and tactical training--must be inseparably interlinked as two aspects of a single whole. If attention to either of these is slighted, this will at once affect combat training as a whole, and this will inevitably affect combat readiness as well.

This is so because here and there the basic truth that flight training is not a goal in itself, but an essential means for the performance of combat missions is still not understood. This constitutes its main point and significance.

Piloting technique being the main goal of pilot instruction is a task for both military pilots and sportsmen pilots. But for military pilots the chief goal is qualitatively different, unquestionably more responsible and complex: the destruction of the air enemy in hard fighting. The air soldier needs impeccable piloting technique for combat rather than for sport.

In modern combat even the most ideal piloting technique is not enough: what is needed is the ability to organize and fight a battle. The sharpest blows must be aimed at the more vulnerable spots, i.e., every pilot must be a real tactics expert.

If we approach tactical training in this way, the importance of flight training and its specific features will by no means be lessened. Only the understanding that flying is subordinate to the interests of fast-moving combat makes tactical training genuinely intelligent and purposeful.

The role of the aviation commander as an organizer in the training of pilots follows from this. His entire attention must be given to the planning, preparation and direction of flights. He must personally get ready

for the flights himself and keep the documents. He must realize that in the sight of the laws of the flying service all are equal and he must assess and rehearse in detail all elements from takeoff to landing and the operations in special cases. All this is necessary not only in order to rehearse piloting technique, but also to assure flight safety. It is the safety in every flight of every pilot that he aims thus to assure, rather than safety in general.

As aviation equipment is mastered, there must be an increase in the proportion of attention paid to questions concerning the combat capabilities of this equipment, i.e., to questions of the tactics to match the equipment.

The study of tactics as a discipline must be headed up personally by the commander or the most qualified officers who have the necessary experience.

Some think that the question is settled with just the skills gained in firing and technical training conducted with flight personnel according to plans, and clearly allot second priority to practical application and comprehension of the acquired skills by means of flights in the relevant tactical situation.

Excellent training in firing and tactics means that we are working and learning effectively. In practice, we should be guided by the formula, "Science--equipment--tactics." These three components represent the summit of all flight training. They are interconnected by firing and tactical training. To fight under modern conditions, every pilot must be a real tactician and have sniping training. Excellent firing and tactical training must, without fail, be combined with personal ability.

The interrelationship and interdependence of tactics and equipment can be seen as in focus. The unity of the process of the mutual influence of tactics and equipment lies in the fact that tactics are developed by studying the characteristics of equipment and by finding more and more new methods and techniques for the combat employment of equipment on this basis. It is for this reason that such great attention must be paid to the above-cited formula.

The planning element and a rhythmical pace in staff operations play a great part in the organization and conduct of the entire training process for all categories of aviation specialists and especially flight personnel.

For aviation specialists, whatever is left unfinished on the ground has its consequences in the air, i.e., affects the safety of every flight. Theoretical knowledge of equipment, aerodynamics, flight and fire training must be converted into practical skills and habits of employing aircraft in specific complex tactical situations.

The contemporary international situation more than ever makes it imperative, on behalf of the defense of the socialist fatherland, to train pilot protectors of their native sky, who are mentally stable, daring, devoted to the people and party, highly trained and tactically competent.

SEPTEMBER 1980 ISSUE OF SED THEORETICAL JOURNAL REVIEWED

East Berlin NEUES DEUTSCHLAND in German 20-21 Sep 80 p 10

[Helmut Caspar review of East Berlin EINHEIT in German Vol 35 No 9, September 1980, signed to press 14 August 1980, pp 865-976: "Focus on the Topic of Work." Translations and/or summaries of articles by the authors referred to below, as well as by others, are published in pages following this review]

[Text] Work in the socialist society is the central theme of several articles in the September issue of EINHEIT. In his contribution, Otto Reinhold underscores that, together with nature, work is not only the source of society's material wealth, but at the same time also the sphere of life wherein man puts into practice his intellectual and physical capabilities and continues to develop them. At the same time, an essential characteristic of socialism and socialist democracy is brought out by the work factor; this is where the working people feel every day that their participation in thought and creative action is in demand everywhere. Other articles deal with socialist competition (Willi Land/Gerhard Muth), aspects of the scientific organization of labor (Arno Schaefer), the schools of socialist labor (Hans-Joachim Neblung), as well as with problems of collective relations (Walter Maeder) and labor discipline (Harry Moebius).

In another part of the journal, Heinz Kessler gives his thoughts on Erich Honecker's autobiography, "From My Life." Heinz Kessler hails the book as an "instructive overview of past difficult, often sacrificing and ultimately victorious struggles of the German workers movement up to the shaping of the developed socialist society in the GDR." The book, according to Kessler, not only portrays a great personality in action, but also takes up the struggles of our times. The policy of the party, marked by Lenin's style of work, by clarity, puposefulness, objectiveness and comradeship--in whose drafting and consistent implementation Erich Honecker has a great personal share--strengthens the relationship of confidence between party and people, and releases great creative forces "which enable us today, in preparation for the Tenth Party Congress, to draw up such a successful balance sheet and to look into the future with great confidence."

SOCIALISM'S CULTURAL ROOTS FOUND IN GERMAN CLASSICS

East Berlin EINHEIT in German Vol 35 No 9, Sep 80 signed to press 14 Aug 80 pp 913-920

[Article by Dr Rudolf Dau, lecturer, Institute for Marxist-Leninist Culture and Art Studies, Academy of Social Sciences, SED Central Committee: "The Literary Legacy of the German Classics"]

[Text] Our socialist society's creative relationship with the German classics has its start in the revolutionary workers movement. The achievements and limits in this contradictory literary legacy are recognized with ever increasing discrimination and are tapped in the course of the historic appropriation process. The aesthetic and philosophic ideas in this legacy, which far transcend the time that gave birth to them, and some of which in a utopian manner anticipated a free society without antagonistic contradictions, are an imperishable part of the treasure of humanistic culture, which to preserve, creatively and critically appropriate and disseminate is socialist society's historic mission.

"War, unless imposed for self-defense, is a mad assault upon a quiet neighboring nation, an inhuman undertaking, worse then beastly, in that it not only threatens the nation innocently attacked with murder and devastation but also sacrifices the nation conducting it as undeservedly and terribly."[1] It was Johann Gottfried Herder who published this urgent warning in 1797. Under the complicated conditions of times full of struggle and rich in contradictions, the author of the "Letters on Humanity," one of the leading minds of classical bourgeois literature in Germany, was searching for answers to the urgent questions in a world-historic revolutionary situation. Opposing the designs of feudal reaction to turn back the wheel of history through several wars against revolutionary France, while simultaneously opposing the greedy "tentacles," as a Schiller poem put it,[2] *of the egoistic mercantile* interests of the British and French haute bourgeoisie, Herder [illegible]ed his

idea of eternal peace. He appealed to all nations on the earth to become conscious of their strength and to enforce a permanent order of peace.

Almost two centuries later, Herder's peace appeal was placed at the start of a conference conducted by the Culture League of the GDR in preparation of the 175th death anniversary of this important bourgeois humanist in 1978. In view of bourgeois class rule and its consequences that threaten humanity, but also in view of the growing strength of the nations in their struggle for peace and democracy all over the globe, this peace appeal has lost none of its relevance. On the contrary: the existence of socialist states as the embodiment of real humanism, the revolutionary movement of the international workers class, and the liberation struggle of the peoples of Asia, Africa and Latin America only set the historic stage that makes possible for the humanistic ideals and value concepts of the bourgeois champions for the emancipation of the human race to become dialectically suspended in the concrete social practice of socialism and the struggles of the progressive forces in our era.

Workers Movement and Classical Bourgeois Legacy

The active, creative, highly contemporary and yet future-oriented relationship our socialist society has to the spiritual and artistic legacy of the German classics can lay claim to a long productive prehistory. For the founders of Marxism, classic bourgeois literature (in its interaction with classical bourgeois philosophy in Germany) was one of the spiritual sources for their dialectical-materialistic world-outlook and later also, time and time again, the point of departure for their follow-up ideas. The combative, antifeudal character of the classical bourgeois emancipation literature was rated highly by the early German workers movement. Mainly the works by Lessing and Schiller were in Franz Mehring's mind when he spoke of the revolutionary proletariat's enthusiasm for the bourgeois classics "in which it finds no trace of its class consciousness but does find that joyous element of struggle found missing in modern art."[3]

Later too, the relationship with classical bourgeois humanism kept its solid position in the cultural policy and the cultural practice of the revolutionary workers movement and in setting up the socialist society in the GDR. Relevantly absorbed, embedded in novel, always historically concrete appropriation conditions, the social, political and ideological function of this legacy underwent changes, to be sure. In the formation of early organizational forms of proletarian culture, it had to produce effects different from those in the political and ideological struggles in the 1920's. As the legitimate and very own property of all who were struggling for progress, it had to be defended always anew by the workers class: against the conservative "succession by inheritance" and the quotation-picking of bourgeois high-school professors; the idealistically mystifying, nationalistic and other, often reactionary, misinterpretations; the misuse of humanistic traditions through the demagoguery by proimperialist ideologues and politicians of culture; and also against its being diluted by a social-reformist educational policy or pseudoradical, sectarian constrictions.

The creative-critical appropriation of the classic literary legacy reached a climax in the years of struggle against Hitler dictatorship and war. At that time it was a matter of tearing the classics--like any other humanistic tradition--away from fascist barbarism. And more than that. An intensive confrontation with the works of the German classics in literature and philosophy and with the progressive basic contents in this legacy as it related to socialist humanism was a component of the whole working class party policy and also of its comprehensive alliance policy. Essential experiences of this alliance-policy concept entered into the strategy of the antifascist-democratic new beginning and of socialist construction once fascism was destroyed. The Goethe year of 1949 and the tributes to Schiller in 1955 and 1959 became the first points of culmination in the active expression of allegiance by the workers and farmers state to its national humanistic traditions.

What with all that may have been too narrow-minded and all too subtle, and all the errors, in the history of socialist relations, on a Marxist-Leninist basis, with the classical bourgeois literary legacy, a line of continuity predominates. The basis for this continuity can be found in the objective relations, negotiated through material and spiritual culture, between two rising and revolutionary eras in the history of mankind: the bourgeois emancipation struggle up to the prevailing of capitalism on the one hand, and the preparation for the proletarian revolution and real socialism's march of triumph, on the other. Despite the differences in the struggle conditions and the constantly changing historical situation, fruitful points of contact with bourgeois art and culture in their classical phase of development time and time again derived from it for the revolutionary proletariat and, later, for socialist society. That is true not only for the current relevance of earlier struggles as the prehistory of the great class conflict the workers class had to engage in, but equally much for directly going back to ethical and esthetic ideals and value concepts we relate to and feel substantively connected with--despite our opposing class base--because they provide us with impulses for coping with contemporary historic tasks. That, however, is possible only through a process of creative-critical appropriation that proceeds from requirements of the present while it at the same time takes account of the actual achievements of the German classics throughout cultural history in all their magnitude and contradictoriness.

On the Achievements and Limits of the German Classics

On the eve of capitalism's fully coming into its own, in the era when it had its rise and the bourgeois class was socioeconomically, politically and ideologically consolidated, its spiritual and artistic champions still were in the position to contain the already noticeable critical distance from their own class practice in a "heroic," affirmative and future-oriented world view. They still were entitled to speak on behalf of all mankind because bourgeois progress when it came to prevail ultimately was in the objective interest of humanity's progress. The work of the classics reflects experiences the cultural-historic significance of which far transcends the stuggle against feudal reaction.

The development of heretofore unknown productive forces that released novel creative human potentials; the (bourgeois) individual's preserving his independence against all fetters of the feudal estate structure and the formation of a differentiated individual need structure engendered by the development of the productive forces; the awareness that one was defending the interests of all who were creatively active against arrogated feudal privileges; the experience of worldwide intellectual communication in the Enlightenment, which was celebrated, or yearned for, as the victory of reason; and the high-flown dreams of a rational, harmonious, humane adjustment of social relations--all that became subject to artistic and philosophic reflexion in German Classicism. A full measure of humanistic ideas adumbrating future developments was invested in all of it.

Critical analyses and assessments of the transition from feudalism to capitalism also entered into the artistic treatment and theoretical reflexion of the classic bourgeois authors. Lessing and Schiller severely citicized all manifestations of egoism, greed and profiteering, they being by no means merely a privilege of the feudal class. Herder in his works attacked the despoliation of whole continents and the extermination of entire nations practiced not only on behalf of princely magnates. Goethe and Schiller took issue with the manipulations by profit-seeking publishers who, in exploiting new and legitimate needs of their readership audiences, initiated a trivial "mass literature." They deplored the fact that an accretion in public wealth under the conditions of social inequality and an enslaving division of labor would rather lead to a "fragmentation" of personality for many people than to the fostering of universally developed individuals.

The art of the rising bourgeoisie reflected the inherent disunity of aims in the new era, not only in the subjects it dealt with and in its themes, but down to the most subtle emotional reactions to reality and the nuances of its aesthetic valuations. Nonetheless, in classical bourgeois literature there dominates a fundamentally optimistic trend in its philosophy of history, an affirmation, in principle, of social progress--despite an increasing awareness of the inherent contradictoriness of historic advances, of there being long-term antagonisms which could not for the time being be abolished. Still at the turn from the 18th to the 19th century, when the European Enlightenment in its entirety met its crisis and a new type of artistic reaction to the altered realities of the era came to prevail in Romanticism, the representatives of classical German literature managed to penetrate to revealing insights into the dialectic-contradictory course of history without surrendering their being rooted in the basically optimistic positions of the Enlightenment. Schiller's late dramas, Hoelderlin's late lyrical output and, finally--as the "sum total" of an entire literary period, as it were--, the conclusion of Goethe's "Faust" may be referred to here as the oustanding examples.

This unique position of the German classical authors on the boundary between Enlightenment and Romanticism in Europe, especially the preservation of classical-utopian ideas in a humanistic perspective for mankind and its

further idealistic-dialectical development under changed historic conditions can also be explained by the specific situation of its national history. By the second half of the 18th century the German bourgeoisie had reached such a degree of maturity that its progressive representatives would welcome, and spiritually and artistically assimilate, the revolutionary, antifeudal movements in neighboring countries, the Netherlands, England and France. What was lacking in Germany, however, was not only a revolutionary situation but also "a unified development and a revolutionary concentration in the antagonism between feudal absolutism and the third estate," let alone the internal discrepancies of the third estate, which had rapidly broken open in revolutionary France. Thus the ideals and value concepts of the bourgeois emancipation literature in Germany by and large kept forming splendid utopias. Rather the positive idealism and its "universally-human" significance than the pragmatic bourgeois obligations and their problematic consequences is what the classical German authors took over from the era of transition from feudalism to capitalism so full of struggles and contradictions.

It is this complicated historic and intellectual situation which essentially explains the contradictory character and the conjunction between progressive features and characteristic limitations in German literature at that time. There developed--to mention the positive aspects first--the special traits of solidarity with the people in Lessing's and Herder's thoughts and works, the powerful claim to individuality in Goethe's Storm-and-Stress poetry, the rigorous moral demands and the exuberance about liberty in the works of Schiller, the subtle perceptivity in the poems of Klopstock, Goethe or the "Goettingen Grove," or the more probing dimensions in the philosophy of history found in the mature works of Goethe, Schiller and Hoelderlin. New possibilities were tapped in the artistic treatment of the relations between the individual and society, personality and history, new paths were opened for the specifically esthetic in theory and practice.

All that, however, was tied up with a special development of those illusions which are inherent in prerevolutionary and revolutionary bourgeois ideology in general: The early Enlightenment ideas of the overwhelming power of "reason," the belief in the "forces of nature" inherent in the individual as a permanent abstract concept which needed merely to break through all courtly or estate "polish," the idealistically coated hopes for a moral purification of the individual or even for the "esthetic education" of all mankind as the seemingly one remaining possibility for attaining the desired social changes moving toward a harmonious and humane way of life. Such features of abstraction are part and parcel of the overall contradictory picture of the German classics.

The Classical-Bourgeois Legacy Today

"The socialist national culture of the GDR includes the careful cultivation and appropriation of all humanistic and progressive cultural achievements of the past. Socialist culture is committed to the rich legacy created throughout the entire history of the German people."[5] This guiding statement in

the SED Program, aimed at a fundamental inevitability of the socialist cultural revolution, wholly also applies to the legacy of the German classics.

Standing on the threshold of a decisive period of human history, the classic authors of bourgeois literature picked up vital questions of such great historic scope that some of their boldest ideas can only now, in the construction of developed socialism and in the current phase of the international conflict between socialism and imperialism, bring the whole range of their potentials effectively to bear.

In the shaping of the developed socialist society in our country, what counts is to familiarize all the people--based on the proven principles of our alliance policy--with the great wealth of ideas and the esthetic accomplishments of our classical literary legacy, to prove ever more clearly that real socialism is the true home of all progressive ideas of the past, and to tap our cultural legacy in all its breadth and variety. The artistic and philosophic achievements of the classics, which in their potency far transcend the time in which they originated and in part in a utopian manner anticipated a society free of antagonistic contradictions, are an imperishable and binding part of our store of humanistic culture, which socialist society has the historic mission to preserve, appropriate and disseminate. On the occasion of the founding of the Martin Luther Committee, Comrade Erich Honecker therefore reiterated once more: "The socialist GDR, the first workers and farmers state on German soil, is the legitimate heir of the revolutionary struggle by the workers class and the other democratic forces against capitalism and war, and of the revolutionary activities of the peasants, craftsmen, clergymen, intellectuals and artists, and the members of the bourgeoisie, in short of all who advanced our social development."[6]

A creative-critical appropriation of such an extensive political-historical and intellectual-cultural legacy, including the specific achievements of the bourgeois emancipation literature in Germany, constantly calls for new efforts, for an indefatigable struggle toward vividly connecting current historical tasks with the rich potentials in the humanistic traditions of cultural history. For the German classical legacy that holds true to a special degree because there far-reaching analyses and utopian ideals far ahead of their times are embodied in a artistically or philosophically generalizing form, and here the idea is raised, for instance, of the universality and creativity of man, of man creating himself through his work, so that it is highly important to keep in mind both the social and ideological difference in principle between bourgeois and socialist humanism and what both conceptions of humanism have in common. And we are aware in all this "that our socialist course today is more than a mere implementation of great humanistic ideals and utopias of the past."[7]

On the other hand, our dealing critically and creatively with our classic-bourgeois legacy, mindful of its considerable accomplishments and its internal contradictoriness, in no way curtails its current efficacy. Rather,

extracting all its contemporary relevance has finally become feasible this way in the first place. "Critical appropriation mainly means comprehending the great artistic achievements of past social epochs in terms of their social conditions, and that also means in terms of the contradictions besetting some of them. Only when looked at that way, will they reveal their original vividness and freshness, that which was progressive in their image of man. It saves us from taking our legacy merely as a subject of solemnity and awe."[8]

This vivid approach to our legacy also was what inspired the public discussions--especially since the Eighth SED Congress--about the higher quality needed for the appropriation of our bourgeois literary legacy, principally that of German Classicism and Romanticism. New questions had to be asked of our legacy, new ways and means of dealing with it began to emerge. Anniversaries such as Herder's 175th death anniversary in 1978, Lessing's 250th birthday in 1979, or the 175th anniversary of the death of Schiller this year, but also tributes to E. T. A. Hoffmann, Heinrich von Kleist and many others, not only occasioned commemorative articles, celebrations and official speeches, they also sparked initiatives in many areas of our intellectual and cultural life. Scientists came up with new research results, important new editions were completed or started. Many theaters tested new techniques for staging the dramas of Lessing, Goethe, Schiller or Kleist. A conference also deliberated on the problems of conveying our classical literary legacy through literary instruction. Memorial sites in Weimar, Kamenz and other places were or are being reconditioned--in accordance with changing requirements--and are becoming more attractive each year. More incentives are going to be provided by our preparing for the 200th anniversary of Lessing's death in 1981, the 150th anniversary of Goethe's death in 1982, and the 225th birthday of Schiller in 1984. "Anniversaries to us are nothing formal but occasions for more deeply understanding historic events and the nature of great personalities and for making use of them on behalf of our present days. We thereby gain knowledge of the entire process of history and of the lessons from the struggles and successes, from the defeats and victories."[9]

With reference to Herder we have already pointed out the internal connection between the humanistic ideas of his times and the main problem of our days, the safeguarding of world peace. In Lessing's "Minna von Barnhelm" likewise, in almost all of Schiller's dramas, in Hoelderlin's poems and in Goethe's works--from his "Goetz" to the second part of "Faust"--we encounter the same problem, and this at a level of spiritual confrontation that excludes pacifistic ideas. Going all the way back to antiquity, but mainly to the time of the Peasants' War and the Netherlands' liberation struggle, the classic authors created a multilayered picture of the complex web of revolutionary struggles, counterrevolutionary invasion, national wars of defense and feudal or bourgeois policy of conquest at the turn from the feudal-absolutistic to the bourgeois-capitalist age. Their analyses and the denouments they designed are of the greatest value today.

Faced with the deep internal crisis of the imperialist system of government, the ideologues of that system more and more frequently resort to irrational "interpretations" of the world situation and conservative-reactionary recommendations for "solutions." The ever more blatant inability of capitalist society to combine scientific-technical progress with the development of humane "qualities of life" once again leads them to decry historic progress itself. Especially affected by that is the age that was reflected in the works of the bourgeois classic authors and offered an initial approach to interpretation in terms of the dialectics of history. The Enlightenment, the French Revolution, and the industrial revolution, so they claim, had "cut man off from his metaphysical sources," for which reason it would now be essential to regain irrationalism, the "comfort of religious certitude," for the "modern industrial society."[10]

One more reason for the revolutionary workers movement and its allies to reassure themselves time and time again of the progressive legacy in those revolutionary processes in the history of mankind, and especially of the conviction that man--without the help from "supernatural" forces--must take his destiny into his own hands. "Not mute the world is to the man of worth./What need hath he to range infinitude?/What he perceives, that may be understood"--that is the message we can find not only in Goethe's "Faust" but also in Lessing's "Nathan the Wise," in Schiller's classical ballads, or in Herder's "Ideas for a Philosophy of History." Lessing's and Herder's theological polemics also show that religious convictions need not be in the way to a realistic assessment of real contexts and an active participation in social progress.

Moreover, the image of history on the part of classical bourgeois philosophy and literature was very different from the shallow liberalistic progress optimism of the bourgeoisie then in power which stands on such unsure grounds that it constantly tends to relapse into metaphysics and reactionary utopias--always shaken again by every crisis in capitalism. From there comes the importance of our classical legacy in the struggle against any irrationalistic and reactionary obscurantism for our ideas on the course of progress through history as well as against timid bourgeois fright of the contradictions in an epochal transformation, be that expressed in some shallow undialectical faith in progress or in some plaintive whimpering about the relentlessness of the material dialectics of history. Especially in Goethe's "Faust," we experience and perceive the adverse unity of bourgeois productive force development and the forward-directed potentials of humanity, of objective social determinism and the individual's active social conduct, shown in all the tragedy resulting from antagonistic conditions but also in the magnificent fruitful perspectives objectively inherent in the stage of human-social emancipation ever since the end of the Middle-Ages. In Schiller's works also, conflicts are located within the tension between objective material coercion and subjective ethical decisions, and they always come combined with the concern to preserve human dignity even under the most difficult conditions and to strive for active conduct.

In this sense then the appropriation of our classical legacy is of inestimable importance to practically and intellectually coping with the epochal dialectics of the current era. And it is found every day anew that only socialist society is able to pick up the bold thrusts of classical bourgeois literature and translate them into practice in the manner appropriate to us.

INCREASED RESPONSIBILITIES URGED FOR BASIC PARTY ORGANIZATIONS

East Berlin EINHEIT in German Vol 35 No 9, Sep 80 signed to press 14 Aug 80 pp 963-967

['Consultation' feature article by Dr Heinz Pude[illegible] economist, [illegible]puty department chief, SED Central Committee: "Basic Organizations--Foundation of the Party"]

[Text] "What matters is further to raise our party's fighting strength and strengthen its solidarity with the people, arming it in every respect for solving our future tasks,"[1] Comrade Erich Honecker said at the 12th Central Committee session and emphasized that this involved "focusing the party organizations and all comrades politically and ideologically on the demands of the 1980's. We want to create the best conditions for steadily carrying on our economic and social policy. That implies for all public domains our strengthening the party organizations, acting in unity, constantly deepening the communists' mass solidarity and thus further raising our party's leadership role."[2]

That makes a high demand on all basic party organizations and their activities and on the revolutionary substance of their work in the further implementation of the Ninth SED Congress resolutions and the preparation for the Tenth SED Congress. Our Marxist-Leninist party, after all, mainly accomplishes its guiding and organizational influence in all domains of public life through the work of its basic organizations and the daily political work of each comrade in his work collective, residential area and other public domains. "The basic organization," our Party Program says, "embodies for every member and candidate the political home base in which he is firmly rooted, which bestows decisive impulses on his combative life and efforts, and in its party-minded, confident communist atmosphere he feels at home and constantly gains new strength."[3]

Centers of Political Activity

All party members and candidates are gathered together in the basic organizations. Lenin termed them the cells of the revolutionary working class party "performing agitprop and organizational work, acting with determination in

all domains of public life, through the many-sided work of which they systematically educate themselves and the party as well as the class and the mass."[4] The basic organizations are at work wherever the working people work, learn and live and where problems and contradictions arise that are part of life and that have to be resolved. Their activities are of decisive importance for deepening the confident relationship between the party and the people and for developing a conscious conduct in the workers class and all working people. It is therefore all the more important to turn them into ever more effective centers of political activity and confident relations with the working people. As the foundation of the party, the basic organizations secure its political-ideological and organizational influence in all public domains in seeing to it that the rights and duties set down in the statute are assumed by all party members and that the communists are uniformly indoctrinated and their uniform actions are properly and systematically organized.

"Increased fighting strength is obtained," the Central Committee directive on conducting the 1980/81 party elections says, "to the extent that we succeed in promoting in every respect, on the basis of democratic centralism, the initiative of the basic organizations for implementing the party resolutions, in shaping among all comrades firm political positions on the new tasks, and in deriving higher demands for their own work." The Leninist principle of democratic centralism is the fundamental political and organizational principle by which our Marxist-Leninist party is constructed and acts, from which to a large extent it receives its fighting strength. This democratic centralism, after all, is the decisive foundation for combining our unified central leadership most closely with the comrades' broad activities, with our collective wisdom and our party discipline that is binding or all alike. On this basis, the SED has always paid great attention to the political activities of its more than 77,000 basic organizations.

Guided by the realization that the party's fighting strength is raised above all through basic organization initiatives on party resolution implementation, and through the party loyalty and dedication of each comrade, the ninth party congress specified the application of the principle of democratic centralism in the party statute: Our growing tasks demand that we raise basic organization responsibility to the fulfillment of the party decisions and enable the basic organizations still more extensively to implement those decisions in conformity with the concrete conditions in the territories and enterprises and clarify problems right on the spot. At the same time intra-party democracy is further strengthened through further elevating the role and responsibility of the basic organizations and of each individual communist. The basic organizations in the state apparatus and in mass organizations were given the right to control the implementation of the decisions in their particular area of responsibility. Forms of organization were also further developed, for instance the right to convene party activists meetings and the obligation of the basic organization management to submit regular reports to membership meetings.

The continued shaping of our developed socialist society in the 1980's places new and higher demands on our party work. It is imperative to create the best conditions everywhere for successfully carrying on our party policy, allied to the people as it is. That calls for fully developing the conscious, initiative-rich and uniform actions of all communists. This always and everywhere amounts to shaping a truly combative dedication to the implementation of the policy decided on by the party. That applies to all public domains and, particularly, to economic development because the economy, after all, is the main battle ground, and progress in all other domains of our public life becomes increasingly dependent on economic results.

The party organizations in the enterprises, as Lenin already pointed out, are especially important to us because, "the chief strength of the movement, after all, lies in that the workers in the large-scale enterprises are organized, as the large enterprises (and factories) contain the decisive part of the whole workers class, not only in numbers but more still in terms of their influence, development and fighting ability. Every enterprise must be a fortress of ours,"[5] he emphasized. This to a special degree applies to the party organizations in the enterprises which are part of the 129 industrial combines and those of the building trade. They bear a great responsibility for continuing the course of the main task under the new conditions. More than 425,000 communists are organized in them, and 2.4 million working people are employed in those enterprises.

Further developing the role of the basic organizations as centers for political activity and as the political nucleus of the work collectives, and increasing the activities of all communists in the struggle for the fulfillment of economic tasks--therein lies a crucial criterion for the work in each party organization. "It is the honor of each party collective and each communist reliably to fulfill, day after day, all tasks in the economic plan," as the party election directive points out.

Linking All Working People

What is most important now is significantly to improve economic efficiency, effectively stimulate more rapid scientific-technical progress, and to set a fine example everywhere in the implementation of the party organizations' campaign programs. This requires that the comrades come up with concrete suggestions on how to meet the new demands and where to utilize reserves. In this, the educational influence of the communists, their authority and the confidence they are shown in the work collective depend on how their words agree with what they do, on how they through their own work attempt "a high developmental tempo in socialist production, efficiency improvements, scientific-technical advances and increasing labor productivity."[6] So it is all the more important for the basic organizations to put into effect all the constructive suggestions and follow up all the advice and criticism on improving party work as submitted during the party document check and the official registration of members and candidates. The selfless work of

hundreds of thousands of comrades, male and female, their modesty, their sense of responsibility and personal dedication make sure that mistakes and shortcomings, indifference and carelessness, and illegal conduct by individuals are intolerantly and critically taken to task.

It is necessary to raise the responsibility of all party organizations and every communist for further developing socialist national consciousness and for having the working people take part still more comprehensively in the various forms of management and planning. The criterion for the quality and effectiveness of our educational work must be how a comrade works politically within his work collective, what he himself changes there, and how he helps advance developments in his collective together with other working people, and so brings to realization the principle, "wherever there is a comrade, there is the party too."

The basic organizations link the party with all working people. They bear a great responsibility for the working people's close rallying around the party and for organizing the masses in implementing our party policy, which is oriented to man, to the prosperity and happiness of the people. We proceed from the realization that our complicated tasks can be solved only if we succeed in involving an ever larger circle of people who, through their own free decisions and motivated by knowledge and conviction, place all their strength in the service to our common cause. For that one must know exactly what moves the people and what recommendations and suggestions they have. The greatest successes are achieved where the close and trusting relationship with the working people is constantly being strengthened.

An ever stronger shaping of a truly socialist attitude toward work and public property requires constantly to clarify through our ideological work the connections between economic efficiency development and the goal of socialist production. Everyone must understand that the well-being of all of us, the further consolidation of socialism, the protection of its achievements and the safeguarding of peace also depend on his personal performance. Great support is warranted for the best workers and innovators, for encouraging and spreading their initiatives, attitudes and moral positions. Every comrade is called upon to conduct political talks at all times with his colleagues at work and consult with them about conclusions to be drawn for his own work and not to dodge complicated problems.

Party education in the basic organizations thus should especially be aimed at developing the comrades' inner need, drive and ability to disseminate our world-outlook and explain our party policy to the working people always with passion and the power of conviction. They should be placed in the position where they can defend our world-outlook and policy against all hostile attacks and distortions and take issue, without reservation, with imperialist policy and ideology in a militant fashion.

It simply is a fact that primarily the party members' influence on the working people depends on their attitudes, their activities, their strength

of radiation. We have learned by experience that communists are respected in their work collectives and that they are listened to if they set good examples and take a firm party position in discussions and do not squawk when there are difficulties. That is why the demand Lenin raised in connection with organizing labor freely given to the state assumes increasing importance under our new conditions: "In terms of labor discipline and energy, the party members must be ahead of all others."[7] That places still higher demands on the communists in matters of approaching all issues from the class standpoint, from the interests of the workers class and all the working people, energetically and aggressively advocating everywhere and always our party policy, taking a lead in the struggle for all-round plan fulfillment, in socialist competition, in improving labor productivity and reducing costs, in achieving the highest qualities and in rationalization, showing themselves intolerant to any kind of abuse, loafingon the job and waste of material, and to any violation of socialist discipline and order. This includes boldness in decision-making as much as honesty, consistency and tenacity and the constant willingness to encourage what is new, constantly seeking confident relations with the working people and being an ardent patriot and internationalist.

The Basic Organizations--The Political Home Base of the Communists

"Life has confirmed time and time again that the political atmosphere in the basic organizations decides how the demands of everyday party work are coped with. It is all the more necessary to encourage all those efforts, in preparation of the tenth party congress, that aim at creating an atmosphere in each basic organization which makes possible our implementing the party decisions still more successfully."[8] It is of great importance here that all basic organizations foster and further collective consultation and creative debate on how best to implement the party resolutions. The basic organizations should see to it that the tasks and problems facing the party and the planning of the work are conferred and decided on in the collective and that the collective responsibility in the implementation of the tasks is raised, accurate controls and accounting are ensured for the implementation of the resolutions, and ciriticism and self-criticism are used as an element of the work itself. It is incumbent upon the basic organizations constantly to care for the Marxist-Leninist training of the cadres and of all party members, and to consult systematically and confidently with the party members and unaffiliated working people, in order to make the fullest use of their experience, knowledge and skills. A key issue here is to turn the Leninist norms for party life, as set down in the statute, into each communist's life maxim by means of purposeful political efforts by the basic organizations, true to the principle: communists know no greater task than serving their people selflessly.

Essential for an ever more perfect development of intraparty democracy and an active involvement of the communists are demanding membership meetings and improved political and technical training for the communists. "To be informed and expert," Comrade Erich Honecker has said, "to know what our

party policy is all about, and what its salient features are, significantly helps spread confidence and conscious activity."[9] We must therefore be very careful in responding to questions raised by life itself, questions of concern to the members and candidates of the basic organizations. Frankly and with party-mindedness they should express their standpoint on the most effective implementation of party policy in their area of work.

Political steadfastness in every situation, a combative attitude in approaching lofty goals, a passionate advocacy of innovation, energy in overcoming any obstruction, an honest, modest and sensitive attitude toward the working people--those are characteristics which, entirely in Lenin's sense, determine the respect a party member enjoys. Party organizations will encourage the development of these characteristics if they insure a healthy, party-bound atmosphere in which intraparty democracy fully develops, criticism and self-criticism are engaged in open-mindedly, and all comrades deliberately abide by voluntary discipline. Membership meetings here are the most important forum the communists have for explaining and creatively applying the party resolutions, for consolidating their communist convictions and attitudes, and for training the members and candidates in uniform and persuasive argumentation. The membership meeting is an assembly that forms collective opinion and coordinates the comrades' political actions. Thus it must not be only informative in character. While all comrades are given the opportunity to get answers to the questions that concern them and to take part in the elaboration of concrete arguments for their ideological work, it also is important to explain the basic problems in their own work and arm them for resolving those problems.

Next to the membership meeting the party study year is the most important place for deepening and expanding the participants' Marxist-Leninist knowledge and for helping them to conduct their political dialog with the working people. It therefore is an important concern of the circles and seminars to improve still more the abilities of the attendants in pertinent and persuasive argumentation and in aggressively and combatively representing the class standpoint of the workers class. Here too it is essential for the propagandists to understand how to set up a frank atmosphere in the circles and seminars, to appeal both to one's heart and one's reason, and to make use, through a good sense of intuition, of the various skills and abilities the attendants bring to the discussion.

In this respect it has been found useful to conduct theoretically demanding and relevant problem discussions on the themes of the party study year in the training seminars for propagandists and to deepen and make more specific sets of arguments worked outin the propaganda activists' groups. No less important is that kreis executive secretaries appear regularly before propagandists to explain new resolutions to them, answer topical questions and provide arguments for their ideological confrontations. State and economic functionaries, scientists, and cadres from the various fields inform the propagandists there on new insights, tasks and events. These and other forms of instruction and information must be strengthened to help the

comrades in the circles and seminars assume a firm party-minded standpoint and equip them with the best arguments. Especially this deepening of the unity of intent and conduct at an ever higher level, based on the identity of ideological views in our party of equal-minded, enables our party members and cadidates to solve the tasks of the party organizations with a high sense of responsibility and to engage in a permanent trusting dialog with the working people, mobilizing them and directing all their creative forces and initiatives at one goal: the best for the tenth party congress! Everything for the good of the people!

LISTINGS, SUMMARIES OF OTHER MAJOR 'EINHEIT' ARTICLES

East Berlin EINHEIT in German Vol 35 No 9, Sep 80 signed to press 14 Aug 80
'Resumes' addendum

The Topic: Work and Work Collective

[Text] "Work in Our Lives" (pp 870-877), by Prof Dr Otto Reinhold, economist, member, SED Central Committee; rector, Academy of Social Sciences, SED CC; memb ., GDR Academy of Sciences; corresponding member, USSR Academy of Sciences; member, EINHEIT editorial board. This article opens a series of contributions discussing the role and function of work, requirements for its organization and aspects of the workers' creative collaboration in the collective.

[PLEASE NOTE: A translation of Professor Reinhold's article is published under the heading, "Academician Explains Need for Incentive Pay Principle," in a recent JPRS issue of EAST EUROPE REPORT: ECONOMIC AND INDUSTRIAL AFFAIRS]

"How to Conduct the Socialist Competition?" (pp 878-884), by Prof Willi Land, economist, secretary, Central Institute for Socialist Economic Management, SED Central Committee; and Gerhard Muth, member, National Executive Committee, Free German Trade Union Federation (FDGB); chief of the executive committee's Labor and Wages Department; giving current findings on the determined conduct of the competition.

"Standards for the Scientific Organization of Work" (pp 885-890), by Arno Schaefer, social scientist, engineer, economist, chief, Department for Scientific Work Organization (WAO), State Secretariat for Labor and Wages. These standards are seen as the result of socialist rationalization.

"Schools of Socialist Labor" (pp 891-894), by Hans-Joachim Neblung, social scientist, basic organization secretary and party organizer for the Central Committee in the main enterprise of VEB 7 October Machine-tool Combine, (East) Berlin; giving experiences in and requirements for the shaping of consciousness.

"Relationships and Behavioral Patterns in the Collective" (pp 895-899), by Prof Dr Walter Maeder, SED basic organization secretary at the Central Institute for Socialist Economic Management, SED Central Committee; discussing the determined shaping of these relationships and behavioral patterns.

"Free and Conscious Discipline" (pp 900-904), by Dr Harry Moebis, economist, state secretary, GDR Council of Ministers; discussing socialist behavioral patterns expressed in the struggle for law and order and discipline.

A Life for the Communist Cause

[Summary of article by Col Gen Heinz Kessler, member, SED Central Committee; deputy minister for national defense; chief, Political Main Administration, National People's Army (NVA); pp 905-912. A West German commentary on this EINHEIT article is inserted below this summary]

[Text] Comrade Erich Honecker's autobiography, "From My Life," offers insight into interconnections of self-experienced social processes, in the shaping of which the author himself was greatly and creatively involved, and illuminates his whole way through life thus far, which took him through the schools of the class struggle up to the top in the party of the triumphant German workers class and the first workers and farmers state on German soil, as a piece of contemporary history. It is an instructive overview of past difficult, often sacrificing and ultimately victorious struggles of the German workers movement up to the shaping of the developed socialist society in the GDR in conformity with the eighth and ninth party congress policy aimed at the good of the people, in the drafting and consistent implementation Erich Honecker has a great personal share. The book joins the struggles of our time.

West German Commentary

Bonn IWE-TAGESDIENST in German No 136, 9 Sep 80 p 1

[Report from Berlin: "SED Emphasizes 'Honecker's Strong Bonds With the People'"]

[Text] The GDR mass media campaign in tribute of the state and party chief, conducted in recent weeks in connection with the publication of Honecker's autobiography, "From My Life," has reached its climax so far in the SED's theoretical journal EINHEIT (No 9, 1980). In the journal's most recent edition, Heinz Kessler, deputy minister for national defense, hails "our friend and comrade Erich Honecker" in a fashion highly reminiscent of the "cult of personality." In that article, Honecker is called, among other things, an "honest, unbending communist," an "outstanding, experienced party leader and internationally recognized statesman of worldwide renown," a "true continuer of revolutionary workers' policy," and a "great personality." He had an "outstanding share in the drafting and sound theoretical explanation of the strategy and tactics for the shaping of the developed socialist society." "Inseparably connected with his name," Kessler says, was the "vigorous emphasis on the meaning of socialism to do everything for the good of the workers class and all working people." The "Leninist working style, clarity, purposiveness, objectivity and comradeship," as coming from Honecker, imbued the activity of the whole party. As all communists, he derived his strength from the people, and his "deep affiliation with the people" was for him "the most normal and obvious way" for coping with his tasks. "Time and time again" Honecker felt himself drawn to the workers, seeking personal talks with them.

NATO--Chief Instrument of Imperialism's Aggressive Forces

[Summary of article by Prof Dr Albrecht Charisius, colonel, GDR Military History Institute; pp 921-928]

> [Text] Once again NATO has become the focal point of a modified variant of the global strategy of the most aggressive U.S. forces. U.S. ruling circles--and the military-industrial complexes of the other states of that pact in their wake--are using NATO as the main tool for subordinating the other members under its course of confrontation, opposed to detente and disarmament. They are seeking to turn NATO into the nucleus of an antisocialist united front.

Scientific-Technical Revolution and Youth

[Text] "High Demands on Education and Training" (pp 929-935), by Hermann Apel, social scientist, deputy department chief, SED Central Committee; and Dr Lothar Oppermann, department chief, SED CC; member, GDR Academy of Pedagogical Sciences. This article opens a series of contributions discussing this problem in our socialist schools.

"Continued Development of the Polytechnical Character of the Secondary School" (pp 936-942), by Prof Dr Heinz Frankiewicz, director, Institute for Instruction of Mathematics, Natural Sciences and Polytechnics, GDR Academy of Pedagogical Sciences; member of the academy. This article discusses a specific aspect of the party's orientation in school policy.

"Science and Technology--Proving Ground of Working Youth" (pp 943-950), by Dieter Mueller, candidate member, SED Central Committee; secretary, Central Council, Free German Youth (FDJ); discussing FDJ initiatives to strengthen the GDR economically, especially through the 'Fair of the Masters of Tomorrow' movement and the work of the youth brigades.

"On Status and Creativeness in the Studies of Students" (pp 951-957), by Dr Edwin Schwertner, economist, deputy department chief, SED Central Committee. The author discusses the subject proceeding from basically changed objective and subjective conditions in the college system.

"Graduates in Practical Work" (pp 958-962), by Lothar Reissig, chief engineer, director for science and technology, VEB Wema (machine-tool factory), Auerbach, an enterprise of VEB Fritz Heckert Machine-Tool Combine, Karl-Marx-Stadt. Using VEB Wema as an example, the author shows how these graduates prove themselves when properly stimulated and challenged.

The Myth and the Threat

[Summary of article by Dr Guenter Kalex, economist, sector chief, SED Central Committee; pp 972-975]

[Text] The myth of the threat from the East, in particular a direct military threat by the Soviet Union--a dangerous smoke screen behind which the most aggressive imperialist forces of the United States and its NATO allies hide their attacks against detente

and the peoples' struggle, their seeking to regain their military superiority to socialism, and their greed for profits from the armaments business. Who actually is the one that is turning up the armaments spiral--from the history of the most important innovations in arms technology since 1945.

PUJA SURVEYS FOREIGN AFFAIRS, DEFINES HUNGARY'S POSITION

Budapest KULPOLITIKA in Hungarian No 3, 80 pp 3-18

[Article by Frigyes Puja, minister of foreign affairs: "Peace, Security!"]

[Text] The causes for the intensification of strains in the international situation are now being sought for in various factors, and a different judgement is being made in the leading circles of the socialist countries and the developed capitalist countries. But in our view there can hardly be any doubt: the basic cause for the worsening situation is that the leading circles of the United States have revised their stance on detente, that is, they have changed their foreign policy.

The peoples of Europe and international public opinion are disturbed by many developments in the world situation. The intensity of bilateral relations between the socialist and developed capitalist countries has declined, mistrust has grown, and in general peace and security have become more fragile. Cause for concern, however, is primarily in the fact that NATO--at America's incitement--is seeking to upset the balance of power which has developed in the world and gain military superiority vis-a-vis the Warsaw Pact countries. The American leaders have again brought out of the storeroom of imperialist politics the old formula whereby they have the right, obligation in fact, to world leadership, and there is no area on the globe from where, they say, the security of the United States could not be threatened.

The NATO summit held in Washington in 1978 supported a permanent and continuous increase in the military budgets of the member states. Following this, the West speeded up the expansion and accumulation of weapons of mass destruction. The peoples of Europe are particularly disturbed by a December 1979 decision of the NATO Council of Ministers which called for the establishment of 572 medium-range American nuclear missiles in five Western European countries. If this decision is carried out, it will unavoidably lead to a further deterioration in the European and the whole international situation, for the Soviet Union and the socialist world cannot be indifferent on seeing such an obvious attempt to upset the European military balance.

The NATO countries assert that the Soviet Union is responsible for the intensified tension in the world situation. In a large-scale manner they "forget" that the new wave of arms race--which is the most important cause for these tensions--was provoked by the 1978 NATO decision and the Brussels resolution on the manufacture and establishment of medium-range American nuclear missiles. If the NATO powers desire so much to obstruct the developments that are pointing in a bad direction, why did they not accept Comrade L. I. Brezhnev's proposal, which he made last October, to hold discussions on the medium-range nuclear missiles? Why do they not reply worthily now

when the Soviet Union is proposing that discussions be undertaken on limiting the number and strike capability of the medium-range nuclear weapons to be placed in the European area including the advance-posted American nuclear missiles as well. This is not a matter of raising conditions, as is often maintained in the West, but of the fact that by reviving power politics NATO is seeking what the Soviet Union and the other socialist countries never have accepted and will not do so now.

The United States has put on ice, so to say, ratification of the second Soviet-American agreement on reducing strategic weapons. But the ratification of SALT II would be important, because only this can open the way to SALT III, that is, the reduction of strategic arms and perhaps even an agreement in the field of medium range nuclear missiles.

The Carter administration has frozen talks virtually at every level the Soviet-American disarmament conducted up to now at various forums. It is consistently obstructing Soviet initiatives for progress. The work of the supporters of disarmament has also been made more difficult in other negotiations.

This and many other things show that the aggressive American circles are not interested in disarmament negotiations. They still see the mirage of gaining military superiority.

Why have certain American leaders again taken on the armor of the crusaders against communism, and why are they seeking nowadays again to forge some kind of anti-Soviet holy alliance? The most frequently expressed argument is that the security of the United States is being threatened. But why should the security of the United States be threatened if internal social changes are taking place in some country? Why, for example, did the Moscow Olympics threaten the security of the United States, on which pretext it forbade the participation of American athletes? Of course in reality this is not what it is about. The truth is that the American side would like to obstruct socialism, the advance of progress, to prevent peoples from shaking off the yoke of colonialism or neocolonialism and freeing themselves from the slavery of capitalism. They would like to prevent the collapse of old, dilapidated systems which serve American policy, and in fact reconquer in various parts of the world the positions they have lost to progress, to socialism. They want no less, therefore, than to shackle human progress.

Nowadays imperialist propaganda is loudly talking of Soviet military help in Afghanistan. They turn everything around and say that the present tensions were evoked help extended by Soviet military to the Afghan people's system. However, if someone knows the relationship of Afghanistan to the Soviet Union, he will quickly see through it: we are dealing with trickery and the noise that has raised over Afghanistan is nothing more than an attempt to divert the attention of the world from the aggressive efforts of American imperialism; the covering up of actions designed to gain military superiority seeks to obfuscate the fact that the Americans, for strategic reasons, want to make protectorates of the Near and Middle East countries.

And here we have arrived at the core of the false imperialist policy and to the reason for the propaganda campaigns. Western disclosures are on the increase which are intended as interference in the international affairs of the socialist countries, and in fact they do not even refrain from inciting difficulties in relations among the socialist countries.

The international atmosphere is spoiled and the norms of interstate relationship are damaged by the fact that the United States and other capitalist countries have instituted embargoes against the Soviet Union. (More recently, for other reasons, against Iran also.) Such methods are well known to the socialist countries from the first half of the 1950's. At that time also it was believed in the West that the socialist system would be weakened thereby and its progress slowed down by an embargo. Even as the cold war could not arrest the advance of socialism and progress, neither will economic embargo measures obstruct the work of building socialism. This is all the more true now because the socialist countries are incomparably stronger than they were.

Those who set their course on intensifying the tensions in international relations have made it their goal to make Soviet-American relations more difficult, one of the most important elements to detente. The nature of these relations were and are a major importance in the develapment of the international situation. We have become accustomed to see that when the aggressive circles of imperialism forge their plans for foiling peace and security they always attack the Soviet Union, the main bastion of socialism and the main support of world peace. It has been so ever since the victory of the Great October Socialist Revolution; this is still what every politician does who represents the interests of imperialism and monopoly capitalism.

This is natural because it is the Soviet Union that bears the main burden in the struggles against imperialism on behalf of progress and socialism, and undertakes the lion's share of the struggle for a better future on behalf of mankind, and for lasting peace and security.

The communists understand perfectly well that the laws of the international class struggle determine international development. The basic character of imperialism has not changed and cannot change. Even in the more relaxed atmosphere of the 1970's the motifs of confrontation and cooperation were simultaneously present and exerted their effect. At present, confrontation is being emphasized more than before because the extreme trends of imperialism that ignore reality have gained ground. The military-industrial complex, the oil monopolies, the Zionist Lobby are seeking for a way out of the deepening general crisis of capitalist society, the growing problems, the increasing contradictions of capitalist society through a faster pace of armaments, increasing the tensions of the situation, restraining detente, and even bringing back some kind of new variant of the cold war.

In intensifying the tensions of the situation, the foreign policy of the Chinese leaders is playing a greater role since they are seeking support from the imperialists for the realization of their fantasies of world domination. Today, Maoism without Mao has become the de facto ally of American imperialism on the international scene. Peking has embarked on the course of adventure and intensified expansion.

We have not harbored and do not harbor illusions about the development of the international situation. We reckon with the fact that the extreme forces of imperialism still have their reserves. We reckon with the policy of the Peking leadership and with the shifting attitudes of the governments of countries that are misled by imperialism and its allies. We know that all this can cause serious damage to the cause of peace, security and detente and can evoke further serious disturbances in international relations.

But we are still not pessimistic about the future. Those imperialist circles which are divorced from reality are now seeking to realize plans and to talk with the Soviet Union and its allies in the language of power do not reckon with the limits of their possibilities.

Why can we be optimistic? Because the international power relations on which the entire structure of international relaxation rests is continuously and uninterruptedly developing in favor of socialism and progress. This had a great role to play in the start of the relaxation process and will be reflected in future policies as well.

Since the 1950's radical changes have occurred in international power relations. These changes have been marked by the rocketing increase in the strength of the socialist community and its international influence; the strengthening of socialism and its international positions of progress; the increase in the influence of international communism and the workers' movement; the successes of the national liberation movements; the great successes of the forces fighting for peace and security; the intensification of the difficulties in the capitalist world; and the deepening of the general crisis of capitalism. Only such a favorable modification of the international power relations has made possible the development of peaceful coexistence among countries with different social systems and international detente. There is no reason to assume that this favorable change in power relations will stop, on the contrary we count on its continuation.

The other fact which influences the development of the situation is the deepening of the general crisis of capitalism, the increasing differences among the imperialist and capitalist countries. It is obvious that nowadays the situation in this area is not the same as it was in the 1950's. The leading role of the United States in the capitalist world is no longer indisputable. The interests of the European capitalist countries differ today in many respects from those of American monopoly capital. Japan's interests are also pointing in another direction. These countries can still be held together in some way by the bugaboo of communism, but if conflicts of interest continue to deepen, this too may be forced to recede into the background. It is true that the ideological differences between the socialist and capitalist countries are irreconcilable, but there are no economic differences of interest, so to speak, and in fact the trends of economic cooperation are being strengthened. The European capitalist countries and Japan have profited a great deal from detente and they would not be the better for it economically if some new variety of the cold war were to replace detente. Their economic interests dictate that they distinguish themselves, though cautiously, from the extreme American policy. We have no illusions that the aggressive American circles still have the means to constrain these countries to some kind of acquiescence. The Western European reactions to the Americans measures against Iran and to the sharp anti-Soviet change of direction in American policy also show, however, that the alliance of the developed capitalist countries is not what it was in the first half of the 1950's. Of course, we must not exaggerate these differences. In the decades following World War II the common features of capitalist class interests in the fight against communism proved to be stronger than the differences. But history teaches us that at times differences can force even this class solidarity into the background.

The third factor is rooted in the so-called Chinese problem. The Chinese Maoist leadership, as we have indicated, is striving for world domination for which of course there is no basis in reality at all. The Chinese leadership conceives of the path to this goal on the basis of Mao Tsetung's tactics: to incite the United States

and Western Europe against the Soviet Union so that if possible they might destroy one another, and then to step out on the scene and with the pressure of a billion people force a "world order" on the Chinese model. This adventurous dream is not in harmony with the interests of the Chinese people. This is a factor with which the Peking leadership must sooner or later reckon. The Chinese people can no longer be sealed airtight from the world. It is also becoming more and more obvious that socialism cannot be built on an anti-Soviet foreign policy or on friendship with imperialism. If the Chinese leaders really want to build a socialist system they will sooner or later have to give up the idea of an alliance with the United States. It would be an exaggeration to maintain that the Chinese People's Republic is simply a "puppet" of extreme circles in the United States and Japan; its leadership has its own goals. The great internal tensions of China have always incited the Peking leadership to ease these with a classic recipe--the incitement of external tensions. Unfortunately, this also runs through the history of liberated China as well. Not for a moment has the Peking leadership given up the idea of expansion southward, and it has even tried expansion toward the north. But since the Peking leadership has not completely lost its sense of reality, it has temporarily given up its "march" toward the north and has turned to the south. With the Vietnamese adventure they had to see that the socialist world, above all the Soviet Union, would not abandon the Vietnamese Socialist Republic and Indochina, and this direction is closed. But there are still some countries and areas which China still essentially regards as Chinese territory by "historical right": Thailand, Burma, a good part of Malaysia, large areas of India, some of the archipelagoes belonging to the Philippine Islands, and all of Korea, Singapore and so forth. The question is when will American imperialism realize that its embrace with the Chinese leaders in the final analysis also seriously endangers its own interests. We believe it is only a matter of time before conflicts of interest arise from the present union. Actually, it will be a conflict of interests between two powers driven by goals of expansionism, for China's foreign policy has nothing to do with socialism.

A closer economic cooperation between China and Japan is complicating the situation. With its own great technical state of development and with China's cheaper raw materials and even cheaper labor at its disposal, Japan is becoming an even more dangerous economic rival of the United States and the Western capitalist countries than it has been to now. Under such circumstances it is not inconceivable that the conflicts of economic interest among the United States, the developed capitalist countries of Western Europe, and the Chinese People's Republic as well as Japan will increase.

Socialist foreign policy must study these phenomena very carefully and take them into account when determining certain steps.

These factors are very important, but without the active presence of the subjective element these cannot by themselves result in the attainment of the desired goal. The incessant struggle of the forces fighting for socialism progress, peace, and international cooperation is the main driving force which we may thank for the great results achieved thus far.

It was at the suggestion of the Soviet Union in 1963 that the first important international agreement was born, the nuclear peace treaty. Its importance lies in the fact that it prescribed certain limits to nuclear armament, namely in the area of nuclear explosion testing. Following this, the delegates of the Soviet Union and the United States continued negotiations which led to more recent agreements. This process was accelerated in particular in the early 1970's there and also had a benefical effect on the international atmosphere.

The settling of the so-called German problem played a major role in European relaxation. The Western powers, in particular the extreme circles of the United States and the FRG, wanted to use the so-called "unsettled" state of the German question to line up the countries and peoples of Western Europe behind the anti-Soviet and new world war plans of American imperialism. The main method for doing this was to refuse recognition to the new European situation which developed after World War II, hinder the creation of a new unified Germany, establish a separate West German state and the aggressive military alliance NATO, including the rearmed FRG of May 1955. With this they foiled the idea of the Soviet Union and the other socialist countries that Germany should be unified and belong to neither of the military-political blocs. This, to be sure, would have crossed up the American plans, for without Germany it would be impossible to organize a new world war in Europe.

After such developments, the European socialist countries had no choice but to close ranks more tightly and form their own defensive organization, the Warsaw Pact.

But even then American imperialism and its West German allies did not give up their original ideas. Although they were the ones responsible for the splitting of Germany into two, they now "mobilized" for the unification of Germany, naturally on a capitalist basis. What is more, they did not want to recognize the new European situation which developed after the war, the new European boundaries, and the existence of the socialist countries and the GDR. They organized numerous provocations around West Berlin. Thus their goal did not change: to forestall the pacification of the situation in Europe, and continue their preparations for the launching of the World War III. With the cold war, the United States and its allies prepared essentially for a hot war in Europe. The recently revealed Pentagon documents speak eloquently of the dangerous plans of the leading American circles.

Thanks to the increasing strength of the Soviet Union, the socialist countries, the progressive developing countries, and the militant camp of the peace-loving millions, these plans failed. With time, the situation matured so that in the beginning of the 1970's the settlement of the so-called German question was begun. A role of great merit was played in this by the West German Social Democratic-Free Democratic government which recognized the necessity of a settlement. And in rapid succession the well-known agreements came into being among the FRG, the USSR, the Polish People's Republic, and the CSSR. Representatives of the four victorious powers in World War II signed the quadrilateral agreement regulating the status of West Berlin. The basic agreement of the GDR and the FRG was also signed. All this meant that the governments of the FRG and the Western powers recognized the new European situation that developed after the war, the new boundaries, and in respect to international law they also recognized the socialist German state, the GDR. From the viewpoint of strengthening security these agreements had enormous importance, for with these it became possible significantly to reduce the tensions which had accumulated off and on around the German problem.

At the initiative of the European socialist countries, the leading statemen of 33 European countries, the United States and Canada met in Helsinki in 1975 and signed the historically important Final Act.

In 1973 negotiations were begun in Vienna between representatives of the Warsaw Pact and NATO on an agreement designed to reduce military forces and arms in Central Europe.

The Soviet-American negotiations were of particularly great importance in the field of disarmament. The Soviet-American agreement, SALT I, on limiting defensive strategic weapons was born, and after long negotiations the final agreement was also signed in the spring of 1979 in Vienna on limiting strategic offensive weapons.

Agreements were also signed in other important areas. The ban of nuclear testing in the atmosphere, outer space and under water, the nuclear nonproliferation agreement, the ban of mass destruction weapons in earth orbit, the ban and elimination of bacteriological and toxic weapons on the sea and ocean floors and the ban of environmentally damaging devices all represented a very important advance in limiting nuclear armament and signified the strengthening of detente.

It is precisely these results and the factors promoting detente which represent the target of drumfire from extreme imperialist circles; their machinations are directed mainly at making military detente and further disarmament measures impossible, not only to thereby stop the process of detente but also reject it.

The appearance of the extreme forces places mankind at the crossroads. The question today is whether sober sense will prevail in the leading circles of Western countries, are they willing to continue that which we started in the early 1970's, or will and unbridled arms race gain the upper hand that could break down the barriers with unforeseeably tragic consequences that have been erected up to now with hard work.

The guarding of peace, the solidification of security and the maintenance of detente are an unchanged vital interest of the world's population. At the root of man's consciousness is the recognition of the fact that there is no rational alternative to peaceful coexistence. Objectively, those circles which were our partners in the 1970's in developing detente continue to be interested in peaceful coexistence and in maintaining and developing the cooperation that has evolved.

Although imperialism still has the strength to stir up trouble in various areas of the world and to threaten peace and security, it is not, and will no more be in the position to arbitrarily and unilaterally decide the world's fate from its position of superior strength. More and more the forces of socialism, peace and progress play a decisive role in international relations, and the cavilling of imperialism will be able to hinder their efforts only for a short time.

At a time when the international situation is deteriorating and tensions are developing it is the task of the socialist countries, the progressive forces, all the people of the world, well-intentioned and peace-loving people to unite by building on the positive results achieved thus far and to intensify their efforts to repulse the imperialist provocations, stop the processes harmful to peace, guard the results of detente, normalize international relations, and promote the cause of disarmament in order to solidify peace and security.

The Warsaw Pact not long ago celebrated the 25th anniversary of its establishment. This organization is a new type of defense alliance for the socialist states, the goal of which is to protect socialist society and European peace and security against aggressive designs. Therefore, the Warsaw Pact was an is an important factor in the struggle for the noble goal of universal peace and security.

The Warsaw Pact was formed after the Soviet Union and the other socialist countries exhausted every possibility to prevent the armament of West Germany as a separate state and make it a NATO member. Thus the signing of the Pact was a matter of constraint, an answer to the machinations of American imperialism which created NATO 6 years earlier to revive Germany's military power and make it the main NATO force.

Thus the main task of the Warsaw Pact is twofold. On one hand, it is an organization of peace which has had a decisive role in avoiding a new world war since World War II, and thus the people of Europe have been able to enjoy the blessings of peace for 35 years now. With its renewed political initiatives it contributed greatly to the advance of detente in Europe and around the world. The other function of the Pact is military in nature. The member states of the Warsaw Pact believe that international detente is an important guarantee for maintaining the balance of military power. They do not seek military superiority. Living proof of this is the proposal that they are ready for any disarmament measure no matter how broad, including also the mutual dissolution of both the Warsaw Pact and NATO. At the same time the Warsaw Pact countries cannot accept the theory of American domination and they can in no way permit the United States and its allies to acquire military superiority over the Soviet Union and the socialist countries. The member states of the Warsaw Pact are willing to examine seriously and discuss any proposal which has the goal of reducing military forces and armaments on the basis of military balance of power and equal security.

As we see, the main characteristic of the Warsaw Pact was, and remains, for the member states to contribute, with foreign policy actions, to the soldification of peace and security, promote military detente and disarmament. It has always been our belief that the European and North American states must concentrate their forces on peaceful coesistence.

On the basis of the past 25 years' experience we can justly state that our organization performs its tasks well and reliably fulfills both functions. Among the constructive proposals of the leading organs of the Warsaw Pact, we succeeded in having many of them accepted, and this had a decisive role in successfully preserving world peace.

Now that the situation has become more difficult and complicated, the Warsaw Pact has not been remiss in strengthening its earlier proposals and offering new ones. The anniversary session of the Political Consultation Body in May of this year in Warsaw approved documents which include an entire program for political and military detente the realization of which would have a beneficial effect not only on the European continent but also on the peace of the whole world.

The development of the world situation is decisively influenced by the kind of relations which prevail in the European and North American theaters. We have already mentioned that the continuing fate of political detente depends now essentially on whether the braking of arms competition will be advanced via the working out and realization of disarmament measures. The basic problem in the development of tensions in the entire international situation is the 1978 NATO decision to increase armaments, and even so the main cause of the sudden development of tensions in the European situation is the NATO decision which calls for the placing by Western Europe of medium-range American nuclear missiles in five Western European countries. This decision is extremely harmful from various points of view, chiefly because, if realized, it would break down the European military balance. If the 572 medium-range nuclear missiles are placed in Europe, the Soviet Union and the other socialist countries

will be forced to create a counterweight. It must be noted that the so-called Euromissiles are medium-range in name but their planned placement sites make them of strategic importance. With their help NATO would acquire military superiority over the countries of the Warsaw Pact, thereby circumventing the provisions of SALT II.

What can be done in this situation? Reason would dictate discussions, but it is impossible to hold discussions in the language of power, it can only be done on bas of the principle of equality and equal security.

Preventing the realization of the decision on the so-called Euromissiles and the maintenance of the European military balance serves the welfare of all European people. This is in the interest not only of the Warsaw Pact countries at whom the missiles are directed but also of the European NATO countries, mainly those which contribute by permitting the placement of the weapons on their territory. It does no harm to mention that such a contribution does not mean less than the fact that the countries concerned are undertaking the role of modern ammunition which has been assigned to them by the United States. It is obvious that with the presence of the American missiles in the event of a nuclear conflict these countries, would become primary targets. Thus the governments concerned and the elemental interests of the peoples require that they do not blindly follow the American demand. The arguments that the placement of American missiles in Western Europe strengthens the security of these countries are without any foundation. On the contrary, they increase the danger that in the case of a nuclear war these countries will sacrific themselves on the altar of American interests.

This year's May session of the Political Consultation Body of the Warsaw Pact presented the public opinion of NATO countries and the whole world with a broad scale of proposals political in nature. The essence of every one of these proposals is to prevent a further increase in tensions. This is also the goal of the invitation which the member states of the Warsaw Pact have accepted to a conference of leaders of the states in all the areas of the world to put out the fires of international tension and prevent war. At this meeting they should devote special attention to European security and the strengthening of peace on the continent. If the NATO countries want peace and security as much as their leaders say, the time is now for taking the proposals of the Warsaw Pact seriously and discussing them fundamentally. Above all, the question of European peace and security should be dealt with because this is the key to improving the world situation.

Of course the development of the European situation cannot be separated from the general world situation. The various crises centers also have an effect on European peace and security. History, however, has taught us that since World War II there always have been and always will be armed clashes outside the European area. One reason is that the people want to be free of colonial oppression and of the rule of capitalist exploitation; this reaction and its allies want to prevent even with arms. The other reason is that it is inherent in imperialism to want to expand; it not only wants to keep its present positions but also wants to reconquer what it has lost. The slogan nowadays circulating in the West is that peaceful coexistence and detente can only be of a universal character--that is, valid only if peace and security can be created everywhere in the world at one time--is still illusory. Today it only serves imperialism to try to prevent the advance of progress and the ideas of socialism.

The member states of the Warsaw Pact regard it as important that every state should seek to guard the results attained in detente through maximum exploitation of the possibilities. In such efforts, the members of the Warsaw Pact are ready to cooperate in the future as well.

The member states of the Warsaw Pact have reemphasized several of their earlier proposals, the realization of which would result in a serious improvement of the European situation. Realization of the proposal drafted in Budapest and further developed in Berlin in respect to the conference on military detente and the problem of disarmament, for which Poland offered Warsaw as the site, could give the cause of European detente a great forward thrust.

In the opinion of the Warsaw Pact member states, the approaching Madrid meeting can play an important role in the strengthening of confidence only by working out concrete steps serving this goal. For this conference to have a constructive role it will be necessary that only such measures be discussed which the participants agree so that the provocative attempts made by certain Western powers at Belgrade can be avoided. This meeting could also be a suitable forum, for example, for deciding on the place and time for an all-European conference to be called on military detente and disarmament.

The Warsaw Pact discussions emphasized that disarmament agreements which have already been signed must be unconditionally respected. It would have an extremely favorable effect if the American legislature finally would commit itself to ratify the SALT II agreement. The renewal of the stalled disarmament negotiations would also be beneficial to the United States.

It is time to make progress at the Vienna discussions which have been going on by now for 7 years on the reduction of Central European armed forces and armaments. From what has taken place thus far we are forced to conclude that in essence the NATO member states do not want to reduce Central European armed forces but rather it is their goal to keep the FRG Bundeswehr intact, even assure opportunities for its further development.

Acceptance of the Warsaw Pact proposals would eliminate and turn around the trend of growing tensions and would create favorable conditions for gradual advancment for improving the European situation.

The Political Consultation Body proposes that the participants of the Helsinki Conference sign an agreement that they would not be the first to use nuclear or conventional weapons against each other and the nuclear powers would guarantee not to deploy nuclear weapons on non-nuclear powers which have not placed such weapons on their soil.

To improve the European situation and to announce good intentions, the Warsaw Pact regards it necessary for the states to accept the following obligation: in the spirit of the Helsinki Final Act, beginning from a certain point of time, they will not increase the number of their armed forces.

It is the position of the Warsaw Pact countries that they are ready to limit, forbid or eliminate any type of weapon on the basis of full equality, full mutuality, and equal security.

All these proposals unequivocally bear witness that the Warsaw Pact countries take seriously and are ready to carry out the principles and recommendations in the Helsinki Final Act. At the same time, they also except their partners to take a similar position.

The realization of the Warsaw Pact recommendations would create an international atmosphere in which the European socialist and capitalist countries, through joint efforts, could give direction to a radical improvement in the world situation.

In this spirit, the Warsaw Pact member states urge that there should be a comprehensive agreement on the renunciation of force and the threat of force, the termination of the manufacture of nuclear weapons, the gradual destruction of existing stockpiles, the prohibition of creating new type weapons of mass destruction, the reduction of the military budgets of states and in particular the large powers, and the termination of military activity on the seas and the oceans of the world.

It would beneficially influence the European and the world situation alike if measures were undertaken to promote detente in the Mediterranean theater. Such a step would be the withdrawal of warships equipped with nuclear weapons and the signing of an agreement that in this theater nuclear weapons would not be placed in the areas of states where these weapons do not already exist.

It would be of extremely great importance if progress were made in eliminating, by political means, the various centers of crises.

The communique on the Warsaw Pact meeting calls on all the peace-loving forces, the vast majority of the developing countries, the soberly thinking leading circles of certain developed capitalist countries to do everything they can to prevent the worst, that is war. To do this it is necessary to have unity and an action presence. It is our expereince that more and more perceive the danger which the reevaluated American policy is drawing the world, and there is a readiness to fight in the defense and development of the results of detente. The proposals worked out by the Warsaw Pact are suitable as a basis for the broadest unity in which communists and socialists, materialists and the faithful, sober-thinking capitalists and manual workers, intellectuals, writers, artists, women and young people, in a word everyone, will find his own task in defending and solidifying peace and security.

It is extremely encouraging that effective initiatives have already been taken to mobilize the forces of peace. A passionate will to act characterized the Paris consultations of the European sister parties, the meeting held recently in Budapest by the presidium of the World Council for Peace, and other actions of the believers in European and world peace.

A great sense of responsibility permeated those consultations which were held between the socialist and Western foreign ministers in Vienna on the 25th anniversary of the signing of the Austrian State Treaty.* The NATO foreign ministers, to be sure, tried to put responsiblity for the situation as it has developed on the socialist countries, but by now it is clear to everyone that their arguments are becoming more and more

*Which restored Austrian independence and sovereignty.

untenable. The Warsaw talks of Leonid Ilich Brezhnev, secretary-general of the Communist Party of the Soviet Union and chairman of the USSR Supreme Soviet, and Giscard d'Estaing, president of the French Republic, were encouraging for top-level meetings to settle the difficult situation. The Moscow discussions of Helmut Schmidt, chancellor of the FRG, also had an effect in this direction. We believe that both the Vienna talks and the top-level meetings held thus far represent a starting point for the mutual efforts of the socialist and capitalist countries, which in the end will remove obstacles from the road to the development of detente. It was precisely this purpose which permeated the 14-15 May Warsaw anniversary meeting of the Warsaw Pact Political Consultation Body.

The common proposals and combined efforts of the Warsaw Pact member states which serve the cause of peace, security and disarmament are in harmony with the interests of the Hungarian People's Republic, and the Hungarian people.

Our country lies in the heart of Europe. Our people have lived through the terrible sufferings and losses of two world wars. What would be more natural than for us to work at the building of a developed socialist society and strive with heart and soul for the basic, indispensable condition to realize our goals for peace and security. It is understandable, therefore, that we are closely affected by everything which happens in Europe and by everything which is interdependent with the peace and security of our continent and the world.

The experience of international life shows that peace and the atmosphere of detente also have a favorable effect on the cause of universal human progress. Ultimately, the forces of reaction have for this reason launched a counterattack against that peace policy of which our country is one of the initiators and implementers.

The report presented to the Central Committee of the Hungarian Socialist Workers' Party at the 12th Party Congress stated: "In representing the interests of our country and people and pursuing the principle of proletarian internationalism and peaceful coexistence, we strive to contribute to the advance of detente, to the solidification of peace and an increase in the forces of national independence, socialism, and social progress." The 25th Congress of our Party has strengthened this resolution and ideological policy.

Since the beginning, the Hungarian People's Republic has been an active member of the Warsaw Pact. Life has shown that our participation in this organization is a solid support and guarantee of our sovereignty, the protection of our national independence, our country-building work, and at the same time this is a factor which contributes to the increase in international respect for our country. Therefore an important task of our foreign policy continues to be the coordination of our international activity with the other member states of the Warsaw Pact. We shall continue to contribute to perfecting the defense strength of the Warsaw Pact.

In the economic organization of the socialist states, the Council for Mutual Economic Assistance, we are working to see that socialist integration, the close economic cooperation of the member states will show decisive results as quickly as possible. In the present world situation, this is the main guarantee of our economic development.

The Hungarian People's Republic is a convinced believer in the policy of peaceful coexistence, detente, and disarmament, and is deeply interested in seeing that with joint effort we shall prevent the deterioration of European relations and the world situation, and strengthen the peace and security of our continent.

Proceeding from the principle of peaceful coexistence, our country is ready to build, maintain and further develop mutually advantageous relations with countries that have different social systems. We are convinced that a comprehensive system of such relations will serve well the cause of peace, the solidification of security, the advance of peaceful coexistence, and the strengthening of the foundations of detente.

In the spirit of this policy, our country honorably observes the letter and spirit of the Helsinki Final Act and works continuously to realize these principles and the recommendations of the Final Act. We regard it as a particularly important tas of ours to make indefatigable efforts to promote military detente.

The main efforts of our peace policy were clearly defined by Janos Kadar in summarizing the discussions of the 12th Congress: "Let there be peace, let there be balance of power, but a lower level of armament. Let every state and people feel itself secure. This is why we are struggling in the international arena." In accordance with these goals, Hungarian foreign policy resolutely supports the Soviet proposals designed to restrain armament competition, participates actively in working out the common proposals, and to the extent of its possibilities urges their acceptance and realization."

At the time, the government of the Hungarian People's Republic did a great deal for bringing about the Helsinki Conference, organizing the Belgrade meeting, and now it is throwing all its forces to prepare a constructive atmosphere at the Madred meeting.

Our diplomacy carried out a responsible task when--on the basis of the commission of the Warsaw Pact Foreign Minister's Committee--we delivered to the governments signing the Helsinki Final Act the document which the Foreign Ministers' Committee approved in May 1979 in the Hungarian capital and which contained the proposal that a conference should be called of the representatives of the signatory states to discuss measures to increase confidence and discuss steps serving to reduce armed forces and armaments. We were also the ones who the replies of the governments concerned to the proposal. On this basis, the Foreign Ministers' Committee on December 1979 developed the proposal further, and their approval by the majority of the European countries can essentially be counted on.

Hungarian foreign policy is resolutely opposed to the stirring up of new waves of armament competition. Accordingly, through diplomatic channels we have called the attention of the NATO governments to the serious consequences of the decision regarding the establishment of American nuclear missiles in Western Europe.

We know that to attain our common goals we need to travel a long, difficult course. But our people are optimistic. They believe in their creative power, which is multiplied by our brotherly friendship with the Soviet Union, the countries of the socialist community, and our active participation in the collective organization of the socialist countries. The Hungarian People's Republic is always ready to work on behalf of a good cause.

For this reason, it is our resolute intent, in accordance with the foreign policy guidelines of our party, to take active part in the future as well in the struggle which together with our allies and friends we are waging on one front against those obsessed with tensions, armaments and war, to secure the external conditions for our constructive work, to advance socialism and social progress, and universal peace and security.

Our greatest strength is in our joint presence. However, this does not mean that from our historical past, our economic endowments, our culture, and our geographical situation we do not have characteristic interests and possibilities which we must exploit. The Hungarian People's Republic will always fulfill its own task in the interest of the common goals of socialism and human progress, and with this and the exploitation of its characteristic possibilities it will carry out the obligations placed on it by the Hungarian working class and the international proletariat.

'NEPSZABADSAG' EDITOR, YOUNG INTELLECTUAL DEBATE LIMITS OF SOCIAL CRITICISM

Budapest KRITIKA in Hungarian Jan, Jul 80

[Article by Istvan Elek: "Realistic Self-Knowledge and the Limits of Social Criticism"]

[Jan 80, p 12]

[Text] However convincing may seem the arguments which call attention to the danger of an erroneous generalization of a work of social criticism--most recently in an article by Dezso Togh titled "Realism and the Discovery of Reality" (NEPSZABADSAG, 19 August 1979)--I have never seen this to be as great a danger as its opposite, if social criticism is much too cautious in its discovering and generalizing, and thus the desired result does not come about. The opposite of what is optimal in this connection is not erroneous generalization but rather the unsatisfactory nature of social criticism, under-generalization or the lack of generalization. Disproportionately little is said about the latter in our official forums. Let us define the terms!

Let us think. It is as if we knew precisely where the border was between excessively cautious social criticism and erroneous generalization if we were to consider it justified to establish a relationship to reality on the basis of other points of view. It is as if we knew who, or rather what organizations and institutions, was called to this task concretely and in general. It is as if we had no doubt about who was called on to make socially valid determinations, necessarily as a representative of a partial social interest; as if we had no doubt that we had now and forever an objective or at least credible standard!

The answer which too easily avoids responsibility would be to say that the reality of the time, the given social practice, designates these limits. But the reality of the time is the subject of our analysis and not the censor of it. The basic difficulty lies precisely in this, that the answers which will correct our present judgments await us in the future.

I think it is obvious that we are talking not only about the possibilities and limits of generalization in formal works; rather, we are talking more broadly about the question of social criticism, the critical relationship to our social practice, and the problem of a work of social criticism is only a unique manifestational form of this. So what is the greater danger now? What might the consequences be, for example, of an exaggeration or erroneous generalization of social criticism?

Let us presume that this criticism regards a problem as an element of larger interdependencies, a phenomenon manifesting general tendencies, although what is really involved is a unique, isolated case! This is frequently presented as the special danger of erroneous generalization, that, painting an unjustifiedly dark picture of our reality, it may become a source of pessimism, may be suitable for shaking the faith of simple and sincere people in our achievements and prospects, in the cause of socialism. The consistent logic of this view conjures up the spectre of social crisis.

Perhaps it would not be unuseful to use the historical point of view. If we look back over our last 30 years, or the history of socialism in general, we see that the shocks of social scale were never interdependent with this danger but rather with its opposite. A limited, stifled, excessively cautious social criticism which did not see and was not permitted to see the interdependencies was always first among those factors which led directly to mass disillusionment, to loss of faith and loss of goals, to the abandonment of the cause of socialism. It was not a criticism which had become excessive. (It is not possible here to detail the social determination of this status of criticism; but to a crucial degree the given social state--e.g., the personality cult--was a symptom of it, the thing which created and maintained it.) If in some period its role does grow disproportionately then this too is a symptom, a symptom of a social shock (e.g., Hungary in the summer and fall of 1956), a consequence of the fact that earlier it had been degraded into insignificance. Concretely, it is a sign of a situation in which criticism can no longer be silenced but in which the forces representing this criticism have no way to carry out consistent corrections in the sphere of political power.

If you are not satisfied with the lessons of history let us think, Are we so distrustful of the persuasive strength of our achievements that we must so cautiously protect our society from the possibility of conflicts aroused by erroneour generalization?

Perhaps I will not be suspected of propounding some sort of elitist view if I risk the opinion that it is worth considering that we are building a society of responsibly thinking men! For thinking men--and why should we deny this title in advance to the ordinary members of our society--the higher and more desirable degree of democracy means that they can participate in forming their own fate--even if they may sometimes sacrifice themselves on the alters of their errors--rather than having us think out a good fate for them, instead of them, in their name. Adding that even if we were capable of this without error, what sort of good fate would it be? Such a "taking over" of individual responsibility, such a limitation on a social scale of independent thinking, which is presumed by this version of defending the faith would mean, among other thing, an immoderate underestimation of social openness. A laconic simplifying or ideologizing version of taking cognizance is a symptom of a dwarfed democracy growing whiskers.

Such a citing of the danger of the generalization of social criticism reminds one of that logic with which some so easily dismiss as useless, unnecessary, even as harmful and causing confusion any thinking about the fundamental, comprehensive social-historical problems, any analysis of the history of Soviet-Hungarian relations, or any analytical debate of the turning points of socialism and Hungary such as 1945-1948, 1956 and 1968, the 30 year practice of the leading role of the

Party, etc. Both views, as they say, display an attitude which propounds and feeds the lack of maturity of society.

But here also it is obvious that it is not thinking that causes confusion, certainly not thought that causes trouble, rather it is those unresolved social, historical dilemmas, even those social troubles to which thought calls attention. Not only can we permit ourselves to "cause trouble" in this sense but, in the view of many, it is the obligation of a man committed to the cause of socialism.

An historical awareness is very nearly the self-awareness of society. And without a realistic historical awareness there is no realistic awareness of the situation either. Organically interdependent with all this is the fact that there is a significant dissonance between the reality of our society and the picture it has formed of itself. Although it is clear to all of us that this is not the 1950's, one-sided analogies can be misleading in this and in other things. Comparisons can never be for us simply a tool in aiding to justify the present but if a bare comparison of present and past situations is a form of valuation then this is what is involved.

A realistic historical attitude should presume a much more realistic awareness of the present in addition to a realistic awareness of the past, taking into consideration the present possibilities at all times and evaluating the actual political, economic, cultural, social, etc. policy achievements and decisions in relation to these possibilities, where the possibilities are not rigid, unchangeable factors in the game. What else could we mean today by that so frequently cited active formation of history if not the constant expansion of the freedom of movement, the situational conditions?

So in evaluating the achievements we need not only to face the conditions of the present by means of a comparison with the past, we need also to ask: Have we done everything for the possibility of the possibilities? Have we done everything for the possibility of the more favorable conditions? And then we should not think in terms of a situationally determined attitude. We should regard the social situation as the possible and necessary field of action, and nothing more.

Before all else there is need for profound analyses in order to judge our present realistically. We will not get far in the debates, as happened in a recent conversation, if we simply list the facts, for example for and against our liberal cultural policy. It cannot be a "pro" argument in this debate that Gyorgy Konrad's "Founder of the City" was finally published or that KRITIKA published an interview with Jurgen Habermas, which would have been unimaginable a few years ago. These cannot be "pro" arguments because we could list plenty of "contra" arguments too. And, as is well known, you cannot refute facts with facts. So let us not relate these thirgs to one another but rather to that of which they are symptoms, that which is behind them, that which can be characterized today by saying that it contains this and that, the one and the other. Let us relate these things to our intellectual life more generally, to our public situation.

This is natural, someone might say. It is natural, of course, I might say, just as natural as for a personality with some economics background--referring to the appearance of liberal tendencies and more broadly to the quality of life--to call us in some western papers the happiest barracks in the socialist camp.

of or insignificant symptoms. And there are those which do not carry out that generalization which would be quite justified by the number and weight of the phenomena. Optimal generalization in social criticism is the opposite of both even if the author is worried only about the latter--"in this connection," meaning his own subjective prejudice.

Now that I have said the word, "subjective," let me not hide it under a bushel; it is just this hardly disguised subjectivity which distrubs one in Elek's attitude and it is worth while and necessary to deal with it. (Not least of all because it can be generalized to the current attitude of a certain part of the younger intellectuals. It can be found especially among young people studying the humanities.) What is this attitude?

If one dismantles the scenery of Elek's retirent formulations it appears that what is involved is nothing more than dissatisfaction with contemporary society in that we do not dare to face conflicts and errors, do not talk frankly about the past and are silent about real problems because this is more opportunistic, etc. What we are accustomed to say by way of explanation or excuse--namely, that compared to earlier times or the practice of other societies criticism is opener here, that there has been development--that is eye-wash intended to disarm critical passions; in essence nothing has changed, there is no true democracy, there is no true critical freedom; this is betrayed by the "official" criticism which protects social criticism from the excessive generalization of negative factors and demands apologetics for existing conditions; calling on social criticism to be responsible is nothing more than the self-defense of the officials responsible for the social ills....

Istvan Elek expands this position--more precisely this feeling--into a theory according to which troubles in social development have always followed from an insufficiency of critical generalization and never from its excesses.

Need one prove at any length that this theory falls far from the truth? We need not go too far back into the past. I mention only two examples, one from pre-war and one from post-war domestic history. Horthyist nationalism after 1919 attributed all the ills of the system--the poverty of the living conditions of the masses--to the truncation of the country. In the name of this generalization it stifled the peasant movements demanding land distribution, classified the class struggle labor movements as being against the nation, persecuted the revolutionaries and progressive people and brought the country into war. At the time of the personality cult, on the other hand, the most serious errors were committed on the basis of the principle according to which the class struggle necessarily and automatically sharpened paralled with the building of socialism, the disguised enemy working itself into the system and the party; and so everyone had to be suspect in advance, no sort of trust could be given to anyone--and thus the dangers of diversion and reactionary organization were generalized into something universal which determined everything. This led to the threshold of the 1956 tragedy, at which point a generalization of the opposite sign, the immoderate generalization of errors and denial of socialist achievements, opened the door to counterrevolution. Istvan Elek imagines that the forces representing socialist criticism did not succeed in carrying out consistent corrections in the sphere of power because the old leadership did not permit them to generalize enough; but the "generalization" which surfaced then was the total negation of the system; the only ones who found

the correct road were those who opposed both forms of excessive generalization, the sectarian-dogmatic and the revisionist which opened the way for the counterrevolution. "Over-generalization" on both fronts was characterized by excesses; the believers in socialism were characterized by the struggle for a differentiated, precise analysis of phenomena.

Innumerable other examples could be listed to prove that views cannot be classified simply by the degree of generalization. It is evident that there are erroneous and correct generalizations, that "over-generalization" and "under-generalization" are incorrect in every case, and, indeed, that every "over-generalization" means an "under-generalization" too.

The distinction between correct and erroneous, precise and imprecise generalization is just what is entirely missing from the argument of Istvan Elek--and, I might add, from his optimism, worthy of envy. His evidence is different--one of his arguments, and the chief one, is that attempts to protect society are never right and passions of social criticism are always right. The only question is, when can they carry through their own corrections--in the medium of the political sphere which is opposed in every case. He does not feel that it is worth considering different situations, when it is this way, that there are social systems in which there are not only errors to be overcome but also self-criticism--horribile dictu--in the political sphere which is aware of the dangers accompanying the exercise of power and fights against them. Otherwise we cannot understand the key sentence of the article, which goes like this: "A limited, stifled, excessively cautious social criticism which did not see and was not permitted to see the interdependencies was always first among those factors which led directly to mass disillusionment, to loss of faith and loss of goals, to the abandonment of the cause of socialism; it was not a criticism which had become excessive." I call this an optimism worthy of envy in this sense, that Elek sees contemporary Hungarian society as one which cannot be hurt by any criticism carried to extremes.

How can one imagine this? Either the achievements of society are beyond all measure and there are no conflicts which can be exploited or magnified by "extreme" criticism--let us say, demagogic, ill intended, inciting, hostile criticism. Or socialist awareness is so general and so strong that one need no longer reckon with such "excesses" in social criticism. Whether we presume the former or the latter we have come to some form of apologetics. It is true that Istvan Elek exempts the political sphere of society from this. But how could a society be so resistant if the political sphere is as the author supposes, if he does not say so directly? Let us look at his argument.

First he poses the question with supercilious scorn: "Let us think, Are we so distrustful of the persuasive strength of our achievements that we must so cautiously protect our society from the possibility of conflicts aroused by erroneous generalizations?" According to this Istvan Elek trusts in these achievements. But he casts no light on how we should understand them if "some dismiss...as harmful and causing confusion any thinking about the fundamental, comprehensive social-historical problems."

These "some" are not just some isolated individuals because they represent--according to the logic of the article--that attitude which--allegedly--leaves its stamp

Here we are again at the problem of measuring ourselves, at the everyday anomalies of the picture formed about ourselves. A comparison with the western bourgeois democracies cannot decide the case in judging our present, for example the degree of the democratization of our society; it can only provide a point of view for evaluating our peculiarities. But it can be very useful, for example especially in regard to the institutional system, if we keep in mind that we should not regard "the historically expressed values and legal institutions of democracy as simply a bourgeois invention" because "they must also be realized in the course of building socialism" (Csaba Gombar, "Concerning the Current Concept of Democracy," LATOHATAR, 1978, No 12, p 137).

A comparison with socialist countries also can only provide points of view. That personality who refers to the happy barracks has his domestic counterpart too, self-deluding or cynical as you please: "Nowhere do they live so well with this amount of work; imagine if it were here as it is...." Versions of this, accompanied by a cynically confidential smile, are slowly appearing even in semi-official statements. Representatives of these views, with their flacid or well considered passivity, strengthen the sprawling boredom with differing emphasis depending on the situational conditions--" There are still problems but essentially everything is going well; there are still problems but our society is constantly working on eliminating them." Such an attitude, with a curious awarensss of organic continuity always considers itself justified. Starting from the thesis that value judgments necessarily depend on the current social situation they can always transcend their earlier views without consistently facing the problem of responsibility because the different social situations justify their judgments then and now.

An especially dangerous quality manifests itself day after day, because, regarding themselves as pledges of the social-political specific gravity, they propound the own truth as of absolute validity in judging current, timely social problems phenomena despite the fact that, as good pragmatists, they should know clearly that after 5-10 years, conceding to the power of the "spirit of the age," they will regard as salvation even that "more shaded" opinion being formulated by their present, usually only potential", debating partners.

I have tried to oppose certain possible arguments against attitudinal elements certainly present in our public thinking, although it is clear to me that their truth content is valid only in this system of relationships, in regard to the given attitude; outside of this their truth content is most skimpy.

[Article by Peter Renyi: "Why Go To Extremes?"]

[Jan 80, p 13]

[Text] As a theoretical or methodological thesis it is difficult to know where to begin with the statement of Istvan Elek that he never saw erroneous generalization in social criticism as being as great a danger as too cautious generalization. This is due partly to the imprecise use of words.

It is obvious that we have to talk about two kinds of erroneous generalization. There are judgments which exaggerate aspects of certain phenomena which can be generalized, judgments which establish general traits on the basis of a small number

on our entire society; as opposed to them our author demands a realistic view of history and a more realistic awareness of the present; it is because of them that "there is a significant dissonance between the reality of our society and the picture it has formed of itself." In other words these "some" are responsible for a phenomenon of social magnitude; they determine what we will publish and what we will not. It is true that there are those (sectarians, embittered pragmatists, shallow administrators) who think in this way. But Istvan Elek feels them to be the dominant, determining force; to use his own expression, he is "over-generalizing." But can he wonder at this if he raises over-generalization, exaggeration, into a program and a method?

But let me here abandon the polemic; what is more interesting and more important is to seek the cause of why the author formulates the problem in this way, why there is a feeling in him and others which rejects the criteria of science and precision --in a rather surprising way among young intellectuals; why it seems desirable to him to take social criticism to extremes. Why is he irritated by that natural wish of cultural policy (put forward without any irritation) that the authors of works of social criticism should be aware of their responsibility? Is it perhaps because he feels great limitations, because he has found that only conformist works are published here because those who think "otherwise" have their mouths stopped up? I do not believe that this is why. If we look at domestic publicity and publication with open eyes we find innumerable formulations of various tendencies which differ from and even oppose the "official" positions; and this includes a very large number of "over-generalizations" of social criticism. He cites two works; two thousand could be cited.

Why does not Istvan Elek "over-generalize" this; why does he suspect some cunning manipulation behind it? Why does he think that he is surrounded by tabus while others, who would like to "generalize" with the opposite sign, are frightened by it and see in it a danger threatening socialism? I believe that the cause of this must be sought in a quite different direction than that in which Istvan Elek seeks it. He is right when he says that no one has the ability to determine where the general border is between "over-generalization" and "under-generalization" in works of social criticism.

There are obviously works and views which exaggerate and those which are too cautious in the judgment of which, in this or that listing, it is not difficult to arrive at a consensus among those who basically accept the principles and practice of socialism. But this is not the same as determining that border. This can be done only from work to work, with concrete analysis, arguments and exchanges of views in ideological, political and esthetic debates. As I see it we have failed in this, in this socialist criticism has not come up to the requirements, in this sense there is not enough activity in the forums.

It is true that there are sensitive questions but the sphere of these is not identical with what Istvan Elek calls unclarified themes. There are many fewer of these but there are some. The ideas which are considered sensitive today are rational but it is not only to this that we can and must refer. Before all else we must see that verifiable tendency which follows from our entire policy which is directed at dismantling the tabus in the course of development. (Whether the answers to be given will always be identical with what is expected as an answer--I conclude this from the passion of exaggeration--is another question.)

As for the overwhelming majority of the problems to be debated there are no such difficulties. On the contrary, there are few debates and analytical answers; it is probable that the author feels this lack and so comes to the conclusion that he must demand a franchise for ever more provocative and ever more exaggerated works, works to which it is not possible not to react (which in this way, of course, will carry us every farther from the real problems).

I believe that one must draw this cnnclusion frcm the position taken by Istvan Elek. There may be those who will feel this explanation to be excessively unsuspecting. But why should we presume ill intent when the author openly takes a stand for "over-generalization," that is for exaggeration and thus for a form of distortion? Of course the naivete which is manifested in this does not relieve one of the obligation of debating with it but it does oblige one not to seek the error primarily in subjective intentions. The conclusion which follows from this is that we must enliven, broaden and make more profound the debates one goal of which is that social criticism should not over-generalize or under-generalize but should be precise and to the point.

[Article by Istvan Elek: "An Answer to Peter Renyi"]

[Jul 80, p 9]

[Text] It is difficult for me to see what Peter Renyi's intention was with his article (KRITIKA, 1980/1, p 13). Formally it was a debate article for it dealt with my article (ibid, p 12) concerning the critical relationship to our society, but in reality it did not carry through consistently this debate in the concrete questions of substance.

Disregarding the simplifications he succinctly summarized in the fourth paragraph what was hiding behind, to use his phrase, the scenery of my reticent formulations. I will say only this about this scenery: I also would hope that the public could be exposed to the trains of thought of those who formulate things in a categorical way and do not waste their energy on the art of "packaging."

Peter Renyi regards it as one of his most important tasks to define the problems raised by me, or rather the fundamental reality of the general feeling which can be read from my article. According to this there are "few debates and analytical answers" in the judging of works and views. The critical thought in my article which goes beyond this he calls essentially the result of "naivete," "subjectivity," and an attitude which rejects "the criteria of science and precision." He thus more or less excuses my position before those in whom the charge of "ill intent" might arise in connection with me. Thus these observations also show how one should view my article, how one should relate to it, to make it somehow understandable and acceptable.

Naturally I am convinced that I should take all this without "ill intent" and need not prove myself to be subjective, naive and unscientific, certainly not in the sense of these words used by Renyi. As for this aspect of his debating method, that he should thus stamp me without refuting my ideas, I should explain to such an experienced publicist as Peter Renyi that it would not be necessarily objective, realistic and scientifically well founded for me, by arbitrary substitution, to

identify his position with an objective, realistic and scientifically well founded view. Such qualifications would be empty vessels containing in essence nothing more than the fact that Renyi does not agree with me. But this is what we are talking about! In a debate our subjective truths become credible truth in proportion to the weight of our arguments. We are not competing in calling names; it is our arguments which should debate! Among other things I wrote my debated article speaking for that public in which no one has a lease on objective truth.

I could go through Peter Renyi's reasoning point by point but in itself there would not be much sense in trying to restore the original meaning and interdependencies to my ideas arbitrarily ripped out of context and distorted by him. I feel that we do not have a debate primarily in regard to details. But there are a few things I cannot pass by. It is probable that Peter Renyi also knows that the difference between the views of the two of us is not that I believe in exaggerated social criticism while he believes in optimal social criticism. The difference is that we mean different things by optimal social criticism. And this is a direct consequence of the fact that we evaluate our social relationships and public condition differently. If in my article I argued for an exaggerated social criticism that only means that I was adapting to the pharseology of the medium (knowing that I am using a concept not easy to grasp--official criticism) in which the idea of an optimal social criticism, which I consider desirable, regularly appears as a danger, as an exaggeration of social criticism, the danger of erroneous generalization. Although even Renyi must know this very well he presents extreme generalization as the key to my train of thought. Of course he can do this only by abandoning the meaning used by me--which is perfectly clear in context. He tries to build his conception on an extreme generalization ripped out of context. He was not too successful because a few paragraphs later he quotes that part of my article which refutes what he has to say. "A limited, stifled, excessively cautious social criticism which did not see and was not permitted to see the interdependencies was always first among those factors which led directly to mass disillusionment, to loss of faith and loss of goals, to the abandonment of the cause of socialism. It was not a criticism which had become excessive." Thus--I note this only for the sake of precision--I was not talking about social development in general but rather only about socialism and in the second place, despite Renyi's presentation, I did not deplore the lack of generalization with some sort of indifferent content but rather the lack of social criticism which saw and was permitted to see the interdependencies.

In addition Renyi did not make a fortunate choice of historical arguments; they justify me rather than him. His examples taken from the Horthy epoch and the time of the personality cult both show the deficiencies of social criticism; the excessive generalization he cites was a tool and manifestation of the demagogy of power, raised to the rank of official policy in the absence of a social criticism which saw and was permitted to see the interdependencies, which became possible in the absence of the critical supervision of power. As for 1956, the question is a little more complicated. Certainly in regard to the relationship of revisionism and sectarian-dogmatic politics there is need for a more shaded picture than can be read from Peter Renyi's words. He puts the two political trends side by side but in reality there was a cause and effect relationship between them. He ignores just that interdependency which I noted in my previous article, that 1956 was the consequence of a process in which social criticism became impossible. The

historical reality shows that the "believers in socialism", the forces representing a differentiated, precise analysis of phenomena, the hypothesized optimal criticism --if they existed--were incapable of implementing their view under the conditions of the political arrangements and the power mechanisms of the personality cult. The critique formulated by revisionism was the answer to this situation. And thus we came to the tragedy of 1956. I considered it necessary to emphasize this in my previous article too.

If there is something to be objected to in my treatment of this question it is that I exaggerated the role of social criticism, that I hypothesized too direct a link between "optimal" social criticism and political practice. In reality the mere existence of this critical thinking says little. There is no law that politics will implement its results. For this one needs institutional guarantees of a critical supervision of the political power of the time. More precisely, the democratic field of play should correspond to this ideal so that there is a possibility for the representation and realization of differing interests, so that the various ruling factors will supervise and limit one another. The lawful relationship consists rather of this, that "optimal" social criticism is a concommitant of the latter political practice.

In contrast to the hypothesis of Peter Renyi, who says that I do not feel that it is worth considering that "there are social systems (he is thinking of socialism here--I.E.) in which there are not only errors to be overcome", I think that not only are there such systems but that every social system in the mainstream of the development of civilization is such a system. It is not something unique that there is self-criticism in the political sphere of a system. But how critical thinking is implemented in the political sphere of a society, how effective criticism is in political practice, never depends merely on the intentions of the power but rather, as I have said, on those institutional mechanisms built into the political sphere which are the guarantees of the supervision of the power.

Unfortunately in our public thinking questions which require rational judgments often lead into the fog of moralizing. In this case we are not talking about distrust toward the representatives of power nor are we questioning their moral capacities, we are simply talking about taking cognizance of a certain social reality. We are talking about the fact that power is embodied in common earthly mortals (and in the institutions which cannot be separated from them) and thus it necessarily realizes a limited point of view. Although functionaries mention it from time to time with a bit of pride I feel that really the situation of a power which must play the role of its own opposition may be very uncomfortable. Under the conditions of a monopolistic exercise of power if they really want to carry out this task they must be haunted by schizophrenia. (One should not confuse the roles of self-criticism and critical supervision!)

One can hardly read today any publication about our social-economic difficulties in which they do not stress the social-economic role and significance of interest differences and conflicts of interest--which, in the final analysis, derive from differences in the place occupied in the social division of labor. The timid popularization of this fact was one of the most important elements of our new economic mechanism aimed at increasing economic efficiency. Our present economic aspirations give vitality to this idea also. There are also signs in cultural life which promise a practical recognition of the right of stratum and group

interests to exist (Andras Kepes' interview with cultural minister Imre Pozsgay, KRITIKA, 1979/2, p 3). But there are no signs that we are inclined to draw the conclusions in regard to the political sphere as well.

It appears that any recognition in the political sphere of the right to exist of conflicts of interest can be rejected by a mechanism which tacitly identifies the sphere of comprehensive political questions with the sphere of questions affecting the foundations and ultimate essence of socialism, which cannot be touched by the existence of interest differences or the struggle of opposed interests. Thus this mechanism does not tolerate political alternatives within socialism and so any determination of what socialism means concretely, in the sequence of political decisions, is removed from the frameworks of political publicity.

The social arrangements, including the political superstructure therein, which we now call socialist, as a uniform whole, is obviously not an immutable value. To relate to this differently with a demand for change is not possible--I think we can agree in this. In one respect the anxiety manifested in this regard is justified, namely that every social system needs guarantees in the interest of preserving its fundamental identity. But it is not necessary in a socialist social system that this guarantee be the untouchability of the mechanism of the monopolistic exercise of power.

In addition to denying the validity of my views pertaining to our public thinking and the condition of our society, Peter Renyi objects primarily to the attitude of my article. In the final analysis what he says is that one must look differently at what I see. He is demanding from me his own attitude.

When will we be capable of admitting that social responsibility in social criticism is not one and indivisible? How can Peter Renyi, the deputy editor-in-chief of NEPSZABADSAG, expect me, a young intellectual "studying the humanities," to represent the same thing as he in the question of social responsibility? The positions we occupy in the social division of labor differ to a crucial degree.

For my part I understand that he will not find acceptable the picture of society outlined by me. After all, the generation of which he is a member--as they say--spent its life establishing this social system so it is understandable subjectively if for him the assumption of social responsibility manifests itself primarily in sticking to what has been realized, to the practice of socialism. But we must also see that since loyalty to the past dominates in such a conception of social responsibility this greatly limits the validity of this conception.

How can my relationship to socialism be interpreted in contrast to this? Whether I be an insider or an outsider, this reality is for me the unavoidable arena of social action. No more, no less. This does not express a condemnation of the moralizing attitude of the preceding generations; it is simply a rational admisssion of my situation, of our situation. For me social responsibility means before all else a responsibility felt in regard to the tasks of the present. The sphere of problems raised indicates in what the tasks of the present appear for me. I need not say that I see responsibility felt for the future to be formulatable only in these problems also. In the final analysis what is involved is what Gyorgy Aczel formulated in connection with the so-called impatience of the young intellectuals,

"In a few years they will be able to blame only themselves for the reality of their own present" (LATOHATAR, 1978/11, p 138).

I think that it is obvious from all this that the dialectic of preservation and progress necessarily appears differently in our relationship to this society.

I also feel that what I have to say "can be generalized to the current attitude of a certain part of the younger intellectuals," that I have expressed the feelings of these younger intellectuals, and I am in debt to Peter Renyi for having said this for me. But I object to his attempt to render insignificant the weight of the problems raised by me. Since it is a fact that the public feeling of a social group is involved it must be noted that there is a realistic foundation for the timeliness of the problem in our contemporary society.

Let there be no mistake, I do not consider "thinking differently" to be simply a question of generational differences. In every society, in every period of social development, citizens judge in different ways the social-political facts, events in the political sphere, and they develop different ideas about which might be the desirable action alternatives. At all times the question is only, Is the given social public inclined to accept the differences in view so that in some form it will be possible to see the existing political articulation? This is the question today also, Do we want to see as hostile the representatives of views opposite to the opinion of the political power or do we recognize the right to exist of different views, of "thinking differently," and given room for the natural expression of different views have we come to that stage of political culture where a consensus comes into being in the open debate of opposed views?

If I have admitted in a certain sense my subjectivity I can admit my naivete also. Of course, what looks like naivete from that side may be a freshness of view from this. I, for example, have such "irrational" ideas as this, that, let us say, if some morning I awake as a citizen to find that I do not agree with the position taken by my government in some foreign policy or comprehensive domestic policy question then it would be the most natural, most everyday thing for me to be able to voice this publicly.

It is also obvious today that differences in view in judging the problems and tasks of this society do not derive simple from the attitudinal differences of two generations. It seems probable, however, that today, as a result of the peculiarities of the most recent phase of our historical development and amidst the changed economic-social conditions, the givens and the challenges, "the conditions for social-cultural change will develop between the oldest--still active--generation and the youngest generation" (Akos Szilagyi, "Liberalism and Democratism," KRITIKA, 1979/4, p 11). And this more or less means that this attitudinal difference could be the matrix for the struggle being waged for the creation of democratic socialism. If the historical chance for socialism is democratic socialism then the chance for a real generational role for the youngest generations is the recognition of this historically given possibility.

[Article by Peter Renyi: "Concerning the Debate About the Limits of Social Criticism, Without 'Packaging'"]

[Jul 80, pp 10-12]

[Text] I am in a more fortunate position than Istvan Elek. It does not seem difficult to me to see through his intentions. It was clear in the case of his first article and especially in the latter case: Going far beyond every concrete social question in which a debate could be carried to its end he wants to suggest that it is not possible to debate here, that there is no freedom for open exchanges of views. He hints that essentially everything is stifled in our public life but he is very careful not to write down a single fact which can be examined, discussed and analyzed because, you see, the social relationships force him to waste his energy on the art of "packaging."

Well, if I never gave any idea of what I wanted to represent different from the "official" position but only whined that they were not permitting me to express my views then--whether I intended to or not--I would be placing on the scales of democracy the freedom to debate openly everything, extending to all our basic principles. (And this is not changed by the fact that in one place--in a way which will be discussed later--Elek recognizes the right of socialism to guarantees of its "identity.")

Here is one example of the hiding of opinion in the name of freedom of opinion: "I, for example, have such 'irrational' ideas as this, that, let us say, if some morning I awake as a citizen to find that I do not agree with the position taken by my government in some foreign policy or comprehensive domestic policy question then it would be the most natural, most everyday thing for me to be able to voice this publicly." Here also--and this is perhaps the least affected sentence in his article--he draws back from the concrete, from giving the slightest idea of what he considers to be a foreign policy or comprehensive domestic policy position to which "some morning", as he rubbed the sleep from his eyes, he would feel obliged to call the country's attention--publicly, let it be understood, and not in a letter or report to the government, to which he has unlimited rights in his own name.

We might think about how this would happen. Would we immediately make available to Istvan Elek some time on a television program or would he be satisfied with the radio or perhaps a major daily? And what if he was not the only one but there were others, let us say a thousand, who woke up to the fact--some in one way, some in another--that they did not agree with this or that? (Obviously the democratism of Elek--going far beyond the most liberal bourgeois democracy--would not deny national publicity to anyone.) But how could this be solved technically or organizationally? At least we would have to set up a committee which would be the worthies on this committee? Since we are talking about popular rule they would have to be representatives of the people. Ergo, we would have to elect a parliament, with candidates nominated at open meetings, with secret vote, which would have to accept the government which would name the committee.... I will not continue the logic of Ferenc Molnar's comedy in which someone who wanted to do away with marriage had to invent marriage. I think it is obvious where I wanted to go. It is not difficult to demonstrate that Istvan Elek's ideas about spontaneous democracy are very, very makeshift. (He does not deign to discuss how contemporary democracy might be developed, although that could be discussed.)

But Elek's train of thought is not shocking primarily because of the unfeasible method but rather primarily because of his failure to give us evan a taste of his different or counter-opinions which he offers us--so modestly--as products of his "intellectual freshness."

What sort of essentially different positions is he thinking of, let us say in foreign policy? Would he support the rocket emplacement program of NATO, would he accept the view that the Soviet Union and the countries of the Warsaw Pact are striving for military superiority and world rule and thus are a threat to peace, would he consider just the most recent American commando action against Iran? I believe that he would not. But how are we to know that this is really so if he does not betray by a single word from whence and in what sense his critical spirit arises?

And how are we to understand his demand that he be permitted to express his lack of agreement in fundamental questions in domestic policy? He does not question socialism as such--see "identity"--but does he question the system of popular power which has developed? Would he demand a multi-party system in place of the socialist democracy which has developed and which is developing further here in the single party system? Does he think that we should re-think the principles of nationalization and collectivization? I do not believe this either, but as long as he does not say even by chance where he has his reservations how can we reassure those who, for example, have the right to know what sort of views he wants to use the tools of publicity to propound, for these tools are operated at the public expense and must serve their interests.

The forums of Hungarian public life--including the tools of telecommunications, and films, plays, books and journals too--can be accused of many things but hardly of not offering the opportunity for the expression of the most varied critical views as they pertain to the concrete functioning of the institutions of society and the concrete change of principles ripe for modification. They consider barring only those hostile ideas which--in opposition to the constitutional order also--reject in principle the basic aspects of the new social system. Where these are made public--and unfortunately there are examples of this--there socialist constitutionality is violated and action must be taken against them. We have never hid this under a bushel, we have always admitted it openly and we will do so in the future also. It should be added that there may temporarily arise international foreign policy interests where it is not absolutely useful to make use of the broadest publicity for the debating of this or that question. (I recently talked about this already.)

If Istvan Elek does not agree with this or if he places himself outside the system of socialism which is valid here--which, I repeat, I do not hypothesize about him --then he would have to ask himself why he counts on and makes use of the possibility of legal debate (and in an organ well known for defending socialist norms with a determination different from the rather widespread half-heartedness), why he conducts an exchange seeking consensus, understanding and solution within the barricades. If he is defending the basic principles of the system, why does he not have the courage to say so in connection with concrete themes?

What is this hide-and-seek all about? I am not asking him for honor laps but I am asking him for unambiguous speech, for a clarification of phenomena from which it

will appear to what he says yes and to what he says no. I am speaking against beating about the bush, which on the one hand leaves the door open to total denial, to hostility in principle, and on the other hand provides him with room to retreat just in case he is pressed in the debate, so he can say: "I didn't mean that, my general identification with socialism is self-understood, that need not be said...."

No, these are not formal questions. Everyone could be convinced of this by Istvan Elek's exposition concerning the role of social supervision from which it appears that he--not alone, as we know--judges social reality on the basis of abstract models, on the basis of abstract ideas, as if it were sufficient to put materials of quality and composition suitable for measurement into the communicating vessels of some laboratory apparatus and their mechanical movements would give the correct summation. Except that a living social organism cannot be understood in this way, much less created.

I am thinking primarily of those theories which attempt to relate everything to the structure of interests, metaphysically conceived, now active in society and according to which democracy is nothing more than ensuring that the differing interests will find expression and manifest themselves. But it is a long road from the false awareness of interests to recognized objective interests and it is more complicated than Elek's formulation, which goes like this: "One needs institutional guarantees of a critical supervision of the political power of the time. More precisely, the democratic field of play should correspond to this ideal so that there is a possibility for the representation and realization of differing interests, so that the various ruling factors will supervise and limit one another.... 'Optimal' social criticism is a concomitant of the latter political practice."

Elek sees a step in this direction in the new economic mechanism (although he is ironic to the extent of calling it "timid") and he sees signs in cultural policy which "promise a practical recognition of the right of stratum and group interests to exist" ("promise," and no more!), but he complains that we have not drawn the political consequences of this and he throws it up to us that we identify "the sphere of comprehensive political questions" with "the sphere of questions affecting the foundations and ultimate essence of socialism"--again remaining silent about where and how the two should be distinguished in his estimation--thus opening the way, if you will, for the development of "political alternatives" within socialism. Even when he says that "every social system needs guarantees in the interest of preserving its fundamental identity" he does not say, not even approximately, what those "comprehensive political questions" are which do not affect the essence of socialism or what he means by those "political alternatives" which the "monopolistic exercise of power" does not tolerate here.

It may be true that the socialist superstructure is not an immutable value and that as Marxists we can never give up the need for change, but still we would have to know what Istvan Elek wants changed and what he wants to preserve and defend, because what sort of Marxism would it be which would not take up the struggle in defense of the achievements of the social revolution? It will not scare anybody today to proclaim those who fear for what has been achieved thus far and thus oppose harum-scarum changes to be believers in the "monopolistic exercise of power," namely limited sectarians who take under their wing every swindler and careerist who has gotten into power and who hold out for every stupid measure and all conservatism because their chief principle is the "untouchability" of the power mechanism!

Our author, I believe, calculates badly if he believes that he can achieve his goal in this way; and he is even more in error when he wants to support these views --with pseudosociological methods--with objective causes, saying that the representatives and institutions of power--being common earthly mortals--"necessarily realize a limited point of view" and sneers that "the situation of a power which must play the role of its own opposition may be very uncomfortable." These opinions show an ahistorical view, the dialectical failure of structuralist thinking metaphysical rigidity and, if we may say so, inadequate awareness of ideology and the revolutionary movement. By his statement that "one should not confuse the roles of self-criticism and critical supervision" because if we want to fight against our own errors we must be haunted by "schizophrenia" Elek makes if dubious that those exercising socialist power have sincere goals at all.

There can be no doubt that revolutionaries, the convinced believers in socialism, are earthly mortals--they are not free of error, indeed they make many errors, because they have begun something new, they must go forward on unsurveyed ground, their every new substantial step is an experiment; it is a fundamental condition of the success of their cause that they be self-critical, that they hold only to that which proves itself and change everything else. But they have devoted their lives to something and they have done something which proves to all the world that they are not "necessarily realizing a limited point of view." Their position cannot be defined by vulgar sociological categories--those in power, the officials of power. To call into doubt their willingness--and their ability--to face up to their own weaknesses and the deficiencies of their institutions is a falsification of history, in the case of our most recent history a refusal to take cognizance of all those positive efforts which have been made in the past two or two-and-a-half decades in our homeland of which our people, and our party as part of the people, are justly proud.

Istvan Elek mentions the period of the personality cult, but unfortunately he has not studied it; according to the sign he is informed about only at the level of rumors. Otherwise he would know that the communist movement, and the Hungarian party therein, disclosed to the public the errors and crimes of the old leadership--the process of purification was initiated not by the criticism of the revisionists or the opposition but rather by the self-criticism of the communists. Which makes recognizable that simplification of Elek according to which sectarianism was simply the "cause" of revisionism; it was possible to oppose sectarianism from Marxist-Leninist foundations also, in the spirit of the 20th congress--and this was the real, radical break with the personality cult; and it was possible on the pretext of a struggle against pseudo-leftist, harmful methods and under the banner of anti-dogmatism to conduct a policy which opened the gate to counter-revolution.

So what is involved is not that "the forces representing the hypothesized optimal criticism...were incapable of implementing their view under the conditions of the political arrangements and the power mechanisms of the personality cult." They were the ones, first in June 1953 and then in July 1956, who shook the positions of the personality cult; even if they did not succeed (even in the summer of 1956) in completely and finally setting aside the old leaders, by then the old leaders could only fight a rearguard action. The answer to this postponing situation was not the "critique formulated by revisionism", as Elek pretends; the action of

revisionism was in the opposite direction, it was a stab in the back to those with good intentions who wanted to put an end to the personality cult once and for all, not, of course, by destroying the party but rather by returning it to the Lenin path. The chief problem of revisionism was to present the renewal of the party, the re-organization of the socialist system on secure foundations, to prevent consolidation; in the interest of this they were inclined to make an alliance even with the devil.

But we can talk not about this only, we could go through the quarter century which has transpired since, which proves that the MSZMP had and has the strength to face up to errors. We might mention the successful execution of collectivization, which broke with the earlier arbitrariness, the cultural guiding principles, which made possible the unfolding of all positive creative forces and led to the cultural flowering of the 1960's, or the economic reform, which faced up to the previous methods of economic guidance which had become obsolete and bureaucratic; or we could talk about the concern with demographic problems or the development of public culture. All of these examples prove that the forces leading Hungarian socialism are not forces which "necessarily realize a limited point of view" and which are "haunted by schizophrenia" if they "must play the role of their own opposition" (which is to say, be critics of their own errors). That this facing up to problems is frequently extraordinarily difficult and that there are those --intellectually incapable of overcoming contradictions--who are brought to the limits of schizophrenia is all the more reason for us to reject any sort of malicious schadenfreude.

So much for history and the general attitudinal questions. I would like to speak about the personal aspects of this debate also, more precisely about how I view Istvan Elek and how he views me. As for the latter, Elek shows me condescending understanding in several places, treating me like an old war-horse who must be forgiven for being able only to stumble along in the accustomed way. He puts it this way: "After all, the generation of which he (that is, I, P.R.) is a member --as they say--spent its life establishing this social system so it is understandable subjectively if for him the assumption of social responsibility manifests itself primarily in sticking to what has been realized, to the practice of socialism." But, he adds, "loyalty to the past dominates in such a conception of social responsibility" and "this greatly limits the validity of this conception." In plain language, we old folks just want to conserve things and are hardly capable of anything else.

This judgment is typical of the spirit of the previously mentioned pseudo-sociological categorization. He who is so many years old is to such an extent ossified --this is more or less the content of Elek's thesis; he classifies personality on the basis of biological criteria, independent of experience, ideological outlook or individual temper. I would have liked to list, but will refrain lest I appear immoderate, the many personalities known by both of us, much more capable than my insignificant self, who played and are playing a real historical role who proved capable at my age or older of seeing the new phenomena of the age, reevaluating their earlier views, formulating new ideas and not sticking to the past or wanting to live on their past merits. I might also have refuted his gerontology by citing the names of those in my generation who devoted their strength to "establishing this social system" and who now see things quite differently than I--more

similarly to Elek. So, alas, I cannot accept Istvan Elek's "forgiveness." If he regards me as a narrow, overgrown veteran he must ascribe it not to my generation but to me--without courteous forgiveness for my senility.

I am perfectly willing to admit that I am in the custom of debating sharply; I am not one of your elegantly cool partners, I have emotions too; but as for the insinuations that "by arbitrary substitution" I identify my position "with an objective, realistic and scientifically well founded view" or debate as one who "has a lease on objective truth" or "arbitrarily ripped out of context" his ideas, etc., etc.--I can only add that Istvan Elek is doing here precisely what he accuses me of, replacing argument with name calling.

As could be shown from his first article, Elek is raising the exaggeration of social criticism to a principle, a necessary requirement for uncovering the truth; this is not the result of arbitrary procedure but the consequence of his radically erroneous formulation and he cannot escape--as he tried earlier--by saying that he was accomodating to the phraseology of a medium which calls optimal criticism an exaggeration. In other words, he has reinterpreted for his own purposes, virtually turned around, the terminology of those who oppose him and then pretends --perhaps as a mind reader--that I "must know this very well."

And then he wants us to believe (you might as well be hanged for a sheep as a lamb) that he did not say what he earlier admitted (with a commentary asking understanding) but that it was I who gave this impression by taking things out of context! This is not a serious procedure and no more words should be wasted on it. Istvan Elek, who has so many strong expressions in regard to how I believe myself to be infallible, would have done better to have given examples of the critical behavior contrary to his own, instead of beating about the bush, saying outright that it used bad formulations which should be corrected, used arguments which were not thought through.

Finally we should talk about that conflict of the changing of generations which Istvan Elek regards not only as the background of our debate but actually its cause. His thesis is that his views derive from a rational taking congnizance of the situation defined by his young age, that for him--and his generation--"social responsibility means before all else a responsibility felt in regard to the tasks of the present." As opposed to my generation, in whose conception "loyalty to the past dominates." He links this to a sentence from Gyorgy Aczel according to which young people "in a few years will be able to blame only themselves for the reality of their own present." And Elek's conclusion is that "it is obvious from all this that the dialectic of preservation and progress necessarily appears differently in our relationship to this society."

It is difficult to interpret this as meaning anything else than that with the changing of generations another type of thinking must take the place of the previous thinking, which was true up to now but will not be true hereafter. Generational truth takes the place of objective truth. And, as appears from Elek's subsequent argument, not just in any sense, for he is demanding on behalf of "thinking differently" that we recognize the right to existence or legality of "views opposite to the opinion of the political power." Here also he is silent about how we should understand these "different" or "opposite" views or the "open

debate of opposing views." Elek's article is full of "rubber concepts" into which anything fits--that we should debate, let us say, the price increases, which may be justified, or that someone wants to change the basic political line, which would endanger everything on which the present and future of the country depends.

But I would direct attention here primarily to how this is linked with the question of generations. The quoted words of Gyorgy Aczel called on young people to grow up to their mission of leading society, to master the experience of the generations going before them, because when the older people leave the scene the younger people will not be able to do without their knowledge but can only supplement it and develop it further in order to solve the problems of their own present, that is the future, and can no longer call those before them to account. It is sophistry to interpret this as if the opposite were the case, to mean that within a few years the younger generation should develop its own "necessarily different" conception which is "opposite" in basic political questions. The changing of generations is not the same thing as the changing of policy.

Of course Istvan Elek would object strongly to this hypothesis and would call them suspicions of bad memory, my wanting to see the enemy in him. I reassure him, I have no such thought. It is only that I am convinced that his view is full of ideas which have not been thought out, full of things which have not been clarified, that he may desire a rather romantic appearing opposition role but not so much so that he could be blamed for it. This is why he really does waste a good part of his energy on the art of "packaging," on stylistic tactics, etc. But, on the basis of these two articles alone, I feel that his talents might be spent on more and better.

Not only on reflecting the confused feeling, certainly not without cause, of a stratum of the young intellectuals but also--after going more seriously into these problems--on helping to understand whence this feeling derives (which would not be a matter of indifference even if numerically this were not a large stratum) and what it would be good to do in the interest of improving it. And this means that Istvan Elek should clarify in himself and then say clearly what he means by the identity of socialism, which he considers worth defending, and what sort of conceptions he feels it necessary to change.

Without any "packaging."

OVARI WRITES ON EMPHASES IN CULTURAL POLICY

Budapest TARSADALMI SZEMLE in Hungarian Nos 8-9, Aug-Sep 80 pp 3-14

[Article by Miklos Ovari: "Our Cultural Policy Tasks Following the 12th Congress]

[Text] The 12th party Congress confirmed, repeatedly and in a creative manner, the continuity of our party's policies, including the continuity of the cultural policies; it affirmed convincingly the readiness and capacity of the party for rejuvenation.

The democratic manner in which the discussions were prepared and conducted, the openness of the debates, and the critical and self-critical approach to the problems greatly contributed to the formulation of congressional resolutions and to the impetus of action-inspiring, creative forces. Based on the analyses and evaluations, a fulfillment of the resolutions has started everywhere under community and individual responsibility. That lively and creative atmosphere which characterized the preparation and also the discussions is still needed, but uniform action and the indispensable uniform interpretation must now be stressed.

The strengthening of party unity and of the trust between party and population, in the wake of the congress, is a result which must be exchanged for action of public usefulness. In the present situation, a concentration of intellectual and material forces, a consistent execution and uniform action are the primary tasks of every communist, of every national and social organ and of every Hungarian citizen pledged to our socialist goals. This requirement--party and citizen discipline with the wise firmness of democratic centralism--refers not only to economic building activity but also to ideological life, to agitation and propaganda activity, and to all areas of the cultural policy.

Creative Continuity of Our Cultural Policy

At the 12th Congress, culture and ideology were discussed more comprehensively than in the course of any earlier discussions. This broad, composite interpretation of culture and of awareness includes labor culture, knowledge indispensable to a democratic participation in public matters and also many elements of the mode of living. Nearly every comment dealt, in some forms, with the intellectual profile of our society, with the relationship between scientific thinking and practice, and with numerous timely questions and problems of education. The guidelines of the congress concerning ideological and cultural policy activities

can also be found not only in the Central Committee report and in the chapters devoted to this topic in the resulution, but in these documents in their entirety.

This social-political foundation of our cultural policy is a valuable tradition of the steadily prevailing political trend in the MSZMP, the development of the mutually presumed cultural revolution and social democracy. However, at the 12th Congress, it was stressed even more than before and it received stronger emphasis which was also expressed in some new formulations.

As a result of our objective situation, the complex, difficult problems of economic building activity, of the standard of living and the maintenance of results achieved in this area are naturally in the forefront of societal attention and political action today. As it is usual at such times, mainly in the Western burgeois press comments on the congress--which could not, in its entirety, refrain from acknowledging the realistic tone of the congress--but occasionally also at home, one could find evaluations--derived from various causes--that the "technocratic-pragmatic trend" has gained strength and "the aspects of ideology and culture" were pushed into the background. Perhaps, in this context, it is not superfluous to mention repeatedly the impossibility of thinking only in fragments, in such false alternatives; "modern" technocracy and "conservative" ideology are bad extremes. It is more important to stress this because occasionally there is doubtless an inclination to examine the problems and tasks of the cultural area separately from social correlations. This manifests itself, in part, in underrating the cultural-ideological area and in a distorted, narrow interpretation of its role and, in part, in an unjustified sense of inferiority, disturbed orientation, and suspicion toward economic influences, on the part of workers in cultural life.

Now days, the role of intellectual, cultural and ideological driving forces, and of the so-called human factors including socialist awareness, scientific achievements, the everyday knowledge and culture which is turned into material strength, and humanistic--above all socialist-humanistic--art is on the increase rather than a decrease. The economic, social and cultural achievements of the past years and the changes in the mode of living of our population are also confirming this as does the nature of the--not inconsiderable--tasks ahead of us. This is not demonstrated unequivocally by everyday practices and especially not by their superficial signs since the increased role of culture and awareness is certainly not without contradictions. The objective limits and contradictions of our social advancement, which can be derived also from historical causes and which are unavoidably present in our economic and communal relationships, are of necessity reflected in consciousness and in intellectual life. They greatly influence the cultural possibilities and customs and also determine the active role of ideological factors which affect society.

When the congress called attention to the current conditions and to the related new problems and requirements, it also, similarly stressed the importance and necessity of continuity and of steady renewal--with respect to party activity as a whole and also to cultural policy. "We must take care that the lasting, unchanged basic principles of our policies should prevail unimpaired, that no one distorts them--either in the direction of dogmatism or of revisionism. Neither will we allow our earlier, correct decisions and stands to become dogmas. We must be open to new problems and we must take initiatives everywhere where the interest of the

public and of the nation requires changes for general progress, in the future as well. The continuity of the main line of our policies is perceived in such a way that whatever aids progress of the nation and successfully serves the public must be preserved and further advanced."

The chief aims, basic principles and methods which have been certified and enriched by the experiences of more than two decades, in ideological activity, agitation, propaganda and also cultural policy, were reaffirmed by the XIIth Congress.

Our cultural policy--which is an organic and unique part of the general policy of the party--must continue to work toward closer ties between population and cultural values, and toward strengthening the scientific basis of economic-social development and public thinking. Creating better conditions for education and culture or expanding them, decreasing inequilities, improving the validity, principles and currency of information are considered important factors in advancing socialist democracy. Enhancing the position of Marxism-Leninism, the special support of socialist aspirations and the creation of unity between federal policy and ideological debate remain our goals. The leading role of the party in the area of cultural policy will be manifested by theoretical guidance and persuasion, also in the future. We support freedom of creativity, the unity of independence and responsibility of the workshops, both in science and in cultural life.

However, these and a long list of other principles always prevail under concrete social conditions. The present emphases on the continually valid basic principles of cultural policy are derived precisely from this concreteness. The present circumstances of building a developed socialist society, the slowed dynamics of economic growth but, at the same time, the more stringent "quality" methods--new in many respects and serving long-range development--,the changes in the international situation, the positive trends and contradictions in the advancement of the international labor movement require a change in attitude in the realization of the proven basic principles of our cultural policy as well. and represent new tasks from several aspects.

In solving the tasks of the coming decade, we can build with certainty not only on our own achievements and good foundations but also on the internationally valid experiences of the sister parties, above all of the Communist Party of the Soviet Union.

The Unity of Social, Economic and Cultural Advancement

The mutuality and unity of social, economic and cultural advancement was unequivocally formulated in both the congressional debate and the resolution. The report by the Central Committee rightly stressed that: "Raising the level of general education and of professional training an a society-wide basis is a requirement of primary importance in the current phase of our socialist development. Our economic advancement is greatly dependent on the professional training and preparation of the production workers. Cultural foundation, arousing a desire for knowledge, culture of our mother tongue, the dissemination of cultural values, and encouraging self-education are not the internal affairs of pedagogy and education but are inseparable from the advancement of society as a whole."

From the standpoint of practical cultural policy, this correlation means that we must interpret and guide the interrelationship--by no means expressed merely in the size and distribution of funds--between economy and culture in a more innovative and realistic manner.

The current problems of our national economy--as was also stressed by the XIIth Congress--are derived not only from the state of the global economy, energy crisis and deteriorating terms of trade but are also the results of internal causes. The economic-social development reached a level that can not be further advanced using the earlier methods of extensive development. Therefore, not only today but also on a long-range basis, the most important task is to develop the qualitative factors of economic advancement, to improve the international competitiveness of our national economy, to place in the foreground and achieve the requirements of intensive development, and to enhance the readiness and capability of our economy for innovation. This task can be solved only as a result of purposeful effort by the entire society. Beyond the smooth functioning of the democratic institutions of society, the basis of this renewal capacity rests precisely on the increase in education, culture, creativity, adaptation capacity and responsiveness to things new.

In cultural policy, more carefully planned developmental goals, long-range conceptions and more unequivocal preferences must be endorsed because the considerable --and yet, in comparison to the actual and justified demands, limited--sources of power can be focused only in this manner toward the already mentioned goals of economic policy: intensive development and structural change, holding our own in the world market and improving our international competitiveness.

Advancement of science, education and culture is in the basic interest of society both now and in the long run. We all know that advancement guaged in terms of needs and demands is made more difficult by historical limits and material problems here as well. Yet we must use more effectively the limited possibilities and we must open up our hidden reserves. Our entire cultural guidance activity must be thought through and founded better and in a more timely fashion economically as well. This analysis must also be made from the other side--economy--and not only on the basis of the "residue principle" but with a historical sense of responsibility and considering the social role of culture and, within it, also that education, culture, pedagogy and science are an increasingly important source of power in our economic advancement as well.

The sensible ranking of investments in science, pedagogy, public education, art and entertainment, their differentiated advancement under a uniform concept, an economy which would stress quality requirements also in cultural life, can have a favorable effect on cultural-intellectual life itself and also on the relationship between culture and society. And let us add: It must have!

The 12th Congress refers to this and expects from us this rather difficult shift. "our popular state provides the material resources needed for the running and advancement of scientific, cultural and educational institutions. At the same time, it is our task to use the not inconsiderable material provisions for cultural goals in accordance with their intended purposes, sensibly, thriftily and according to the ranking of the tasks. We must discontinue the practice by which we are

supporting the good, the mediocre and the weak because this also hinders the advancement of culture. It is the task and responsibility of the guiding organs to steadily assert that the product be made the measure of moral and material appreciation, just as in other areas of life." This is not only external economic compulsion dictated by the scarcity of economic-financial conditions but also an internal requirement for the advancement of cultural fields.

Under more stringent conditions than previously, our science policy must respond with increasing scientific achievement to the reapidly changing social demands. Science can respond to this challenge only by becoming more open, by improving its adaptability, by following practice of higher demands in its "internal" life and more flexibility in its "outside" relationships. In terms of development of the research base, this means, above all, determination of the intensive traits, concentration of forces, ranking of the tasks according to their social, economic and scientific values, and greater cooperation between the research units of factories, the academy and the universities.

The preferred development of certain areas or branches and the increased practical relevance of research--without damage to basic researches but rather alongside their support in general--presupposes reduction in other areas. Also taking into account the results of the research institutional network review currently in progress, one must strive to work out a developmental policy which will help to improve the effectiveness of scientific researches, to select quality more unequivocally and to serve more consistently the interest of society. Of course, this is the task not only of scientific life but also of production, economy and social policy. It was not accidental that the more rapid and effective utilization of scientific results already achieved was urged by the congress.

The unified view of economy and culture must be asserted in the development of pedagogy and public education as well. In the 1980's, we must expect a rapid increase in the number of school age children. Simultaneously, there is no change in our duty to improve the general functional conditions in the educational institutions and also to find the material means indispensable for the gradual modernization of the training educational system. One of the basic tasks of the recently established Ministry of Culture is to work out manifold concepts related to pedagogic and public educational development, marked by sensible concentration and thrift, and also taking into account the possibilities of complexity.

Problems of a material nature are also known to the cultural-artistic life. The cultural map of the country [illegible]es sizeable inequalities in spite of considerable advancement. Through the [illegible]al modernization of radio and television, reception possibilities must [illegible]rther improved and widened. Compared to our demands and societal needs, the theatrical, musical and cinematographic infrastructure is backward, several of our theater buildings need renovation and our film-making is technically backward. The paper and printing-industrial as well as funding problems of the press and of book publishing are also known.

Considerable energy and material expenditure is needed to relieve these stresses: this can be perceived only gradually. Nevertheless, clear preferences, ranking, concentration of material forces and capacities, above all selection according to true values, and the unified provision of material and moral support are needed in

this area as well. Realistic planning is possible only by taking into account the situation of the national economy as a whole. The sums spent on culture are not money thrown away here either. This is investment returned from the standpoint of national economy and the entire society. In the course of cultural advancement, it is also indispensable that the expanded material-financial conditions be accompanied by an improved functioning of the cultural guidance itself, the organization and the infrastructure. The principle of support, the acknowledgement of socialistic, humanistic values--without any silly boxing-in--should be better expressed in honoring the creative and in the selective, differentiated state support of consumption.

It is particularly important that such endeavors of ours be realized as soon as possible at those broad contact strips of art (more broadly, culture) and public which are also direct testimony about the mode of living and taste of people, of the population. Therefore, in this respect as well, our cultural policy must expand and increase its attention to environmental and housing culture, commercial art, industrial form planning, popular music and other occasions of entertainment, for instance, the market for records, cassettes, magnetophones, pictorial publications, furniture, and other articles of furnishing. Simultaneously, industry and commerce must also be made to have more interest in expanding the selection in modern forms and tasteful objects. This is also an important factor in competitiveness and, therefore, is of basic economic interest. On the other hand, one must be very careful that the economic viewpoint, the "freer" and, at the same time, "stricter" cultural success of merchandise and monetary conditions should not favor commerce and lack of value but rather that it should facilitate the expression of social and cultural policy interests.

The 12th Congress has the intention to make known to a wide circle the interactions and unity of social, economic and cultural development. Of course, it designates tasks other than the correlations discussed here. Not only the limits and challenges of economy must be endorsed--with suitable translations and transfers--in science, education, in the forms of culture outside of school and in artistic life, but the cultural sphere in its broad sense must also be made more effectively active in the interest of economic-social advancement. It hardly needs proof that the currently evolving intensive epoch of economic development, the structure and motional direction of our society and the place occupied by us in the world require such a steady and more dynamic renewal than presently there, that they urge a more uninhibited evolution of human factors, that is, material and intellectual energies hidden in culture, than before.

Scientific investigations must serve, more effectively than before, the economic building activity, technical development and the recognition of realities. In addition to modernization of the research basis, this requires a further advancement of research guidance. First of all, the National Intermediate-Range Research Development Plan must be prepared--similarly to the intermediate-range national economic planning activity. At the same time, the economy, production and companies must be made more interested in the utilization of scientific researches.

This also refers to social sciences. We have encouraging results here as well. It suffices to recall only those investigations which dealt with the class and strata structure of our society, with the functionality and international connections of

our economy, with the realization of socialist democracy and mode of living and the possibilities of its advancement, with the problems of socialist awareness as well as with the creative Marxist content of the esthetic categories of realism, partisanship and ethnicity. However, there are plenty of old and new questions awaiting answers from the social sciences. In the intermediate-range research plans the ratio of topics important from the aspect of our advancement must be increased the more so because not only the difficulty of the topics but also the international ideological contest are great tests of the Marxist-Leninist social scientific researches. The delay with up-to-date answers enhances the position of revisionistic, eclectic--often sensation seeking in their superficiality--or unequivocally idealistic, respectively, dogmatic-conservative "answers", or else it works in the direction of de-ideologistion, while the imperialist propaganda organs are increasing their activity to discredit our revolutionary ideals and social results in order to disrupt the unity of brotherly cooperation between the socialist countries.

At the same time, the results of the social sciences must be more strongly leaned upon also in politics and practical work. They must be better utilized in the preparation of decisions, in agitation and in propaganda. Among the achievements of the policy of the MSZMP are listed: the realistic evaluation of the situation and the recognition that successful socialist building can be performed only by masses awakened to their own, true interests. These together also provide the basic condition for a good political atmosphere. During the past years, the economic self-awareness of our population and its awareness of the situation have improved. However, agitation and propaganda still have much to do to deepen historical perspective and national selfawareness. We also have to expend our cooperation with the sister countries for the mutual utilization of experiences with building the socialist society.

The changes in interest relations and the increasing strength of socialist democracy play a determinant role in elevating the moral standing of creative work and of serving the public good in our society. In this respect much can be done also by journalism, radio and television; if they would represent and spread the social ideas at a level higher than before, if they would graphically illuminate the relationship between knowledge and democracy, between effective work and a broad range of awareness of reality, if they would criticize what is foreign to the ideals of our society. However, this social criticism can be valid and effective only if it shows not only what is to be rejected or corrected but it also reveals and supports the newer phenomena bearing socialist quality, the human and community values, the current examples of humanism, revolutionism and creation action. It is also natural that credibility of judgement is granted by all primarily on the basis of the quality of work performed in the interest of socialism. The judgement of one who does more for society will also be given more weight. It would obviously be incorrect to divide work so that the large majority would provide only labor while some individuals would have the privilege of only criticism. Therefore--reflecting on current debates--I do not consider it the main question whether social criticism has a reason for its existence but rather what the content and goal of this criticism are, to what extent it serves our socialist development, and what deeds accompany and validate the critical words.

In socialist national awareness, in the intellectual and emotional contents of patriotism and internationalism--in addition to cultivation of the mother tongue,

the traditions of the nation's past and other components--more attention must be given to economic self-awareness, to the appreciation of work well done, to culture, to the culture of labor, to the realistic recognition of the current international situation of our nation, and to the knowledge of our historical path and experiences. While we accept all true values and all progressive struggles from our past, and have a critical attitude toward factors retarding progress, our social reality is also judged by us free of illusions but identifying with the historical results of building the new world. Because of its unique, irreplaceable role, modern, realistic art can also do much to reenforce and enrich these traits of awareness and view of life.

The unifying system of pedagogy and public education must play a large role in the evolution of favorable economic and social processes. The continual modernization of the educational system is justified by the increasingly obvious fact that general culture and the level of education are also decisive factors in the renewal of our economy, the increasing strength of social democracy and the lessening of social inequalities. Only more cultured and educated men, informed about our narrow and wider world, who have an overview of the labor process, can become subjects and mainly initiators of a more up-to-date economic building process.

Nursery school training must be made complete. The special attention paid to elementary school education and the elimination of the remaining, considerable differences in their level must be continued. In high school education, we can more realistically set the goals for a significant enrichment of the professional training, view of the world, general and work culture of hundreds of thousands of youths by working out the basic material for general education subjects and by uniform guidance. Building on broadly based general knowledge, in the course of high school and higher education, we must train professionals with "convertible", profound knowledge. With it they will be able to follow the economic-social changes and necessities in a self-activating and self-renewing manner.

It can be seen even from this brief list: the years to come will not be "quiet" or "boring" either in education or in any of our ideological and cultural policy activities. In our society, understandably, much attention is paid to education: nearly every family is directly involved in what goes on between the walls of the schools. Many of our social problems and contradictions are also reflected here. During the past years, several correct educational policy decisions have been made. At the same time, some thoughtless educational policy provisions have caused concern among pedagogues and have also evoked justified criticism among some parents.

A society as such in motion as ours is can not promise relaxation, rigid stability, especially not in education. But it can promise fertile, lively, dynamic stability which means thoughtful planning, the invariable "upholding" of the basics and, at the same time, also responsible and steady changes. Attention must be called to this relationship and perspective--which also influences social public opinion--the more so because--in accordance with the 1972 educational policy decision and the stand taken by the 12th Congress--the long-range developmental trends of the school system must be defined in the coming years. This is an urgent requirement for our economic and social development.

Reenforcement of the Socialist Traits of Our Society and Cultural Policy

To stimulate and make aware of the interaction between economic, social and cultural development, to reenforce the unity of practice and education, these are inseparable from the other very important congressional goal: "to reenforce the social traits of our society on the basis of our great achievements." This requirement returns several times in the congressional documents--approached from different angles--marking the unity and mutual acceptance of the social political and ideological sides of cultural policy tasks. As stressed in the Central Committee report: "In work aimed at reenforcing the socialist trains of our society, the party counts on the workers in the fields of social sciences, progaganda, agitation, information and education. Their cooperation is an important condition for solving the great, joint tasks of building the nation and for enhancing the socialist awareness of society even more successfully than before."

What does this relationship mean in practice? On the one hand: the growth and increase in the role of science, education and art, that is, the more organic coupling of culture with effective work, with modern, quality production, with societal processes and with the evolution of socialist democracy will objectively enhance the socialist traits on the face of our society. On the other hand: the socialist traits must be enhanced also within the large sphere of education and public thinking, in science, agitation and propaganda, in public education and in the creative and transmitting spheres of culture. This largely presupposes less hindrance to the progress of public interest, of steady readiness for renewal and of the aspects of quality. Therefore, as a basic task designated by the congress, enhancement of the socialist traits is a dual yet unified requirement: it must succeed within the culture and also through the culture.

Social-economic-cultural renewal and innovation--as mentioned increasingly today--, or else, the enhancement of socialist tendencies, the creative enrichment of Marxism-Leninism and reenforcement of its social presence are at times erroneously separated by the everyday awareness, and purposefully separated and even contrasted by the enemy propaganda. Nevertheless, these two are a single tendency in reality: two, indivisible characteristics and requirements of our age and policy.

Therefore, it is very important that we join these two sides in our cultural policy activities, in guidance, in everyday practice and in forming public opinion. Instead of pragmatism and empty ideologizing, one must pay attention to the present, concrete situation and to our long-range socialist goals both in our cultural policy and ideological activities.

Raising the cultural level of our population is a basic condition for realising our political goals and, within these, also for developing socialist democracy. At the same time, the continued evolution of democratism itself is also one of the decisive components of enhancing the socialist traits in our entire society and, within it, in our cultural-intellectual life, in the awareness and moral spheres as well as in everyday practice.

The growth of socialist democracy also improves the conditions for Marxist-Leninist ideological activity. In the reverse: enhancing the sensitivity to realism in our scientific ideology, solving the new problems, readiness to debate principles

will retroact on the development of democracy and also improve the conditions of federal politics.

Fulfilling and enlarging the role of education, science, culture--and indirectly also are--in economic development, in the molding of society and in self-awareness is decisively dependent on the extent to which they are suffused by a Marxist-Leninist view of the world and on the extent to which they become the natural organ of this cultural process. Of course, democracy is not a magic potion but a historical category and only socialism has a chance to evolve and develop it because our system--not from one day to the other but gradually--can create the conditions necessary for active participation in public life and for guiding the life of society. And also, of course, because democracy is not the anthithesis of effective, sensible, disciplined work but one of its indispensable conditions.

Enhancing the social role of science and improving its productivity are difficult to imagine without realization of a substantial democratism which certifies the realistic order of values. Unfortunately, the open, ideological clash of views and their Marxist synthesis occur only rarely, as yet, at open scientific forums. Therefore, beyond political orientation, one of the most important tasks of cultural policy and of the party and social organs is to develop orders which liberate energies, and develop a democratic atmosphere in debates and in public life, as well as to effectively apply the results. All of these will become more natural if, in judging the work of the scientific investigator, we start from the actual accomplishments, we do not set formal requirements, we encourage reasonable experimentation--even though accompanied by risks--and if the moral and material recognition expresses better the differences in the effectiveness of the work. The system of scientific qualifications must also be renewed in this spirit. We must succeed in getting more of the social scientists involved--in the spirit of active engagement--in the solving of timely economic, social political and cultural problems, and in improving the productivity and morale of social researchers.

Our principles concerning the hegemony of Marxist views and federal policies must be applied according to the current situation. Namely it is not rare that, alluding to democratism and to federal policies, even scientifically discredited, non-Marxist, debated and debatable views fail to undergo ideological Marxist evaluation. This also paralyzes the creative debates. At the same time, some debates also led to distortions because, instead of recognizing the new truths, applying sensitivity to realities and creatively approaching the new problems, we formally satisfied the requirements of the struggle on two fronts. Closely related to encouraging research in actual social problems, we must be very careful in our entire intellectual life to encourage, orient and resolutely unite the pledged Marxist intellectuals.

Schools play a decisive role in shaping the view of life, social ideology, work culture of today's youths and tomorrow's adults. We can not be satisfied with our results so far, but the ideological effects of school can not be enhanced separately from its other basic functions. This side of the educational-pedagogic activity also must be given attention in harmony with the gradual modernization of the entire educational matter.

An important prerequisite of reaching our great historical goals is a more effective participation by the schools in reducing societal and regional inequalities

and in spreading the culture and world view necessary for expanding social democracy. We still have much to do to achieve this and, in general, to have our educational system better fulfill its social calling. I am quoting only a few among these: to equalize the differences in the level of elementary schools so that no averaging but an uplifting effect will prevail; to increasingly help the children of physical laborers and of families in difficult situations for some reason--not by giving formal advantages but by truly diminishing the differences in their chance; to gradually bring nearer to each other the rigidly separated types of secondary education and to achieve the uniform guidance of secondary education; to improve the selection mechanisms for advanced education and choice of profession; to modernize the admission system in universities and colleges, and the education-pedagogic programs; the system of postgraduate education is also awaiting development.

However, all of these presuppose the diminishing in functional distrubances seen in the school system, in the youth movement of the schools and in the function of faculties. One important task of the Ministry of Culture was recently established: to organize the unified guidance of specialties and branches, in cooperation with the councils. This will also improve the atmosphere in educational bodies and the morale of pedagogues which is the more important because the democratic air of faculties and the professional evaluation and social acknowledgement of the work of pedagogues has a sizeable effect on the political and ideological development, and public life activity of the students.

Much work was also formulated by the resolution of the 12th Congress to enhance the socialist traits of cultural-artistic life. Art policy is greatly responsible for providing favorable conditions for the creative process, the artistic work. More intensively than before, we must aid, by the most varied means, the deepening of the artists' sense of reality and their sensitivity to social problems. Political trust and initiation into the problems of international and domestic reality will also have an artistically fertilizing effect.

This is not contradicted but rather the trust is validated and the relationship between party and progressive artists is made stronger if we face the debatable views occasionally found in artist circles and if we oppose the occasional forms of behavior disregarding our social endeavours. The primary task of Marxists is "building", the serving of positive, progressive processes, and making creative responses to new problems in artistic life as well. However, inseparably from this task, their presence must also prevail so that nihilistic, sham-modernistic moods and false ideologies will not succeed, and nationalistic and cosmopolitan views will not take hold. In the struggle against them--also validating our federal policy--we can not be satisfied with halfbaked solutions, with ideologically shallow or sectional, conservative types of criticism. Our artistic workshops, the communist artists, editors and leaders must firmly present the need for taking reality, our present world into realistic artistic possession. Unacceptable are those views and stands which contrast the closely related creative elements of artistic completeness and validity: realism and universality, humanism and social responsibility, esthetical value and the socially valid message.

We encourage and support the artistic presentation of social truth, the contradictions between past and present, its human dramas and conflicts. At the same time,

the artists and public must also understand that there is a significant difference between responsible social-critical behavior with socialist ideology, on the one hand, and a cynical, supercilious standing apart or even an opposition to our social system and socialist goals, on the other hand. By representing socialist realism, and the timely contents and value systems of partisanship and ethnicity--continually maintaining these categories--, Marxist criticism should fulfill its role better and more consistently and thereby should help the arts to fulfill their social function to the fullest. Social democracy also presupposes the rejection of practicing a downward trend toward mediocrity in favor of qualitative selection and more consistent support for all true values. Moreover: today, this differentiation is gradually becoming a decisive condition for the further evolution of creative freedom also including the appreciation for valuable, humanistic creations by artists of non-Marxist ideology.

This leads us to the plateau of artistic-cultural mediation. In this sphere too, numerous negative factors, ideological conservatism and laziness, human and structural weaknesses stand in the way of progress. Our cultural policy must devote considerably more attention than before to promoting the meeting between the masses and the arts. In publishing, mediating and selecting cultural works we must strive more resolutely to represent the interests of the entire society--without compromising quality or principle. The workshops which create and mold cultural public opinion, above all the radio, television, press, mass book publication and record production, should simultaneously strengthen their role in discovering and supporting new values, satisfying need and awakening demand. For instance, one must know what belongs to the studio stage and what to the large theater; what must and should be published in a 3000 copy journal and what in a weekly magazine; what belongs to a professional club discussion and what to the screen. The intensive, narrow "intellectual" induction of mood is just as much rejected as the demagoguery of vulgar interpretation of general comprehensibility, at times wearing a political robe. Keeping in mind the interest of society, improving the basic supply of culture, supporting works which mold the thinking and taste of broad masses, the planned development of artistic education, the possibility of sensible experimentation, the special handling of the matter of cultured entertainment are all inseparable tasks of our cultural policy. Their fulfillment simultaneously benefits society as a whole, and the internal progress and value selection process of art as well.

The need to enhance the socialist traits and our engagement with the democratization of culture urge action an the artistic workshops as well. At times, ideological, organizational and cadre policy issues also hinder the consistent democratic functioning, in the socialist spirit, of artistic societies, cultural creative workshops and institutions be they theatre, film, fine arts or literature. Consistent and tolerant debates must follow the creative path of the young artists who have taken or are taking their place in our artistic life during the decade now at its end, a considerable fraction of whom--for various objective and subjective reasons--appear to be susceptible to a skeptical view of history and to an utopistic interpretation of the necessary democratization. In certain cases they are susceptible to self-serving or meaningless experimentation which fails to renew anything; such "experimentations" merely reduce the chances and conditions for searching for new paths which would truly renew content and form.

In artistic life, a similarly indispensable element of socialist democracy is the possibility of developing individuality, of realizing artistic versatility, and the prevailing of socialist views and public interest. We must also see clearly what are the realistic paths of socialist development today and what is illusion or even abuse of the concept. During the coming period--when we will strive for bolder selection, decisions, quality selection and the expansion of patient but decisive ideological debate--it will not be easier to maintain and strengthen federal policy and consensus. The 1980's are expected to pose new problems--in the entire cultural policy--to the leading role of the party, to the unity of federal policy and ideological debate, to the relationship between socialist democracy and national unity. Yet we must chose this path--the gradual strengthening of socialist democracy--because this alone can produce lasting results.

In the social sciences, in artistic life and in public education, we have to think anew, from the perspective of the 1980's, about the tasks of more successful work in Marxist theory and the search for truth, of an ideological presence with more initiatives, of increasing the attraction between our ideals and the party, and of the simultaneous assertion of federal policy and ideological debate. If we consider only the latter: the current fractionalization of society, the increased sensitivity of public morality, the reassertion of idealist and nihilist views of the world observed in certain circles, the ideological-moral phenomena accompanying the change in generations also raise numerous new problems. The artistic-cultural life can mold the face of our society in a lively--in the true meaning of the word--up-to-date manner and can enhance its socialist traits only if itself will come into more organic harmony with the true movement processes of reality, with life, if it will enrich its "own" socialist traits.

*

Only a few problems were discussed from among the cultural policy and ideological guidelines of the 12th Congress resolution. For instance, I did not mention the actions to be taken with regard to improvement of the guidance activities of the party and state, and to cadre policies. Processing and practical realization of the stands taken by the congress are collective tasks which must be carried out independently and with responsibility by a unified interpretation of the resolution, taking initiatives by the organizations involved, by the governmental organs, by the leaders and by those led, by every communist.

Cultural matters had not been a separate area of party policy during the age of ideology, neither are they today. Everyone is involved--under the sign of democratic centralism. It is, natural that ideology and cultural policy, agitation and proganda activity present especially great responsibilities--and simultaneously assign mobilization tasks--to the intellectuals. As worded by the congressional report: "The intellectuals are active participants in the building of socialism, they are closely bound to the worker class and to the cooperative peasants. Our party and our entire nation highly values the work of the intellectuals. Their role is increased in close relationship to the general advancement of our society, to scientific-technical progress and to the increased significance of culture. The solution of the tasks ahead of us makes it necessary that we utilize our intellectual resources, professional knowledge and preparation in every area better, more economically and with better organization, and that we request and insure the increased participation of intellectuals in the building of socialism and in public life." Every intellectual who feels responsible for his people and nation, and is a devoted advocate of social progress, can find his role and assignment in this task.

FRENCH PRESS ARTICLE ON WALESA NOTED

Paris LE POINT in French 29 Sep 80 p 62

[Article by Thierry Dussard: "Lech the Mischievous"]

[Text] Lech Walesa is almost as famous in Poland as the Pope. The first independent trade union is coming into being and heads are still falling within the party.

A Special Report.

"We are not afraid of anything." His hands cupped around his mouth, Lech Walesa was addressing the crowd gathered in front of the Warsaw governor's building. Two thousand people, who had come to be present at the historic registration of the charter for the new unions, were listening to their hero religiously, who was calling for unity and work. And to clearly show that he feared no one, he decided to go on foot to the tomb of the unknown soldier. This was, in effect, a victory lap of the Polish capital which was thus afforded to Lech Walesa and his friends last Wednesday.

The whole delegation swarmed over the sidewalks for an impromptu demonstration. A banner led the way. The procession grew larger as it went back up the streets to Victory Square. The onlookers asked what was happening. "It's Lech Walesa who is passing by." "Walesa, which one is he?" The most famous Pole after the Pope, as his fellow countrymen call him, is in fact a man whose face is unknown to the majority of them. His picture has never been published in the newspapers. He has only appeared on television twice, the evening the agreement was signed and last Thursday. The members of Solidarity, the new name for the independent trade union, have by the way made the Warsaw trip to talk to people in high places about these news "blackouts."

The day had begun, as always, with a morning mass. Then, after the application was filed to register the 44 sections of the Union agreement, which is of a federative nature, a bundle of flowers was laid at the unknown soldier memorial. But everything really started up with the meeting at the offices of the Council of Ministers. Four deputy chairmen received the 16 delegates and those accompanying them. On both sides people found themselves in the company of signatories of the regional agreements. But it was the first time such a meeting was held

at the national level: this was a ceremonial confirmation of the unity of the new trade unionists and a unique opportunity for the government to take stock of the worker movement as a whole. On this day, the negotiators no longer sat facing each other but took their places side by side around a large oval table. Jagielski and Walesa shook hands, almost like old friends, after the Gdansk negotiations. Barcikowski found Jurczyk, from the port of Szczecin, more impressive than ever, and Kopec his opposite number from Katowice, the dark-looking Switon behind his black beard. Deputy chairman Grabski himself was there as the person responsible for ideology and propaganda in the Central Committee. These areas were right at the heart of the debate. The Solidarity trade unionists refused at first to be classified as antisocialist elements, which category is denounced daily in the press. On the other hand, they did not go along with the authorities' attacking the KOR (Committee for the Defense of the Workers]. This was a tricky situation, in which Walesa had to simultaneously support the KOR and to set himself apart from Jacek Kuron, whose name rings like a battlecry in the ears of the authorities.

The authorities are cut off from the "real country," nervous about the economic situation, and divided on what approach to follow. The Sixth Plenum of the Central Committee, which was meant to convene last week, will not be able to finish its work before the end of the month as anticipated. These delays underline the struggles for influence within the party, in which each faction is trying to impose its ideas. The new first secretary, Stanislaw Kania, is still amazingly reserved, to the point that some people are wondering if he is a "transition pope."

Meanwhile the purges are not experiencing any delay and already heads are rolling. After the first secretary of Silesia, it was the radio and television committee chairman's turn to give up his position. He had held on barely a month to control of the audiovisual area. Only real news, in Lech Walesa's view, can fill in the gap between the Poles and their leaders. "Do you want to reestablish confidence? Then stop putting out disinformation as you do; it reflects back on the government and only serves to make you ridiculous."

After having spoken in the Ursus factory stadium, Walesa called a press conference to put things in perspective. With a picture of the miraculous Virgin on his jacket lapel and half smiling under his moustache, the fellow was visibly doing well. To journalists from the international press he confided: "In our country we are doing a little tidying up which should serve as an example." The lesson seems to have been understood. In Hungary, the official trade unions have stated that they want "to play the role of a loyal opposition..." These are matters which bear watching, that is only too clear.

CATHOLIC PAPER PROTESTS PRESS ARTICLE

Zagreb GLAS KONCILA in Serbo-Croatian 12 Oct 80 p 4

[Article by Zivko Kustic: "On Whose Behalf Does Nenad Ivankovic Speak?: False Charges and Assessments and Blackmail of GLAS KONCILA"]

[Text] On 27 September of this year VJESNIK published an article that bore the title "Delirium of the Tridentine Fever," the subheading "GLAS KONCILA as It Really Is" and the signature Nenad Ivankovic. This article requires an answer--not because of journalistic ethics, which does not apply in this case, but because of the accused person's right and duty to defend himself. The article referred, that is, shows that Nenad Ivankovic has assumed the role of a public prosecutor on his own initiative. It remains an open question whether that presumption of his was truly on his own initiative. But until someone bearing more responsibility makes an appearance in public, from the formal standpoint this can be only a conversation with Nenad Ivankovic. But since he apostrophizes GLAS KONCILA mainly because of unsigned articles, and it is well known that the editors, which specifically means the editor in chief, bears direct and exclusive responsibility for articles of any importance and by definition for articles which are unsigned, it is proper that I speak out myself.

Blackmail

Nenad Ivankovic says that the editors of GLAS KONCILA directly and consciously oppose socialism in this society. And that we are consciously striving "to poison relations between church and state." And also that we are a "handful of clericalists." It is obvious that if he had real evidence of our activity against the state and antisocial activity, he could have called upon the public prosecutor's office to take us before the court. But he does not want that kind of "administrative" action, he wants action by "political" means. He calls upon our bishops and the Holy Seat ("the one bearing the greatest responsibility in the Church") to replace us, to stand in our way. And so what, among other things, as N. I. [Nenad Ivankovic] sees it, is to come of good relations between the church authority and the authority of the state: that the church authority will remove priests who someone in the latter does not like. That is right, N. I. is calling upon "the most responsible in the Church" to silence us: otherwise

they will not be entitled to count on a certain understanding on the state's side. This sounds just like blackmail, like a threat, like a political message of great weight. But behind this serious political effort stands only the signature of one of the youngest of VJESNIK's newsmen, one of those who is actually specializing in church and theological affairs.

Be that as it may, it is a question of a public demand that we be silenced without a hearing. Anyone who is judged without a hearing can also be found guilty without being so.

Must We Have an Intermediary Whenever We Speak?

And what, according to N. I., is our guilt supposed to be? He says that we proclaim "communism in extenso" to be a dictatorship. What does that phrase "communism in extenso" mean to him? Have we ever insulted this concrete communist government in the SFRY in that way in any place? Or is N. I. charging us with this before some Comintern or Cominform? He says that according to us "Latin American dictatorships are outright democracies compared to communism." No, that is not true. And now that we are thus publicly charging that Ivankovic is writing things that are not true, it would be a good thing for him to understand this very thoroughly. After all, everyone knows what GLAS KONCILA has written about Latin American dictatorships. Just because some "David" there must on occasion obey "Nathan" does not mean that that kind of "David" has ceased to be a dictator and murderer.

Nor is it true when N. I. states that we at GLAS KONCILA, specifically I personally, are poisoning relations between church and state. We believe that a progress in those relations is possible and the improvement is obvious. Otherwise we would have nothing at all to talk about. But improvement of relations does not mean, cannot even mean, that there have been no evils in those relations nor that there are not still some now. Who, then, does it disturb if we publicly call attention to certain cases of violation of the religious freedoms of the members of the church and therefore of the church itself as a community? Is it better to correct an evil without public criticism; or are we not allowed to speak directly of an evil that affects us believers, but must have an intermediary?

The Dogma of Infallible Courts

The case of the late Father Ante Radic is given a special place in N. I.'s article. He might just as well have mentioned the case of Archbishop Petar Cula in a recent interview for GLAS KONCILA. It is a question of several church officials who in the postwar years have been convicted and sentenced, usually to several years in prison. GLAS KONCILA has on occasion published the assurance of certain of these people and the assurance of many of the pious who know them well that they were not guilty. They served their sentence. They do not even seek rehabilitation, nor are they conducting any sort of campaign to that end. They are all contacting the appropriate

government agencies in a constructive way and according to proper procedure. As we recently had occasion to see in the interview with Archbishop Cula and Archbishop Turk (whom N. I. refers to so many times and who also does not consider himself guilty!), they praise the real progress in relations between church and state. Their bitter experience gives a special significance to that testimony. But from time to time, when the topic arises, these people do not think that they must absolutely conceal what has happened to them. After all, is it a crime to believe that the court can be wrong? Does N. I. mean to proclaim as a dogma that the courts of the state cannot be deceived? Can he suppose that in relations toward the church and church people this society has never erred in anything? What then can the improvement of relations have consisted of? Indeed, if we are prepared to quietly listen to what is said even about those errors or oversights, it is a sign that we really do believe in progress, in a constructive development of relations.

Were We Clericalists, We Would Have an Easier Time

One more thing: N. I. can bring charges against us with authorities on both sides, but he cannot call us clericalists. Were we clericalists, it would be easier for us, and we would be content. N. I. is the one who advocates total clericalization of the church, since everything he cites concerning the progress of good relations between the church and society mostly comes down to the position of the clergy, while lay believers within that view have full religious freedom if they can freely receive the religious services rendered by the clergy. The clergy get social security, seminaries get certain privileges, the clergy can freely conduct religious services, and so on. Things seem to be relatively good for the clergy. We even state that as far as religious liberties are concerned things must not be better for the clergy than for all other members of the church, better than for laymen. And we state that we have to go a long way yet before every citizen who is a believer is guaranteed that degree of religious freedoms enjoyed already in this society by us clergymen. We are afraid of clericalism, we are afraid of an alliance between the church administration and the government administration bypassing the public in general and that portion of the public which is religious in particular. This is our principal fear, this is what we truly must fear if we want to believe in a real progress of relations between the church community and the social community.

Is This the Preparation for a Controlled Catholic Press?

We are not naive, and we are quite aware of all the things that can happen. So is N. I. The prosecutor might come forth with charges. The church authority might sacrifice several of its people for the sake of peace, which is what N. I. hopes. We know all that. And we hope that none of that will happen. But if it did happen, whom would it actually benefit?

So what exactly does N. I. want? To suppress GLAS KONCILA? Obviously. Is this an appeal--let us be frank--for the state even here to create a monitored and controlled "Catholic" press, that is, a press for Catholics? It was our fond hope that the responsible people in the Socialist Republic of Croatia did not want to copy such models, that they looked upon our pluralism as a special and valuable feature of our reality. Can we have become tired of so much pluralism that we want to enter the waters of unitarianism once again? It really is difficult to believe that one could find here believers who would be willing and prepared to take over that job of administering a controlled "Catholic" press. But--all in the framework of these suppositions--would that kind of "Catholic" press--even before it makes its appearance--have to be assured by the state that monopoly which the church authorities have never attempted to obtain for their newspapers or periodicals within the church?

We Have Nothing To Hide

We have not even referred to the title of the article. But if N. I. wants to isolate us from the majority in this our native church, he should not have made fun of the Council of Trent. After all, this was a great reform council of the church, one whose fruits are still operative and are worth a great deal. Without it there would not have been the Second Vatican Council. Had N. I. been in closer and more serious contact with the theologians he regards as acceptable, he would not have made such a major error. As it is, he has alerted believers that he is not attacking a "handful," but the church and its own basic legacy.

GLAS KONCILA is not "in the pocket" of any group in the church. It has always been entirely at the disposition of the hierarchy. The bishops know that none of us will ever demand that any of the overall interests of the church communities be sacrificed to rescue one or another of the editors of GLAS KONCILA. We are not threatening anyone, nor are we blackmailing anyone. We are just making a statement. For did not Jesus say: "I must work while there is daylight"? And we reject any political insinuation, since in this respect we have nothing to hide, nor anything to fear.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

MOSCOW, ALBANIAN COMMENTARY ON FRIENDSHIP SOCIETY ANNIVERSARY

AU042050 Moscow Radio in Albanian 1530 GMT 3 Nov 80

[Commentary by named commentator--name indistinct]

[Text] Some 35 years have passed since the foundation [words indistinct] of cultural cooperation between Albania and the Soviet Union, which was called the Albanian-Soviet Friendship Society. For years in a row the society was a center for comprehensive links between (?our countries). For example, it organized visits of 95 Albanian delegations to the Soviet Union. The progressive workers of production, scientists and cultural people of People's Albania, who took part in those delegations, received much benefit from the meetings with Soviet people, and from their acquaintance with the rich Soviet experience. Many Soviet delegations also visited Albania, invited by the Albanian-Soviet Friendship Society. As the Albanian press wrote, (?these meetings) served the deepening of the mutual good will of all the people, [words indistinct] for the continual development and (?progress) of their cooperation. Among the activities organized by the Albanian-Soviet Friendship Society were friendly evening meetings, exhibitions of Soviet books and Soviet art, and others. Albanian workers linked these [word indistinct] with the successes of the Soviet country in all spheres of life. In this way (?before the 20th anniversary of the socialist revolution) in Korce District alone 32 conferences had been held which were organized by the society and which popularized the successes of the Soviet Union. In the exhibitions of Soviet books which were organized on the occasion of [name indistinct] in many Albanian cities, the visitors saw the works of [names indistinct] and other well-known Soviet writers which were translated into Albanian and (?enjoyed by readers). The friendship journal which the Albanian-Soviet Friendship Society published, told its readers about the outstanding Soviet workers of production, about the participation [words indistinct] which had a practical importance for Albania. In connection with this, various articles were published in the friendship journal [words indistinct]. Because of this, in the Albanian enterprises all workers followed the example of (Valentin Gardanow) [passage indistinct]. The Soviet-Albanian Friendship Society developed its activities in close coordination with the Albanian-Soviet Friendship Society. And now the Soviet-Albanian Friendship Society organizes exhibitions and evenings dedicated to People's Albania, and marks dates in its history. One such activity is the meeting of the leadership of the Soviet-Albanian Friendship Society to be held tonight in the House of Friendship With Foreign Peoples and Countries on the occasion of the 35th anniversary of the Albanian-Soviet Friendship Society.

CSO: 2100

PROTECTIVE MEASURES AGAINST NUCLEAR ATTACK SUGGESTED

Protection Against Neutron Weapons

Sofia GRAZHDANSKA OTBRANA in Bulgarian No 10, 1980 p 31

[Article by Ivan Portalski, chief assistant at the Chair for Civil Defense and the Organization for the Protection of the Population and the National Economy at the Kl. Okhridski Sofia University: "Improving Defense Against a Neutron Flux"]

[Text] In this issue the magazine is beginning a new section entitled "Science and Technology in the Service of Civil Defense [CD]." It will provide brief information with a practical focus on technical innovations which can be used in the CD system, for useful rationalization and proposals, for possible improvements in the scientific organization of labor in CD, for utilizing mathematical methods for optimizing measures to protect the population and the national economy, and the organizing and carrying out of rescue and emergency damage repair work in a strike area and with natural disasters or major production emergencies.

The editors of the journal GRAZHDANSKA OTBRANA are expecting collaborators for the new section from among the scientific workers, the instructors in GO-OZNNA [Civil Defense and the Organization of Defense for the Population and National Economy] in a VUZ [institution of higher learning] and specialists in the CD system. We are awaiting your letters and proposals to deepen the process of the intellectualization of labor in the CD system by the familiarizing with and introduction of the most recent scientific and technical achievements.

The discovery of neutron weapons has confronted the CD system with the problem of improving protection against a neutron flux. This question is particularly urgent in bearing in mind that the United States has resolved to produce the basic components of neutron weapons. In practice this means that in one form or another, neutron weapons have already been adopted in the U.S. Army. There is also information that France is also arming with neutron weapons.

In the exploding of a nuclear charge with a power up to 1 megaton (that is, with a charge in which a chain fission reaction is used as the source of energy), the ensuing neutrons have an energy of 2 mev, they are effective over shorter distances

than the gamma photons and represent a significantly smaller portion of the penetrating radiation in comparison with gamma radiation. With a thermonuclear explosion (a modification of which is used in the neutron weapon), 10-fold more neutrons are given off, and 80 percent of these have an energy of around 14 mev (fast neutrons). Consequently, the neutron component of the penetrating radiation obtained with a neutron explosion predominates and is the basic destructive factor. In bearing in mind that the radii of the casualty zones with the detonating of a neutron charge are greater than the radii obtained from a nuclear charge of the same power, it can be assumed that mass neutron strikes will be made against the CD installations.

An improvement in the existing antiradiation surfaces for more efficient protection against the neutrons can be provided in three ways.

The first way is by covering the interior walls of the radiation shelters with a layer of special polymers which have a high content of hydrogen atoms. In recent years, different variations of polytehylene and polypropylene have been developed for this purpose. One such variation is the following: 100 parts of granulated polyethylene with a density of 0.93 are mixed with 20 parts of lead or calcium stearate and 7 parts of boron carbide. The mixture is homogenized and pressed into sheets of varying thickness at a temperature of 130-135° C.

Recently announcements have appeared that solid hydrogen has been developed. The Carnegie Institute in the United States has produced an ice-like solid form of hydrogen at an ordinary temperature. Metal hydrogen is expected in the next few years. This substance is ideal from the viewpoint of defense against fast neutron fluxes. Certainly, hydrogen ice is very costly, but in the future, after the technology has become cheaper, it can be used in small quantities for protecting particularly valuable installations.

Ordinary water can also be used because of the high hydrogen content. For this purpose, a double wall is made on the inside of the PRU [radiation shelter] and the space between the two walls is filled with water in which, for example, lead or iron salts have been dissolved. This method of protection can be used primarily in building new radiation shelters.

The third and most usable method at present for protection against fast neutrons is the painting of the interior walls of the PRU with special resins (so-called "plastic concretes") or varnishes, as well as various mixtures of paraffin with the rare earth elements. Here is an example of a special varnish which can be used: basic lead carbonate--0.765; basic lead sulfate--0.630; zinc oxide--1.175; gadolinium oxide--0.560; magnesium silicate and pigments--1.250; unrefined linseed oil--1.580; polymerized linseed oil--0.530; solvents--0.510.

The gadolinium oxide which is the most difficult to secure can be replaced by a mixture of samarium and europium oxide. The thickness of the layer which can be applied on the inside of the PRU is from 0.076 to 0.178 mm. Such a layer of the described varnish retains around 99 percent of the thermal neutrons obtained as a result of the slowing down of the fast neutrons by the walls of the PRU.

It is also possible to use various polyester resins which are mixed with graphite powder, carbon black, iron dust, and so forth. For example, the interior walls of

protective structures can be faced with plastic block from 5 to 20 cm thick and containing a powder of tungsten, iron or barium. The inside of these blocks must be covered with a layer of graphite which reflects the faster neutrons and absorbs the thermal ones.

A layer of paraffin 10 cm thick fully stops the fast neutrons and the protons knocked off them. The same thing can be achieved by a layer of water 30 cm thick. In order to eliminate the effect of the slowed thermal neutrons, behind the layer of water or paraffin it is essential to place an iron or lead layer from several millimeters to several centimeters thick.

In each specific instance, it is essential to assess the optimum combination of substances which will be used to face the inner walls of the protective structure. However, in any instance it must be kept in mind that the layer of light substances must be positioned first and the heavy ones afterwards.

The given data indicate that the adapting of the existing structures for sufficiently effective protection against neutron weapons can be carried comparatively quickly and cheaply.

Use of Tunnels as Shelters

Sofia GRAZHDANSKA OTBRANA in Bulgarian No 10, 1980 p 32

[Article by Angel Stoyadinov and Bogdan Dimitrov: "Underground Dual-Purpose Transport Tunnels"]

[Text] The protection of the workers and the population against weapons of mass destruction is a much more complicated and difficult task than in previous wars. At present structures are required with greater protective properties as these must protect people not only against the effect of the shock wave but also other injurious factors.

On the other hand, the enormous scope of a war and the destructive force of nuclear weapons demand much more from the protective structures for the population. For this reason in recent years specialists have been concentrating on the building of multi- or dual-purpose structures which when needed can be used also for the protection of people and valuable property.

For example, underground transport tunnels (Fig. 1) provide a good opportunity for using them as protective structures. With a thicker roof and proper positioning of gates, we can obtain a structure with a high degree of protection. In order to avoid direct exposure to penetrating radiation, the safety doors must be positioned a distance away from the tunnel portal which would exclude direct radiation.

The safety gates can be electrically or manually operated sliding ones. At the two entrances to the tunnel, it is essential to provide for locks. They should be installed to the side in metal chambers (Fig. 2).

The space per person for each tunnel can vary. This is set by the local CD staff, in proceeding not only from the practical viewpoint but also from the density of the population around the portals and entrances to the tunnel.

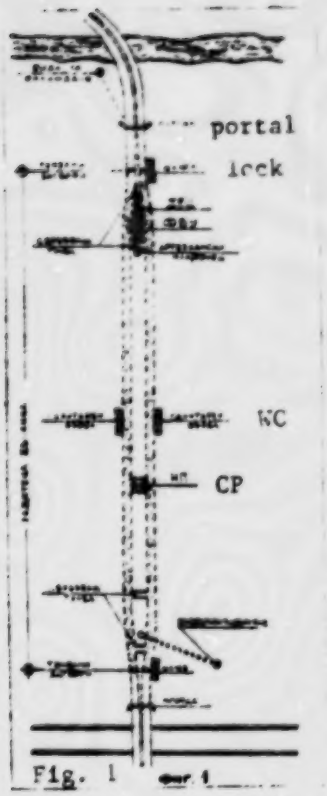

Fig. 1

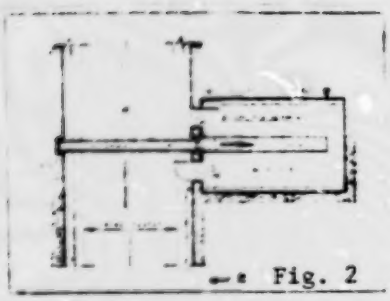

Fig. 2

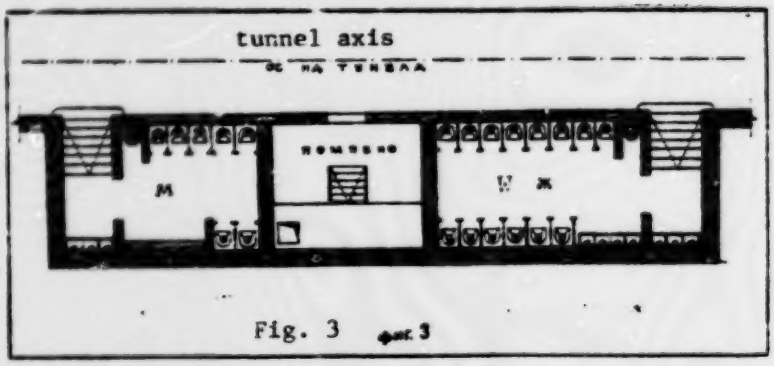

Fig. 3

For each tunnel planned for dual use, it is also essential to provide additional facilities such as a command post, WC, storerooms and so forth which should be so positioned that maximum use could also be made of them in peacetime.

The sanitation facilities (Fig. 3) should be built in supplementary rooms near the exhaust vent, with provision for at least 50 flush toilets for every 10,000 persons taking shelter.

The capacity of each transport tunnel as a protective structure can be determined in proceeding from the condition that at least 1 m^2 of area is required for each person taking shelter. If in the given tunnel with an area of 1 m per person 13,000 persons may take shelter, they can remain up to 14 hours with a fixed volume [? of air]. With an area of 1.33 m^2, the number of persons taking shelter will be around 10,000, and the time of stay 19 hours, and with 2 m^2, respectively, 8,000 persons and 21 hours.

The question arises of whether it is justified in investing money for additional technical devices for the purpose of extending the stay of the persons taking shelter. The answer depends upon the tactical considerations for the purpose and use of the corresponding CD facility. A lengthening of the time spent in the tunnel is possible in using diesel electric plants and low-output fans for peacetime operations.

However for an extended stay, in addition to the area for the persons taking shelter, it is also essential to have supplies of drinking water and food, as well as areas for the equipment and installations. The minimum calculated amount of water is 2.5-3.0 liters per day per person. Emergency containers can be built out of steel or reinforced concrete.

In the event that the ventilating of the tunnel is imperative, tolerable climatic conditions must be provided for the extended stay of the persons taking shelter.

This in a most general form is some of the possibilities for the dual-purpose use of transport tunnels.

DEVELOPMENT, ORDER OF BATTLE OF NATIONAL PEOPLE'S ARMY REVIEWED

Bonn WEHRTECHNIK in German No 10, Oct 80 pp 49-50, 54, 56-57, 60

[Article by Guenter Lippert: "Warsaw Pact: The National People's Army (NVA) of the GDR"]

> [Text] It was the last of the people's armies of the Eastern European satellite states of the Soviet Union to be christened in January 1956: The army of the smaller half of Germany, the army of the GDR. Like the others, it did not become the army of the people but the armed might of the ruling Communist Party. Nevertheless, it was not even to enjoy the adjective of "people's." It was called the "National" [army] although the nation had been split and its creators were pledged to international communism. With around 200,000 men, equipped with about 1,400 battle tanks, 400 combat aircraft and helicopters, and 160 combat vessels and boats, the NVA (National People's Army) is today a component of the "First Strategic Echelon" of the Warsaw Pact forces--an echelon which is kept at constant action readiness. Among the other people's armies, it is considered a model pupil of the Soviet "brother army." But it must nevertheless employ one quarter of its soldiers in order to prevent the flight of the people away from the gains of Moscow-style socialism.

The baptism actually was a rebaptism because, when the People's Chamber of the GDR--allegedly as a spontaneous response to West German rearmament--on 18 January 1956 passed the "Law on the Creation of the NVA and the Ministry of National Defense," both of these steps had already been taken and about 100,000 men were already under arms. On instructions from the Soviet Military Administration the camouflaged buildup of the NVA had begun almost 10 years earlier:

The first units of the "Border Police" were organized the end of 1946;

Starting in the summer of 1948, garrisoned police alert units were formed and weapons training and officer candidate schools were established;

In 1950, finally, the first maritime police units were set up and preparatory work was started for the buildup of an aviation police.

Thus, in 1950 already, one year prior to the start of the establishment of the West German Federal Border Guard in the FRG, the garrisoned forces of the People's Police, Border Police, and Maritime Police--which were under the GDR Interior Ministry--revealed a personnel strength of 88,000 men. At that time, the inspector-general of the People's Police was the old-line communist Heinz Hoffmann, who today is the defense minister of the GDR and who acquired his military experience during the Spanish Civil War in the "International Brigades."

The buildup of the force--which, starting in 1952 was officially referred to as the KVP (Garrisoned People's Police)--progressed rapidly. In 1952, the blue police uniforms were replaced by olive-brown uniforms and the police ranks were replaced by military ranks. Heinz Hoffmann, who was promoted to lieutenant general, built up a uniform High Command for the KVP and, as the forerunner of the subsequent military district, he established two "territorial administrations of the KVP." At the same time, the first KVP officers were detailed to attend schools and academies of the Soviet Army. Finally, GDR Interior Minister Willi Stoph in the middle of 1955 resigned his office. With the rank of colonel-general, he became the commander of the KVP which at the same time was taken out of the ministry and was thus ready at the right time in order, after the "spontaneous" People's Chamber resolution of January 1956, to assume the new office of "Minister of National Defense." Just 6 weeks later, on 1 March 1956, which is considered the birthdate of the NVA, the first units already appeared in public and early in October of the same year, Stoph, in an order of the day, observed that the NVA has been organized. In addition to the name, only the uniform has been changed: It is once again field-gray and as far as the cut is concerned, it is the same old uniform, that of the Wehrmacht [World War II German Armed Forces], including the braid on the cuffs of the dress blouse, the silver "sleeve stripes" for the company first sergeants, the parade belts and buckles, swords, dress daggers and riding britches for the officers as well as red stripes down the trouser leg for the generals. Only the steel helmet looks new but it had been developed already back in 1944 by the Army Ordnance Bureau and did not prevent bad memories from being aroused among the Eastern neighboring nations.

The rest is routine: All units of the NVA were included in the united fighting forces of the WP (Warsaw Pact); the GDR defense minister becomes the deputy of their supreme commander. Modern weapons came from the USSR and joint exercises within the WP context followed. In August 1961, the NVA passed its first rather macabre trial: together with Soviet troops it provided security for the construction of the Berlin Wall.

The recruitment of military personnel was initially based on material incentives and political pressure--on a voluntary basis. But the personnel strength, which had been 110,000 men since 1956, can hardly be increased as a result of that because increasing pressure leads to larger numbers of refugees. Only after the construction of the wall in Berlin and the strengthening of border security along the boundary line between the two parts of Germany, was the 18-month draft introduced in January 1962 and the NVA was then quickly brought up to its current strength.

The second rather doubtful trial came in October 1968, involving participation of NVA units in Soviet intervention in Czechoslovakia. After this loyalty test, the NVA was then allowed also to assume a surrogate role for Moscow in the Third World: Starting in the seventies, NVA delegations visited the left-wing-oriented countries of Africa and the Near East and worked out training and equipment aid agreements. As part of this variation of development aid, about 3,000 NVA advisors and instructors are today active in eleven countries. Most of them are stationed in Angola, Ethiopia, and Mozambique.

The Top Command

The supreme commander of the NVA is the MfNV (Minister of National Defense). This post has been held since 1960 by Army Gen Heinz Hoffmann who today is just about 70 years old. The ministry's organization is patterned along the Soviet model. It consists of four HV (main administration) and a large number of independent administrations. The HV chiefs hold the rank of deputy minister.

Main Staff

The NVA general staff, which rather shame-facedly is called the Main Staff, is the militarily most important main administration of the ministry. Within the context of instructions from the supreme commander of the United Forces of the WP it is responsible for overall operational planning and military intelligence. Furthermore, it is responsible for organization, the personnel replacement system, and additional interservice tasks, such as telecommunications and military transportation. The chief of the Main Staff has been Col Gen Fritz Streletz, born in 1926, since early 1979.

Political Main Administration

The Political Main Administration is undoubtedly the most influential one. It directs and watches over the political orientation of the NVA. It supervises all sectors of the armed forces through a special duty channel via the "deputy commanders for political affairs," which it selects and commands, and the SED and FdJ [Free German Youth] organizations in the various headquarters and units, which are subordinated to it in their capacity as party duty stations.

Col Gen Heinz Kessler, born in 1920, has been the chief of the Political Main Administration since early 1979; while serving in the German Armed Forces during World War II, he deserted to the Red Army in 1941 and helped found the "National Committee for a Free Germany." The fact that Kessler was first of all already a deputy minister in his capacity as chief of the Air Force and then as chief of the Main Staff--even before he took over the Political Main Administration--underscores the significance of this position.

Main Administration for Equipment and Armament

The Main Administration for Equipment and Armament, under Col Gen Werner Fleissner, born in 1922, is responsible for the planning, development, and procurement of weapons and equipment.

Main Administration for Support Services

The Main Administration for Support Services--taken over a short time ago by Lt Gen Wolfgang Neidhardt--plans and coordinates supply functions and is responsible for training logistics units.

Civil defense has been a part of the responsibility of the MfNV since 1977-1978. It may possibly be another main administration and its chief, Lt Gen Fritz Peter, is likewise a deputy minister.

The position of the deputy minister is also held by the following:

The chief of the NVA Ground Forces, Col Gen Horst Stechbarth, born in 1925;

The chief of the NVA Air Force and Air Defense, Col Gen Wolfgang Reinhold, born in 1923;

The chief of the NVA People's Navy, Adm Wilhelm Ehm, born in 1918, a former PO in the World War II Navy and the senior member among the deputies, and

The chief of the "Border Forces of the GDR," Lt Gen Klaus-Dieter Baumgarten, a graduate of the Soviet Frunze Military Academy.

The general officer corps of the GDR consists of more than 150 members and is not confined to the NVA. The four stars of an army general are also worn by Hoffmann's predecessor, Prime Minister Willi Stoph. Others with the rank of colonel-general are the director of the Security Department in the SED Central Committee, the old-line communist Herbert Scheibe, born in 1914, who was being held in the Buchenwald concentration camp until 1945; the notorious Minister of State Security Erich Mielke, born in 1907, and Interior Minister and Chief of the "German People's Police" Friedrich Dickel, born in 1913. Even the deputy minister for transportation and director of the GDR Airline "Interflug," Klaus Henkes, holds the rank of major general.

The years of birth show that the time of the old-line communists is rapidly nearing an end. All of them are ready for retirement and will probably leave shortly. The World War II Armed Forces officers and the unqualified "people's officers" of the very first days--who were used to help build up the army--were separated even before them or were shunted aside to minor jobs. Within a few years, the top military commanders will be men who, after thorough training at the officer colleges of the NVA, took courses at the "Friedrich Engels" Military Academy or the "Wilhelm Pieck" Political College and who mostly also attended a corresponding institution of education in the Soviet Army.

NVA Ground Forces

With a personnel strength of about 100,000 men, the NVA Ground Forces alone have the same size as the Reichswehr [armed forces between the two World Wars] of the undivided German Reich. In peacetime they are under the Ground Forces Command at Potsdam-Geltow which is responsible for equipment and training.

Two Military Districts

There are two military district headquarters under the High Command. In peacetime, they are the territorial commands for the units deployed in their area along with the duty stations and installations of the People's Army. In case of major maneuvers and in case of war, they provide one, each, field army HQ for the operational command of the ground forces units assigned to them. They are then probably not placed under a common national command but will be separately integrated into "fronts" (army groups) of the Warsaw Pact forces. Military District III, with HQ in Leipzig, covers the seven southern bezirks of the GDR. It constitutes the Third (NVA) Army which includes the following:

The 7th Armored Division in Dresden,

The 4th Motorized Rifle Division in Erfurt, and

The 11th Motorized Rifle Division in Halle.

Military District V, with HQ in Neubrandenburg, is responsible for the seven northern bezirks of the GDR. It forms the Fifth (NVA) Army which has under it:

The 9th Armored Division in Eggesin,

The 1st Motorized Rifle Division in Potsdam and

The 8th Motorized Rifle Division in Schwerin.

In addition to these combat divisions, the two armies have the following very important combat support units, each:

One rocket artillery brigade,

One artillery regiment,

One AA rocket regiment,

One pontoon bridge Engineer regiment, as well as

One landing and crossing Engineer battalion plus one (general) Engineer batallion.

The Ground Forces Command has directly under it certain construction Engineer battalions and special units as well as probably also the "Willi Saenger" unit which is trained for operations in enemy rear areas and the parachute battalion of the NVA which is stationed in Prora on [the island of] Ruegen.

Several territorial units of the ground forces are directly under the MfNV. These are primarily telecommunications units as well as construction Engineer and railroad Engineer regiments which, according to the Soviet model, are included among the "units of the military transport system." The NVA Guard Regiment--the ministry's parade and show unit--is included among these formations. Each week, it performs the "changing of the guard" at the New Guard Building erected in 1818 by Schinkel in East Berlin, which has been converted into a "memorial for the victims of fascism and militarism."

Same Organizational Setup as Red Army

The organization of the NVA ground forces units as well as their command and combat principles almost without exception correspond to the model of the Soviet Army from which they want to "learn how to win." The just about slavish imitation of the big "brother-in-arms" even includes the terminology which represents more of a stereotyped verbal rather than conceptual transposition of Russian concepts into the German language and which therefore is frequently unintelligible.

Following the Soviet model, the ground forces distinguish the following combat arms:

Motorized rifle units (armored infantry),

Armored forces,

Airborne forces,

Rocket units and artillery as well as

Unit AA defense (AA defense unit).

In addition to that we have the "Special Units and Services" which among others include the signal units (telecommunications unit), the Chemical Warfare units (NBC defense units), and the rear-area services (logistics units).

The combat divisions are made up of major and minor units from all combat arms, special units, and services. The armored divisions, which number about 9,500 men, are organized in three tank regiments and one motorized rifle regiment; the motorized rifle divisions, with about 12,000 men, are organized in three motorized rifle regiments and one tank regiment. In addition to this, each division type has the required command, combat support, and logistics units, such as a recon battalion, a signal battalion, an artillery regiment, a rocket launcher battalion, a rocket artillery battalion, an AA regiment, an Engineer battalion, and NBC defense battalion.

The motorized rifle division moreover has a TD battalion.

Equipment

The equipment of the NVA ground forces consists almost completely of weapons and equipment of Soviet origin and a small portion made in the CSSR [Czechoslovakia]. Domestic products turned out by the GDR industry as such include only a series of wheeled vehicles, as well as a few special equipment items, such as, for example, NBC defense equipment and certain types of ammunition. Apart from a variation of the "Kalashnikov" assault rifle, the GDR did not go into any licensed production of Soviet weapons. Regarding the modern condition of equipment, the NVA ground forces clearly rank below the units which the Soviet Army uses in the approaches to the Soviet Union. But in that respect they do not differ from those of the Polish and Czechoslovak people's armies although the latter, because of its domestic armament industry, seems to have a slight head start. Generally speaking, the accent in the NVA ground forces and those of the other non-Soviet WP armies since the end of the seventies has been on conversion to the most modern Soviet weapons systems. It is interesting to note here that some of them were delivered only after the Soviet Union had filled the orders placed by its Arab customers who have the money to pay for this sort of equipment.

Armored Forces

The NVA's armored forces are still predominantly equipped with the slightly obsolete T-54/55 tank. Not until the course of 1979 was the first unit converted to the most modern Soviet model, the T-72, which, with its better armor and driving performance and its 125-mm gun, has a considerably higher

combat value. It is currently impossible to predict over what interval of time the conversion of the armored units will take place. About 1,500 tanks have to be replaced in the various units. In addition to that, there is a depot inventory amounting to an estimated 900 battle tanks for the organization of reserve units and they reportedly still also include T-34 tanks from the NVA's initial issue.

Motorized Rifle Units

The NVA's motorized rifle units are equipped with BMP [ABC] and BTR-60 PB [armored troop carriers]. The tracked BMP is included in the equipment of all of the motorized rifle regiments in the armored divisions while in the motorized rifle division only one motorized rifle regiment is equipped with that type of vehicle. The other motorized rifle regiments of those divisions are to continue to be equipped with the wheeled BTR-60 PB [wheeled armored troop carrier], which according to NVA concepts is considered a full-fledged fighting vehicle for the motorized rifle units and which is to be developed further. To balance out their rather poor AT capability, the units equipped with the BTR-60 PB a short time ago were issued the latest Soviet AT guided rocket system which resembles the German-French MILAN that is the AT-4/SPIGOT.

Rocket Units and Artillery

The assortment of weapons of the rocket units and artillery extends from the 122-mm field howitzer, model D-30, all the way to the atomic weapons of the rocket artillery battalions and bridgades, the surface-to-surface guided missile systems FROG-7 (range about 65 km) and SCUD B (range about 300 km). They also include the CSSR version of the Soviet multiple rocket launcher BM-21, the RM-70 on TATRA chassis, which is more effective than its Soviet model because of its armor and reloading mechanism. As part of the modernization of its weapons, the NVA last year also received its first 152-mm armored howitzers and the pertinent armored artillery command vehicles.

AA Defense

Unit AA defense has the capability of effectively protecting the combat units against air attacks with its SA-7/GRAIL shoulder-fired AA rocket on the company level all the way to the AA rocket weapons systems called SA-4/GANEF on the field army level. Any still existing weak spots are being eliminated by means of the issue of the SA-9/GASKIN and SA-6/GAINFUL AA rocket weapons systems to be started at the very latest in 1979. The SA-9/GASKIN supplements the ZSU-23-4 armored AA mount in the AA batteries of the regiments while the SA-6/GAINFUL replaces the 57-mm AA guns, model S-60, which are still being used so far in the AA regiment of each division.

Training

To train its future leaders and commanders, the NVA ground forces have available the "Ernst Thaelmann" Officer College in Loebau/Zittau and five NCO schools, including one for techincal duties. The enlisted men are getting their training with the various units.

Evaluating the situation exclusively from the military viewpoint, the ground forces of the NVA--with their tough training, their rigid command, and their sufficiently modern weapons--supply the Warsaw Pact with two powerful field armies which are fully capable of offensive combat.

NVA Air Force and Air Defense

The NVA LSK/LV [Air Force and Air Defense] have primarily an air defense mission and for this purpose have been fully integrated into the air defense system of the Warsaw Pact. Since about 1972, they have been also assigned air support missions for the ground forces. The national command authority of this armed forces component, with about 31,000 men, is the HQ, NVA-LSK/LV in Strausberg-Eggersdorf.

Two Air Defense Divisions

The combat units under this HQ are combined in two air defense divisions. The 1st LV [Air Defense] division, with HQ in Cottbus, includes the following:

Four fighter wings,

One fighter-bomber wing and

Two AA rocket regiments.

They are deployed in the southern region of the GDR; the aircraft wings are stationed near the eastern border and the AA rocket regiments are stationed forward, toward the west.

The 3rd LV Division, with HQ at Neubrandenburg, comprises the following:

Two fighter wings and

Three AA regiments,

which are deployed according to the same pattern in the northern region of the GDR.

Something New: Attack Helicopter Wings

The latest combat unit of the NVA Air Force is a combat [attack] helicopter wing which is directly under the HQ and which was recently given the name

"Adolf von Luetzow"; it is stationed in Basepohl, Northern Mecklenburg. In addition to these combat units, HQ, LSK/LV, also has a series of flying and ground support units. They include the following:

One transport helicopter wing,

Three transport aircraft squadrons,

Two radar regiments (NVA: communications engineering regiment) and

One telecommunications [signal] regiment (NVA: signal regiment).

Each aircraft or helicopter wing is equipped with 40-50 craft. The AA rocket regiments are organized in four battalions each with three firing batteries. Each battery consists of six AA rocket firing ramps.

Equipment

The equipment of the combat aircraft wings of the GDR Air Force was changed several times since it was first set up.

The first wing of the "People's Police of the Air" were still equipped with the Yak-11, a two-seater piston job. Right after the camouflage was dropped, the pilots were then retrained in 1956 to handle the first jet fighter type, the MiG-15/FAGOT, which by the end of 1958 was already replaced by the MiG-17/FRESCO. The first supersonic fighters were not long in coming; in 1959 already, the first flights of the fighter wing were issued the Mig-19/FARMER aircraft, partly in the version equipped with four air-to-air missiles and the MiG-19 PM which was equipped with radar-search and target equipment.

In the meantime, this type has likewise been taken out of the inventory. Starting in 1962, it was replaced by the supersonic fighter called MiG-21/FISHBED, in various versions (C/E, D/F, JX, and more modern versions). This aircraft, which is used in equipping most of the fighter units at this time, depending upon the type of armament, has a takeoff weight of 3-10.4 t and a combat radius of about 65 km. Its maximum speed is 2,200 km/hr (Mach 2). Depending depending upon the particular version, it is equipped with a 23-mm twin machine cannon as well as two air-to-air guided missiles or two firing pods, each holding 16 unguided 57-mm air-to-surface rockets. In place of the missiles or rockets, this aircraft can also carry two 500-kg bombs.

The constant modernization of NVA-LSK/LV thus however has not come to an end. In 1979, they received the first swing-wing aircraft of the MiG-23/FLOGGER type. So far, at least one combat squadron has been equipped with this most modern type. The all-weather fighter-fighter-bomber aircraft has a maximum takeoff weight of almost 20 t and a combat radius of about 1,100 km. Its maximum speed is 2,450 km (Mach 2+). By virtue of its variable-

geometry wings however it also has favorable cruising, takeoff, and landing qualities. In addition to a 23-mm twin machine-cannon, the armament, by way of options, can include four air-to-air guided missiles or firing pods for 32, each, unguided 57-mm air-to-surface rockets or several bombs.

Attack Helicopter Wing

The attack helicopter wing is still equipped mostly with the Mi-8/HIP. In addition to the 12.7 mm bow of this MG, the older version (HIP C) is equipped with firing pods, each holding 16 [rockets], while the more modern version (HIP E) is equipped with six firing pods each holding 32 unguided 57-mm air-to-surface rockets. Besides, the HIP E also carries four firing rails for the type AT-2/SWATTER guided AT rockets.

Since 1979, at least nine attack helicopters of the Mi-24/HIND D type have been included in the wing. This most modern attack helicopter, equipped with IR ground vision system, is made in the Soviet Union and is equipped with a four-barrel rotating machine-cannon. It furthermore carries four firing pods, each with 32 unguided 57-mm rockets and four firing rails for the AT-2/SWATTER.

Overall, the NVA Air Force has about 335 combat aircraft and about 50 attack helicopters. In addition there are about 60 trainers and transport aircraft as well as around 50 transport or multi-purpose helicopters.

AA Rocket Regiments

The AA rocket regiments of NVA-LSK/LV are using the frequently modernized AA rocket weapon system SA-2/GUIDELINE for engaging airborne targets at high altitudes; for protection against airborne targets flying at low and medium altitudes, they use the SA-3/GOA AA rocket weapon system.

Training

Pilots and mechanics are trained at Kamenz, in Saxony, at the "Franz Mehring" Officer College and at the "Harry Kuhn" NCO school. They have attached to them a training wing which is stationed in Bautzen.

The NVA-LSK/LV to be sure are small but have noteworthy modern equipment. For a long time they were almost completely confined to air defense, something which predominates today. Only in recent years were units established for air attack although their scope is still small.

NVA People's Navy

With a personnel strength of about 16,000 men, the People's Navy is the smallest component of the NVA. Because of its equipment, it is a pure coastal navy with an originally defensive character. Because of the

continuing reinforcement of its seaborne landing potential and the improvement of the PT-boat component, referred to as "shock forces," it has however increasingly assumed offensive significance in the western sector of the Baltic Sea. Together with the Polish Navy, it would seem to have the mission of keeping the sea lanes open in the Baltic Sea for the Baltic Red Banner Fleet of the Soviet Navy, whose amphibious forces it would probably have to support in opening the Baltic Sea exit and screening the maritime flank of the WP ground forces.

The NVA People's HQ, stationed in Rostock-Gehlsdorf, in addition to command, logistics, and training units as well as one navy helicopter squadron, has three flotillas under it as operational units:

The 1st Flotilla in Peenemuende, consisting of minesweeper divisions, landing craft divisions, and one ASW division;

The 4th Flotilla in Warnemuende, consisting of minesweeper divisions, one ASW division, and the coast guard division equipped with guided missile frigates;

The 6th Flotilla in Dranske-Bug on Ruegen, which includeds the guided missile and PT-boat brigade.

In addition, the three flotillas have the necessary auxilliary vessels and logistics facilities under them. HQ, NVA People's Navy furthermore, in operational terms, is in charge of the seaborne component of the Border Forces of the GDR, the Coastal Border Brigade.

160 Combat Units

The ship inventory of the People's Navy, which has been going through a second modernization process since the middle of the seventies, currently consists of about 160 combat units and about 80 auxilliary vessels. Most of them were built by GDR shipyards, especially the Peenewerft [shipyard] in Wolgast. In recent times there has been stepped-up armament cooperation with the Polish People's Republic and the USSR. For example, the training vessel WILHELM PIECK, of the People's Navy, which was commissioned in 1976, was built by the Northern Shipyards in Danzig and is a sister ship of the Polish training vessels GRYF and WODNIK.

The two largest and most powerful units of the People's Navy are the coast guard vessels ROSTOCK and BERLIN which were delivered by the USSR in 1978-1979. They are guided-missile frigates of the brand-new Soviet KONI class. They replace the four frigates of the Soviet RIGA class which in the meantime have been taken out of the inventory and which were delivered to the People's Navy during its organizational period. The new, about 95-m long coast guard vessels have a displacement of about 2,300 ts [English tons] and a speed of about 32 kg. They are equipped with two 76-mm and two 30-mm twin guns, one twin launcher for ship-to-air guided missiles of the SA-N-4 type, as well as two ASW rocket launcher groups. Their stern ramp is designed for dropping depth charges and mines.

Shock Forces

The nucleus of the GDR Navy's "shock forces" consists of 15 guided missile boats of the Soviet OSA-1 class which are equipped with four ship-to-ship guided missiles of type SS-N-2/STYX, as well as two 30-mm twin guns. The boats have a displacement of 165 ts and speed of 38 kg. The range of the STYX guided missiles is around 30 km. The guided missile boats are supplemented by 18 PT-boats of the Soviet SHER-SHEN class, with four torpedo tubes and, so far, about 30 so-called small PT-boats (KTS) of the GDR-made Libelle class which, starting in 1972, were commissioned as replacements for the obsolete boats of the ILTIS class. These small PT-boats are equipped with two stern torpedo tubes for firing their torpedos aft. They reportedly have speed of 50 kn but are extremely vulnerable to heavy seas because of their size. Built by GDR shipyards, we also have 12 subchasers of the HAI class which have been in service since the sixties. For ASW, they are equipped with four six-tube ASW rocket launcher groups and at the stern they have two depth charge dropping platforms.

About 50 minesweepers of the KONDOR class constitute the ship inventory of the minesweeper division and the Coastal Border Brigade. The older boats of the KONDOR-1 class are assigned to the Border Brigade while the more modern boats of the KONDOR-II class are assigned to the People's Navy.

The People's Navy's landing ship divisions have the biggest warships so far built in the GDR with the at least 10 medium landing ships of the FROSCH class which they have been getting since 1976. These 91-m long and 11-m wide ships have a displacement of about 2,00o ts. They can carry about 12 battle tanks or 15 APCs or about 1,000 t of cargo. Their armament consists of two 57-mm and two 30-mm twin guns, as well as two multiple rocket launcher groups with 20 tubes each for 122-mm artillery rockets. They are furthermore designed for dropping depth charges and laying mines. The smaller landing craft of the ROBBE and LABO classes have obviously been replaced by the larger and more modern type.

The People's Navy does not have any Marine Infantry units. On the other hand, the "Ernst Moritz Arndt" Motorized Rifle Regiment, 8th Motorized Rifle Division, stationed in Prora, Ruegen, is being trained for seaborne landing missions.

The navy helicopter squadron is equipped with about 20 craft of the Mi-8/HIP type in various versions. They can be used for sea-rescue, transport, and ASW missions.

Training

The People's Navy's officers are being trained at the "Karl Liebknecht" Officer College in Stralsund; the seamen and POs are being trained at the

Fleet Training School in Parow. Overall, the NVA People's Navy is a rather respectable support fleet for the Soviet naval forces in the Baltic Sea. Its equipment with modern guided-missile frigates shows that the Soviets assign considerable significance to it.

Border Forces of the GDR

The Border Forces of the GDR, with about 47,000 men, sprang from the DGP (German Border Police), which initially was under the Interior Ministry and then temporarily also under the Ministry of State Security. In autumn of 1961, the already militarily organized DGP was integrated into the NVA, took over its duty functions and uniforms, and from then on was considered as the fourth component of the NVA under the official designation NVA Border Forces. Starting in January 1974, the direct subordination to the NVA was formally lifted as a result of the fact that it was renamed "Border Forces of the GDR"; but they were kept under the MfNV. It is assumed that this name change was made with a view to the Vienna MBFR negotiations in order to reduce the apparent strength of the NVA.

The Border Forces HQ in Paetz near Berlin is the highest headquarters of this component. It has the following units under its control:

The Northern Border Command in Stendal and the Southern Border Command in Erfurt which are used to seal off the IdG (Inner-German border);

The Central Border Command, with HQ in Berlin-Karlshorst, intended to seal off West Berlin;

The border sector headquarters in Pirna, Saxony, and Frankfurt/Oder, used for watching the borders with the Polish People's Republic and Czechoslovakia, as well as

The Coastal Border Command in Rostock, which is supposed to screen the maritime frontier of the GDR.

The Southern, Northern, and Central border commands each have six border regiments for border security duty. One additional regiment of the Central Command handles border control functions at the border crossing points in Berlin. The sector commands along the GDR's eastern and southern boundaries have only understrength border surveillance units. The seaborne units of the Coastal Command are being directed in operational terms by HQ, NVA-People's Navy.

The border forces are recruited from specially loyal volunteers and draftees without any contacts with the west who are considered politically reliable.

Training

All border guard members are trained not only in preparation for border guard duty but also get basic infantry training patterned along the operational principles of the motorized rifle units. Officer candidates are trained at the "Rosa Luxemburg" Officer College of the Border Forces in Plauen, Vogtland, and at the "Egon Schultz" NCO School of the Border Force in Perleberg, Schwerin Bezirk. Enlisted personnel are trained in the three border commands, that is, North, South and Center, in two training regiments. Training facilities of the other armed forces components are also used for special career fields and for advanced officer training.

Equipment

The equipment of the border regiments assigned to duty along the boundary between the two parts of Germany consists almost exclusively of light infantry weapons and unarmored wheeled vehicles. The border regiments in and around Berlin moreover have guns, multiple rocket launchers, mortars, flamethrowers, and wheeled APCs of older design. Their infantry training emphasizes house-to-house fighting.

To perform their official mission, which is "to screen the western international boundary, to preserve its inviolability, and to prevent border penetrations," the border units fall back on rather expensive barrier facilities. The buildup of this so-called "antifascist bulwark" complete with mines, automatic firing systems, chain link fences, watchdog sectors, and observation towers however makes it clear that the tremendous expenditure in terms of materiel and manpower exclusively serves to prevent people from escaping from the east to the west. Accordingly, the military value of these barrier facilities is Zero. The military value of the border forces themselves--judging by the personnel strength-- is relatively poor because of the rather light equipment. They can be used for guard-duty and protection missions in rear areas and as screening forces in combat areas. Besides, they represent a personnel reserve with infantry training. Essentially however the GDR must provide the second-strongest grouping of its "armed agencies"--the potential for about four motorized rifle divisions--in order to make sure that large segments of the population and the army will not simply take off!

Summary

In a few months, the NVA will--officially--celebrate its 25th anniversary. During those years it has consolidated itself without visible difficulties and how has a high level of combat value.

In contrast to what happened to the West German Armed Forces, the NVA did not have to face any problems of modern manpower management and leadership; its draftees have already been properly disciplined in schools, factories, and youth organizations where they have also been given ideological indoctrination and premilitary training. The drill and the customs of the service were taken over from the World War II Armed Forces although the

first of these is today being justified with the help of quotations from Engels while the other point is being popularized with the rather awkward-sounding form of address which is "comrade." Obedience has remained unconditional and there is no question as to refusing military service. The constitution does not make any provision for this and anybody who refuses to serve nevertheless simply is assigned to construction units or goes to prison. A pseudo-scientifically-justified ideology does not permit any doubts on the system and supplies a rather twisted image of the enemy. Like the uniform and the drill, the phrases have also remained the same old ones, although with a different prefix perhaps. The army is no longer the "armed agency of the people united under National Socialism" but rather must "be loyal and devoted to the Marxist-Leninist party and its socialist state." (Career regulations of the NVA.)

Thus trained and drilled, the NVA seems to be completely in line with the way its creators had visualized it. But what it is on paper and what it is in reality constitutes a gap that is no less wide than in other areas of "real socialism." That brings us to the very basic question as to the reliability of the NVA when the balloon goes up. There is no doubt that most of its officer corps will follow Moscow in every way. The combat readiness of the simple soldier would seem to depend on how credibly the regime can picture, under the conditions prevailing at that time, the threat and the value of the threated gains. So long as both of these are so incredible that the rulers cannot dare open the borders to their younger generation and so long as they must deny contact with the "class enemy" to that younger generation, so long do both of them seem to deny the loyalty of the younger generation to the regime. It would thus seem that doubts as to the reliability of a large segment of the NVA are permitted.

'DER SPIEGEL' PROFILE OF WALESA, SOLIDARITY MOVEMENT PUBLISHED

Background on Walesa

Hamburg DER SPIEGEL in German Vol 34 No 45, 3 Nov 80 pp 142, 143, 145, 149, 151, 153, 154

[DER SPIEGEL cover story: "'What Happens in Poland Is Our Affair'"]

> [Text] Only a few months ago he was a nobody as far as the world outside Danzig was concerned. Then he advanced to labor leader of all of Poland. Father of six children and a practicing Catholic, Lech Walesa compelled the communist party to make unheard-of concessions. The GDR walled itself off, Prague issued threats, and the Kremlin summoned communist party chief Kania to Moscow for a report.

Had he never been afraid of losing the unequal fight against the all-powerful party, strike leader Lech Walesa of the Lenin Shipyard in Gdansk was asked the day after the Gdansk victory by a U.S. television reporter.

Speaking into the microphone, he replied, "No, not of losing," and after a brief pause, "but I was afraid in case we should win."

No later than last week, events in Poland had proved that such skepticism was not playful modesty, let alone clever tactics, but demonstrated a sense of reality.

For it appears that Lech Walesa is unhinging the power of the Polish state and party. For almost 3 months he has made Poland, the Eastern bloc and part of the rest of the world hold their breath. Supported only by a mandate of the trust of his fellow citizens, which meanwhile has taken on mystical proportions, he advanced from Gdansk strike leader to spokesman of the biggest Polish mass organization, the "independent, self-administered Solidarity Trade Union" with a membership of more than 7 million, or about 60 percent of all workers.

In an assault unprecedented not only in the history of socialism, this proletarian revolutionary, virtually unknown until last summer, without violence and relying only on the discipline and solidarity of his fellow workers, razed some of the bastions of the once omnipotent state and party apparatus that had been regarded as impregnable.

What has been dealt with in revolutionary songs in whose words no communist functionary believes any longer, what has been presented to a bored public to the point of surfeit in the way of pompous kitschy heroes of so-called socialist theater and film has been turned into fascinating reality for millions of people in almost daily television reports, and into a source of anxiety for Soviet communism, by this man only 5 feet 3 inches tall, with a walrus mustache; "all the wheels are standing still if that is our strong arm's will."

Without as much as mentioning names or making demands, he has sent a powerful state trade union chief packing in the past few weeks and compelled his successor to swear the bankruptcy oath of a leader without a following.

It was Walesa and his striking dockworkers in Gdansk who overthrew a Polish premier, Babiuch, and a little later even a party head, Gierek--and along with the bigshots of the system a slew of leading functionaries who would be the wrong people in the kind of Poland the Walesas have in mind.

Such sad things had not even been experienced by the hallowed communist party of a state of the Eastern bloc in previous revolts--in East Berlin in 1953, in Budapest in 1956 or in Prague in 1968. A leadership at a loss abandoned one position after another, sacrificed the party leader, allowed its monopoly of power to be attacked by the concept of free trade unions, thus virtually putting its own political existence up for grabs, and incurred the accusation from the pope in Moscow of jeopardizing the faith and rule of "real socialism"--and none of this, not any of it, was of any avail.

Bad previous experience and now the quick breakthrough lent the workers movement a dynamic of its own which, it appeared last week, could hardly be stopped any longer, facing new party head Kania with an almost insoluble dilemma.

If he wanted to prevent the outbreak of already announced new strikes, he had to seek to gain credibility below, proving that he really meant to fulfill his promises of greater freedom.

At the same time, however, he had to demonstrate to Moscow that his yielding in fact was not changing the system--in other words, that he did not mean to fulfill his promises to the people below.

Last week the conflict was drifting toward a decision under ominous signs: in Warsaw the Aeroflot office was burning, the supply situation becoming more dramatic. Throughout the country not only meat but potatoes and sugar had vanished from the market.

Under the pressure of 11 new demands from Gdansk, complete with the threat of a strike on 12 November, Kania and Premier Pinkowski rendered their report in Moscow. The comparison with the meeting in Cierna at the end of July 1968, where Dubcek & Co were given an ultimatum by the Kremlin bosses to straighten out the situation, was obvious.

In that instance, the forces of the Warsaw Pact started on their march 3 weeks later. Now a laconically eloquent TASS statement noted that imperialist forces

were at work in Poland and that Leonid Brezhnev was confident "that the communists and workers of fraternal Poland will be able to solve...the acute problems confronting it."

Prague made it crystal clear that the events in Poland were calling to mind "the activities of the antisocialist forces in the CSSR during the crisis years of 1968/1969."

In Poland meanwhile strike leader Walesa and his fellow workers from Szcsecin and Katowice dictated to the harassed party leadership conditions for a new start which were bound to look like the outbreak of sheer heresy in Moscow's eyes.

Labor leader Walesa declared it was indispensable for the 21 Gdansk demands accepted by the government, and since called "social treaty" by the party press, to be fulfilled.

"Who is that fellow?" party chief Gierek had asked incredulously in mid-August at the crisis headquarters of his Politburo, meeting in continuous session, when reports came coming in about the astute negotiation tactics of that nobody from Gdansk. The files the secret police were able to produce for him merely showed that someone was winning who had come from far below and had nothing to lose.

Today, after not even 3 months, he is known by everyone in Poland, but the most important question has remained unanswered as far as both supporters and adversaries are concerned.

Is he Poland's new national hero, leading the country out of crisis and misery with a boldly calculated plan, or is he a pigheaded fanatic who with his unyielding adherence to principles is triggering military intervention by the infuriated Soviets?

Is this Lech Walesa (pronounced Vowensa) one of those martyrs for justice, strong in faith, of whom there have been many in Polish history, or only a pious fool, who knows nothing about the limits of the politically feasible? Is he acting of his own volition, or is he driven by the base, or even guided by intellectual opponents of the system?

Personifying as he does the development of People's Poland from a backward agrarian state to the 11th-strongest industrial country of the world, the curriculum vitae of the only 37-year-old labor leader might have been taken out of a textbook for Polish sociologists.

Like most Poles of his generation, Lech Walesa comes from a rural area. He was born in the village of Popowo not far from Bydgoszcz 2 years before the end of the war, his father a carpenter and his mother a small farmer. After elementary school, he sought a place as an electrician's apprentice.

The Walesas, a large family, are pious people, like most of the other villagers. Not bothering much with politics, not to speak of the party, they are left largely in peace in their rural isolation, also by the functionaries.

As an electrician Lech Walesa gets a job at the Lenin Shipyard in Gdansk in 1967 and already a year later, at the age of 24, is nominated for a seat on the works council. One of his fellow workers of that time says: "He was good at speaking and was not afraid of big shots."

In December 1970, during the workers' uprising in the coastal cities, electrician and trade unionist Walesa is a member of the works council at the Lenin Shipyard. But the uprising is smashed violently by police and militia; according to official data, 45 workers died in the process, including some fellow workers of Walesa's from the Gdansk shipyard.

After the fall of party chief Gomulka, a delegation of dockworkers on 25 January 1971 negotiates with new party chief Gierek, who has arrived specially for that purpose; Walesa is a member of it. Gierek promises workers' self-administration, giving assurances that under his leadership workers will never again be fired on.

In spring 1976 Walesa is dismissed from the Lenin Shipyard because of his advocacy of the formation of free trade unions--as a "preventative measure"--despite the fact that as a member of the works council he enjoys special protection against being let go.

After that, for 4 years, Lech Walesa did not have a steady job and (having married the former wreath and bouquet maker Miroslawa in 1969) had to support his family with occasional work and with the help of friends. He says: "Wherever I went to look for a job, a position that was vacant only a moment before had been filled as soon as the personnel manager saw my workbook."

His parents had taken a trip to the United States to visit relatives in 1973. His mother having died in a car accident in New Jersey, his father, who knows hardly a word of English to this day, decided to remain with the Walesa clan in the States. He has not seen his now world-famous son since and hopes that "since he now has truck with government ministers" he will soon get a passport for travel to the United States.

Until he was fired his son Lech was living like the average Pole. The rapidly growing family (the Walesas are orthodox Catholics) had to be content with a 26-square-meter two-room apartment, he regularly went to mass, spent a lot of time with his children and occasionally went to see a soccer game.

What distinguished the unemployed electrician from his neighbors, however, was his dogged struggle for trade union rights. This brought him into contact with the "Workers Defense Committee" (KOR) founded by Warsaw intellectuals in 1976, which under constant repression by the secret police quickly developed into a germ cell of growing antiparty opposition.

Walesa was among those present when the "Free Trade Union of the Coastal Area" was founded in Gdansk on the eve of 1 May 1978. An appeal to the workers was signed, as a representative of the charter committee, by Gdansk shipyard engineer Andrzej Gwiadza--today Walesa's closest collaborator in the Solidarity union.

From 1978 on Lech Walesa worked on the KOR-inspired underground journal ROBOTNIK WYBRZEZA (The Coastal Worker), which advocated the founding of a free trade union as a legitimate representative of the workers.

Since the journal openly acknowledged the names and addresses of contributors, the secret police did not take long to locate the proletarian dissident. "In those years I was arrested or received summonses up to 100 times," Walesa recalls today.

The Gdansk police were particularly keen on keeping the veteran of the 1970 events under lock and key on the annual anniversaries commemorating the victims of the Gdansk workers' massacre.

However, when in December 1978 police looked for him even with police dogs, fellow workers had hidden him. Walesa managed to deliver his commemorative address on the shipyard premises unhindered. The 3,000 workers who had come to attend the occasion formed an impenetrable ring with their bodies, thus protecting him from arrest.

The following year dockers smuggled him in a container through the shipyard gates. In his commemorative address in behalf of his killed fellow workers Walesa called for "solidarity of all Poles in the struggle for their rights"--with a lasting echo.

For when, following a wave of wage strikes throughout the countries, the workers of the Lenin Shipyard in Gdansk went on strike on 14 August this year, one of their most important demands was the immediate reemployment of works council member Lech Walesa illegally dismissed 4 years ago.

At the time he happened to have a job in another Gdansk firm. He was brought to the shipyard by taxi, and in the meantime shipyard director Wojcik, who was trying to calm down the workers, had to wait on top of an excavator.

Two days later, something happened which Lech Walesa now does not like to talk about any more and which might have given a different direction not only to his career but to Polish developments: Walesa wanted to end the strike at the Lenin Shipyard in Gdansk.

He told the strike committee that the demands--reemployment of fellow workers dismissed for political reasons and a promise to raise wages--really had been met, and it was therefore time to go home.

A majority on the committee voted against him, however, wanting to continue the strike until precisely defined points were met. Bowing to the majority, Walesa was ready at once to support its arguments with determination--sometimes even too fierily.

When shipyard director Wojcik had the communications center of the shipyard closed in order to prevent agitation, Walesa together with some weighty supporters stormed into the management offices, threatening to beat up Wojcik.

Only his friend Gwiadza, also a member of the strike committee, was able to prevent the worst and in the end, through a peaceful settlement, also managed to have the center reopened.

But then there were also different scenes. It is Walesa who listens patiently to delegations of other firms who want to join the strike.

In fact he listens to just about anyone, with the patience of a father confessor, consoles where necessary and tries to pledge fellow strikers, constantly increasing in number, to consideration and solidarity--a favorite term of his which in the end becomes the trademark of his movement.

When the newspaper writes about "antisocialist people behind the scenes" at the Gdansk shipyard, several times mentioning the KOR, unfamiliar to virtually all the shipyard workers, Walesa delivers a lecture explaining the history and aims of the KOR and stating that its members are friends of the workers and that no one should fall for the press provocations.

One day in the big hall where the delegates of the strike committee, which now no longer deals with the affairs of only one plant, are consulting, a man tries to make a speech defending party chief Gierek. The workers are not sure what to do until Anna Walentynowicz, herself a veteran of the struggles of 1970 and once dismissed for political reasons, unmasks the man as a provocateur, saying, "I know him well, for he is the official who persecuted me for many years."

The aroused crowd wants to lynch the man now identified, but Walesa intervenes, threatening to resign his post if something happens to the man. Grumbling, the workers obey.

They also obey him when he pronounces a strict ban on alcohol and recommends that the government delegates from Warsaw be treated courteously. Even the roughest among them are willing to attend Sunday mass on the shipyard premises with their spokesman Walesa.

Walesa calmly puts up with the dockworkers occasionally making fun of his religiousness, displayed without inhibition. A joke makes the rounds: "If you ask Lescek what time it is, he first asks: What does the pope say?"

But when Cardinal Wyszynski reads mass during the high point of the strike in Czechostowa--broadcast on television for the first time--and in the course of it renders but lame support to the workers' struggle, the disappointed Walesa has a sheet of paper placed under the picture of the Madonna bearing the inscription "The Madonna is on strike."

For as many as 17 days and nights Walesa maintains unity and discipline among his host of workers, now grown to 200,000 persons, in the face of threats and lures.

Then the strikers' demands, whose fulfillment no one had anticipated, are accepted by the shaken party leadership, and Walesa has won.

The historic test of strength had not been planned by either Walesa or anyone else on the strike committee. Sure, Walesa and his fellow workers were not alone in that power marathon. Millions of workers throughout Poland openly showed their sympathy and endorsement, and there were also some active helpers.

The friends from KOR, such as dissident leaders Kuron and Michnik, who became the target of the Polish press and later also the Soviet press as alleged "antisocialist people behind the scenes," certainly did not have the biggest

opportunities for this, for they were not released from prison until the day the strike ended, at Walesa's express insistence. (He had included the demand for their release in the 21-point program.)

The legal and political advisers who helped the strikers draft their statements and check the draft of the agreement are still members of the staff of advisers of the Solidarity union.

Particularly Warsaw lawyer Sila Nowicki was useful to Solidarity. Now an elderly gentleman, he had already courageously defended those charged after the 1968 student revolts.

Tadeusz Mazowiecki too, editor-in-chief of the Catholic journal WIEZ (The Bond) issued by the "Znak" group of parliamentarians, participated from the start.

Walesa has never denied that he received considerable financial donations for his union, also from supporters from the West. He says: "There is no aid which might embarrass us politically."

With similar unselfconsciousness he also reports that the party tried to bribe him with lucrative offers "such as houses, cars, money--anything." And his mentor Cardinal Wyszynski, he reveals, "suggested that it might be a good idea" for him to "assume the leadership of the official trade unions."

Already during the charter period his mania for presenting his new union as a non-political "purely social organization" looked quite naive, and Walesa has long since realized that he cannot make it adhere to that kind of role. The conflict with the currently weaker rival, the Polish communist party, was inescapable from the outset.

As late as end of August, however, when asked about the historical consequences of the establishment of his union, Walesa thundered:

"What do I care about history? What I am interested in is our 21 demands, the first and most important of which, our trade union, we are not accomplishing. I am not fighting for history, I am fighting for the people."

As yet the small man, who does not seem to fit the image of a labor hero, continues to be his old self. Wearing the same crumpled readymade brown suit he wore when stepping before the microphone with Deputy Premier Jagielski at the Gdansk shipyard, he now sits in his office on the fifth floor of the Gdansk suburban Hotel Morski, headquarters of Solidarity.

Only one thing has changed, and the fact that Walesa accepted this present obviously intended as political testifies to his clear conscience: the eight members of the Walesa family (the youngest daughter was born during the dramatic strike weeks) have moved into an apartment of 114 square meters--almost a luxury apartment by Polish standards.

As of mid-September the labor leader, who has given up the job at the Lenin Shipyard he had only just regained in order, as he puts it, "to fulfill a mission," was still uncertain just what the new trade union is to look like: "There are no

schools here for such things; all we have had here is the old trade unions, and the training there was not the real thing."

One thing he thinks he knows: his new union is to remain limited to Gdansk, or at most to the coastal region: "I have so much work to do here that I cannot see to the rest of Poland."

Already 2 weeks later, however, he is outvoted at a gathering of 300 delegates from charter committees from the entire country. Contrary to his wishes, the new union gets a nationwide Polish umbrella organization, with headquarters in Gdansk.

More than 3 million applications have already been received for membership in the new trade union, and by the time that the provisional leadership, meanwhile also including representatives of the far more militant Silesian miners--late in September--submits its statutes to a court in Warsaw for approval, Solidarity already represents more than 5 million persons. Walesa realizes that he is no longer equal to the task of leading such a mass organization, that he is overtaxed by the organizational problems connected with it, that he is running the risk of losing the contact with the base which is so important to him.

Others too on the executive, such as his Gdansk friend Gwiadza, know about the limits of Walesa's abilities, but tactical considerations in a struggle not yet won prohibit exchanging the successful figurehead.

Shaken to its foundations, the party for the time being has too much to do internally to be able to follow the difficulties in Solidarity. Party chief Kania to the point of self-denial is trying to fulfill the "social treaty" with the strikers approved by him.

As yet the party leadership probably also thinks that the pull of the new union might decrease, that it might be possible somehow to integrate or corrupt the movement. Even a warning strike by the leading union in Gdansk intended to speed up fulfillment of its demands is accepted calmly by the leaders in Warsaw.

At the Sixth Plenary Session of the Central Committee of the Polish communist party, party chief Kania after detailed self-criticism of previous economic and information policy, also takes a stand on the new trade unions. It almost sounds like praise:

"We note with satisfaction all the information concerning constructive initiatives or a positive attitude by the new trade unions. We are relying on the organizers seeing to it that the image of the movement is confirmed and formed in consonance with the agreement and the workers' interests. We count on their devoting themselves to the necessary protection of the workers' rights and also shaping their civic attitude toward the state."

Like it or not, Walesa, privately still aiming at a nonpolitical social partnership with the state, is stamped a junior partner of the party, a factor of order in the state--a prisoner of his successes.

Party chief Kania knows full well that only if the independent trade unions cooperate can his reform program take hold--industrial decentralization, full guarantees of the property of private farmers, strengthening of parliament and expansion of the rights of local authorities.

People in his own ranks are criticizing the concessions. Particularly Central Committee members Grabski and Olszowski, who as sharp critics of Gierek were removed from the center of power and were not taken back into the party leadership until the strike wave had crested, are accusing the party chief of watering down the principles of the party.

Walesa takes a long time to understand his new role, but when he starts on a tour through southern Poland in mid-October, he is a changed person. The very route he takes invites fatal comparisons: in the summer of last year, Polish Pope Wojtyla made almost the same stops when he toured the country. Like him, Walesa now seeks to immerse himself in the crowds.

In Krakow, where 30,000 supporters carry him jubilating through the streets, he puts up with being enthusiastically compared to the Polish national hero Tadeusz Kosciuszko who led the uprising against the Russian occupiers from Krakow 186 years ago.

Having been concerned only about "my trade union" a few weeks ago, Walesa now tells the Krakowers: "I too, Lech Walesa, want to pledge at this historic place to serve the people and to do all that you call on me to do."

In Czestochowa he lets himself be feted by the crowd with religious hymns; in the soccer stadium in Tarnow he parades around the place at the people's request so that everyone can get a close look at the new popular hero.

Suddenly Walesa also becomes openly political. In Nowa Huta he sharply rejects criticism of the Polish events by Prague Politburo member Vasil Bilak, saying: "What happens in Poland is our affair. We are in the process of establishing a Polish socialism. Everyone has his own problems. We do not want any kind of interference in our country's internal affairs."

In Katowice he scores the campaign started by party chief Kania against corrupt party bosses, saying: "This is not the time to throw people into prison. It would be best if they made a list on a sheet of paper of all that they have acquired illegally and then simply returned it."

But it is not what he says but the way he says it that causes the enthusiasm of the crowd. His sentences are short and his language is original, far removed from the functionaries' party jargon. As at the Gdansk shipyard so on his tour, he creates the impression of a man who believes in what he says.

The week before last, the state started to put an end to the openly displayed consensus with the union and at long last again to help "real socialism" to assert its rights; resorting to a legal trick, via Justice Koscielniak, it tried to leash the new trade union league on the occasion of the adoption of its statutes.

Without having discussed the matter with the unions, the judge changed the statutes as far as two vital points were concerned. In paragraph 1 he added express acknowledgment of the leading role of the party, and articles 32 and 33 concerning the right to strike were amended by him to read: "The organizing of a strike must not run counter to prevailing law."

In vain did the Polish party press appeal to the union to agree to this "compromise." The doves on the executive of Solidarity, who for a start wanted to exhaust available legal opportunities by lodging an appeal with a view to a possible revision and warned against jeopardizing what had been accomplished by excessively sharp reaction, were in for a bad time.

For the hawks on the executive made it crystal clear at a stormy session at the Gdansk headquarters that such attempts at manipulation had already deprived the works councils of success after the uprisings in 1956 and 1970 and most recently in 1970--an irrefutable fact.

The old distrust toward the attempt, experienced several times, to tie the workers' representatives again to the chains of the party after initial concessions made during a strike had cropped up again. While at heart probably rather on the side of the doves, Lech Walesa became the spokesman of the hawks.

There was a vicious circle with virtually no way out for either side. Party chief Kania knows only too well that the union can be useful to him as a factor of order and stabilization only if it remains independent from the ruling party as unambiguously as possible.

The leaders of Solidarity, on the other hand, know only too well that a Polish communist party tolerating in the long run a truly independent trade union which moreover exceeds it in numerical strength would be giving up its raison d'etre. Such a union would mean the beginning of the end of communist rule in Poland, or the first communist system with a real opposition would come into being.

Under such pressure, party chief Kania sought solace and assistance from the partner that had come to the party's aid several times in the past in warding off excessively liberal demands--the Polish church.

True, the Polish Bishops Conference, if only afraid lest it lose the support of the workers, in principle supported the founding of the independent trade union.

Yet, before ancient Cardinal Wyszynski started his trip to Rome to see the pope week before last, he had a long talk with party chief Kania. What these two dissimilar masters talked about remained a secret, but there are persistent rumors in Warsaw that Kania had requested that the pope address some moderating words of authority to Walesa and his union leadership which the faithful son of the church would then obey.

During Kania's report in Moscow, things apparently were done in a hurry, the Poles remaining only 5 hours. There was need for haste.

For Friday morning Premier Pinkowski had to appear at a meeting, brought about by ultimatum, with a 40-member delegation of Solidarity headed by Lech Walesa. The

most important demand in a new 11-point program: Retraction of the amendments of the statutes made by the court.

Solidarity emphasized its demands with a strike threat. Tools were to be downed throughout Poland on 12 November, the day after the national holiday recalling the end of the First World War and thus the new founding of the state.

At the start of a 14-hour negotiation marathon Pinkowski and Walesa agreed to do nothing until 8 November that might exacerbate the situation.

Last Friday night, however, the meeting ended without the drafted communique having been signed. Walesa's fear of winning appeared to have been justified.

Report on Solidarity Movement

Hamburg DER SPIEGEL in German Vol 34 No 45, 3 Nov 80 pp 148-149

[Article by British journalist Tim Garton Ash on the Gdansk headquarters of the Solidarity Trade Union: "'Here There Is Not Just Grumbling; Here the Steam Is Building'"]

[Text] "We demand registration of the independent Solidarity Trade Union." The red dye on the white poster has become a little fuzzy in the dull autumn rain, but the poster, as well as the demand, still stands.

"We just cannot trust the word of the government any more," says a young organizer of Solidarity in the Hotel Morski, the headquarters of the union. On the day of the historical compromise at the Lenin Shipyard he had still believed in the promise of Deputy Premier Jagielski: they knew "how Poles (had to) talk with Poles."

"The nicest day of my vacation." The homework comes from an 8-year-old girl, drawn for the people in the occupied Lenin Shipyard. In large child's letters it says: "We want free independent trade unions." The picture is hanging in the window of the dingy Hotel Morski; next to it the latest Solidarity news, perused and discussed by a crowd of people. There is a line of people patiently waiting for each new publication from early morning until nighttime.

Our taxi driver grabs may arm saying: "Did you see? Professor Kowalik will hold a lecture." He points to the announcement. On 4 November Dr Tadeusz Kowalik will hold a seminar about the "social and economic problems of trade unions"--apparently a very exciting piece of news for the taxi driver.

The urge for information can also be felt among the workers. On this wet October evening they are waiting at the hotel entrance for the latest leaflets--a huge line, neutral clothing, many leather jackets and blue peaked caps, serious faces brightly illuminated by a large lamp.

Knowledge is power. Apparently everyone knows that. Even the party: newspapers are gone in no time. Aware of this, the government is doing everything possible to restrict the information possibilities of the new unions.

The press spokesman of Solidarity, Gdansk writer Lech Badkowski, says so with a telling shrug of his shoulders. Just about the only thing he has managed to have printed in his new business card, with full title and two addresses. "MKZ NSZZ Solidarnosc, Gdansk, ul. Grundwaldzka 103" is the unofficially official address of the trade union league on the fourth floor of Hotel Morski.

The rooms of the unionists are small, there are a few pieces of cheap furniture, the cheap paint is peeling off--as one might expect would happen in a sailors hostel.

Badkowski knows from personal experience how the authorities have been keeping their promises since August. A Solidarity column edited by him was to appear in a Gdansk local paper. It has not appeared for weeks. The censors cut so much of it that it was not worthwhile any longer.

So the question of the legal status is the most prominent one. The union leadership is demanding deletion of the elastic clauses--the imposed acknowledgment of the "leading role of the party" and the nebulous language concerning the right to strike.

Dead tired and apparently only kept awake by many glasses of strong tea, leading unionists such as engineer Andrzej Gwiadza and his wife, Joanna Duda-Gwiadza--a Rosa Luxemburg figure or, as some say in the occupied Lenin Shipyard, a Joan of Arc--are looking for the limits of what is possible. And they are doing so in a country where the impossible has already happened and the unachievable has been achieved.

In this utterly unknown terrain there are of course differences of opinion about the best way. It would be a mistake, however, to speak of hawks or doves in the trade union leadership.

Whether Walesa voices the threat of a strike a little more softly or Gwiadza expresses it a little more harshly, in their basic positions the old charter members of the strike committee agree--just as their opponents in the party do.

They also agree about the strategic concept that disciplined warning strikes are a definitely usuful tool--but only to force the hesitant apparatus to keep the Gdansk promises.

Matters are more problematical as far as the intellectuals are concerned. Walesa and his unionists have been getting advice from three different, though interconnected, groups of "experts." KOR members, with Jacek Kuron in the lead, assist him on the left, the Catholic committee of experts, with editor-in-chief Tadeusz Mazowiecki at the head, on the right. A group of advisers dispatched by the episcopate, certainly less influential, is somewhere in the middle.

These groups hold forth behind the scenes in Gdansk. But tension is more likely among the intellectuals than between intellectuals and labor leaders. Tadeusz Mazowiecki, a Catholic cultural policy man inclining to caution as a result of personal experience, did not take a particularly strong stand for the rights of the imprisoned KOR members. According to one person in the know, he does "not always (get along) all that well" with democratic socialist Jacek Kuron.

But Kuron's three-page "open letter" in defense of the committee for social self-defense (KOR) is there to be read in the window of Hotel Morski, with a statement of support and solidarity by the Gdansk men next to it.

One gets the impression that Walesa knows very well how to guide his sometimes quarreling advisers diplomatically.

In addition the party and state leadership, evidently hoping for a split in the Solidarity leadership, has achieved exactly the opposite with its latest steps. Particularly the court coup of 24 October has again fully united the members of the Solidarity leadership--"shock therapy," says one.

In a cozy Russian hangout on Ulica Grunwaldzka a young Solidarity activist talks about a much greater danger. A graduate sociologist and involved in the university opposition since 1968, he is noticing an almost unstoppable "social pressure": the supply situation is not getting any better, and the workers so far have not seen much of the promised wage rises.

So they had hoped that the Gdansk agreements would at least bring about some change in the intellectual-political climate. A POLITYKA newspaperman put it this way: Since the government cannot give the workers much more bread anyway, they might be able to offer a little more truth instead.

So far this has happened only exceptionally. In fact Lech Badkowski believes that "after 35 years they do not believe the party paper any more, even when occasionally it writes the truth."

The workers, says the Gdansk man, feel they are being harassed by the government, and their disgruntlement and militancy are increasing. "Here there is not just grumbling; here the steam is building."

Only Walesa's strong personal authority prevents a wildcat strike by factory workers in Ursus. Walesa realizes full well the danger of new strikes breaking out in other industrial areas, such as the Silesian mines.

The pressure from below, from the trade union base comprising millions to the union leadership, will let up only if the government of its own volition--and very soon--gives tangible signs of good will. As far as the base is concerned, clarity as regards legal status and genuine change in information policy are even more important at the moment than more money and more food; that is the impression one gets from the many delegations and reports arriving at Hotel Morski.

So the question remains as to whether the Kania leadership is in fact capable of such a basic change. "If not..."; a Solidarity organizer does not complete the sentence.

At night, in the dark and in pouring rain, with only the front balconies with their red-white flags lighted, Hotel Morski looks almost like a liner. Solidarity gets up a lot of steam in its boilers. Like Poland itself, it is steaming into the unknown.

REACTIONS OF YOUTH ORGANIZATIONS TO RECENT WORK STOPPAGES NOTED

Problems Encountered by Young Inventors

Warsaw WALKA MLODYCH in Polish No 28, 13 July 80 pp 3, 10

[Article by Tomasz Kowalik: "Patent on a Square Circle"]

[Text] Six years of service in industry, working as an engineer and as a laboratory director, the author of 51 original designs, including 23 inventions and five patents--a person with this kind of record does not have anything to complain about. Nor, for that matter, does it sound the least bit strange to label this record a career. Ryszard Mellerowicz has no reason to fear that his inventiveness or his opportunities for making a living have come to an end. Something else is bothering him. Namely, the fact that the results of his inventions could be worth billions, but they are not, nor have they yielded any benefits for the state or the economy.

Right after he graduated from the university he started out working in the galvanizing plant of METALPLAST in Oborniki Wielkopolskie. His first invention, which he came up with while he was still doing his postgraduate practicum, was the subject of his master's thesis, and at the same time it was recognized by the awarding of patent no 91319. While he was still working as engineer and director of the galvanizing plant he made use of this process for etching metals that employs after-pickling solutions for retrieving metal chlorides. He now says that this process was already in use at the plant. He pushed it a step further and went along for the ride. Hardly anyone believes him when he says that it all started with his fondness for angling. As everyone knows, it is harder to catch fish in polluted waters. So, he started thinking about what to do about this, and in the meantime everyone else was talking about the need to protect the environment. "I was upset over all the pollution," he says.

To make a long story short, this was how he got started down the path that led to the invention which is now protected by patents in 16 countries, an invention which eliminates toxic materials and the need to buy expensive equipment to neutralize these materials. In addition, these wastes can be put to use for the production of raw materials that otherwise have to be imported--especially metal chlorides. As an engineer he has done his share, and he is still doing a little bit more of the same for good measure. He is still a young man after all. Other people say he was just lucky. In the meantime he has turned out to be an expert on patent

law and on a number of other branches of law as well. Although he now sums things up by saying that this is essential knowledge, he asserts that he almost turned out to be an engineer who knew how to construct an engine for a kind of motor vehicle that could be operated without a driver's license. But, as we all know, this would be a violation of many standards of community life and a personally risky business as well.

His first invention was followed by others. He was a prizewinner in several young people's competitions, and so the people at the new plant told him that he ought to take an interest in inventions. And so he did. He is the head of the plant's Technology and Rationalization Club. As an inventor, engineer and party member (his is the secretary of the basic party organization in his galvanizing plant) and, to some extent, as a private citizen, he is far from being pleased with what he has accomplished, even though the work he is doing is of the utmost importance in a social and civic sense. Can it be that an invention for which he has been paid should be left sitting in somebody's drawer? Should he be personally responsible for trying to persuade all the other galvanizing plants in Poland to use an idea that could save the country billions in the form of foreign exchange and raw materials? The laws that relate to this matter are an affront to his ambitions as an inventor, engineer and private citizen.

At the time of the Second Congress of the Union of Socialist Polish Youth [ZSMP] he took pride in pointing out that there were many people just like him sitting in the conference room of the Congress platform committee. And the proposals which they were submitting were similar to his own. And the problems that have gone unsolved for years and years are the same as ever. And yet the fact remains that some harsh words were spoken on this subject not only during the proceedings of the Second ZSMP Congress. Similar observations were made at many of the youth conferences held to evaluate the results of the Young Masters of Technology, Young Masters of Organization and Young Masters of Economization competitions, i.e., in forums where no one needed to be persuaded of the need to identify untapped resources and to promote progress. These harsh words were always spoken by the disappointed ones who--to be sure--had invented something, but who did not follow through with the development of their inventions. Here too we are treated to a rundown of the whole litany of thresholds, barriers, obstacles, regulatory snags, inconsistencies and absurd directives.

According to Ryszard Mellerowicz, as soon as work gets under way on the drawing up of design plans for many plants the procedural rules governing this work make allowances for design modifications and overdesigned installations which, as happened in his case, do not give inventors a chance to display their talents until after these installations go into operation. Why do these designers make allowances for blueprint modifications and not for the efficiency of the overall investment project? He was not the only one who asked this question while inspecting installations which, in his opinion, should have cost only a couple of hundred million if the designers had used a different technology, the very same technology which was patented by him. When he shows up with recommendations for process design modifications in galvanizing plants that are already in operation no one will have anything to do with him. Anyway, he has already done his share and made something out of it. Why is it that no one wants to turn a profit by applying his ideas--this is precisely what he cannot understand. There is nothing in the law,

be it in the field of occupational health and safety or technological progress, that says they cannot do this, and, legal considerations aside, common sense suggests that they ought to do so.

This in fact is an illustration of the reason why most inventions are left sitting in desk drawers. Only slightly more than 2 percent of all rationalization plans are ever applied for a second time or on a continuing basis. The law says that you can receive no more than half of the amount of the award paid out to you as an original inventor for the practical application of your invention. In the case of the Mellerowicz technique for extracting metal chlorides, any sum that is paid out for the right to use this technique would be recovered in a very few days, since the need to import raw materials and equipment is eliminated, the protection of the environment is assured, and make-work activities are cut back in many areas. The upshot of all this is that his patent is least well known in his own country, which ought to be taking advantage of it on a daily basis, while the fact that it was published in the Patent Office bulletin clears the way for shrewd businessmen abroad to make a big name for themselves.

There are more such paradoxes. Every inventor who has gone through the wringer of finding practical applications for his invention could write a book on this theme. Suppose a technological applications team sets out to find a practical use for an invention. The limit on royalties paid out on this basis is determined by the amount of revenues generated by the practical application of this invention over a one-year period. What happens if such a team, guided by the interests of its plant and even of the economy as a whole, is ready, willing and able to find practical applications for two, three or a dozen inventions every year? The law on royalties states that royalties can be paid out in an amount equal to two times the value of an inventor's salary. What if an inventor has a way of working that enables him to come up with more inventions? So the limits imposed on an enterprise's nonstaff remuneration fund strike a blow even against those inventors and applications teams who want to work, and even when inventions worth 10 million could be practically applied at a cost of no more than 100,000 and produce goods for the marketplace. What is worse, there are many financial regulations that are clearly at odds with the provisions of the law on inventions.

And this is why Ryszard Mellerowicz made the following statement during the Second ZSMP Congress: "I have developed some very simple methods for recovering imported raw materials from waste products. It turns out that those materials which some plants are discarding as waste products, thereby polluting the natural environment, others are importing. During the 6 years that have passed since I developed this method of mine, millions have been spent on inefficient and unneeded imports." This statement notwithstanding, he is not bitter, nor is he complaining. He does not want to be accused of being a sour-grapes inventor who is only out to make money. The law is the law. But as an engineer he cannot agree with this.

His paper was included in the official proceedings of the congress, and the participants acknowledged that what he had to say was true. Moreover, representatives of the Patent Office requested a copy of his statement. All the more so due to the fact that he advocated changes in the provisions of the law on inventions and in many other laws as well, laws which in effect obstruct the initiative of young inventors. How many young people, already disenchanted with inventing work, will

give up before these changes are made? Is is hard to say. For years now the youth movement has been setting some ambitious tasks for itself in this area, providing organized channels for the technological innovativeness of young people, and trying to publicize positive experiences in this regard. While the congress was being held, an exhibit was set up in the Museum of Technology that displayed only a portion of the accomplishments of these young people.

The appeals and recommendations submitted to the Second ZSMP Congress constitute a body of literature that ought to be studies by teams of experts, and they call for conscientious efforts aimed at bringing about the desired changes. For it is all but inconceivable that these recommendations would be allowed to remain mere words on a piece of paper, or that their importance would be ignored. It is not beside the point to mention that the ZSMP is entitled to call for changes in the law that will promote the growth of the young inventors' movement. What is bred in the bone will come out in the flesh.

Ryszard Mellerowicz is active professionally and in public affairs, and he is a resident of Poznan. He is a member of the executive committee of the ZSMP in his province. We talked with him about the possibility of utilizing the structure of the ZSMP Federation as a basis for setting up a joint program for promoting the drive for scientific and technological innovations. The technology and rationalization clubs of the trade unions, the committees in charge of running the Young Masters of Technology competitions, and the university student science organizations would participate in this program as equal partners. Many projects and plans geared toward the promotion of technological progress have been announced in every workplace, the Young Masters of Technology Competitions have produced many worthwhile inventions, and university and technical school students have written a multitude of theses and dissertations. But as of now nothing has been done to develop the vast majority of these ideas and inventions. Most of them, and not just Poznan, are gathering dust on bookshelves, in desk drawers and in archives. At the same time, it is a well-known fact that the curricula of the schools and universities and of management development courses are guilty of gross neglect when it comes to the study of the innovative process and the law on inventions. It is likewise well-known that students who are led by the hand in the universities seldom take up the study of subjects that would be beneficial to business enterprises. The themes of their dissertations and theses are geared more toward the benefit of some vaguely defined posterity.

All of this needs to be put in some kind of order and thought over. The moldy structures of the past need to be plowed under, and the barriers that segregate young inventors from the facts of life and technological progress need to be torn down. It will be a long time before we can think about honors competitions among theses and dissertations in technical schools and universities that are not geared toward meeting practical needs. And at the same time workers are responding to barely 20 to 30 percent of the problem-solving themes suggested by promoters of the rationization drives in workplaces. For a long time now subsidized research grants, postgraduate practicums and vocational apprenticeships have not been as productive as they ought to be in terms of concrete results, specific plans and designs aimed at boosting the quality and efficiency of production. We lodge eloquent complaints about turnover rates, resignations, and the placement of people in jobs that have nothing to do with their fields of specialized training,

while, at the same time, that field of endeavor referred to as inventiveness, or the opportunity to build a close relationship with one's place of work by performing specific services in its behalf, lies fallow.

Nor is the opportunity for personal financial gain a matter of minor importance. Instead of waiting in line for loans, many young people could be making it easier for themselves to get established financially and professionally by taking part in the innovation drive and in work aimed at finding practical applications for new inventions. But in the meantime the prizes handed out for inventions developed in the Young Masters of Technology Competitions are considered taxable. This does nothing to encourage young people to work actively toward coming to terms with the demands of their social and professional lives. Nor does it encourage them to get ahead in life by displaying their knowledge and by working toward specific professional goals, including goals having to do with work on inventions.

The participation of young people in the innovation drive, their adoption of a dynamic attitude toward themselves, toward their workplaces and toward their society, and, hence, their adoption of a creative outlook toward everyday life in general cannot be ordered, decreed or fostered by a group of experts. In order to achieve this it is necessary to create conditions which are conducive to these attitudes, conditions which must be created with the participation of those young people who are dissatisfied with their lot. The myth of the blessings conferred by a diploma and an official title do just as much to obstruct the spirit of innovation as do the various barriers written into the law, inconsistency, and the arbitrary and frequently petty decisions that sap the energy of inventors. The position taken on this problem by the ZSMP during the second congress was a start in the right direction of doing something to solve it--and not just for the sake of young people.

Poorly conceived laws that hinder the practical application of inventions or modest rationalization proposals and, not infrequently, personal spite and small-mindedness give rise to disenchantment among young people who try their hand at inventing work as a way to make a name for themselves and to display their knowledge, as a way to broaden their knowledge in response to inner drives and desires, and not just for the sake of appearances or in order to win a diploma or medal. As pointed out by many inventors and organizers of ZSMP programs in this area during the second congress, the current laws relating to this subject matter appear to favor inventors. It often happens that these laws are so well written that they cannot be enforced in practice. There is no system for separating out worthwhile inventions, or for exchanging information about things invented by others. There are certain cases, notorious by now, in which plans submitted by young people taking part in Young Masters of Organization Competitions for rationalization inventions were not acknowledged and regulations governing the Young Masters of Technology Competitions were ignored in many plants outside of the machine building industry. Patents are often a stumbling block for Polish enterprises, while at the same time the same patents are taken advantage of by foreigners. For years now the activities of the Patent Office have been subjected to criticism. It has been a long time since the work of enterprises such as "Posteor" have produced any worthwhile results. For years now it has been impossible to gain quick access to practically useful information in the form of the theses and dissertations of young technicians, engineers and PhDs, the kind of information that could be put to use immediately and that could be exported as technological know-how.

Even if somebody does invent the proverbial "square circle," he does not stand a chance of being able to prove that this is what he has come up with or that something like this could be an idea whose time has come. And the practical application of such an invention would be a hopeless dream. Many more worthwhile inventions developed by young people are on the drawing boards, inventions giving rise to projects worth billions or at least a symbolic zloty of financial return. And this is why it is necessary to look for new solutions to this problem--including new solutions to problems in the system for promoting inventions, since this system is the school in which young inventors are reared. We are always going to need inventors, and in large numbers as well.

ZSMP Position on Current Situation

Warsaw WALKA MLODYCH in Polish No 35, 31 Aug 80, pp 5, 21

[Article by Henryk Urbanowski]

[Text] On 21 August the Warsaw Board of the ZSMP met in plenary session. This was the first time any of the country's youth organizations attempted to spell out its position on current sociopolitical events.

Mounting economic and social difficulties recently sparked a series of strikes, and Warsaw's factories were not left out in this regard. Here in Warsaw these strikes served as a catalyst in that the workers here started to speak out loud about the shortcomings and defects of their youth organizations. Some strong opinions were also voiced on this score at the meeting of the Warsaw Board of the ZSMP.

The fact of the matter is that the initiators of the work stoppages in Warsaw were made up mostly of young people, some of whom were members of the ZSMP. It is true that during the first phase of these strikes the various units and components of the ZSMP took a neutral stand on these events. "Evaluating these developments in line with the Marxist methodology," it was stated in the keynote address at this meeting, "we must talk about their causes, and not about their effects." At another point the keynote speaker went on to say that, "But we cannot remain indifferent to the fact that in appraisals of the development of some of these strikes a view was put forward which made it seem as if young people were the most impatient group participating in these strikes, sometimes making demagogic demands without taking into account certain economic facts and possibilities. We accept the responsibility for the fact that some groups of young people, and sometimes isolated individuals, have taken this attitude. We are taking advantage of the conclusions to be drawn from this in our ideological and educational work, and we are stepping up our activities in this area so as to insure that the influence which our organization has on the thinking of young people will be as far-reaching as possible."

Everyone knows that the numerous shortcomings that exist in our economy and in the current policies of the socialist state have been mounting for a long time. These shortcomings have been pointed out on several occasions by working people and young people, for example at the reporting and election meetings held during last year's election campaign in the ZSMP. In many cases they were reassured by the answers they received. They were expected to take an understanding attitude toward

what were said to be the objective causes of the dislocations taking place in the economy. They acknowledged that these objective causes are real enough, but they also wanted to talk about internal bottlenecks and breakdowns. In the factories and in the university departments, that is, in those places where they knew best what was going on, young people came up with their own diagnoses which were sometimes heard out. But in rare, very rare, instances were any practical conclusions drawn from these diagnoses.

"It is too bad that so many of the problems brought to the attention of the management in the past had to wait for strikes to break out before they could be taken care of," said Zdzislaw Kalinski, head of the ZSMP Factory Administration at Ursus, during the discussion period. It is also too bad that the official propaganda counters concerns about the present and the future with stories about the otherwise unquestioned accomplishments of the past. The moral of this story was correctly summed up by Krzystof Wzorek, representing the General Walter Working Cooperative of Handicapped Persons, by quoting the oriental proverb: "If today we boast about what we accomplished yesterday, then tomorrow we won't have anything to boast about."

The fact that young people are by their very nature impatient is not surprising. But what led some of these young people to behave in a more radical manner? One of the reports read before the plenary session devoted a great deal of attention to an analysis of the causes of this problem. The reasons behind this behavior are of a complex nature, even though they can be broken into two basic categories. The first category boils down to the problem of the ineffectiveness of educational work among young people. In many plants, and on certain points this is true everywhere, the resolution of the Seventh Central Committee Plenum held in 1972 concerning the duties of the nation and the state vis a vis young people has been set aside to gather dust on library bookshelves. The wisdom of the ideas contained in this resolution has been supplanted in practice by mechanical, disorganized and improvised educational programs. And of these programs the only ones that were carried out were those aimed at resolving the most glaring of our present problems. This problem covers a wide range of issues. For the time being I am only pointing that the problem exists, but I will come back to it a little later.

The second category of reasons has to do with the long drawn out process by which management and the trade unions attempt to resolve social welfare, wage and employment problems. The report of the Warsaw plenum refers to this problem in the following terms: "This is not just a matter of dealing with our most important problems, such as the problem of providing everyone with a home of their own. There are smaller problems that are more disturbing and upsetting, even if these problems amount to nothing more than the fact that it is now impossible to buy a schoolbook satchel for children, or the chronic shortages of many basic goods that are indispensable in the raising of children, e.g., food items and manufactured goods, powdered milk, supplemental nutrients, modeling clay, and school smocks. This list of items in short supply is a long one. This is the case not because of any general incapacity on the part of our economy to produce these goods. Most of these basic items were more readily available during the years of national reconstruction and during the baby-boom period. The prices charged for childrens' goods are very alarming. These prices are not justified either by the cost of the materials used to manufacture these goods or by the labor that goes into their

manufacture. One is bound to conclude that manufacturers are taking advantage of market shortages in order to push through unwarranted price hikes. We recommend that the prices of childrens' goods and of other products necessary for the care of children should be verified by correlating them with manufacturing costs and they should be placed on the list of the State Price Commission, as was suggested by Comrade Gierek in his televised address to the nation. We think that our economy can afford not to make an excessive profit on the sale of these kinds of products. The fact that there is a shortage of childrens' goods on the market and that high prices are being charged for these goods runs counter to the policy of the party and state on young families and the policy geared toward providing special state assistance to mothers and their children. Social discontent among young people is also attributable to the lack of an adequate number of spaces for children in day-care centers and preschool facilities, and to official unresponsiveness to teh demands that have been raised for a long time now claiming that in the credit terms granted to young married couples allowances should be made for single-parent households. And until Comrade Gierek spoke out on this issue, no one bothered to respond to the demand calling for childcare allowances to be increased so as to make them a real and meaningful part of family budgets, and not just a symbolic income supplement as has always the case until now.

Nor was there any shortage of critical self-assessments delivered by some ZSMP officials, and adverse opinions were expressed on the subject of some of the union's programs. Certain practices occurring in the Young Masters of Economization Competition program, such as the falsification of statistical records, a practice that reinforces the cult of recordkeeping, came in for criticism. It so happened that these were the very reasons why in the annual summary report for this competition it proved to be impossible to review the alleged accomplishments of young people from three Warsaw districts. Also criticized was the lackadaisical way in which the Executive Board has been handling the formal and legal recognition of rationalization suggestions, as evidenced by its responces to suggestions for improving technical efficiency.

A representative of the Polish Optical Works, who also happens to be the head of that plant's public affairs study group, had some exceptionally pertinent things to say about the cult-like preoccupation with proliferating official programs. At this plant matters have already gone so far that it was officially announced that a competition would be organized to see who could come up with the best program for promoting the social and professional adjustment of young workers. Naturally, nothing came of this competition. At this plant nobody could care less about the findings of sociological and psychological studies, and the climate surrounding talks with the study group suggest that the answers they come up with concerning the massive turnover rate at the plant are determined in advance to suit the wishes of the management.

Unfortunately, nothing was said during the Warsaw plenum about the effects of negative examples on members of the ZSMP, about their apathy and opportunism, about the elitism of officeholders in the youth movement, or about the squandering of public funds on banquets. There is hope that in an atmosphere of objective debate these issues will be raised at similar ZSMP plenary meetings held in workplaces. It has already been announced that these kinds of meetings will be held. In insisting that others should live up to their responsibilities it is also necessary to be mindful of the fact that one has done a good job of fulfilling one's own duties.

In the report reference was made to the fact that some members of the youth movement aktiv are isolated from the problems that are being experienced by rank and file workers. "It is not right that aktiv members in some plants should be so dimly aware of the living standards of their organization's rank-and-file membership. We do not know enough about those young workers who are in difficult material circumstances. Some organizations are not speaking out with a loud enough voice when it comes to dealing with these problems at the plant level. Our organization, including its active members above all, must make a stronger effort to speak out for the cause of social justice and to combat displays of favoritism and cliquishness and unfair wage scales that are all too common in some plants. It must fight for honest performance evaluations that are based on facts and real performance records."

Only one of the officials who addressed this plenum performed an act of contrition and asked if it had ever happened in any plant that the workers' Self-Management Conference KSR had refused to endorse a plan thrust upon their plant by a ministry or association: "Where were we when unrealistic proposals were being laid before us?" It would also be a good idea to come up with an answer to the question as to what the ZSMP organization has done to help its representatives in the workers' self-management conferences decipher the deficiencies of an enterprise's performance concealed within synthetic plan indicators.

Parenthetically speaking, it was also fitting that something should be said with regard to the pricing policy proposals spelled out in the report, since there was no hint of self-criticism in these remarks. Most workplaces in Warsaw are entitled to act independently in setting prices for their products. People say that it is a good thing when prices are raised for goods produced by their own plant, since this provides them with extra money for premiums and funds. It is not a good thing when other plants raise their prices, since this hurts their position in the marketplace. How can we go on thinking and behaving in this way? In the future it would be a good idea for plant organizations of the ZSMP to make more consistent stands on such practices, stands which would indicate that they are mindful of the general public interest.

It is understandable that during the discussion period the participants focused most of their attention on worker wage demands. Krzystof Wzorek, from the General Walter Cooperative, reported on the situation in his plant. This plant employs many young people whose monthly pay does not exceed 1,900 zlotys. Due to a shortage of raw materials this cooperative is faced with the threat of having to close down by 15 September. "But we have kept on working," said Wzorek, "and none of this has caused any interruptions in our production schedule. Rather we have been talking over our wage problems during afterwork hours."

Some of the participants in the discussion period spoke out against automatic wage increases for everyone regardless of their actual performance. But it was acknowledged that these kinds of adjustments can be made as temporary corrective measures insofar as they are geared toward compensating workers for losses arising out of increases in the cost of living. However, it was pointed out by several of the speakers that sometime in the future the rules governing worker compensation should be completely revised. We cannot allow situations to arise like the one described at the close of the session's proceedings by Henryk Gawronski, then a secretary of the PZPR

provincial committee and now serving as minister of the machine building industry, whereby one of the people clamoring most loudly for equal wage increases for all was a young man working for the "Warsaw" metallurgical works who claimed that he too was entitled to a raise even though he could not show up for work every day, since he was building a house for himself near Sochaczew. This is at once grotesque and pitiful.

In a resolution that was adopted by unanimous vote all of those attending the plenum expressed their support for the actions being taken by the Warsaw organization of the PZPR. Of the many conclusions that were drawn during this session this one shows most fully what kinds of plans are being made for the future. This resolution states in part that, "we must think about things in political terms, we must learn how to draw the proper conclusions, how to react more promptly to signs of worker discontent, and how to act in a way that will help the working class resist the influence of people who do not belong to this class."

The debate that took place during this plenum did not cover all of the serious problems facing us. This debate should be continued openly, discreetly and calmly and at a time that is most suitable. All youth organizations, not just the Warsaw organization of the ZSMP, should make an honest and careful accounting of the consistency and perseverance with which proper and reasonable demands are acted upon.

ZSMP's Observations, Suggested Actions

Warsaw WALKA MLODYCH in Polish No 36, 7 Sep 80 pp 2, 10

[Article by Henryk Urbanowski]

[Text] In the wake of the wave of strikes that hit the Baltic Coast and that has started to subside since last Saturday the time has come to respond to the many basic questions on the minds of every, thinking young person who really cares about the fate of our country. Many such questions are now being raised, running the gamut from how could it have happened that the current policies of the party and state got so sidetracked in representing the real interests of society and its principal force--the working class to personal reflections about whether solidarity with the strikers, passive or active, was manifested in a proper way and to what purpose. Answers to many of these questions were provided by the Fourth Plenum of the PZPR Central Committee.

So, after all these instinctive, reflex emotions and actions, the time has now come to think things over more carefully and also to look to others for statements of support for our views and attitudes.

The aktiv of the Union of Socialist Polish Youth is also looking for such support.

Responding to this need, the Executive Board of the ZSMP scheduled a conference of the chairmen of the provincial boards and the members of the organization's central aktiv that was held on 31 August.* The participants attempted to answer these questions and looked ahead to the future by making numerous recommendations related to the future activities of the ZSMP.

This relatively late attempt to define its position on these matters was not at all the result of some passive wait-and-see attitude toward the events that were then unfolding. It was impossible to hold this conference earlier in view of the direct involvement of the ZSMP aktiv in the heated debates that were taking place in the workplaces where the front lines had been drawn in the battle to fulfill worker demands.

---

* The conference was held on Sunday, 31 August, in the Central School of the Aktiv of the FSZM [Federation of Socialist Unions of Polish Youth] in Srodoborow outside Warsaw. The conference proceedings were presided over by the chairman of the Executive Board of the ZSMP, Andrzej Koltek. The chairmen of the provincial boards of the ZSMP took part in the discussion period in the following order: Andrzej Schulz from Gdansk, Wojciech Kazmierczak from Szczecin, Wieslaw Sowala from Wroclaw, Wojciech Knocewicz from Walbrzych, Zygmunt Bober from Legnica, Marian Mankowski from Elblag, Tadeusz Kuras from Poznan, Jan Sienko from Slupsk, Zenon Wasilewski from Plock and Henryk Gryko from Lomza. At the close of the conference proceedings a statement was read by Ryszard Bryk, director of the PZPR Central Committee Department for Social Organizations, Sports and Tourism.

No one who spoke out during the conference claimed the right to pronounce authoritative judgments and opinions, nor was any attempt made to draft a joint statement reflecting the views of all the participants. This was not because it was impossible to reach agreement on the basic issues, rather it was acknowledged that the time was not yet ripe for this, that it was necessary to solicit the views of more diverse groups and gather together a larger number of reports that would make it possible to come up with a common stand. An attempt will be made to do this at the plenary session of the Executive Board scheduled to be held sometime in the next couple of weeks.

Nevertheless, many pertinent and useful observations were made at this conference, observations which can effectively stimulate all of us to think further about the role of the union, about ways to deal with the backlog of unresolved political, social and economic problems, and about needed changes in the way the organization conducts its affairs. I am going to take the liberty of giving an account of these various observations and remarks in the form of a series of more or less fully developed propositions. I am doing so in the belief that each of the problems highlighted here is a separate issue that ought to be addressed in a series of open-ended debates.

1. The credibility of the organization's program and of many of its activities was confirmed during the hot days of August, for in recent years the ZSMP has served as a genuine spokesman for the rights and interests of working people, especially so in the case of young workers.

It advocated and more or less effectively fought for an acceleration of the program for the construction of new housing. Throughout the long years of the housing crisis the ZSMP has always offered special assistance to the construction industry as a way to harness untapped resources. The result of this 10-year patronage program is more than 40,000 housing units in excess of plan targets. It is open to question whether this housing was really built in excess of plan targets or whether the ZSMP

did not just happen to take the place of some other organization in the line of those who had long been waiting for the same opportunity. And here and there this was indeed the case. But it is true that the vast majority of housing units built under the auspices of the ZSMP were in excess of plan targets. Most of this construction work was completed without any delays, even though the paperwork supporting this effort was haphazardly organized, thanks to the perseverance and hard work of the future tenants. It is also true that here and there those people who built houses for themselves with their own hands had these houses taken away from them by local authorities, thereby greatly prolonging the time it takes to award ownership titles to someone else. Or these same local authorities, by confiscating this housing, would add it to their plan fulfillment figures.

Many suggestions were made with regard to the question of improving social welfare services for families, i.e., building more day-care centers and preschool facilities, increasing family allowances for children and nonworking mothers to a level that would have some noticeable impact on family budgets, extending the period of paid maternity leave to 3 years, and reforming the system that provides credits to young married couples so as to provide coverage also for mothers and fathers who are raising children alone. Strong objections were raised against the high prices of childrens' goods and of products used in the rearing of children. Attention was called to the shortages of these goods. The pressure brought to bear from below by young people to get the ZSMP to do something about these problems was very strong. This pressure was most evident during the period leading up to the Second ZSMP Congress and the Eighth PZPR Congress.

Suffice it to say that many of the demands written into the platform of the ZSMP are identical to the socioeconomic demands that are being made by the striking workers.

The credibility of the ZSMP's platform and programs was put to a serious test in July and August. There were some plants in which ZSMP organizations had proved in the past that they were genuinely committed to solving the social problems of the workers. It was in these plants that ZSMP activists were in a position to provide leadership for the discontented workers and to participate in the process of guiding these strikes in a direction that was characterized by responsibility in terms of the behavior of the striking workers and political maturity in terms of the ensuing debates. But this was not the case everywhere. At this point it is still not possible to speak in terms of the total collapse of certain institutions and organizations. The personal prestige of certain individuals did collapse, and new people emerged to take their place. These are the very people who laid bare the dubiousness of their own authority, an authority which was based on nothing more than their official titles. This statement also applies to certain components and levels of the ZSMP, that is, at those levels where nothing was done to provide true representation for the rights and interests of the younger generation, where this kind of activity was paralyzed by opportunism and conformism and constricted by instrumentalism and pragmatism. Anywhere where courage and candor were lacking.

2. The credibility of the ZSMP's programs are also reflected in its strenous efforts on behalf of the rationalization of our collective efforts as producers. It has been working to this end through its widely publicized "Youth for Progress" program which is being constantly enriched with new initiatives.

The tone of the long ongoing debate on the proper functioning of our economy has been sober and highly responsible. This debate came out into the open in earnest during the First National Conference of the ZSMP Workers' Aktiv held in February 1977. At this point it would be relevant to quote some excerpts from a speech delivered at this conference by Jerzy Rasilewicz, chairman of the ZSMP Plant Board of the Gdynia Port Authority:

"In many plants in our province there are young people with an innovative cast of mind when it comes to production-related matters who are seldom promoted to management positions.....It often happens that many boss and foreman jobs are filled with people without any background in public affairs and without any of the skills that are needed to lead a team of workers.....We cannot afford to waste the talents and knowledge of young people in this way. These young people represent a large pool of untapped talent that belongs to us all....

"During meetings and discussion sessions with workers our members say that, given a properly organized work schedule and an atmosphere that is conducive to good interpersonal relations, we would be able to build a new Poland without having to work overtime, but rather merely by putting in an effective 8-hour shift!

"Young workers do not complain about having to do heavy work, rather they are more often bothered by organizational chaos. I do not have to persuade anyone of the extent to which this confusion raises production costs, adversely affects production performance, and demoralizes the workers!"

These words were spoken before the winter of 1979 laid bare in all its severity the organizational chaos of our economic life.

Later, at the Second ZSMP Congress held in May 1980, some even harsher words were spoken by Jerzy [presumably Ryszard] Mellerowicz from Oborniki Wielkopolskie. We discussed the main arguments of his address and the rocky road of his career as an inventor in the article entitled "Patent on a Square Circle."

Statements of a similar or more vicious nature made by young people number in the hundreds. The result of the decision by management to put off doing anything about the suggestions that had been made was that in July and August some of these young people came to the conclusion their only remaining option was to take extreme measures.

To some observers of the August events the fact that young people are taking part in these strikes on a massive scale, often joining those groups who initiated the strikes, suggests conclusions that are too far-reaching insofar as they allow these observers to accuse the ZSMP of running educational programs that are less than effective. The time has now come to refute these hasty judgments and shallow opinions. Young people now account for from 30 to 70 percent of the work force employed in industrial manufacturing plants, and this is the most impressionable segment of the industrial work force due to its very nature and also due to its social and occupational status. We should not expect to discern the causes of this crisis in the attitudes of these young workers or in their lack of a civicminded maturity, though this too is sometime questionable. Let us not confuse causes with symptoms. We should be pleased to note that this fortunately small number of extreme voices is being resisted by the mature intellectuals and observers of our political life.

4. As was always the case in the past, so it should be now that the youth movement ought to be bound by the rules of fair play when it comes to passing judgment on the trade unions. There is no point now in hiding the fact that in the past trade unions were close partners of the ZSMP. But we should avoid criticizing the ZSMP aktiv as a whole. Rather it is most important that we should now differentiate between the petty tyrants and satraps, and those honest officials who have not dishonored the mandate of trust placed in them by their fellow workers. And of the latter there are many.

Youth movement activists should get actively involved in the debate on proposed laws on the trade unions and workers' self-management conferences. And in so doing they should be guided by a knowledge of how to draw distinctions between the positions of those who are really promoting the near and long term interests of the working class and of those who espouse anarcho-syndilalist views.

When it was time to discuss specific issues the participants in this conference came out against solving the problems associated with the participation of young people in the work of the workers' self-management conferences and the trade unions along pro forma, institutional lines. Instead they proposed truly meaningful forms of representation. The youth committees functioning as adjuncts of the councils at certain levels of the trade unions hierarchy were declared to be outdated and ineffective.

5. The civic and political maturity of the youth movement, which is evident in most cases, entitles it to speak out on general issues of national affairs.

Accordingly, it has been proposed that a young deputies club should be established in the Sejm that would be able to influence the decisions made by our highest ranking national leaders by presenting the views of the younger generation. This kind of arrangement has been employed to good effect in certain other socialist countries (in the GDR for example). In Poland a similar function is performed by the youth committees attached to the national councils.

6. The prevailing belief in the efficacy of institutional solutions, an attitude which was evident during the events of August, may give cause for disappointment if it turns out that good will is lacking when it comes time to take meaningful actions. We have already come up with some fairly good formal arrangements when it comes to the functioning of the institutions of socialist democracy. But we have not been able to profit from these arrangements. As things now stand, many of these institutional devices are taking on the character of defensive-preventive arrangements, and in the long run they do not go far enough in the absence of a willingness to bring about genuine reforms that obviate the repetition of past mistakes.

The ZSMP needs to mount an ideological offensive that is directed both inward and outward toward all young people. It must do this not only in order to dispel the doubts of a more general nature that are coming into the minds of young people, to be sure this is extremely important, but also in order to do a responsible job of propagating class-conscious and civicminded assessments of current problems and events.

For a long time now there has been a noticeable lack of refreshingly formulated ideological and civic education programs that motivate people in a conscious and not just in an instinctive way to get involved in public affairs. It is hardly surprising that in some localities the activities of the ZSMP have been dominated by the cult of efficiency, pragmatism, the overemphasis on the cost effectiveness of programs, and small-scale "patchwork" efforts that are devoid of any broader scope or more general perspective on public affairs.

7. It is above all necessary that we should initiate a new debate on the effectiveness of the work being done by this country's educational system, and in this context we must reconsider the role of the youth movement within the framework of the FSZMP, with a view to strengthening its cohesiveness, militancy, and the meaningfulness of its activities. It would be a good idea to consider whether or not it would be advisable to get the ZSMP involved in the upper grades of secondary schools. The newly interpreted program for the education of the younger generation, as ratified by the PZPR at the Seventh Plenum of the Central Committee held in 1972, might be able to play a very helpful role in the current debate on these issues.

It is especially urgent that we should address ourselves to the need to introduce courses on political science, history, economics and the arts into the curricula of our vocational schools in order to promote the mainstreaming of the members of our young working class. True, this is a task for the ZSMP, but it is above all a task that is incumbent upon the state. Thus far neither the school system nor the ZSMP has had anything to offer in the way of formal courses in any of these disciplines.

8. Improvements are also going to have to be made in the working style and methods of the youth movement. Higher-ranking officials in the youth movement need to spend more time working with members of special-interest clubs. They need to seek the advice of these club members with regard to the decisions that they have made, and to give a hearing to the views of real producers, that is, workers and farmers. In their everyday work they must be guided by the conviction that they were elected to their offices in order to serve young people, and not in order, as it has sometimes worked out, to keep the ZSMP running so that they can score points for the advancement of their personal careers. It is necessary to restore a measure of unaffectedness and directness in interpersonal relations within the ZSMP. It is necessary to provide for greater flexibility in the implementation of the organization's program based on the real needs and interests of young people.

The realization of this goal will be furthered, quite properly to be sure, by doing away with what are referred to as the ceremonial and ornamental functions carried out by the ZSMP in the past. The democratization of the organization's internal life should tend to reinforce the real strength of the ZSMP, that is to say, the clubs, as its basic components, should become the backbone of the ZSMP.

There are bound to be countless other arguments that will be cited in favor of pursuing this course. For the debate on these problems has only just got started.

Resolution of Youth Aktiv at Lenin Steelworks

Warsaw RAZEM in Polish No 37, 14 Sep 80 p 9

[Text] At a youth conference held on 5 September 1980 the aktiv of the factory workers' organization of the ZSMP at the Lenin Iron and Steel Works adopted the following resolution:
In view of the current sociopolitical situation that exists in our country, young iron and steel workers have expressed a desire to participate in and to be the coauthors of the socioeconomic changes that are promoting the underlying processes geared toward the reform of all areas of our national life. We therefore deem it essential that a stronger sociopolitical voice should be given to the youth of our country and to their representative in the working class, the ZSMP.

It is in this connection that we set forth below the demands submitted by the younger members of the work force at our combine:
--to give real meaning to the participation of young people's representatives is local organs of political power and social self-government, and to insure their effective voice in the shaping and implementation of local socioeconomic plans;
--to pass a law that will define the rights and duties of young people and their organizations;
--to empower organs of the youth movement to submit legislative initiatives;
--to establish a young deputies club in the Sejm;
--to give official representatives of the ZSMP a voice in the deliberations of plant collectives and to institutionalize their participation by passing appropriate legislation that conforms to the law on enterprises.

We are presenting our demands as set forth above in the deeply held conviction that their implementation would be in accordance with the policy line of our party with regard to the partnership role of the youth movement and as set forth in the resolutions of the Seventh Plenum of the Central Committee held in 1972, resolutions which unfortunately have not yet been fully implemented.

We believe that the implementation of our proposals will make it possible to define the role of young people in the socioeconomic life of our nation to a degree that will be commensurate with our patriotic goals and aspirations.

INDEPENDENT STUDENT ASSOCIATION COMMITTEES FORMED

Meetings at Gdansk University, Gdansk Polytechnic

Warsaw STUDENT in Polish No 20, 9-22 Oct 80 p 5

[Article by Jerzy Siemko: "The Strike University"]

[Text] The Lenin Shipyard is assuming to role of a symbol.

The atmosphere of the city takes the afternoon newcomer by surprise. Nearly every one of its inhabitants has a diploma under his belt granted in August by that institution of continued learning--the "strike university," as it is known here. The strikes, the vigils in the shipyard or in front of the gate, the direct transmissions by Polish Radio of the debates of the Government Commission with the Interfactory Strike Committee [MKS], and above all the solidarity of the whole of society with every Gdansk inhabitant have left their traces.

Gregory is one of the many graduates of the "strike university." He works for the community to complete the artistic details of a plan for a monument in honor of fallen dock workers. He proclaims: "We want to continue the ties with the workers which were set up during the strike, to nurture solidarity and hope. Representatives of all social groups were present in the shipyard conference hall during the strike."

I found many graduates of the "strike university" in the building of the Gdansk University faculty of mathematics/physics/chemistry. It is here that the center of the Independent Association of Polish Students [NZSP] is found. The letters TKZ NZSP (for Provisional Founding Committee of the Independent Association of Polish Students) written on a window may be seen from a distance of several hundred meters. The Provisional Founding Committee has its office in room 226. Two rooms down is the PZPR Faculty Committee.

A small group of students is engaged in a discussion in the corridor. Among them are two members of the presidium of the Socialist Union of Polish Students [SZSP] Provincial Committee [ZW]--Tomasz Krzeminski and Aleksander Koprowski, and an aktiv of the SZSP culture section, Dariusz Nowaczyk. They have come to discuss cooperation between the SZSP and the NZSP in the area of culture and science. The rough draft of regulations is rewritten, the matter of tomorrow's meeting of the NZSP of Gdansk University [UG] is discussed. And so it continues throughout the day.

Andrzej Kasperek, a student of Polish studies at Gdansk University, informs me about the month-long history of the association. The initiative for calling together the NZSP originated on 27 August under the shipyard gate, where many students gathered. At a 1 September meeting of workers and students held at the university, Pawel Huelle read a student appeal; since that day over 1,000 persons have signed the appeal. The signers of the resolution demanded the return of autonomy to the university and the creation of an independent student organization of an apolitical character, among other things. The following day the Provisional Founding Committee, which now numbers 22 persons, was formed. It announced in its first communique that it "is conducting work on a draft of an independent, self-governing student organization, which, having an apolitical character, will participate in a real way in the scholarly, cultural and social life of the institution. The committee is of a temporary nature, and the results of its efforts will be reevaluated by the students immediately following the opening of the academic year in October of this year."

In a second communique of 9 September its credo was somewhat more broadly expressed. In answer to the question "What will become of the SZSP?" came the statement: "Let us make it clear from the outset: we are not out to develop the SZSP. We are of the opinion that this organization itself should define its position with regard to the above questions and should revitalize the forms of its operation (to the extent that it considers this appropriate or essential). In short: let the SZSP do that which it considers fitting for its members."

The initiators of the association admit that at present they do not have a complete program of action. It is to evolve out of discussions with the future members of the NZSP. The views of the present members differ on many issues. They are in agreement, however, about one thing: the SZSP has ossified into an institution and does not represent the youth movement. A copy of a piece of NZSP literature states: "The idea of a truly free and truly student movement which includes Marxists, Catholics and people of other convictions and beliefs can become a reality only if we, the students, implement it."

The idea of creating the association has been positively regarded at the university. During a 17 September meeting of nearly 400 students, the signatures on a declaration to join the association numbered approximately 120. The NZSP has the support of the Gdansk University Independent Employees' Self-Government and the rector, Janusz Sokolowski, who made a location available to serve the needs of the organizers.

Above all August brought about a radical change in the situation of the SZSP. The scene is the College Council of the Technical University of Gdansk on Friday, 19 September at about 2 pm. There is still a whole week before the return of the student body from vacation. Not a soul is around. I find a secretary, who tells me that the College Council secretary may possibly still turn up. And after a time Wojciech Jamrozik does arrive. I ask about the attitude of the College Council toward the NZSP. To be sure, some aktivs, among them even members of the College Council presidium, have gone over to the association. Despite this, the SZSP does not wish to fight with anyone, but to work together to develop in common that form of activity which best serve the student self-government. To this end the SZSP College Council of the Technical University of Gdansk called a meeting on 3 September, at which it presented its position. A parliament, which has a long-

standing tradition at the Technical University, could serve as a platform for the cooperation of all. It would be a body selected by all the students, independent of their affiliation.

The following day, among the members of the Agreements Committee--whose task is to propagate the idea of the parliament and to register student organizations which arise at the university--who were gathered for a prearranged meeting, there was one "representing himself alone," who was actively initiating a return to the concept of a Parliament at the Technical University, Szymon Skup. The chairman of the SZSP College Council, Jerzy Bogdanski, was also in attendance. Once again the question arose regarding the motives of undertaking the issue of a parliament several weeks before the beginning of the school year.

Skup stated: "The mood that swept over the whole city in August was an influencing factor. The Technical University of Gdansk has had a parliament for many years and by now it has practically become a legend. A universal lack of faith in the representative power of our mass organization, a crisis of belief in the organization as such and in the manner of its operation, skepticism concerning the possibility of the existence of an organization which is not run from within, the conviction that resiliency is lacking and the necessity of enabling smaller groups to play a part in making decisions about university matters activated this idea."

Of course I spoke with Tomasz Krzeminski and Aleksander Koprowski about the current student problems of the Gdansk SZSP. They do not hide the fact that "it is an interesting state of affairs." Initially there was the feeling that undertaking a dialogue with the NZSP is a common goal and that a plurality of views may engender a new entity. They are losing members, but until the present time, with 60 percent of the student body organized, only one-fifth at most was active. The association does not have a program of action; consequently, the SZSP cannot embark on a complete dialogue with them. The SZSP College Council takes the position that the student self-government should be represented by a parliament in which there would be room both for members of the SZSP and the NZSP.---"We have come of age rapidly in the past few weeks. The current situation has spurred a release of new motivations among factions of SZSP aktivs, increasing their activism. We react positively to initiatives of the creation of new organizations when they serve to rouse people from lethargy. We are convinced that the SZSP "will also contribute to this ferment."

Student Meeting in Krakow

Warsaw STUDENT in Polish No 20, 9-22 Oct 80 pp 3-4

[Article by Maria Paluch: "In the Beginning Was Chaos..."]

[Text] The posters announcing the creation of an Independent Association of Students (NZS) were already hanging at various points throughout the city on Friday. Then, as if by the touch of a magic wand, they began to disappear. Various hobbyists took part in the action and began tearing them down to enrich their own collections.

Monday, 22 September, 11 am at the Philology Institute on Grodzka Street, the posters said.

Students wearing white armbands stand at the entrance to the university grounds. They check the identification cards of those entering.

The meeting takes place in the open air because the building does not have a room that is large enough to accommodate all those interested in the meeting.

A few benches here and there. Most of the crowd stand. Employees of the Sociology Institute, stand at the windows, which face onto the square.

A banner hanging between the building and a tree announces "Democracy in Our Land, Independence for Organizations, Autonomy for the University."

The ones wearing the white armbands check the sound equipment. Their girl friends hand out an appeal to students published 10 September in Warsaw. "We propose the creation of an independent, apolitical departmental self-government representing the interests of all students. In our opinion, under no circumstances can the SZSP play such a role. Such self-governing bodies must arise in a democratic manner..."

Again the microphones are checked, and after a 20-minute delay the organizational part of the meeting begins. Everyone is asked to move to the left to allow the people near the gate to come within hearing range.

"My name is Jarek Zadencki...we would like to create an Independent Association of Students...we would like to work with independent trade unions..."

Everyone listens with concentration. The murmur of voices typical of large gatherings has completely died out.

"I note: The Founding Committee is not in authority, but wants to work. A new student organization is needed...

"The word democratization is now often used by those in power. The value of such words as justice and liberty is returning. External changes have also occurred. Society, which was apathetic and corrupted by the authorities, has come alive. It was seriously ill, but perhaps not incurably so (much applause).

"We are not permitted to enclose ourselves within the enclave of the university. We must come out against renewal. None of us has reneged in our responsibility for the fate of our country...The renewal process is a continuation of certain former tasks. We also had our share in these tasks. We took part in many activities...Until now they were 'underground' activities."

The speaker had in mind the activities of the Academic Renewal Movement as announced by the SZSP, an action against "student movements."

He continued after the applause, "The whole society, and we as well, have become aware of the fact that we should seek the subjectivity of society...The guarantee of this is organization proceeding from the ranks. But not governmental organization. The new union organizations will be in control of the authorities. Otherwise the government will become despotic...

"The SZSP may not claim the right to exclusivity.

"Its numbers are so great because it is the only student organization which has an available material base.

"It is ruled by the status quo. Only now has it submitted our former demands, which it had boycotted until now...

"The new organization, with the temporary name of the Independent Association of Students (NZS) must have a real right to take part not only in school matters...

"It can help to bring about a return of citizens' freedoms...

"The guarantee of the public nature of political and social life.

"The limitation of censorship.

"Truth in social and political studies and art...

"Respect for persons of other political convictions...

"A passport for every citizen.

"Abolishing the dividend for doing societal work.

"Reinstating those expelled from the university for their political convictions..."

"Are there such people?" shouts someone in the crowd.

"Employment according to one's training..."

The philosophy student standing next to me numbers this last demand of the Founding Committee among the "myths."

The Founding Committee believes that it will be assisted in the realization of the demands listed here and of all their other demands (which I do not list for lack of space) by the Free Unions of Scholarly Workers.

I look at the crowd. The people are determined--so it seems to me. They are quiet and sober. Emotions? I ask about them. I learn that this is not the time for emotions.

"Our initiative began with the Academic Renewal Movement (ARD)," says Marek Ciesielczyk, head of the ARD. Now we operate within the framework of the joint Founding Committee. Both the Inter-Factory Founding Committee (MKZ) and Walesa have given their support...On Friday the rector issued us an office and a telephone."

Borzecki, the representative from the MKZ, confirms Ciesielczyk's words about the support of the MKZ.

"The MKZ extends its heartfelt thanks to the student circle," says Borzecki. "While this is a vacation period which does not foster mutual activities,

cooperation has existed since the creation of the MKZ in Nowa Huta a week ago. At present the Krakow MKZ joins together over 100 work plants and over 100,000 people. This is a regionally operative force, like all MKZ groups throughout Poland...And we wish to maintain this structure...It guarantees contact with the masses. We are opposed to centralization of the union movement...The student movement derives its inspiration from the independent trade unions...A readiness exists for cooperation within the MKZ. A committee for cooperating with the students is to be called."

The meeting ends in a very uplifted mood: "You have the power to influence the student milieu. You are the salt of the earth!"

Next Prof Ryszard Luzny is the first to indulge in humor in the introduction to his speech. But he immediately turns serious as befits the moment.

"This is an opportunity which perhaps will not be repeated," the professor says. "The right to associate granted to the self-government is that right granted to students as well...I have followed university goings on for 4 full years. And I am pleased that these bold tendencies issuing from the ranks have become something universal. They are gaining a healthy color..."

Professor Luzny, who is aware of the fact that we are all being bombarded with appeals and exhortations, nonetheless takes the liberty of making an appeal to those gathered.

The appeal: for reason, reflection, and moderation--for gaining experience from what has happened--for avoiding extremes.

The high point of the meeting finally comes: the representatives of the Founding Committee have managed to get the final approval from the rector of the Jagiellonian University for access to an office and printing facilities.

A momentary easing of the tension: The voice from the microphone proposes the presentation of a plan of regulatory principles. The quiet returns momentarily.

"The association is independent of the authorities and other organizations...The self-governing and autonomous institutions of higher learning..."

And so on and so forth. At the request of the crowd even the organizational portion of the regulations is read.

"We cannot avoid extremes" resounds from the microphone, as if in answer to the demands of the professor.

An impatient wait for the delegates has begun. Students fill out forms. In the course of 20 minutes, nearly 200 persons have joined the new Association. The Founding Committee announces that a meeting of the Jagiellonian University Founding Committee and of all those who are willing to work will take place today at 8 pm at the Philosophy Institute. Finally the delegates return from the rector's office. A young woman, her voice indicating that she is out of breath, announces that the rector has given them an office on Golebia Street...

That evening at the Philosophy Institute.

It is fortunate that I have come early. At 8 o'clock the small room is full of people willing to work in the new organization. The morning's quiet has yielded to everyone's talking at once and outshouting one another.

We must get organized.

There are representatives of other institutions of higher learning. They are also willing to work. They will take the organizational knowledge they gain back to their institutions.

Certain regulatory statements engender doubts. Consequently a statutes committee is set up to work these things out...

"We should differ from the SZSP in that no member will be passive...there will be no 'dead souls,'" they remind each other.

They are in a fever of excitement, but only those who have newly arrived to work for the association. The Founding Committee members remain calm.

They have already been to the MKZ and have seen their legal advisor. At the MKZ it was decided that they should wait for the delegate from Gdansk. The legal questions have not been finalized because they are not, strictly speaking, trade unions.

"Later we will not be moved to act," someone says prophetically.

They went to the legal advisor concerning the registration of the new association. The minister has the right to register such an organization. The regulations are to be prepared and then are to be taken to the rector. The advisor promised to read over the regulations from the viewpoint of legal loopholes. Then they must send a letter through the rector to the minister. Within 2 months they should receive an answer. The 2-month wait dismays the volunteers.

Someone says, "I have the impression that we are acting illegally since we are signing up before the minister's approval."

"We are within the law, but unfortunately that is the official path," the committee members explain. After all, the rector has given his approval of our activities and has offered us an office.

Other committees are created. And there is a great dilemma concerning the joining together of the self-government committee with the committee working on a higher education law...

"The law should be well thought out and well formulated...

"We must announce our plan of student self-government to the SZSP. Self-government should be independent both of the SZSP and of us.

"The SZSP has announced elections to the self-government in which all will have passive elective rights. We must fight for active voting rights...We will present our lists. As a last resort--a boycott..."

The hubbub grows. The chairman of the meeting tries to gain control. Who would like to serve on what committee?

"The economic committee--no, because it will be under the management of the self-government..."

Remarks are made that the present work is mental work. "We must work conceptually to find forms of activism and of involving a large a group of students as possible."

An office of the press spokesman is created. The name of the spokesman will be given later, since this must be decided. It will be someone from the committee.

"There is still the question of the organization's newsletter," the volunteers remind the committee.

"There will be our newsletter and the Communiques of the Founding Committee."

This does not satisfy the volunteers.

"That's no good," a student behind me protests.

"Perhaps someone feels up to editing such a newsletter," the committee proposes. We ask all those interested..."

No one volunteers.

"I propose continuous tours of duty beginning tomorrow. We must have this. People will be coming and they must be kept informed...

"I propose various kinds of information for those who come. Information bureaucracy, or consultation..."

The hubbub grows. The dates of the organizational meetings of other schools are written on the blackboard. The committees set up the dates for their meetings, since "above all we must meet and settle something..."

FUTURE OF STUDENT MOVEMENTS DISCUSSED

Is SZSP a Political Organization

Warsaw STUDENT in Polish No 18, 11-24 Sep 80 pp 1,5

[Article by Andrzej Korybski: "Is SZSP a Political Organization?"]

[Text] It is possible that the very presentation of the problem may seem for many people to be a rhetorical maneuver. Why, we talk about the political substance of the whole youth movement, of which the SZSP is one of the basic units, and in the ideological declaration and in the statute of the SZSP the ideological-political nature of the student organization is greatly emphasized. So what is there to discuss?

Nonetheless, the problem is not a contrived one. You can find it in the talks of the activist group of the organization, in questions about its political strength, about the actual nature and basic planes of its operations. There are statements that the organization is gravitating towards more the model of a trade union of student society than a political organization. It is a striking thing that between everyday talks appearing outside the current of the SZSP's life and the assessments and opinions formulated at the forum of the organization there is a tremendous difference. In the organization's official life the problem of its political nature is usually buried in the enormous number of self-government, touristic, cultural, and organizational affairs. With increased strength it appears only periodically: during a conference or reports marking the end of a certain period of operation of a department council, college council, and so on. In the conference-reports style it has become accepted to speak and write about the SZSP's ideological-political activity in the form which has been smoothed out and brought into agreement with all the possible factors, free of any controversial assessments, bristling with stereotype phrases. Unofficially the current of the discussion on the SZSP's political nature is usually a denial of the softened assessments, ground down slogans, congratulating statements. Has the disparity perhaps been a reflection of the SZSP bodies' failure and the milieu's failure to accommodate one another? Or maybe too some of these assessments are inadequate? If so, which?

Talk about SZSP's political nature at the organization's forum is usually limited to ideological-political activity, and often the sole responsibility for the effectiveness of action is laid entirely at the door of the training echelon. Then there is usually also criticism of the meager effectiveness which that element has on the milieu, symptoms of triteness, and ritualism in its work. There is a call for shifting the lion's share of the ideological-political activity to action groups, making them jointly responsible for organizing political discussions and for the course of the basic forms of ideological training. New forms of action are brought in, but forms which after a certain time (for example as in the case of the college centers of political and creative work) return to the well-worn tracks of discussion with an establish subject, talks, camps for cadres, and, most important, reports. There is a report, which is appropriately thick and based on a host of figures, and there is also a favorable assessment of the top echelon.

I think that in reviewing the problem of SZSP's political nature, it is essential to go beyond the question of the ideological-political work. Let me explain, in order that I may be clearly understood: This is an important issue, but it absolutely is not adequate to give a full picture of the student organization as a political organization. It would seem that SZSP's rules and by-laws really do answer the question unequivocally: "It is the task of SZSP to provide upbringing for the socialist intelligentsia [and inculcate] the highest ideological and moral values..." But this is only one side of SZSP's political nature. Let us read further on: "SZSP is the representative of the interests of college youth." Although it is placed further on, this point nonetheless is equally important to SZSP's political nature and may be of even the greatest importance. If the hypothesis that SZSP is turning into a students' trade union does actually pertain to the very question of representing their interests, then this is proof not of SZSP's apolitical nature but of its political character. The question is merely political force and hence the organization's effectiveness in representing the interests of student society.

Returning to the initial problem, my decision is in the affirmative, but not because this is what the by-laws and other documents of SZSP say. The organization's political nature is determined by SZSP's role and place in our political system. The state leadership here is taken to be an instrument for organizing social action to create the desired social goods and to distribute them in the interest of the broad ranks of the social masses. In such a conceptualization, the effective functioning of the system of state leadership depends on the extent to which that system effectively coincides with the important social interests. This requires both a precise familiarity with the social needs and that organization of the actions of individuals and groups which will lead to their creating the greatest amount of desired social goods of adequate quality.

A separate question is the operation of the whole mass of links between the society and political decisionmakers. What is essential is an expanded political system encompassing efficiently operating sociopolitical organizations which express and represent the interests of specific groups and milieus.

For a Democratic Leadership

These are indispensable links not only acting as channels of information but above all informing those links about social needs and about the opinions and social assessments of state decisions.

Each of these organizations is a unit of political life, in a dual sense. First, by its activity it spurs the organization of efforts on the part of a given group in a direction consistent with the directives and decisions which have been drawn up by the managerial decision-making group and implements top general social interests. Second, it represents the interests of the various groups and milieus in the political system. Any ineffectiveness of these organizations' work which might result from their low level of activity or inadequate institu tional participation in political life gives rise to the danger of erroneous decisions. The weakening of sociopolitical organizations also leads to difficulty in the social masses' acceptance of state decisions.

I consider the student organization to be one of the most important sociopolitical organizations. It bears the obligations and right to express and represent the interests of several thousand college students and young academic employees. Student youth should participate through it in the drafting of general social and group decisions, and at the same time through the organization the political and state bodies try to structure appropriate sociopolitical attitudes among the student community.

Hence, SZSP's position and role determine the political nature of SZSP, in the sense of the two aspects mentioned above. This is related to the question: What sort of political force does the student organization have? How effectively does the organization operate as a body which represents, expresses, and accomplishes in part the interests and aspirations of the student community? What is the SZSP's effectiveness of ideolo[illegible] political influence, its effect on the structuring of stude[illegible]ociopolitical attitudes? The answer to this question show SZS[illegible]eal political strength.

Ideological and political activity is treated as only one plane of action, which is considered by many to be less important, for example, in comparison to self-government or cultural activity.

Various Planes of Operation

People make a distinction here forgetting that without the support of cultural and self-government activity the talks and discussion of a political nature become superficial and illusory. Attention is given to the lack of familiarity with Marxism not only among the rank and file members of the organization but also among the activists. Under these conditions the structuring of proper ideological and political attitudes would seem to be a risky undertaking at the very least. On the other hand, it is emphasized that SZSP is burdened with numerous responsibilities and is becoming to an increasing extent a vague organization in the ideological sense. This is linked to its indecisiveness, its lack of clarity concerning models and attitudes to be spread. There is criticism that its forms of political work are meager and sets goals in terms of quantities (for example, the number of students who are party members is one of the most important measures of the effectiveness of ideological and political efforts). Opinions are put forth that the orientation to masses born out of the phenomenon of formal membership, and the passivity of a large share of the student community are an impediment to the effort to give the overall efforts of SZSP any uniformity in terms of world outlook or ideology.

These opinions and similar ones concerning SZSP's ideological and political activity come up rather often in the student community, but they concern only one side of the problem, because if we were to limit ourselves to only this sphere, it would be easy to encounter the accusation formulated in the form of the remote theory of the "drive belt," a theory the essence of which is the fact that it runs in only one direction, from the political and state bodies to the organization, and from the organization to the mass membership. The next accusation could concern tendencies which sometimes occur in burdening the student organization with the role of ideological and political guide, because the structuring of ideological and political attitudes may be effective insofar as it is linked to the effective representation of the interests of its community. It is a question of having each student recognize the actions of the organization as his own, of internal acceptance of the actions of SZSP bodies. Hence, effective ideological and moral work can be conducted only out of a conviction that the efforts of SZSP groups are the same as and mutual with the efforts of the students as a group.

I think that the problem of the political nature of SZSP, seen from the aspect of expressing and representing the interests of the community, should be considered on at least three planes:

From the viewpoint of the system of the flow of information between SZSP bodies and the community,

From the viewpoint of the institutional framework under which the activation of the student masses takes place,

From the viewpoint of mechanisms of representing and accomplishing the interests of the community vis-a-vis the authorities of the institution of higher education and the political and state bodies.

I do not feel justified in stating general diagnoses concerning each of these aspects.

On the Basis of Much Research

in sociology* conducted in the student community, we can put forth a hypothesis concerning the ineffectiveness of at least part of the cirulation of information between it and the SZSP. This is proved by the scant familiarity with the "Ideological Declaration of SZSP" and its by-laws among students. The decisions of the department councils and college councils are usually known to only a narrow circle of activists and finally, in the distribution of certain goods and values, a few other interested parties. Under conditions where the actions of the SZSP bodies are not entirely clear, the membership's control over the decisions of these bodies is illusory. Nor is there any full understanding of how the various decisions of the organization are adopted in the community. At the same time it seems as though the channels through which members of the student community can inform the appropriate echelons of SZSP about their problems, aspirations, and expectations are not operating at full effectiveness either. An analysis should be made of the operation of the lowest-level links in the SZSP: the action groups and the various cells of the department councils. In my opinion it is here that we could find the greatest possibilities for improving the flow of information within the student community.

The flow of information is tied in closely with the question of activating the members of SZSP. There is much disturbing information resulting from research concerning the decline in the level of activity. A small number of students are active, and this activity usually goes on within a closed circle, operating under informal rules. The ritual nature of life within the organiztion, the unclear nature of the real mechanisms by which the organization operates, all this excludes the ordinary student intent on his studies, the student who does not accept these mechanisms, and the student who simply does not know about them. To make matters worse, there is no such thing as a dialogue between the SZSP bodies and the student community. The decided majority of SZSP students do not see their role in SZSP decisions and is convinced that they are powerless, helpless, in terms of having any impact on decision-making within the organization. Various research shows that from over 40 percent to about 80 percent of those questionned consider themselves to be passive members of SZSP, blaming this for the most part on the organization and, especially, on the atmosphere of passivity and lack of clarity concerning the work of the department and college councils.

In Such a Situation

The student organization ceases to be an effective agent to express and represent the interests of the community, because it is difficult to expect the SZSP leadership to be a body which knows everything and anticipates every situation. What reaches it is the not very effective work of the mass media operating in the student committee. On the other hand the situation in which the student organization is threatened with playing the role of this drive belt mentioned above is becoming more and more realistic.

This is the final problem: the means to insure that the SZSP will have an effective role in making decisions concerning the student community and the country, means which will make it possible for it to have an impact on the decisions made by officials of the institution and the state. Decisionmaking in matters of the institution of higher education depends to a large extent on the position and role of the collegial bodies of the college, because this is mainly where student representatives come in. If the life of the colleges is dominated by one-man management and administration as a style, and if there are practically no forms of community control over the actions of college officials, then this also predetermines the extent to which SZSP can decide about matters of the institution. The most important matters remain beyond the sphere of operations of SZSP, when it is not sufficiently active concerning them. On the other hand, the questions are trivial, inconvenient for the administration, or those for whose creation they are responsible are thrust on the organization and presented as justification (for example, the organization of the SPR's), but I would be being unfair if I did not note the frequent stubborn battles of the central, local, and community echelons of SZSP to ease certain problems and to bring about certain decisions. On the other hand, it often also happens that these battles, which enjoy a great measure of success, are presented to the community as the result of the action of the college, local, or central administration and officials. The organization does nothing to bring about a conviction for change, because it does not consider the representation of the community's interests to be its primary task. The organization does not give an accounting with the community. It should be added that many other matters of tremendous importance to the community (for example, the question of the employment of college graduates, changes in study regulations) remain beyond the scope of their operations.

Several Comments on SZSP's Style of Operation

I think that the SZSP has adopted those forms and stereotypes of action which so powerfully dominate our sociopolitical life. After all, it is difficult to imagine that SZSP could be treated as something in isolation. The organization is an integral part of the political system. Its successes and failures are at the same time to a certain extent the achievements and failures of SZSP. The activity of SZSP seen

through the eyes of the ordinary member is activity devoid of elements of conflict. It is flattened out. But after all there are conflicts. There is an abrasion of views within the organization, but all that is unavailable to the general membership, because it is played out in closed circles, far from the broader forum. The moment the problem comes more out in the open, it is presented as the only correct solution, without alternatives. This is the reason for the formal conferences, the flat addresses, the formal papers on the assumptions of the working sessions. The conflicts no longer appear. The general membership is only a passive element which accepts decisions previously made. The tendency to compromise is victorious. Such an operating style doubtless has significant virtues, but I should like to point to the weaknesses: the destruction of alternative solutions, the furthering of the passivity of the rank and file membership, turning collegiality in the phase of passive acceptance into a protective shield for the real authors of given undertakings, and the loss of the general membership's control over the actions of the leadership. In connection with the abuse of the procedure of collegiality, one does not know who is responsible for a bad move or a good one, whom to praise and whom to condemn. And one can always give the explanation that the one most correct decision in the assumptions got lost somewhere along the way, progressing through the various echelons to the mass membership.

I am aware of the fact that the problems mentioned do not exhaust even part of the questions which need to be taken up right away. I am treating my presentation as a view open to discussion. I would like to emphasize once again its main hypothesis. SZSP is not and cannot be a creature for itself alone or an organization directly solely to be an instrumental role vis-a-vis the political and state authorities. The latter is very important, but always in connection with the functional nature of SZSP vis-a-vis the student community. The political nature of the organization is the preparation of its members for life in such a form of our political reality and not some other, the shaping of certain ideological and political attitudes in the student community. All right. But the political nature of SZSP is also, and perhaps even mainly, an effective expression, representation, and realization of student interests to officials of the institution and political bodies and to state authority.

---

*Both this hypothesis and those presented later on in this article have been formulated on the basis of sociological research available to me, research which was conducted in the student community at least a dozen and some times during the 1970's. It is worth mentioning here, for example, the research on the student self-government movement conducted among Wroclaw students, research on selected problems of the political awareness of Lublin students, and research conducted at the request of the main administration of SZSP.

Possible Orientation Change

Warsaw STUDENT in Polish No 19, 25 Sep - 8 Oct 80 pp 1,4

[Article by Jacek Raciborski: "If Not Like That, Then How?"

> [Text] In the general national consideration of our country's future, students and young academic employees also have a role, without waiting for the start of the academic year. In the previous issue we published Andrzej Korybski's article, "Is the SZSP a Political Organization?" In this issue we are continuing the discussion on the future shape of the student movement. (See the following text and that on pages 4 and 5).
>
> We warmly invite further responses.

The academic year has not begun yet. The students are still scattered. They have not made a statement yet on the subject of their organization, but even now we can say that the scale of the changes in the country has shaken the student organization, placing before it a question on the order of: to be or not to be. This was caused by the workers turning against the functioning of the trade union movement in its former form. The scale of the political changes is also now creating the possibility for the public to come out and take a stand on subjects which used to be husned up, but this would be a simplification if we were to see only in it the possibility of taking a stand on the direction of reforming the student organization. Taking a stand now is worthwhile, necessary, because it is right now that there are real possibilities and at the same time the necessity of profound changes in its functioning. Now or never. This is no slogan. This is the truth.

The Socialist Union of Polish Students (SZSP), as an "ideological-political, mass, independent organization," has in no way fully confirmed the adjectives stated, taken directly from the by-laws and regulations. Its ideological and political nature have consisted of conducting apologetics concerning the changing directions of party and government policy and even the people representing it. But after all, this was not the concern of those who in March 1973 approved the documents creating it. The organization deserves the name political, if it plays an independent role in the whole system, if it has what is called a "political substance" and can effectively articulate the distinct range of student interests. Being an ally of the party, it cannot be its unthinking arm. Such a situation obviously is not the result of the errors of one activist or another on the Main Board but that of the political relations which have predominated up until now in the country. Nonetheless, such a political and ideological nature of the organization's authority has not been constructive. Obviously this hypothesis can be refuted by giving some sort of example of good activity on the

part of a discussion group, but it is not single instances which determine the nature of the organization. If 80 percent of SZSP members considered themselves to be politically passive (research conducted under the direction of Prof Malanowski at the University of Warsaw in 1979), then this would seem to be strong testimony concerning the extent to which the statutory tasks are being carried out. This organization has achieved a mass quality in its short history, but a declining trend in new membership in SZSP has been noted for some time. There are great differences in how the situation looks, depending on the college and even the department. I do not have any statistics at hand, but I personally know departments where only five or six students joined the organization out of 30 freshmen, although I also know those where 80 percent of the freshmen joined. However, the problem lies not in the numbers but in the quality. The basic masses of SZSP were not active. Many students do not remember having joined the organization at one time. This shows what a low level of identification with SZSP they have. The motives for joining the organization are not very inspiring either. The research already mentioned above shows that the predominating motives are those of individual benefits to be gained. Ideological motives were in last place, fourth, although the desire for social action was listed rather frequently as the major reason for joining, and this finding is encouraging. So much for the mass nature of the organization.

Independence, the next quality mentioned in the by-laws, also gives rise to many doubts. Independent of whom? The academic administration, the party? Surely not. Ironically, one could say of the students, yes, indeed independent. In the assumptions, which I agree with, where there is talk about action under the ideological and political leadership of the party, the reference is to our ideological option on behalf of socialism, to cooperation with the party in carrying it out, and to the fact that our actions coincide with its general political line. But this does not have much in common with implementing the detailed charges vis-a-vis the echelons of SZSP. Previous methods of directing the youth movement do not serve the interests of socialism. Youth activists must understand this fact too. Everything favors it. Independence with regard to the academic administration is a necessary condition for the organization to be able to fulfill its statutory obligations, but practice shows that things are not the best here either. Heads of the College Council and Department Council, usually the pets of deans and rectors, additionally are aware that their function and good relations with the academic authorities are a way of finding a permanent home in the institution or in the upper echelons of the youth machinery.

It is also worth pointing out that the college organization is financially dependent on the rector. SZSP has regulations insuring that it receives a share of the college budget, but the bursar and rector determine the timing and amount of the flow of money. Hence, a "good" head of a college council must keep this in mind too. There are many other, deeper reasons why activists are not very militant in the fight for the

interests of students. Fundamental, it seems to me, is the lack of continual pressure from the mass membership on the way its representatives handle community matters. This is related to the fact that there is little SZSP control activity and also that the machinery of the organization has become bureaucratized and shows a tendency to become autonomous.

It is not my intention in so short an article to present a diagnosis of the condition of the organization, because such a diagnosis after all would require broad discussion and a careful weighing of errors and merits. There is no one objective truth about the organization. It is the way students see it and assess it, and it is difficult to arrive at any unanimous agreed-upon assessment. What should be changed, and how, in order to maintain unity of the student unit, unity in the student community, because this is an important element of its strength? There may be many programs and concepts. The thing is their social acceptance, their authentic popularity, because this is what determines whether or not they are real. I am convinced that we now need to reinterpret the rules and regulations, which have been distorted in many places through practice, as we have shown above, but in many places too we must change them. In hypotheses only now I would like to present directions for concrete changes, which I feel to be essential conditions for obtaining moral authority in the student community and making this authority a lasting one.

1. There must be a departure from the fiction of SZSP action groups. They never really operated well, but the idea of them was propagated with a thrust worthy of a better cause. They could be effectively replaced by a dean's group council leading with an elder. The groups' elders would form the council of the year. The elder for the year should be elected for the whole year in direct elections. In this way a department council could be created. This is an old ZSP custom which simplifies and facilitates the handling of everyday student affairs related to study and environmental conditions. These organizational structures would encompass all students, regardless of their organizational membership and represent real student self-government. If the SZSP does not want to find itself outside these structures, then its members should try for the mandate of the whole group.

2. One of the conditions to the organization's independence is its financial independence. A major share of the funds should come from dues, the amount of which has remained unchanged for years and must be increased. In addition, in order to make the organization independent of the funds of the institution of higher education and therefore independent of its officials, a subsidy for the organization should come directly out of the central budget through the main administration. The department councils must have far-reaching financial independence vis-a-vis college officials too.

3. The need of the moment is a broadly conceived development of the student self-government providing the opportunity for all students to enter into real participation. This pertains especially to the residents' councils in the dormitories, the student club councils, and also the student scientific movement. It would also be worthwhile to popularize the notion of the creation of student scientific societies institutionally independent of SZSP.

4. The student organization, which is itself based on self-government structures, should call for the restoration of the self-government in the institutions of higher education, for example, through the appointment of all academic officials.

5. In the SZSP, as after all in other sociopolitical organizations, we are dealing with the officialdom of the machinery. On the other hand, it should be exerted through the echelons, that is, for example, with the college council being not the presidium but the plenum. In order to counteract the phenomenon which I call the degeneration of the representatives, which consists of the delegates' rapid forgetting of the mandate under which they are operating, I propose that the institution of the imperative mandate be created. Then the representative of the department or college has a strictly defined position which he is obligated to defend. This mandate should also be conditional, and could be withdrawn at any moment. These are the measures of direct democracy, measures essential at the moment of such a deep crisis of trust in the "representatives." The election mechanism in SZSP is not working properly. Important functions are assigned outside of it, for example, through the indirect election of echelon chairmen, the mechanism of coopting people, and the phenomenon of too frequently departing from secret voting. This has a bad influence on the moral authority of operating activists vis-a-vis both students and college officials.

6. The practical operations of the review committees and collegial courts by no means confirm the statutory principle of their independence. The review committees examine only what the chairmen want them to examine. In the same way, the courts review those persons who do not have "immunity" by virtue of their functions. The regulations are good, but some sort of discreet mechanisms influence of the organization functionaries on these links suspend the working of these regulations. Therefore these groups do not enjoy much respect, and it is for this reason that the people who wind up on them are rejected personnel, and in addition they are often incompetent. In order to correct such a state of affairs, it is necessary first of all for the students themselves to become active in the execution of the statutory rights of the review and judicial bodies.

7. In SZSP bureaucracy is progressing at a geometric rate. In the upper echelons there is no social activist group, and this means that the machinery must just keep on growing. Similarly, in the student cultural

clubs, full-time and half-time jobs and lump-sum payments are the only way of mobilizing people to become active. It is a vicious circle. It is necessary to create the positions and the payments, because there is nobody willing to work for nothing. There is no group of social activists here, because these are strictly hierarchical offices. It is probably a substantial share of the organization's budget which goes to maintain this machinery. A change in the style of operation, the programs, and the atmosphere in general in the community is another problem that could be quickly resolved.

8. SZSP distributes many different sorts of goods. There is general criticism that the criteria for distribution are not fair. Great priority is given to activists. There are frequent instances of using friendships. All of this is bound to irritate the students. It would be worthwhile to transfer all these goods for distribution to the self-governments in the departments. SZSP on the other hand should try to see that there are as many such goods to be distributed as possible.

All these proposals are based on the assumption of the unity of the student movement, but not on an assumption of uniformity. This must be a diversified movement, in order to take in the various spheres of student life and articulate the different sorts of needs, but at the same time its strength and place in the political system is a strict derivative of this unity. There is constantly the problem of a guarantee, and in the same way we can also class everything I have written about here too. In my view there are no assurances that changes will be made in the direction of democratization, except for this one: the mass activity of all students. If this activity does not appear and the passive, conformist attitudes are not broken down, then the most radical institutional change will not insure that the student movement is democratized. One bureaucracy will be replaced by another. This has been the way many basic reforms have ended. The project which I have presented here is not complex or comprehensive. A great deal could still be added. Maybe the whole notion is wrong. But if it should not be this way, then how should it be?

SZSP CULTURAL AKTIV SUBMITS POSTULATES

Warsaw STUDENT in Polish No 18, 25 Sep - 8 Oct 80 pp 4,5

[Article by Jan Tasak: "A Fragment of a Larger Entity"]

[Text] Central Camps of the SZSP Cultural Aktiv [COAK], usually held before the beginning of an academic year, gained a permanent place in the calendar of our student movement. STUDENT usually reported about the discussion between the authors and activists of student culture, a discussion going--admittedly--far beyond the narrowly interpreted framework of the student cultural movement.

This year's Central Camp of the SZSP Cultural Aktiv took place on 6 through 12 September in Chelm under unusual circumstances. There is hardly any need to inform anybody about the events which caused that situation, because at the end of this summer all Polish citizens became spontaneous creators of the life they share. The student movement, particularly its creative aktiv, could not avoid raising its voice for that national cause.

The effect of the few days which the student cultural activists spent in Chelm is reflected in "The Statement by the Participants in the Central Camp of the Cultural Aktiv." In accordance with the concluding pledge the representatives of the participants who had signed the COAK document presented one copy of the statement to our editors for publication in STUDENT. Only the volume of the statement prevents us from fulfilling the wishes of the signatories of that document. However, we publish its contents in a necessary abbridgment.

The Statement opens with an introduction outlining the circumstances at the inception of that document and the motivation guiding its authors. Among other things, the student artists and cultural activists underscore the following: "We have already expressed our anxieties and concerns in our previous artistic statements and in discussions in various forums, and warned against the irregularities developing in our country."

We hardly need to convince the readers of STUDENT that those are no empty words voiced expostfacto to fit the new situation in our country. After all, our editorial board also tried to support students' concerns, especially those expressed in the language of arts. Therefore we shall confine the gist of the introduction to a single quotation: "We are guided most of all by our concern for the future of Poland and of our circle." Presented here are specific postulates articulated in the statement.

In the most general terms, from the 38 postulates stipulated in the document (not counting subsections and annotations) we may single out a group of proposals concerning general democratization of Poland's life, a system of reforms related to a broadly conceived state cultural policy, postulates pertaining to the function of schools of higher education as well as the broadest group of proposals concerning the character of student organizations and the space open in them to artistic activity.

In the first group of postulates expressed by the COAK participants we encounter the problem of democratic social representation in all representative organs, with a focus on the necessity for the young polish generation to increase its participation in those bodies. Here we note also a postulate calling for a regeneration of the life of the party which is supposed to have the leading role in our country (the postulate expressed after all even more forcefully and broadly by the workers' groups) as well as a related task to make our political life less theatrical and to promote such democratic mechanisms as dialog, management and responsibility.

The paucity of postulates addressed to Poland's most generally conceived problems must not be interpreted as an expression of a lack of interest in these issues on the part of the student cultural aktiv. In view of the postulates endorsed by the workers, the student artists and cultural activists concentrated on an area of problems closest to them, namely, on student and cultural affairs.

The postulates and proposals concerning social control of Polish cultural development focus on the question of our national culture, in other words, on the state cultural policy. Consequently, the statement demands that mass communications media, publishing policies, and awards of cultural values also be subjected to social control which should be exercised by representative democratic organs, and in particular, also by an elected council (in which representatives of student organizations would participate). A far from negligible proposal, echoing the views of many other media, underscores the necessity to increase governmental allocations for culture, among other things.

Focusing on the immediate sphere of influence in our higher education (regarded as a part of our educational system), the authors of the statement strongly emphasize the necessity to democratize the academic system. On the one hand, they call for greater autonomy of institutes of higher learning (among other things, by restoring elections of their authorities and giving them greater powers, whether in instruction or research), and on the other hand, they vigorously stress the necessity to enable the students themselves to be partners in the administration of their educational institutes. The postulates concerning student participation in the administration of their schools are presented in rather broad terms; among other things, they call for organization of a democratic student self-government, and discuss the method of participation in collective control of educational institutes, as well as statutory guarantees granting the students the right of effective representation.

The categorically formulated postulates in that group deal with changes in the curricula of higher education. Furthermore, they call in general for updated and individualized program of studies, especially for a reform of the humanities and social studies where the "seasonal character" of propaganda and other concepts is

felt much too frequently. Finally, some of the postulates address themselves to the problems of admission into academic life which have been provoking doubts for a long time (abolition of rectors' seats at examinations in favor of admission and determination of qualification for study exclusively on the basis of the examination, etc.).

The opportunities open to college graduates are correlated to a certain extent with the course of study itself. In six specific postulates designated as "social living" the authors of the statement focus their attention on problems of appropriate employment and correlation of the system of priorities in obtaining a professional start with the results of studies. Of vital importance is the proposal dealing with facilitation of the graduates' start in professional life (jobs, residence, etc.).

The most extensive group of postulates articulated in the Chelm Statement concerns the student organization itself, especially its obligation to stimulate the spiritual life of the academe, and to sponsor every form of student cultural activities. With the sequence of the postulates slightly rearranged, we find here a voice advocating democratization of the student organization, and calling for more interest on the part of its members in affairs of the SZSP, more efficient work, and greater responsibility on the part of the SZSP leadership. Specific postulates suggest a change in the SZSP electoral regulations (direct elections to faculty and college instances, secret ballots in personnel affairs, introduction of a principle limiting the tenure of administrators with concurrent reduction of the term of tenure, and finally, more competent representative bodies and control organs of the SZSP).

Because it is quite certain that student forums will discuss the postulates many times--they must be regarded as a mere fraction of the proposals and views of the students.

This fraction was expressed by the cultural aktiv whose most specific demands are articulated in special proposals concerning the performance of the Cultural Commission at the General Administration of the SZSP. Proposals of changes in the sphere of competence, composition and types of activities of the Cultural Commission at the SZSP General Administration have caused some anxiety--mainly because they are focused on only one level of the SZSP organizational structure (and also of the students' cultural movement), turning organizational solutions into something of a fetish and ignoring the most essential problem of fostering the involvement (including cultural activity) of broad masses of students, as well as creating mechanisms that would make it possible to take advantage of the initiative arising from the rank and file of the organization.

A prominent place in the statement was given to postulates stipulating the tasks of the SZSP in the area of patronage in the art movement. Thus, it was confirmed that "the SZSP must do its best in exercising its patronage of the art movement, offer the best possible organizational and technical opportunities, and above all, a sense of security to authors entering their works in our program and participating in citizens' discussions about ourselves, our organization, our society and our country."

In those terms many more tasks are articulated for the student organization. Other proposals call for mediation in the implemenation of the students' postulates by the Ministry of Culture and Art (among other things, to establish a scholarship fund for young authors in the budget of the Ministry of Culture and Art, to facilitate the professional start of authors remaining within the sphere of student culture--and on the peripheries of the authors' guild system of organization of professional creativity--and to offer more material security for the activities of student art organization). An evidently fundamental proposal deals with stabilization of a mutually binding framework of cooperation between the SZSP (as the representative of the student art movement) and the General Bureau for Control of the Press, Publishing and Entertainment--narrowly linked with the postulated law on censorship.

An ample space in the statement is devoted to necessity of broad-based popularization of the student art movement. Thus, among its postulates we find recommendation of specific methods to popularize student culture, as well as some proposals that are more general from the point of view of student life, dealing with intensification of the students' own publishing potential (for example, establishment of the SZSP's own publishing house, and a guaranteed right to appoint adminstrative cadres of the SZSP to existing student publications). One part of the proposals outlines new institutions of the student cultural movement (for instance, the Organization of Cultural Studies) whose establishment should guarantee, according to the opinion of the authors of the statement, correct development of student creativity and intellectual thought.

The document which we present here considerably abbreviated is quite evidently incomplete, in many sections excessively general, and occasionally again overly detailed. We shall avoid polemics with some doubt-provoking theses in the statement, because we realize that this is but one of the first voices of the Polish students' organization on an issue that is not a matter of indifference to any Polish citizen. We may be certain that in the immediate future a much wider body of the SZSP members and students outside that organization will also express their judgment on issues introduced by the students' cultural aktiv in Chelm. In all probability, the signatories of the statement are aware of that. We regard their voice as an important expression and as an initial pronouncement by Polish students on the most meaningful issue, as continuation of the powerful words hurled in our factories, ironworks and shipyards--a voice in Poland's interest.

MINISTER GORSKI MEETS WITH KRAKOW STUDENTS

Krakow GAZETA POLUDNIOWA in Polish 15 Oct 80 pp 3, 4

[Article by Teresa Betkowska: "The Minister and the Students"]

[Text] A loudspeaker blares: "...we demand,...we request,...we want...." From the trolley station, Municipal Transport Enterprise passengers turn toward the building to look.

Dozens, hundreds of students are going into the Rotunda, some with SZSP [Socialist Union of Polish Students] emblems on their sweaters and jackets, others with the green badges of NZS [Independent Association of Students], still others with just an identification card. No one will be allowed in the door without one.

It is crowded in the corridors, and in the coffee shop and the stairways as well. Images flicker on television screens, and the clamor of loudspeakers is mingled with voices. Everyone is pressing forward to a room on the second floor, the main hall. There, at noon on 9 October, a meeting is to begin.

It is exactly noon. There is still nobody at the long table on the podium. A girl with a brown cap hurries to the rostrum. She reads a statement on what a student organization embodying democracy and autonomy should be like. The room is in turmoil. There is applause, loud applause. The girl does not stop even when the persons they are awaiting press through the middle of the hall to the table with the green cloth. They sit down and listen; everyone listens. The NZS representative leaves the microphone and her place is taken by Maciej Brzezinski, head of the Krakow Board of the SZSP, who thanks the previous speaker for occupying those at the meeting while they waited for Minister Janusz Gorski [minister of science, higher education and technology] and representatives of other ministries.

"We planned this meeting," says Brzezinski, "in order to present our views regarding the demands presented on 18 September to the minister, to Premier Jozef Pinkowski and to Central Committee First Secretary Stanislaw Kania. These demands are contained in the 17 September resolution of the Krakow Board and lay the groundwork for the organization's discussion with the student community. I suggest the following program for today's meeting: first the minister will speak, then there will be a discussion, after which we will work out a joint communique specifying the time, the proceedings and the method of resolving the demands."

There are cheers, whistles, shouts and countershouts. There is an air of uneasiness, of tension in the hall. Not everyone here is trustful, and not all are of like mind.

The minister stands before the audience.

"Colleagues, at the outset I must thank you warmly for your invitation." (cheers) "I am aware that this meeting may be less interesting than--shall we say--2 years ago." (loud applause, shouts) "But, my friends, I understand that we will be deliberating in accordance with democratic practice. These practices call for respect for others' opinions--at least, this is my view. And I have had good training in this respect. If i interests you, my mentor as a scientific worker was Professor Edward Lipinski. I worked with him until be became emeritus, and then succeeded to his chair." (Here the minister spoke of his scientific work, his publications, his work in the ministry and the like.) "I have come here, to you, full of humility." (Cheers) "I have! As Comrade Kania taught me to do." (loud applause) "I have given some thought to the procedure for the meeting. As you know, I am a professor, and sometimes professors like to ramble. This is a normal practice. But please don't lose patience right away: there is a purpose in my opening remarks. But I don't want to speak longer than 45 minutes minutes...."

The appointed time passes, and the minister is still speaking. Questions come from the floor, and he answers them. Laughter and sarcastic remarks can be heard in the room. Sometimes the audience is indignant, sometimes the minister is. There are encounters from which the representative of the government does not come out entirely unscathed.

[Question] "Mr Minister, why do you rely on statistics?"

[Answer] "Because they get the point across."

[Question] "More conjuring with numbers? More success propaganda? And what if the material base is growing in terms of figures? You should pay a visit to the schools in Krakow."

[Answer] "My friends, it's not as bad as that! Let me give you an illustration: we are building the Institute of Polish Culture [Institut Polonijny] and the Molecular Institute...."

[Question] "And at the Institute of Pharmacology, wall sections are lying around on the ground, there are no places in the student hostels, there are few dining rooms...."

[Answer] This kind of talk won't do. We are far from thinking that in the last 10 years we have done nothing to develop higher education in Poland and that we have simply taken it apart. Certainly there are shortcomings: we know that. We want to eliminate them. We are developing a new law on higher education."

The minister says that the schools themselves can formulate the program of instruction, the students deny it. He says that there is autonomy, but the

schools are not capable of utilizing it; there are protests from the floor. He says that the scientific research programs are not dictated; the audience has a different opinion.

"As education becomes a common good," says the minister, "you must get used to the fact that with a diploma you will be getting lower and lower positions. Poland is overproducing educated people."

[Question] "Mr Minister, we do not belong among the advanced countries at all in terms of the number of people with a higher education. And educated people are informed people."

[Answer] "We don't have jobs for them, and that is the truth."

The speakers speak both at the microphone and from the floor. They speak of a lack of textbooks, lecture notes, and books in general, as well as of the low level of teaching, of poor organization of assignments, and of overloaded programs.

[Answer] "I know, I agree with you. Three years ago I said that in our education work we are behaving like a locomotive with a large head of steam: it whistles like the devil and does not go anywhere."

It is time for the demands. The minister addresses those presented by the Krakow SZSP Board, reading them one at a time and discussing them--for the most part briefly. "We are moving in that direction" (regarding increased autonomy for the schools). "I agree, and we are already implementing it" (regarding instituting the election of rectors and deans). "I agree" (regarding updating of the principles on which disciplinary and dismissal commissions act). "Their autonomy is complete, so I do not understand" (regarding increased autonomy for schools in choosing their research programs).

"I have my doubts" (regarding the elimination of preference points in entrance examinations). "We are considering it" (regarding the acceptance only of "superstars" [olimpijczycy] without examinations). "We haven't the foreign exchange" (regarding guaranteeing access to all scholarly sources published in this country and abroad). "It's under the jurisdiction of the local governments" (regarding the guaranteeing of a sufficient number of places in student homes and dining halls for those who need them). "I am waiting for suggestions" (regarding a fundamental reorganization of the health care system). "That's your affair" (regarding an independent student press). "I'm sorry, but I'll argue against this, because I have a different opinion" (regarding the system of performance of military service). "We don't deny it; today's meeting attests to that" (regarding the right to public airing of opinions).

There are a good many more demands: 15 regarding the political situation in the country, formulated in the spirit of the agreement entered into on the Baltic Coast, 12 regarding academies, matriculated students, and the young family; and 8 aimed at guaranteeing implementation of the organization's requests.

[Question] "Mr Minister, you have been speaking for 2 full hours, and you have disposed of the most important matter, our demands, in a few sentences, just as if you received them at 5 minutes to 12 and had not yet had time to familiarize yourself with them."

[Answer] "That is because they are too sloganistic, too general. What does this mean: 'Fundamental reorganization of the health care system?' What does this mean: 'We demand a reanalysis of previous work in the administration of justice in Poland'--that if one wife cheats on her husband, all are unfaithful? And you want to go through all the cases that have been on the court calendar! No, my friends. But if there really are some cases about which you have doubts, please ask, but be specific."

[Question] [Mr Minister, you have been cracking jokes and telling anecdotes and treating us as if we are of little importance."

[Answer] "Why do you think that? I have dealt quite clearly with nearly 90 percent of the demands."

Emotion reigns in the hall. A discussion begins. Members of SZSP come to the microphone. But NZS too wants to speak:

"Why did no one invite us to today's meeting? We are already organized. It is true that we are not yet registered, but there are already thousands of students in the Independent Association! This cannot be treated as a trivial matter. We have draft bylaws and a program. But we were not able to get them printed because we have had trouble getting access to printing facilities."

After other speakers, Andrzej Bozecki, representative of MZK NSZZ "Solidarnosc" [Interfactory Founding Committee of the Independent, Self-Governing Trade Union Solidarnosc] has the floor.

"We have already met. We were in the neighborhood of the Jagiellonian University, on Grodski Street, when the Independent Association of Students was formed. Representatives of SZSP have also come to see us to propose cooperation with Solidarnosc. Let me explain the position which the Interfactory Organizing Committee has taken inthis matter: we have promised to cooperate with NZS because we see in the process of formation of this movement many analogies with our labor movement. But we do not refuse to cooperate with any social organization whose program shows that it is concerned with the good of the country and of the working people. Accordingly we have suggested to the representatives of SZSP that they start by developing a basis for agreement in their own sphere, over the years and in their departments. If there is a possibility for developing a unified program and for carrying it out through joint actions, this must come from below, as is the procedure in our union."

Bozecki speaks slowly and stresses the words in which he calls for reasoned action and thought. But he appeals especially to the young students not to ruin what has been achieved by the people in Gdansk, Szczecin and Jastrzebie by any ill-conceived actions or strikes.

Applause follows.

The next speaker: "On behalf of NZS I would like to deny immediately the rumors intimating that we are preparing for a strike. This is not true. Rather, before today's meeting we heard that SZSP has a plan to declare a strike in one of the departments of Jagiellonian University."

There is silence in the hall: consternation. Nobody denies the report. Then? Disputes, reasonable voices and not-so-reasonable voices. At times, debating pure and simple.

The fourth hour of discussion passes. Another speaker from the floor:

"We didn't come here to make conversation; we came to resolve specific matters." (Loud applause for the speaker). I think that we should now begin the second part of our meeting, in which we will have detailed discussion, leading to motions and resolutions. Accordingly I suggest that we begin that part of the discussions, with a much smaller group, downstairs in a specially-prepared room, which is wired for sound and has television cameras. Anyone who is interested in the course of the subsequent debates can listen to what is said at the table when the representatives of students of all the schools and representatives of the ministries sit down together."

Again an uproar. NZS is not prepared for the discussions, because nobody, it says, told it about them. Not being a registered organization, how can it participate officially? Who should be "designated" its representative? NZS suggests putting off the discussion until another time.

Again many young people come to the microphone. There are further disputes. It is approaching 5 pm. A young man comes up with a card.

"I would like to ready an important news item which has just been handed to me: 'Polish Radio has reported that this year's Nobel Prize for literature has been won by Czeslaw Milosz.'"

The loud applause in the hall reaches its zenith. The barriers have disappeared. Now nobody can contain his emotion. Minutes pass and the joy does not subside.

Minister Gorski makes a decision: the students who are now in the rotunda may consider themselves excused from assignments today.

The discussion continues.

It is 6:40 pm. Maciej Brzezinski announces the end of the meeting. The minister and department directors go to the hall downstairs, as do the SZSP representatives. A long discussion begins regarding all matters included in the demands, but also concerning those which are particularly important in the life of the academic community. All are tired, some very tired.

It is 8:40 pm. I briefly leave the hall with the spotlights, cameras and microphones. I take another look into the coffee shop: here, over meatballs in dill sauce, a few people are watching the television monitors. And the rest? They are playing cards or pinball. The sound of guitars and singing is heard from the hall.

At 10 pm the meeting with the minister concludes after 10 hours.

ARTICLE ON FREUD AROUSES CONTROVERSY

Bucharest ERA SOCIALISTA in Romanian No 19, 5 Oct 80 pp 51-52

/Article by Dr Leonard Gavriliu: "Accuracy of a Review and Ethics of Scientific Work"/

/Text/ Under the title "Accuracy of a Criticism and the Standard of Scientific Truth," Dr Tiberiu Vlad published a review in ERA SOCIALISTA No 15, 1980 of my Romanian version of three of Sigmund Freud's most representative works ("Introduction to Psychoanalysis," "Lectures on Psychoanalysis," and "Psychopathology of Everyday Life"). In addition to a series of general remarks and some judgments of the suitability and significance of the publication of these works of Freud's in Romanian "as an illustration of our broad cultural receptiveness in these years," this review includes a number of critical opinions (in itself an absolutely favorable fact) which would be welcome if they were the result of a relevant analysis of Freudian psychoanalysis in the light of dialectical and historical materialism and the latest advances of science in general and of the social and medical sciences in particular.

I shall discuss below some of the reviewer's statements and objections concerning the Freudian texts or my introductory study to this volume, "Sigmund Freud or the Right to Truth."

T. Vlad writes, "The lecture on 'The Making of the Dream' includes a synthesis of the ideas in the referenced work 'Die Traumdeutung,' published in 1900, and presents the relationship fundamental to Freud between the 'latent dream' and the 'manifest dream'." Leaving aside the expressions "latent dream" and "manifest dream" (which occur nowhere in Freud and are probably the result of careless reading of the Freudian text by the reviewer), I stipulate that a synthesis of the ideas in the massive volume "Die Traumdeutung" is not in the cited chapter but in all 11 chapters of the second part of the work "Introduction to Psychoanalysis," while the relationship to which T. Vlad refers is specially treated in the chapter clearly entitled "The Manifest Content and Latent Ideas of the Dream."

T. Vlad reproaches me at one point because "an even more marked omission concerns the psychoanalytic type of division of the personality into three compartments" and because, presumably in order to fill this gap, I "inserted in the preface" a passage "of three pages (25-28) from Freud's last work ('View of Psychoanalysis')."

Anyone checking these statements will readily find that the criticized quotation is not even two pages long (to say nothing of the fact that 28 lines are taken up by the footnotes) and that an entire chapter of the introductory study ("Structure of the Psychic Apparatus'," pp 21-28) treats in depth and with the aid of some zincographed sketches what T. Vlad incorrectly calls in his review (and even more incorrectly defines) "division of the personality."

After declaring himself in disagreement with the "dismissal" of Herbert Marcuse as an adherent of psychoanalysis, T. Vlad concludes that I have also applied "similar epithets" (to those he quotes from a note on p 33) to other personalities too, as for example B. F. Skinner, H. J. Eysenck, Karl Popper, Jung or Lacan. I declare that I assume full responsibility for the evaluation of some or others of these authors, but it is beyond my powers to find any mention anywhere in my study or in any note among the many scattered throughout the volume the name of Karl Popper, which probably clung to T. Vlad's pen from a review by the famous English psychologist Anthony Storr.

In referring to "the studies on dreams in the last two decades," the reviewer concludes that "H . Fiss, Michel Jouvet, Liviu Popovici (sic!) and others try to demonstrate the importance of dreams in maintenance of mental health, which supports Freud's idea. On the other hand, the idea of a manifest content of the dream and another latent one has not been confirmed. Moreover the repetition of certain anticipatory dreams, when an individual is expecting some important changes that might negatively affect his existence, can be regarded as a processed form of anxiety, a function postulated by Freud but surprisingly limited by him to the periods that follow traumatizing events." This whole passage, barely disguised by some transpositions of proportions and by slight terminological retouches or minor omissions, reproduces two paragraphs from the above-mentioned review by Anthony Storr of the work "The Scientific Credibility of Freud's Theories and Therapy" (Basic Books, New York, 560 pp) by Seymour Fisher and Roger P. Greenberg, from which review we quote: "Although studies on lack of dreams show that they probably play an important part in maintenance of mental health (which supports Freud's idea that dreams maintain mental balance), the language of dreams is not an obscure text that can be deciphered solely by a psychoanalyst. In other words the idea of a 'latent' content as contrasted with an 'evident' one has not been confirmed. Many dreams, like the anticipatory reveries of the kind we all have when we are faced with the prospect of an important interview, for example, appear linked to a kind of cognizable processing of anxiety. Freud postulated such a function, but surprisingly limited it to the kind of dreams which, he said, he found the most difficult to explain, namely the dreams that are repeated and appear after a 'traumatic' event."

What I think is wrong here from the scientific standpoint is the fact that T. Vlad attributes to H. Fiss, M. Jouvet and L. Popovici a critical view of Freudianism that actually belongs to the two authors reviewed by Anthony Storr, the famous English psychologist, who himself has a quite reserved attitude toward Freud and expressly prefers Carl Gustav Jung in matters of psychoanalysis, whose disciple he was.

T. Vlad quotes the work of Seymour Fisher and Roger P. Greenberg, which he dates as having been published in New York in 1979! That is a sheer impossibility because the review of this volume appeared in THE NEW YORK TIMES BOOK REVIEW in 1977.

This only pertains to dating the book. But here is what T. Vlad tells us about its general content: "In a more recently published volume entitled 'The Scientific Credibility of Freud's Theories and Therapy,' the Freudian legacy is objectively judged and the conclusion is drawn that the founder of psychoanalysis was wrong nearly as

often as he was right, and that in general he proved to be a gifted observer of psychic phenomena but a theorist of much more limited scope." But actually what T. Vlad presents to us as the viewpoint of the book of the two American authors is nothing but the personal comment of the British psychiatrist Anthony Starrat the end of the review to which I have referred. Anthony Storr writes there, "There could still be some Freudian devotees who would be disturbed or angered by the critical judgments of the master made by Fisher and Greenberg. Those of us who are not his disciples will continue to regard him as a genius. Even if he was wrong as often as he was right, he presented a great many fruitful and bold hypotheses concerning the nature of the psychic aspect of man."

Much more could be said about the ideas T. Vlad conveys in his review. But I think it is harmful to the scientific climate to engage in such polemics.

ROLE OF THE STATE IN SOCIALIST SOCIETY

Bucharest ERA SOCIALISTA in Romanian No 20, 20 Oct 80 pp 30-32

/Article by Univ Reader Manea Babut of the Stefan Gheorgniu Academy/

/Text/ As it says in the RCP Program, our party proceeds from the dialectical-materialist and historical conception in which the state is a product of the division of society into antagonistic classes that will gradually disappear along with the disappearance of the classes, the leveling of society, and the creation of a single working people of communist society. "In the period of building the fully developed socialist society and of transition to communism, the state has an important part to play in organization of all socioeconomic activity." Moreover "The state has important tasks in defending the nation's revolutionary gains, independence and sovereignty. To be sure greater emphasis will be placed upon a given aspect of the state's activity in view of the specific conditions in one period or another, but its role in scientific organization of socioeconomic activity will be enhanced under any circumstances."

Socialist State's Role and Functions

As a main instrument of socialist construction and regulation of social relations and activities through uniform government norms and enactments, the state is expected to ensure rational and efficient management of all Romania's material and manpower resources, harmonious performance of all economic, political and intellectual activities in keeping with the workers' potentials, needs and basic interests, defense of the revolutionary gains of socialism, and solution of the general problems flowing from the aims of building the new order, current international relations, and the need of Romania's increasingly active participation in the world circulation of values.

Emphasis upon the purposeful character of social development, the maturing of the new order, and the increased tasks to be performed in all fields require development of the state's role by expansion of its social base and of the public and mass organizations' participation in the adoption and implementation of state decisions.

The socialist state performs its role in development of the new order through its functions, which themselves evolve according to the new characteristics acquired by social reality and the new tasks the solution of which determines social progress.

The scope and importance of some functions in the state organs' general activity increase while other decline. Meanwhile structural changes are made in every function according to the range of interests and the ways and means of activity. The general direction of the changes required by the socialist state's enhanced role is in that of the importance of the constructive function devoted to meeting the demands of social-political, economic and cultural progress. Enhancement of its role in planned organization and management of the national economy should be mentioned first, which is based on application of the principle of democratic centralism, which principle harmonizes uniform management of socioeconomic activity with the autonomy and initiative of the people's councils, economic enterprises, and the other social units. Thus the state performs important functions in further development and improvement of socialist economic relations and in rapid and harmonious development of the productive forces. As the complexity of the socialist economy increases the socialist state's economic role broadens, in pursuance of such essential aims as intensive promotion of the technical-scientific revolution in all fields, development and modernization of the technical-material base by continuing the party policy of socialist industrialization on a higher qualitative level, an extensive agrarian revolution to modernize agriculture and increase crop and livestock production, better organization of production, greater labor productivity and and increased effectiveness throughout the economy for the further improvement of the entire people's welfare and standard of civilization.

A major role in the performance of the state's economic functions is played by planning and purposeful, planned direction of the economic processes with advance determination of the optimal proportions and rates of development in the various sectors of the economy as well as throughout it.

Planning has been steadily improved in Romania, and the Uniform National Plan contains the main lever with which the state distributes and makes good use of the resources and concentrates all activities upon all-around development of the new order. The planned management of the economy is faced with highly complex tasks by the Directive and Directive-Programs ratified by the 12th RCP Congress, forecasting the results of the program by the last decade of the 20th century and even beyond in some fields. Once socialist economic relations were improved to the point of strongly stimulating development of the productive forces of society, socialist democracy was intensified, the organizational and administrative structures of the economic management system were improved, and the new economic-financial mechanism was introduced. In the light of the provisions of its program documents, the party constantly perfects the ways and means of scientific organization and management of society and state activity as well as the methods of preparing and checking plan fulfillment for purposes of closer combination of central management according to the uniform plan with stimulation of the local organs' initiative and autonomy in achieving the aims of the present stage of socialist construction. This purpose is served, among other things, by the new system of socioeconomic indicators and the start of regional planning.

The purposefulness of social development under the new society, the high technical-scientific standards of socialist society in its evolution, and formation of a man with a rich intellectuality and a harmoniously and fully developed personality are factors for development of the state's role in cultural-educational work. In this connection the state is trying to develop and modernize education in a uniform design in keeping with the demands of the present scientific-technical revolution and the current and long-range requirement of our socialist society's output of

material and cultural values. Development of science, encouragement of literary-artistic creation, expansion, diversification and improvement of dissemination of culture, and intensified educational efforts to form the new man are major aims of our socialist state's activity.

In close connection with the problems of economic and cultural development, the state has particular duties in defense of the revolutionary gains of the working class and the people. The specific nature and methods of performing these duties bear the stamp of the distinctive features of every stage of building the new society. In the present stage defense of the revolutionary gains mainly consists of consolidating and developing socialist ownership and the legal order, improving legislation, strengthening socialist legality, and guaranteeing civil rights and freedoms.

In close interdependence with the series of social phenomena and processes peculiar to construction of the fully developed socialist society, the method of persuasion and education is growing in importance. While the coercive instruments are maintained at the proper level, prevention of illegal acts is highly important in state activity, as well as strengthening and improving the legal system as a means of consolidating the gains of the new order and stimulating development and improvement of socialist socioeconomic relations. Measures have been adopted in recent years to enhance the role of advanced public opinion and the workers collectives in preventing and checking violations of the legal provisions and socialist standards of behavior. The decisions of the National Party Conference in December 1977 on improvement of legislation and the work of the trial and prosecuting organs are very important in this respect. They are based on the need of emphasizing political-educational work, efforts to convince every citizen of his duty to constantly observe the laws of the land, communist norms of social coexistence, and order and discipline in all areas, and the effort to prevent violations and to help correct the violators when they have been committed.

An important part in these efforts is played by the organs of the Ministry of Interior, militia and security, who are called upon to guard the public peace and the protection of socialist and private propert as well as the entire people's revolutionary gains. By fulfilling the responsibilities entrusted to them and basing their activity on the support and participation of the masses, these organs must make sure that no violation of socialist laws goes unpunished while no one is unjustly sanctioned.

The state's main functions include strengthening national defense, improving the army's equipment and political training, and preparing the entire people to safeguard their peaceful, creative work. As Comrade Nicolae Ceausescu pointed out in his speech at the reviewing convention of army activists and key personnel, "We must not for one moment forget that as long as imperialism exists there will be inherious international contradictions and the danger of aggressions and wars. And we must always bear in mind that there are still antisocialist manifestations in various forms and that in various ways all kinds of attempts upon the gains of socialism and the independence of the nation are being made from outside. Therefore the Romanian army must always be ready to repel any attempts in any form to impair in one way or another the revolutionary gains, the socialist construction and the sovereignty and independence of the nation."

Social Integration, Improvement of State Activity and Role of People's Councils

In construction of the fully developed socialist society and the advance toward communism and with the structural changes in society and the improvement in

management and planning, the state's activity is increasingly involved with that of society as a whole. In fact, the main purpose of the Romanian socialist state's evolution is increasingly complete integration in society. The state must not act as a body divorced from the people, above the masses and society, which would contradict its very nature and the final aim that it should serve as an instrument, namely creation of the new society. On the basis of the changes socialism is making in the degree of development of production relations and forces, in the social and class structure, and in the consciousness of the masses, the RCP perceives the socialist state's role in a permanent correlation with consistent development of socialist democracy, so that all state organs will regularly depend in their activity upon the broad masses and will consistently and staunchly defend their interests. The system of Romanian democracy tends more and more to express the application of the principle of government of the state and society by the people themselves.

In the years of socialism and especially since the 11th RCP Congress, measures have been adopted to improve the organizational structures of the state and the work of its organs. Establishment of collective management and labor as a basic principle of all socioeconomic activity is particularly important. The collective management organs formed and perfected in this period and their broadly democratic and representative complement, from the central institutions down to the primary units, provide possibilities of using the competence, experience and initiative of the workers in the act of management. A number of measures taken in this period improved the organization and exercise of state power on the central level. For closer contact with experience and the specific activities of the economic and social units, personnel with sound political and professional training, specialists and workers who work directly in production and have direct knowledge of the practical problems are promoted in rotation on the staffs of the state administration, the ministries, the centrals and the socioeconomic units.

One of the major aims of the effort to perfect state organization and activity is to rationalize the state system, to simplify it and bring it closer to the specific problems of production and of all social activity. The improved system of economic management meets this requirement. The measures to rationalize the structures of the entire state system and the regulations governing the uniform structural norms of the state organs and the economic, educational, scientific research and other units have important implications. They were designed to eliminate some intermediary units, to simplify and economize on the state system, to make more efficient use of the specialists by employing them in production, to reduce administrative personnel and to increase directly productive personnel. Application of these measures was intended to eliminate some oversized structures generating bureaucracy, red tape, substitutions and duplications. As Comrade Nicolae Ceausescu pointed out at the Second Congress of People's Councils, further action must be taken to simplify the system for preparing decisions and solving problems of current activity in order to strengthen state and economic discipline, to establish perfect order in all socioeconomic units, to heighten the sense of responsibility at work and to apply the laws consistently. All this requires better administration of the ministries and shifting of their activities to centrals and enterprises for prompt solutions of all problems presented by the production process.

Application of the principle of democratic centralism also includes the measures which, with the improved territorial-administrative division of Romania, have gradually increased the functions and extended the autonomy of the local administrative units and the social-cultural enterprises and units in solving all problems

within their jurisdictions. This has created increasingly favorable conditions for making the management of the various sectors more democratic, for heightening the responsibility and initiative of the local organs, and for enhancing workers' more direct participation in social-political activities.

The people's councils have greater responsibilities in socioeconomic activity and direct solution of local problems. Their functions and powers in management of all socioeconomic activity in counties, cities and communes and in solving problems of organization of labor and the inhabitants' affairs provide a broad field for responsibility and initiative in developing all counties and communities. Institution of the Congress of County and Communal People's Councils as a supreme collective forum for management of the activity of the local organs of the state authority and administration, as well as that of the conferences of chairmen of communal, municipal and city people's councils, have proved particularly effective in amplifying the functions of the people's councils, since a suitable framework has been institutionalized for a useful exchange of experience and a fruitful common discussion of the basic problems of the activity of the local organs of the state authority and administration. The decisions and specific measures of the Second Congress of People's Councils are especially important in this respect. The Legislative Chamber of the People's Councils performs extensive functions in preparation and improvement of legislation. The measures taken in recent years to coordinate the methods of state planning and management with the requirements of socialist democracy have special significance for improved application of democratic centralism. These measures require maintenance and consolidation of democratic centralism as a fundamental principle of organization and management on a national-state scale and its dialectical, harmonious correlation with self-management and economic-financial self-administration as a basic principle of organization and management of the socioeconomic and territorial-administrative units.

Combination and functioning in a uniform system of the methods of representative participation with direct participation of the masses in social management keep expanding the mass base of political power and contribute to more intensive integration of the political institutions in social activity as a whole. To this end, in the course of development of socialist democracy there is a constant rapprochement and a complete involvement between the activities of the party, state and mass and public organizations and the general development of the organizational framework intended to encourage each citizen's responsible initiative. To accomplish this process, the principle of personnel rotation is applied, as well as plurality of party, state and mass organization functions, and bodies are created for analysis, guidance, coordination and control that operate under the direct supervision of the Party Central Committee and the State Council, some of them being of a two-fold party and state nature. Note also the improvements made in the institutional framework whereby the masses of workers are participating more and more directly, actively and effectively in the act of managing social activity in all its phases, in all fields and on all levels, and particularly the improvement in the organization and activity of the Democracy Front and the Socialist Unity Front.

All these measures are intended to provide for broader participation of the masses and the entire people in social management. In referring to the evolution of this process, Comrade Nicolae Ceausescu pointed out that "All the big collective bodies in which the workers directly participate should play a decisive role, closely associating their activity with that of the state organs... Let us understand that the principle of the disappearance of the state does not mean its dismantling at

any given point, but creation of the framework wherein the popular masses participate in social activity and assume their responsibility in social management." And so transfer of some of the state's functions to the popular masses and the workers collectives is a distinctive feature of the process of improving its activity in the present stage.

As it says in the RCP Program, under fully constructed communism the production and territorial units will be democratically managed, with participation of all their members and provision for periodic rotation of workers in management functions according to their aptitudes and qualities, as a general social obligation. The democratically elected organs of management and organization will be increasingly subject to the control of the masses, who will strictly enforce the norms of social coexistence and the communist principles of life. This will bring about the most advanced form of socialist democracy, the transition from the rule of necessity to the rule of freedom.

CURRENT THEATRICAL ACTIVITY EVALUATED

Bucharest ERA SOCIALISTA in Romanian No 20, 20 Oct 80 pp 20-22

/Article by Valentin Silvestru: "How the Theater Is Performing Its Present Functions"/

/Text/ Among other autumn holidays is that of the opening of a new theatrical season. In September the brass gong solemnly rings behind the scenes and the public comes in to see new plays, new actors, new directors and scenographers, and sometimes halls renovated by a municipal effort.

The opening was truly festive throughout Romania. Romanian plays of today and yesterday were duly presented, and a fine start was made. Now in October a brief review can be made, and it is favorable. Original dramaturgy concentrates on major social and ethical problems and has a pronounced controversial tone. The main effort is to seek the truth beyond false or sham appearances. Cases are traced that illustrate evolutions of the personality, revealing with considered acuteness the stoppages of thought and action, the blockages of various kinds, the mystifications and delusions. The propensity for the historical view is also marked. For all good writing projects the destinies examined against a broad background of a period, involving the devious relationship between the individual and time as well as the no less convoluted one between the individual and society. Adrian Dohotaru's "Inquiry About a Youth Who Did Nothing," Theodor Manescu's "Night on the Asphalt," Paul Everac's "The Ordainer" et al. are all, in different forms, results of the effort to discover what is authentic and what is improvable in our neighbors' behavior at the start of the new decade, and how the socialist idea of ethics and justice is taking effect in practice. The critical spirit of the recent plays takes a quite different tone in satirical comedy. For the time being no references can be made to new output on the subject but, since several theaters are showing or have revived "Furniture and Pain" /Mobila si durere/, "Fools in the Moonlight" and other satires by Teodor Mazilu, "Saint Mitica Blajinu" by Aurel Baranga, "Occasional Paradise" and "Competition of Beauties" by Tudor Popescu, "Happy Lament for a Grain of Wandering Dust" by Andras Suto" and "33 Anonymous Letters" by Gyorgy Mehes, the reliefs of the comic genre are noticeable, with the comment that they are relatively high, since the said writers ridicule, sometimes harshly, failings and anomalies in the lives of people and communities. The subject matter of comedy is extensive enough today, as well as honest critical boldness, but in general there is need of more ruthlessness concerning such vexations

as bureaucratic indolence, the gross stupidity that obstructs the new, and the arrogant attitudes of some persons entrusted with managerial jobs in various sectors who forget why they hold these jobs.

Since most of the said plays have enjoyed careful and some even attractive presentations on both the provincial and Bucharest stages, the theater is at a high point of its existence now at the start of the artistic year, honorably and sincerely performing the social-educational and cultural-artistic functions with which our society has invested it.

When we consider the plays advertised, including notable successes of last season like "The Fortuitous Middle Ages" by Romulus Guga (Little Theater), "The Coolness" by Marin Sorescu ("Bulandra" in Sibiu), "Medusa's Raft" /Pluta meduzei/ (Petrosani), "The Game of Life and Death in the Desert of Ashes" by Horia Lovinescu ("Nottara" in Iasi and the German Theater in Timisoara, now revived in Craiova and the Hungarian section of the National Theater in Tirgu Mures), as well as the new plays published and prepared in the last few weeks on several stages, as for example "An Osteological Study..." and "The Thief of Eagles" by Dumitru Radu Popescu, Marin Preda's posthumous play, "Moromete's Youth," and "The Rain and the Investigator" by Leonida Teodorescu, we are entitled to conclude that the diversity of style and subject matter of current dramaturgy is wider than ever. We have also seen how much the public likes some of the current writings and how appreciative the critics are, who have distinguished the literary creations of broad scope in competitions.

To be sure misbegotten plays flatly reproducing petty circumstances are still appearing, and the by-products of local or central triflers presented in phantom performances with very short runs are still leaping over all the barriers, sometimes unfortunately even in the national theaters. But the present period of original dramaturgy is characterized by the vigorous and expressive realism of a direct or symbolic formula, in modern theatrical conventions that are cleansed of factology and reject descriptivism and illustrativism. Adrian Dohotaru's play for example, investigating the condition of youths who do not find jobs and shirk their social obligations, has an interesting documentary approach reminiscent of dramatic reporting. "Happy Lament for a Grain of Wandering Dust" is a juicy piece of buffoonery in the popular spirit, fervently ridiculing religious manias and superstitions. Leonida Teodorescu's "The Rain and the Investigator" is a parable of the responsibility each of us has for the other. Marin Sorescu's "Medusa's Raft" as an ontological comedy brings up the modern scientist's moral obligations in a metaphorical treatment of broad poetic and philosophical scope. Dumitru Radu Popescu's "An Osteological Study..." is a rich and vivid chronicle in Brechtian style of 30 years of a Transylvanian settlement.

The writers' approach is profoundly realistic and uniform in that respect. The diversity of the creative methods and the modes and styles is a natural corollary of the development and differentiation of the personalities. Theoretical attempts to develop only certain ways of changing reality and to discredit others are devoid of reason. Poetry, painting, music and other arts now naturally resort to stylizing, abstractions and metaphors to broaden the horizon of understanding of the world. Intellectualizing the public, continuing evolution of taste, increasingly profound knowledge of the most varied creative works in our own past (from Bolintineanu to Arghezi and from Alecsandri to Lucian Blaga), frequent exchanges with other cultures, and the present verve of the innovating trend result in works

meeting extremely diverse requirements. The theater is no exception, presenting performances that differ among themselves not only in repertoire but also in the ways the repertoirs is presented on the stage. Presentation in popular style of an artimystical satire like "Happy Lament..." and that of a historical tragicomedy of symphonic structure like "The Coolness" do not automatically produce axiological differentiations on the criterion of "Which is more realistic," just as the imposing universalist philosophical parable "The Game of Life and Death..." or the admirable political grotesque "The Fortuitous Middle Ages" do not weaken their messages by the proposed cryptic formulas but on the contrary they strengthen them and enter them in a vast field of contemporary ideas.

No doubt the theater educates and forms habits, helping to mold the consciousness, but it does so in its way, with conventions dictated by genera and species, in a realistic comprehension of existence that knows no restrictions of expression and can never be reduced to an artistic mode or conviction or to any aesthetic orientation or single style. Uniformity is generally the sad outcome of forced alignments and condemnations of originality in the name of a presupposed principle of accessibility, which always hides inability both to create and to understand the artistic phenomenon. True accessibility, which our art and artistic policy legitimately demand, has nothing to do with platitudes, facility or the rudiments of acultural entertainment. It calls for emotional and intellectual participation of the reader, the spectator and the hearer as sharers in the creative act.

The considerable success of some difficult plays and performances, some highly complex novels, philosophical poetry and new music shows that in addition to the established requirements and habits there are also new popular demands that art perceives and tries to satisfy. The theater also assumes this obligation, being unable to remain on the level of vaudeville, outmoded bombastic evocation, alcove drama, and idyllic and studied ruralism. Sensitive representation of our present material and spiritual universe is naturally accomplished by the means of the present world, in a wide range of processes and gradations required by the many rungs of the ladder of general culture.

The theater's cultural-artistic function is also expressed by constant restoration of the store of two centuries of writing and experience to the living cycle of the stage. The national dramaturgical reserve must be constantly known and reknown. It preserves essential information on the nationality, culture, language, spiritual civilization and especially our theatrical culture. The constant appearance of unpublished works and absolute firsts shows that it has not been entirely determined and only partially investigated and brought up to date, as for example Eminescu's dramatic manuscripts after 100 years, a historical drama of Camil Petrescu's after 50 years, a comedy of Eugen Lovinescu's after sixty years, and even after two centuries the tragedy "The Murder of Grigore Ghica Voda" attributed to Samuil Vulcan, the oldest entirely preserved Romanian dramatic text.

The value of the knowledge contained in the old Romanian repertoire, the artistic riches that its patriotic weight totals, and the typological features of the many creations of yesteryear are brilliantly illustrated by Caragiale's masterpieces, for example, which bring great and lasting joy to new generations of spectators in innovating performances. This year "A Stormy Night" (Botosani and Sibiu) has been staged, "A Lost Letter" is in preparation in another staging, "The Ladies of the Carnival" (in Bacau) is being staged, and fragments of short stories ("Nottara") are being dramatized (in the second edition of the collection of sketches and

fragments, "The Rings, Earrings and Tinsel." A new form has been given to Delavrancea's famous drama "Sundown" (Iasi), and the same author's "Hagi-Tudose" has occasioned a noteworthy staging of the Bucharest National (The play is also being performed in Birlad). G. M. Zamfirescu's "Miss Nastasia" (Galati) and Mihail Sorbu's "Red Passion" (Braila) are also notable here. Plays of Vasile Voiculescu, G. Ciprian and Radu Stanca are in preparation.

It is not much in all and perhaps not enough, but the effort is noteworthy especially because colleagues or other theatrical people have sometimes urged us, "Let us allow the old plays to have their well-deserved sleep." To maintain the state of torpor in the field, they also advance the argument, unsupported by facts, that time has made all the hierarchies and therefore there would be no point in looking for what has not been confirmed by success "in its time." Someone even sneeringly called the intensive investigation of the national dramaturgical reserve a "bogyman." Even if I did not mention the sneer, which started at a colloquium and subsequently reached paper, somewhat soiling the page in question, I would have to point out that this "bogyman" (according to the dictionary, a supernatural being used to scare children) resulted in publication of monumental volumes of dramaturgy by Alecsandri (also summarizing some still unperformed plays!), Eminescu, Delavrancea, Macedonski, Duiliu Zamfirescu, Liviu Rebreanu, G. M. Zamfirescu, Al. Kritescu et al., restorations of plays of Slavici, Adrian Maniu, Dan Botta, N. D. Cocea, Hortensia Papadat-Bengescu, Tudor Arghezi et al., discovery of some unknown plays of Mihai Saulescu, Gheorghe Braescu, Anton Holban et al., premieres of some forgotten, overlooked plays, etc. How could "their time" classify and grade plays of Iordache Golescu, Hasdeu, Nicolae Iorga, Gib I. Mihaescu and many others that were never performed, were prohibited, remained in manuscript form, were printed in obscure editions or journals and sometimes posthumously. It is clear that the theater does not have to form a separate opinion in this respect at all concerning historical-literary or artistic research, making its contribution to the record of the nation's spiritual values in its characteristic way, that is by performing and offering contemporaries current opinions about the old dramaturgy for definitive classifications.

It is true that some of these performances, whether uninspired or too timid, have shown mediocre results, but these results have also included many (very many in some seasons) foreign products on Romanian stages. This does not mean in any way that we should give up importing them, although the caliber of some of them is far below what we have (such as farces, musical comedies and sentimental plays for example) in our own repertoire. I. Valjan (not performed today) is unquestionably better than Pierre Chesnot who, probably to his own surprise, is present at about ten places in Romania, just as the trifle called "Gin-Rummy" is in no way comparable with let us say "The Transfiguration" [Schimbarea la fata], a comedy by G. M. Zamfirescu that is still unperformed.

On the other hand "Danton," one of the greatest Romanian plays, has demonstrated that the necessary classifications and qualifications are far from finished, and apparently the problem remains for future generationa to resolve, at least in the case of some of our great dramatists. The archival effort, with mild reconstructions, is outside the art, but it does not have to determine our critical thinking or repertoire policy. The standards are set by successes, by the modern stagings that have shown us the types and customs of yore in a new light and made us establish a more suitable scale of values and restore to the living cultural heritage what belongs there but had remained unknown or insufficiently known or had been lost from sight.

The start of the season also brings the theaters some new administrative and organizational regulations concerning itineraries on tour, cultural exchanges with foreign countries, etc. The interpretation of the regulatory acts must be quite clear and free of any confusion, so that the preliminary ideological and artistic decisions in connection with administrative unification of the artistic institutions in a city will not critically depend at any points upon persons who have neither the competence nor the practical possibility of signing them in accordance with our party's and state's theatrical policy. However capable, honest and well-intentioned a chief accountant may be, he cannot assume the responsibility for determining the theatrical, musical and choreographic repertoire, hiring artistic personnel, especially the stage managers and scenographers, scheduling performances on the weekly program, etc. Precise definition of relations between the theater director and the manager of the unified administration can forestall any harmful irregularities.

We have 43 theaters and hundreds of cities and villages with adequate facilities but without permanent troupes, where the inhabitants see theatrical performances very rarely or sometimes not at all for a whole year. The tours are a necessity for both institutions and audiences, and the possibility should be considered of showing the residents of certain parts of Romania Bucharest performances, for example, at least occasionally. One of the consequences would be a stop to proliferation of inferior troupes (a few people and three suitcases) presenting commercial, hack performances and distorting the idea of the theater in a misleading and harmful way.

Some comrades, especially in the provinces, think the theater can increase its radius of action and collections in any fashion, that is by interspersing its programs with elements of popular or light music and sports figures or by presenting only superficial productions with which to "clear out the suburbs," according to an expression of the old impresarios. Telecasts of sports matches, guitar players, a dromedary or a lady magician may appear in the intermissions of a play of Ibsen's. But let us not forget that the theaters were raised over centuries and left by our forebears as a sacred cultural legacy, that the socialist state raised these monuments to radiate spiritual light, or that the stage has a characteristic function it is expected to perform especially with the aid of Romanian and foreign literature, by building moral universes, presenting living types, and planting ideas in people's minds and exalted feelings in their souls. It is a school of the people, a tribune of the citizens, and a place of elevated entertainment through vivid images. Any measures of correlation with other arts, with poetry, the dance, music and painting are, within these concepts and in the context of socialist culture, possible and perhaps advantageous to the calm and rational effect of particular stage images created by actors upon the consciousness. The theater's ceaseless struggle for quality and timeliness, in its desire to attract the public as much as possible and to give the public its humanistic faith, often requires weapons not to be found in the traditional panoply. But there is a limit beyond which synthesis deteriorates into a conglomeration and dramatic art can no longer preserve its character and its educational mission along with it.

Centuries of experience of ours and others show that by working with cultural sincerity and artistic power we can keep the stages of the theater pure and proper, bringing society benefits of all kinds, including an immense spiritual gain for the benefit of formation of the new man of today and tomorrow in the revolutionary spirit.

DECREE ON MEDICAL CARE FOR MENTAL PATIENTS

Bucharest BULETINUL OFICIAL in Romanian Part I No 83, 16 Oct 80 pp 1-4

/State Council Decree on Assistance for Dangerous Mental Patients/

/Text/ The State Council of the Socialist Republic of Romania decrees:

Chapter I
General Provisions

Article 1. The ensuring of the population's health is done through a complex of economic, social, cultural and health measures that pursue the continual strengthening of health, the prevention of sickness, the providing of medical treatment in case of sickness and the recovery of the capacity for work.

The complex medical assistance given to patients with mental disorders constitutes an integral part of health assistance and has as a goal the restoration of health, the improvement of the capacity of the patients to adapt to the living conditions in the family, at work and in society, and the prevention of acute manifestations of the illness that can constitute a danger for the patients themselves or for those around them.

The health units, the other socialist units, and the family members of patients who suffer from mental disorders are obligated to ensure the performance of the specialized treatment at the proper time and their integration into the family and into vocational activities corresponding to their state of health, in order to prevent the appearance of situations in which they may become dangerous.

Article 2. In the sense of the present decree, mental patients who, through their manifestations, endanger their own life, health and bodily integrity or those of others and important material values or repeatedly and seriously disturb the normal working or living conditions in the family or society are dangerous.

Article 3. Dangerous mental patients are subject mandatorily to specialized medical treatment in the health units.

The mandatory medical treatment is done on an outpatient basis and, if need be, under conditions of hospitalization in the specialized health units.

Article 4. The necessity of the institution of mandatory medical treatment will be established by taking into account the patient's condition and the degree of danger that his behavior presents for himself or for the persons with whom he comes in contact.

The institution of mandatory medical treatment has as a goal the elimination of disturbances occurring in the condition of the patients, in order to improve their capacity for psychosocial adaptation.

Chapter II
The Institution of Mandatory Medical Treatment

Article 5. The adult members of the family who customarily live with a person from whose behavior it could be deduced that he is a dangerous mental patient, those who come in constant contact with him at home or at the workplace, and any other person who has cognizance of such a case are obligated to immediately notify the health units in writing. When the mental patient considered dangerous is put under an interdiction or is a minor, the tutelary authority, the guardians or the parents of the minor also have the same obligation.

The notification is addressed to the medical dispensary in whose territorial range the person considered to be a dangerous mental patient resides or to the medical dispensary that serves the worker personnel in the unit at which he performs his activity.

Article 6. The dispensary's physician examines the person, gives him the requisite medical care if necessary and, on the basis of the findings, informs the executive committee or bureau of the people's council in whose range the medical dispensary is located.

The executive committee or bureau will give help to the specialized personnel in the dispensary, for obtaining information, through direct findings and through written statements of the persons who know the patient's condition and manifestations.

The physician will guide the patient and will send his findings, together with the data on the patient's condition and manifestations, to the competent polyclinic dispensary from a territorial viewpoint.

Article 7. The psychiatrist in the polyclinic dispensary will examine the patient and will prescribe and pursue the making of the necessary analyses, including the psychological examination, after which he will formulate the diagnosis and, taking into account the data received and the findings made, will establish if it is necessary for him to be subjected to examination by the medical commission mentioned in Article 8.

When the psychiatrist in the polyclinic dispensary considers it necessary for the patient to appear before the medical commission, he will take steps so that the patient, the medical documents and the other data obtained are sent immediately to the psychiatric hospital or the psychiatric section of the hospital to which the polyclinic dispensary is subordinate.

In the situation in which the specialised physician judges that it is not necessary for the patient to appear before the medical commission, he will send his conclusions, together with the therapeutic instructions and with the data received, to the territorial medical dispensary.

Article 8. In the psychiatric hospital or section, the patient and the documents sent will be examined, within 24 hours, by a commission composed of 3 psychiatrists.

The appointment of the commission is done by the management of the health unit and is confirmed by the county health directorate or that of the municipality of Bucharest.

Article 9. The medical commission can decide on, as the case may be:

a) Outpatient mandatory medical treatment, whenever there is no major medical necessity for confining the patient in the hospital;

b) Mandatory medical treatment in the hospital.

In the situation in which the commission judges that the institution of mandatory medical treatment is not necessary, it can recommend to the patient, if necessary, the taking of suitable medical treatment.

If medical examinations or additional relations are necessary, the commission can order the performance of the medical examinations by the competent health bodies or the supplementation of the relations obtained in accordance with the provisions of Article 6, Paragraph 2.

The commission decides by a unanimous vote. In case of disagreement, the commission will be expanded with two more psychiatrists and will decide by a majority vote.

The decision will include the diagnosis, the solution adopted and the explanation for it and will be signed by all members of the commission, with the possible different opinion being recorded. The commission's decision is executory.

Article 10. Within 24 hours after making the decision on the institution of mandatory medical treatment, the commission notifies in writing about this the patient, one of the adult members of the family with which the patient customarily lives or the person under whose care he is, the executive committee or bureau of the people's council, the polyclinic dispensary and

the territorial medical dispensary. If the patient to whom the decision refers is put under an interdiction or is a minor, the tutelary authority at his residence, the guardians or the parents of the minor are also notified.

Article 11. The mandatory medical treatment will be applied immediately after the making of the decision by the commission, at the direction and under the control of the specialized physicians, depending on the nature and stage of the illness and on the type of evolution of it, in accordance with the technical standards regarding medical assistance for mental patients, established by the Ministry of Health.

Article 12. The outpatient mandatory medical treatment is performed by the polyclinic dispensary or by the territorial medical dispensary, under the guidance and control of the psychiatrist in the polyclinic dispensary. The patients are obligated to appear for a periodic medical examination on the dates set by the psychiatrist in the polyclinic dispensary, to submit to the stipulated medical treatment and to follow the therapeutic instructions in the period between two examinations.

Article 13. The persons under whose care there is a mental patient subject to outpatient mandatory medical treatment, the guardians, and the adult family members who customarily live with him are obligated to take the steps necessary in order to perform the prescribed medical treatment and in order for him to appear regularly at the medical dispensary or at the polyclinic dispensary.

Article 14. The management of the health units in which dangerous mental patients are confined has the obligation to provide the conditions required for applying the proper medical treatment, including psychotherapy, recreational therapy and ergotherapy.

The medical personnel have the obligation to perform the treatment at the proper time and to follow the evolution of the patient's mental and physical condition and his adaptation to the therapeutic activities.

Article 15. The supervision of patients is done by the medical personnel in the psychiatric hospital or section in which they are confined.

In the case in which a dangerous mental patient leaves the health unit without medical authorization, he will be returned to the same unit through the health bodies and, if necessary, also with the help of the bodies mentioned in Article 31.

Chapter III
Modification and Cessation of Mandatory Medical Treatment

Article 16. The commission that decided on mandatory medical treatment in the hospital has the obligation to reexamine the patients in at most 2

months or whenever necessary, depending on their condition, and at the request of the section's chief physician, of an adult member of the patient's family or of any other person and, in the case of those put under an interdiction or of minors, also at the request of the tutelary authority, the guardian or the parents.

Article 17. The commission, after the reexamination, decides on, as the case may be:

a) The continuation of mandatory medical treatment under conditions of hospitalization;

b) The cessation of mandatory medical treatment in the hospital and, further, the institution of outpatient mandatory medical treatment;

c) The cessation of any mandatory medical treatment.

Article 18. The cessation of outpatient mandatory medical treatment is decided by the commission mentioned in Article 8, at the request of the patient, of the prosecutor or of the other persons mentioned in Article 10, with the advice of the psychiatrist in the polyclinic dispensary or only at his proposal.

Article 19. The provisions of Article 9, paragraphs 2 and 3, and Article 10 are also applied accordingly with regard to the decisions on continuing, changing or ceasing the mandatory medical treatment.

Article 20. The socialist units in which patients for whom the cessation of mandatory medical treatment was ordered are or were employed have the obligation, in the case in which they have the capacity for work intact, to provide for the performance or the resumption of their activity in workplaces corresponding to the commission's instructions. In the case in which the patient's capacity for adaptation is not suited to the demands of the old workplace, a change in workplace will be made at the commission's direction.

Mental patients who, prior to mandatory medical treatment, were not employed and who are oriented by the commission that ordered the cessation of treatment toward vocations suited to their aptitudes and level of training will be employed in suitable workplaces.

Mental patients who, at the end of mandatory medical treatment, have a reduced capacity for work will be employed in workplaces corresponding to the recommendation of the commission for medical evaluation and recovery of the capacity for work.

The socialist units have the obligation to employ, in suitable workplaces, all categories of mental patients mentioned in the preceding paragraphs.

The county directorates for work problems and social welfare and that of the municipality of Bucharest will provide for the assignment to work of mental patients who have taken mandatory medical treatment and who have such an indication from the health bodies.

Chapter IV
Control of Decisions and Responsibilities

Article 21. The Ministry of Health is responsible for the way in which the provisions of the present decree are applied and controls and guides the entire activity of the health units upon which there devolve tasks in providing medical assistance for dangerous mental patients.

The Ministry of Health and the Ministry of Labor, together with the other central bodies involved, analyze annually the way in which assistance has been given to dangerous mental patients and the way in which their integration into activity has been achieved, taking suitable steps.

Article 22. In order to verify the manner of application of the provisions of the present decree, the commission mentioned in Article 8 communicates in writing, within 24 hours, to the local prosecutor's office in whose territorial range the hospital is located, the decision on the institution of mandatory medical treatment or the decision on continuing, changing or ceasing the mandatory medical treatment.

Article 23. The bodies of the prosecutor's office in whose territorial range there are hospitals in which dangerous mental patients are confined will periodically verify ex officio the legality of the confinement and the conditions of hospitalization.

Article 24. A protest against the medical commission's decision by means of which the institution, continuation, changing or cessation of mandatory medical treatment was ordered can be lodged by the one with regard to whom such a decision was made, the persons mentioned in Article 10, the prosecutor and any other person.

The judging of the protest comes within the jurisdiction of the court in whose territorial range there is located the health unit where there operates the commission that made the decision.

Article 25. The judging of the protest is done immediately.

The court, judging the protest, verifies the legality of the medical commission's decision, it being able to order the making of a psychiatric medicolegal evaluation and to administer any other tests that it considers necessary in order to establish if, with regard to the patient's behavior and manifestations, the conditions mentioned in Article 2 of the present decree, for applying the mandatory medical treatment, were met.

In all cases, the court will hear the person with regard to whom the mandatory medical treatment was instituted.

The trial takes place with the providing of an official defender by the court for the one with regard to whom the mandatory medical treatment was instituted, if he does not have a defender chosen.

The participation of the prosecutor in the trial is mandatory.

The court decides on, as the case may be, the continuation, modification or cessation of the application of the decision by means of which the mandatory medical treatment was ordered.

Article 26. The decision by means of which the court resolved the protest is subject to appeal.

After the decision becomes final, the medical file will be returned to the commission that decided on mandatory medical treatment.

Article 27. The provisions of articles 25 and 26 are supplemented accordingly with the provisions of the Code of Criminal Procedure.

Article 28. The confinement of a person as a dangerous mental patient and the institution or continuation of mandatory medical treatment without complying with the provisions of the present decree entail, as the case may be, material, civil, disciplinary or criminal responsibility.

Chapter V
Final and Transitional Provisions

Article 29. The Ministry of Health and the county people's councils and that of the municipality of Bucharest will take steps to provide the material base, the medicine and the personnel needed for properly carrying out assistance for dangerous mental patients, within the framework of the approved economic and financial indicators.

The Ministry of Health will take steps to train and improve the medical personnel needed for providing medical assistance for dangerous mental patients and to achieve a unified system of records of them.

The people's councils will provide, in accordance with the legal provisions, the farmland needed by the health units for organizing and developing the activities of ergotherapy.

Article 30. The health bodies have the obligation to provide transportation for patients who are to be confined and for those with regard to whom this measure has ceased and for their companions.

The executive committees or bureaus of the people's councils will give help for transporting the persons mentioned in Paragraph 1.

Article 31. At the request of the medical personnel, the executive committees or bureaus of the people's councils, through the commissions for education, health and culture or persons delegated for this purpose, will give the help needed for applying the measures regarding assistance for dangerous mental patients.

Article 32. Drug addicts who, because of chronic intoxication with alcohol, narcotics or other such substances, are in one of the situations mentioned in Article 2 are also subject to the provisions of the present decree.

Article 33. The requests, protests and other documents in connection with the institution, continuation, changing or cessation of mandatory medical treatment are exempt from any fees.

The mandatory medical treatment, done on an outpatient basis or under conditions of hospitalization, and the confinement of mental patients and of those mentioned in Article 32 are free.

Article 34. The provisions of the Penal Code and the Code of Criminal Procedure are applicable to dangerous mental patients who have committed acts provided by criminal law.

Article 35. Dangerous mental patients confined for mandatory medical treatment in accordance with the provisions of Decree No 12/1965 will be reexamined, within 30 days after the date of publication of the present decree in BULETINUL OFICIAL AL REPUBLICII SOCIALISTE ROMANIA, by the medical commission mentioned in Article 8, which will proceed in accordance with Article 17.

The cases in the course of being resolved will be handled in accordance with the provisions of the present decree.

Article 36. Decree No 12/1965 on medical care for dangerous mental patients, published in BULETINUL OFICIAL, No 4, 27 January 1965, and Decision No 39/1965 of the Council of Ministers for applying Decree No 12/1965 on medical care for dangerous mental patients, published in COLECTIA DE HOTARIRI SI DISPOZITII ALE CONSILIULUI DE MINISTRI, No 3, 27 January 1965, are repealed.

NEW REGULATIONS FOR APPROVING MEDICAL LEAVE

Bucharest ROMANIA LIBERA in Romanian 23 Sep 80 p 5

["Regulations on Medical Care"]

[Text] The Ministry of Health recently took a number of measures for the application of methods of prevention, the determination of diagnoses and the execution of treatment in close accordance with the current requirements of health care. Dr Radu Ozun, director of the Directorate for Medical Care of the Ministry of Health has given us some details.

Ozun: Recently, the health organs have undertaken actions and have taken a number of measures for the development of the activity of out-patient units, so that there will be more order and discipline in the hospitals and so that only those who need constant medical attention will be hospitalized. Other organizational aspects in regard to temporary incapacity for work, which has been on the rise in recent months, were taken into consideration. Also, illness certificates issued by doctors, acts which, according to the Law on Ensuring the Health of the Population, should be approved by the enterprise or institution where the citizen works, were analyzed. The Ministry of Health has given further instructions in regard to the way in which doctors and patients should proceed so that all will know and respect the legislation in force. The supplementary measures are intended to help the patient, to make it as easy as possible for him to obtain the necessary documents. Thus, for emergency medical treatment administered by a health unit other than the one to which the patient belongs and if necessity requires it, an affidavit certifying temporary incapacity for work for up to 3 days is issued. As soon as this document is issued, the person is obliged to go to the health unit to which he belongs to receive a certificate of illness, no later than 24 hours after the expiration of the leave period recommended in the affidavit.

Question: What happens if the patient needs more rest?

Ozun: When the patient cannot resume his activity, because of serious illness, he must notify the medical dispensary to which he belongs in regard to his situation. On the basis of the condition of the patient, the dispensary has the obligation to examine the situation and may give a leave certificate granting more rest to the sick person or, if necessary, send him to the

hospital. If, while continuing home rest given for emergency cases, the patient's condition becomes worse and he has to be put in a hospital other than the one to which he belongs, the presentation of the affidavit takes place within 24 hours of the expiration of the leave mentioned in this document. At the same time, the patient or a family member must present the respective certificate to the unit to which the patient belongs on the basis of his workplace so that the certificate of illness can be issued.

Question: Can medical leave be granted retroactively?

Ozun: At present the retroactive granting of medical leave is not permitted, with the exception of situations specified in regulations in force (pregnancy and confinement, treatment in spas, cases where the person is immobilized in a cast, sickness abroad). If the documents testifying to the person's incapacity for work are not presented to the health unit to which the patient belongs within the time limit specified above, this unit can issue a medical certificate only for the days specified in the affidavit. So as to avoid confusion in regard to the way in which illness certificates should be issued, recent instructions prohibit all health units, in practice, all doctors, from mentioning in the affidavits which they issue (I am referring to emergency assistance) the recommendation for continuing medical leave, since this aspect is the strict responsibility of the health unit to which the patient belongs. Therefore, all doctors have the obligation of calling the patients' attention to this fact.

RESPONSE TO CRITICISM FROM CATHOLIC PAPER

Zagreb VJESNIK in Serbo-Croatian 4 Nov 80 p 5

[Article by Nenad Ivankovic: "A Dialog Entrenched"]

[Text] When someone says in public that relations between the church and state are today as they were way back in 1948 and goes on to support this with the thesis that in this country "... it is permitted for priests to be publicly insulted and ridiculed in their most sacred convictions and feelings, since there is no court that would honor their complaint of having been insulted" (GLAS KONCILA, No 17), and a few weeks later asserts (concerning relations between that same church and state): "We believe that progress is possible in these relations and that the improvement is obvious.... The clergy are getting social security, clerical schools are getting certain privileges, the clergy are allowed to freely perform services, and so on. It seems that it is relatively good for the clergy," then it is obvious that we are dealing with talk that is not at the level of principle, talk which is not aimed at the truth, but at momentary effects and cabalistic aims.

And unfortunately this is precisely the line taken by the editor in chief of GLAS KONCILA, especially in his article entitled "False Charges, Assessments and Blackmail of GLAS KONCILA" (GLAS KONCILA, No 20), in which he answers the article entitled "Delirium of the Tridentine Fever," which was published 27 September in VJESNIK. After all, if that were not so, would an experienced newsman who also regards himself as a responsible public figure and a knowledgeable person await such a proper (improper) occasion to say what otherwise he so skillfully evades and refrains from saying in his newspaper?

But even in this last article, in which he later becomes so bold as even to say something constructive, he unfortunately did not manage to conceal his ulterior motives.

He believes, for example, that we allow violations not only of the religious freedom of "members of the church, (but) precisely of the church itself as a community," and, according to him, the task of his newspaper is to criticize this publicly, to see that the evil is remedied. Nowhere does he say where and how the rights of the church as a community are being violated. What is more, a few lines further on he says that "the clergy are allowed to freely perform their services, and so on," and it really is incomprehensible in the light of this statement how the rights of the church as a community are being violated. Indeed, a bit further on he says "that a long road has to be traveled before every citizen who is a believer is assured that degree of religious freedoms which we clergymen already enjoy in this society." But this sting, which in the opinion of the editor in chief ought to be the truth about the position of believers in our society, is not only not backed up by any evidence, but in fact is eloquently refuted by practice itself, in spite of the individual difficulties and problems which do arise here and there. What is more, this is an old refrain of GLAS KONCILA, one that is so worn out that one need not spend too many words on it. Finally, it would be good if the editor in chief were to explain how clergymen can freely perform religious services when believers do not at the same time enjoy religious freedoms?

The rationale of the editor in chief runs along the same line of reflection concerning the now frequent writing in GLAS KONCILA about how certain churchmen were convicted of offenses immediately after the Liberation, saying nothing about the grounds on which they were brought into the defendant's box. He simply deems it enough for him to say that these people simply did not feel themselves guilty, and on the testimony of believers he also knows this to be true of those who are no longer alive (!), and he concludes that the courts obviously erred. He therefore asked: "Can it be that N. I. wishes to proclaim the dogma that the courts of the state cannot be deceived?" Of course, any court may err, but here it certainly is not a question of this or that possible error, but, as follows from the writing of GLAS KONCILA, of an entire series of errors. Does this mean that the editor in chief feels that our courts intentionally erred, that is, that those errors were natural for such a society as ours?

Perhaps the answer can be suspected from that part of the article where the editor in chief appeals to "our pluralism," which he regards as a "particularly valuable feature of this reality of ours," on behalf of freedom and defense of his own position. More precisely, from the fact that he does not denote in more detail that "particularly valuable attribute" of ours. It seems that the thought of self-management pluralism is odious to him, and he prefers to speak about pluralism as such, which in the final analysis, defined no more clearly than this, is directed toward the pluralism of political parties, which certainly has nothing whatsoever to do with what we call the pluralism of self-management interests, that is, the democracy of socialist self-management. If this is one of the false charges and

assessments, as the editor in chief has chosen to put it, it would be good if he showed when that phrase was last printed in GLAS KONCILA if it ever was.

Destructive Criticism

Of course, the purpose of this article is not mainly to debate the positions taken by the chief editor of GLAS KONCILA, but to indicate how within, in this case the Catholic Church, along with a number of constructive tendencies, there is also an ideological tendency with which all dialog is basically impossible and which objectively wants to close off the possibility of any communication through dialog. I do not say this because the advocates of that orientation are criticizing certain negative things which do occur in practice, but because the intention of their criticism is essentially destructive, which means that it is not aimed at resolving the difficulties, but at petrifying them, at imposing an ideological confrontation, that is, of positional warfare, whose consequences and also outcome can be seen very clearly. That is why they immediately raise every case to the rank of a principle, nor are all of them negative cases, while every constructive step they pass over in silence or portray as an exception. GLAS KONCILA is truly exemplary in this respect: it simply abounds in real and unreal negative examples, at the same time remaining silent about everything that is constructive, pursuing the purpose of imposing debates which cannot benefit anyone.

This is all the more unfortunate when we realize that today many people are advocating dialog as a way of a mutual meeting of minds and understanding through the principle of affirming those things which people, groups and nationalities have in common rather than what divides them. To go against that means going against the constructive historical experience of our nationalities and ethnic minorities, against their present and their future.

Of course, this does not mean that negative phenomena should be passed over in silence, but only that they should be spoken about so as to hasten the conditions of their resolution. In this sense criticism is not merely a right, but also implies responsibility for the consequences which one might cause.

GLAS KONCILA obviously does not take this into account, not because its editors are ignorant, but because it objectively suits them to have things progress as slowly as possible and perhaps because they feel a responsibility to someone else. That is why GLAS KONCILA does not now and will not in the future contribute to anything constructive in this area of the life of society if it continues to hold the position of destructive caviling, of unprincipled behavior and of petty political advocacy on the basis of group interests. In so doing it will inflict damage not only on society as a whole, but also on the believers whom it supposedly represents.

That is, as one of our theologians has said, "the gospel cannot be carried out nor confidently preached in a manner which itself negates what is essential in the gospel. The Kingdom of the Lord cannot be established by trickery, by deception, by violence, by dissension, by mistrust, or by willfulness, things we resort to when it seems that 'our cause' is not faring well."

To mention one other thing, there is another passage in that article where the editor in chief says: "GLAS KONCILA is not 'in the pocket' of any group in the church. As a whole it is always at the disposition of the hierarchy." Since he does not mention the believers nor the clergy at the lower level at all, it would seem worth asking whether the editor in chief meant to say that he speaks on behalf of the hierarchy?

ZAGREB HOTEL DIRECTOR'S OUSTER, RETURN TO POST DETAILED

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1551, 21 Sep 80 pp 18-19

[Article by Jug Grizelj: "Epilog to the Jakopovic Affair"]

[Text] The news last year published in dozens of newspapers, in hundreds of editions and in millions of copies containing the serious moral and financial charges against Branko Jakopovic, then director of the work organization of Zagreb hotels Interkontinental was like a shock for all those who knew this man by sight and reputation as an exceptionally good worker, an excellent organizer, an honest man and an upright citizen of this country.

The first news was followed by a second report, the second by a virtual flood of articles in installments which painstakingly recorded every detail in the development of the large-scale scandal and of the large work force of the hotel belonging to the Interkontinental chain, which for decades has been headed by Branko Jakopovic, which had just opened and which according to many is one of the best in the world. The man who up until that time had been unstintingly spoken of as a wonderful business executive, the recipient of many prestigious forms of recognition both at home and abroad, the dean of our contemporary hotel business and a rare example of a worker who had spent almost four decades in the same economic organization, advancing from an illiterate Zagorje peasant boy to elevator boy, dishwasher, waiter, desk clerk, and maitre d' to experienced and educated hotel director (more than once in the world's newspapers the example of Branko Jakopovic has frequently been used as evidence that the Yugoslav system of self-management has succeeded in stimulating every talented worker and of creating an official from him) overnight became a scorned technocratic professional manager, an unscrupulous violator of worker rights, an opponent of the party line, a forger, all but a sexual maniac and finally, a criminal who "for several dozen pages of copied self-management acts" took 300 million old dinars from Geneks of Belgrade, which at that point was preparing to open a second affiliate of the Yugoslav Interkontinental in Belgrade.

For months horror followed horror in portrayal of the character of Branko Jakopovic, and finally it was reported that "since the collective has been

unable to adopt a reasonable decision" the party committee of Centar Opstina in Zagreb, and later the conference of that same organization, unanimously adopted a decision to expel him from the League of Communists. At the same time the public was also informed of the evaluation of this opstina forum to the effect that Branko Jakopovic "because of his documented and unacceptable" moral and political attributes can no longer receive the support of that forum in remaining in the position of director of Interkontinental. Finally, or better--somewhat before that--after a brief pause an additional sensation broke out in the newspapers: in the judgment of various solicitor general's offices, in the contract whereby Jakopovic and a group of his collaborators assumed the obligation to prepare the organization and technology of the Interkontinental in Belgrade for Generaleksport, this man seriously damaged the social community.

"Expelled" From Everything

News items are like that: they start out as snowballs and then roll and grow until they are an avalanche. That is the way it happened with the news on the injurious activity of Branko Jakopovic: when the affair reached its peak, there was no longer a single well-known charge in our system which had not been pinned on this man. The case appeared to be cut and dried--and ended. But that was only the appearance, just as in many other criminal affairs in which things appear excessively and perfectly clear.

Not long ago, following a careful examination of Jakopovic's appeal against his expulsion from the League of Communists, the Bylaws Commission of the Zagreb City Conference of the League of Communists reinstated him in the party. At almost the same time, following a public competition and with the obvious, though tacit, consent of all sociopolitical organizations, including those of the opstina, which up until a few months before had contested even his basic moral and political attributes, Branko Jakopovic was elected director of the Interkontinental hotel organization of associated labor by a unanimous decision of the collective. Finally, just as in a film in which the projectionist reverses the film and the avalanche slowly shrinks until it is a snowball, Jakopovic and the group of those who drafted the contract so much contested and called at one time the "Inter monkey business" won their case before the court which judged that there was nothing unlawful in the Jakopovic--Geneks contract, whereupon the court ordered Geneks to pay the entire fee envisaged by the contract for proper performance of the job.

How the Mechanism of an Affair Operates

Since the story we just told is not the first or the last in the chronicle of scandal in which an error is established sometimes sooner and sometimes later (and sometimes too late), and yesterday's sworn culprit becomes a sworn victim, it is becoming increasingly interesting and important for our society to study the driving force behind the mechanism of these fabricated

affairs. We can follow this in an almost characteristic way in the case of Branko Jakopovic. How did Branko Jakopovic become a waster of public funds? The very beginning of the entire scandal was an anonymous letter sent to some 20 important federal, republic, municipal and opstina addresses, including the address of the work collective Interkontinental. At this point it is not really important whether those are right who swear that they recognize the author of this anonymous letter consisting of nine typed pages and who say that he was one of Jakopovic's closest collaborators, who at one point in what has been referred to as the restructuring following the Law on Associated Labor, felt that he had been unfairly deprived of a promotion to a supervisory position. The letter itself, and this is easy to establish by simply examining its content, consists mostly of hearsay and gossip and "who did what to whom" with one sole, but magical exception: in that letter Jakopovic and his immediate management team are charged with opposing the Law on Associated Labor and of usurping self-management. The same kind of letter--(and such letters, as is well known, are circulating in many quarters in our system) could quite well be sent from any one of our work collectives. Though regarded by all the addressees as insubstantial and not worthy of attention--the contents of the letter, on the basis of our truly strange convention concerning anonymous pieces of this kind of eloquence (this convention calls for all charges to be investigated, and it is up to the accused to prove that the charges, however monstrous, are not accurate) went the rounds of various commissions, working groups, councils of comrades, and so on, and so on.

Little by little the contents of the letter were altogether forgotten, but not the demand that "every aspect be studied." The snowball began to roll, and no longer was anyone able to stop it. At one point it even became clear that certain elements outside the collective did not in fact want to stop the snowball, but were making every effort to turn it into an avalanche. In spite of the tremendous pressure exerted on the collective by individuals outside it for it to take a stand on the "evident guilt" of its director, the collective of Interkontinental, we must admit, held out to the end: in several discussions and in a large number of votes, in spite of the pressure we have mentioned, which took on monstrous proportions in some cases, the collective headed by Branko Jakopovic did not consent even at the end to expel him from the League of Communists, nor to discharge him.

Finally, when the tales about Branko Jakopovic's behavior in opposition to self-management were joined by the "large-scale Belgrade affair" (also trumped up, as shown by the court decisions and also the assessments of the competent sociopolitical bodies in Zagreb and Belgrade) involving Geneks and Jakopovic and Interkontinental and the alleged theft of 300 million dinars, no one was any longer able to stop the avalanche. Even then, however, neither the bodies of self-management nor the party organization of Interkontinental consented to join in the stoning of Jakopovic--and the persistent forces outside the collective accomplished an unlikely pirouette in which they managed to take the entire matter out of the hands of the

basic party organization of Interkontinental and transfer it to the opstina committee for a decision. There, as we have already said, Jakopovic was expelled and was labeled as someone unfit for the job of director; in short, he was liquidated.

The Satisfaction Due to Human Decency

Fortunately, there are also people and forums whose purpose is not to manufacture scandals. Nor, be it said, to cover them up. Nor do these lines offer in any manner whatsoever a vision of Branko Jakopovic's infallibility. Nor does the decision of the Bylaws Commission of the Zagreb City Committee of the League of Communists reinstating Jakopovic in the League of Communists, nor the assessment of the Interkontinental collective in re-electing him director bear witness to his infallibility. These decisions only say that reason and a sober and measured evaluation of Branko Jakopovic's personality and career won out. These decisions speak, then, about satisfaction gained not only by Branko Jakopovic, but also by an authentically democratic, self-management and humanly decent approach to a man with all his characteristics and faults.

Finally, it has remained to the present author to speak of the most unpleasant detail of the Jakopovic affair, one which he finds most difficult to utter. When that affair was current and was an affair, it rolled about for months in many Yugoslav newspapers. Today, that means for the last 2 months, since the moment when it became known that the affair was no longer an affair, none of the newspapers which reported Jakopovic's dismissal as director, his expulsion from the League of Communists, and the steps of the investigation and inquiry into the "injurious contract" with Geneks, has carried even one word to the effect that Jakopovic has been rehabilitated.

This "forgetfulness" is not to the credit of the profession which I love so much and have served so long. Anyone can make a mistake, including a newsman, but a newsman is required to confess his error in public when he becomes aware of it.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

EDUCATION OF GYPSIES IN SLOVAKIA STILL PROBLEMATIC

Bratislava ROLNICKE NOVINY in Slovak 30 Oct 80 p 4

[Article by Peter Marianyi: "The Effort Must Be Made by Both Sides"]

[Text] The decade just passed brought a number of positive changes in our society resulting from constant concern for a higher living and cultural standard of the population, from the constantly better satisfaction of material and spiritual needs of our citizen. The humane and democratic spirit of the principles on which our socialist society is based was significantly reflected during this period also in the results of the process of social and cultural integration of our gypsy fellow-citizens into our society.

The changes in consciousness and life of Gypsies, however, take place only gradually. The national committees in particular must exert a great deal of effort and overcome distrust and traditional barriers which had formed among our Gypsy citizens over the long period and which are characteristic for them. An important result of this effort is the spreading differentiation process among the gypsy population. There is a constantly increasing number who realize the inevitability of change in the way of life and see the basic prerequisite for their better life in the active participation in the production process and societywide actions.

The Gypsies are said to have an untamable temperament. They find it difficult to abide by the laws and do not intend to give up their habits and especially their freedom. These features of their character are inherited from one generation to another, from parents to children. And yet, it is precisely in this part of their upbringing that the greatest successes can be achieved--in the upbringing of Gypsy children, in their early and sensitive inclusion in the common educational process and upbringing with other children. In such an environment, the child gets used from the outset to the norms generally recognized by the society, gradually merges into the generation of his contemporaries, and when he grows up, there is no problem for him to join the production process and lead an orderly, socialist way of life.

In contrast to the capitalist society which promotes the separation of Gypsies from the rest of the population and thus excludes them from its center, from the participation in the affairs of the society, the socialist society tries to achieve just the opposite--a full integration of Gypsies from early childhood into the life of the society on the basis of absolute equality. What, however, is the reaction of our Gypsy fellow-citizens? We find from day to day that many of them do not want,

or are not able to appreciate the achievements of the socialist society; that they frequently misuse care given to them by the national committees; that the parents are not willing to comply with the teacher's wishes concerning the upbringing of their offspring. Naturally, the difficult upbringing of the young gypsy generation then largely rests upon the shoulders of the entire society, of our state, and this is obviously quite all right with many gypsy parents. This costs us a great deal of effort, many funds, and a lot of patience. At the beginning of the 1970's, fewer than 10 percent of the children from Gypsy families in preschool age were trained for regular attendance. Due to the increased care in this area and increased attention to the problems of upbringing of the gypsy youth in the past decade, their number increased to 55 percent by the end of last year. This means that we can offer preschool upbringing to almost 10,000 gypsy children at the present time. Although enough possibilities have been created, the parents make less use of them and refuse to accompany the children to the kindergartens. Also children coming there appear to be neglected and there are difficulties with payments for food. The indifferent attitude of Gypsy parents toward these questions must then be dealt with again by the national committees. A number of unnecessary problems arise, troubles which must be remedied at the expense of the entire society.

The situation at the basic nine-year schools is no better in any way. Despite special care for Gypsy children, despite overall attention paid to them by the educators (or perhaps because of that?), the irregularities in school attendance have not been eliminated.

Past practice has demonstrated that, if the Gypsy youth complete at least basic school education, he manages to participate successfully in the normal life of the society. Today, almost 50 percent of gypsy youngsters become participants in apprentice training and the number of those who stay at home with their parents has been reduced to 13.4 percent. Due to this fact, also, the number of economically active Gypsy citizens increased to 93 percent for men and to almost 50 percent for women.

Naturally, the problems outlined here do not pertain to all fellow-citizens of Gypsy ethnic minority. Most of them try to be solid citizens of our society. Yet, it is precisely that minority whose behavior does not correspond to the norms of the socialist coexistence which jeopardizes the reputation of the entire Gypsy community. Our society, our socialist system, tries to comply with the wishes of these people, and to help them in every possible way. Yet, this effort can be successful only if the other side, those Gypsy fellow-citizens who need this help most, will cooperate.

BRIEFS

CSSR REFUSES ATHLETE VISA--Former Austrian figure skating champion Sonja Balun, 24 years old, formerly a CSSR citizen and from 1970 an Austrian citizen, had visited the CSSR 15 times since 1970, the last time 2 months ago for the CSSR-USSR ice hockey game in Bratislava. When, in her capacity of trainer of two young Austrian figure skaters who were to participate in the Banska Bystrica Juniors Competition, she recently applied for an entry visa, she was refused. When she inquired about the reason at the CSSR Embassy in Vienna, she was told that CSSR authorities had for years "overlooked a mistake," and that she was still a CSSR citizen. The reason for the CSSR authorities' attitude may possibly be the fact that Sonja Balun, before she came of age, failed to sign an application requesting to be released from CSSR citizenship. FORMER SED OFFICIAL ANALYZES CAUSES, CONSEQUENCES OF GDR HARDLINE

Hamburg DER SPIEGEL in German Vol 34 No 43, 20 Oct 80 pp 35, 37, 39

/Article by Wolfgang Seiffert: "Poland Threatens the Power Monopoly of the SED--Wolfgang Seiffert on the New Course of the GDR Leadership"/

/Text/ Until his resettlement in the Federal Republic in 1978 author Seiffert, 53, was vice president of the GDR Society for International Law, SED member and adviser to the East Berlin Government. At the present time Seiffert, one of the foremost experts on GDR politics, is a guest professor for international economic law at Kiel University.

Last Monday the SED leadership followed the drum roll of drastic increases in compulsory currency conversion for visitors from the West by calling for a totally new and different basis of relations between the two German states, originally agreed in 1972. This completed the GDR leadership's new political formula for dealing with Europe: "Fewer contacts--more money--greater pressure on Bonn." We have to assume that they will pursue it for the foreseeable future.

And yet, neither the GDR, its people nor its leadership have done badly with the earlier arrangements:

-- The German Democratic Republcic received worldwide recognition, joined the United Nations, and GDR statehood was fully accepted by the Federal Republic;

-- On the basis of sensible compromises the GDR obtained many important economic benefits and financial services; economic relations with the Federal Republic prospered;

-- The expansion of opportunities for communication between persons--though usually only in the West-East direction--made the East German public feel that they were not totally isolated, despite the Wall. And the GDR leadership seemed to have learned to live with the ideological burden of increased contacts and opportunities for communication.

The peoples of Europe gained the impression that the Germans had discovered a way of living side by side, despite the hardships of the division and the Wall, possibly even of getting along with one another.

Many people in Germany and other European countries are therefore quite justified in asking would could have possessed the East Berliners to put all--or at least some--of this at risk.

Many indications lead me to the conclusion that East Berlin--and I must add Moscow also--diagnosed a worsening international situation which, from the standpoint of the Politburos in Moscow and East Berlin, looked like a "worldwide conspiracy" (NEUES DEUTSCHLAND) of the West, designed to put the countries of "real socialism" under severe pressure by confrontation.

Until recently the East cited as proof of the alleged conspiracy the NATO arms modernization decision and the situation in the Near East, the Gulf and Afghanistan. The United States, in particular, was held responsible. Yet, it was always asserted that these tensions should not be transferred to Europe.

As late as 4 July last Honecker emphasized in an interview (published in late August at the same time as his autobiography): "Of course we and our allies ar making every effort to prevent the extension of the current international tensions to European relations."

What, then, happened in Europe to cause such an abrupt change in line? Evidently it is the development in Poland, which is turning out to be much more thoroughgoing than was feared: It threatens the power monopoly of the communist party and, among the peoples of the East European countries, strengthens the awareness that the political structures of this system need not inevitably conform to the Stalinist model.

In the case of the GDR there is an additional factor: A constantly reaffirmed and strengthened special relationship between the two German states might not only demonstrate that both states could live together quite peacefully despite their profoundly differing social systems. The special relationship could also serve to strengthen (or arouse) among East Germans awareness of the continued existence and unity of the nation and thereby consolidate the conviction that this unity is a real prospect for the future, albeit in the very long term, and always provided that peace in Europe is preserved.

However, the SED leadership and Moscow always considered the GDR a fortification against NATO and the Federal Republic at the westernmost border of the Warsaw Pact. Now they fear that the situation may be reversed: In the West they still see NATO and the FRG's attraction for Germans in the GDR; in the East a reformed Poland, liberated from Stalinist structures. All this at a time when the economic situation of the GDR and the other socialist contries continues to deteriorate.

It is a characteristic feature of all Stalinist systems--and despite the changes which have occurred there also the USSR and the GDR are still the most Stalinist countries--, that power is their No 1 goal, and that sections of the system, whether the economy, the state or ideology are primarily considered instruments of power.

For these systems power is just about synonymous with the autocracy of the communist party, the security of the one-party system.

There have always been two types of internal security: One based on the far reaching identification of the majority with prevailing conditions, and another which is best described as the quiet of the grave. Up to now the SED leadership under Honecker has tried to achieve something like a basic consensus with the GDR public, insofar as that is possible in the prevailing conditions and within the framework of unchanged political structures.

If this is no longer considered realistic, they will make do with the other internal "stability," provided only that power and the power structure are intact.

Moreover, from the viewpoint of Moscow and East Berlin, it seems that all overland threads linking the opposition forces in Poland with the West run through one country: The GDR. The flow of visitors from the West, especially from the Federal Republic to the GDR, is alleged to provide an ideal setting for "agents" and "counterrevolutionaries" to fish in troubled waters, and where they are difficult to detect, let alone catch.

Against this background Honecker's foray proves to be mainly an attempt to mount a major diversionary offensive for those forces in the Soviet Union, Poland and the GDR, who wish to keep alive the structures of the Stalinist exercise of power. At the same time it is the preparation for the attempt to restore in Poland the shaken if not largely destroyed structure of the one-party system on the Soviet model.

The danger to the Polish reform movement--at least for now--threatens less at the Polish-Soviet border. Instead it hovers at Poland's "open border" with the GDR and the reformed CSSR, although that obviously does not signify any change as far as the Moscow command center is concerned.

The SED bezirk managements in Rostock, Frankfurt/Oder and Cottbus as well as the Ministry for State Security's respective bezirk administrative offices have always been much preoccupied with developments in Poland, not only for their potential effects on the GDR public but also because they consider it their "internationalist duty" to use their numerous links to the Polish party and government apparatus for ensuring that everything in Poland "cleaves to the socialist line."

However, it is quite evident that the GDR leadership's new line has no real future.

The accusations addressed to Bonn are ridiculously far fetched, the demands unrealistic and unfounded, the promises to be made in case Bonn gives in dishonest.

Only an exceptional simpleton could believe, for example, that a change in the Federal Government's basic attitude on the citizenship issue would mean easier travel for the GDR public.

Honcker himself unintentionally admitted as much: In his July interview he criticized the Federal Government's attitude, commenting that the GDR had now concluded consular treaties with 32 countries, including Britain, France, the United States, Austria, Finland, Cyprus, Mexico and India.

And yet GDR citizens cannot freely travel to any of these countries. On the contrary: Honecker here cites only those countries to which the ordinary GDR citizen would not be allowed to travel even after a settlement of the citizenship issue--just as he is not allowed to travel to the Federal Republic.

In fact the GDR is not in the least interested in the "recognition" of GDR citizenship (incidentally, Honecker could have been told by one of his own international jurists that there is no such legal institute in international law as the recognition of citizenship). The real East Berlin intention is to keep their grip on GDR Germans even when they have voluntarily chosen to be domiciled in the Federal Republic.

Much the same applies to Honecker's request to have the present permanent representations transformed into embassies. He is not concerned with satisfying the requirements of international law but wants to change the painstakingly negotiated bases of relations between the two German states to such an extent that the SED state's total power over the GDR population is reinforced.

Honecker's demands do have a certain logic: In a curiously perverse manner he confirms the continued existence of the nation and the special relations arising therefrom.

The attitude of confrontation now assumed in the GDR vis-a-vis the FRG is bound further to alienate the GDR leadership from the people, create new contradictions, possibly provoke a new wave of applications for emigration, arouse anger and disappointment.

On the international stage also the new line may easily boomerang. The GDR's confrontation course is unlikely to evoke sympathy in countries such as Poland or the CSSR. It will probably reinforce the trend among reformist forces in Eastern Europe, who consider a reunited German state a welcome ally for their own independence from Moscow.

In the Federal Republic Honecker's belligerent attitude may have the highly undesirable effect of pushing the political scene to the right, although we must hope that this will not happen. If it does, the confrontation course could turn out to be similarly fateful for Europe as the KPD's doctrine of "social fascism" in the Weimar Republic, which helped Hitler assume power, and Stalin's pact with Hitler, which helped the national socialist dictator to realize his warlike intentions.

Granted, we must be just toward Honecker and his crew. The operation now begun was not generated by German Communists in the GDR. The SED leaders with Honecker wished to continue the former line; they were convinced that this would serve best to secure the GDR's internal stability. Unfortunately they were increasingly confronted with the prospect that the global interests of the Soviet power required a change.

Still in total agreement with Moscow at that time, they had sent out quite unmistakeable and urgent signals to Bonn about expanding relations--ranging from Politburo member Guenter Mittag's visit to Bonn, FRG Research Minister Volker Hauff's to the GDR, Honecker's talk with Schmidt in Belgrade to Honecker's Leipzig statement regarding the GDR's "great interest" in good relations with Bonn.

It will probably have to be left to later historians to ascertain [illegible] Bonn--already in the throes of the forthcoming election campaign--was not receptive enough

or not willing enough to take action. In any case events in Poland cut across the good intentions of the SED leaders as well as the cumbersome decision-making process in Bonn.

Once again, as always at critical turning points of the political situation, Honecker toed the Moscow line. Yet in the course of the necessary analysis and search for a future approach to German-German relations we should not forget the SED's earlier willingness to enter into discussions. Though at the moment well hidden, the GDR leadership's appreciation of the realities, their awareness of their own best interests, offers an opportunity later on to take up the threads where they were left dangling.

It would not be advisable to react by imposing sanctions, although of course relations with the GDR must not be conducted on the principle: "If someone strikes your left cheek, tender the right one also!"

It will be crucial for the Federal Government to react politically, stand by its principles and patiently continue the talks, negotiations and equalization of interests. At the same time this attitude may include the resolve not to agree to every negotiating point of the other side, to state quite clearly that the Federal Republic can do even without this or that treaty--if the situation requires.

After all, despite what has happened, developments have confirmed the correctness, efficacy and strength of this approach. Though the Stalinist power apparatus constantly disrupts and at times plunges the process into crises, the fact remains that the internal reform forces are being freed and the social status quo changed by peaceful means and within the limits drawn by international law.

Other than military confrontation there is really no alternative.

WEST GERMAN ANALYSIS OF GDR CAREER GUIDANCE PROBLEMS

Cologne DEUTSCHLAND ARCHIV in German Vol 13 No 10, Oct 80 signed to press 26 Sep 80 pp 1075-1081

/'Analyses and Reports' feature article by Katharina Belwe: "On the Entry of Young People Into the Work Life of the GDR--Causes of Faulty Developments"/

/Text/ The Issue

In view of the shortage of manpower prevailing in the GDR the smooth and successful integration of young people in the production process is of the utmost importance. The planned deployment of the total societal labor capacity, however, poses a problem insofar as it is confronted by the right of every GDR citizen to freely choose his job and by an excess of vacancies.[1] Consequently the planned deployment of young people also is restricted by the circumstances. The organs of the GDR's state management and planning must deal with the problem of "being compelled to achieve the far reaching coincidence of youthful wishes for the greatest possible mobility, the stemming of uneconomic manpower turnover, and the realization of socially necessary manpower movements."[2] This is where the system of career guidance comes in.[3] According to Rudolph career counseling in the GDR has two preeminent goals: Young people are to be enabled

1. To arrive at a decision as to their future work on the basis of the best possible information about opportunities, requirements and prospects, coupled with the realistic assessment of their own abilities and inclinations;

2. To coordinate or subordinate their own interests to social requirements.

Career counseling is largely regulated by the "decree on career guidance"[4] and various orders. The most important institutions involved are schools, enterprises, career guidance centers, local state organs and social organizations.[5] The following report is not designed fully to describe the GDR system of career guidance in all its ramifications. For that see the papers by Western authors.[6] I am concerned with tracing the causes of faulty developments in the incorporation of young people in the social production process by way of GDR empirical studies.[7] The fact is that a career counseling system, though seemingly very well organized, is marred by evidently faulty developments in the career choices of young people.

At the present time some 15 percent of young people change their jobs immediately after completion of their career training. In 1975 Kuhrt pointed out that young

people often begin their career training with certain reservations, illustrated by sociological studies in Halle Bezirk regarding the satisfaction of career wishes, satisfaction with the career as such and interest in the chosen career.[8] Dissatisfaction was greatest among young working people below the age of 25. According to Hille (1978) GDR exports assume that 'about 70 percent of young people per graduating class at POS / polytechnical secondary schools/ achieve satisfactory adjustment to the table of organization. The other 30 percent need a prolonged stage of career orientation and counseling before a training contract can be concluded. They include about 10 percent of problem cases where placement is difficult, incline to 'idleness' and frequent job changes and, sometimes, require the intervention of the youth aid agencies."[9] At least 10 percent of POS graduates per annum must therefore be considered potentially unstable. In 1978 this involved 24,000 job seeking juveniles among 240,000 school leavers (60,000 of the total of 300,000 wished to apply for admission to colleges or technical schools).[10] This figure, though, is far too low because the 70 percent of POS graduates who achieve satisfactory adjustment to the table of organization also include apprentices who are dissatisfied with their choice: "Though more than 70 percent of school leavers are able to conclude a training contract after a first application to an enterprise, some of them obtain a training contract for a career which is not their first choice." Balzer, head of the career guidance section of the State Secretariat for Career Training, cites three reasons:

1. Contradictions between the student's subjective expectations and professional interests on the one hand and social needs on the other, which fail to be settled before the conclusion of the training contract.

2. Many enterprises tend to unduly orient hiring requirements to grades achieved at school rather than the total personality of the student.

3. Career guidance of students to help them settle on a career and conclude a training contract is often inadequate.[11]

Empirical Material on Faulty Developments

The comparison of two different studies--one involving 300 tenth grade students at eight Magdeburg secondary schools and another of 400 apprentices in various occupations in Magdeburg and Prenzlau--will illustrate this faulty development:

The 300 students polled had basically made their career decisions, that is most were fully aware of the career and the enterprise they would join for training after their graduation from school. The 400 apprentices belonged to the career groups skilled machinists, machine design draftsmen, skilled workers for manufacturing aids, maintenance mechanics, skilled construction worker and sales clerk. The results of the poll--subsequently cross-indexed in table 1--allow the conclusion that most students "err" in their career choice because, as the poll of apprentices showed, only 14.5 percent would choose the same career if given a second chance.[12]

Table 1[13]

Appraisal of the profession to be chosen/chosen	Student Replies Percentage	Apprentice Replies Percentage
Job preferences largely met	77	145
Job preferences partly met	16	55-88
Problem cases	7	

Consequently, while a majority of students consider their choice of career correct, "a lot of apprentices tend negatively to appraise the result of their career choice."[14] Obviously students believe to have received adequate information for their career choice; later--in the course of training--they find out that they were wrong.

About 64 percent of the tenth grade students polled were also convinced that they had chosen a favorable career, suitable for their purposes; 25 percent thought this likely; the remainder was deemed to be "problem cases." Table 2 compares the students standpoint with a view to the appraisal of their chosen careers with that of apprentices. While the majority of students believe that they have given sufficient consideration to their own abilities and characters with regard to suitability for the respective career, and that they know all about their chosen career, only relatively few apprentices make the same claim. We may thus assume a fairly widespread lack of information and (therefore) a less than acute student awareness at the time oc career choice.

Table 2[15]

Viewpoints regarding the appraisal of the chosen career/training	Student Statements Percentage	Apprentice Statements Percentage
General knowledge about the career to be trained in	85	36
Consideration of ability	78	29
Consideration of suitability	75	42

In addition only 36 percent of the apprentices polled stated that they knew something about their future career; only 37 percent believe that they considered their interests and inclinations in connection with their career choice, and only 46 percent now say that they had appreciated future career opportunities when making their choice.

The learning effect is remarkable: 90 percent of the 400 apprentices polled pleaded for general, 85 percent for special knowledge of the career; 88 percent consider indispensable a thorough test of abilities, 86 percent a review of their inclinations and interests for the chosen career; 81 percent advocate greater consideration for career opportunities at the time of choosing.[16]

GDR empirical studies of young people's knowledge about the careers chosen reveal similar gaps in their information: A 1977 poll of 194 first year apprentices, for

example, showed that only 3.6 percent of those polled felt they had been very well informed about the nature of their career, 5.2 percent about its requirements and prerequisites, 3.1 percent about the training, 9.8 percent about future earning potentials, and 10.8 percent about opportunities for further education. Most gave a verdict of "well informed" (maintaining the above sequence: 38.1 percent, 38.7 percent, 32.0 percent, 40.2 percent, 42.8 percent) or "satisfactorily informed" (40.7 percent, 38.7 percent, 37.6 percent, 37.6 percent, 32 percent). Sixteen percent were "not informed" about the nature of the job, 12.4 percent about requirements and prerequisites, 13.9 percent about the future earning potential, and 26.8 percent about opportunities for further education, that is more than 25 percent lacked proper information.[17]

The results of the study seem to indicate, on the one hand, that there are some deficiencies in career counseling. According to Dietz actual contact with the future job "corrected the erroneous assumption that the career decision had been made responsibly."[18] On the other hand they are proof that the transition from school to working life is a problem general to young people. It seems doubtful whether it can basically be resolved by better career guidance (= limits of career guidance). Young people must live this stage of their development--contradictory as far as they are concerned--in the course of which they experience a raising of consciousness (learning effect). However, it is accepted that the general transition to working life may be eased for the young person by the provision of realistic information. Here are the opportunities for career counseling. The summary of an empirical study conducted in 1978--it may be applicable generally--revealed "that the possibilities for the achievement of a higher standard of information as the prerequisite for a responsible and informed career choice have certainly not been exhausted."[19] At the time the career decision is made some of the school leavers still display a certain lack of information. The following factors are held responsible for the insufficiently realistic ideas of young people as regards their future careers.

They are:

-- The sometimes inadequate utilization of existing sources of information,

-- Insufficient familiarity with the respective career,

-- Occasionally the tendency more actively to recruit for certain careers than provide objective information about them,

-- Subjective recommendations by friends and acquaintances,

-- Repeated reorientation of some young people/students to other apprentice jobs for one reason or the other, because the initial career wish cannot be realized,

-- Manifestations of an unduly passive or apathetic attitude of young people at the time of career choice, as well as

-- Insufficiently distinct career interest and belated choice of career training.[20]

Causes of Information Gaps

Some of the gaps arise because schools sometimes feel hard put to it to meet their responsibilities for career guidance. Quite often they consider career preparation "a marginal duty, especially because it is not explicitly mentioned in the curriculums."[21] As, however, preparation for the choice of career is in first place in the problems confronting senior students in particular,[22] school represents the first cause of wrong career choices which may later result in undue job instability. Though the significance of polytechnical instruction[23] for the illustration of various careers and working life should not be underestimated, it is necessary to point out the "picture book nature" of the impressions given.

Information gaps also arise from the fact that career guidance centers--the real providers of information--do not exert the greatest influence on the young people who chose careers. The juveniles polled "almost unanimously cited their parents as the foremost influence." The latest studies confirm this statement without exception (see tables 3 and 4).

Table 3[24]--Prime Factors Influencing the Career Choices of Students (706 Graduates)

Influenced by	Total 706	Males 353	Females 353
Parents and relatives	372 (52.7%)	152 (43.0%)	220 (62.3%)
School and youth association	146 (20.6%)	68 (19.3%)	78 (22.1%)
Enterprise and polytechnical instruction	126 (17.9%)	90 (25.5%)	36 (10.2%)
Mass communication media	62 (8.8%)	43 (12.2%)	19 (5.4%)

Table 4[25]-- Survey of the Efficacy of Various Influences on Career Choices (involving 194 first year apprentices)

	Percentages
1. Parents	28.3
2. Career guidance centers	18.5
3. Relatives, acquaintances	8.3
4. Classmates, friends	8.3
4. Siblings	5.7
6. Enterprise representatives	4.4
7. Informational material at career guidance centers	3.9
8. Home room teachers	3.4
9. Other factors	19.2

According to Bonring/Ducke the fact that parental influence is decisive for the career choice of students underlines "the necessity even more to involve parents in carrer choice orienting activities and making available to them more information for the proper guidance of their children."[26] That, however, is difficult because information is usually available only at parents meetings,[27] which many parents fail to attend. Consequently the expensive career guidance system tends to be undermined to a certain extent by parents who--consciously or unconsciously--misdirect their children (by reference to "social requirements").

Added to this is the unduly low priority of individual career counseling for students. Individual counseling is provided only for juveniles who are considered "problem cases." As a result important sources of information are insufficiently exploited. On the other hand it is well known "that information responding to subjective needs is more readily accepted and absorbed."[28] Of little benefit to the smooth running incorporation of career entrants, finally, is the trend to flowery job descriptions. Often this is entirely counterproductive. A career entrant, for example, who decided to train as a "calculating machine mechanic" because "it sounded nice" in the index of apprenticeships, may well feel disappointed and "cheated when she ends up on the assembly line." That disappointment is due to inadequate or misleading information about the particular career. The attitude that "it may not be bad as far as earnings are concerned but can't satisfy me for the rest of my life" implies the thought of future job changes.[29] "Lack of knowledge and information about the actual circumstances of the job" are cited as among the main reasons for errors in career choices.[30] True, all 291 possible job training opportunities are listed in the systematic register of careers and described on half a page each,[31] but the information provided about various aspects of the prospective career (subject matter, physical and intellectual requirements, prior qualifications, the kind of training, opportunities for advancement, earnings, and so on) is not always adequate.[32] The description "skilled word processing worker," for example, primarily means "typing from tapes, taking dictation and transcribing it on the typewriter; typing from handwritten or shorthand notes; writing letters from brief notes; producing texts for office printing processes (mimeographing, copying machines and small offset printers)."[33]

Conclusion

Using the results of GDR empirical studies I was able to show that faulty developments in the stage of career choice tend to occur despite a most comprehensively planned and generally persuasive career guidance system. Disregarding the general problems of the transition of juveniles to working life they are mainly due to the fact that too little use is made of the opportunities to influence career choices available to schools, enterprises, career guidance facilities and social organizations. All these institutions should be able to offer the young people a realistic picture of their enterprise and career opportunities, but some are underused, others inadequate or so organized that the reality of working life is not clearly appreciated by the young people. Here is a wide field of possible reasons for the subsequent tendency to excessive manpower turnover. More realistic and sophisticated information could certainly help to largely avoid this. Equally important is the provision of such social and material working conditions as may compensate the nonfulfillment of the career wish, disappointment with the "dream career," and so on. Aiming in this direction is the summing up of GDR sociologist Ducke: "However

perfect the information available, it cannot make up for defects, inadequacies, lack of challenge, and so on."[35]

22. A study by the pedagogical college at Erfurt/Muehlhausen revealed that in 14 groups of problems career selection is the outstanding issue for 76 percent of students in grades 7 and 8, and for 81 percent of grades 9 and 10. See Kuhrt, "Basic Issues,,,," (note 8), p 7; see also Otmar Kabal vel Job, "Geschlechtstypische Einstellungen und Verhaltensweisen bei Jugendlichen," /Sex Typical Attitudes and Behavior Among Juveniles/, Berlin (GDR) 1979, p 100.

23. Polytechnical instruction begins in the upper grades of the POS (grades 7-10) and is carried on in cooperation with local industry. This happens in schools proper and--mainly--the "polytechnical cabinets," the "supra" enterprise polytechnical centers and in production departments of enterprises. Efforts for the further centralization and further removal of polytechnical instruction from the enterprise are in direct contradiction to the avowed aim to facilitate the students transition to working life by their immediate confrontation with socialist production.

SHORTCOMINGS IN INTERNAL PARTY AFFAIRS REVEALED

Bucharest MUNCA DE PARTID in Romanian No 10, Oct 80 pp 7-12

/Unsigned article: "Internal Party Affairs As a Fertile Field for Strengthening Sense of Responsibility, Order and Discipline"/

/Text/ The party's intensified leadership in all fields in the process of building the fully developed socialist society is considerably enhancing the scope and content of internal party affairs and lending them new dimensions. But however diversified the interests of the party organs and organizations are, economic problems are still central to the party's agenda. Furthermore as society evolves and the volume and complexity of the tasks increase, the importance of economics in the affairs and activity of every party organization grows considerably, and the internal affairs of the organization are the favorable environment wherein the communist familiarizes himself most intimately with the economic world and the specific requirements of development of material production. Through it and charged with definite responsibilities, he plays an effective part in preparation of solutions that will help to enhance the efficiency of the whole production system. In fact, fulfillment of the economic plans, enhancement of profitability, full exploitation of the great reserves of the enterprise, constant improvement of quality and regular reduction of outlays are the substratum of internal party affairs, the basic purpose of the main measures taken by the party organizations. This requires every organization to check first of all how the communist is performing his professional duties and what he is doing specifically to keep himself in the lead and to influence all those around him. The primary organization that takes no interest in the results obtained in production by its members and their efforts to keep improving them will find it difficult or nearly impossible to successfully fulfill the prerogatives that flow from its role as a leading political force of the collective.

In pointing out the unbreakable bond between the quality of party life and development of the capacity of the party organs and organizations to unite the efforts of the workers in the struggle to implement the RCP Program, Comrade Nicolae Ceausescu asked them to devote the greatest attention to exacting organization of internal affairs because it is there in that favorable environment that the communist becomes a social militant inspired by a powerful revolutionary spirit.

The Party's Strength Is in the Quality of Its Members

Numerical and qualitative reinforcement of the party organization's ranks, a correct social and national composition and proper distribution of the party's forces are essential components of party affairs.

While implementing the decisions of the 12th Party Congress and the directions handed down by Comrade Nicolae Ceausescu, the party organs and organizations have made notable progress this year in the qualitative and numerical reinforcement of their ranks. The fact is noteworthy that the party now numbers over 3 million members, and it is an eloquent expression of its enormous political and organizational influence among the masses and of the boundless confidence of all the workers regardless of nationality and of the entire people in our party's wise policy.

The fact that 54 percent of the party members are workers, nearly 17 percent are farmers, over 21 percent are intellectuals and office workers, and over 28 percent are women is indicative of the concern with which the party administration keeps trying to achieve a healthy composition.

In pursuance of the decision of the Plenum of the RCP Central Committee in March 1980 and the directions of the party secretary general, emphasis is still placed on the quality of party members and improvement of their political and ideological standards and their sense of responsibility and aggressiveness. In other words the priority is on making sure that in all party organizations every recommendation, every decision to admit to the party and every confirmation will express certainty that the individual abundantly deserves the high title of communist.

First attention is given to recruiting the most advanced and purposeful workers in the enterprises of the machine building and light industries, the state agricultural enterprises and the cooperative farms. The party organizations also concentrate on reinforcing their ranks with the best workers in the construction enterprises, especially bricklayers, reinforced concrete workers and carpenters.

Political-organizational work is planned so that in the counties with over 35 percent farmers in the total employed population the proportion of workers will be 55 percent of the total admissions to the party and that of farmers at least 25 percent. In the other counties farmers will be at least 15 percent of the total 80 percent workers and farmer.

Furthermore the party organs and organizations are required to militate for recruitment of the most active women, especially agricultural cooperative members, with strict observance of the decision that they shall comprise 40-45 percent of all new party recruits.

The effort toward party education of party members, especially the young communists, has been intensified. The method whereby the bureaus of the primary organizations hold discussions with the communists at least once a year has been extended at most points.

But in view of the ever growing demands made by the party on its members, the party organs and organizations are expected to make even more intensive efforts toward revolutionary education of party members in order to strengthen the spirit of order and discipline so that each one will become an active militant in implementing the party decisions and laws of the land.

Some organizations are not taking due care to educate party members, so that some of them seriously violate party discipline and morality and the regulations. Almost half of those expelled from the party last year were found guilty of acts requiring criminal sanctions.

Basic qualitative changes have also been made in the party members' cultural and political training. Now more than half the party members are graduates of institutes of higher education, specialized high schools and technical and trade schools. Aid to party members who have not completed their elementary school studies, a program instituted at Nicolae Ceausescu's direction, has shown very good results. In the last 2 years over 300,000 party members up to 50 years of age completed the eight elementary grades, and over 52,000 are now taking courses toward graduation.

Yet some counties (Dimbovita, Dolj, Bacau, Prahova, Arad, Buzau, Iasi, Mures and Teleorman counties) still number a great many party members up to 50 years of age with only four elementary grades who have not been enrolled to finish general school, proving that the program has not been followed up everywhere with due perseverance. The party organs and organizations, jointly with the school inspectorates, must appoint the most capable teachers to help them graduate properly and to check how they study and are prepared to take their examinations.

Several counties have instituted worthy programs to help party members complete their high school studies. A total of over 68,000 party members are in this program, a greater number being in Bucharest, Galati, Cluj, Dolj and Mures. Therefore the organization and propaganda sections of the party committees must check the progress of this program closely, organize aid to party members to attend evening high school, make full use of the experience acquired when party members complete elementary studies, and regard this as an important measure for applying the party secretary general's direction to expand party members' cultural horizon during expansion of the technical-scientific revolution in Romania.

On the basis of the Decision of the Plenum of the RCP Central Committee of March 1979 and the directions of the Secretariat of the Central Committee on the start of the exchange of party documents, individual discussions practically ceased and nearly all organizations held general assemblies to discuss the conclusions drawn from these discussions. About two-thirds of all party members have received the new cards.

As the party secretary general pointed out, the exchange of party documents is profoundly political in nature, with very favorable effects upon development of the party organizations' ability to mobilize the workers' collectives to accomplish their objectives, and upon the revolutionary spirit and the sense of party responsibility in performing the assigned tasks.

The general assemblies to deliver the new party cards are now in full progress, an occasion which should be made a veritable school of communist, party education of the party members everywhere. In view of the great importance of this action, the bureaus of the county committees must keep the exchange of documents firmly in hand and conduct it effectively, not leaving it for one moment to the sections for problems of regulations, documents and records of party members.

Now the most important task in connection with the exchange of party cards is a close check on application of the lessons learned from this important event to party affairs, implementation of the good suggestions and ideas, consideration of all

criticisms, and implementation in every particular of the measures adopted on this occasion. Viewed in this light alone it can be said that this action has truly contributed to intensification of the communists' activity and to consolidation of every party organization's leadership.

In accordance with the directions of the Secretariat of the Central Committee, the assemblies to deliver the new cards are an occasion to develop the communists' sense of responsibility for the way they keep this important document.

It is the task of the organizational section to check strict observance of the rules governing regular control of the cards at the general assemblies and upon payment of dues, questioning every instance of negligence in keeping and handling the card. Even more determined steps must be taken so that all communists will see that the party card is kept quite safely, putting a complete stop to any show of negligence. When the documents were exchanged cases were discovered (in Petrosani, Sacele, Fagaras, Vaslui and Brasov) where even secretaries of primary organizations could not properly keep the cards entrusted them by some party members.

Therefore all primary organizations must make new educational efforts so that every party member will carry his party card with the greatest care and in perfect safety.

An Essential Method of Party Education of Communists

The party task is a basic instrument that enables every communist to know exactly what he has to do at any point, how to use his political and professional aptitudes, and how to develop his capacities as a volunteer fighter in the communist avantgarde.

Precise fulfillment of the party task is the most conclusive expression of a high communist discipline. When the party secretary general asked the party organs and organizations and the activists to militate more firmly for a stronger sense of discipline and for development of revolutionary aggressiveness and party responsibility, the fact that all these are essential ways of providing for unflagging implementation of party decisions and the laws of the land is what he had in mind.

As Comrade Nicolae Ceausescu pointed out at the conference in September 1979, a strengthened sense of responsibility and labor discipline is an essential requirement for fulfulling party and state decisions and the RCP Program for Romania's Socioeconomic Development, without which no proper performance of party activity is possible, nor scientific management in any sector of social activity.

But an analysis of the way the party organizations use the party task system to keep the active spirit alive in the communists' ranks shows that there is room for considerable improvements there. When we say this we have in mind the fact that in some of the county organizations (Arad, Bacau, Buzau, Dimbovita, Ialomita, Iasi, Suceava and Teleorman counties and Bucharest municipality) almost all the party members have definite tasks, while in others (Bihor, Brasov, Dolj, Hunedoara, Mures and Olt counties) their number is more limited.

The existing data show that in June only half the party members had tasks in Olt and Dolj counties. Do these counties have no objectives to attain or business to occupy all party members? It is hard to believe that Olt and Dolj counties have solved the great problems of socioeconomic development to such an extent that they can leave a large number of party members inactive.

We are also referring to the superficiality that appears in the division of tasks, since consideration is not always given to the background, interests or aptitudes of the party members or the particular requirements of the political and organizational work in each organization.

If in addition to all these we also consider the existing defects in control over the communists' performance of the assigned tasks it is clear how broad the field of action is here. The experience of many party organizations in Alba, Botosani, Braila, Prahova, Suceava, Timis, Vaslui and Vrancea counties, which request party members to report regularly on their work in assemblies should be emulated as soon as possible by the party organizations in Cluj, Constanta, Galati and Maramures counties that exercise no party control over many communists.

An important part in internal affairs is played by the general assemblies, the higher organs over the primary organizations and the forums that enable the communists to participate effectively in decision making, directing all political and organizational work, and managing the affairs of the organizations to which they belong. But the facts prove that the general assemblies do not invariably receive due attention. Some county, municipal and city committees not only do not know what has been discussed in the assemblies in the course of a month or what kind of suggestions, criticisms or comments have been made but do not even know whether they are held regularly as provided by the regulations. Nearly every month a number of primary organizations in Arges, Dolj, Ilfov and Arad counties fail to hold their general assemblies, in clear violation of the regulations.

There are cases unsatisfactory attendance at assemblies, the most limited being indicated in Dimbovita, Mehedinti and Buzau counties. This reveals neglect of these aspects of party life on the part of the respective county party committees and the oganizational sections.

When we consider that many assemblies do not take up the most urgent problems, do not display the necessary militance against defects and those who caused them, and adopt no measures or definite tasks for communists, we better realize how deficient the work of some organizational sections is.

Therefore the organizational sections must come to grips with these problems seriously and devise a system to check on them constantly, to inform the bureau and the secretariat, and especially to intervene with solutions and measures for the most efficient conduct of internal party affairs, with unfailing observance of all regulation norms.

Emphasis on Practical, Systematic Briefings

Organization and performance of briefings of the party organs and staff are an important aspect of party affairs and the management process. The party administration is constantly concerned with improving their content and effectiveness and eliminating superficiality in their organization and performance.

Any appreciable improvement in the briefings necessarily requires the bureaus of the county committees to concern themselves directly with their preparation and performance, enlisting the most qualified personnel, starting with the first secretary of the county party committee, to give the briefing properly speaking. The practice in some places of leaving the briefing to some staff workers not only impairs its

effectiveness but does not even allow the activists to take congnizance of the problems that actually come first among the concerns of the respective party organ.

Comrade Nicolae Ceausescu recently pointed out that the briefings must place greater emphasis upon the practical aspect and teach those present how to work better and how not to work, drawing conclusions both from favorable experience and from the existing defects and failings, with special emphasis on their causes. This means the briefings must dwell more on exchanges of experience, practical demonstrations, discussions of reports, visits to leading units to collect material, and other approaches capable of maintaining a dialogue among the participants.

Special attention must be given to organizing the biefing within the time limits set in the Central Committee's instructions and with strict observance of the days devoted to each kind of briefing. Unfortunately some county party committees (Buzau, Constanta, Olt and Mures counties and Bucharest municipality et al.) have not observed the provisions on periodicity and duration of the briefings, briefing their own staffs only 7-9 times last year instead of 12 times. In the same period in Alba, Arad, Bihor, Botosani, Dolj, Gorj, Ilfov, Teleorman, Vaslui and Vilcea counties briefings of the secretaries of the party committees and the bureaus of the primary organizations in the industrial, construction and transportation enterprises and state agricultural enterpises in the rural areas were held only 1-2 times instead of 3 times as specified in the RCP Central Committee's instructions.

The efficiency of internal party affairs heavily depends upon the way they are conducted, directed and controlled by the local party organs and the efforts made in this direction by the organizational sections. The facts indicate that the bureaus and secretariats of the party committees and their organizational sections do not pay attention to all aspects of internal party affairs at all points.

It is vital for the organizational sections to thoroughly check the progress of the internal activity of all party organs and organizations and for the problems of party affairs to recur often on the agenda of the controls and analyses made by the bureaus and secretariats of the county, municipal and city committees so that political and organizational work will proceed in perfect order, characterized by a high sense of responsibility and communist discipline.

IMPORTANCE OF POSITION OF CHAIRMAN OF TRADE UNION COMMITTEE

Bucharest MUNCA DE PARTID in Romanian No 10, Oct 80 pp 54-56

/Article by Teodor Prunea, first vice chairman of the Commission for Problems of Organization, Regulations and Autonomy of Trade Unions under the Central Council of the General Union of Romanian Trade Unions: "Highly Responsible Office of Chairman of Trade Union Committee"/

/Text/ The Law on Organization and Management of State Socialist Units provides that the trade union committee and the workers council are responsible for organization of the workers general assembly. Involvement of the trade union organization in this vital task was considerably increased when its chairman was made chairman of the supreme forum of collective management of the enterprise's socioeconomic activity. As Comrade Nicolae Ceausescu pointed out at the constituent meeting of the National Council of Workers, "We have made the stipulation, which actually became a practice long ago, that the chairman of the trade union in an enterprise, who is also vice chairman of the council, will conduct the workers general assembly, because the trade union as the largest workers organization should have more responsibility for the working masses' participation in social management."

The function accorded the trade union chairman eloquently expresses the profoundly democratic character of Romanian socialist society, which enables the trade unions to fully perform their social mission and contribute to their full capacity to the nation's further development and prosperity and to the success of the party's measures to enhance the material and cultural welfare of the workers and the entire Romanian people.

The responsibility of the trade union organization takes on new proportions because the workers general assembly is one of the vital components of the system of worker self-management, as the forum wherein the working class and masses of workers participate in organized fashion in management of socioeconomic activity and in discussion and solution of plan fulfillment problems. Moreover the general assembly exercises control over the unit's management organs and is a means of developing the workers' socialist awareness, strengthening discipline and social responsibility, and encouraging the masses' creative initiative on behalf of good management of public property.

In practice, the function of chairman of the workers general assembly includes many obligations that go far beyond the task and time of chairing the proceedings of the meeting.

In the preparatory stage, the assembly chairman's contribution is first required in order to make known, assimilate and adjust to the unit's specific conditions the provisions of the plan of action approved by the national council of workers concerning the organization and conduct of the general assemblies. It is essential to efficiency for the policies set by the central collective management organ to be received with very serious attention, so that the activity will be analyzed in full accord with the supreme social imperatives of the respective period.

In the present special session (September-October 1980) the subject of the general assemblies is discussion of the enterprises' tasks in the Uniform National Plan of Romania's Socioeconomic development for 1981, in the light of the decisions of the 12th RCP Congress and the guidelines and directives handed down by Comrade Nicolae Ceausescu, the party secretary general, at the working conferences of the RCP Central Committee this year, at the expanded plenum of the National Council of Workers in June 1980 and at the recent Congress of County People's Councils and Chairmen of Municipal, City and Communal People's Councils. It is the duty of the assembly chairman to ensure the active participation of the trade union committee under the party organization's guidance and to contribute personally to determination and implementation of all the measures required for sound and responsible preparation and conduct of the program.

Organization of the workers general assemblies requires special attention at the start of each year and of the half-years. In big enterprises, the trade union organ and its chairman are expected to provide jointly with the workers council for optimal scheduling of the assemblies that are organized according to sections, sectors, worksites, plants, factories, mines and other such units, so that management personnel with the authority to resolve the questions that arise promptly can be present at their preparation and proceedings.

The materials specified on the agenda must be drafted with great care. As a common document of the workers council and the trade union committee, the report is prepared with the direct and active participation of the chairman of the general assembly on the basis of the party organization's directions, making sure that it includes a very exacting and responsible examination of the operational problems in the past period and of the future tasks, so that the workers or their representatives can rule knowledgeably upon the performance and the decisions to be made.

Party Secretary General Nicolae Ceausescu's repeated statements about the interpretation and application of the new economic-financial mechanism call for the most careful examination of the execution of the enterprise budget of incomes and outlays in order to clearly bring out the state of management and formation of the funds as well as the efforts of the unit's management and the workers collective to enhance profitability, reduce costs, and increase the incomes and profits.

While directly participating and interesting the other members of the trade union organ in drafting the materials on the agenda, the assembly chairman cannot overlook the importance of preparing all workers in the enterprise for this event. Many trade unions, like those at the Ploiesti Dorobantul Textile Enterprise, the Baneasa-Bucharest IPRS /Enterprise for Radio Parts and Semiconductors/, Alba Iulia

Portelamul et al., have started organizing various programs encouraging workers to think over the major problems to be discussed at assemblies so that they can come with suggestions for solutions. The chairmen arrange for regular work with individuals, articles in the wall newspapers and broadcasts on the radio amplifiers, creating a climate of keen interest on the part of the masses of workers.

The chairmen's responsibility for efficient use of the efforts made to prepare the general assemblies requires them to maintain an atmosphere conducive to criticism and self-criticism during the proceedings. Democracy demands that during the discussions the participants should be able to express their views, even if contradictory, freely and sincerely so that the best of the proposed solutions can be chosen. This requires participation in the discussions of as large a number as possible of highly skilled workers, foremen and other workers thoroughly familiar with the problems of the various activities who can present what is useful as well as the deficiencies and their causes and can make suggestions to improve the work in all areas.

As we know the assembly approves the uniform plan of technical-organizational measures, the programs for improving the work norms and standards, the budget of incomes and outlays, the collective labor contract, the pledge in socialist competition and other documents shaping and predetermining socioeconomic and political-educational activity for a long period of time. The chairman of the trade union or assembly has responsibilities to carry out the approved decisions in the whole organization of labor. It is one of his first concerns to see that the proposals made in the discussion are actually included in the established programs and measures, so that the decision on them, which is usually approved in the general assembly, will not be merely an empty formula as it sometimes happens in some enterprises.

Experience in many units shows that good results are obtained when, after every general assembly, the suggestions made by those present are studied by the collectives formed for the purpose which, jointly with the management personnel of the respective sectors and services, determine the resolutions. The assembly chairman is asked to help in this important work and participates in supplementing the operational plan of the workers council on the basis of what was decided in the assembly. He also has this obligation in connection with the operational plan of the trade union committee, especially in the case of problems concerning organization and conduct of socialist competition, the mass movement of inventors and innovators, strengthening order and discipline, and worker control over socioeconomic activity and working conditions.

Of course efficiency depends upon carrying out the provisions of the plans based on the assembly's decisions. More than the other members of the workers council, it is the duty of the assembly chairman to make a definite contribution to implementation of the adopted measures and programs. Therefore the heavy machinery enterprises, the Dacia Textile Enterprise and the Bucharest Electronica Enterprise form collectives to perform certain tasks or solve problems, including the workers who made the respective suggestions. This makes it possible to adopt previously devised solutions promptly and encourages efforts to find the best solutions.

Interesting the trade union groups in holding true open sessions of the workers general assembly is an important task of the chairman of the trade union committee in his twofold capacity. Experience shows there is no job not directly or indirectly affected by the decisions and measures approved by the general assembly, by the

analysis made there, or by the workers council's decisions. This makes it absolutely necessary for the group assemblies to regularly examine the action taken to implement what was determined by the higher collective management organ. And in their entirety the group assemblies are the organized medium on the job level for the entire collective's participation in discussion and solution of the problems of organization and management of socioeconomic, political and cultural-educational activity, providing the workers council with suggestions and opinions and consequently requirements for its more efficient performance as a collective management organ.

This also makes it necessary for all workers council members to participate regularly in the group assemblies in order to take cognizance of the workers' problems and to solve them on the spot as far as possible. In enterprises such as Ploiesti 1 May, Sinaia Precision Machinery, Braila Wood Processing Combine et al., the main problems within the competence of the management organs that are raised in the trade union group assemblies are entered in special records, providing for an accurate recording and a check on their solution.

The council for worker control over socioeconomic activity in the enterprise is a very efficient instrument for stimulating efforts to carry out the general assembly's decisions and measures. It is important for the assembly chairman, in his capacity as chairman of the trade union committee, to whom the worker control council is subordinate, to appeal regularly to this body for help. The regularly organized subject controls can inform him of the action taken by the executive bureau of the workers council and the managers of the sections, sectors and work places to solve the problems for which they are responsible.

By thoroughly mastering their functions in all their complexity and acting more responsibly and competently to perform them, the chairmen of the workers general assemblies can make an essential contribution to the proper organization and operation of the state socialist units, to fulfillment of the tasks assigned by the RCP administration and by Nicolae Ceausescu in person for precise application of the principles of the new economic-financial mechanism, and to general enhancement of the effectiveness of productive activity.

SUPERFICIALITY, LACK OF DISCIPLINE IN EXCHANGE OF PARTY CARDS

Bucharest MUNCA DE PARTID in Romanian No 10, Oct 80 pp 68-69

/Unsigned article: "When Superficiality Joins Disorder and Indiscipline"/

/Text/ In view of the particular political and organizational importance of the exchange of party cards, the Plenum of the RCP Central Committee in March 1979 pointed out the need for this action to be directly under the bureaus of the county, municipal and city party committees, the first secretaries being fully responsible for the proper management and handling of the party documents.

The fact that in most of the party organizations the individual discussions, the general assemblies to discuss the conclusions drawn from those discussions, and the delivery properly speaking of the new cards took place with strict observance of the directions of the Secretariat of the RCP Central Committee proves that the party organs understood their great responsibilities in this respect, making sure that the goals set by the party administration would be entirely attained.

But a check made recently in Gorj County revealed some facts indicating that in both the county committee and some city committees the exchange of the party documents was left largely to the sections for problems of regulations and documents and records of party members. Otherwise it is inexplicable how it could have happened that a great many cards, personal record cards and control slips were filled out incorrectly in the Tirgu Jiu Municipal Party Committee and the Motru City Party Committee. Although the RCP Central Committee's instructions expressly state that no no corrections or erasures of any kind can be made in these documents, both party organs allowed various changes to be made in documents containing mistakes. Moreover the directive that the party documents must be filled out in special ink was not observed, as some of them were written in India ink /tus/.

The fact that the Tirgu Jiu Municipal Party Committee allowed four persons to draft the documents who were not even party members and were not approved by the party organ, in violation of the directions of the Secretariat of the RCP Central Committee, also indicates how superficially this action was conducted. In the Motru City Party Committee, the head of the section for problems of regulations and documents and records of party members, with intolerable carelessness, allowed the party documents on the 1980 form to be filled out although the documents on the 1965 form had not been brought up to date with the exact name of the organ wherein the party file is kept. Of course this was a main source of many errors.

It is true that after an analysis made by a collective of the Central Committee the bureau of the county committee sanctioned and discharged the head of the section for problems of regulations and documents and records of party members of the county committee as well as the heads of the respective sections of Tirgu Jiu Municipal Committee and the Motru City Committee and sanctioned other activists found guilty of these violations. But it must be said that the bureau itself and the secretariat of the county committee are much to blame for what happened. In fact, it cannot be said that the secretary for organizational problems, the head of the organization section or the other activists of the section did their duty.

Furthermore the existing data show that other aspects of internal party affairs are also not checked and known as they should be here, and that they are actually out of hand. For example, there is the way admission to the party is handled. It is incomprehensible how in a county with a high proportion of farmers in its total population only 10-20 people of this category are admitted to the party for months on end, far less than the number of intellectuals and office workers. Nor is the duty observed to consistently apply the directive of the Plenum of the RCP Central Committee of March 1980 to the effect that 40-45 percent of all those admitted to the party shall be women.

Or to consider another aspect indicative of indiscipline and laxity in the organization and conduct of internal party affairs, about 350 party members in Gorj County have not paid their party dues regularly for months. One wonders quite rightly what the effect is of the individual discussions, which have practically ceased, and the general assemblies to discuss the conclusions drawn from these discussions, held in nearly all the primary organizations, if they have not succeeded in making the censured party members conform to the standards of our regulations in their entire activity?

It is to be expected that these instances will not be treated in isolation by the bureau of the county committee but in close connection with the general state of organizational work and internal party affairs and with the whole approach of the county party organ. An extensive analysis of the way internal party affairs are conducted, directed and organized as well as planning and application of rigorous measures will undoubtedly inspire a strong revolutionary spirit in all party activists and imbue them with order, discipline, loyalty to party principles and communist responsibility, which are indispensable if the party organs and organizations are to meet the current high standards set by the party administration.

PEOPLE'S COUNCILS' LEGISLATIVE CHAMBER APPROVES 1981 PLAN

Bucharest BULETINUL OFICIAL in Romanian Part I No 87, 21 Oct 80 pp 1-4

/Decision of the Legislative Chamber of the People's Councils on the Approval of the Draft of the 1981 Sole National Plan for Economic and Social Development of the Socialist Republic of Romania, in Territorial Form/

/Text/ Socialist Republic of Romania

On the basis of Article 13 of Law No 5/1975 on the congress, legislative chamber and conferences of the people's councils, we approve and order to be published in BULETINUL OFICIAL AL REPUBLICII SOCIALISTE ROMANIA Decision No 1 of 14 October 1980 of the Legislative Chamber of the People's Councils on the approval of the draft of the 1981 Sole National Plan for Economic and Social Development of the Socialist Republic of Romania, in Territorial Form.

Nicolae Ceausescu,
Chairman
of the Socialist Republic of Romania

Bucharest, 21 October 1980.

Decision of the Legislative Chamber of the People's Councils on the Approval of the Draft of the 1981 Sole National Plan for Economic and Social Development of the Socialist Republic of Romania, in Territorial Form

The Legislative Chamber of the People's Councils, discussing the draft of the 1981 Sole National Plan for Economic and Social Development of the Socialist Republic of Romania, finds that it was drawn up on the basis of the directives adopted at the 12th Congress of the Romanian Communist Party with regard to the country's economic and social development in the next five-year period.

The improvements made in the draft plan as a result of the directions given by Comrade Nicolae Ceausescu, secretary general of the Romanian Communist

Party and chairman of the Socialist Republic of Romania, at the Second Congress of the People's Councils and on the occasion of disclosing the plan projects, for raising all economic activity to a qualitatively higher level and strictly applying the provisions of the new economic and financial mechanism, promoting a firm policy of rational management of raw materials and increasing the degree of utilization of them, sensibly utilizing energy resources, concentrating the investments for speeding up the putting of the new capacities into operation and reducing the cost of the work, increasing the efficiency of production and exportation and reducing imports, using better the work force in each county and locality, and fulfilling the program for raising the population's standard of living, were pointed out in particular during the discussions.

The Legislative Chamber of the People's Councils judges that the 1981 plan provisions reflect the policy of the party and the state with regard to the continual, balanced and dynamic development of the national economy, they being in keeping with the decisions of the 12th Congress of the Romanian Communist Party with regard to economic and social development in 1981-1985.

On the basis of Article 6 of Law No 5/1975 on the congress, legislative chamber and conferences of the people's councils, the Legislative Chamber of the People's Councils decides:

Article 1. It approves the draft of the 1981 Sole National Plan for Economic and Social Development of the Socialist Republic of Romania, in Territorial Form.

The proposals made in the session of the Legislative Chamber on the occasion of discussing the draft will be forwarded to the Council of Ministers.

Article 2. In order to fulfill and overfulfill the 1981 Sole National Plan for Economic and Social Development, in Territorial Form, the people's councils will take steps regarding:

a) The raising of the efficiency of all economic and social activity in each county, municipality, city and commune, with a view to the steady fulfillment of the plan targets by all units, regardless of their subordination, especially those concerning the physical output and the value of the net output, the reduction of material expenses, the steady application of the provisions of the new economic and financial mechanism, for strengthening self-management and self-administration in order to obtain better economic results;

b) The better utilization of production capacities, the suitable employment of technological lines and equipment on all shifts, the strict observance of the standards for operating the machines and equipment, the reduction of the period for attaining the projected parameters at the units going into operation, the furnishing and training of the necessary work force;

c) The raising of the technical and qualitative level of products, through the intensification of the process of renovating, typifying and standardizing them, the assimilation of new materials and equipment with better characteristics and low energy consumptions into manufacture, the modernization and diversification of the production of consumer goods in accordance with the population's requirements;

d) The rational use of energy resources in all fields of activity through the further reduction of the specific consumptions of electric and thermal power and of fuel, through the modernization of the consuming installations, the perfecting of the manufacturing technologies, the improvement of the structure of production, the raising of the outputs in the fuel-consuming processes, the supplying of heat-recovery equipment, the reduction of technological consumptions and losses in the electric power stations and in the transportation and distribution networks;

e) The sensible management of resources of raw materials and supplies, the raising of the degree of utilization of them, the achievement of a strict policy of economy through the substantial reduction of consumptions, intending that measures for further reducing them be provided in all economic units;

f) The intensification of the actions for recovering and reusing the materials resulting from the process of production and consumption, with a view to the greater utilization of them in production for meeting the need for raw materials and reducing imports, the steady application of the measures established for organizing the activity of recovering these resources both from the socialist units and from the population, for introducing them into the economic circuit; the reconditioning of used spare parts, components and subassemblies to a greater extent;

g) The faster development of small-scale industry in order to increase to a greater extent the production of consumer goods, the activity of services for the population, construction materials, the reconditioning of parts and subassemblies, the production and exportation of handicrafts, and cooperation with large-scale industry; the expansion of the utilization of local resources of raw materials, of byproducts and recoverable materials in industry and agriculture;

h) The rational exploitation of land resources through the complete utilization of agricultural areas, as well as those held by the population, the full and highly productive use of the areas set up for irrigation; the execution of the work of drainage and of control of soil erosion on the stipulated dates;

i) The raising of agricultural production, through the execution of the agricultural work at the proper time and in terms of high quality, the better utilization of the fleet of tractors and agricultural machines, the efficient administration of chemical and natural fertilizer, the rational use of chemical means of pest control;

j) The intensification of the action of modernizing the fruitgrowing and vinegrowing plantations, the raising of the production of vegetables to a greater extent through the concentration of the areas of vegetables and the cultivation of them on land set up for irrigation, the expansion of the crops of early summer and fall vegetables and the better utilization of them, the providing of a crop structure taking into account the meeting of industry's need and the supplying of the population as well as possible;

k) The increasing of the populations of animals and the raising of their outputs through the improvement of the selection and reproduction of the breeds, the full use of the capacity of the livestock complexes, the providing of fodder resources through the raising of the average yields per hectare, the improvement of natural meadows and hayfields, the use of roughage and byproducts; the raising of the production of meat, milk and eggs, for meeting the needs of each county, will be pursued;

l) The stimulation of the growth of vegetable and animal production on the farms of the inhabitants in rural areas;

m) The intensification of research and the prompt application to production of the results of the research for achieving high-yield seeds and planting stock adapted to the climatic conditions in our country;

n) The complete fulfillment of the tasks established by means of the plan for the deliveries to the central supply of agricultural products, the raising of the population's contribution to the fulfillment of these tasks;

o) The continual raising of the efficiency of the economic activity in all state and cooperative combined agroindustrial councils and the other agricultural units through the reduction of material expenses, the raising of labor productivity, the reduction of the consumption of raw materials, supplies and fuel;

p) The mobilization of the working people in villages for the performance of agricultural and land-improvement work at the proper time and with good quality, the shortening of the harvesting period to the utmost, the better organization of labor, the strengthening of the discipline and responsibility in each agricultural unit for fulfilling the plan targets;

r) The achievement of water-management work, the rational use of resources and the reduction of water losses to the utmost, the application of the measures contained in the environmental-protection program, the execution of the installations for purification of used water and the operation of them at the projected parameters;

s) The putting of the investment facilities into operation on the planned dates, to which end action will be taken regarding the contracting for the technological equipment and the delivery of it on schedule, the preparation of the working designs in advance, the steady performance of the activity on all construction sites, the expansion of the mechanization and

industrialization of building-assembly work, the efficient use of the technical equipment and the work force throughout the year; special attention will be devoted to using the existing areas to the utmost by equipping them with machines and equipment and to shortening the periods for putting into operation the facilities in the course of execution;

ş) The application to design of new technological and construction solutions that would provide minimal consumptions of energy and fuel in operation, would reduce the volume and area of the constructions, the installations and the sanitary-engineering, thermal and electrical networks, as well as the consumption of energy-intensive materials, especially metal and cement, the expansion of the utilization of light construction materials and of those that are provided from local resources, of prefabricated elements and of cheap materials, which would lead to the growth of the efficiency of the investments;

t) The providing of the supply of goods for exportation in the assortment and quality structure demanded on foreign markets, which would lead to an increase in their utilization, the maximally efficient utilization of the valuta funds allocated by means of the plan;

t) The rationalization of the use of means of automotive transportation within the counties in order to reduce expenses to the absolute minimum, the utilization of the motor vehicles and trailers in the fleet at full capacity;

u) The intensification of the efforts in the field of scientific research, technological development, and introduction of technical progress, the identification and utilization of new natural and synthetic resources and new sources of energy, the utilization of raw materials and supplies with greater efficiency, the economization of fuel and energy, the devising of modern technologies and the perfecting of the existing ones, the optimum utilization of recoverable and reusable materials;

v) The complete fulfillment on schedule of the measures established in the programs for growth in labor productivity through the improvement of the work and personnel standards and quotas, the raising of the degree of mechanization and automation of the production processes, the improvement of the organization of production and labor, the better utilization of worktime, the strengthening of discipline at the workplace, the raising of the degree of qualification and polyqualification of the worker personnel.

Article 3. With a view to the fulfillment of the tasks that devolve upon the directly subordinate economic and social units, the people's councils will provide for:

a) The maximally efficient use of the investment funds provided by means of the plan for housing construction, the expansion of the water-supply and sewer system, the development of the technical-material base of the building-assembly organizations, for education, culture and health care; special

attention will be devoted to putting into operation the facilities in the course of execution from previous years;

b) The exercise of efficient control over the application of the systematization plans on approving and carrying out investments, in order to ensure the rational use of the land in the buildable perimeters of the localities, the avoidance of the changing of the purpose and the demolition of existing constructions and of the removal of land from the agricultural or forestry circuit;

c) The generalization of new construction solutions in the design and execution of housing and sociocultural buildings, for reducing the weight of the constructions, the volume of the municipal technical networks and the consumption of materials and fuel; the expansion of the utilization of building stone, volcanic tuff and other local materials; the introduction of the new typified materials for construction into the production of their own units and the replacement of those that do not correspond to the requirements for reducing the energy consumptions;

d) The expansion of the degree of industrialization in housing construction, the promotion of a specific architecture to a greater extent, and the raising of the quality and durability of residential buildings;

e) The improvement of the activity of contracting with the population for privately owned dwellings that are achieved with the state's help in loans and execution;

f) The faster development of the activity of performing services for the population, the diversification and the improvement of the quality of the services, especially for repairs and maintenance of dwellings, chemical laundries and cleaners, maintenance and repairs of automobiles, various domestic services, with provision being made for the complete fulfillment of the tasks in the program for development of the performance of services for the population according to new groups of dwellings and localities; the improvement of the distribution of the service-performing units according to territory and in localities;

g) The accentuation of the reduction of the specific consumptions of materials, fuel and energy, the strict observance of the planned quotas, with action being taken in conformity with the programs of measures established for the rational utilization of metal, energy and fuel in all sectors of activity of the people's councils;

h) The development of their own sources of energy from biogas, wind and solar energy, the putting of new microhydroelectric power stations into operation in order to expand the utilization of these new sources on a local level; the equipping of dwellings with a solar-energy installation in order to provide them with hot water for home use in the summer months;

i) The furnishing and training of the worker personnel needed in the activities of building-assembly and communal and housing administration, the

organization of qualification and polyqualification courses, the improvement of the organization of labor and the expansion of the overall contract system, the strengthening of discipline in production, the providing of better working and living conditions to the workers;

j) The providing of the participation of the population and of the worker personnel of enterprises and institutions to a greater extent in fulfilling the program for housing and sociocultural construction, in carrying out municipal-administrative and locality-beautification projects.

Article 4. In order to achieve in a better and better way the supplying of goods to the population and improve the serving of the consumers in all localities, the people's councils will provide for:

a) The pursuit of the fulfillment of the tasks for completely and steadily delivering in the assortments and qualities wanted by the population the supply of goods stipulated by the plan and in the economic contracts;

b) The sensible distribution of the supply of goods according to localities, commercial systems, and units, the steady supplying of them, giving priority to the worker centers and cities;

c) The expansion of the trade network in correlation with the putting of blocks of dwellings into use, the intensive utilization of commercial spaces, the promotion of modern and quick methods of serving the population to a greater extent, the further development and modernization of the network of public food-service units;

d) The strict observance of the trade standards and the hygiene and health conditions by all units, the strengthening of responsibility and control of the activity in each unit.

Article 5. The people's councils will act steadily to fulfill all the tasks that devolve upon them for the balanced economic and social development of the localities, the good management and beautification of the cities and communes, the fulfillment of projects of public interest, the raising of the material and spiritual standard of living of the population in all zones of the country.

DECREE ON PROVIDING UNIFORMS FOR WORKERS IN STATE SOCIALIST UNITS

Bucharest BULETINUL OFICIAL in Romanian Part I No 82, 15 Oct 80 pp 1-4

/Decree of the State Council on the Providing of Duty Uniforms and Typified Vestmental Equipment for the Personnel in the State Socialist Units/

/Text/ The State Council of the Socialist Republic of Romania decrees:

Chapter I
General Provisions

Article 1. The personnel in the state socialist units who, by the nature of the function or activity that they perform, are obligated to wear a duty uniform or typified vestmental equipment on duty receive them under the conditions of the present decree.

Article 2. (1) A duty uniform is provided to the personnel in the railroad, customs and forest units, marine transportation, the Sulina Free Port Administration, civil aviation, posts and telecommunications, the watch, civilian firemen, and the operational personnel who serve the public automotive fleet belonging to the Ministry of Transportation and Telecommunications and the automotive fleet for urban transportation in the municipalities of Bucharest and Constanta.

(2) The duty uniform is composed of a summer costume, a winter costume, the coat, a man's cap or a woman's cap. The uniform can also be supplemented with other objects and with distinctive insignia of rank, in relation to the function performed.

(3) Typified vestmental equipment is provided to the personnel in the courts, including the prosecutors who participate in the court session, the personnel in the representative culture and art units, the big commercial, public-food-service and hotel units, the gatemen and overseers in the road and bridge units, the personnel who directly serve the aircraft at the international airports, the personnel in the tourism units, including the operational personnel in the tourist automotive transport unit, the personnel in the stations for furnishing retail petroleum products, and the personnel

in the protocol departments within the Ministry of Foreign Affairs and the Ministry of Foreign Trade and International Economic Cooperation. The objects of which the typified vestmental equipment is composed are established, in relation to the type of activity of the unit, by means of regulations approved in accordance with Article 3.

(4) Only badges will be used for other situations in which a form of identification for the unit's personnel who come in contact with the public is necessary.

Article 5. The categories of personnel who are entitled to a uniform or typified vestmental equipment, the description of the objects of which they are composed, the assortments of material from which they are made, the set period of wear, and the conditions of use and preservation are established by means of regulations approved by the Council of Ministers.

Chapter II
The Procurement and the Bearing of the Cost of Uniforms or Typified Vestmental Equipment

Article 4. The procurement of duty uniforms or typified vestmental equipment is done through the units in which the personnel are employed or through other units designated by the ministries or the other central and local bodies.

Article 5. (1) The persons who receive a duty uniform or typified vestmental equipment bear, in relation to the level of the basic wage, established after the application of the second stage of the general increase in wages in 1979-1980, the following portions of the expenses for procuring them:

Percent of the cost of the uniform or equipment that is borne by recipients	Basic wages (lei)
50 percent	up to 1,470
80 percent	1,471-2,000
100 percent	above 2,000

(2) By way of exception, for the personnel with the functions mentioned in Appendix 1,* the portion of the cost of the duty uniforms or typified vestmental equipment is established in this appendix.

(3) The expenses for the duty uniform or typified vestmental equipment that are borne by the recipients, in accordance with paragraphs 1 and 2, are withheld from the salary, through the paysheet, in monthly installments spread over a period of at most 36 months, but not less than 100 lei per month.

Article 6. For the expenses for the cost of the duty uniform or typified vestmental equipment that are borne by the recipients, the state units can

* The appendix is communicated to the institutions involved.

get bank loans with an interest of 1 percent per year, which is borne by the recipients within the framework of the portions owed in accordance with Article 5.

Article 7. In the year prior to conscription or pensioning, a duty uniform or typified vestmental equipment will not be provided to persons who are to be conscripted for the fulfillment of military service and to those who are to be pensioned. If the set period of wear for the pieces of uniform or equipment that were provided to them earlier is greater than the time left in the unit until the date of conscription or pensioning, the installments will be established in such a way that the whole sum owed is recovered from the recipients, in accordance with the provisions of Article 5.

Article 8 (1) For the persons who have been transferred for official purposes to other sectors of work where a duty uniform or typified vestmental equipment is not worn and for those whose work contract has been cancelled for reasons that are not imputable to them, the units will consider, in relation to the state of wear of the uniform, whether it can be issued to another person, under conditions of payment of the difference, or whether it remains with the recipients, who would still pay the installments owed.

(2) In the case of transfer on request to another unit and in the case of cancellation of the work contract on the initiative of the persons employed in work or for reasons imputable to them, the persons in question have the obligation to bear completely all the installments remaining unpaid and the unit's portion for the unamortized part of the uniform or typified vestmental equipment.

(3) In the case of degradation of the duty uniform or typified vestmental equipment, before the set period of wear, due to causes imputable to the recipient, another duty uniform or new typified vestmental equipment can be provided, with the recipient having the obligation to bear the expenses for the old duty uniform or typified vestmental equipment, under the conditions of Paragraph 2.

(4) The debts for the cost of the duty uniform or typified vestmental equipment remaining as a result of death or pensioning due to work accidents occurring during the performance of official duties or due to an occupational illness are no longer pursued and are borne from the financial results of the respective unit.

Article 9 (1) The personnel within representative hotel and public-food-service units subordinate to the Ministry of Tourism or the Ministry of Domestic Trade can receive, free of charge, specific clothing--a national costume, a period costume or equipment with a distinct specific character--which will be able to be used only on duty and is part of the unit's inventory. The units at which this provision is applied are established by means of regulations approved in accordance with Article 3.

(2) For the personnel attached temporarily or employed for set periods at the seasonal units at the seashore who come in contact with the public, it

is possible to provide--for use--typified vestmental equipment, under the conditions established by means of regulations approved in accordance with Article 3, which is part of the unit's inventory, it having to be used only on duty, in many seasons.

Article 10. (1) The military personnel attached temporarily to units where a duty uniform is worn will bear for the uniform that is provided to them only the difference in excess of the cost of the military uniform to which they would have been entitled in the same period.

(2) The personnel who directly serve the aircraft at the international airports can receive, for use, under the conditions established by means of regulations approved in accordance with Article 3, free of charge, typified vestmental equipment, which will be able to be used only on duty. These personnel will no longer receive similar assortments of protective or work equipment stipulated by other regulatory acts.

Chapter III
Final and Transitional Provisions

Article 11. The duty uniform and the typified vestmental equipment provided by units prior to the date of publication of the present decree will be used up to the expiration of their period of wear under the conditions, including those of payment, established by means of the regulations on the basis of which they were provided.

Article 12. The provisions of the present decree also apply accordingly to the personnel within the cooperative organizations and the other public organizations, on the basis of the regulations drawn up by their central bodies, with the advice of the Ministry of Labor and the Ministry of Finance.

Article 13. (1) The application of the provisions of the present decree in each unit is done from the date stipulated for the general increase in wages in the respective unit, for the second stage in 1979-1980. The applicability of the regulatory acts contained in Appendix 2 and any other contrary provisions ceases on the same date.

(2) Within 60 days after the date of the present decree, the ministries and the other central bodies involved will present to the Council of Ministers the draft regulations mentioned in Article 3, including for the units of local subordination in their field of activity.

Article 14. Appendices 1 and 2 are an integral part of the present decree.

Nicolae Ceausescu,
Chairman
of the Socialist Republic of Romania

Bucharest, 14 October 1980.
No 312.

Appendix 2.

Regulatory Acts That Are Repealed

1. Decree No 538/1954, published in BULETINUL OFICIAL, No 2, 15 February 1955, on the regulation of the system of uniforms for civil servants.

2. Decree No 231/1974, published in BULETINUL OFICIAL, No 9, 15 January 1975 (which became Law No 7/1975), on the guarding of goods.

3. Decision No 2,781 of 31 December 1954 of the Council of Ministers on the restriction of the categories of employees with a right to be provided uniforms by institutions and enterprises and the modification of the system of payment of their cost.

4. Decision No 2,054 of 23 September 1955 of the Council of Ministers on the compulsoriness of the wearing of the uniform by customs employees and the regulation of the gratuitousness of this uniform.

5. Decision No 2,356 of 1 November 1955 of the Council of Ministers for supplementing Point 5 of Decision No 2,781/1954 of the Council of Ministers.

6. Decision No 495 of 28 March 1956 of the Council of Ministers for supplementing Decision No 2,781/1954 of the Council of Ministers on the restriction of the categories of employees with a right to be provided uniforms by institutions and enterprises and the modification of the system of payment of their cost.

7. Decision No 1,655 of the Council of Ministers, published in BULETINUL OFICIAL, No 55, 31 October 1956, on the providing of equipment to the attending personnel of the hotels in categories I and II and in category III in the capital, Sinaia and Busteni, under the conditions of Decision No 2,781/1954 of the Council of Ministers.

8. Decision No 269 of 15 February 1957 of the Council of Ministers on the uniforming of the personnel of the Ministry of Railroads, the Ministry of Road, Naval and Air Transportation and the Ministry of Posts and Telecommunications.

9. Decision No 1,266 of 14 August 1957 of the Council of Ministers on the uniforming of employees in the forestry sector.

10. Decision No 1,249 of 26 August 1959 of the Council of Ministers on the extension of the application of Decision No 269/1957 of the Council of Ministers to the people's council of the capital of the People's Republic of Romania.

11. Decision No 189 of 18 March 1961 of the Council of Ministers on the use of clothing--the uniform--by the operational personnel of commercial, public-food-service and hotel units.

12. Decision No 621 of 19 June 1962 of the Council of Ministers on the founding of the Department of Special Transportation in the Ministry of Transportation and Telecommunications (Article 6, Paragraph 2).

13. Decision No 784 of 12 October 1963 of the Council of Ministers for extending the application of Decision No 189/1961 of the Council of Ministers on the use of clothing--the uniform--by the operational personnel in commercial, public-food-service and hotel units.

14. Decision No 753 of 8 October 1964 of the Council of Ministers on the providing of uniforms to categories of employees in culture and art units.

15. Decision No 906 of 14 November 1964 of the Council of Ministers on the raising of the salaries of the workers and the technical administrative personnel in the communal-administration enterprises of the regional people's councils and those of the cities of Bucharest and Constanta (Appendix 3).

16. Decision No 881 of 12 November 1964 of the Council of Ministers on the raising of the salaries of the workers, the operational personnel and the management, technical-engineering, specialized, economic and administrative personnel in the postal and telecommunication units subordinate to the Ministry of Transportation and Telecommunications.

17. Decision No 909 of 19 November 1964 of the Council of Ministers on the improvement of the pay and other rights that are given to categories of employees of the "Carpati" National Office of Tourism (Article 4).

18. Decision No 1,264 of 19 October 1965 of the Council of Ministers on the quotas and ceilings of basic wages in accordance with which the road- and bridge-maintenance units bear the cost of the uniforms.

19. Decision No 858 of 11 May 1966 of the Council of Ministers on the application of Decision No 269/1957 of the Council of Ministers to the traffic-management personnel of the Constanta Transportation Enterprise subordinate to the People's Council of the City of Constanta.

20. Decision No 924 of 17 May 1966 of the Council of Ministers on the free providing of articles of apparel to the employees with tasks of representation employed in the protocol directorates, sections, offices or services in the apparatus of central state bodies.

21. Decision No 2,295 of 18 October 1966 of the Council of Ministers for supplementing the appendix to Decision No 753/1964 of the Council of Ministers on the providing of uniforms to categories of employees in culture and art units.

22. Decision No 239 of the Council of Ministers, published in BULETINUL OFICIAL, No 13, 16 February 1967, on the regulation of the providing of uniforms to the employees of the enterprises and economic and budgetary organizations subordinate to the Ministry of Railroads.

23. Decision No 1,600 of 6 July 1967 of the Council of Ministers for amending Article 3 of Decision No 1,266/1957 of the Council of Ministers on the uniforming of employees in the forestry sector.

24. Decision No 1,889 of the Council of Ministers, published in BULETINUL OFICIAL, No 73, 11 August 1967, on the providing of vestmental equipment to categories of employees of socialist organizations subordinate to the Ministry of Automotive, Naval and Air Transportation.

25. Decision No 79 of the Council of Ministers, published in BULETINUL OFICIAL, No 11, 3 February 1968, on the providing of uniforms to the personnel in the merchant marine.

26. Decision No 175 of the Council of Ministers, published in BULETINUL OFICIAL, No 44, 9 May 1970, on the establishment of the vestmental court dress in the courts.

27. Decision No 1,628 of the Council of Ministers, published in BULETINUL OFICIAL, No 133, 26 November 1970, on the providing of uniforms to categories of employees who serve the public automotive fleet belonging to the Ministry of Transportation.

28. Decision No 841 of 12 July 1971 of the Council of Ministers for supplementing the appendix to Decision No 753/1964 of the Council of Ministers on the providing of uniforms to categories of employees in culture and art units.

29. Decision No 844 of the Council of Ministers, published in BULETINUL OFICIAL, No 87, 12 July 1971, on the providing of uniforms to the personnel who operate the "PECO" stations for furnishing retail petroleum products within the Ministry of the Chemical Industry.

30. Decision No 1,400 of the Council of Ministers, published in BULETINUL OFICIAL, No 148, 12 December 1972, on some measures referring to the operation of the State Committee for Romanian Radio-Television (Article 7).

31. Decision No 295 of the Council of Ministers, published in BULETINUL OFICIAL, No 37, 27 March 1975, for approving the regulation on the description, the wearing of the uniform and the distinctive insignia of the watch personnel who provide the socialist organizations' own watch and of the distinctive insignia of the public and field watchmen, and the schedule for providing the uniform.

32. Decision No 927 of the Council of Ministers, published in BULETINUL OFICIAL, No 127, 16 August 1972, on the uniforms of the personnel in civil aviation.

UNITY OF ANTI-IMPERIALIST, DEMOCRATIC, SOCIALIST FORCES NEEDED

Bucharest ERA SOCIALISTA in Romanian No 21, 5 Nov 80 pp 17-20

/Article by Leonte Rautu, member of Executive Political Committee of RCP Central Committee: "Unity of Anti-imperialist, Democratic, Socialist Forces As an Imperative of the Period"/

/Text/ In the millennial history of mankind the present period stands out as a decisive one dominated by radical economic, social and political changes. It is the period of socialist revolution wherein the objective historical trend of man's transition to worldwide socialism is inevitably asserting itself through all the contradictions, zigzags and turning points of history. It is the period of abolition of imperialist, colonial and neocolonial domination and the struggle to base relations among states upon new principles of equality and respect for national sovereignty. The worldwide technical-scientific revolution, with its vast implications for all social activity, is a powerful factor for historical progress.

The radical change in the international balance of power in favor of the socialist, progressive, anti-imperialist forces is a definitive characteristic of present social activity. The socialist countries, which have made profound revolutionary changes in all social activities in the course of building the new order, the working class, whose role and influence have increased considerably in many countries of the world, the gigantic national liberation movement, the appearance of dozens of new states militating to defend and consolidate their independence and sovereignty, and the broad masses of peasants, intellectuals and youth as well as other social strata are factors in the struggle for social and national freedom, a true democracy, and international collaboration in a climate of peace and security. As it says in the RCP Program, close unification of all revolutionary, progressive, democratic and anti-imperialist forces on both the national and international levels is the controlling factor in the innovations of our time.

The extent and rapid rate of social-political changes, their dialectical linkage and interdependence, and the growing diversity of the conditions under which the communist parties and other forces for social progress act intensify the complexity of the world revolutionary process. This requires the communist parties to prepare answers and solutions to the often radically new problems on the agenda of current historical development and to approach the new processes and phenomena creatively, drawing the necessary conclusions for their strategy and tactics.

As a leading political force of the entire people, the activity of which is based upon creative application of the theory of scientific socialism to Romania's particular conditions, the RCP invariably concentrates the workers' efforts upon further harmonious and steady development of the productive forces accompanied by implementation of the program to raise the people's material and cultural living standard. We emphasize improvement of production relations and of planned management of the national economy as well as intensified socialist democracy based on self-management for purposes of widespread mass participation in social management on all levels. We are inspired by the resolve to make our further contribution to growth of the forces of socialism and peace, to confirmation of the superiority of socialism as a new form of social organization, and to the greater drawing power of socialist ideas through our specific achievements in building the fully developed socialist society and through our state's active and constructive foreign policy.

It is the historic mission of the socialist countries, communist and labor parties and revolutionary forces everywhere to lead the effort to solve, in the interests of all peoples and of socioeconomic and cultural progress, the highly complex problems rightly called global because their solution concerns all nations of the world and our entire planet. First among these problems prevention of a new world war and safeguarding international peace and security as essential to solution of all other problems facing all humanity.

Elimination of underdevelopment and the huge economic gaps separating the developed from the developing states, one of the chief sources of aggravation of international distrust, contradictions, conflicts and tensions is exceptionally important among the basic problems of the times. Complete economic and technical backwardness accompanied by such phenomena as chronic famine, mass illiteracy and serious endemic diseases is a specific instance of this serious anomaly that afflicts two-thirds of the world's population with varying intensity. Division of the world into rich and poor countries due to centuries of oppression and domination by imperialism and colonialism is an objective reality of the world of today. Statistics on these conditions are not wanting in the materials of the specialized bodies. Moreover they prove that despite the "decades of development," due to the policy of neocolonial exploitation and the unjust operation of the mechanisms of the present international economic order, the very serious phenomenon of aggravation of the gaps is taking place. Less than 7 percent of the gross world income (1) is received by 21 percent of the world's population, belonging to the most underdeveloped countries. I also mention that the total foreign debt of the "third world" countries increased from $50 billion to $400 billion between 1970 and 1979, or one-fourth of these states' total national income. (2)

The neocolonial policy is designed to keep the newly liberated countries in the system of relations of oppression and domination generated by capitalism and to keep the developing countries in a capacity of suppliers of raw materials, semifinished goods or products of inefficient industries and in that of markets and fields for advantageous investments, in order to increase the profits of the big monopolies and transnational companies and to throw the difficulties caused by the economic crisis upon the backs of the underdeveloped countries.

Neocolonialism takes extremely diverse forms, from brutal, blatant acts of interference in internal affairs and violation of independence and sovereignty to highly refined and camouflaged methods..

Elimination of underdevelopment is unquestionably a highly complex and lengthy process. The social and national changes taking place in many developing countries striving for full liberation from the imperialist yoke, consolidation of their independence, ownership of their national resources and assertion of their inalienable right to make the social-political and economic changes they wish without outside interference are highly important to the accomplishment of this basic requirement of our times.

Elimination of underdevelopment and the economic gaps directly depends upon radical restructuring of international relations by establishment of a new world economic order. The present international economic order is in flagrant contradiction with the radical changes made in the world's political, social and economic configuration. The RCP documents constantly point out that the effort to change the existing international economic order is a natural continuation of the anti-imperialist struggle to abolish all traces of colonialism and neocolonialism, as well as a component of the strategy of worldwide social progress.

In the modern world, wherein all countries are interconnected by the international division of labor and share in the world economic cycle, and wherein the serious disturbances caused by underdevelopment, the crisis in energy and raw materials and the financial-foreign exchange crisis affect all national economies in varying degrees, establishment of a new international economic order is not just a slogan of the moment but an objective necessity for the entire world community.

Of course accelerated socioeconomic improvement of the developing countries must be based primarily upon each people's efforts, close collaboration among the developing countries, and cooperation with the other states on a new basis. But the underdeveloped and developing countries have the legitimate right to ask the former parent countries to return to them in the form of aid at least a part of the resources of which they have been plundered for centuries. At the same time, in view of the gravity of the problems caused by underdevelopment, the urgency of eliminating it, and the huge proportions of the means necessary to do so, all developed countries must lend aid to the backward states. The conclusion of the recent special session of the U. N. General Assembly with no unanimous agreement on global negotiations due to the opposition of a few developed capitalist countries poses an even more acute problem of new actions to implement specific measures leading to a new international economic order.

We regard resolute action so that these countries will help to accelerate the socioeconomic progress of the backward states and the radical reform of international economic relations as a vital task of the revolutionary forces in the developed countries and a definite expression of alliance and militant solidarity between the labor movement and the national liberation movement. The socialist countries are called upon to actively support the developing countries' efforts on behalf of their socioeconomic progress as well as their struggle to achieve the new international economic order. Nicolae Ceausescu said, "We feel the socialist countries, the communist and labor parties, the revolutionary movement and all progressive, democratic forces should actively support this effort and play an important part in the struggle to achieve these major objectives of the world of today." (3)

As a developing socialist country, Romania its consistently expanding its collaboration with the African, Asian and Latin American countries. Over 20 percent of Romania's total foreign trade is with the developing countries. We are building a

great many socioeconomic capacities in these countries and lending them extensive aid in personnel training. Romania has made many specific proposals in the United Nations and other international forums to establish a new international economic order and a more just international division of labor, beginning with promotion of intensive productive, industrial and agricultural activities in the developing countries and provision for economically substantiated ratios between the prices of the various categories of products (raw materials, energy, food products and manufactured goods), and also to lighten the foreign debts of the developing countries, balance their payments, and help to train personnel for them.

The RCP has been constantly promoting a policy of militant solidarity with the peoples fighting for the right to a free and independent existence and abolition of any form of colonial or neocolonial domination. We take great pride in the fact that our party and state and the Romanian people have been giving active, all-around support to the struggle of the peoples in Angola, Mozambique, Zimbabwe and other peoples in Asia, Africa and Latin America in their heroic struggle to win and consolidate their independence. We support Namibia's fight for liberation and the legitimate aspiration of the peoples of South Africa to do away with the disgraceful policy of apartheid and racism.

In the future too the RCP will side with all peoples fighting for their full self-determination. It will staunchly support and strengthen its solidarity with all forces fighting imperialism and neocolonialism for independence, freedom, the end of colonial domination and revolutionary reforms.

Study of the results of the very diverse changes going on in the "third world and careful analysis of the content, stages and forms of the developmental process, the participating social and political forces, and the alliances and contradictions between them are a rich source of new theoretical conclusions and enhancement of Marxist thought and revolutionary action.

The options of some of the countries that have thrown off the colonial yoke for the socialist path of socioeconomic construction have profound historical implications. Social organization on a capitalist basis cannot offer the developing countries the possibility of rapid progress or the prospect of radical solution of the serious socioeconomic and cultural problems confronting them. For these countries transition to socialism is a historical necessity and the sole sure way to achieve any radical changes in all social activities and to place them firmly in the orbit of historical progress.

It goes without saying that construction of the new order can begin only by the efforts of the progressive, revolutionary forces in each country, who must consolidate their unity, staunchly support the majority of the population, and act according to the particular historical, social and national conditions.

No one, neither a state nor any outside force, has the right, regardless of the reasons given, to hinder a people's struggle to accomplish democratic revolutionary changes in any country or to export counterrevolution. Along with this, Marxism rejects the idea of exporting revolution. The solidarity of the working class, the other democratic, progressive forces and the communist parties with the peoples who are fighting for structural socioeconomic changes should be based on the conviction that it is the mission of the revolutionary forces in each country to solve the

complex problems of building the new society independently and in keeping with the wishes and interests of the respective peoples.

As I have already said, the solution of all the great contemporary problems ultimately depends upon securing a lasting peace in the world.

As we know, international affairs have deteriorated sharply of late. The atmosphere of tension in relations among states and the frequent recourse to arms in the conflicts that arise are creating serious dangers to peace in various areas of the world and throughout it. The states of tension and the conflicts appearing in the world mainly originate in violations of the principles of independence, sovereignty, equality of rights and noninterference in internal affairs in relations among states, as a result of manifestations of the imperialist policy of force and dictation, redivision into spheres of influence, reinforced domination of other states, and interference in other peoples' affairs.

Democratization of international relations based upon strict and invariable observance of the foregoing principles and active participation of all countries regardless of social order, size and economic or military potential, of the small and medium countries, of the developing countries and of the unaligned countries in the solution of the major international problems is a basic prerequisite for placing relations among states on the lasting basis of peace and collaboration.

Under the complicated circumstances that now characterize the international situation, when the armaments race is assuming an unprecedented intensity and when in various parts of the world new conflicts are arising that are often generated by the onerous heritage of the past, the only way is to renounce force and the threat of force and to resolve all disputes, however complex and difficult they may be, solely by negotiations and dialogue in the political way and in accordance with the interests of peace, security and cooperation among peoples.

It is vitally necessary for the socialist countries, the communist and labor parties, the national liberation movements and all the progressive, democratic forces to mobilize and unite their efforts to resume and carry on the policy of detente and cooperation, to stop the armaments race and to take some effective measures for disarmament and especially nuclear disarmament. The huge military expenditures, with a growth rate this year that far exceeds that of the world product, are devouring the nations' resources for economic development and destabilizing the world economy. A recent study of this problem (4) shows that the military expenditures in the world have now reached the incredible sum of $1 million a minute! The illusions that the immense military outlays will be a panacea for the crisis in the capitalist world have been dispelled. As it says in the above-mentioned study, most economists agree that the military outlays considerably reduce the resources available for productive investments, retard many countries' economic development, block the growth of productivity in the civilian sector, and stimulate the phenomena of crisis, unemployment and inflation.

Space does not permit me to mention the many serious effects of the armaments race upon the developing countries' economies. I shall confine myself to pointing out that the funds allocated to aid for development are only 5 percent of the world's military outlays.

All this brings out the great urgency of the proposals made by Romania and other states to initiate international programs and agreements to cut military outlays

by at least 10 percent, so that some of the funds obtained this way will be used for each country's socioeconomic development and most of them will be used to stimulate the economic development of the developing countries.

It is difficult to speak of the dangers threatening world peace or of stopping the armaments race without referring to the special situation of our continent, where the greatest and most dangerous means of mass destruction have been accumulated. Romania resolutely opposes locating new rockets with a medium radius of action in Europe, regarding them as a source of aggravation of the danger of a military conflagration. Complete abolition of nuclear weapons from Europe and the whole world, implementation of the Final Act of Helsinki concerning detente, security and collaboration on the continent and the measures for disarmament and military disengagement, reduction of military budgets and contingents, and dismantling of the military bases and blocs must be the basic aims of the common struggle of the forces of socialism, peace and progress, and the popular masses for a lasting peace and to preclude the danger of a world conflagration.

The RCP's international policy is guided by the idea that further consolidation of the friendship and solidarity of the socialist nations and the communist and labor parties and that of collaboration among all the democratic, progressive and anti-imperialist forces are essential factors for modern world development.

Development of friendly relations with the other socialist countries is emphasized in Romania's international activity. Under the present circumstances it is more necessary than ever to make every effort to overcome the existing divergences among socialist countries on the basis of the principles of scientific socialism, full equality, noninterference, and mutual respect and collaboration, avoiding any action likely to impair relations among them. That is the only way the socialist countries will be able to make an increasingly effective contribution to the policy of peace, detente and national independence and to the greater international prestige of socialism.

Romania's relations with the developing and unaligned countries are being broadened, and its relations with all states regardless of social order are being developed on the principles of peaceful coexistence in the interest of international peace and collaboration.

We are making a consistent effort to consolidate collaboration and unity with the other communist and labor parties, a new kind of unity, a unity in diversity that allows for the variety of particular historical situations in which the revolutionary struggle, solutions, forms and methods of action differing from country to country are developed. This requires expanded contacts and exchanges of experience and opinions in the spirit of mutual respect, equality and observance of each party's autonomy and its exclusive right to determine its revolutionary policy, strategy and tactics independently.

The RCP is also trying to develop relations between our party and the socialist and social-democratic parties and to consolidate relations of solidarity and collaboration with the national liberation movements, with the government parties in the countries that have thrown off the colonial yoke and with all democratic and progressive parties and factions.

In its documents the RCP brings out the necessity of enriching the concept of international solidarity and adapting it to the realities of the world of today. Comrade

Nicolae Ceausescu pointed out, "We view the idea of international solidarity in the context of the vast revolutionary changes that have taken place in the world, so that it includes both the unity of the socialist countries, the communist and labor parties, and the working class and support of the national liberation movements, the struggle with imperialism, colonialism, neocolonialism and underdevelopment in order to create the new international economic order, the achievement of disarmament, and the effort on behalf of observance of every people's right to self-determination." (5)

We have every confidence that in the future too, by acting in union and with firmness, the progressive, democratic and anti-imperialist forces throughout the world will play a decisive part in the process of historical development and will make new progress in the struggle for abolition of imperialism and colonialism, for the freedom and independence of all peoples, and for the solution of mankind's urgent problems, on behalf of the cause of collaboration among all peoples of the world, peace on our planet, and the cause of socialism and progress.

Talk at the International Scientific Conference on the subject of "The Common Struggle of the Labor Movement and the National Liberation Movement Against Imperialism on Behalf of Social Progress" (Berlin, 20-24 October 1980).

PUBLIC OPINION MUST BE AROUSED AGAINST ANTISOCIAL ACTIONS

Bucharest ERA SOCIALISTA in Romanian No 21, 5 Nov 80 p 49

/Article by Stefan Ionescu/

/Text/ As we know, alongside their effort to perfect social-political and economic management our party and state attach particular importance to basing social relations on the lasting principles and standards of socialist ethics and justice, protecting the citizens' public and private property, and providing all conditions for the normal course of social activity and work.

The measures for more intensive involvement of the masses and public opinion in the trial and punishment of antisocial acts are important in this respect. In adopting a long series of legal provisions to reeducate those who have committed various violations and to restore them to society, the Romanian state has shown great understanding and clemency especially toward youth and minors with deviant behavior and has based the good influence and efforts of the community upon their reeducation.

But this attitude toward violators of the law is sometimes interpreted even by the latter as laxity and as an opportunity to continue their antisocial conduct unhampered. Socialist humanism and concern for the individual are certainly not to be confused with tolerance of legal violations, acts of hooliganism, social parasitism, delinquency or the behavior of those who have made a veritable "trade" of their refusal to work. Most often the parasitism of individuals and their desire to try to create an "easier" life by illegal means lie behind this refusal to join any socially useful activity or to observe the standards of conduct.

In this respect the recent telecast of an expression of civic spirit strikingly entitled "Hooliganism in the Court of Public Opinion" is in keeping with the effort of the press and journalism in general to form strong public opinion against violation of the laws. The telecast undertook to answer such questions as: Does public opinion oppose acts of hooliganism spontaneously, and is it effective? Do we pass by hooligans indifferently or do we intervene promptly, with or without the help of the organs of law and order? Does hooliganism disturb you?

Such questions, asked of some citizens by a reporter, are actually limited to the requirement to arouse public opinion against any hooligan, antisocial acts. One of those asked declared, "Public opinion should be more forceful. Prompt action is not always taken for collective censure of these acts." And as the said telecast

also indicated, the citizens do not invariably display civic disapproval of those who repeatedly disregard the norms of social coexistence. To be sure it is the task of the organs of law and order primarily to intervene in such situations, but we often overlook acts of huliganism indifferently, evading the civic obligation of prompt and firm intervention.

By bringing these cases to public discussion, the said telecast confronts the perpetrators of the acts of hooliganism with their victims. The images on the small screen, the discussions held, the reporter's questions and the culprits' answers (some delivered with defiance and insolence) are not intended by the editors to constitute an action. It is clearly the reporter's wish to direct the discussion toward an explanation of the causes of such degrading acts. To that end he questions some of the parents of the youths who have lapsed into hooliganism, people beyond reproach at work and in society. But as parents? The argument brought too often by some of them that "They worked to provide their sons with an easy life sheltered from material cares and difficulties" may be a point to be considered, of course. But what have they done to educate them?

Most of the parents maintained that they knew nothing about their children's behavior, or how they wasted their spare time and their youth. When confronted with evidence of the guilt of his own son who was accused of hooliganism, one of the parents continued to believe he was innocent. "The guitar is guilty," he declared simplemidedly, trying to shift the responsibility to the instrument around which a group of boys, including his son, drank alcoholic beverages and then set upon some young classmates of the same age with their fists.

Of course it can be said that this is only one instance. And so it is. But sometimes youths are overlooked whom society has made great material and human efforts to educate and restore to the workers collectives when they have erred. The family, the school, the plant, the youth organization etc. must actively contribute to their social rehabilitation. But the family has the first responsibilities.

"Excusing" your son may be an understandable parent's attitude, but to defend him even when he is guilty of serious violations means to cover up his guilt. What is the attitude of the adolescent hailed into the court of public opinion when he sees in his parent an "ally" and a "defender"? Will he not continue in his conduct?

It is clear that those guilty of violating the law and those who commit serious acts of hooliganism, theft, robbery etc. should not enjoy society's leniency. There are youths who have benefited by the very humane and mild sanctioning system that allows for their age and the possibility of reeducating them in the environment and under the influence of the workers collective. The facts show that many of them have succeeded in reintegrating themselves in society with the help of the community. The percentage of them is high. But others ("cultivated" by some youths brought to collective trial by the said telecast) continue, often unrestricted, to disregard the laws and the standards of socialist morality and to behave antisocially. As the telecast also indicated, the reeducation effort sometimes fails. Some collectives in some work places do not make an adequate effort to supervise and check those assigned them for reeducation, who take advantage of this negligence to continue their criminal activity and to commit other and even more serious criminal acts. In such situations public opinion must be active and intolerant of legal violations. The statements of some workers at the 23 August Plant are significant in this regard. One of them said, "The law is too gentle with such delinquents. They do not all

deserve society's leniency." "Let them be tried at the work place and let them feel the anger and scorn of the collective, because it is impossible to live as a parasite in our society."

Socialist society is one of confidence in people and one based upon true humanism. But revolutionary humanism and kindness do not mean weakness or tolerance of legal violations. On the contrary, it is in the spirit of this humanism to firmly apply and carry out the laws of the state and to act with high standards and resolve to combat and punish antisocial acts and also to reeducate, correct and fully restore to their own as well as all society's useful activities those who impair the values of the new order by their antisocial acts.

'SAPTAMINA' RETRACTS VIEWS ON PUBLISHING PRE-COMMUNIST TEXTS

Bucharest SAPTAMINA in Romanian 12 Sep 80 p 1

[Editorial signed 'SAPTAMINA': "Cultural and Political Heritage"]

[Text] On numerous occasions, our review has militated for the recovery of literacy texts or texts of social importance which have remained in forgotten volumes or even in manuscripts--things which should be integrated into our literary-artistic or historiographic treasure. This operation was carried out over the years with care. The reviews MAGAZIN ISTORIC and MANUSCRIPTUM can be cited in this regard. The chapters which were reincorporated and put back into circulation have always been accompanied by adjoining texts providing comments on the content of some passages or even on the author. Unfortunately, in such operations there have also appeared exaggerations, affirmations which were not made on the basis of the Marxist positions of our party and this makes the texts presented for publications friable. Our political philosophy demands of us that the works published be judged on the basis of the author's attitude toward social progress, toward the great problems of humanity and his opposition to everything which is harmful in tumultuous contemporary history.

In this regard some information and proposals made without a critical spirit have even infiltrated into our review; for example, in the article entitled "Ideals" which appeared in our last issue. Out of good intentions, the idea was set forth that a national library should be set up. The idea in itself is not worthy of condemnation if we think that there are still some pages which are not known to the younger generation in the works of Eminescu, for example, or the works of Nicolae Densusianu or Vasile Parvan, etc. However, it was suggested that texts of Iuliu Maniu and Armand Calinescu be put into this library in an arbitrary manner, without political and scientific criteria. It is one thing to publish a text of Maniu which makes a plea for the union of Transylvania with the mother country and another thing to publish his later discourses, replete with chauvinism and therefore, contrary to our policy, not to mention the profoundly reactionary role which Maniu played in the public life of the country. It is one thing to publish the speeches of Armand Calinescu in which the Iron Guard is denounced and it is another thing to print his attacks on the communists of his time.

This is why, while forgiving the lack of experience of the author of this article and the negligence of the responsible secretary of the editorial board and the page editor, we cannot fail to say that increased attention is needed in judging our cultural and historical past and in carefully selecting that which is truly progressive,

useful and patriotic. Otherwise, such evaluations are only grist for the mill of open or secret adversaries of our policy. By patriotism we understand an energy dedicated exclusively to the good fortune of our country and not unpleasant emphases which would lead to unfortunate conclusions. A just utilization of our cultural treasure and of historic memorials will only increase our spiritual patrimony and lead to a good education for the younger generations. In this sense, we have understood how to recommend the reconsideration of forgotten pages although, as we have already written, some formulations in the article "Ideals" were completely erroneous.

CONTROVERSIAL 'SAPTAMINA' ARTICLE DISCUSSED IN JEWISH ORGAN

Condemning Anti-Semitism

Bucharest REVISTA CULTULUI MOZAIC in Romanian 1 Nov 80 p 5

[Article: "We Read in the Review SAPTAMINA"]

[Text] In its 24 October 1980 issue the review SAPTAMINA published, under the signature of Ion Lotreanu, the article "A Policy of Unity and Brotherhood--A Climate Favorable to Work and Creation," from which we extract the following excerpts:

"As part of our broad ideological front, the review SAPTAMINA acts together with the other press organs, in accordance with the guiding principles of the party. In keeping with this profile, our review has treated varied aspects of the cultural phenomenon, has promoted authentic values by adopting a critical position toward artificial improvisations, has encouraged viable, healthy creation, and has pleaded for an art with strong humanistic values. In the spirit of the revolutionary concept of the world and of life held by our party, the review has taken a stand against anti-social manifestations, superstitions and chauvinistic and nationalistic manifestations of any sort. Our readers have always appreciated the quality and the effectiveness of the materials published. We will say, however, that unfortunately, by an exception, some erroneous opinions, which could give rise to false interpretations, appeared in the pages of SAPTAMINA. We are referring to the article, "Ideals," published in No 509 of the review which, as a result of the verbose formulations of the author and the utilization of some ambiguous terms, aroused a few comments on the part of the readers. The editorial staff has analyzed these comments with a spirit of responsibility and has drawn conclusions which will be useful for the improvement of subsequent activity.

Obviously, in regard to the nationality problem, the position of the review SAPTAMINA is a single one, which is very precisely formulated, the position of our party to which we referred earlier. Moreover, we consider that the pages of SAPTAMINA a review in which both Romanian authors and Hungarian, German and Jewish and other (national minority) authors constantly write constitute by themselves an expression of a principled party-minded attitude,

one of close, association, friendship and collaboration among all men of culture in our country Acting in a critical and self-critical spirit, placing a greater emphasis on collective responsibility, giving increased attention to the conception and realization of each issue, promoting a clear and accurate language, the editorial staff of SAPTAMINA will continue to act in the spirit of the party policy, militating for the brotherhood and equality of all citizens of the country, regardless of nationality, for the good and prosperity of our entire people.

We, the editors of SAPTAMINA, just like all workers, condemn and disassociate ourselves from every manifestation of nationalism, chauvinism, racism, anti-semitism, etc., which we consider to be totally foreign to our social realities, to our socialist ideology and to the spirit in which the broad masses in Romania are educated by our Communist Party."

Rabbi Accepts Review's Explanations

Bucharest REVISTA CULTULUI MOZAIC in Romanian 1 Nov 80 p 5

[Article: "With Complete Confidence"]

[Text] The article published in SAPTAMINA of 24 October, No 516, under the signature of Ion Lotreanu, in the name of the review's editorial staff, confirms once again the firm policy of full equality among all citizens of the country, regardless of nationality, race or religion, which is one of the essential characteristics of the socialist regime in Romania.

The article condemns, unequivocally, all those who would attempt to fan racist or anti-semitic ideas and reaffirms the spirit of brotherhood and harmony which prevails among men of culture in this country.

Condemning affirmations in the article "Ideals," published in the same publication on 5 September 1980, matters are clarified without any possibility of false interpretation.

We have preserved all the time an unshakable belief in the noble and humanistic principles which serve as the ideological foundation of the socialist government of this country.

Our confidence has been fully confirmed.

Gratitude and devotion to this fatherland, which assures us of human dignity, protects us from all slander and gives us the feeling of equality and brotherhood with all her other sons.

Chief Rabbi Dr Moses Rosen,
President of the Federation of Jewish
Communities in the Socialist Republic
of Romania

PROBLEMS FACED BY WOMEN SEEKING PROMOTIONS DISCUSSED

Bucharest FEMEIA in Romanian No 11, Nov 80 p 5

[Interview with Paula Preoteasa, deputy chairman of the Central Council for Worker Control of Economic and Social Activity, by Elisabeta Moraru date and place not given]

[Excerpts] Question: What is your opinion about the progress obtained in recent years in regard to the promotion of women and about the column in our review devoted to this subject?

Answer: The attention which our party and Comrade Nicolae Ceausescu have constantly given to increasing the role of women in the economic, social and political life of the country, their promotion to positions of leadership constitutes an inseparable aspect of the strategy of social development of Romania. We are also justified in taking pride in the prestige as a scholar of world renown of Comrade Elena Ceausescu and the esteem which she enjoys for the many activities which she performs in the party and state leadership, while still maintaining her warmth and concern for the children and youth of the country and for the affirmation of women in socio-economic life.

In regard to the column "The Promotion File," I appreciate, in particular, the free dialogue between the editors and the persons interviewed, the faithful rendition of what the person interviewed thinks and says, the sincerity of the statements, which results in interesting interviews, without platitudes. The most important thing is that "The Promotion File" has proposed to be a work instrument for the factors of responsibility.

Question: Since you are among the women promoted to an organism of leadership on the central level, what would you like to add to the ideas expressed in our column?

Answer: There are still a number of areas where the process of promoting women must be stimulated because people are acting very timidly and work relations which we should think about are still being maintained. I am referring to the fact that women in the respective fields often do not receive any consideration for the work which they do. In some cases brutal discussions take place with them, with threats and other methods which, in general, we repudiate in work relations, whether women or men are involved. Such cases still persist in agriculture, in tourism, in machine building--especially in agriculture, where, as we know, the women bear the burden. The idea that the sectors mentioned are more difficult has been accredited, thus expressing "concern" for protecting women from hardships.

Of course, equality does not mean identity. Each person brings his or her own specific strength. Perhaps the woman has a greater sensitivity but this is a result, not only of her nature, but also of some attitudes of lack of confidence, and the minimalization of her contribution, with inhibiting effects. It is not a matter of a dispute between the sexes, since there can be no such thing in our country, but of certain delays, of the persistence of ancestral mentalities, which became at a certain moment, obstacles in the evolution of the emancipation of women and even of men. In some enterprises, even if women have been promoted into the leadership, certain jobs always held by men (brigade chief, master workers, etc), who do not always understand the more difficult situations in the family life of their co-workers.

In the handicraft cooperative network, trade, the peoples councils and other areas in the services sector where women are in positions of leadership--from the heads of units to the leadership of the ministry, presidents of units or deputy chairmen of central institutions--much remains to be done, in applying the existing programs of measures, not to mention the need for thorough, scientific analyses of future needs. At the same time, the food industry and light industry, the chemical industry, and the machine building industry (consumer goods) are still behind in regard to the implementation of the guidelines of the party leadership in regard to special programs, such as the development of the production of prepared and semi-prepared culinary products, the production of household apparatus and equipment, the diversification and improvement of the quality of articles of clothing. The most deficient are the cooperative and trade sectors, the principal providers of service, directly linked with the public, where the attitude of the workers influences the quality of services, which are rather limited.

Question: Some persons we have interviewed think that women have been given too much work.

Answer: In certain situations, women have been given tasks which have been regarded as "women's work." However, sometimes one goes too far with the accusation that the women's capacity for making decisions is overlooked.

FINES SET FOR VIOLATIONS OF METRO REGULATIONS

Bucharest BULETINUL OFICIAL in Romanian Part I, No 83, 16 Oct 80 pp 4, 5

[Council of State Decree for Establishing and Penalizing Violations of Norms for Metro Travel]

[Text] Carrying out joint transportation for workers in the Municipality of Bucharest under the best possible conditions--an expression of the concern of the party and state for continually improving the living and working conditions for the capital's residents--has necessitated the state's allocating large material and financial assets to build the metro, a fast means of circulation, supplied with modern installations which provide optimum traveling conditions.

The good operation of the metro and maintenance of the installations' integrity and operativeness require particular responsibility from the personnel of the Enterprise for Metro Operation, with a view to preventing accidents, disturbance in the traffic pattern and destruction or deterioration of its equipment and installations.

The persons using this modern means of transportation must demonstrate high civic awareness in assuring order and discipline, respecting travel norms and aiding the competent organs in bringing to responsibility those who violate the norms established, with a view to the good operation of this means of transportation.

Toward this end, the Council of State of the Socialist Republic of Romania decrees:

Article 1. The following acts, if they have not been committed under such conditions where, in accordance with the law, they are considered infractions, are violations of the norms for metro travel and are penalized as follows:

I. With a 400-500 lei fine:

a) Entering technological areas or places within the metro where public access is prohibited;

b) Failure to pay the fare or use of the metro on the basis of invalid travel identity card;

c) Deterioration of furniture, breaking of windows in the stations or the cars;

d) Disturbing the passengers or inappropriate behavior toward the other passengers or service personnel;

e) Smoking or drinking alcoholic beverages in the metro or dirtying the stations or cars;

f) Attaching posters in the cars or in stations without special authorization from the leaders of the Enterprise for Metro Operation of Bucharest;

g) Transporting live animals in the cars or goods which can disturb or dirty the passengers, as well as objects larger than 25 x 55 x 75 cm and 20 kg ;

h) Peddling in the stations or cars;.

II. With a 500-1,000 lei fine:

a) Forcing the doors of the cars to open while the car is stopped or is going;

b) Pulling the alarm signal for unmotivated reasons of imminent danger to the safety of traffic or of the passengers;

c) Transporting in the cars dangerous goods which are not allowed to be transported, such as inflammable, explosive, corrosive, caustic or poisonous articles.

III. With an 800-2,000 lei fine:

a) Deterioriation or destruction of parts, lighting installations in the cars and stations as well as da aging platforms, stairways, escalators and other articles within the metro, done on purpose;

b) Deterioration or destruction of telecommunications installations, parts of various installations, parts of cables or cables or signals as well as breaking windows in the voltage signaling devices and fire hydrants, done on purpose.

Article 2. Determination of violations and application of penalties is done by personnel empowered for this purpose by the leaders of the Enterprise for Metro Operation of Bucharest.

Article 3. Damages for material losses caused by the committing of any of the violations provided in this decree, together with application of the penalty, are established in accordance with legal tariffs.

Article 4. The provisions of Law 32/1968 on theEstablishing and Penalizing of Violations are applicable to the violations provided in this decree.

MEMBERS OF COMMISSION HANDLING WORKERS' COMPLAINTS

Bucharest BULETINUL OFICIAL in Romanian Part I, No 83, 16 Oct 80 pp 5-6

[Council of State Decision to Change Appendix to Council of State Decision No 1/1978 on Approval of Composition of Commission To Analyze the Activity of Solving Proposals, Notifications, Complaints and Request of Workers Addressed to the Council of State]

[Text] The Council of State of the Socialist Republic of Romania decrees:

Single article. The appendix to Council of State Decision No 1/1978 on Approval of Composition of Commission To Analyze the Activity of Solving Proposals, Notifications, Complaints and Requests of Workers Addressed to the Council of State is changed and is replaced with the appendix which is an integral part of this decision.

Appendix: Composition of the Commission To Analyze the Activity of Solving Proposals, Notifications, Complaints and Requests of Workers Addressed to the Council of State

President

1. Vasile Vilcu	Member of the Council of State, president of the Central Auditing Commission of the Romanian Communist Party

Members

2. Ioana Bratu	Member of the Council of State, UTC Central Committee secretary
3. Stefania Ionescu	Member of the Council of State, president of the Putineiu Agricultural Production Cooperative, Teleorman County
4. Emilia Sonea	Vice president of the Grand National Assembly, member of the Bureau of the National Council of Women
5. Luigi Martis	Deputy in the Grand National Assembly, major general, commander of the security troops
6. Iuliu Fejes	Deputy in the Grand National Assembly, secretary of the Council of Workers of Hungarian Nationality
7. Lidia Oradean	Deputy in the Grand National Assembly, state secretary in the Ministry of Health

8.	Mecu Georgeta	Deputy minister of labor, member of the Bucharest Sector 1 Party Committee and secretary of the Ministry of Labor Party Committee
9.	Decebal Urdea	Deputy in the Grand National Assembly ;director of the Institute of Finances, Monetary Circulation and Prices; director of the Directorate for Rate Setting, Methodology and Accounting Guidance in the Ministry of Finance
10.	Gheorghe Stuparu	Vice president of the Central Council of the General Union of Trade Unions of Romania
11.	Tudor Balan	Metal pattern maker, head of a brigade, member of the Bucharest Semanatoarea Enterprise Party Committee
12.	Teodor Ciudin	Instructor in the Central Council of Worker Control of Economic and Social Activity
13.	Costica Dinu	Head of a section at the Higher Court of Financial Control
14.	Dumitru Constantin	Director of the Directorate for Organization and Control in the Ministry of Agriculture and Food Industry
15.	Adalbert Militz	Secretary of the Council of Workers of German Nationality
16.	Romica Onica	Prosecutor, head of a directorate in the General Prosecutor's Office
17.	Romul Opre	Director of the Directorate of Civil Courts, Notary Offices and Legal Profession in the Ministry of Justice
18.	Virginia Pripitu	Member of the Central Council of Worker Control of Economic and Social Activity, president of the trade union committee at the Baneasa Enterprise for Radio Parts and Semi-Condcutors
19.	Zoia Pirvu	Technical Quality Control inspector at the Bucharest Cotton Industry Enterprise, member of the enterprise's party committee bureau and workers' council
20.	Ion Rizescu	Director of the Directorate for Organization and Control in the Ministry of Education and Instruction
21.	Constantin Voinescu	Director of the Directorate for Organization and State Administration in the Committee for People's Council Problems

POOR REPORTING ON NEW CONSCRIPTION LAW SCORED

Belgrade MLADOST in Serbo-Croatian 8 Aug 80 p 5

[Commentary by Branko Vukovic: "Post Festum Concerning the Passage of a Law"]

[Text] Irrefutably, none of the so-called systemic laws--with the exception of the Law on Associated Labor--has aroused as much public attention as the Law on Military Conscription. This circumstance is wholly understandable and need not be specially explained.

Among other things, the Law on Military Conscription deals with draft tours in the Yugoslav People's Army, a matter of interest to all young people who are getting ready to don the uniform. This is a matter of interest to all others, too, of course. Accordingly, the law was justifiably expected to be passed under established procedures, without undue haste and accompanied by the widest possible public discussion of the proposed solutions, with the public to be advised in an organized way of the course of the discussion. Every Yugoslav citizen would thus be in a position to influence the substance of the legislation, offering objections, proposals, and suggestions. In reality, the situation was different.

So far as the writer of these lines knows, the draft of the Law on Military Conscription was not published in the daily press, nor was it obtainable in the usual way. In other words, scores and hundreds of thousands of young people who are now or will eventually be soldiers ("subjects"!) had no opportunity to influence the substance of the law that detailedly regulates draft tours--"every citizen's highest duty and honor."

Someone will surely [illegible] anyone interested could easily inform himself in the sense that inform[illegible]media wrote at length on possible legislative solutions, proposals, and d[illegible]ms faced by the law's drafters. Indeed: the press, radio, and television kept us informed on an almost day-to-day basis of the work of those who were creating this legislation. However, what was the quality of the information?

The idea has taken root that nationwide defense is an area about which any newspaperman can write, i.e., even one lacking special knowledge. Hence, we often read articles evidencing poor knowledge of the subject. In addition, the articles are frequently dry and uninventive (if anybody wants to read, let him!). Most importantly, however, facts are distorted; in practical terms, there is misinformation. How otherwise can we explain assertions that women will be obliged to serve draft

tours, that all soldiers will serve 15-month tours after the Law on Military Conscription has been passed, that all soldiers over the age of 27 will be transferred to the reserve ("sent home"!), etc.?

This suggests the conclusion that wanting to write is not enough; you need knowledge of the subject in addition to desire and good intentions. Otherwise, good will results in distortion of the facts; so-called popularization of a legal text results in vulgarization.

We are not pointing out all this just for the fun of it. The question is of first-class significance and ought to be posed, even if in rough form. The harm is great both for individuals and for society when incompetent persons inform us about important matters. The latter, unfortunately and surprisingly, include TANJUG journalists and certain high-ranking military officers.

Right before the passage of the Law on Military Conscription, TANJUG broadcast the news--we read it in NOVA MAKEDONIJA--that all soldiers aged 27 or over (there are many such) would be released as soon as the law took effect. Soldiers, being soldiers, talk only about girls and shortening their draft tours. Accordingly, we can easily imagine how these young men felt when they learned that the item from our reputable news agency was untruthful.

Similar "information" could be heard on the radio, especially on local radio stations. In some places, even opstina-level officials were interpreting the law, and how they did so is not difficult to imagine.

Unfortunately, there have also been striking inaccuracies in the interpretations of persons who ought to be excellently informed. One high-ranking officer, for example, said over the radio something similar to the TANJUG item--to the effect that all soldiers born in 1952 and 1953 would be transferred to the reserve. The truth is that this provision of the law applies only to soldiers born in 1952 who joined the Yugoslav People's Army this year and soldiers born in 1951 who joined last year. Those are big differences!

As we can see, there is a large gap between the passage of the law and reporting on it--on the one hand--and the principles promulgated by the constitution on the other. Even if we take into consideration certain particularities of a procedural nature in this instance (we usually say "military matters") [passage missing] superficially and inaccurately informed. We can be informed about prices at the marketplace, hunting, fishing, and fashion by persons whose knowledge is not at the highest possible level. On significant social topics--by no means.

CSO: 2800

BRIEFS

KOSOVO LC OPSTINA ORGANIZATIONS--In the opstina LC organizations of Kosovo good political preparations have been made and action taken for elections in the basic LC organizations. It has been possible to conclude elections in 3,020 basic organizations, i.e., electing this number of LC secretaries, as well as 11,420 members of opstina LC organization secretariats. Of the total number of 3,020 secretaries, 64.3 percent were elected for the first time. Moreover, 20.26 percent of them were workers from direct production, 22.8 percent were private farmers, 3.67 percent were veterans and 5.6 percent were women. The nationality structure of these organizations has also improved, such that 72.88 percent of the secretaries elected were Albanians. However, despite the significant results achieved in these elections, the LC Presidency made the judgment that a number of these organizations and their leaderships are still not capable of adequately carrying out their leading role and being mobilizers, as well as the internal cohesive force of our system. Further training and strengthening of the LC is, therefore, needed. It was said at the 6 November meeting of the LC Central Committee Presidium of Kosovo that in all opstina LC leaderships, cadre changes had been carried out in the spirit of Comrade Tito's initiative and new opstina committees (made up of 11 to 15 members) had been elected, that PC opstina conference presidents had been elected for 1-year terms and secretaries of LC opstina committees, for 2-year terms. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

'UNCULTURED, FOREIGN MANIFESTATIONS' DEPLORED

Tirana PUNA in Albanian 23 Sep 80 p 3

[Article "Let Us Know and Implement Our Laws" by Iliriana Mezini: "Healthy Opinion Stifles Foreign Manifestations and Activities"]

[Text] Disgraceful behavior in society is a manifestation of the class struggle. It has its roots in the remnants of the old society, in the continual pressure of bourgeois-revisionist ideology and especially in persons who become the bearers of bourgeois morality and who, because of their behavior and attitudes, commit anti-moral and anti-social acts, thus, striking at the legal norms and rules of behavior in society.

This category of crimes is not a characteristic of our socialist society. Also, because of some special qualities and fine traditions of our people, the crime of disgraceful behavior in society is not widespread in our country. A comprehensive political and ideological struggle is carried out in our country against foreign manifestations of bourgeois morality expressed here and there in certain in our society; this struggle has reduced more and more the sources and causes of the rise in crime, in general, and crimes of disgraceful behavior in particular. Our penal legislation is also playing an important role in this field.

Crimes of disgraceful behavior in society harm the rules of coexistence in the socialist society. The person who executes [this kind of] crime does not seek to achieve a determined criminal purpose. In this criminal act, this person is moved not by motives incorrectly conceived, but by the desire to "please himself" and to show off before others, thus, showing his "skill" and "force" and so forth. The Penal Code of the People's Socialist Republic of Albania, in its Article No 129, stipulates that "disgraceful behavior in society, because of motives of delinquency that noticeably affect the rules of socialist coexistence, are punishable by re-education through work or by deprivation of liberty up to a period of 5 years."

When do we deal with disgraceful behavior in society? Let us give one case for an example: two young workers--F.D., a cook in Zall-Daj, and L.B., a worker in the housing enterprise--went drinking one day and had more drinks than they should have had. Walking and pushing each other after this behavior, they decided to have their picture taken. Their failure to keep their equilibrium while walking in the street drew the attention of passers-by. Openly disregarding the other

people, they used indecent words and even teased the girls who passed by. As a result of having drunk too much, they were driven to committing acts completely in contradiction with the rules of socialist coexistence and the norms of our communist morality.

The behavior of some youths at the stadium during sport competitions also is a negative aspect. Of course, those to whom we refer, are elements with accentuated remnants in their awareness. Having no consideration for the masses of society, they manifest indecent manners through repeated shouts in unison saying indecent and offensive words--an aspect which is not a characteristic of the large sports-loving masses of our country. These acts committed by some youths are in flagrant contradition with the norms and rules of socialist coexistence. It is even worse when these acts, which are provoked at the stadium, are continued in the street after the conclusion of sport events, where discussions become more noisy accompanied by shouts and offensive words. Because of this open disregard for society, these youths take legal responsibility upon themselves, as they cause disturbances and disturb the tranquility of the public in the stadium or of families and others in the streets.

All these acts mentioned above and some other behavior added to them, such as, for example, answering a citizen in a taunting manner constitute the crime of indecent behavior in society. Their act is condemnable by the law, because it hurts our socialist morality.

To eliminate manifestations of disgraceful behavior in society, which also constitutes a crime, it is necessary to create a repressive atmosphere for all these acts which we encounter in our work and society. The education of the new man in the communist morality is the task of the working collective, society and of every citizen. We must not remain indifferent when we observe that manifestations of disgraceful behavior are occurring in our society; on the contrary, we must intervene immediately and must prevent our comrade from sinking into his mistake; we must make it clear to him that these acts lead to a misleading path. After this, it is necessary that the foreign acts and manifestations of some member of the collective be discussed in the collective so that the behavior and action of one person will become a lesson for another person and so they will not be repeated anymore in life.

BETTER UTILIZATION OF ENERGY RESOURCES NEEDED

Tirana ZERI I POPULLIT in Albanian 27 Sep 80 p 3

[Article by Petro Dode, chairman of the State Planning Commission: "More Effective Studies and Measures for Increasing and Rationally Utilizing Energy Resources"]

[Text] The party, in its policy for the socialist industrialization of the country, has continually given special attention and concern to the most rapid development of heavy industry, considering it as the only way which has guaranteed the introduction of natural resources and other raw materials of the country in economic circulation and in rational and effective utilization. In this regard, based on Comrade Enver Hoxha's teachings that "without energy there is no progress and there is no development of the production forces," a number of measures have been taken and executed in our country; these measures have gradually developed, but always with priority, the energy industry which has become a powerful factor for the creation of a complete and multibranch economy, as independent as possible, relying on its own forces. Our country has always provided an active balance-sheet of energy resources, satisfying the increasing needs of all branches of the economy and even exporting a part of its energy products.

This correct policy pursued by the party in the field of energy resources and its vitality appear even more, especially now, when the entire capitalist and revisionist world, including the largest countries, is taken over by the economic crisis in general and the energy crisis in particular. Our socialist economy, which has created a powerful energy base, has not known and does not know reductions of production and other negative phenomena of the cyclic and spontaneous development that characterize the very nature of the economy of the bourgeois and revisionist countries.

Our party has consistently followed the path of the creation, development and invigoration of the energy industry, as a component part of its program for the socialist industrialization of the country, as a factor of a special importance that guarantees the consolidation and further promotes the independent political and economic development of the country, both successfully unmasking and destroying the hostile activity of the deviationists within its ranks and the modern revisionists.

As it was stressed at the Eighth Plenum of the Party Central Committee, the creation and development of the key branches, such as the petroleum industry, the

gas industry, the energy industry and other important branches of the economy, have had and will always have a vital importance for the building of socialism with our own forces and for strengthening the independence of the country. In drafting the Seventh Five-Year Plan (1981-1985), we took into consideration and are studying the possibilities for further increasing investments in the petroleum industry and further improving the effectiveness of these investments, aiming at also guaranteeing in the future the increase of reserves and the extraction of petroleum and gas. In this regard, it is necessary to study and better solve, in a complex manner, the problems of a material-technical and economic-financial character. In this branch of industry, the aim will always be, by strengthening technical and scientific discipline in work, to achieve, first of all, the most rational utilization possible of the technical-material base so as to assure the increase of the drilling-research and drilling-utilization rates in order to discover as many new oil and gas fields as possible and in order to speed up their exploitation. The tasks assigned in this direction are linked with the perfection of organization and management, with the continual strengthening of proletarian and scientific discipline in work so as to eliminate those technical and organizational shortcomings which, in some cases, have led to breakdowns.

The party has worked and is continually working to develop the coal mining industry along with the petroleum industry. Today, coal mining holds an important position in the balance-sheet of fuel in our country. In 1970, compared to 1960, coal mining increased by more than two times; while, in 1980, it increased by over five times. We have fought and rejected the views that underestimated the economic value of this branch and important measures have continually been taken and implemented in order to increase the mining of coal and to promote its use to the greatest extent possible, including coal of low calorific power. The various sectors of the economy will have greater use of coal during the five-year plan. Therefore, work is being aimed at solving the important problems leading to the increase of production by every mine and the improvement of the quality of coal, where there are still problems requiring a solution, such as: the reduction of losses in coal strata and impoverishment during coal extraction and the further improvement of the level of mechanization in mines and so forth.

The problems concerning the use of coal are being attentively examined. Studies have been completed on the possibility of converting boilers using liquid fuel into boilers using coal and, at the same time, efforts are being made to implement this conversion. Also, better efforts will be made to intensify the use of coal in families in order to save firewood that is a scarce material for the economy. Of particular importance in the more rational utilization of coal is the study which is being carried out for the centralization of production and of the distribution of steam to the city industrial zones, with the prospect of extending the heating system for communal needs in heated greenhouses for the production of vegetables and so forth.

The implementation of these studies in the years of the coming five-year plan will bring to the economy important savings in raw energy liquid fuel, coal and firewood and so forth. But, at the same time, tasks arise from these studies in regard to adopting all the technical and organizational measures, both by the grassroots organizations and central departments, so as to implement them on the

shortest deadlines possible and with the smallest investments possible. In this regard, it is necessary to stress that studies in the field of the thermal power sector need to be further expanded in order to elevate them, as the Eighth Plenum of the Party Central Committee recommended, to a higher scientific level, so that the most energy possible is taken from coal and other fuel materials for the thermal equipment, in order that the adjustment or production of new boilers will be carried out in full harmony with our kinds of coal and according to a studied regional system for this distribution.

The utilization of hydroenergy resources has been and will be in the future, too, one of the most important directions for increasing energy resources and, in general, improving the effectiveness of this branch of industry. The overall production of electric power in 1979, compared to 1960, increased by 15.3 times; while, the overall production of electric power supplied by the hydroelectric power stations increased by 20.4 times. But, in addition to this, our country still has many unexploited important water resources which constitute very great reserves for increasing, at rapid rates, the production of electric power. However, in this field, too, a number of tasks are set forth, especially for the intensification of complex studies in order to determine the complete blueprints for the utilization of rivers and of their affluents in a complex manner, utilizing them not only for the hydroelectric power stations, but also for satisfying the needs of the other sectors of the economy, such as, for irrigation, communal utilities and for the new industrial centers and so forth. For this, it is necessary to provide a better cooperation between our study and design institutions and the responsible departments and Tirana State University, by harmonizing prognoses and long range studies with the study and design of the projects expected to be built during the coming five-year plan. In this framework, it is necessary that the studies produce a number of technical and economic indicators which will serve to determine the order of construction of the hydroelectric power stations.

The party has always linked the priority development of the power industry with the necessity of applying a strong system of savings to the use of its products. In the present conditions of the dynamic development of our country, when the needs for energy resources are in increasing demands in all sectors of the economy and when the energy crisis has strongly taken over the capitalist and revisionist world, it is necessary that we implement, without any negligence, the important tasks assigned by the Seventh Party Congress in the field of savings, and of the economical use, of raw materials, especially of petroleum and of its by-products, gas, and coal and electric power.

In the execution of all the measures which will guarantee the further strengthening of the system of savings in the products of the power industry, we must always guide ourselves by the recommendations of Comrade Enver Hoxha that "...the country which produces much is not always a rich country; on the contrary, it is the country which produces as much as it is necessary to produce and which uses the good material things, that it produces, sparingly and with strict calculation."

Working in this direction, the greatest attention and concern has been concentrated on saving petroleum and its by-products. Our efforts aim at extending and applying, as widely as possible, the advanced experience that we find in individuals and in the user enterprises, while combatting every manifestation of routine and

of liberalism which still exist in the work of some state and economic organs. The results achieved in saving liquid fuel and motor fuel last year and during the current year tell about the great reserves that our economy possesses.

A very important direction to save liquid fuel is the persistent execution of the program approved by the Council of Ministers on the replacement of liquid fuel with solid fuel or gas and the use of all kinds of wastes which can be used for burning. Greater efforts will be made in the transport sector, the machine tractor stations [SMT] and in other sectors in order to base the use of combustibles on the best experience obtained, because, at present, there are noticeable differences in regard to the realization of norms between the individuals, work brigades and enterprises; and these differences constitute important reserves to economize petroleum, gasoline and so forth. Other measures for saving combustibles in the transport sector are: the use, to a greater extent, of trailers, cableways, carts and oxcarts for domestic transportation and, in the future, the replacement of vehicles' gasoline engines with naphtha engines.

Great savings reserves also exist in the utilization of coal. The increase of the coefficient of the utilization of calorific power of coal in a profitable manner by the users by only 10 percent, during the coming five-year plan, would bring to the economy a saving of 150,000 to 200,000 tons of coal per year. There are cases in our enterprises showing that not burning coal results in considerable savings. Thus, for example, from 8-10 percent that is the calculated norm allowed, the quantity of burned coal in the Durres bread factories, the paper plant in Kavaje, the beer and brick plants in Korce and so forth amounts to 25-50 percent and so forth. Such losses of coal exist almost everywhere, where the burning is carried out in hollows, therefore, the return to the system with pulverization devices is an urgent task.

There are also reserves everywhere in the economy to save electric power. Although efforts have been carried out in this field, there is room for further reduction of norms for the utilization of electric power per production unit, construction unit and service unit. Attention must be concentrated, especially, on the large users of electric power, such as the chemical, metallurgical and petroleum plants and so forth. In these sectors, power is saved especially when the plants are worked at full capacity.

To draft and execute the most scientific norms for the use of combustible materials in general, it is necessary to place their measurements on healthy bases. There are many gaps and shortcomings in this field both in regard to the setting, checking and precision of apparatuses and in regard to their repair. Of course, in order that all these economy measures are properly carried out, it is also necessary to have a better trained personnel to manage the equipment that use energy resources as a whole.

The totality of problems linked with the most rational utilization of fuel and combustibles is the object of expanded discussions and examinations on the part of all working collectives so as to further promote the technical and scientific revolution in these fields. Everywhere, as the party tells us, the people must take the most mobilizing tasks upon themselves in regard to saving power products;

no one must have the idea that we swim on petroleum and that we walk on coal; on the contrary, we must deeply instill in everyone the sense of saving every drop of petroleum, every handful of coal.

Understanding more and more thoroughly the tasks set forth by the party and Comrade Enver for the future development of the economy, based on the principle of relying on one's own forces, the working collectives will further struggle, will find new roads and will discover important reserves both to increase the products of the energy industry at higher rates and to utilize them most rationally and sparingly.

WORKERS PENSION RIGHTS DISCUSSED

Tirana PUNA in Albanian 10 Oct 80 p 3

[Article by Nesim Canko: "Let Us Know and Implement Our Laws": "On Workers Pension Rights"]

[Text] The basic principles of the New Constitution of the People's Socialist Republic of Albania in the field of relationships in socialist work have found a complete and clear expression in the New Labor Code. One of the main principles expressed in the Code is the providing of material means for the livelihood of workers when they are unable to work and when they are old.

A single, advanced and complete system of pensions for workers, white-collar employees and agricultural cooperative members has been established in the People's Socialist Republic of Albania. This is a great victory achieved by our people under the leadership of the Albanian Workers Party led by Comrade Enver Hoxha.

An important principle of the system of pensions is the fact that expenditures for the payment of pensions are covered by the contributions provided by the enterprises, institutions, organizations and agricultural cooperatives and by the state budget. Therefore, workers make no payment at all from their personal incomes for their insurance. Also, a failure by enterprises or agricultural cooperatives to pay their contribution does not prevent workers from getting their pension rights guaranteed by law.

Workers or white-collar employees have the right to receive an old age pension when they reach the pension age and when they have completed the years of service in work, in accordance with the category of work which they have done. A male worker who has done a heavy or difficult type of work, which belongs to the first work category, receives his pension at 50 with 20 years of service in work; while, a female worker earns her right to pension at 45 with 15 years of service. Those workers who execute the type of work of the second category receive their pensions at 55 with 25 years of service, while women of this work category receive their pensions at 50 with 20 years of service. The male workers of the third category of work receive their pensions at 60 and female workers at 55 with 25 and 20 years of service respectively.

Female workers or female employees, regardless of the category of work they have done, when they have given birth and have raised six or more children up to the

age of 8 years, have the right to get complete old age pensions at 50 after having completed 15 years of service in work.

Agricultural cooperative members have the right to full old age pensions when they have reached 65 years of age and have completed 25 years of service; while female members of the agricultural cooperatives earn their right to a pension at 55 after having completed 20 years of service.

The amount of the pensions is 70 percent of the average monthly incomes that workers have earned during 3 consecutive years in the last 10 working years, giving them the right to choose the period in which they have earned larger incomes. The old age pension for workers and white-collar employees cannot be less than 350 leks nor more than 700 leks, per month.

A worker or an agricultural cooperative member, who has reached the age for pension but has not completed the years of service in work to earn full old age pension, has the right to receive a partial old age pension, provided that he has completed the following years of service: men, no less than 12 years and 6 months, and women, no less than 10 years of service. The partial old age pension is granted in proportion to the number of years in service.

When a worker has completed the years of service in work, but has left work without reaching the age for pension, a full pension or partial pension is given to him when he reaches the age for pension.

Disability pensions are granted to workers, white-collar employees and agricultural cooperative members who become disabled in work or become disabled within 30 calendar days from the day they leave work or from the day they fail to appear for work. This pension is granted when the worker has totally or partially lost his capability for work according to the disability group determined by the doctor-worker examination commission. When disability has been caused by an accident that has taken place at work pension is given regardless of the years of service in work; when disability is the result of a general illness or caused by an accident which has no connection with work, pension is granted if the worker has put in a number of years of service determined in proportion to his age, for example: between 20 to 25 years, men must have completed 2 years of service and women 1 year of service; while, above 55 years, men must have 16 years of service and women 12 years of service.

The disability pension is granted as follows: 85 percent for the first group, 70 percent for the second group, 60 percent for the third group and 40 percent for the fourth group over the average monthly incomes received during the year or during the last 3 years, chosen by the worker himself in accordance with the highest salary that he had received.

A worker or cooperative member, who becomes an invalid in the first or second groups, because of an illness or because of an accident which has no connection with work, and who has not completed the years of service in work required for determining a full pension, has the right to receive a partial disability pension, if he has no less than one fourth of the work time required for determining full pension. This pension is granted in proportion to the years of service.

Also, the members of a family who have been unable to work and have actually been dependent on the worker, white-collar employee or agricultural cooperative member receive family pensions if their supporter dies during his working life, or within 2 years of the day he has left work, if he is a worker, and within 30 days from the moment he has been absent from work, if he is a cooperative member.

The family pension is based on the average monthly salary differentiated in accordance with the number of dependent family members. Thus, for families with three or more members, the family pension is 65 percent of the average monthly salary; for families with two members, 50 percent and for a one-member family, 40 percent.

The parents, the adopted children and the surviving spouse who, at the death of the child or of the other spouse, have not reached the pension age, but have been capable of working, have the right to family pensions when they reach the required age or when they become unable to work. The right to seek a pension is not limited, that is, it can be requested at any time.

Also, some special workers have the advantage of an old age pension for their years of service, regardless of age, provided that they have a determined number of years of service. Those who profit by this pension are military men of the permanent active service, opera soloists, ballet dancers, soloist singers of the professional variety theater, soloists and dancers of the State Ensemble and of the People's Army Ensemble and circus acrobats who have given up their work because they can no longer continue their professions. Their pensions are granted on the basis of 35, 40 and 60 percent of the average monthly salaries.

Persons who have participated in the National Renaissance Movement, in the popular movements, the Anti-Fascist National Liberation Struggle or in the revolutionary movements outside the country and have special merits, as well as the persons who have distinguished themselves in the fields of sciences, technology, culture and art and in state, social and economic activities, all have their right to pensions for special merits when they become unable to work or when they reach pension age, that is, for men at 55 and for women at 50, regardless of their years of service. The amount of the pension and the granting and stopping of these pensions are decided upon by decision of the Council of Ministers.

BRIDES CRITICIZED FOR STAYING HOME FROM WORK

Tirana BASHKIMI in Albanian 20 Oct 80 p 3

[Article by Tashko Lako: "On Brides Who Do Not Go to Work"]

[Text] During the first 9 months of this year, 625 brides have come in the villages of Fier District (either within the district or from outside the district); one half of these brides stayed entire months without going to work. From a calculation made, it appears that this "half" has not worked for approximately 12,000 work-days, a period during which they could have harvested beans from 600 hectares of land or raked over about 1,000 hectares of land sown with cotton or corn and so forth. These work-days, which have been lost, have had a negative influence on the fulfillment of the tasks on schedu . Nevertheless, the village Democratic Front organizations have not shown the necessary concern in regard to this fact, because they have not properly evaluated this problem of an ideological and economic nature.

As we can see, the old custom of keeping brides at home for a long period still has not been up-rooted. Of course, there are many positive examples and they are to be found precisely in those villages where negative examples are also observed. In Frakull village, for example, 10 newly married brides stayed at home for 15 days and, then, started work; in Pojan village a bride went to work 5 days after her wedding; in Agim village two brides went to work 5 days after their weddings; and eight other brides, married in Verri village, also went to work 5 days after their marriages. Nevertheless, the Democratic Front organizations are not taking advantage of positive examples in order to propagate them as much as possible and, through them, to struggle against the manifestations of the old custom that still raise their heads, keeping alive the "stains" of foreign ideology and harming the economy.

The reasonings given by these people who keep their brides at home without sending them to work are many. In Frakull village, they say: "All right, as soon as they get some rest. After all, they have come from work and they will go to work." And 12 brides from this village, by staying home several months without going to work, until "they get some rest," did not put in 750 work days, thus, they had a negative effect on the fulfillment of the tasks. The Democratic Front organization did not make this issue a family problem, a social problem. And this attitude has its reason. The Frakull agricultural cooperative is one of the agricultural units of this district which, this year, is regularly fulfilling its

tasks; and this fact has prevented the Front organization from noticing the absence of these brides who did not go to work; and it says: "we are doing well. We collected about 2,000 quintals of cotton and harvested about 180 hectares of corn." This is so; they have distinguished themselves; but, this fact does not give them the right to neglect such a problem of an ideological nature closely linked with the implementation of the pledges they have taken.

In Agim village people say: "Well...for a little while, until they make acquaintance with the people of the house...." By so saying, they want to justify, a little, the attitude toward the brides who do not go to work and toward those people who do not send them to work. But, who are the people whom the bride would like to know? They are the people she has been working with at the same cooperative, the people she met so many times when she was engaged. It is true, in the past, the bride could not have known the members of her husband's family, because she was kept closed up within the four walls of the house; while, today, it is different. She works together with other people and, in work, she has known these people and they have known her. And, because it agrees with such concepts, the village Front organization did not notice that six brides stayed home for over 2 months without going to work or that they did not put in 250 work days, during which period they could have harvested beans in 12.5 hectares of land or raked over 20 hectares sown with corn or cotton.

"We will go to work. In a little while...." And, it is with these words that in Pojan agricultural cooperative six brides managed to stay home about 4 months without going to work, thus, failing to put in about 480 work days. Those are small figures for such a large agricultural unit, they say; but, we must not forget that it is precisely in this large agricultural unit that, so far, the cooperative members have harvested only 100 hectares of land out of 305 hectares sown with corn and have collected only 450 quintals of cotton of the 5,815 quintals that they have to pick. It is not at all correct for the Front organization to tolerate such thoughts. Let us remember that here a worker or a white-collar employee goes to work immediately after his wedding, while many village brides stay at home for entire months without going to work, and the Front organization closes one eye and one ear, instead of making this issue the problem of the family, of the society.

As the Front organizations in the village of Fier District have not properly evaluated this problem, therefore, their work suffers quite a bit in this direction. The front activists in the villages busy themselves with many problems concerning the assurance of the participation of forces in work, but not with this problem. The leaders of the Front in united villages and special villages have not examined this problem; in cooperation with the women's and youth organizations, they must carry out a more concrete work with the people in order to convince them that their brides must go to work immediately and not months after their weddings, just as the new popular song has it: "Oh, you young bride, you worked on Saturday, you married on Sunday and, again, you went to work on Monday."

WRITERS' UNION HEAD URGES MORE DIVERSITY OF IDEAS IN MASS MEDIA

Bonn IWE-TAGESDIENST in German No 169, 12 Nov 80 p 1

[Report from Berlin: "Hermann Kant Favors More Differences of Opinion in GDR Media"]

[Text] Hermann Kant, president of the GDR writers' union, criticized the mass media in the GDR for their aversion to conflict. The journalistic environment which is created in the GDR "is too narrow, is over-anxious, is determined by touchiness and suspicions which should not matter so in this world," he wrote in the East Berlin literary journal (SINN UND FORM (No 5, 1980). "More controversies must be published," according to Kant, and fear of differing opinions was out of place. At the same time Kant disassociated himself from his writer colleagues who had expressed their criticisms of certain GDR conditions over the radio and television of the FRG for lack of publication opportunities in their own country. It was "inadmissible to have conflicting political opinions blared out by a political adversary." Kant termed the "detour by the western route" a dead end.

According to Kant, the GDR writers' union attempted to intervene in previous difficult conflicts between the state and individual authors. The union's interests, he said, were not always identical with the interests of each individual writer, but neither were they by any means always identical with the "predominant interests of society at the time." He described his own role as union official as that of a "double advocate." He wanted to explain the state to his colleagues, his colleagues to the state. What the union was able to achieve in conflicts, he said, amounted to compromise, in any case.

WEST GERMAN BOOK ANALYZES ROLE OF MILITARY EDUCATION IN GDR SCHOOLS

Cologne DEUTSCHLAND ARCHIV in German Vol 13 No 10, Oct 80 signed to press 26 Sep 80 pp 1097-1099

[Review by Arnim Brux of the book "Wehrerziehung und vormilitaerische Ausbildung der Kinder und Jugendlichen in der DDR" [Military Education and Premilitary Training of Children and Youths in the GDR] by Juergen Hartwig and Albert Wimmel, No 14, Military Policy, Series of the Society for the Study of Contemporary Problems, Bonn; Seewald Verlag, Stuttgart-Degerloch, 1979, 207 pages]

[Text] In his pamphlet "Kann Europa abruesten?" [Can Europe Disarm?] Friedrich Engels demanded that "military training must be concentrated within the education of the youth, so as to achieve a reduction in the duration of military service. He added a proposal for the use of retired noncommissioned officers as instructors of gymnastics and close order drill of the students (MEW No 22, Berlin [East] 1963, p 282 f). Although the GDR can generally use professionally qualified cadres for sports instruction, it is nevertheless quite eager to accept a part of Engels' teachings and to utilize it in the training process within the educational system. This is shown not only in the incorporation of close order drill and exercises, as well as of military sports exercises into the physical education curricula, but also in the adoption of military training as a mandatory subject for the general polytechnical secondary school on 1 September 1978. It was precisely that last step that resulted in a sudden jump in the number of publications about premilitary training in the GDR within the context of sometimes vehement reactions in the East and the West.

Hartwig's and Wimmel's work does not limit itself to the explanation and analysis of military instruction, but undertakes the laudable task of demonstrating that military education is a pervasive principle and an interdisciplinary element of the entire educational and formative process of the youth of the GDR. In the introduction the authors set themselves the aim of explaining "the position of socialist military instruction within the monolithic social system of the GDR" and of "contributing to the filling of an information gap within the FRG regarding socialist military education and premilitary training in the GDR" (p 11). They also attempted to research not only the educational programs, but--as far as possible--also the educational realities. Due to the well-known lack of empirical material about the daily life in the GDR this task appeals especially to the reader's expectations. Hartwig and Wimmel concentrate on describing military education and premilitary training during childhood and adolescence, emanating from the basic assumption that "it is then that the basic attitudes and information for subsequent behavior according to norm are determined" (p 11). For the sake of completeness attention is also drawn to the pervasiveness of military training in the life of the GDR population, with the male part kept active to the 60th birthday by reservist exercises and the militia of the working class.

The authors have attempted to illustrate the problem area by the use of numerous original sources and documents that are cited extensively without comment. On the one hand this gives concrete proof for arguments, motives, aims and contents of military education and on the other it occupies the reader's attention with numerous direct quotes from the sources, which in content and terminology are often redundant and wordy.

Essentially, the work consists of three main thrusts. Chapters 1 to 3 provide an introduction to the general foundations of military training within the educational system, chapters 4 to 6 are devoted to military education in preschool and in school, while another 4 chapters deal with military education in the social organizations.

After a brief explanation of training and instruction in the GDR the talk turns to the fixing of the military education idea in the various laws and documents. With astonishment Hartwig and Wimmel realize that socialist military education is not expressly mentioned in the education law of 1965, but is evidenced only in commentaries to the law. The general guidelines for the military education of youth have been published in Chapter V of the law on youth. Like the constitution, it expressly points out that the defense of the socialist fatherland and the socialist community of nations is the right and honorable duty of all juveniles. The neglect of this honorable duty, e.g. refusal to perform military service, is punishable by imprisonment, as evidenced by a reference to the criminal code of the GDR (Article 25, Paragraph 1).

The two authors divide socialist military education into two basic areas--the emotional education could be defined as defense propaganda, in that it aims to develop the defense motives, socialist defense morale, and defense consciousness on the political-ideological and moral basis. This, as Wlater Ulbricht postulated in the second of the "Ten commandments for the new socialist man," is designed to increase love of the fatherland and the readiness to "devote the entire strength and ability to the defense of the workers' and peasants' state" (p 31). The rational education is primarily directed at the communication of military-technological knowledge and skills, as well as at the development of the physical basis.

Hartwig and Wimmel demonstrate that military education is indeed an integral part of the entire socialization process, beginning almost in the cradle, by showing the training and instruction process in the kindergarten. Since children in that stage of development are especially open emotionally, military education concentrates primarily on the emotional side. Thus the children are to develop "feelings of closeness...to members of the armed forces," and, as a contrast, have to be shown a concrete concept of the enemy, in order to develop hatred for the class enemy. The depressing demonstration of manipulation of infants reaches its nadir in the characterization of military toys as pedagogically valuable. Their use is justified with the argument that they represent within a child's play an image of reality, they evoke technical knowledge and understanding, and thus lead to an examination of technology (p 47).

With a sense of urgency the authors depict the methods and contents of military education in the kindergartens, including the contribution made by the childrens' magazine BUMMI.

The sphere of influence of military training extends from preschool to the educational and formative process within the general educational polytechnical secondary school. It is demonstrated that every subject has to perform its appropriate function. Hartwig and Wimmel differentiate between four subject areas, the social-scientific, the mathematical-scientific and technological, the cultural-esthetic, and physical education, demonstrating impressively their specific tasks within military education. As an example, they turn to the German lessons of the first to fourth grades. On the basis of stories, poems and conversations (including those with members of the army) military educational ideology is to be carried out within German instruction. It is also directed at the development of the friend-foe image, the justification for the existence of armed organs, the development of positive attitudes toward the soldiers of the NVA and the Soviet comrades-in-arms, the justification of the Wall construction, and the formulation of socialist examples.

With numerous examples from reading texts of the primary classes the authors explain the multifaceted emotional influences on the students. The picture is concluded by a description of military training of the Thaelmann Pioneers, the Free German Youth (FDJ), with special mention of the Hans Beimler games, and the Society for Sports and Technology (GST).

The reader of the book will miss two topics--first a comprehensive placing of the topic into the historical framework, to include the genesis and the constituting of the idea of military training within the GDR; second the fulfillment of an expectation raised in the introduction, that military training would not be only commented upon through laws, regulations, directives, curricula and instructional materiel, i.e. on a normative level, but that the norms would be compared to the degree of realization within daily practical education. Such an attempt was condemned to failure due to the lack of empirical evidence. And thus the final conclusion of Hartwig and Wimmel is primarily speculative, when they argue that the introduction of military instruction indicated that defense readiness was different from official pronouncements, but that nevertheless youth "is inducted into military service, better prepared physically and psychologically than is the case in countries such as the FRG" (p 165). However, this limitation only marginally reduces the informational content of the book.

INTERIOR MINISTER REVIEWS 1977/80 WORKER MILITIA TRAINING

East Berlin DER KAEMPFER in German Vol 24 No 11, Nov 80 pp 1, 2

[Article by Col Gen Friedrich Dickel, member, SED Central Committee; minister of the interior; chief, German People's Police: "With Conviction and Confidence We Confront the Demands of the 1980's--Successful 1977/80 Training Period Has Created Favorable Preconditions for Task Fulfillment of 1981/85 Training Period"]

[Text] The worker militia has successfully concluded the 1977/80 training period in anticipation of the approaching Tenth SED Congress. In the struggle for the realization of the resolutions of the ninth party congress, the fighters, NCO's and commanders achieved exemplary deeds in fulfilling and surpassing the economic plan. By fulfilling the tasks of the training program so well, the worker militia secures its position within the national defense and makes an important contribution to the protection of our socialist fatherland and of peace. Thus it again proves its high class consciousness, its political maturity and its staunch loyalty to the worker party and to socialism. Members of the militia have once again in this time period shown themselves worthy of our party's great confidence.

Socialist Competition Furthered Greater Achievements

Under party leadership, the demanding goals and tasks of political and combat training were fulfilled by all units, combat collectives were universally strengthened, experienced commanders were further qualified and the required increase in combat strength and combat preparedness was achieved. All this leads to the conclusion that the 1977/80 training period will be remembered as one of the most successful in the history of the worker militia.

New initiatives grew out of a deep understanding for the necessity for the continuous and all-around strengthening of socialism, for the determined and successful fight against imperialism, against all variations of its ideology and against its peace-threatening provocations, combined with the unmasking of its aggressive goals and intrigues. The party's resolutions, orders and other instructions became even more disciplined, more creative and met with even better compliance. Both in the factories and in the units it was the communists who led in exemplary fashion.

An important part was played by the call by the Hans Beimler mechanized worker militia battalion in Potsdam and by the Franz Stenzer militia battalion in Eisenach for all militia units to join in socialist competition. The competition's tasks and goals were high. To reach and to fulfill them required strict organization, leadership and steady control from all those responsible for the political training and education, especially from the commanders. The calls for competition created a fantastic atmosphere in all the units. They demanded and promoted the combat readiness of every fighter, of every NCO and commander, and strengthened their determination to fulfill the goals to which they had obligated themselves in the competition. Of decisive significance was the political ideological work organized under the leadership of the party and continuously brought up to date, in close cooperation with the responsible officers of the People's Police, with commanders and government leaders in the respective factories. All this proves that socialist competition has reached a new level in the 1977/80 training period.

The main efforts were directed successfully to the further intensification of overall combat training. This was done through extensive, qualified political work which took into consideration the steadily intensifying international class struggle. The struggle for the total fulfillment of the tasks and goals set forth in training documents and in the socialist competition thus received a convincing and inspiring political motivation. The effects were seen in production, in the exemplary conduct of militia members in their fight to increase work productivity, for the most frugal use of materials, energy and fuel, for order, discipline and safety at work, for the fulfillment and surpassing of the economic plan. But above all, all members of the militia were made more conscious about the pitiless and uncompromising harshness of any possible combat action with the enemy and the absolute necessity for high and harsh demands for combat training and combat preparedness which result from that.

The regular participation by militia in training, and by commanders in extracurricular qualifications, the outstanding results in combat-, rifle-, and special training, attest to the fact that militia members, NCO's and commanders actively support our party's policies and have drawn the correct conclusions from the international situation, which has been aggravated by United States imperialists and by NATO.

In the 1977/80 training period, essential progress was achieved regarding increased planning, tighter organization, improved quality and effectiveness, and especially a greater complexity and greater realism in training.

Reflected in this is the continuous qualitative improvement of commanders and NCO's as well as of comrades of the People's Police responsible for the training of the militia. They were even more successful in optimally using the short training period, in teaching knowledge and skills more intensively and more effectively, and in avoiding, i.e. not permitting, shutdowns in production.

Day of Combat Preparedness Proved Everywhere

The total training results achieved prove that all units struggled successfully for highest achievements in armament, equipment and technology. This was especially manifest in the antiaircraft units which reached their best results yet during Combat Shooting 1980. Good to very good progress can be noted in achieving combat preparedness. Proof of this is the compliance with and even improvement of time limits allowed after sounding the alarm, the results of checking over weapons, technology and equipment, the "Day of Combat Preparedness," which has already become a tradition, and other measures. Through goal-directed political-ideological work and the closer cooperation between all those responsible for the worker militia, the organizational, material and leadership prerequisites, which enable the units to fulfill their mission promptly, at any time and under any conditions, were further improved under the leadership of the party.

The party continues to pay a great deal of attention to the qualification and proper employment of the commander cadre. Based on the long-term cadre development and employment programs worked out by leading party members in bezirks and kreises, a large number of younger commander cadres have been trained in recent years in accordance with their functions. They have successfully passed their examinations in practical service, especially by checking combat preparedness, and in the 1980 tactical maneuvers.

The high point of the 1977/80 training period was the tactical exercises at the conclusion of the 1980 training year. It was up to every unit, from independent platoon to mechanized militia battalions, to account to the first secretaries of the SED bezirk and kreis management how not only the last training year, but the entire training period had been used. These tactical exercises imposed noticeably higher demands. It was very impressive how these demands had been met by most of the units, men and commanders. Combat preparedness, the will to achieve, military knowledge and know-how all convincingly demonstrated an increase in combat strength and combat preparedness in the worker militia.

Source of All Successes--Leading Role of the Party

Successes in military conduct by men and commanders, in organized cooperation, in the optimal use of firing power and the uniformity between combat collectives were obvious. The commanders acted quickly, with circumspection and with consistency. They demonstrated their improved capabilities in the successful leadership of their units. It became convincingly clear that they are able to meet all requirements and are able to master even complicated situations through well-founded decisions, precise combat orders and quick actions.

In evaluating the results of the 1977/80 training period, the following can be objectively noted: Increased combat strength and combat preparedness of the worker militia can be seen in all areas. This is primarily the result of the expansion of the party's leading role. This continues to be the decisive source and basic prerequisite for all successes of the worker militia, their continuous further development and strengthening. The increased combat strength of the party collectives in the units, the exemplary conduct of the communists, stronger military discipline and order as well as stricter individual leadership resulted in most units in a measurable increase in military strength.

The more goal-directed development in the competitive and innovative movements has affected this just as much as the greater emphasis placed on tradition. They had considerable influence on combat preparedness, the will to achieve and to gain military knowledge and skills.

Using Experiences

Partnership relationships between militia units and units of the NVA, of the People's Police and of the Soviet Army have again proved highly successful. This also applies to work with sponsored schools. And it must be noted that the influence and the effectiveness of militia units within the framework of socialist defense training, especially on our youth, have increased significantly, both in quality and depth.

The 1977/80 training period, and the tasks and goals set out in the training documents were demanding without a doubt. They challenged men as well as commanders by placing higher demands on them. The good and very good results are a success of which all participants can rightfully be proud.

In the past 4 years, much was achieved, much was created and many new things were learned. The experiences gathered in all areas are of immeasurable value. This will become manifest, especially in the next few years. At the 12th session of our party's Central Committee, Comrade Erich Honecker emphasized that it is the primary objective of the preparations for the Tenth SED Congress "to orient the party organizations and all comrades politically-ideologically in the requirements of the 1980's."

For the first time in militia history, the 1981-1985 training period will cover a 5-year period. It is thus organically integrated into the five-year cycle on the basis of which all decisive political and social activities are organized in our GDR under the leadership of the party. Based on all past experiences and under the goal-directed leadership of the party, and in close cooperation among all, those responsible for and within the worker militia will succeed in fulfilling the missions set forth in the training documents and in reaching the set goals.

What It Depends On Now

The following are important prerequisites for this:

Based on an extensive and in-depth study of the training documents, an objective evaluation of the results is to be carried out by the party in every unit and in every kreis. Especially the reasons and causes for good experiences and positive examples are to be evaluated thoroughly and conclusions are to be drawn.

The main efforts are to be directed to the highest achievements reached in the fulfillment of the gasks set forth in the training documents. This requires that the greatest attention continues to be paid to the intensification of overall training.

It must be assured that in every unit the results achieved so far are not accepted as final but rather than they are further improved. To this end, the heads of bezirk and kreis offices of the People's Police, in close cooperation with the NVA's defense commandos, must create all prerequisites and must continuously give the commanders instruction and support, especially through further improvement of extracurricular training.

All militia members are to be taught the pitiless laws and hardships of modern battle through effective political-ideological education, and through complex and more realistic combat training. Physical and psychological stress is to be increased deliberately. Trainers and commanders must guarantee that the men and crew completely master their weapons, equipment and technology, that they perform at their highest potential and that they are capable of hitting the target with the first shot.

All available knowledge must be employed in order to further improve methods, standards, quality and effectiveness of the NCO's. There must not be an hour of training without thorough preparation. Organization and effectiveness of material as well as technical and medical supplies are gaining more and more in significance and must be improved further in accordance with growing demands. It is important to assure the most sensible use of available funds.

The content of partnership and sponsorship contracts must be made more precise in the interest of increasing combat value and combat preparedness of every unit, and of increased socialist defense training of our youth, respectively.

The "Day of Combat Preparedness" should be carried out in all units and kreises in order to achieve a universal coordination of measures.

The Ernst Thaelmann Central Militia School, the Ernst Schneller Militia School in Gera and all other schools must give commanders, NCO's and militia specialists even more practical knowledge, must improve their skills, create a sufficient elimination process in the entire education and training process, and support the further development of the militia through their own scientific-theoretical research.

On the basis of the central call for competition in honor of the Tenth SED party congress by the mechanized Ernst Thaelmann militia battalion in Rostock, the competition must be conducted rigidly in every unit, accounted for publicly, a goal-directed exchange of experiences must be pursued, and an enthusiastic, competitive atmosphere must be created, in order to increase broad-scale efforts in support of highest achievements in all areas.

Applying New Criteria

The party's resolutions for the 1981-85 training period show to everyone the criteria and demands for the increase in combat strength and combat readiness which the worker militia must achieve. They are higher, because the international class struggle has become more intense, because--as comrade Erich Honecker emphasized in his opening speech for the 1980/81 training year in Gera--the

fight for peace--mankind's greatest treasure--has entered a new phase of greater conflict. Great alertness, order and discipline are necessary everywhere. It is the task of every man, NCO, commander and everyone responsible to do justice to the new increased demands on the GDR's defense preparedness in the 1980's. The motto for our actions is the reliable protection of our socialist fatherland, of socialism and of peace. The worker militia as well as the people's police, closely allied with all workers of our republic, are determined to make this motto a reality through their dedicated work and actions: "The best for the tenth party congress! Everything for the people!"

'LE FIGARO' ANALYZES PZPR CC SEVENTH PLENUM RESULTS

LD051429 Paris LE FIGARO in French 4 Dec 80 p 3

[Dispatch by Bernard Margueritte: "Poland: Nothing Has Been Resolved"]

[Text] Following the Seventh Polish Party Central Committee Plenum you can only feel compassion for Kania and his friends--everything indicates that they know what should be done but have, unfortunately, been affected by a paralyzing impotence. But perhaps, as the hero of Wyspianski's "The Wedding" says, it would be sufficient to "want to have a will of your own?"

The seventh plenum gave the present leadership the last chance to increase its credibility and recover public confidence somewhat. Let us say that this opportunity has been missed almost completely. The Central Committee has again shown that it was only able to deal with personnel questions, making changes here and condemning there. However, the leaders have again shown that they are incapable of finding any answer to the fundamental questions which the country is asking itself.

Is it an attitude worthy of scientific socialism merely to exclude Gierek from the Central Committee or dare to envisage the sacking of Jaroszewicz from the party ("This would be something extraordinary," a very excited activist told me, "because it would be the first time that such a thing had happened to someone decorated with the Order of Lenin")?

If Gierek's rule--just like that of Gomulka--ended disastrously, was this not because of the failure of a system which should, therefore, be subjected to analysis?

Nor has anything concrete emerged with respect to the future. The program remains nebulous, vague, and uncertain. What is more, you would look in vain for any draft agenda for its implementation. It is, therefore, understandable that a feeling of bitterness and disappointment now prevails everywhere, including the party.

Many party organizations have already reported this to the Central Committee and the Central Committee organ TRYBUNA LUOU. This plenum of dupes has increased the risk of destabilization within the party itself.

So for want of anything else, some personnel changes have been made. It is true that steps have been taken in the right direction, but it is generally believed that they have not gone far enough. The departure of Kruczek, the former trade union boss, Karkoszka, who was Warsaw first secretary until recently, Werblan who was in charge of ideology, and security chief Kowalczyk was expected, as was the promotion of General Moczar to the Politburo and Fiszbach's appointment as Politburo candidate member.

Four Trends...

It has been obvious since Sunday that so far Kania has saved his post. He owes this mainly to two calming statements made just before the plenum by Walesa and Solidarity leaders in Warsaw, for which, I was told, the party leadership had assiduously asked.

However, can it be said that Kania has achieved success? It is true that he has saved his job, but he has had to pay a high price for it. There existed hitherto four trends in the party--that of liberals wanting profound reforms, that of Kania which favored a cautious renewal, that of the center-right which wanted to reconcile democratization with regaining control, and, finally, that of the advocates of a return to orthodoxy.

In his report, the first secretary had to give the center-right important pledges by clearly coming out in favor of "renewal without anarchy." What is more, he had to agree to appoint to the Politburo General Moczar and Mr Grabski, both of whom, together with Mr Olszowski, are among the main leaders of a faction which is now playing a determining role among the party leadership.

In view of all this, it is understandable that in this plenum speech General Moczar could afford to praise Kania and the content of his report. This is also probably why, contrary to expectations, two moderate leaders--POLITYKA chief editor Rakowski and culture minister Tejchma--have not become Politburo members. It is not in their direction that the party is moving.

...And Four Objectives

What policy will this new leadership pursue? It has set four fundamental objectives for itself:

First, eliminating corrupt and incompetent elements from the party. The steps taken at the plenum with respect to Gierek, Jaroszewicz, and other former leaders have confirmed this;

Second, achieving a broad national unity among reasonable patriots, in particular, in conjunction with the Church and moderate "Solidarity" members. The presence of Kania with Walesa and Cardinal Wyszynski in Gdansk on 16 December at the inauguration ceremony of a memorial to workers killed 10 years ago would be a symbolic gesture which is now being considered and which could create a great stir;

Third, continuing with the implementation of the renewal and democratization program;

And, fourth, pursuing a policy of firmness to restore discipline in the country, as demanded by many participants in the plenum discussion.

This final aspect could exert a positive influence by inducing "Solidarity" leaders to continue to draw closer to Kania, especially in view of the fact that, as they know, the majority of Politburo members is now in favor of regaining control. It is clear how narrow the path is which Kania must follow, at least until a congress is held.

Especially since, even though any trouble in the country is likely to alarm the Soviets, the latter could well become even more alarmed by any attempt to reach an agreement among reasonable Poles with a view to implementing a more democratic brand of socialism, the delaying tactics favored by Kania, who seems to be a kind of a Kutuzov of politics, are unlikely to arouse enthusiasm, but let us admit that his position is far from enviable.

GULCZYNSKI EXAMINES CAUSES OF CRISIS

Warsaw LITERATURA in Polish Nos 42, 43; 16, 23 Oct 80

[Article by Mariusz Galczynski: "To Understand the Crisis"]

[No 42, 16 Oct 80 pp 1, 10]

[Text] Without exaggeration we can say that at present the main task is to work out those ways of overcoming the next sociopolitical and economic crisis in our system, in order that at last we may overcome the tendency towards cyclical recurrences, as designated by significant months in the Polish calendar: October 1956, December 1970, and August 1980. And less significant ones too, because they turned out to be trivialized signs of the swelling of the crisis: in the form of the events of March 1968 and June 1976.

After all, it is not enough for there to be good intentions, which, after all, were not lacking before, either. What is essential is a correct definition of the sources of crises and the programming of a strategy which promises that they will be consistently eliminated. Therefore, an understanding of the causes of crisis and its nature is an essential condition to endowing actions aimed at restoring our system to functional operation with a nature which is more rational and which promises greater hope for improvement which is more lasting than that which has followed previous crises.

A qualitatively different course and reaction to the current crisis and the forms involved in it favors such an understanding and therefore victory: Free of unbridled spontaneity on the part of those protesting distortions. On the other hand, on the part of the deciding parties, it would take the form of well-considered measures, which is undeniably better than those methods adopted during the previous crises, methods which were comparable to lashing out at waves. But the beginning of the departure from the peak phase of the crisis also turned out to be free of the former euphoric delight and excessively glib hopes for immediate improvement.

This at the same time creates the demand and climate for intellectual mastery of the crisis, and therefore also the rationalization of efforts aimed at overcoming it. On the other hand, this can be accomplished only by allowing public opinion to test the attempts to understand the reasons for the crisis and the proposals for ways out of it.

Nature of the Crisis

Let us start by stating the obvious.

The symptoms of the crisis appeared with increasing clarity during the latter half of the 1970's in all key spheres of our social organism:

In the sphere of production, in the failure to balance the production of interdependent sectors and enterprises, which led to interruptions in work and shut-downs (far in advance of the strikes, and harder to remove) and a related breakdown in the relationship between plans and their fulfillment, a problem which was by no means resolved but which became worse as the result of a voluntaristic policy of "open plans" and so-called manual control;

In the sphere of distribution, in the increasing imbalance between the demand for (or total material and cultural needs of the society) and the supply of goods and services to satisfy these needs, an imbalance worsened by the granting of privilege to certain regions, professions, echelons of the service hierarchy, and persons, all which created the ground for the popularization of a climate of struggle for the satisfaction of one's own needs better than others' and at the cost of others' unscrupulously;

In the political sphere, in the growing injustice of institutional mechanisms of socialist democracy as revealed in the replacement of the process of openness and coordination of the basic aspiration of the forces of our society with upper-echelon autocratic inflicting of programs which were the result of back-room bargaining among various pressure groups; in replacing the elective system in the party and other organizations with the system of coopting people; in replacing the system of assessment and control of the various institutions with self-evaluation of bodies responsible for carrying out tasks, and in turning the mass information system into a tool of inefficient manipulation of public consciousness, which, taken altogether, blocked the possibility of revealing, analyzing, and overcoming manifestations of crisis in a conscious and organized way and led to paralysis in the party, state, trade unions, and other related organizations.

The glaring intensity of the above-mentioned manifestations of crisis and of others omitted for the sake the the necessary brevity creates the danger of the focusing of efforts aimed at reforming the republic to combat these symptoms, while neglecting the detection and combatting of their more deeply-rooted causes, after the example of the proverbial treating of the fever instead of the tuberculosis or treating hoof-and-mouth disease instead of hepatitis. Most of the sphere involved in the crisis is threatened with the danger of dispersion of the energies of interested parties to make piecemeal repairs through mutually uncoordinated measures.

Another type of trap, which we also fell into in the previous attempts to overcome the crises, is to be found in the conducting of efforts toward positivist measures, a special sort of patchwork with all sorts of different corrective measures. To be found in this and the more highly developed capitalist countries, measures which can be monitored that way for organizing the society but not adaptable without a comprehensive change of political system. As everyone knows, on the other hand, nobody of any consequence expects that. It is possible to combat the threat of eclectic improvements only by developing a complex strategy for the improvement of the socialist system of our society in keeping with the requirements of the present day and the future.

The next type of trap on the road towards improvement consists of assessments which treat all people fighting against distortions of socialism during the past period as people fighting against socialism itself, and therefore they equate the defense of socialism with an uncritical attitude and the defense of everything socialist, including the distortions. The creation of such false fronts, instead of a real categorization into: a) those attacking the distortions on behalf of the improvement of socialism, b) those attacking distortions which are essential properties of socialism and therefore undermining and weakening socialism, and c) those defending socialism together with the distortions, can be and is beneficial to antisocialist forces, regardless of the subjective intentions. The fact that spokesmen for the defense of socialism along with the distortions determined the policy of the party and state right up to the Fourth Party Plenum foreordained the paralysis of possible action on the part of a substantial share of the activist group calling for a consistent combatting of distortions on behalf of the improvement of socialism and created a situation making it also possible for antisocialist elements to join the spontaneous workers' movement on the behalf of the improvement of socialism. The universality of prosocialist attitudes in the working class made it necessary for these individuals to camouflage their antisocialist intent and made the essence of the workers' protest a struggle to purify socialism of the distortions. In order to combat the trap of false categories, it is necessary not only to combat the opinions and views of this type held by the adversaries but also to compromise them in the essence of interpretation in the realm of the prosocialist activist group.

The next type of trap, the one I believe to be the least dangerous in practice, but it runs the risk of pushing part of the prosocialist forces on the track of bitterness and glaring opposition, is the apologetics for the irrevocable, idealized past from the time of the political revolution or the birth of socialist industrialization and the call for a return to the virtues and rules of behavior of that time. It is to be expected that the activists who during the previous crises allowed themselves to be pushed into the position of tragic and plaintive ex-revolutionaries will be joined by new ones complaining about the past shape of the trade unions or other institutions rather than fighting for the socialist content of new bodies. This is why it is so important to be forewarned about such a trap and to take action favoring the joining of everyone in favor of making the socialist transformations deep and lasting, into the process of thinking and acting aimed at overcoming the crisis.

The obvious remedy for this type of trap, the detection and overcoming of the causes of the crisis, still is not free of one extremely important dangerous rocky area. This is personification, limiting the causes of the crsis to the lack of skill or the dishonesty of certain decision-makers of our past policy. This faulty course neglects analysis, in keeping with Marxist rules, of the social forces supporting this policy. This inevitably creates the tendency to limit remedial measures to changes in personnel and neglects a more thorough-going analysis of the causes of the distortions, failing to demand that the new teams making the decisions carry out a concrete program to consistently overcome these causes. This trap is not illusory. It was first reflected in the drafting of an assessment of the distortions of the Stalinist period, an assessment which individually blamed the leader without any Marxist assessment of the underlying ground providing the soil for the existence and repetition of this type of deviation. On the other hand, in our country, twice (in 1965 and 1970) after being satisfied with a change of leadership, the leader's contacts with the society were reduced to one-sided monologues, first applauded with genuine enthusiasm, and then, owing to the bitterness of the organizers, there was no thorough analysis of the causes of the crisis or any program promising to eliminate them. In order to get through the rocky shoals we must associate the changes in personnel in the decision-making circles with the setting up of profound discussions in the party and in the society, discussions to reveal the capability of understanding the origin of the distortions, the nature of the interests of the basic forces of our society, and skill in organizing progressive compromises.

The definition and compromising of the above-mentioned traps, dangers, and rocky shoals on the way to improving the people's republic are justified by the desire to channel the search for the causes of the crisis, which we are living through once again and set it on a difference course from previous history.

After all this is not and hever has been in the past a crisis in the socialist formation of the society. This is shown by the fact that loans and adaptations from capitalism and also a deep commitment to the international division of labor in the capitalist world without sufficient prior reflection have made our crisis worse during the past ten-year period rather than overcoming it as had been intended. It is also proved by the fact that capitalism is currently going through a deep crisis in various areas of social life and up until now has found no way out of it. It would therefore be absurd to expect theoretical or practical solutions to our problems from that source. We should also call to mind the obvious circumstance that, except for little fringe groups with inheritor or foreign agent tendencies, none of the important political forces is calling for a change in the socialist formation of our society. Instead they are all fighting for changes which will be beneficial for them within it.

This was not however, as was thought in October 1956 and December 1970, merely a crisis created by inadequate flexibility in the formulation of the strategy for further socialist development. Flexibility led each time to eclecticism, the search for all sorts of different solutions, from one end to the other, which, after short-lived delight in eclectic freedoms (along with "slack"), led to disappointments and the more the innovations inculcated failed to coincide with the socialist logic of the system, the deeper the disappointment.

Nor was this only a crisis in carrying out proper strategy which suffered as the result of lack of skill or dishonesty on the part of the organizers of social life. The negative decision-making elements usually became apparent when the inadequacy of the strategy was revealed in the unmet requirements for the development of the society, that is, the need to choose between a revision of the strategy and attemp s to force its realization stubbornly in spite of objective capabilities, hence, using the strength of all sorts of means, with priority given to excessive zeal while eyes were closed at the same time to dishonesty.

In the implied context of the negation of the above assessments of the sources of crisis and the ways to improve the republic is the hypothesis that the root of the causes is to be found in the "birth pangs" related with our society's transition from a lower phase of socialist revolution to a higher one. These pains are made greater by the forcing of priorities and principles which are contrary to the new requirements and are appropriate for the previous phase of socialist transitions, and modifications contrary to the logical of our system, aided by the uncritical borrowings of economic, technological, and ideological solutions which have grown up under the conditions of various political systems.

In order to overcome the repetitive nature of the crises, it is therefore necessary to define the original socialist strategy for further development, one free both of the encumbrances of our own past and of the apparent modifications stemming from capitalism.

Social Sources of Crisis

The following circumstances make it difficult to accomplish this task, that is, they hamper the advancement of socialist societies which have built the foundations for making industrialization universal in the higher phase of revolutionary changes:

a) the existence of social forces interested in making permanent the situation appropriate for the preliminary phase which assigns priority to the sector of the means of production for the production of the means of production and not those branches which directly serve the population's consumer needs;

b) weaknesses in the forces objectively interested in the industrialization of branches serving consumer needs, factions of the working class from those sectors, employees from the services sector, and peasants, people slow to become aware of the nature and demands of progress, which they are supposed to bring about, people who are dispersed and do not have intellectual and political representation adequate to meet the requirements;

c) education of the block of social forces interested in treating the manifestations of the natural extinction of the effectiveness of the regulations for operation from the times of socialist industrialization as proof of the limited effectiveness of socialist ways to further progress, forcing converging modification through the adaptation of technological and political solutions and a consumption model taken from the highly advanced capitalist countries. Alongside the remnants of the petty capitalist sector in our country we find certain factions of the young intelligentsia. But at the same time it must be admitted that the greater they are the more negative the effects are of continuing a strategy from a phase which actually belongs the past but has not been overcome, and this has compromized the solutions identified not with a transition period but with the essence of the social method of management and political organization of the society.

It would be very interesting to compare the above-mentioned schematic system of forces with the network of events which has taken place in our country. It will be necessary to do this in the very near future, in order to understand the essence of our most recent history. Now, being governed by the discipline of the requirement to give a brief presentation of the model features and abnormalities in our development, I will limit myself to saying that both in October 1956 and in December 1970 we failed to overcome the conflicting aspirations and compromise easing

of conflict situations. First of all in both cases with corrections in favor of the forces calling for a change in priorities to favor the production of the means of consumption and socialist regulation of distribution and political relations. Later this changed quite a bit.

After all, in the 1960's we were dealing with attempts to ease the increasing conflicts of interest by using short-sighted defensive tactics for every economic development tendency, a policy which wound up leading to the threat of mass unemployment of those from the so-called demographic rise who were entering the work force and the notorious attempt to eliminate a host of enterprises and complete branches of industry, all this ending in the events of December 1970.

On the other hand, in the 1970's, after a basically successful definition of the need to change the accent from economic development to socio-economic development at the Sixth Party Congress, which was a political contribution to the essence of tasks in the new phase, a rather rapid regression took place in two ways, because there was a special sort of compromise of the forces interested in continuing the fundamental assumptions of the strategy from the phase of the construction of the bases of socialist industrialization with the forces in favor of overcoming the deficiencies of such a strategy and practice through uncritical adaptation of solutions from the highly developed capitalist countries. The basis of this paradoxical compromise of the enduring aspects of socialism with the solutions of another self-overhaul was the broad influx of credit from the west to help satisfy the appetites of both sides, credit which paralyzed the forces interested in creating an originally socialist strategy for further development with short-term spectacular effects.

The association of elements of strategy suitable for a past, accomplished phase of construction of the foundations of socialism with the adaptation of foreign models disintegrated into an eclectic practice which dominated the 1970's, a practice which ran contrary to the requirements of rational development of our society. The inadequacy of such a policy to deal with the possibilities and necessity of further development of our society led and was bound to lead to crisis, the results of which had a negative impact not only on the factions of society which had been harmed from the beginning but also those which had initially been favored, because the complementary nature of our socialism organism makes it impossible in the long run to give priority to certain sectors over others, and therefore to certain social groups at the cost of others. The resulting inconsistency in the aspirations of the various factions of the working class and its allies inevitably also carries with it inconsistency in action, and therefore the increased disharmony and lack of functionality of the key links in social life.

And if it is generally known, this very fact creates chances for commitment to overcoming the sources of crisis, commitment not only on the part of those factions of the working class and its allies which have been wronged but also on the part of the more mature groups which prefer the previously beneficial special-interest policy, which ultimately has been responsible for a backlash situation which is unfavorable to them too.

What to Overcome and How

In order to overcome the essential, not just apparent, and recurring sources of disharmony in the functioning of our economic and political system and the resulting general social dissatisfaction, it is necessary to overcome the basic elements of both sides of the predominating sick compromise which has held sway during the past period in all key areas of our social life. I am emphasizing that it is both sides or tendencies, and not just one, because there are already signs of attempts to reduce the attack to compromised elements of remnants of the strategy from the previous phase, which are all the easier to combat in that they show up more clearly by virtue of their archaic nature and degenerative tendencies. At the same time criticism of the adaptation of the capitalist models is silenced, and further borrowings of this type are called upon as a remedy for the crisis.

Above all this requires the compromising and combatting of two assumptions which have been directing our practical efforts during the past decades: generalization of the gradual staged task from the previous phase of the socialist revolution, and uncritical borrowing from other political systems providing a model for progress in the productive forces.

The generalization of a phased task consists above all, as I have already mentioned, of giving priority to the expansion and modernization of the sector of the means of production for the production of the means of production, to a far greater degree than this sector has provided the other spheres of the national economy with the possibility of a growth in items meeting the consumer needs of the society. As a result, the substantial expansion of this special sort of "fly-wheel" of expanded reproduction of material conditions of social life did not bring about the projected essential effects in the form of overcoming the archaic level of the means of production and expanding the productivity of light industry, food industry, agriculture, construction, services, and so on. This sector still consumed more energy and resources than it turned out. The permanent nature of this sort of severe difference deepened the already earlier existing imblances between the supply of consumer items and the demand.

These imbalances were heightened rather than being lessened, as had been expected, by the uncritical adaptation of the model of progress of the production forces in the highly advanced capitalist countries, along with engineering and technologies imported therefrom in an uncritical way and basically without any real plan. This model came into being, expanded,

and was approved by its relative functionality under qualitatively different conditions which caused priority to be given to time-saving, energy-intensive solutions requiring raw materials of the highest quality. This is at least open to discussion as to whether these values are consistent with our objective capabilities and whether they favor the optimal use of the trump cards at our disposal. On the other hand there are undeniable detriments which such marvelous imports have brought to our economy in the assumption, imports which were marvelous in the assumption but dismal in results, such as enormous livestock installations dependent on imported feed, which cause the pollution of the environment instead of the fertilization of the soil, like the elimination of local dairies which have given way to gigantic plants which require greater transportation and which make it harder to get the milk, like the purchase of the Massey-Fergusson tractor license instead of cooperative production with Czechoslovakia to make an improved version (from all accounts a splendid one, according to the experts) or the license for Ferliet to resurrect our miserable urban transportation instead of cooperative production of the undeniably better Ikarus with the Hungarians.

It was no accident that the policy for the development of production forces during the past decade was directed by the above two briefly defined tendencies which conflicted with the requirements of the rational industrialization of our economy. Nor was it the result of ill will or insufficient knowledge. It was predestined by the special interests of large, important factions of our society, and this is both factions of the large-industrial working class and the technical and administrative intelligentsia having a predominating influence on the people at that time in the decision-making units and on the programs for the development of the country. And it was this food which nurtured the increasing inadequacy of such a policy which abounded with instances where absurd or harmful decisions were made as the result of an intimate clique or of an indulged tendency to gestures of great power.

The fact that the development of the complementary whole, our socioeconomic organism, was subordinated to special interests of a part produced negative results ultimately for all, including factions of the society which previously had preferred such a policy, creates the possibility of reassessing it. The consistent overcoming of negative elements by reducing them and, most important, the creation and inculcation of a strategy to fit our capabilities and needs, a strategy to restore the balance between the major sectors of our economy, a strategy to take into account our natural strong points, for example such resources as coal, sulfur, and copper, and therefore the possibility and necessity of achieving more lasting effects by basing our efforts to a greater extent on processing them rather than on exporting them in the raw state, appreciating the objective fact proved by experience that optimum opportunities for entering into an international division of labor are created by expanding our strength in competitive cooperation with capitalism (let us be aware of the fact that there is no noncompetitive cooperation and there cannot be any!) through the actual and not declared

expansion of joint production bonds linking us to our natural partners in CEMA, a strategy creating opportunities for taking maximum advantage of the most important element of our productive forces, personnel more numerous in our countries than in other, mostly young, educated, sensible workers, members of the intelligentsia, and peasants.

The source of progress necessary for expanded reproduction of social life in the area of the development of production forces so crucial to that reproduction is the development and inculcation of a strategy for the industrialization of all branches of our national economy, a strategy which is optimally rational from the viewpoint of our country's objective capabilities and the requirements of its development to satisfy all the members of the socialist society.

It is obvious that such a reassessment of the strategy cannot occur in the form of the unveiling of a program thought out up above in the hush of the offices of scholars or politicians, a program handed down to be believed in by the rest of the nation. It needs profound, universal discussion in which all politically active Poles take part. In calling for a ho-holds-barred discussion to bring to light all the negative aspects of the recent past and check all possible variants for rationalizing our further development, I am paying particular attention to the need not to limit ourselves merely to the above-mentioned sphere of development of production forces. It is necessary to overcome both sorts of deviation peculiar to the 1970's by creating and inculcating original ways of progress consistent with the requirement of the next phase of development of socialism also in such key areas as improved satisfaction of the material and cultural needs and the improvement of the democartic nature of the institutions of the dictatorship of the proletariat.

The second part of this article treats this aspect.

[No 43, 23 Oct 80 pp 4, 15]

Understand the crisis in order to overcome it effectively in a lasting way. To do this it is necessary to overcome the deviations peculiar to the 1970's by creating and inculcating original ways of progressing which are consistent with the requirements of our next phase of socialist development, ways like: 1) development of production forces to insure rational industrialization of all sectors of production and services; 2) improvement of the satisfaction of material and cultural needs consistent with socialist rules of distribution; 3) improvement of the democratic nature of the institution of the dictatorship of the proletariat.

I say that only a comprehensive approach to and implementation of the tasks of progress consistent with the requirements of a higher phase of socialist revolution in these three key areas, and therefore also in other areas of social life derived therefrom, will permit any consistent

overcoming of the crisis, a way out of this special sort of "vicious circle" of incomplete, inconsistent changes peculiar to the past 2 decades, a way out of the "spiral" of further socialist development.

In the first part of this article, published a week ago, I focused on the first of the above-mentioned spheres. Here I will try to take up the causes of the crisis and the ways out of the last two.

Deviations and Corruption in the Sphere of Distribution

During the 1970's social practice in the sphere of the distribution of goods was dominated by a special sort of association of a) the generalization of the principles in force in the industrialization phase, and b) adaptation of models of prosperity from the highly advanced capitalist countries.

The generalization, or treatment of principles correct under certain conditions and therefore within a certain timeframe as correct for all time, by the nature of things took on a shape that was deformed and even absolutely degenerate. And so the principle of relatively low labor force costs was also justified under conditions where there was a need to accumulate funds to accelerate the construction of the foundations for industrialization, and this principle was possible, because it provided most employees with advancement in their standard of living in relation to the previous situation (prewar unemployment and wartime hunger). To maintain this principle for the majority of employees as a fixed rule was an anachronism, and the failure to overcome it in a conscious, calm way was bound to lead to the push for new worker wage demands through strikes. Similarly the limiting of employees' influence on plant management might be relatively justified under conditions where most of the employees had recently arrived from rural areas and small towns, employees who had to be taught factory work discipline and qualitatively different rules for organizing the production process. On the other hand, this became absurd as the workers matured to the point where they had intellectual mastery not only of their piecemeal activity but also of the processes coming about in the plant and the society. The absurdity was all the greater in that the maintenance of the previous status had to assume the form of autocratic moves breaking any attempt at evolution in the inculcation of new principles. And it was out of this that was born the necessity also in this sphere to manifest a new working class maturity during the strikes and to fight for the need to overcome the old principles by inculcating qualitatively new ones.

On the other hand, in terms of the feelings in the society, the most disturbing form was manifested in the principle of privileged access to higher level goods by way of exceptions for certain people and echelons in the service and professional hierarchies. Although of doubtful moral status, always, such privilege could be justified, when it was aimed at releaving famous scholars or organizers of social life of the need to

spend a lot of time securing for themselves the necessiti s of life. I It was also possible to recognize the rationale behind attracting people to the professions which were of particular social importance or burdensome by giving them privileges over others (as we can see, for example, in the "Miner's Card").

Nevertheless, the generalization of this principle in relation to a situation requiring not so much that the privileged be freed from a state of insufficiency as using this means to make prosperity available to them proved to be a distortion which is probably already evident. We should not therefore be surprised that various sorts of deviations and depravations grow out of the fertile humus soil created by a muddled system of the most varied sorts of privileges (Jerzy Chlopecki, who wrote in PRAWO I ZYCIE, 31 Aug of this year, was right when he said that nearly all of us avail ourselves of some sort of privilege).

Judgment must be passed on all those who have revealed how shallow their character is by availing themselves of opportunities to enrich themselves at the cost of others, and the bodies of people's power created for this purpose must be consistent in eliminating from our landscape the "heirs" of the 1970's ready to sit on the porches of their luxurious country cottages or behind the window panes of their special dwellings and ridicule the honest people for being naive. Nonetheless, in order to overcome the sources of these distortions and depravations, it is necessary to do away overall with any sort of privileges for people, service echelons, professions, or plants. We have already matured to the point where clear, unequivocal rules can be introduced for distribution according to essential needs for all and according to work in relation to needs which are aspirations.

The increase in the distortion of the principles of distribution of goods was caused to a great extent by the surrender to the effect of the demonstration of models of prosperity taken from the highly advanced capitalist countries. I wrote in more detail on this subject in LITERATURA (No 37, 38 of this year), so I can leave it at merely a brief mention that this model, although tempting to many, has no chance of being popularized in countries which have exploited others in the past or are doing so now (thanks to their superiority in terms of capital), and it is not possible to maintain it in the long run where it has been created. I refer as proof to a fact which is probably already obvious: the attempt to focus our economic potential on adapting the most spectacular aspects of that model, the private motorcar in particular, led to drastic neglect both of public transportation and of housing construction and the industrialization of agriculture.

It is essential that we take into account the fact that what we need is not just any sort of progress in production growth nor just any sort of industrialization of the branches producing the means of consumption. What is essential is to create and inculcate a strategy promising what from the point of view of our economic potential and the real chances

for its development is the most rational, to liberate all members of society from material shortages, and to encourage vocational activity by making higher-level goods available to every serious employee, regardless of his profession or echelon in the service hierarchy.

In other words, it is necessary to direct the further development of our economy by working out in a public discussion with all Poles a model of prosperity which is more promising than in capitalism for the working force's industrial-level consumption.

Those which are more promising than under capitalism means those which:

Insure each person able to work not only a job but work which is well-organized on the scale of the plant and the country, work which provides satisfaction owing to the fact that all have a shared role in programming a rational plan for collection action;

Assure that all members of the society are freed of material shortages by guaranteeing each person the satisfaction of his essential needs on the level of the social minimum;

Awaken vocational activity by giving surpluses over and above essential needs as bonuses to provide access to goods of a higher order for any more productive work, regardless of the profession or function;

Insure an adequate level of and improvement in the infrastructure of collective consumption in such spheres as education, transportation, health care, and recreation, in which it is possible in the most rational way to eliminate all shortages and achieve prosperity accessible to each person;

Block chances for depreciation of the values of the wealth achieved by all those honestly working, by having the proper legal efforts of the state bodies make it impossible to achieve prosperity by means other than more productive work or to create elite islands of ostentatious luxury;

Liberate from the competitive race appropriate to the capitalist method of production all elements of the economic process in processing natural products into goods, a race which leads to economic crisis; permit the adoption of the strategy laid down for rational adaptation of nature to people's living needs now and in the future. The rules in effect during the first phases of the socialist revolution for the just liberation of all people from shortages have proved to be inadequate for the new situation, which requires a just distribution of access to prosperity.

There is no other way to achieve progress in this sphere, just as in the previous one, than democratization of the method by which

aspirations are coordinated and therefore by which the program negotiated in public discussions is carried out in a conscious, organized way.

Requirements of Democratization

The heart of the transformations which must be made in the sphere of the democratization of political relations is the consistent reduction, compromising, and overcoming of everything which has made it difficult or impossible for the party, and therefore also the state, the trade unions, and the youth organizations, to fulfill the role of instruments of the dictatorship of the proletariat and organizers of this class's alliance with the peasantry and other strata of our nation.

This requires above all the elimination of both a) a paternalistic attitude toward the working class and b) manipulatory managerial methods borrowed from capitalism for guiding production and social life.

In our country paternalism has taken the form of treating the working class and its main ally, that is, the peasant class, as unimportant, immature children incapable of understanding their own interests, of selecting organizers of social life and control and implementors of the results of social activity by having the decision-making political, administrative, and ideological elements make the choice. This is why the managerial elements have assumed the whole realm of decisions in these spheres, with organization along the lines of the patriarchal family model, in which the all-knowing father, who is always objective, makes all the decisions and organizes the whole structure of social life, with the aid of hierarchial structures of "uncles" and "older brothers" who accept his authority.

This style of exercising authority developed in a situation where the sudden rise in the number of people in the working class as the result of socialist industrialization made its largest factions a "class in themselves" without maturing subjectively to a role of the leading force which only a "class for itself" can play. Meanwhile there was a special sort of need for the political, ideological, and administrative representatives of the working class and its peasant allies to play the role of the leading force, and also to rely on habits appropriate for production groups based not on learned qualifications but experience acquired with age, making it necessary to become subordinate without any appeal either to the head of a farm or to a foreman. It is my contention that this was the soil out of which the so-called cult of the individual grew and was maintained. As the objective circumstances came into being for overcoming this situation through the maturation of the working class, especially its younger members education in the socialist schools, the circumstances for becoming a "class for themselves," a conflict developed between the style of exercising authority, which was now inadequate for the new situation, and the new possibilities and needs.

And this conflict was not only between the new requirements and the ways of exercising political, ideological, and economic authority from conditions irrevocably lost to the past, but also between these requirements and the interests of the large social groups using the paternalistic systems, because as such a style of exercising authority became objectively a relic of the past as the result of the disappearance of the social base in the form of factions of the working class on the level of a "class in itself" and the peasantry maintaining an archaic management method, maintaining it required support in those factions of the society which used the fixed nature of paternalistic limitations on democratism to supply the means for making their own special-interest needs predominate at the cost of general social needs. The building of the conflicts between such a style of exercising authority, the possibilities and necessity of improving the system of the dictatorship of the proletariat, and the requirements of directing the working class and its allies and of developing them in keeping with all their interests led to a dual sort of attempt to maintain the archaic system.

The first was the expansion of an artificial social base for paternalism in the form of a bureaucratic machine and a special sort of "worker aristocracy" of privileged groups of the so-called lower- and intermediate-level supervision.

The second was the apparent modernization of the style of exercising authority through adaptation of methods developed under capitalism for easing social conflicts within a plant and coordinating interdependent actions among plants. The root of these modernization efforts in relation to social conflicts was their shift to the plant and individual level, an unloading with the aid of manipulatory measures and subsidiary participation in the firm's profits through the expansion of recreation facilities, and so on, along with the simultaneous uncritical transfer of methods developed under capitalism to expand labor productivity by using a system for squeezing more effort out of the workers. Hence, in this area too, as in the adaptation of technology, the fascination with solutions useful under the conditions of other political systems blocked out the critical thinking necessary to process that experience and work out original paths of progress adapted to the properties and requirements of socialist management.

The rejection of modernization efforts of this sort is all the more essential at the present time, in that, as many symptoms show, there are within our society rather substantial forces trying to utilize the compromising of paternalism and its related distortions in the form of bureaucratic centralism to force a cure in the form of bureaucratic decentralization, and hence to replace the division into factions related to various sectors and regions, a division which weakens the working class, with a division into the interest groups of various plants, which division would create still greater chances than before for manipulating the workers and playing them off one against the other.

These are by no means original concepts. They are a reflection of the conservative current currently predominating in the developed capitalist countries, a current of criticism of the ineffectiveness of state interference and the forcing of neo-laissez-faire programs assuming that corporations will be treated as absolutely autonomous, obliged both to pacify the working forces by various sorts of participation (in profit-sharing, stock-sharing, and management) and to prove their raison d'etre by meeting the requirements of absolute market competition. One must take a good look at these concepts to reduce the likelihood of having the ideas come to birth on our soil, especially since, as shown by the experience of Great Britain, where these concepts became the program for conservative governments, there is doubt, to say the very least, as to the effectiveness of these solutions even there.

The real remedy for deviations of nature of the paternalistic version of bureaucratic centralism and also adaptations of capitalist methods and ways of manipulating society in general and the working forces in particular is to be found in a return to the principled fundamentals of the dictatorship of the proletariat on a new level, to fit the possibilities created by maturity which is probably already evident, permitting the working class to play the role of the leading force in the higher phase of the socialist revolution.

The root of the dictatorship of the proletariat, like that of all the class dictatorships ruling under previous systems, is "to thrust on the society the conditions for their class existence" ("Communist Manifesto") with the aid of the instruments of political, economic, and ideological authority.

The difference between the dictatorship of the proletariat and the previous dictatorships is based on the fact that this class does not aspire to assume a position of privilege at the cost of other classes or strata but to do away with all privilege and class divisions. This foreordains that both the party of the working class and socialist states can represent general national interests better as they are more consistent in adopting long-range and current interests of the working class as a whole as the basis.

And because nobody understands the interests of the working class better than it does itself, starting with the time which it again became a "class for itself" on a mass scale, the improvement of the process of detecting and coordinating the aspirations of this class and therefore also coordinating them with the aspirations of allied forces in the peasantry and the intelligentsia becomes the point of departure for the democratization of the institution of the dictatorship of the proletariat. This makes it necessary to take into account the fact that an irrevocable end has come not only to the time when the working class was unable to articulate its aspirations in a mature way but also to

the time when this was not a need of the first order, owing to the obvious needs which the socialist revolution had to assume at that time. The creation of this special sort of social consensus using paternalistic methods by giving consideration in the programs to the implementation of various demands for improvement in living conditions in keeping with the force of the pressure of the social groups competing for these improvements, on the basis of a special sort of "concert by request," led ultimately to cacaphony in the form of imbalance in development and production in various sectors of the economy vis-a-vis one another and social needs. It is therefore essential to review publically the various variants of commitment and development of the economic potential and to compromise in that public discussion those tendencies which even though attractive are unrealistic and ultimately useful only for a few people, and we need, on the other hand, to select in a conscious way the most rational program for further development, and in this sense it is essential to inform the society about the state of our economy and its possibilities without secrets and lies, to give up prejudgments, using censorship, concerning which ideas and aspirations are correct and which are wrong, to put specialists not in the role of advisers whispering to paternalistic decision-making groups but in the role of real experts, who present various aspirations and concepts for the use of public discussion, provide information about the existing possibilities and limitations, and balance the effects of the national debate to provide the basis for the elements of political power to judge the programs.

The guarantee that such a process of drawing up a program will not be monopolized by intelligentsia groups with a petty bourgeois, proconvergence attitude can and must be the party's assumption of the role of organizer and synthesizer of the results of the public discussion. In order to do this, the past policy of paralyzing the party by putting its activist group into the role of spokesman for programs decided on ahead of time must be replaced by the rule of reaching unity in a discussion presenting different variants of development to be judged within the framework of the party, so that the variant adopted in keeping with the rules of democratic centralism can be propagated by the majority, with real conviction.

The maturity achieved by the working class and its allies also creates the possibility and necessity of replacing traditionally shaped rules for creating and dissolving the organizers of social life. Let us recall that the old rules in effect come from times when the number of people with procommunist attitudes and with the ability to wield economic, political, or administrative authority was so very small that without exaggeration the defense of having certain people hold key positions was the equivalent of the defense of socialism. At the present time, in the situation where prosocialist attitudes are universal and there is widespread education equipping people to assume managerial positions (as we can see from the fact that a million Poles are post-secondary gradu-

ates), the maintaining of the traditional rules is an archaic practice which we cannot stand in the long run. And in this sphere the forces interested in maintaining archaic principles have reached out for ways to make them permanent, ways which undercut socialist democracy, for rules, for example, which have changed elections essentially into autocooptation adjusted more by the decisions of higher decision-making groups than by the act of voting.

After so many crises it has probably already become undisputed that the dilemma between the personal danger of those exercising managerial functions and the danger, functional quality, and development of socialism must be settled in favor of the latter, and the antiquated rules of appointing and removing managerial staff must be eliminated. Without going into too much detail, we must state the necessity of limiting the number of terms for political functions, to provide the possibility that a deserving person with knowledge and experience can assume a position in other areas of social life and there can be alternative candidate choices for all functions from top to bottom in periodic repeated competition for administrative positions.

In this sphere too the guarantee of democratic practice in the selection of managerial personnel in social life is the achievement of progress on this matter within the party, because the party is both the source and the executor of the rules of democratic centralism in the society, and nobody else will discharge essential duty for it

And finally the third main plane for progress in democratization which is possible and essential owing to the higher level of maturity of the working class and its allies is the socialization of control or the monitoring and execution of actions in keeping with the programs for socialist development negotiated in public discussion.

Departures in this sphere, which have been growing during the past decades, under conditions of the domination of special-interests vis-a-vis the society in general, have taken two forms: a) "groupization" by which I mean actions favorable to the working forces of certain plants but contrary to the role which is the reason for their functioning as a component part of the national organism, and b) privatization, the appropriation by certain people, including those appointed to handle and guard public property, of fruits of social work, so that in this way they can achieve a standard of living above legal income and legal ways of gaining assets to goods.

This was fostered by the bureaucratization of the decision-making units of control and by their transformation into bodies of internal self-control (the most explicit proof of which was the subordination of the NIK [Supreme Chamber of Control] to the government). The ineffectiveness of such self-control is demonstrated most eloquently by the fact that nine-tenths of economic offenses are detected not by expanded bodies of internal control but by external investigative bodies, which undoubtedly place

in doubt the usefulness of the existence of the former groups, especially since they have no use at all in the sphere of detecting and combatting tendencies toward "groupization." It is unusual for an industrial association or ministry to question products which may not be in keeping with the interests of consumers or to sound a reproach for negelct of producer obligations or service requirements to obtain unjustified profits. A glaring example of this are the deformities of all the branches of industry, such as the furniture industry which supposedly produces for the rational furniture needs of Poles but actually produces to make profits in the easiest way.

It is not possible to combat this situation without setting up external control bodies to represent the public interest, having this essential role filled by representative institutions such as the Sejm and national councils and linking them to supervision by the society through the shaping of the culture of public analysis and coping with regard to all deviations.

To do this it is necessary to do away with "protective spheres" for any sort of people or groups fostering either distortions or opinions which exaggerate suspicions of depravity, especially for those persons or groups whose lives are secret, or accusing those who are innocent. It would therefore seem wise to require public disclosure of all income and documentation vis-a-vis social control bodies concerning the legality of ways of acquiring goods of great luxury, and also to consistently eliminate from the decision-making bodies all those who have treated their obligation to organize social life as the privilege to enrich oneself easily with impunity in a manner contrary to the accepted rules of distribution, and we should exact a return of the goods and demand that an inquiry be made into the legality of the origin of those goods whose origin cannot be proved, and in this way we should vindicate undisputably the overwhelming majority of the economic, administrative, and political personnel who have lived through this difficult period in an honorable, honest way.

And in this area as in every other the party's ideological and organizational leadership in this work is essential. In this way it will prove, as in all the other ways, that it is capable of defending the good name of the absolute majority of honest communists which make up the party, and of cleansing itself consistently of the few whose shifty acts on their own behalf can serve as the basis for the wider society to make the unjustified generalizations of the assessment "pars pro toto." This also means combatting the special-interest tendencies toward "groupization," actions contrary to the general social interest on behalf of benefits for the plant or sector, actions which ultimately ricochet in all; overcoming them by shaping, under the conditions of democracy, a unity of the party's aspirations and so too its actions and thereby identical principles within the framework of the working class and in alliance with the people's forces which make up the Polish socialist nation.

It is only by meeting the requirements for the democratization of the institution of the dictatorship of the proletariat that we can eliminate both having them paralyzed by the functioning of archaic methods and deviations and the false tendencies to borrow from capitalism solutions of the bureaucratic-managerial decentralization type.

In summing up the discussion of this sphere and therefore the analysis of the causes of key deformities in areas of social life and proposed directions for improvement, we must say that the way to restore the functional operation of the socialist political system in keeping with the requirements of the next phase of revolutionary changes passes through 1) democratization of the process of coordinating aspirations in the party, working class, and alliance of people's forces, which means coordinating the way of drafting programs for further development, 2) democratization of the process of appointing and removing organizers of social life in the party, the state, the trade unions, and the youth, self-government, and cooperative organizations, and 3) democratization of the process of control and of seeing that actions are consistent with the socialist rules and programs negotiated in public discussion.

Only such a path which takes into account the maturity of the working class and its allies and their ability to take a greater share in the decision-making not only concerning the realization of our social life but also determination of its direction will make it possible to expand the potential of the prosocialist forces through a deepening of the democratic nature of unity, and therefore to get around the danger of bureaucratic centralism which paralyzes the ability of the institution of the dictatorship of the proletariat to understand, express, and realize the interests of the working class and its allies and to get around the no less threatening danger of bureaucratic decentralization and the pluralism of opposing political forces which inevitably will run the risk of destroying the unity of the working class, changing it into groups with special fragmented interests, groups entangled in alliances and networks with forces with antisocialist orientations and doubtful affiliations.

The task of the truly progressive forces which represent the current in its pure as it predominates in discussions within the party and the society in connection with the Eighth Party Congress and in the changes forced by the strikes is the consistent struggle to purify the aspirations for further development of socialism and to accomplish the third phase of the socialist revolution, which is difficult but which promises greater satisfaction, a phase in which we should prove the superiority of socialism by creating and inculcating a better way than capitalism has for using the industrial production forces to liberate each person from want, providing the opportunity for prosperity for all those doing honest work but only them, and upgrading the political institutions of the dictatorship of the proletariat, so that their democratic nature is expressed not only in the fact that they operate in the interest of the people but also in the fact that they create for the people directly the optimum opportunities for coordinating their aspirations and seeing that they are realized.

MEDICAL TRAINING IN ARMED FORCES SURVEYED

Warsaw LEKARZ WOJSKOWY in Polish No 3-4, Mar-Apr 80 pp 93-97

[Article by Lt Col Andrzej Gryczko, physician in the Medical Service Command of the Chief Quartermaster, Polish Army: "Army Medical Training"]

[Text] Basic medical training, which in an integral component part of army combat training, is of fundamental significance to the effective medical safeguarding of the subunits and units in combat operations on the modern battlefield. We must not underestimate the significance of proper organization and the level of the rendering of first aid within the framework of self-help and mutual assistance under the conditions of massive medical losses, particularly within the tactical zone, where the promptness and skill in rendering assistance will have a decisive influence on the future fate of the affected people, the effectiveness of their treatment in the medical evacuation stages, and their return to the ranks. On the one hand, the meager means and forces of the health service at the subunit level and the limited capabilities for them to make full use of them in battle dynamics, and, on the other hand, the continual improvement in the existing means of destruction and the development of new weapons force us to treat medical training extremely seriously and with total responsibility, not only in the health service but also, to an equal extent, in the command element. We realize that the development of military techniques and the resulting need to use increasingly more complicated equipment, as well as the rise in the requirements in the sphere of the soldier's general combat training, create a systematic intensification of training of the armies in general and within the realm of tactical, special-tactics, gunnery, sapper-engineering, chemical, and combined-arms training above all have a fundamental effect on the structure of programs and the distribution of hours over the various sections and subjects of training and do not make it possible to increase the number of hours of military training, despite the existing needs. On the other hand the above-mentioned development of military technology and the improvement in the means of destruction place special tasks right before the health service in the area of medical protection and the related medical training of the armies.

A basic program goal of the medical training curriculum is to see that all soldiers acquire practical skills in performing first aid within the framework of self-help and mutual assistance, using the soldier's individual medical equipment, the first aid kits of combat vehicles and means at hand, and instruction in the pursuit, recovery, and bearing of the stricken from the battlefield, from combat vehicles, and so on, and in protecting them from further injury. The training takes into consideration the rendering of first aid during combat operations during which conventional weapons are used and during which weapons of mass destruction are used.

The selection of the subject matter for the planned classes and exercises in medical training fully correspond to the projected training goals. The proper implementation of the program satisfactorily insures that soldiers will be prepared to give first aid. All the material handled is included in the following subject categories (an example of the number of hours allocated for each section is given in parentheses):

1. Personal medical equipment of the soldier and of the first aid kits in combat vehicles, and how to use them (2 hours);

2. Giving first aid for wounds, stopping hemorrhages (2 hours);

3. Giving first aid for fractures, dislocations, and sprains (2 hours);

4. First aid for burns and frostbite (1 hour);

5. Recovery and removal of injured from the battlefield and from combat vehicles, and their protection from further injury (2 hours);

6. Effect of elements of weapons of mass destruction on the human organism. Giving first aid to those affected by nuclear weapons (2 hours);

7. Giving first aid to those affected by toxic agents (2 hours);

8. Performance of medical procedures (1 hour);

9. First aid in other sudden instances. The principles of resuscitation (2 hours).

Owing to the limited number of medical training hours, the other subjects, for example, in the realm of care and prevention of contagious diseases, are usually handled within the framework of the work of departmental health education commissions, the way the subjects of alcoholism, drug abuse, venereal disease, and the like are handled.

The subjects listed in points 1-9 take 16 hours of program training altogether. In certain units, and usually in the training subunits, the number of hours allocated for medical training is still fewer.

We realize what this means in terms of the scope of theoretical information which the soldiers must assimilate and especially in terms of the broad range of practical skills the master of which sometimes requires that the individual soldiers repeat certain exercises many times. For example, the difficulties encountered during the conduct of the training program can be proved by the fact that only 2 hours are devoted to the subject of the recovery and removal of the injured from the battlefield and combat vehicles (and this is true of most of the programs), and 1 hour of this is usually devoted to teaching the recovery and removal of the injured from the battlefield, while the other is devoted to removing the injured from combat vehicles, such as tanks and armored personnel carriers. These are subjects which basically do not require theoretical discussion except for a presentation of a few minutes as introduction, leaving almost the entire 2 hours to be devoted to the practical exercises. Assuming that there are about 30 soldiers (a platoon, for example) in the training group and that we have one tank and one armored personnel carrier available, we can see from a simple computation that one person (even an experienced physician) cannot conduct these exercises properly. The trainees must be divided and the exercises conducted simultaneously in three smaller groups of ten persons each, which means that two more instructors are needed (but this is not always possible). It is only at the given "work point" that each of the ten soldiers within about 30 minutes has a chance to perform the assigned task properly (under supervision) at least once.

The extent varies, but similar difficulties and problems occur in the handling of the other subjects, especially, for example, when the platoon leader, even if he has been provided with a perfectly drafted summary, has only a superficial meritorical knowledge of the subject and poor methodical preparation for conducting this sort of exercise. This is why well-conceived and precise organization along with very carefully, perfectly selected training methods to insure that maximum effects may be achieved in a limited time take on particular importance in medical training.

In summing up, we should state that the achievement of the projected training goals within the framework of the curriculum hours under the existing system of training is not easy and depends above all upon the following factors:

-- the physician's personal commitment to organizing the training process and carrying it out;

-- the selection of the proper training methods;

-- the preparation of younger leadership personnel to carry out the medical training exercises;

-- the condition and level of utilization of the training base.

The fundamental training methods and those most frequently employed are the following: lecture, lecture with demonstration, and practice. During the lectures it is most common to use charts and tables mainly, films and slides less frequently. During the practical exercises personal bandages, IPP [chemical decontamination kits], IPR [radioactive decontamination kits] (for practice), pantocides, bandage materials, splints for immobilizing fractures, pressure compresses, and so on are used, along with infantry combat vehicles and tanks. Basically, the level of supply of equipment and materials necesssary to provide for the training process is not considered adequate at the unit level. Nonetheless, in a number of units there is also a shortage or absence of any fully suitable medical training instruction rooms which can hold at least a platoon. There is also a general shortage of dummies for training in resuscitation. Some units do not have enough training IPR-2 kits, IPP kits, pantocides, and personal bandages allocated for training purposes.

Unit physicians are required to give instruction to subunit commanders who are to conduct the medical training exercises. The instruction is usually not given more than 1-2 days before the exercises. During this instruction, alongside going over the summary, one should discuss in detail the organization and method for conducting the exercises and provide for the training material, and also as need be give the necessary explanations and instructions of a meritorical nature. In the training subunits the exercises are usually conducted personally by the physicians. Sometimes medical petty officers conduct them.

On the other hand, the practical skills acquired in the rendering of first aid should be upgraded during the course of the tactical and special-tactics exercises in the field, firing, and so on, to the extent possible using injury simulation. This is clearly discussed in the annual "Organizational-training guidelines of the Chief Quartermaster of the Polish Army for the armed forces" and the "Detailed instructions for the work of the Medical Service Command of the Chief Quartermaster of the Polish Army." On the other hand it should be stated that both combined-army commanders and certain physicians fail to appreciate this form of training, because it requires time and commitment on the part of the physician, and the platoon or company commander "complicates" normal exercises. This is the reason for the sporadic use of this way of upgrading skills.

Nevertheless the level of the armies' medical training is considered satisfactory, but for several years no real progress has been observed in this area. Here there is rather a substantial difference in the training level from one subunit or unit to another and also in the level of mastery between one subject to another. For example, familiarity with the principles of bandaging wounds stopping hemorrhages and immobilizing fractures and the familiarity with the soldier's personal medical equipment are on a rather good level. Usually the subjects

less well known include the giving of first aid to those affected by nuclear weapons and toxic agents and knowledge of the principles of resuscitation.

In the light of the above, it would seem useful and even essential to treat the 16-hour program in basic medical training as a "minimum program" required of all soldiers regardless of type of army or nature of the unit. The fundamental core subject-matter should be supplemented with additional training according to the specific nature of the army, spanning about 2-4 hours, as needed. In addition, during the training process particular attention should be given to the consistent and systematic improvement of practical skills during tactical, special-tactics, firing, and similar exercises. This is an essential condition to the acquisition of the desired training effects. This is tied in directly with the problem of proper instruction and methodical preparation of the younger command personnel for the conduct of medical training exercises. A separate issue is the matter of insuring that the exercises are adequately attended, particularly in the rear support subunits. According to need (and also in keeping with cost effectiveness), there should be consistent efforts also to expand and modernize the training base for medical training and to make ongoing improvements to compensate for shortages in the realm of material provisions for the training process.

We need to discuss separately the question of applying the "training standards" drawn up several years ago for medical training. These standards do not work completely in assessing the extent of the soldier's medical training. The performance of first-aid tasks "within the allotted time" introduces the element of sport competition and as a result has a negative effect on the quality of the first aid rendered. It would seem that the time in which, for example, an arm or leg should be immobilized will still depend in most cases not so much on the technical skills of the person giving the first aid as on the type of fracture and the general condition of the injured. There is a rather prevalent opinion regarding the need to monitor the above-mentioned norms, because one cannot compare, for example, the handling of a piece of ordnance with the handling of the injured. The logical view would seem to be that these standards should apply above all, but not exclusively, to the handling of medical equipment and the use of medical techniques, and to the development of medical posts and equipment.

Owing to their significance to the medical security of the armies, the above-mentioned problems would seem to merit particular attention. It would seem useful to have comments on these subjects from other physicians engaged in the practical execution of the medical training process, physicians who surely have a great deal of personal experience and observations, and conclusions to offer which may help improve the effectiveness of training.

POLEMIC ERUPTS OVER STIPE SUVAR ARTICLE IN 'DELO'

Belgrade BORBA in Serbo-Croatian 22 Nov 80 p 11

[Article by Dejan Curkovic: "Who Is Who and What Is What in the Current Polemics Between Suvar, Matvejevic and Rupel"]

[Text] When an extensive interview with Stipe Suvar appeared in DELO of Ljubljana on 25 October and thereafter was reprinted by other papers, it was obvious that it would be received in differing ways: it consisted of a very polemical and at times accusatory series of statements and judgments of contemporary social phenomena and groups of people and individuals mentioned by name, along with more or less frank allusions to certain social forces, groups and individuals to whom it was left to recognize themselves. Of this latter group Predrag Matvejevic and Dimitrij Rupel have so far made themselves known, Suvar has responded to them, and the contours of a possible disputation which could have broader social importance are already becoming outlined.

Interlopers

Aside from those we have mentioned, Suvar's interview also evoked two other reactions: from Gajo Petrovic and Carl Gustav Stroehm. They might be characterized in the dispute as interlopers, that is--those persons who become involved in someone else's law suit, since they have an interest in its being decided in favor of one of the principals. By contrast with the interloper Petrovic, whose article, at least so it appears, has the sole purpose of besmirching Suvar as an individual without entering into any of the fundamental issues which he raises in his interview, interloper Carl Gustav Stroehm attempts in DIE WELT on 7 November to emphasize the "key" statements and on the basis of them to draw a fundamental conclusion on signs "that a new disputation could arise in Yugoslavia between the intellectuals and the party." By contrast with Petrovic, who defines Suvar's interview, at least so it appears, as the product of the exclusively personal traits of its author's character and intellect, which the interloper judges to be most base and ugly ("the way dear little Stipe imagines his role in our revolution")--Stroehm identifies Suvar with the LCY and relates the very appearance of the interview in DELO to the petition, of which our

public knows little, "which was signed by more than 100 Yugoslav intellectuals and which demanded revocation of that article of the Criminal Code concerning what is referred to as hostile propaganda," and the intentions of the Serbian writer Dobrica Cosic, also little known, to start a newspaper entitled JAVNOST [THE PUBLIC].

Personally and as a Matter of Principle

Even one who is little informed about this petition and the intentions of the writer Cosic can still detect that the two interlopers are more concerned with what stands between the lines of Suvar's interview than with what is written there.

Suvar's interview, however, is unambiguous to a considerable degree and consists of a great number of statements supported by varying amounts of argumentation. If we ignore the attacks on Suvar as a person, Matvejevic takes exception to the following in his response:

a) the statement that our elite intelligentsia can be divided in Manichaean fashion into just two tendencies--traditional petit bourgeois nationalism and the sloganeering of humanistic New Leftism; (Majvejevic does not mention that Suvar expressly states that he is confronting "certain forces in our elite intelligentsia");

b) the "amazingly" simplistic judgment of the "conflict on the literary Left";

c) the right of the "minister of culture" to express esthetic judgment and to decide "who is and who is not a writer" and to describe someone's contacts with certain editorial offices as "connections big and small throughout Yugoslavia in editorial offices, even by telephone";

d) to the assessment of all criticism of the way in which the school reform is being implemented as an antiparty, opposition, petit bourgeois-nationalistic or New Left view;

e) the constant challenging of individuals and institutions in the field of culture instead of working with them for the general good.

Rupel assessed Suvar's statements in general as "cavilling, vengeful and private," but from his response there are few counterpositions to be drawn that do not distort or falsify Suvar's own. When Suvar says that the free exchange of labor is not possible if the income of the OOUR [basic organization of associated labor] is everywhere distributed in advance and moreover "nearly 80 percent externally," Rupel speaks of Suvar's split personality in being a "truly divided individual: he who is unable to attain free exchange of labor is the same who distributes 80 percent of income externally." When Suvar points up the well-known Yugoslav paradox of personal incomes acquired outside regular employment in excess of total

personal income earned through regular employment, Rupel finds it suitable to regard this as a charge which should be dismissed by reminding the plaintiff that he himself earned some income outside his regular employment. Rupel's entire article abounds in primitive substitutions of arguments of this kind, so that one can barely find three authentic confrontations;

f) over the reform of the educational system;

g) over the "conflict on the literary Left";

h) over how the phenomenon of our dissent is to be described.

Rebuttal of the Rebuttal

One can conclude from this list of Matvejevic's and Rupel's counterpositions that the polemic began with little interest in the numerous fundamental issues which Suvar raised and exhausted itself in the efforts of individuals deprecated in the interview to deprecate the one who insulted them. It would seem at first glance that the others, the interlopers, those whose names were not called, showed more feeling for the general importance of the suit which Suvar conducted in DELO.

In answering Matvejevic and Rupel Suvar himself devoted a great deal of space to settling personal matters. He argues at length and marshals the evidence that he is an honest man, that he does not play any sort of "games with individual politicians and republic groups," he interprets some "incident in 1975" (unidentified) as a private joke, he presents examples of his lack of vengefulness as an author, he repudiates the assertion that he has ever applied for a teacher's job at a university, and so on, without noticing that he is playing his opponents' game. At this point even the inquisitive eye of C. G. Stroehm might recognize the utterly personal nature of Suvar's interview in DELO and the groundlessness of his judgment "that a new polemic could come about in Yugoslavia between the intellectuals and the party."

Drawing himself up in unnecessary indignation because of the public mudslinging against him as an individual, unnecessarily begging Savic, member of the academy, to forgive him for mention of his name, and unnecessarily explaining to Rupel that like other writers of books, he, too, is entitled to financial compensation for this work, Suvar even counts up the total number of our republic "ministers," using this as an argument as to how little his personal power really is. He himself seems to have forgotten what he said in DELO. He said that he did not have any real political power that one ought to fear. When Rupel asks: "Who will believe a minister who says of himself that he does not have real political power; who will believe a self-manager who asserts that it does not pay to wage a fight as a professor at the university?"--Suvar takes these imputations at face value and, abandoning the line of the ideas which he set forth in

DELO, he gets lost in details, going so far as to explain from whom he borrowed the expression "semi-intellectual," or clarifying the differences between the words cobance and pastir ["shepherd"] in the Croato-Serbian language which are unknown in Slovenian,... and so on and so on.

A dispassionate reader surprised by Matvejevic's and Rupel's low blows will be equally surprised by a certain ebbing of Suvar's polemical attitude and his adoption of the role of "defendant" who must justify and defend himself. In his response Suvar held to few of his fundamental positions and overlooks the obvious mistakes of his adversaries (Matvejevic says of the school reform: "The balance sheet is almost catastrophic." Rupel describes it as "experimentation with live people."), and instead of returning the blows, at least on "his own" ground, he behaves the whole while as though he were "paying a visit" and on his best behavior. One can imagine another biased interloper who might even be tempted to defend Suvar from Suvar.

What Is Involved Here

Yet there is no reason for amazement. The position of Matvejevic and Rupel is clear: they have been attacked and insulted. Suvar referred to them both publicly as dissidents, as petit bourgeois intellectuals who "dress according to the latest style" (Rupel) or petit bourgeois semi-intellectuals whose spiritual world is restricted to occasional trips "between Zagreb and Paris and between Belgrade and Dubrovnik" (Matvejevic). Both resorted to the polemical technique of answering "insults for insults," disputing less what Suvar said than his right to say it. In this approach to the dispute they have indirectly offered Suvar new arguments, but he obviously has not taken advantage of them. Does this mean that Suvar is a poor polemicist? Or is something else involved?

Only one thing is certain: neither can what he said be simply labeled as the product of base and improper motives, nor can it be evaluated as a hint or expression of the "official" position of the party or government. This is obviously a personal statement, personal in both the good and the bad sense of that word. It would be worthwhile to shed light on both purposes of Suvar's statements, just as it would be worthwhile to examine in more detail the full content of the responses of his opponents. A more detailed analysis of everything that has been said could take the polemic which has begun, in spite of its obvious weaknesses, to the point where it is no longer personalities but issues that matter.

DRAWBACKS OF PLANNING EFFORT HIGHLIGHTED

Through Legislative Mill

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1554 12 Oct 80 pp 16-17

[Article by Scepan Rabrenovic]

[Text] Until now we have prepared nice plans that were composed of lists of desired objectives, but all of those plans had one and the same shortcoming--they were unattainable.

Sukrija Uzunovic, a member of the Federal Executive Council, stated: "In this complicated and unfavorable economic situation, in which we now find ourselves, failure to prepare plans or the lack of plans has meant that we have been unable to open the prospects that would permit a gradual extrication from the existing situation and difficulties, and the workers are waiting impatiently for that rescue."

Dr Berislav Sefer, a member of the Croatian delegation in the Council of Republics and Provinces of the Yugoslav Assembly, said: "There truly are justified needs, as pointed out by the federal Presidium, that require that a plan be approved by year's end, but clearly that cannot be the basis for approving any sort of plan no matter what the price."

Marko Bule, a member of the Slovenian delegation in the Council of Republics and Provinces of the Yugoslav Assembly, put it this way: "We have no choice but to demand that the work on reaching an agreement be intensified, and at least the appropriate interrepublic committees should be in session day and night so that the main deadline for approving a plan can be upheld if possible."

These 3 evaluations were expressed on the same day, at nearly the same time, during a session of the Council of Republics and Provinces of the Yugoslav Assembly that took place last week. The session was devoted to discussion of the Social Plan for the Country's Development in the period 1981-1985.

From these three evaluations it can be concluded, without knowing anything else, that little time remains for the preparation and approval of this document. The time has actually nearly run out, for the delegates should have had the basic document in their hands 4 months ago.

A Delayed Plan

This time the delegates have not blamed the Federal Executive Council for the delay. They had reasons for that: so far only one republic has prepared its basic document concerning its development in the coming period. How can a plan for the country be made, when the planning of each republic and province is not known and when additionally, the plans of associated labor are also unknown?

Some delegates doubted that such a major task can be completed in the coming three months, and still be valid. That is particularly so because it is clear that viewpoints on such important matters as the development of insufficiently developed republics and the province of Kosovo have not yet been coordinated; without such agreement the plan cannot be an entity. Neither the priorities nor the number of priorities have been determined yet, and each one requires a separate agreement. Many other things are likewise still unknown, such as the amount of income to be set aside for general and mutual public needs and the development of insufficiently developed areas, the manner of utilization of funds that have been newly created, the matter of whether the federal budget will show a deficit again, the nature of credit and monetary policy, the conditions and possibilities for incurring foreign debt, and the primary distribution policy.

All of these things were mentioned at the session, in a rushed manner, of course, because there is no time remaining to work meticulously. True, it was stated that agreements have not yet been achieved on the rate of production growth, price increases (or inflation rates), or social product, but at this session all of these factors were overshadowed by the short time available.

Most of the delegates, nevertheless, believed that the deadline for approving the Social Plan for Development should be met, even if the plan were not complete. It was suggested that minima be adopted, and that the signers accept the obligation to determine maximum values later.

Such an action would be nothing new. The plan that runs out this year was approved late, with some social agreements on the development of priority activities being agreed upon with delays ranging from one and a half to three years. (Perhaps this fact explains why the development of priority activities has only been 50 percent realized and why Yugoslavia continues to be so dependent on imported raw materials and semi-processed materials.)

There was also a delay in approving the resolution on development for this year, which came only in mid-year, just before the annual vacation period, concerning some questions.

The debate was completed by the presentation of the vice president of the Federal Executive Council, Zvone Dragan: "At the session of the LCY Central Committee, direct criticism was expressed about the existing plan documents for the period 1976-1980. It was said that the plan was one of the causes of inflation, and that we had a long list of desires that we agreed upon, but that list pushed us into an even greater degree of instability and inflation.

The magnitude of that list now is unknown, but one thing is known: every one will put his own desires in front, naturally, at the level of republics and provinces. The debate at the session of the Council of Republics and Provinces was characterized to a degree by the notion that it would not be bad to do this, as long as the time for recognizing mutual interests is not lost from sight.

Not only Basic Assumptions

Only a few days earlier, at another meeting, the new Social Plan of Development was also discussed, when in the Yugoslav Economic Chamber business representatives spoke with members of the Federal Executive Council, led by its president Veselin Djuranovic.

Here the conversation was entirely different, for not once were factors such as the rate of growth or individual interests brought up. On the other hand, the urgency of approving the Social Plan of Development was not avoided as a discussion topic, but rather it was discussed from another angle. All were in agreement that the approval of the Social Plan for the next 5 years must come as soon as possible, but there was less talk about lists of desired objectives, and more about the conditions under which the plan objectives would be accomplished.

Concerning those conditions, not even hypotheses are known, and that was the major topic of discussion for the businessmen. The director of the Rade Koncar plant in Zagreb, Ante Markovic, said: "The greatest problem is that we do not know what to expect by year's end and the first months of next year." He continued, "Unfortunately, the effects of devaluation have quickly been used up. When that decision was made, our estimates were that it would happen by the end of the year, but it actually happened sooner than expected."

Under conditions where there are constant changes and no one knows what the operating circumstances will be in 3, 4, or 5 years, or even in a few months, can long-term developmental plan be made at all?

Milenko Bojanic, director of the Crvena Zastava factory in Kragujevac, attempted to answer that question: "Decisions for 1981 are not needed in January of that year, but immediately. The process of self-management planning advances from the basic organization to a complex organization of associated labor, and at least 6 months are needed for the process. We all know how many phases are involved in planning. If we want to make realistic plans, we must know the basis assumptions much sooner."

There are many such basic assumptions. One of them, for example, would indicate the degree to which the state will continue to intervene in the constitutional rights of associated labor. It is not by chance that at the same meeting, Milojko Veljovic, president of the Serbian Economic Chamber, said: "We must transfer the system of authorization to associated labor as soon as possible and provide for its expanded influence on pricing policy. In many areas, prices would be lower if they were determined by the economy." He continued, "Prices are set without consultation with the economy. As a result, there is a tremendous transfer of resources from one sector to another, thus putting people into various situations that are independent of the product of their labor."

Measures Without Speculators

At this meeting, Veselin Djuranovic told the businessmen among other things: "The Social Plan will be the document and the battle program for economic stabilization that will contain all the basic determinations, as well as a clear agreement on the responsibilities of republics and provinces and all other participants in the process of approving the plan. It will also contain operating conditions and elements of common economic policy."

At this time Velesin Djuranovic also promised the business representatives that new measures would insist upon "the preparation of economic motivation, and the establishment of market principles and market factors."

Does this represent a great deal or very little? It is insufficient when we consider how many unknowns are still present, among the lasting conditions of economic functioning, but is is quite a bit compared to what has been offered by previous developmental plans that were lists of nice wishes that were calculated by speculators.

This reporter can still recall the statement of one businessman at the end of 1975, when the present plan was approved: "The plan is excellent, but it has one small fault: it will not be able to function. It is all too nice for actual practice to accept it."

Realities of Statistics

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1554, 12 Oct 80 pp 16-17

[Text] The present five-year plan will expire in 2 and one half months. Final data have not been collected and calculated to see how much of the planned objectives were met, but the results are all well known.

Have we lived and worked according to the plan in the past 5 years? No. Not only has much in the plan not been achieved, but the areas of overfulfillment cannot even be regarded as plusses, particularly when among them are to be found the figures for investments and for prices.

The plan called for the social product to grow by 6.9 percent annually, while the results showed a growth rate of 5.6 percent. Industrial production also grew more slowly than planned: instead of an average annual growth rate of 8 percent, it grew at a 6.9 percentage rate. When compared to the plan, however, the greatest underfulfillment is found in agriculture, where instead of an additional 4 percent more food annually, we produced only 1.9 percent more.

The development of so-called especially significant activities was also slower than planned. Energy was to grow at an annual rate of 9 percent, but achieved only a 6.9 percent rate of growth; ferrous metallurgy was to attain a growth rate of 11 percent annually, but only achieved a 4.6 percent growth rate, while non-ferrous metallurgy had an even worse shortfall. Coal production was to increase by 9.5 percent annually, but we only dug 4.9 percent more coal each year.

Spasoje Medenica, director of the Federal Institute for Economic and Social Planning, commented on these data as follows:

"It is said that we did not have enough money and that therefore, we did not achieve the planned levels of development in activities of special significance. When all activities are regarded separately, that is really true. When, however, we look at the country as a whole, we see that we did have enough money, for in the first 4 years the real growth of basic capital investments in the economy averaged 9.3 percent annually, a figure that considerably exceeded the plan. Furthermore, that took place in a situation where we had a lower rate of growth in the social product than planned."

The question then arises as to where that money went.

"There were no obligations requiring the investor to provide for raw materials, semifinished materials or energy when building processing installations, no matter whether he was involved in direct investments, association of resources or acquiring foreign exchange for imports. Everyone developed his own economic endeavor independently and asked that someone else provide the raw materials, semifinished materials and energy for his economic endeavor. Most often, such needs were supplied through imports, independently of export capabilities. Here is the explanation for the high deficit in the balance of payments and for part of the foreign debts that were incurred."

Spasoje Medenica continued to tell how part of the resources were channeled into non-economic investments: "If we include housing construction, non-economic investments grew at an average annual rate of 8.5 percent, instead of at the 6.6 percent (planned), and that took place in a situation where the social product was growing at a rate slower than planned."

For the past 5 years, prices have increased an average of 18 percent annually.
